<td>While I realize this project is enormous it seems every update I get is one step forward and at least three steps back. It has become so convoluted and incomprehensible that the general public is giving up on trying to understand it. It almost seems like that has been the goal all along. Play the public, act like we're listening to their valid concerns, and then drag it on infinitum until they are totally discouraged and disgusted. THEN we'll go ahead and do what we planned to in the first place. I have written before asking if you are even listening to the public. That would still be my first question. But it all goes back to my original question at a Cottonwood meeting. &quot;Why do we think they will listen to us?&quot; I don't see it happening. It looks like money and greed are winning your hearts and pocketbooks rather than wildlife, safe schools and neighborhoods, and the voice of the public. I have to assume that your legacy is going to be the administration that allowed &quot;development&quot; to ruin this natural valley paradise.</td>

<td>Tillson, Becky</td>
<td>Becky Tillson, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment tonight. First, I wanted to thank you all for your hard work and dedication this year, particularly Larry and Michael, too, as the chairs of this joint Commission. We hope you will continue to ask the hard questions that are so critical in this planning process. The deadline that was set to complete your review of theme three tonight is not nearly as important as having hard-hitting, meaningful discussions about Town ???. As you go through the Staff’s questions, which are really a great starting point, we don’t think that your review of this theme is finished. There are numerous other issues that have been brought forward by members of the public that still need to be addressed. The outline many of you had written comments and actually provided 13 specific recommended actions. Here’s a few of the key issues that we hope you’ll vote on tonight. First, regarding future growth in Town, the public supported the idea of growth districts only with specific tradeoffs in mind, which means they are pretty articulated in the text of this theme. Second, the rewrite of this chapter should include much more detail on how character preservation is to be achieved during downtown redevelopment, including discussions of bulk and scale and how this impacts both the feel of Town and its day-to-day functioning. Third, the industry section needs value added to it as opposed to merely making changes over time. We’ve provided a number of suggestions in our written comments to help improve this theme through the years. Fourth, we recommend essentially what the community has said about this theme’s sections in all the chapters. We either removed or corrected for accuracy and completeness. And lastly, we think that an additional principle to address the unique wildlife-related issues in Town should be added. For example, the STAG group identified ?? in Town, which could actually be highlighted as a new principle. And, of course, as we in the public have consistently asserted, the ?? the impacts of unpredictability that are currently used as discretionary tools particularly in this theme needs to be addressed. Thank you again for all your hard work. Happy holidays.</td>

<td>Tompkins, Kathy</td>
<td>Hi, Kathy Tompkins, Cottonwood Park. Again, thank you very much, Larry, on behalf of all of us. I just wanted to make a comment or express concern about the recommendation to expand the Gregory Lane light industrial area next to the schools by transferring the sports fields across the road behind the high school because ???. I just worry that as busy as High School Road is, if we really do need any more light industrial off that road and, you know, complicating matters while the old school is there. And then plus the fact that a lot of other people’s wishes on the wish list compounding the problem as far as maybe you should put some industrial behind the school also. I know I was just at a meeting the other day as far as the...I know it wasn’t stated as a recommendation, but it does put more of the South Park at the top of the list as far as a place to have a gravel extraction pit. And I’m just worried about all these things coming to light that you’re going to create some kind of industrial area that will just choke off Cottonwood altogether. And then in combination with the Indian Trails ??, or whatever you want to call it, so, basically I would think trucks would use that a lot, and then cutting through, you know, Cottonwood and any new development to the south on the northwest part of the Porter Estate. I just think in the future if this all comes to light, you know, all becomes reality, if somehow a gravel pit is proposed and passed because it’s at the top of the list, you know, from the guidelines on the gravel pit study, and we get more industrial into Gregory Lane ???. I mean, I would love to see the road improved there. I think that needs it anyway. But I’m just worried about Cottonwood Park, the other neighborhoods and schools, because it means so much, especially Cottonwood Park being on the corner there, that we’re just going to be cut off from the rest of the Town as a community and really just separated because of all this industrial that’s on everybody’s wish list for putting things and squeezing more things in there, so we don’t have to put it anywhere else. I know there’s a lot of problems as far as trying to find places, but I just think that’s the wrong place in light of all these other plans and wishes that everybody wants. I just think again that comes into human wants where it really hard presses the human needs of Cottonwood Park and schools in that area. Thank you very much for listening to me. Have a merry Christmas and a happy new year.</td>

<td>Acri, Armond</td>
<td>Armond Acri, representing Saving Historic Jackson Hole. Thank you, both Commissions. Revision of the Comp Plan so far has been challenging to say the least. There have been some good discussions. Progress has been slow. Many people are frustrated, I know, including some of you. But you are making progress and doing good. But keeping things going doesn’t necessarily mean avoiding hard issues that take time to discuss. A lot of times it takes courage to face the really hard issues right on. So, I guess what I’d like to do is call your attention to the 800-pound gorilla in the room. [Laughter] It’s kind of hard to ?? That is the PMUD. Hopefully, no disrespect to anybody, but trying to use a little bit of humor here. I know at this point everybody is a little bit tired and a little cranky. But I do want to at least make the point that, you know, the Conservation Alliance, the STAG, Saving Historic Jackson Hole, a number of editorials in the newspapers, many individuals who all submitted comments calling for either the elimination or a major revision of the PMUD. And unfortunately it’s not in the Staff Report questions and hasn’t been discussed in the last two meetings, and we don’t want to take a chance that it’s going to slide by and be ignored like the proverbial 800-pound gorilla in the room. So, I guess I hope that you won’t ignore it and comment and, if you will, discuss that issue before you leave theme three. I think there is a need to discuss both the benefits and the cost to the community. Hopefully, you’ve all had time to read Mike Whitcomb’s letter to the editor. I think he had some good analysis there. There are really questions about the true benefits of the PMUD to the community. So, I guess our recommendation would be that you consider eliminating it, but hopefully, at the very least, you will have that discussion. Thank you.</td>

<tr>
<td>12/14/2009</td>
<td>Whitcomb, Michael</td>
<td>Town’s Planned Mixed Use Development regulation (PMUD) is intended to generate substantial community benefit in exchange for development incentives. Unfortunately the PMUD is a serious detriment to the community when you examine its workforce housing impact. From the regulation’s inception through 12/2008, PMUD projects were required to build housing for a total of 159 employees. A conservative estimate of the number of full time equivalent employees created by those projects is 1,250. Had all those PMUD projects been completed, roughly 1,100 new employees working in Town would need housing. Certainly a few of those new workers would find free market housing or rentals. Some would freely choose to commute to Town for work. But most will struggle to find a home in Town near their jobs. They will be forced to find housing in the County or in Idaho and bear the burden of a long daily commute. There is no escape from the conclusion that the PMUD is a failed regulation with respect to our workforce housing goals. It may even increase the transportation burden between the County and Town. Is this at all consistent with our green image? No, it is not. The Joint Planning Commissions working on the Comprehensive Plan have yet to have a serious in-depth debate on the merits and weaknesses of the PMUD. It seems that it would be wise to do so during their “Town as Heart” deliberations. Especially since their next Theme is “Workforce Housing”.</td>

</table>
I was heartened to learn that there was discussion among the joint Planning Commission members re parking around Town Square. I was upset when parking was suddenly allowed along the Cache section adjoining the Square, formerly a place for tourists to be let off to see the Town and the arches, and then be gathered up again. Then .. I was glad to see it blocked off once more for parking. It has been so nice to see the Square clearly as one drove by - rather than be cluttered with parked cars. I do hope that Cache open curb space will be continued as such. I really see no need to block parking elsewhere around the square. Cache is the most traveled and obvious place for all passing thru Town to see the arches and well-maintained Square. Thank you! Elise Prayzich East Jackson

I read with interest the possible closure of various streets in town to allow for greater pedestrian traffic. While this sort of permanent closure always sounds like a wonderful pedestrian friendly and beautification project, there are many negative consequences to such action. Jackson is no different. The issues include:

- Closure makes it more difficult to get to stores on the street, which has reduced revenue consequences for the merchants along those streets. Please study the closure of State Street in Chicago, which was closed and upgraded for pedestrians, only to have it reversed a couple years later (at significant cost) when merchants found that their business had declined significantly (I cannot remember the percentage decline, but it was in the double digits). In other towns, this concept has worked, although not universally.
- A significant number of parking spaces would be lost, in a town already stretched for parking spaces in our main tourist season. This seems to be counterproductive.
- Traffic flow would be hindered. Many locals use Gill to bypass the Broadway/Cache intersection. Closing Gill would concentrate more traffic into the main intersection, leading to more congestion, frustration, and accidents. While the article below was not specific if you are considering Gill east or west of Cache, either is problematic. As you know, Gill east of Cache has one of the town’s main parking lots. Access to that lot would be restricted. So any reasonable human being would assume that you are discussing Gill west of Cache, where bypass traffic flow would suffer.
- Deloney west of Cache would be a poor choice since it can hardly be considered beautiful, given the backside of the Wort Hotel on the north side of the street. It would also restrict access to lodging parking.
- Perhaps the only reasonable closure would be the one block of Deloney east of Cache, and possibly the one block of Center north of Broadway, although the parking space reduction remains a problem.

I strongly urge the town planners to carefully study other mountain towns and the impact of street closures, especially on merchant business (I’m certain that the traffic and parking issues are being considered). Before an informed decision can be made by the town commissioners, there must be an unbiased study of the impacts on the community and its merchants.

Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Just a brief comment just to touch on something that was mentioned last night. I would encourage you tonight to revisit the Teton County Planning Commission recommendations from June, particularly recommendations number 12 through 14 that apply to theme two, but since Town was bypassed the discussions on theme two, it's important to go back and revisit those. And other than that, I would ask that you refer to our written comments for our additional suggestions. Thanks.

Expand the Gregory Lane light industrial area into the state owned (school district) lands to the north. In order to facilitate this, the current sports fields would need to be relocated elsewhere. Along with this expansion the current roadways and other
McNutt, Jim

Date: 12/10/2009

Good evening, I’m Jim McNutt; I’m a resident of Jackson. I also happen to be the President and CEO of the National Museum of Wildlife Art. And I’m speaking here for myself and as someone who’s worked in the arts for a long time. And I’ve read the theme-three heart-of-the-region materials and I made a comment that I submitted via e-mail some time ago. First of all, I would like to endorse what Don has said and the work that the Center of Wonder has submitted in favor of public art. I’m not sure that the specifics of any given Plan are so important, but the idea that a place as original as Jackson ought to have such an endorsement in this Plan. And as I read this document, I’m, one, impressed by the work that goes into it, but I also am aware that there is a tremendous arts presence in Jackson and in Teton County that really needs some specific recognition in this document beyond what is here now other than the general terms of cultural work. I think historic preservation is highly important. And I think that the historic character of Jackson and Teton County is critical. I also think the arts through organizations like the Center for the Arts, the National Museum of Wildlife Art, the Grand Teton Music Festival, and so many other organizations that are represented through the Center for the Arts and in other venues constitute a significant economic impact in this community and a significant value going forward for what’s here. So, I think it needs just a little bit more verbal recognition in this Plan, though I don’t, you know, I haven’t presumed to try to rewrite it or tell you just where it ought to go. But hopefully you’ll think about that as you consider revisions to this, and I’ll be happy to talk another time. Thank you.

Date: 12/10/2009

The Plan identifies preserving historic structures and sites within the Town as an appropriate future vision for the Town including the following:

- Identify and preserve historically-significant structures and sites
- Support the Historic Preservation Board
- Enhance historic preservation education, outreach, and awareness

Date: 12/10/2009

The Plan should recognize the importance of civic spaces and social functions as a part of maintaining a sense of community within the Town and should be implemented through the following:

1) Create, Maintain and improve public spaces
2) Make public investments in strategic locations
3) Enhance Jackson gateways

Date: 12/10/2009

Enact a public art program that is administered by Cultural Council.
Insert Bland Hoke, III. recommendations (ideas) about public art.

Date: 12/10/2009

Along the corridors of South Highway 89 and West Broadway the land use pattern will be predominately non-residential with residential allowed on the upper floors.

Date: 12/10/2009

Allow a variety of lodging types that encourage active management for nightly occupancy, and the use of local/visitor amenities in the downtown.

Date: 12/10/2009

Generally maintain the lodging potential and areas allowed today (existing lodging overlay) for the following purpose:

1) Concentrate lodging in the downtown to preserve the remainder of the Town from lodging
2) Create a pedestrian oriented environment

Date: 12/10/2009

Enhance the greater downtown local /visitor service district described as the downtown areas outside of the town square area to include the following:

- Primary pedestrian focus with improved connectivity, sidewalks and other improvements,
- Provide public gathering places,
- Foster visitor/locals interaction during all hours of the day and night all year around,
- Encourage cultural events and activities,
- Street level building design and uses should engage the street including but not limited to considering limiting office and residential uses on the first floor,
- Encourage successful retail and lodging establishments,
- “Lights on” in lodging and residential structures
Hi, I’m Karen Stewart, I’m the Director of the Art Association of Jackson Hole. And never before have the arts and the arts aspect of our culture taken a more important role in the economic and social development in Jackson Hole. There are facts and data that appear almost daily to tell the importance of every community’s ability to stimulate the economic development, make our cities and towns attractive and vibrant places to live and work, attract tourists specifically for the arts and out-of-town visitors, educate our children to succeed in school and beyond and unify our neighborhoods, provide important social and creative outlets for all of our citizens, including seniors and those with disabilities, children and adults, and bringing people of diverse backgrounds together in productive ways. Public art, like the ravens on the fencepost, or the brightly colored free-standing sculptures at Jackson Hole High School, connect with us every day, often when we’ve forgotten about them. They raise not only a smile but also our spirit. There’s no entry charge, no pre-learning to be done beforehand. You can just appreciate them the way they are and as you drive by or walk by a public art piece. Communities that support the arts and culture, including public art, not only enhance their quality of life, they also invest in their economic well being. The Art Association also supports the Center of Wonder and planned proposal to include a statement in the Comprehensive Plan including public art. Thank you.

Gregory Griffith, West Bank. This might be a theme-eight issue, if we still have theme eight. We have Cache Creek in a pipe and that’s a golden opportunity for some micro-hydro generation that works 24/7, 365 on a relatively low wattage-to-cost ratio. It’s something to investigate since we have all the other alternative energy and energy efficiency issues. I’d like to touch on something real quickly that Commissioner Nash said last night and that’s relative his concern that the County houses its proportional share of workers in the future. According to the appendices, etc., Town has 77 percent of the jobs and houses 27 percent of the workers. I think the County is more than up to speed on that issue. Also, there should be some discussion at some point, especially in theme three, about our district impacts, micro regionalism. Regionalism obviously being we don’t export our net negative impacts to Driggs, Victor and Alpine. We need...if the current path for Town and the Village don’t export the negative impacts, and we create a dynamic where onsite housing is the preferred method of employee housing. Eventually, we must have some discussion on revenue sharing. The way that it’s written now, it’s proportional to population. Some of the changes in the Town/County dynamics and the allocation of housing, etc., that’s probably something that’s going to come up and probably we should engage in some free discussion. Also, the last thing is currency requirements. The really only effective way we have to do any type of growth management is be a codified to currency requirements where we don’t allow development to proceed infrastructure and we actually create a set of parameters for that...again, it’s codified and we don’t let that occur, whether it be traffic, water, sewer, still water ??, etc. Thank you.

My name is Don Kushner. I work at the Center for the Arts, but I’m here tonight as the Chairman of the Board of Cultural Council of Jackson Hole. I’ll keep this very brief; I hope you don’t mind. For the past 15 years, the Town and County officials have entrusted the Cultural Council to advocate and administer tax-based funding on every path regarding arts and cultural activities in our Valley. So, in 1994, the Cultural Council retained its 501C3 status, its mission to bring together and advocate for the arts and cultural organizations in our community by supporting communication, collaboration, and promotion of cultural life in the Valley. Representing 21 member organizations that have exploded to almost every single resident in this County, we take our decisions quite seriously and always with respect and deference to Town and County officials. Thus, when we deliberate the merits of funding requests to date distributed throughout the three quarters of a million dollars in cultural help in Jackson Hole. In the Arts Advocacy Conference sponsored by the State of Wyoming this past September, it was clearly recognized that public art has a well-established and versioning presence in numerous communities across the state. It was further realized that public art and access to the arts has definable and documented economic success with the improvement of quality of life as a major component. Here’s the crux of our position: With the inclusion of public art language in the Comprehensive Plan, we would be recognizing a quality-of-life tool that has a proven track record for success. The Cultural Council of Jackson Hole has a commitment in place to support the Center of Wonder and Grand Hope in their efforts to develop research and guidelines for a public art policy. And with consensus of the governing body, we the Cultural Council will apply our experience and resources to enable us, as designees of the elected officials, to deliberate and implement the public arts strategy. Thank you very much.
Thank you. Armond Acri, representing Saving Historic Jackson Hole. Just some brief feedback from last night. I actually thought that these taken off the theme with some brainstorming on your thoughts of the statement of ideal was very productive and I hope you guys will continue to do that for future themes. We don’t always want to bash you guys on the head; we want to give you guys ata boy, ata girl there. It also was encouraged to hear Commissioner daCosta acknowledge public input in some of the statements that she made. That’s one of the basic, you know, things, learning skills is to repeat back what you’ve heard, and it is I think good for the public to hear you guys engage, when you make those statements, that you have heard loud and clear some of the statements that have been made. One issue I want to make on the comment of maintaining healthy residential areas last night. The thought, or the statement that one of the indicators might be having people living in houses. Certainly, it’s preferable to have people living in houses, rather than having empty second homes, but there is a concern I know in some neighborhoods when you started going to where development becomes mostly rental homes, even though those are full, the neighborhood character does change. And I’m not sure that I have a solution there, but I think that’s something that maybe you might want to mull over a little bit is the thought of not necessarily discouraging people having rental properties, but somehow a way to maintain that character that people still do maintain their homes to the same standards that the homeowners do. Last, I am concerned about the flexible zone that was proposed last night. I would caution you to remember that one of the comments that has been made repeatedly is predictability and I think that would be an issue. I would suggest that if there are character issues you want to maintain, if you look at those issues within that district or neighborhood, then try and maintain those, whether it’s house trailers or something like that, but try and maintain it that way, rather than to have no zones, or flexible, because as has been quoted before, that’s where all the mischief comes from. Thank you.
Introduction: Bland Hoke is currently coordinating a Public Art Task Force to develop a Public Art Plan. This document will outline the framework of a Public Art Program, prospectively administered by the Cultural Council of Jackson Hole, for the Town of Jackson and Teton County. The Public Art Task Force meets the second and last Wednesday of the month at the Teton Art Lab at the Center for the Arts at 5 pm. Please contact Bland Hoke for additional information, or visit www.artspotinfo.org to review draft documents of the Public Art Plan.

Revisions to Theme 3 are listed below in an underlined format. Additionally, rationale is provided for background information/inspiration. It is hoped that public art will be considered as an integral aspect to specific sections within Theme 3. However, similar to Principle 3.6 ‘Preserve historic structures and sites’, a separate principle addressing ‘Arts and Culture’ (in which public art could be specifically addressed) may be necessary given the breadth and depth of the subject and its lack of representation in Theme 3.

Page 38 Revised- Jackson as Cultural and Social Hub
The Town of Jackson has long served as the cultural and social hub for the region and Teton County. It is the primary location for many art galleries, restaurants, cultural facilities and cultural activities for residents and tourists to enjoy. The growing reputation of Jackson as a cultural destination should be reinforced with public art, thoughtfully integrated into new development, contributing to the Town’s unique character, charm and culture assets. The town is also the primary location for municipal and county governments as well as regional headquarters for many state and federal agencies. It is also a “gateway” to the national parks and Bridger-Teton national Forest.

Rationale: This paragraph should highlight the presence of the numerous cultural institutions and social activities with cultural significance such as; the Center for the Arts, the National Museum of Wildlife Art, over 60 art galleries, the Art Fair, the Fall Arts Festival and the Western Design Conference. These are mentioned under ‘Art and Culture’ on the Town of Jackson website.

Additionally, the Town of Jackson and Teton County have made a large investment in the arts by providing 3.7 acres of downtown Jackson for the development of the Center for the Arts. This commitment to culture and local arts organizations is paramount, and should be reflected in the vision of ‘Town as Heart’.

Revised-Principle 3.5 – Recognize the importance of civic spaces and social functions as a part of maintaining a sense of community
Historically, the Town of Jackson has served as the cultural, social, and civic hub for the region and Teton County. Maintaining and enhancing public spaces and making strategic investments, increases the importance of Jackson as the regional center for tourism, the arts, government offices, and as a gateway to the nation’s parks and forests.

Revised- Policy 3.5.a: Maintain and improve public spaces
Public spaces are the building blocks of a thriving community. Jackson’s public spaces and civic facilities should be interesting, memorable, and reinforce our sense of community. The town will continue to promote high quality design of public spaces, including creating attractive gateways, preserving views, and providing attractive public right-of-way amenities. The practice of integrating fine arts professionals in the design of projects will be encouraged to create unique and visually engaging projects. New developments in the Town of Jackson should contribute to quality public spaces – including but not limited to sidewalks and walkways, parks, outdoor squares, landscaped...
areas and public art.
Rationale: Public art, integrated into the overall design of a project, will contribute to public spaces that are interesting, memorable and reinforce our sense of community. The elk antler arches reflect the concept of integrating public artwork into the overall design of a public space, thus making it a memorable and interesting space. This concept differs from ‘plopping’ a sculpture in front of a building, or within a park.
Revised- Policy 3.5.b: Make public investments in strategic locations
The community will continue to invest in public facilities such as government buildings, parks, recreation, trails, workforce housing, arts and cultural facilities, and public art projects in locations in town that enhance the town as a civic and cultural hub...
Rationale: Integrating artists in the design of public facilities, parks, trails and cultural facilities is an investment in cultural tourism. Additionally, public art projects can be generated by the community to address areas in need of aesthetic attention.
Revised- Policy 3.5.c.: Enhance Jackson gateways
The town gateways play a special role in setting the community tone and atmosphere for the millions of guests that visit the Town of Jackson every year. The town will work to enhance the three major gateways including upgrades to both the public realm and on private property. Public art projects, which are reflective of the community, environment and character of Jackson, will be encouraged to provide unique and interesting gateway enhancements.
Rationale: Public art is an integral component of many gateways to cities and towns around the US. It is a defining and creative feature that identifies the transition from one area to another.
Strategy 3.4: Develop a Public Art Plan
-Coordinate with the Public Art Task Force to write a Public Art Plan for the Town of Jackson and Teton County.
Indicator
7. Completion of Public Art Plan- -monitor- -1 yr

My name is Patti Ewing and I really hadn’t planned to make a comment tonight, but...and I just came in, but it’s obvious that there is considerable conversation going on about possibly splitting the two boards. And I think that having observed almost every one of your meetings, I would highly suggest and encourage you to do that and give us an opportunity, those of us who live in Town and who come and observe the Town Planning Commission and then those who live out in the Valley can come and see the...watch the Planning Commission for the County. But I think that it would be a far more effective way for you to come together. Then in April, March, whenever, when you’ve both gone through the Plan and made significant input separately. Thank you.
Steve Harrington, Jackson. Just to expand a minute on the previous comment, because I’ve sat there for several meetings and watched. It seems like obviously the Town and County are different and they have different personalities. The people that are involved in each group are different and they look at things I think a little differently. The County seems to want to be a bit faster than the Town. The Town is more deliberate. And that’s fine, rightfully so, but you could use the analogy of our famous federal government. The County being smaller could be the Senate and the Town could be the House. They both have the same interests at heart; they just proceed in a different manner. They just look at things a little bit differently. So, if the County felt like they needed to go faster and they were comfortable with that, then they could get their business done, you know, in a few weeks or however long it takes them. Tony said it could be done in days. And the Town could go at a slower pace and then at the end if you want to look at it coming together, you know, probably 90 percent of what you do is going to be the same anyway. That’s sort of what’s been happening here, but it’s been on some little some other issues that where your perspectives are different. And so at that point, at the end, if you had the perspectives that were different and it would be readily obvious, and then the public and the electives would be able to see that very clearly. But I would like to remind you that this coming year is an election year and six out of the ten offices are up for re-election. So my guess is that those people particularly who are running for re-election would like to have something in hand that they can put their arms around that’s pretty well crafted by you folks, so that some particular issue doesn’t become for them an election issue where, you know, they could get pretty well scalded if they’re on the wrong side of one of these issues. But they can take cover with you guys. If you guys put together a really good Plan, I’ll bet my last quarter that they’ll probably go right along with it. But if you give them something that’s too wide open and has too many avenues in it, I don’t think that they’re going to be very happy with having to deal with that situation and go through a whole other public process in order to come to a final decision before the primaries in August and the general election in November.

Dave Kuhn, Teton County at large. Once again, thanks for all your planning work. You’re volunteers and you’ve gone way beyond the call of duty. So, anyway, I do think that maybe it is time to take a look at parallel paths, and I think you’ve made a valiant effort to make the joint process work, but you are two really different boards. As long as I’ve been here, the Town and County have been a little bit like oil and water, so to expect a mix at this point probably you might kind of step back and take the parallel version. You can…your job is to give recommendations to the electives, and I think for good recommendations, you can split and still give clear recommendations and let them make the choice, because in the end they’re going to do it anyway. I don’t want to say your work isn’t appreciated by them, but they will do what they want. It’s all about clarity. The County and Town are different and give opinions, come back together at the end, and let the electives decide it. And if you do stay together as a joint Commission to meddle through the process, maybe consider a facilitator to kind of organize it a little more and keep it going forward. There’s been a lot of this and that. And, anyway, those are just my thoughts. I’m not battin’ a thousand on the meetings, but I’ve been to a lot of them and you can do better. You’ve done a great job but you can do better. So, thanks.
Kristy Bruner, Jackson Hole Conservation Alliance. Before we did submit some written comments this week in hard copy before you. We just did that this week, since you’re not going to see a Staff Report before your next meeting. So, that’s why we have them in that form tonight. Just a few comments, as you discuss theme three, we appreciate that you want to stay at broad level, but your discussions on theme three must extend beyond Town as an appropriate location for development, to one that really looks and considers the decisions that actually makes additional development in Town smart growth. This really will require looking at the details, the amount and the geographic scope designed in the type of proposed development. While some form of this I assume would be done in the FLUP map discussions, some of these details really need to be put in the policy chapter to make sure the FLUP maps are designed according to the community vision. As we’ve said before, in the Staff Report, Staff did a really good job of, you know, listing a good set of suggested questions to start discussion. In addition to those, I was just going to say a few brief comments on some of the questions you might get to tonight. As far as Staff question one, statement of ideal, something to consider, it include language about ecological and natural resource protection goals, other than just economic and social goals, which are the only ones that are there right now. As we stated before, also really brief, we do feel like further effort should be made to refine the small-town character in the chapter itself, and the ‘94 Plan is a good starting point for this. Question number three, in terms of mixed-use, it’s really important to look at the balance of residential and commercial development in different districts. You know, using the mixed-use concept in commercial have far different results, depending on whether or not you’re talking about an individual development versus a neighborhood scale. And we’d reiterate that the public has consistently stated its concern with excess commercial development, particularly given its impacts on the workforce housing shortages. An increase in commercial development potential beyond what is allowed by existing base zoning should not be a goal in this Plan. Question number four, in terms of identifying stable residential areas, this section could use some more clarification on what we mean by stabilizing an area. And the ‘94 Plan uses a specific sentence that relates to enhancement that new development in these areas should contribute to the existing character and not be allowed to start a shift or trend toward another more intense character type. I’m just bringing that up because there are...there’s language that’s available that I think can clarify some of the things in this new draft. Questions five or eight, just to make sure everybody’s on the same page, it’s important to clarify the geographic scale of what you mean by downtown Jackson. Regarding the issues of defining vibrant and balancing visitor and local-oriented development, the Plan should not lose sight of our Town’s unique role as a gateway community to the public lands of the Greater Yellowstone ecosystem. Making our community accessible, particularly in terms of affordability to visitors, should be an important component of the Town’s function as a gateway community. As for short-term lodging, this certainly provides a critical component of our tourism economy, but the actual benefits and costs really do want in the details. There really are thresholds at which the amount of certain types of lodging can impact the feel of being a community first and resort second, and whether lights stay on, as described by Staff. I feel like it’s important to remember that if our community truly commits to being a community first and commits to high levels of residential and nonresidential development that is local oriented and puts deed-restricted affordable housing closer to the workplace, that it will have positive impacts for the visitors. In the long run, most visitors want to experience a real functioning town rather than an environment that feels like the primary goal is to be a resort. One thing regarding 7.B, before promoting changes to expanding lodging potential, an analysis of effective population as well as shifts in lodging capacity should be undertaken. I guess the question is is there data available such as a documented net loss of lodging units that could help inform the discussion or decide whether or not the overlay should be expanded? We feel that given the extensive development potential permitted by existing zoning, development potential ?? should not be increased, particularly given the impacts that arise from an increase in effective population, which is visitors and residents in the Valley. To close this up, in terms of the process, some good suggestions are already made by others in the room, so I won’t repeat them. The Conservation Alliance does have concerns about the impacts of split votes and how it could potentially impact the final product. If you do decide to undertake a parallel, rather than a joint process, I would request that the meetings are on different nights to help the public. I really do feel the idea does warrant significant consideration and discussion because something does need to be fixed. Thanks.
Jensen, Gail

Interested Public

Hi, Gail Jensen. You know, I sat through almost every one of these meetings, and I just don’t see how we’re really going to get a good Plan out of what’s been going on recently. I see a lot of arguing, I see a lot of going over the same thing, the votes are inconsistent. I mean, you really need to get this back on track and the only thing that I can see that would be of benefit to really move it forward would be to separate the Town and the County, go do your separate reviews, then come together at the end and see if there’s any common ground. I just don’t see where we’re getting; we’re ending up with something that I don’t think is really effective. It’s almost worthless. I’m very upset about theme two. We didn’t even discuss cost of growth. There was no discussion whatsoever. And then to leave the discussion, the review process, after the Planning Staff tries to incorporate any kind of recommendations that were joint recommendations at the end, I mean, just from meeting to meeting, you all forget about how you voted or what went on. What are you going to do when you put the review to the very end, you know, and you’ve waited months to go back to it? You’re not going to remember what people said. You’re not going to remember public comment. In fact, the public comment at this point I think you all are sick and tired...obviously, I heard it twice from Lisa last week, which I was very insulted—I don’t want to hear public comment, I’m sick of public comment. And, you know, it’s our Plan. It’s the community’s Plan. And that upset me very much. And I think we need to get past all this, and I see the only way we can move forward is to separate, come together before it goes to the Commissioners, and see if you can find common ground on your recommendations. I don’t know how else you’re going to get past it. So, that’s what I would hope that you would consider doing. Thank you.

Griffith, Gregory
12/9/2009
Interested Public

Gregory Griffith, West Bank. There was kind of a disturbing development last week, a discussion of consolidated shares. I don’t even know if it’s legal, but throughout world history consolidating more and more power into fewer and fewer hands generally doesn’t work out. I’d like to suggest some discussion to create some efficiencies here. One, to self-limit public comment to 25 minutes. That’s self-limit. It will give you a more high-value early-meeting discussion time. And, quite frankly, there’s diminishing returns on public comment as it is. Also, I’d like to self-limit any redundancies, whether it be oral-to-oral comment or oral-to-written comment, or also any redundancies from you. We had quite a few last week on some specific issues. Relative to the vote you took last week, I’d like to acknowledge that, you know, as Einstein did, that continuing the same course of action while simultaneously, you know, expecting different results, generally doesn’t work out also. We need to acknowledge that we have a responsibility to create a better model and a better template for the electives when they get this process. We need to ask ourselves how long do we review this process to the detriment of the product, and that’s what’s occurred to date, I think. We need to consider that we have two County Planning Commissioners who will be gone the entire month of January. We need to consider that we have two new Planning Commissioners at the County level and think of, you know, we need to remember our learning curve in this process. We need to think about how to best integrate the fresh eyes and the fresh ideas of the incoming Planning Commissioners. We need to acknowledge that 40 percent of the County Planning Commission will be new, while only 14 percent of the...one out of seven of the Town Planning Commissioners. If we couple this with the acknowledgement that several of the County Planning Commissioners will be absent January, then there’s potential for a two-to-one input advantage from Town, and exactly how does that contribute positively to a joint Plan. So, what I’m proposing is very similar it sounds like to what Forrest’s was—consider parallel paths, not a separation, you know, just for the four meetings in January in question. Also consider a soft target date—not a deadline—a soft target date. We need to incorporate the pragmatic realities of spring break, etc. Maybe transition that into a public-comment-type period that would transition this level of hearing into the next level, which will be the electives, which will help focus our time more efficiently and effectively on the big issues, which heretofore we haven’t. That’s part of the time delay. Thanks for your time.
My name is Susanna Hamilton and I’m a new resident of Jackson. My parents started coming here in the ‘70s, so we have a long relationship with Jackson and we’ve seen a lot of changes in Jackson. My business has been having 10,000 square feet on the corner of Fifth and Fifty-Seventh in New York across from Tiffany’s, as well as 4000 square feet in the city of Atlanta, but additionally an office in the Rockies, where we’ve catered to a smaller market. And have been members of various Chambers of Commerce, historic preservation boards, working with contractors privately. So, my background is in building in the arts. That’s my professional background. Having said that, having moved here, I came here tonight to offer you a perspective that maybe you don’t see or hear very often. And that is that from the outside, when you look at this Town, this Town has incredible potential. There is incredible intelligence here, unbelievable talent, extraordinarily…well, except we flounder, absolutely are stagnated across the board, every board, every commission is strangled by gridlock, and everybody is complacent with the status quo to continue on in this way. And it is unbelievable. When you look at this economy and what’s happening in this country, 2010 is going to be a pivotal year. And anybody who is in position, any Town, any school administrator, any hospital, any business, any individual, who is ready for 2010 is going to be extraordinarily wealthy and successful. And anybody who continues to be stagnant and polarized is going to fail. And this Town has the potential to be so incredible and it’s just strangled. And it’s horrible to watch that. And if for one moment we could all take ourselves out of this fishbowl of 6000 people, 9000 people, however big it is, and if you could look at this from the eyes of somebody, a potential investor, and whether that’s a second-homeowner or a potential business investor, and if you came into Town and every day you open a paper and saw the kind of debacle that we had last summer with the hospital board, or the school board, or reading meeting after meeting that you come to no resolution and to no agreement, do you understand that after awhile it looks plain silly? We have got to have some movement. And people in the Town are extremely passionate about their views to the point that they would rather be polarized and rather annihilate somebody’s reputation than work together on a consensus and move forward. And we are our own worst PR and marketing campaign, if you want to know the truth. And everybody in this Town should be able to make a living here and live here and work here and raise their families here, and we’re not giving them that. When we have 100 percent of the population that has to go to Utah, Idaho and Colorado for medical services, for goods, we’re not delivering to them. That does not mean we have to have high-rises and boxed stores, but we need to be thinking about the future. And if anybody thinks that’s not going to happen, they’re dead wrong, because 12 days ago, the Wall Street Journal, it was profiled, three of the best second-home or places to retire, places to move to—Lake Placid, New York; Aspen, Colorado; Jackson, Wyoming. USA Today ran a map on the front cover, saying of places for development and where the next generation of college graduates needs to move, the east coast and the west coast were a bloodbath of red—jobs are absolutely nonexistent, companies are saturated, schools are not doing well. Where do they want to move? The Rocky Mountain Corridor, Jackson Hole, Wyoming, right down on the mountain line. When you look at this room, look at the demographic in this room. There might be three people under the age of 40, maybe, I don’t know, but not many. If you think change is not going to happen, you’re dead wrong. So, you have the opportunity now to put some policies in place and to make some changes, because if you don’t, I promise you the people under 35 are going to change it probably in ways that you don’t want them to. So, I think that it’s an opportunity. You have a great opportunity to move forward, to make this Town the best. It doesn’t mean you have to rip it apart and change it in horrible ways, but take the reigns now and make those changes and move forward. Let’s have something positive in the papers. We should have the best schools, the best hospital, the best newspaper, the best airport. We should be the best. We have all the resources, all of the intelligence, all of the money, all of the ability to do that. And yet we sit in this stagnant pool. So, I think whatever everybody can do to remove themselves from these polarized positions and start moving towards a place of consensus and agreement. And be an example for the other boards and commissions in this Town, because you’re not alone. Every board and every Commission just beats itself to death. And when you look at it from the outside, it’s just too valuable to waste. Thank you.

Joint Planning Commiss

Revise the Theme 3 Statement of Ideal to change “rely” to “support”.

12/9/2009, Hamilton, Susanna Interested Public
December 9, 2009
Town of Jackson and Teton County Planning Commissions
Re: Theme 3 Comments
Submitted via email to Alex Norton and at Dec. 9 Joint Planning Commission Meeting
c: Town of Jackson Planning Staff: Tyler Sinclair and Jeff Noffsinger
Dear Planning Commissioners,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to Theme Three – “Uphold Jackson as ‘Heart of the Region.’” Similar to our review of previous chapters, attached is an analysis of Theme Three that identifies specific sections of the chapter that could benefit from additional clarification. In addition to comments calling for additional explanation on certain language, we have provided specific recommended actions to improve the chapter. While we appreciate the desire to stay at the broader level during the review, an analysis of land use issues in town requires particular attention to the details, including the amount, geographic scope, design, and type of proposed development. In upcoming hearings, the discussion should extend beyond town as an appropriate location for development to one that seriously considers the conditions that actually make additional development in town “smart growth.” Throughout this process, which is now in its third year, we have consistently expressed the need for this planning process to more specifically address the issue of character preservation as it relates to town redevelopment. To do so would improve and build upon the existing 1994 Plan, which was the original objective of the process. While such a task (defining community character) may seem daunting, it must be an essential component of this new plan. Again, the 1994 Plan provides a great starting point for refining a definition in terms of the built environment versus the natural environment. This expectation is not solely our own; Clarion Associates made the following statement in an October 2007 report: “The goal of preserving community character has not been reconciled with the pressures for redevelopment; this is a topic that will be more closely addressed in the [update].” At the broad level, the Conservation Alliance, along with the majority of the public, strongly believes that this plan must not increase the overall growth potential in the valley. Without additional “upzones” there are already high levels of potential development (beyond what is seen on the ground today) that are in the pipeline. This valley ultimately has a carrying capacity beyond which its unparalleled and irreplaceable resources will be lost. This recognition must be front-and-center as you discuss growth-related policies in the Town of Jackson.
Thank you again for all your work on these very difficult and complex issues that face our community 1 Recommended Action: Add a principle and associated policies to this chapter specific to ecological and wildlife-related issues in town. (A possible title is: “Conserve ecological function of lands within and adjacent to town boundaries in order to protect the Greater Yellowstone Ecosystem.”) This addition would provide clearer direction on wildlife planning policies specific to town that are currently lacking in theme one. The policies should address town’s “interface” areas with adjacent public lands, ecologically sensitive and valuable riparian areas (Flat and Cache Creeks), and wildlife habitats, including south-facing slopes that function as crucial winter range. In general, the natural environment, including town’s unique topography and watersheds, is underemphasized in this chapter. Transportation issues specific to Town, including wildlife-related issues, should also be addressed more specifically.
Recommended Action: Further refine the definition of community character as it relates to town redevelopment. This chapter should fulfill one of the main objectives of the Comp Plan process – to reconcile the pressures for redevelopment with community character preservation. It falls far short. Even though a common criticism of the 1994 Plan was its failure to adequately define character, this new draft unfortunately steps further back in terms of clarity. It refers to the word “character,” but then fails to provide adequate definition. Significantly clearer guidance about “compatible” and “appropriate” bulk, scale, and intensity as it relates to community character in a small mountain town, quality of life for residents, and the visitor experience, needs to be included.
In general, this new draft, because it has less specificity regarding community character and less direction for appropriate resort and commercial development, in several ways it provides less direction for town-related planning issues than the 1994 Plan. For example, it provides no direction to place limits on building size (and
why this is important) or to restrict specific types of commercial development.

2 Recommended Action: Clarify the extent to which additional development potential is proposed in town, and to what extent this addition represents additive growth (as opposed to substitutive growth) for the valley overall. As outlined in our comments on theme 2, the extent to which the last sentence of this paragraph would hold, lies in the details of the draft’s implementation. First, if adding additional development potential to town without assurances that “natural areas and wildlife habitat in the region” are actually protected, implying such as tradeoff, as this sentence does, is misleading. Second, with regard to transportation effects, the amount of growth targeted for town, particularly if it is additive growth, and not substitutive, could actually worsen traffic conditions overall, not “reduce vehicle trips.” Also, the extent to which vehicle trips can be reduced will be dependent on whether redevelopment includes high levels of residential housing that is truly affordable to the workforce.

3 See point (1). Community character should be better defined in the new draft. This absence of definition raises again the question as to why this new draft did not more efficiently build upon the existing 1994 Plan. (See chapters 1, 3, and 6 from the 1994 Plan for a starting point.) If critical elements of character are not defined in the comprehensive plan, land development regulations will not be written to protect them. This is a major concern regarding future town redevelopment policies.

4 Based on preliminary votes in the theme two chapter review, sections of this chapter that refer to town-level development in “other identified areas in the county” should be edited. As we stated during that review, the town-level intensification of county “nodes”, coupled with extensive town development, could actually accelerate a sprawling development pattern in the valley overall. The original draft proposed extensive creation and expansion of county “centers,” which appears to be in conflict with the concept of “Town as Heart.” For example, the scenario description in community polling for “Town as Heart” was outlined as having “little or no focus on creating or expanding other County centers.”

46 Jackson / Teton County Comprehensive Plan

5 More specific comments will be provided during the FLUP discussions. However, this plan should acknowledge the potential impacts of significantly increased development potential on the overall historic character of Jackson as a small mountain town. The 1994 Plan summarizes potential impacts of larger buildings on a small town, pedestrian friendly environment.

It is important to recognize that community concerns are not restricted to potential shifts in architectural style or aesthetics; concerns relate to the shift in bulk and scale of buildings and their associated impacts (potential traffic congestion, increased workforce housing shortages, higher maintenance costs associated with reduced sun exposure, etc.). Distinctions should be made between preferred architectural style and preferred scale in buildings.

6 Recommended Action: Remove or correct summaries of community polling. Caution should be taken in citing just several polling examples under the chapter’s section “What the community has said about this theme.” 2008 polling indicates other community input that is not reflected in this abbreviated list.

If the section is not removed, below are a couple examples that should be added:

- The University of Wyoming, Teton County Community Survey 2008, included the following “Key Findings” in a summary report:
  - “A far higher percentage (78%) of residents considers it a higher priority to build more deed restricted affordable housing than to allow additional commercial or resort development.”
  - “Both overall development in rural parts of Teton County and redevelopment in the Town of Jackson should be limited.” (61%)

7 Clarify these statements. The community has also expressed strong concern regarding a lost sense of community due to rapid growth and its associated impacts. The geographic scope of the “strong town core” should be described. Does it extend from the “Y” area to the Town Square?

8 Throughout the document, terminology regarding incentives should be consistent. (The Dec. 3 staff report}
Based on a comprehensive review of the polling questions, “most of the community” is not necessarily representative of the breadth of results across surveys. For example, the University of Wyoming “Key Findings” report of the phone surveys stated: “There was nearly equal agreement among residents that, “Current building heights in town today should be maintained. No change,” (40%), and, “Careful redevelopment outside of the town square should be allowed, with up to 3-storey buildings,” (37%).

Recommended Action: Language should be included that acknowledges the extent to which survey questions, as a whole, focused on asking the public about tradeoffs. For example, when the public was asked questions about whether, for example, 2 or 3 story buildings were preferred, they were also asked to rate a degree of agreement with phrases such as “Designate sensitive resource areas (such as habitat, floodplains, steep slopes) as areas with greatly reduced development potential from which density can be transferred to the Town of Jackson.”

Specific comments regarding the FLUP will be provided during those discussions. It remains unclear the extent to which the new draft promotes mixed-use at the level of individual developments versus at the neighborhood scale. These are two very different concepts, and could result in far different outcomes.

Language should be incorporated that specifies the intent.

UPHOLD JACKSON AS “HEART OF THE REGION” (THEME 3) Y INTRODUCTION

Jackson / Teton County Comprehensive Plan 47

See point (1) regarding the need to define character.

See point (8). Terminology should be consistent.

13 Recommended Action: Ensure that this new plan more clearly articulates “community benefit” in order to increase predictability in future decisions. Perhaps this articulation is appropriate in the “managing growth responsibly” chapter, where it can apply to both town and county land use decisions. * During earlier discussions on the Introduction chapter, the importance of refining criteria for “community benefit” was discussed. When will this be revisited? The list, at a minimum, could include the top priorities.

14 Recommended Action: Ensure that contradictory statements regarding sales tax revenues are not included in the new plan. The language, “Maintained or expanded,” leaves the door open to broad interpretation. How does this sentence relate to policy 2.5.c “Do not make land use decisions for revenue purposes”?

15 Recommended Action: Before promoting regulatory changes to expand lodging potential within town boundaries, an analysis of effective population, as well as of shifts in lodging capacity, should be undertaken. In terms of “desired future land use pattern” as proposed in this draft, what information was used as a basis to propose the expansion/shifting of the lodging overlay?

16 This principle needs further clarification. For example, factors or variables that contribute to fostering “healthy residential neighborhoods” should be described. It would be helpful to clarify the community elements (such as quiet streets, greenspace, a lack of light pollution, and an absence of crime) that people value and don’t want to see degraded. It isn’t simply a matter of not wanting to “[see] too much change too quickly,” as this text suggests.

We fully recognize the benefits of infill development in some areas of town, but we also feel language should be added to describe the real planning challenges associated with increased development potential in these areas. They include, but are not limited to: potential increases in crime, elevated noise, diminished “dark skies”, reduced scenic views, gradual loss of a sense of a small town community, reduced potential for buildings to use the sun as a renewable resource, lowered air quality, traffic congestion, parking deficiencies, and fiscal impacts.

Also, it is unclear what “stable” means in some of these districts. For example, according to Appendix I, in the East Jackson district, a higher number of residential units is proposed above what is allowed by current zoning, but it is still proposed as a “stable” district.

17 Recommended Action: Language that identifies requirements/conditions for additional growth in town should be included. Similar to point (2), is this extra allowable density in “growth districts” permitted only
in exchange for affordable housing units or permanent conservation in outlying areas?

18 Recommended Action: Language should be added to clarify that the community vision should guide the development of the FLUP, not the other way around. Only after a clear policy basis for the proposed FLUP is outlined should the FLUP guide future land use decisions.

19 Vague terms such as “attractive” and “high quality”, without additional defining criteria, do not provide increased clarity beyond the 1994 Plan.

48 Jackson / Teton County Comprehensive Plan

20 This language, in terms of “strategic locations” is vague. For example, this policy states that amenities should first be located in “Downtown Jackson.” The plan should clearly define the geographic boundaries of “downtown” versus “within Town of Jackson limits” to increase predictability.

21 Recommended Action: Language should be added to clarify the meaning of “enhance gateways”. The proposed language does not provide clear direction. As one example, does it suggest that gateways should have minimal or larger setback requirements? The 1994 Plan provided some specific examples to define “enhance” in different contexts, and the importance of these entry points given our function as a gateway community.

22 This principle, and accompanying policies were formerly listed under the “managing growth responsibly” theme. The intent of this policy, to promote “a sense of place” should be a broader goal in the plan, and include both the town and county.

23 Recommended Action: To help meet the 10x10 goal, an additional policy to support reuse of existing structures should be added. The 2008 draft of the new Jackson/Teton County Comprehensive Plan included an additional policy (2.5d – “support reuse of existing structures as an alternative to redevelopment.” This policy has been removed from the new draft, and should be reinstated. Emphasis on retrofits should be included in the new plan.

24 Recommended Action: First, better indicators need to be identified. Indicators should include measurable variables of concern to the community, such as percentage net gain or loss of affordable housing units. For example, if a primary goal of “Town as Heart” is to enable increased housing opportunities for the workforce close to the workplace, indicators should correspond to affordable housing loss, preservation and production within town boundaries. Indicators should also include factors for measuring transportation efficiency, watershed protection, and wildlife habitat preservation in outlying areas, all of which are factors to measure the success of “Town as Heart” vision and policies. Second, baseline conditions, as starting measurable points, should be included in the tables. For example, if the indicator is “number of annual community events”, the plan should have an initial column that provides the existing number of events. Third, “Consistent with FLUP” and “monitor” are not sufficient goals, and should be replaced with more measurable factors. (For example, we should not monitor the goal of monitoring, and “Consistent with FLUP” is an unacceptable benchmark.) The concept of “Town as Heart” is a planning approach that intends to implement broader and more comprehensive goals. This chapter should reflect this broader approach, and identify other indicators that evaluate how “Town as Heart” implementation strategies carry out county-wide goals.

12/9/2009

Joint Planning Commss

Identify pedestrian only areas around the town square including enhancement of pedestrian amenities and closing streets to vehicular traffic.

12/9/2009

Joint Planning Commss

Add an additional residential area category called; flexible areas where uses, character, etc. would not be defined in order to allow a more organic development pattern.
Revise the definition of an active mixed use neighborhood to be: a 1/4 to a 1/2 mile walking area that generally includes all municipal utilities (water, sewer, and storm sewer), schools, a variety of housing types, and recreational amenities. These areas should also include local convenience commercial where compatible with surrounding neighborhood character and uses. These areas should be connected by full “complete streets” with sidewalks in addition to transit.

Armond Acri, representing Saving Historic Jackson Hole. Just a quick comment. Last week I was disappointed that when you guys did discuss some changes, really I don’t think there was enough time devoted to... when there were suggestions, there really wasn’t enough time, so I hope you will allow enough time tonight for some good discussions. Because, as you all know, we’re inventing a process as we go forward with this product that we’re trying to make, which is the Plan. So if you will allow enough time to make... for some good discussion. I think that was one of the reasons why you really couldn’t get anything passed last week because there wasn’t enough time to come up with any alternatives. It was either kind of take it or leave it, and that really doesn’t work so well. I think there is a need to try something different. Certainly that’s always been one of my personal philosophies in life is to try different things. Not everything works. You know, I’ve always subscribed to the management philosophy that says generate a reasonable amount of mistakes. A person who makes no mistakes is probably trying nothing new and probably not making any advances. So, I would suggest that you consider Mr. McCarthy’s suggestion, certainly on a trial basis, and if it works better, then obviously keep doing it, and if it doesn’t, then let’s keep trying to make it work better. I do want to agree with Greg’s comments earlier. I won’t repeat them or any of those points. I do want to make one point on the topic of Town as heart. We keep hearing about Town being the center of the population. And according to the... actually the statistics that’s in this draft Plan from Staff, the Town actually only represents 48 percent of the population. At one time, I think we could have made a clear statement that the Town was the population center. It is no longer. So, if we desire to change that, then we should be honest about that, but I do think we need to be honest with the fact that it is no longer the clear center of the population. And that causes some of the conflicts that we have and we need to recognize that. So, thank you.

My name’s Jay Varley. I’m a resident just a few blocks from here really in the Town. And I just wanted to say something about the Town as heart and a distinction that I think should be made and that’s what I call downtown as the heart of the heart of Jackson, and Town as heart generally. The term Town as heart I think scares the beesjesus out of a lot of residents in Jackson, because they perceive that to mean that there’s going to be a lot more density in the neighborhoods, there’s going to be a lot more deed-restricted housing in the neighborhoods, all these things that for some people, it bothers them. And I think that the real heart of the Valley, not just ?? But potentially residential, or a good part of it, could be in downtown Jackson. It probably should be. So, I’d like, rather than just talking about Town as heart as the whole Town, if you’ve got some discussion dividing the parts of Town ?? In your overall discussions about Town as heart. Thank you.

Second sentence in second paragraph revised to read: “However, it is also crucial that the character and charm of Jackson be protected and enhanced where appropriate, for they too maintain the heart of the region concept.”

County commissioners,
The planning commissioners’ comprehensive plan draft review is not working. A joint planning commission between town and county is sucking the life out of what could be a very positive valley tool. Is there some way for the county commissioner to say “time out” and separate town and county planning commissioners? (We could just rope off the conference room and let each planning commission send out its strongest guy. I could bring two sets of boxing gloves and by the end of the night if we don’t have some results and least we’d be entertained.)

I know this whole process is suppose to able to sort things out so when this plan gets to elected officials the “BS” has been sifted out and the ingredients are ready for the correct recipe. Please let county and town planning commissions come up with their own recipes for baking a cake. The electeds will then be able to sample both recipes, put in their own pinch of seasonings and spices and present to the valley a comprehensive plan that reflects “Life in the Whole Valley”.

Friday, May 04, 2012
Griffith, Gregory
Interested Public

Gregory Griffith, West Bank. I'd like to try an attack on strategy 1.1, establish an Environmental Commission. There's so much public comment—and it's pretty inconsistent—for incorporating Game & Fish comments. So, I'd like to suggest that on the third bullet, the Commission would agree to make ?? studies related to wildlife and natural resource stewardship. It would help to coordinate that effort with multiple agencies. A possible compromised position that won't put anymore skin in the game for you is including but not limited to the Wyoming Game & Fish comments of June 26th. I'd also like to kind of a policy deal that goes directly to theme one. I'd like to request that a new concept be considered—a one-page preamble between vision and theme one, so that when current or future leaders encounter contextual conundrums, contradictions, omissions, oversight, ambiguity, opportunities for selective interpretability, selected enforcement—and they will. We encountered using the theme-one draft the other morning in a fencing workshop, we encountered really contradictory language, which somewhat stalled the discussion. So, this is going to be a problem when moving forward continually. If we insert this one-page preamble, it would act as a balance to the statement of ideal. A statement of ideal, I believe strongly, like Robert Browning said, that man's reach should exceed his grasp, and I believe our community has reached or exceeded its grasp. We should strive for ideal. But I think this ideal is relatively unenforceable. We're dealing with a lot of pragmatism here, so I'd like to balance that with a statement of intent in the form of a preamble. We had discussions last week with Commissioner/Mr. Palmer and Commissioner/Mrs. daCosta about inserting, as I have suggested in the past, private property rights into that equation. A sample...I was writing on my knee at the last meeting, I mean, it's subject to some interpretability, but a sample is the statement of intent for theme one hasn't been incorporated. One of the strongest requests from the community was to prioritize wildlife and open space. And if you need any public comment to back that up, we have 1300 signatures asking for exactly that. And my proposal for a statement of intent is that protection of wildlife, acquisition of open space, and protection of our natural resources prevail in all land-use decisions, except those regarding private property rights and the health and safety of the community. This...we could use this procedure throughout on each theme to provide a statement of intent so that there's, again, it will cover our omissions. And it'll help, you know, facilitate and back scratch the process somewhat. So, that's just a suggestion. That's just a suggestion. As far as the general procedure, I've noted that every chance we've had in this process to be bold, we've been timid. Every chance we've had to be visionary, we've been reactionary. Every time we've had a chance to put on our creative and critical thinking caps, we've instead reached for our concrete boots of the status quo. And this is called...that's the reason we're still discussing theme one at this late of a juncture. Mr. Duncker's comment of several weeks ago about mediocrity, I really feel like what we're doing here is much worse than mediocre. It's regret. One of the strongest human emotions is regret. One of the strongest forms of regret is that of lost or squandered opportunity. So, I'd just like to keep that in mind going forward. Whatever the process proposals are, I would also like to request that since we're using this time for theme-one comment, if there are any major process changes, allow maybe some subsequent discourse tonight for additional public, you know, abbreviated public comment on that process. So, it isn't just another, you know, Chairman Pruett said to Mr. Duncker that this is the process we agreed upon. I disagree. We didn't agree upon anything. This process was dictated to us and it was dictated to us without any opportunity for public comment. And so I feel like that's probably going to happen again tonight, so please give us a little public comment on the process itself later on. Thanks.

My name is Bland Hoke and I’m a resident of the Town of Jackson. I’m the Public Art Ambassador to the Center of Wonder, and I’m here to make a comment in support of integrating public art into theme three. And what I have tonight is a very broad scope of public art. And currently Jackson Hole does not have an established or organized public art program. And I’m letting everyone know on the Planning Commission that I’m organizing and coordinating a task force to develop the plan of a public art program that’s consistent with other communities of art in scope and scale. And in over 350 towns and cities across the U.S., established public art programs exist with ordinances and administration that oversees the funding mechanism and for selecting artists or placing art work in public spaces. And this is what I’m trying to facilitate the creation of, so it’s not a whole new situation that you guys have to deal with. If these public art programs exist to enhance the gateways to other communities, they exist to improve public spaces and they also use artists to reflect the unique characters of communities. So, the results can range from sculptures or murals on buildings to fountains or artwork in other buildings. But they also range from placing public artists right in the design process of buildings so that the result is more reflective of the community and it’s also a creative way that cannot be achieved in other means. So, what I hope the Planning Commission might consider when you look over theme three is how public art could be used to enhance the emotional appeal of the Town of Jackson and Teton County, or to enhance the aesthetics of the community character, or even promote a broad theme such as cultural tourism. That’s it. Thank you.
Kristy Bruner, Jackson Hole Conservation Alliance. I just want to...I brought a few brief comments tonight and say many thanks to those of you who came to one of my ?? presentations. ?? I appreciate that. As you know, the Conservation Alliance, throughout the lengthy review of theme one, we've made a number of specific line-by-line suggestions as to how to clarify and strengthen this chapter’s policies. We will not reiterate those again tonight, but I’d just like to state that while we feel a number of issues have been improved, major concerns still exist, particularly given the split votes at the last meeting. In general, we still strongly feel that the policies in this chapter need to be backed up more by the best available science and data. I’m just going to provide one example of this that I have not mentioned in awhile. In July, we raised concerns about policy 1.1.C that includes a general statement that quote private efforts of successfully protected strategic lands that protect connectivity between crucial areas and enable migration. Some lands have been protected, but to our knowledge there are a number of strategic lands that have not been permanently protected. In the latest round of public comment on the rewritten version of this theme, I noticed that ?? has raised the same concern in one of his statements. And while these types of clarifications or changes may seem little, we feel at the end of the day the new Plan the community ultimately adopts should contain the most accurate information, whether it’s on the detail level or the broad level. In terms of the process, if you at this point are not going to direct line-by-line changes to be made because you want to stay at a broader level, will there be a time prior to sending the draft on to the elected officials where these details will be reviewed by some entity regarding the level of science? Also some of the possible discussion points listed by Staff in your Staff Report, such as point one regarding responsible use of public lands, could better be addressed if these recommendations from other agencies such as Wyoming Game & Fish were noted and accessible in your discussions. As we stated at the September 10th hearing, the agency’s comments on dispersed recreation and responsible use of public lands can be specifically integrated into this policy to increase clarity. You know, overall we hope that prior to your final review, before the electives see it, some of the detailed recommendations brought forth by organizations and agencies that exist in this process can be better incorporated. On this first theme three, we’re going to be submitting detailed written comments on this chapter prior to your next meeting, but since you may be discussing some of the broad issues tonight, I just wanted to mention a few. Staff did a really good job raising some fundamental broad-level questions for your discussion, but I just wanted to mention a few issues that we feel are critical as a starting point in your review of this chapter. First, further refining the definition of community character as it relates to overall open scale, not simply architectural...not simply architecture in Town. You know, we’ve said it before, but I feel like if this Plan doesn’t sufficiently define what we want to protect in Town, the Plan is not going to help in protecting it. There are other terms and goals such as enhanced gateways that can be improved by adding a little more clarity in terms of what do we mean by enhancing gateways. Second, further clarify the extension to which additional development potential in Town represents additive growth for the Valley overall, rather than substituted growth. Are the tradeoffs in this Plan to receive density from outlying areas and important habitat, scenic areas, etc.? You know, as the Alliance has stated before, we believe an overall amount of growth, in addition to the location of growth, is a critical point to discuss in Town issues. Third, further define in addressing potential planning in Town is associated with significant increases in density in Town and how it relates to the Valley overall. I’ll just mention a few in terms of commuting rates, traffic, parking, potential road expansions, crime rates, to elevated noise, light, air pollution, incremental loss of the sense of small-town community. While we fully recognize the many potential benefits of increased density in Town, I feel like this Plan does a really good job about ?? bringing more workers closer to the workplace. We think that there needs to be more language in the Plan that speaks to the realistic potential cost and consequences. That way we at least have policies that address them and minimize those costs. And in general as you discuss Town, always consider how this is going to turn around and affect theme two, because we really don’t want Town redevelopment to be discussed in a back view. One other thing, with respect to some of the lack of specifics, discuss the potential of adding a specific principle or policy that addresses things like wildlife and natural resources and their associated planning missions that are unique to urban town planning issues coming in to Town. I will close with that.

Thanks.
Resident of Jackson. I’ve always been concerned and felt that too often the definition of community character seems to be ?? . And I don’t think that’s at all broad enough for really describing what community character is about. I think it should incorporate things like the pedestrian orientations, the opportunity for interaction between people on the street talking to each other, all those kind of things. The way the architecture is, the public spaces, there’s really a lot more to what I would call community character beyond the physical open scale of building structures. And I’ve always been sensitive to that, because I just don’t think that that’s the way...more density, you know, it’s not...that’s not all there is to community character by a long shot. And in a sense not preserving necessarily what we have today, but improving it and even making it more of a community character that I think Jackson had years ago. That was the kind of interaction we had at the post office, that kind of community dealing with each other on a personal basis. And that was more involved with a pedestrian environment. I’d almost like to go back to more of that, and not the suburban type that we have where we drive everywhere. I think it’s worth attempting to go back to a little better community character. I note in here this comment that was put out about private property rights and historic preservation, and I’d like to say that isn’t really a serious issue. And I also agree that there aren’t really that many ?? properties in Jackson. But I’d also like to suggest there’s been a problem with preservation of historic buildings, and one of those problems relates to the building code. If you should move one of these historic buildings, you have to bring it up...pretty much you have to bring it up to current code. That is really...a real impediment to moving any of these structures. There is provision in the building code. I don’t think it’s been used all that much to allow for historic, for example, ??, you know, that they, okay, it’s been here 50 years <<inaudible>>. You know, there’s provision like that, but I would encourage you in this Plan, in terms of historic preservation, to try to see if there’s ways to facilitate some, because I don’t think it’s even feasible in most cases. I don’t believe in just eliminating all discretionary incentives. I think there’s a lot of merit to getting better projects with some discretionary incentives. An example is resort master plans, which were highly discretionary in terms of how it worked out in the past, especially on bigger parcels. There’s abilities to get much better development if the Planning Commission and Council has some discretion within ?? . We have to always think about, one, lack of development and a bigger development and the differences that can occur in those, or can occur in those, and maybe should, to create better development. I certainly encourage mixed use and <<inaudible>> more pedestrian orientation of that, more concentration and ability to be served by public transit and by pedestrian traffic. People are a lot more willing to do than the conventional wisdom would indicate if it’s from ?? and encouraged. And it is real important also from our tourist economy to have a real nice pedestrian ?? and have them enjoy ?? . The other thing with this community character thing is to have more use of the downtown area by ?? . I’ve never believed, and it always seemed to me like, okay, the square in downtown is for the visitors. We’ll let them have that. We don’t want them to go anywhere else around here. And we don’t want to go there. I think we’ll have more successful visitor economy if they get more of a chance to interact with locals. And I think locals will enjoy the opportunity ultimately to deal with people that come from all over the world here. So, I’d like to see more interaction like that and more planning to get there. There’s a provision in here on enhancing Jackson’s gateways. I think for a number of years I encouraged utilizing the bridges that cross our waterways in a way of making really nice bridges, instead of just pipe columns that is the typical WYDOT thing. And to utilize the provisions that are in the general and highway funding for use of enhancements and really make those nice gateways. It turns out that our waterways are precisely at gateway places in many cases. It’s a very gratuitous opportunity. I mean, we have the Flat Creek out by Dairy Queen, Flat Creek again down by ?? in that area. Those are logical gateways to the downtown area that could be very much in use. We have one in Carnes Meadow and Snow King, which is another one that’s really entering the downtown, or a more concentrated...it’s not a commercial downtown exactly, but it’s still kind of a gateway. We have out by the, you know, by the ?? . That one’s really entering Town. And you have a Wilson, or if you have a Snake River bridge going to Wilson, which is entering the general area. These with some sort of a theme...and you have a Fish Creek going into Wilson, a gateway into Wilson. And you even have one on 390 going out, you know, at Lake Creek going out to Teton Village. Or even the Gros Ventre out going into Grand Teton Park. I mean, there’s really...these things, these are actually in very interesting places. With some sort of a theme that wasn’t a hokey, busy type theme, but some authentic theme of bridge treatments, we could really enhance the area with that, I think. And I believe there’s this highway funding. <<inaudible>>. And I think you could raise money privately to help with that, too. Anyway, that’s some comments. Thank you.

There will be no review of the recommendations for a Theme until all Themes are reviewed.

The intent of the Planning Commission is to apply wildlife protections everywhere, without universally burdening existing platted lots with additional environmental analysis.
Beginning with Theme 3 there will be no review of the recommendations for a Theme until all Themes are reviewed.

Hi, my name is Cindy Stone. I live south of Town. I missed the last couple of meetings; I was away, but I came back yesterday to get audio disk thing. And that’s a good thing, that’s a really good thing. Everybody should take advantage of it. And so on November 12th you were addressing the rural character, which should be included in Comprehensive Plan and don’t, Staff, leave it out. It’s not doing any good except satisfying the public. Now, I mean, that was a joke but it didn’t come over real well ?? . My washing machine in my front yard does not have the fastest spin cycle, but I’m pretty sure that on November 12th my rural character was insulted. And if you don’t know that that provision of rural character, sometimes the correct answer is the simplest. So, I consulted Dan Webster and rural means country, country people, agriculture, character, distinctive quality, attributes. Now, in your public lives and your social networks, I don’t really care nor is it any of my business what you think about rural character. But in this situation you are supposed to be representing the public, and condescending, ignorant remarks are noticed.

Discuss Future Land Use Plan following elected approval of the Themes.

Rich Bloom, and thank you again for all your comments and <<inaudible>>. Just a few comments about theme three. Today I’ll make comments about process and I’m sure there will be a discussion on that tonight. And I want to keep these back up to the 50,000-foot level we’d always love to go to, and it has to do with Michael Kinsey from the Rocky Mountain Institute and those discussions. I’ve been reading some of his papers and all and the idea of smart growth. And I had a conversation with Michael about smart growth works when it’s substituted growth, when you’re trying to move growth around. But when it falls in the realm of additive growth, when you already have huge potential growth within a community that you can’t unwind, then it’s not smart growth anymore. And I think we found how problematic that was and I think we had wonderful discussions there. I wish more of the Town Council and the County Commissions were here about transferrable development rights, about the Planned Residential Development tool, the PRD tool, about the discussions between permanent open space and temporary zoning and just how you move those units around. So, as you move into theme three, Town as heart, I think you’re going to be looking at some stuff to get at growth within Town, which areas should be maybe have different types of uses or lower intensity, moving those to other more logical locations. But I think there’s always a tendency to everything becoming more and more additive because it’s so painful to downzone. It’s almost as bad of a term as node I guess. And I think that’s where nodes and the County came to a rub was great idea but how do we move that around without it being additive. So, that’s going to come up within theme three. So, as you have discussions about adding and changing density, make sure it is substitutive growth within Town or from County to Town that is achieving those goals because I think we already know just how much growth we already have, commercial and residential, on our plates to deal with that we can’t unwind. And I think that’s going to become clearer when the Numbers Group presents. We’ve been able to quantify some of those numbers and they’re pretty scary. They’re actually very scary. Then the only other thing would be…really, that’s kind of it. I guess as we have these discussions, just go back to that whole idea that Michael Kinsey was talking about that we’re not just trying to do ?? , that we’re not trying to just add things. Why are we doing these things? Are we trying to achieve more vitality or property tax to achieve housing, and make sure we’re achieving those goals and we’re not just doing ?? versus achieving a goal whatever that goal happens to be. Thank you.
Hello, Gail Jensen. I’m not going to reiterate my comments from theme one. I put those in writing. I hope you all will still consider those, as we didn’t get further along in the theme-one rewrite discussion. I have one comment for the Town as heart. I’ve officed here in Jackson for almost 30 years and I see a dramatic difference in how the sunlight comes into the Town, the denser Town-Square area, especially around my office where I get very little sunlight. And I would really hope that there would be some discussion on limiting the heights and that so that you can get some light in. It makes it a very unpleasant atmosphere in Town when you can’t get some light into the buildings, especially there on the first floor and you’re totally blocked by three stories above you. Another consideration also...the thing I’ve noticed, too, in Town is the lack of delivery access points. And that is a real problem. I’ve witnessed a number of fist fights and things over the years where UPS trucks, FedEx trucks, delivery trucks, trash trucks, whatever, coming in the front streetscape and blocking a lot of tourist vehicles in or local vehicles in for long periods of time, and there’s been arguments. So, I’m hoping that maybe some sort of...I don’t know if this is the place, or in the LDRs, but there certainly is a problem with that design-wise in our Town. So, anyway, those couple of comments. Thank you.

Alex and Jeff, I would suggest you take a look at Fremont County ID Policy 4 before you begin work on a policy about private property rights for our Comp Plan. Policy 4 acknowledges one of the duties of the Planning Commission is “to protect property rights.” I believe this statement will satisfy Joe and Lisa’s concerns. It also goes on to acknowledge “with property rights comes the responsibility to prevent damage to neighbor’s land or serious health and safety problems. Private landowners will have to take actions to avoid or mitigate adverse impacts.” It then goes on to list 2 strategies to accomplish this balance. (ID state law requires a property rights element in a Comp Plan.) The statements are balanced and seem to address concerns on both sides of the issue. Let me know if you need me to resend the document. I hope you find this useful.

Dear Joint Planning Commissions,
I know you have taken your responsibilities seriously and some good work has been accomplished - but I – in the vein of Commissioner Lisa daCosta’s comment last night – also often wake up at 3am anxious on where this plan process is – and is not going. Perhaps you, as I, would like to get a bit more sleep. I believe after last night’s impasse – the current process is failing. We went on for hours with once again split vote after split vote. I do acknowledge you were eventually able to get a few items to the point of consensus. Unfortunately as Paul Dunker was quoted this week in the newspaper – “Mediocrity is the price of consensus.”
I suggest two possible courses of action – you may have others.
One would be to simply take a time out, enjoy the holidays – and remand the remainder of the draft, in its entirety, back to staff so they align it better with the public will. Then restart your review.
If that is not acceptable then do something along the lines of our own federal government in crafting legislation – divide into Town and County planning commissions and associated staff – then discuss a chapter separately - coming back after each body has a completed draft and see if you can reconcile differences. In this way each will be free to craft a clear position.
Our federal House and Senate does not sit down together crafting legislation – rather they craft it separately which is challenging enough – then try to reconcile the differences. In the end it then goes on to the President for signature. In our Comp Plan the idea is what is not reconciled then proceeds to the joint electeds to reconcile. At least the electeds – and the public - will receive clear - albeit at times different - direction from your two bodies.
What you should seriously think about is whether you really want to continue “riding a dead horse”.
Respectfully - Rich Bloom

<td>Acri, Armond</td>
<td>Larry and Michael, Thanks for keeping it at last night. After a rocky start, I think some progress was made. Perhaps not as much as we would have liked, but more than would have happened if you all went home at 7:00. I have two suggestions to improve the process: There are 3 primary sources of input for the Joint meetings: 1) Staff input (including questions and requests for clarification) 2) Public input (written and verbal) 3) Input from the Commissioners (Primarily written points submitted with the staff report, verbal comments before a vote are a different issue) It is important to adjust the balance so no one source overpowers the other two. I would suggest that the agenda for each meeting include a discussion period for each of the three sources. Since there is a natural advantage to going first, I would suggest the order of discussion be rotated. After asking for comments if there are none, the chair would move to the next item. The important thing is that it is on the agenda as a reminder. Last night, there was a great deal of discussion on written and verbal public comments, but very little discussion on the points submitted by Lisa da Costa. In other meetings Staff input has dominated the discussion with little discussion on public comment. Neither situation is the optimum. My second suggestion is that the real opportunities to work on are the split votes. These identify points of conflict between the two Commissions that need to be worked out. Instead of submitting a revised copy with a footnote, we need to actively pursue a solution. Perhaps that would be done after a &quot;cooling off&quot; period to see if there is room for compromise. Ignoring conflicts will not make them go away. Instead they will fester and resurface later. They hamper our ability to have a true joint process. At the very least, the Staff Report to the Electeds should identify the differences of opinion with a synopsis of the two opposing view points. I hope you will consider these suggestions as I believe they will improve the process.</td>

<td>Labelle, Ernest  Interested Public</td>
<td>My name is Ernest Labelle. I’m a resident of Wilson. In my opinion, one of the most important criteria for a healthy livable quality-of-life environment in a place like Jackson Hole is to create opportunities for wildlife to move freely within the developed areas and through the developed areas. This is not a naive notion. This can be done. One way to encourage it is to address the issue of fencing, which has been addressed at the Commission level, but it needs to be addressed at the neighborhood levels within the community. We are here in this Valley, among other things, a collection of subdivisions. I live in a subdivision. I’m on the board of directors. I’m the past president of the subdivision that I live in. And we have taken steps to see that we have a policy that sets forth the guidelines for stewardship within our subdivision. Stewardship that ensures that no fencing will be allowed that in any way prohibits the movement of wildlife within and throughout our subdivision. Can you imagine if every subdivision and neighborhood in this community, in this Valley, stepped forward and stepped up to the responsibility of making things like that possible? We will have achieved a great gain, what you want to achieve in terms of wildlife stewardship in your Comprehensive Plan. So, I would recommend to you that you find a way of putting guidelines and language in the Comprehensive Plan that will encourage neighborhoods to assume some level of responsibility with their own associations to ensure that we continue to maintain an environment that is friendly and accommodating and that encourages the movement, the free movement, of wildlife throughout our community. Thank you.</td>

<td>Pierson, Scott</td>
<td>Good evening, I’m Scott Pierson. I’m going to ask you to think about planning now and for the future. I know you’re trying to do that, but you’re also thinking a lot about ?? When we don’t plan for the future, certain things happen just because they happen to be at the right place and the wrong place at the right time. One example is the affordable housing planned unit development. Back in ’94, the affordable housing planned unit development didn’t exist. Suddenly the ?? trailer park on 390 and Wilson Road became available. So, they changed the Regulations to accommodate that so that the Housing Authority could put that project in there. Whether or not that project is the right place at the right time or the most suitable location, it was opportunist and we ended up with that project there. We also ended up with a legacy of the affordable housing PUD regulation that in hindsight may not be exactly what we planned on. Another instance of opportunistic things that happened, the Science School, now known as Hypocrite Village by a lot of people. But it was basically the Science School going into an untouched area with a good purpose for the Science School but probably in the wrong location. Another one that was a little outside the County’s planning was WYDOT. WYDOT put a light industrial site down on Hog Island and now we also have two or three other light industrial things there in that area. It was opportunistic for WYDOT to put that in there. Another one that’s more recent to especially the County Planners is the Search &amp; Rescue site. It’s in the Scenic Resource Overlay, it’s in the NRO. It was the only site that they could get; they’d been looking for a site for ten years, so it was approved by the County Planning Commission two weeks ago. Why was it done? There wasn’t any choice. What I want to go back to then is what were some of the better things that we came up with in ’94 that turned out pretty well? The Valley View Subdivision light industrial park has turned out to be a well used, well utilized industrial area. It was planned for that. It was residential at that point in time and it transitioned from the residential because of its proximity between Lower Valley Energy and South Park Service Center into the light industrial area that’s down there now. There’s some mistakes down there as well with accessory residential units in a light industrial area that weren’t contemplated. But that was another change to the LDRs that was made opportunistically. You know, there are some good ways to do things. If you plan for where growth is going to occur, maybe WYDOT wouldn’t be where it is. Maybe Search &amp; Rescue wouldn’t be where they’re ending up. And maybe the Science School wouldn’t be where they are ending up, if you would just figure out, okay, where are we going to grow a little bit. You don’t have to open the floodgates, but plan direction, most logical places and they’ve all been discussed, they’ve all been presented by Staff. Thank you very much.</td>

<td>Shoals, Cindy</td>
<td>Hi, I’m Cindy Shoals and as much as I’d like to speak for lots of other people, I’m only speaking for myself here. I’d like to urge the Commission also to consider the Game &amp; Fish’s comments in this version of the Comprehensive Plan. Not only are we working towards creating a Comp Plan that’s based on the best available science, but let’s think about how this community has evolved over, say, my lifetime, 30 years. One of the most impressive things that have happened in Jackson Hole and the ?? in the past 30 years is the designation of the Gros Ventre wilderness. I urge you all to think about the Gros Ventre wilderness. I urge you all to think about the various movements, the various energies that people on this committee have put together in order to really create a lasting legacy for our community. And I may be a little bit biased about the Gros Ventre wilderness. Not everybody can be at Darwin Ranch. But it’s our responsibility to continue to preserve our open spaces and, most importantly, our wildlife for my grandchildren, for your grandchildren, to set an example for hundreds of years to come. Thank you for all of your efforts and I do urge you to consider the best available science in your decisions.</td>

<td>Barash, Jean</td>
<td>June Brash, Wilson, Wyoming. Today, Dave and I came home at noon and we walked into our living room and we were so excited because there on our pond was a fabulous swan. And at first we thought it was a trumpeter swan and then we looked and it had a big tag collar on it. It looked different. And we picked up the phone and we called Wyoming Game &amp; Fish and we got Susan Powell. And we described what we saw and the number and so forth, and she was so excited and said, can I come out? It’s a tundra swan. They don’t often fly over Wyoming on their way to Utah. I urge you to incorporate Wyoming Game &amp; Fish’s comments into this Plan. They are such a hard-working organization. We have never called them as homeowners with concerns or questions that they haven’t called us right back. They’re so interested. They work so hard. I know they put a lot of time into writing this report. So, I urge you to please incorporate it into this vision statement. And then the second thing is this past weekend I took my grown children to Washington, DC. We hadn’t been there since they were in grade school. And for whatever reason we had a chance to go back again. And we did all the tourist events. We had contacted Senator Lindsey’s office ahead of time, and so we took a tour of the White House and we went to the Capitol, all of those things. My children were there the last time when they were ten, eleven, and fourteen. They’re now thirty-nine, forty, and forty-four. And we had a wonderful time. We did all the things, went to all the memorials. It was great. It was a lot like what it was when we took them there so many years ago. And I was talking to someone at one of the memorials, saying, man, wow, this is so great, this is so fabulous. And I was at the World War II memorial and I hadn’t seen it. And I said, you are so lucky that you can come and see all these things and it doesn’t cost anything. And the person said, where do you live? And I said, Jackson Hole, Wyoming. And the person said, do you know how lucky you are to live in a place like that? And I know I’ve said this before, and it’s so hokey, but this is a one-of-a-kind place. People can ski in other places. People can play golf in other places. People can have fabulous meals in other places. But there is no other place that has the wildlife values, the wildlife that we have. And whether it is because you feel a, you know, you’re a tree hunter or you’re a business person. If you’re a tree hunter, you’re going to come back because you love these places. If you’re a business person, as people are in this community, it’s good for business. So, that’s all I have to say. Thank you all.</td>

<td>Lasley, Louise</td>
<td>Thank you. I’m Louise Lasley and one of the benefits for working at the Conservation Alliance is how closely aligned my ideas and values are with theirs, but tonight I’m speaking personally. And what I would like to suggest most strongly is that this Plan incorporates the best and strongest language that acknowledges the scientific values and the premiums put on wildlife and make sure that’s incorporated. And whether it’s in the body and policies, it should also be in the indicators. I find that just the term monitoring without any kind of background scientific data to back that up and using that data in your monitoring that makes it way too vague to know you’ve accomplished anything. So my emphasis would be on making sure that wildlife in this theme and throughout the Plan is acknowledged, as the public would like to see it, as the number-one priority and everything else in this Plan goes from that. Thank you.</td>

<td>Joint Planning Commiss</td>
<td>Conservation Alliance 11/12 Action #7: Add language that clearly explains why the protection of diversely sized-parcels is important. (The rewrite of what is now policy 1.4a, page 11, does not adequately capture this.) Vote to direct staff to include more</td>
</tr>
</tbody>
</table>
Hello. I’m Nancy Hoffman. I represent myself and I also represent the Conservation Alliance tonight. I’d like to thank you all. Every time we get our reports on the internet, I marvel at the amount of work you guys are doing and stick-to-itiveness. It must be kind of like rote at this point in time, because of the amount of time you’ve had to spend. But I am in awe of it and I want to thank you for all your work that you have been doing. It’s fantastic. And I also wanted to recognize and thank you for including in your rewrite so many of the fundamentals of the planning and science that so often express, or are expressed by the public’s wish to...wish list as well as organizing...as organizations get through the planning process. You received in your packet...I forwarded to Staff in the Staff Report for this Thursday’s meeting seven issues from the Alliance of issues of concern that we believe, and that you believe, ours and the public consistent express key issues of concern and are worthy of examining. They should have been summarized in the points of discussion for tonight. We didn’t realize you didn’t have them. And if you don’t have them, I have them, if you’d like to refer to them. Anyway, the Alliance and I personally are troubled by...about the lack of appreciation of the importance of both Town and County planning issues being intertwined, or not being intertwined, or the fact that they are under not recognizing. So many of the issues have been put at the bottom of the page and that is troubling because, first of all, denying wildlife issues that don’t exist in Town and not taking the whole picture, especially when Town is adjacent to the National Forest. And no animal I know expects human political boundaries. And there is protection of Flat Creek just to mention another. I ask you to please implement the Game & Fish recommendations, which apply to both Town and County, and the other wildlife studies that have been done and anything that has come out of the old Plan that has been baseline that can allow you to move forward. And I compliment the Planning Commissioners who recognize and seeing that working together is for the best interest of the Valley. And that is of utmost importance. It is very important. Also, there’s a great discussion concerning tools, the funding of purchase of open space, and that has been dropped, as I see it. Please reconsider the implementation of a dedicated funding source. And even in these hard times, economically, there are mechanisms that are possible that do not significantly affect the public financially. And I cannot say often enough that having a complete working set of current scientific documents and science-based language relating to wildlife and natural resources as a baseline, and the means of implementing them for future protection of them, must be the key part of your Plan that you’re developing. Chapter one has to be...become the foundation and the guide for all of the chapters. In addition, the formation of a capable Environmental Commission is an excellent resource for good science. We have a unique ecosystem in Teton County which we have an obligation to protect and allow for everyone to experience. It also is our financial interest that we protect the natural resources and magnificent wildlife and scenic vistas, because if we lose our natural assets, we lose our very special uniqueness, and I’m sure you’re all aware of that. And then we become like any other place with no value. Thank you.
Gregory Griffith, West Bank. I'd like to address the agenda items for tonight first. If possible, in the future, could Staff number those one, two, three, four, five and then a, b, c, d, e, so we can comment more succinctly on individual agenda items. I'm going to go straight to number five, the language that includes no value judgment. There has to be a value judgment in the acquisition of open space. The community should not incur the same externalized cost for land of varying ecological value. It also needs to be acknowledged that open space is the single greatest positive effect with the greatest number of issues, including wildlife. And there needs to be a stronger inclusion of language about smaller parcels, primarily critical habitat connectivity. You could have an extremely small acreage that has very high ecological value. Under why this theme is addressed in the rewrite itself, there's a statement privately owned lands in the County continue to provide critical winter habitat for many species. That actually should be most critical habitat. The official statistics of Fish & Game are 79 percent of the moose winter range, 80 percent for mule deer, and 73 percent for elk. So either I suggest enter the actual percentages, or a round up of percentage, or put most to indicate the importance of that statement. Moving right along to policy 1.1.C, conserve large contiguous connected open space. That's great. But again I would like some, you know, acknowledgement of the value of and the need to engage in acquisition and preservation and protection of smaller parcels also. Going into policy 1.2.C, I think instead of water bodies, very similarly to the indicators, the language, the verbiage used there is waterways. I won't go back into my argument why irrigation ditches should be included in that, so I think you all heard it. But we need to acknowledge also that irrigation ditches siphon off and reinvent water to perfect waterways, Snake and Gros Ventre, specifically. And they should be subject to the same setbacks for filtering, etc. Policy 1.3.A also goes to the agenda for tonight. I think the term road scars should be entered into the policy, possibly policy 1.3.A. It's relatively pertinent to the north Highway 89 project right now. I agree with Staff on all roads. That's too vague. Private roads obviously won't be included there, so public roads and parks. Staff's language is fine on that. That also extends to 1.3.B. I think there's all roads listed there also. I also agree with Staff on 1.3.C, berms and ponds should also be included in that. 1.4.A, there really is nowhere where there's sufficiently strong enough language that prioritizes high-value habitat and I figure that verbiage needs to be strengthened. Policy 1.4.B, remove regulatory barriers to continue agriculture. That's opening another tin can of selective interpretation potentially. Wildlife friendly fencing would come under that. We went through that. We need to really...Staff needs to probably tighten that up and delineate which barriers we're talking about so we can vote on non-open-ended language. 1.1 number of strategies, establish an Environmental Commission. If you're not willing to revisit what Game & Fish vote itself, which is very important, as you've seen in public comment, at least consider entering under bullet four there, the Environmental Commission will consider all Wyoming Game & Fish comments and recommend inclusion in theme one where appropriate. That's the absolute minimum that would be acceptable. Under the Environmental Commission, this is primarily the Staff, I feel very strongly there should be a bifurcated board, which has an advisory board or advisory council to provide like ?? recommendations, and these entities would have specific expertise and experience in the disciplines being discussed. LDRs, under policy...sorry, strategy 1.3, amend LDRs. Possibly direct Staff to examine how many LDR changes are necessary to implement theme one. We recently did a...thanks to Commissioner Wall and Commissioner McCarthy, the EA amendment took eight and a half months to do. We had relative little going on with...we need to be realistic about an LDR prioritization. Under indicators, I feel strongly we should add indicator thirteen, acres put under conservation easements and additive units ratio. Right now that ratio is fairly unacceptable and it needs to be addressed. And number 14, you voted on this also. It was an oversight in my mind. Miles of wildlife unfriendly fencing removed. It was a four to one vote in the County. Including it as an indicator, not as a severity of the problem, and it also illustrates the fact that corrective action needs to be measured in miles. We removed 110 miles of un-wildlife-friendly fencing in the last several years and that sort of drives them down into the disparity problem. Thank you.

Hello, my name’s Dorothy Jankowski and I’m speaking for myself tonight. I live in Victor, but for the past 14 years I’ve commuted to Jackson Hole to go to work. And like many people in the area, and like most of the people who have participated in the Comp Plan surveys and made comments, I believe that protecting wildlife is this region’s number-one priority. Tonight I just want to ask you two things: First, as you discuss this latest version of the Comp Plan’s wildlife chapter, would you please keep in mind what the whole point was of revising the Comp Plan. The point is to end up with a Plan that is better than the ’94 Plan at protecting those things that the community has repeatedly said they want protected—wildlife, natural resources, and community character. Second, would you please ask yourselves honestly that the protections in this revision are stronger or weaker than what’s in the ’94 Plan. I believe that, although you have made some improvements, overall the protections in this document are worse, not better, than the ones in the ’94 Plan. If this is the best we can do, Jackson Hole should go back to the ‘94 Plan. Thank you for listening.
Armond Acri, representing Saving Historic Jackson Hole. I spent some time reading all the public input on the website and there were lots of good comments, and I certainly hope that they’re discussed tonight. I also found the Staff comments to be very good. But I am disappointed, to Kelly’s point, on...I think he brings up a good point, because there’s no one better at telling us how to manage wildlife than Game & Fish. So, I’m still a little confused as to why we don’t have that at least on the items to discuss tonight on how to better incorporate the Game & Fish comments into this draft document. And some of the good Staff comments I’d like to point out is, one of them is recommendation 84 to expand the SRO protection to the view points of all roads. As Greg pointed out, we definitely need to address this. I think it did go far out before. Perhaps this recommendation goes too far. Public roads and parks is probably a good compromise, but we certainly do need it, as you heard in discussion earlier, to protect our views. The Staff concerns about 1.3.C, modification to land forms, it certainly seems to merit further discussion. The language seems to be too vague. I have to admit myself not being, after reading it, not clearly understanding that that was the intent when I read what the intent was and compared it to what the actual language was. To Ms. daCosta’s point on property rights, I think that’s a valid point. And I haven’t brought this one up for awhile, so I guess I’ll bring it up again. The Fremont County, Idaho, Comprehensive Plan, which I gave you all copies of, actually addresses that and perhaps rather than, as Ms. daCosta’s suggestion, to put it in a whole bunch of places would be possible to put one statement in there that says, as a principle or policy, that you would respect property rights. They thought it was important enough to add it as another policy, so I would suggest you think about that. And I also think there needs to be a priority discussed in terms of avoiding tax over mitigation. I sat in a meeting this week with the County Commissioners where there was talk about mitigating a project, and the landowner had to admit that there was no way to mitigate. What he was required, the amount of land that he needed to offset what he was doing. So, I think there’s this idea that mitigation is a solution and I think the priorities should be in all cases to avoid the impact first, because that’s always a better policy than mitigation. Mitigation should be a second choice. Thank you.

Conservation Alliance 11/12 Action #6: Add language that provides greater detail on potential types of exemptions and allowances for agriculture.

Conservation Alliance 11/12 Action #4: Wildlife protection should be the primary consideration in all land use decisions.

Conservation Alliance 11/12 Action #4: Wildlife protection should be the primary consideration in all land use decisions (While balancing the need to protect private property rights)

Conservation Alliance 11/12 Action #3: Add the following strategy: “Establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation.”

(Through the vote of the

Conservation Alliance 11/12 Action #2: Ensure that the red-lined, rewritten draft of Theme One that is sent to elected officials includes an incorporation of Wyoming Game and Fish comments.

Conservation Alliance 11/12 Action #1: Ensure that more specific data, language and mechanisms to protect wildlife are incorporated into the plan, and that existing data and knowledge are efficiently utilized. Science-based language from the existing 1994

Incorporate all seven 11/12 recommended actions from the JH Conservation Alliance into Theme 1

The staff rewrite met the intent of the previous recommendations made

Insert into Theme 1, Why is this Theme Addressed, end of second paragraph: "while balancing the need to protect private property rights"
My name’s Kelly Lockhart. I’m speaking for myself and my family and properties that we steward in Buffalo Valley and South Park. I was out on Flat Creek the other day fixing a fence and Tommy and Betty Trout were coming back from ??, coming back to Snake, and they ran into Jake. And said, well, Jake, where’s Martha? He said, well, Martha was up in ?? this summer. She was in this one hole and she kept trying to eat and she ate this bug and it hooked her right in the mouth and dragged her to shore and these people would come and they’d grab her, they’d stomp in the grass in the riparian area and they’d grab her and they’d throw her back. Sometimes she’d go belly up. They did that about three days in a row and all of a sudden she didn’t make it; she died. So, she didn’t come back. <<inaudible>>. And Tommy said, well, how did...did you get to lay the eggs? She said, well, we did but then there were all these people that kept stomping across the rocks to find beds where the eggs were and they just...people would come every day and every day and just stomp across the spawning beds, and so I don’t know, I don’t know if we’ve been very successful this year. And I thought, boy, that’s kind of an interesting story. So I was down at the house the other day on Spring Creek where my house is and Donald and Daffy Duck were coming by the house, swimming, and I heard them talking. Donald said, Daffy, what’ll we do this afternoon? And she said, well, I don’t know, you know, I was down on South Park feed ground the other day with Susie and Herb, and we were just going along and minding our own business and some people come up and wanted to talk. There were these loud bangs and all of a sudden my two friends were dead, killed dead right there in front of me. So, I don’t know if I’m going to go back down there. And so I’m listening to these stories and I thought, well, gee, you know, the County’s doing a Plan on chapter one on wildlife and natural resources and what’s going on. So, obviously, the County must be doing something with respect to fish and ducks. So, I go to the first page and sure enough, you know, we’re going to protect the resources. The community recognizes policies ?? development, transportation, recreation. So, obviously, <<inaudible>> down in South Park. Obviously, we’re going to take care of killing wildlife, right? What could be of more direct impact on the wildlife than killing them dead. <<inaudible>> So, I get into the policies and sure enough, you know, I start to read some of these policies that talk about direct impacts on wildlife. I see policy 1.1, we’re going to limit human noise, 1.2 we’re going to talk about wetlands and riparian areas, 1.5 we’re going to limit recreation to public lands, we’re going to limit impacts on nearby public lands. I guess that might be Daffy and Susie and the ducks and the trout and so we’re going to limit those. And I thought maybe the next sentence would then be that we would not allow humans to kill wildlife. But then it goes on to say we’re actually going to build dog parks. I’m having trouble here guys. I really am. We talk about the impacts to wildlife and I think you have recognized that humans have impacts on wildlife. I think they probably do. I’m not sure what greater impact that we have than our intrusion into their habitats and into their life. And if we’re killing ‘em, which obviously continues killing wildlife, and you want to protect them, maybe you ought to limit ?? . If fishing hurts fish, which I’ve seen some fish get hooked in the gill and I’ve seen them go belly up and have seen them floating on the river. They’re dead. I haven’t seen anything in here that limits humans’ affect on wildlife and killing them. I can’t find one sentence in the stewardship of wildlife and natural resources chapter. If I missed it, please point it out to me. I can’t find one. I did see an indicator. I did see an indicator in that our access points to waterways and public lands. I guess that’s people, trampling in the riparian areas, fishing, pulling their boats up on the rocks, wandering around in these habitats. We want to make sure there’s no net loss. You’ve got to help me out here. How is no net loss of access points to waterways and public lands helping wildlife? What’s it doing in this chapter? What does it have to do with wildlife at all other than putting more people in their habitat, putting more fishermen catching them, fondling them? All the fish don’t make it. I’m on the river quite a bit. I see people wandering around. I would argue that perhaps something in fishing do do damage to wildlife and probably would kill them. Now, I’m not saying this is necessarily my point of view that you should prohibit that, but I’m saying in the chapter where you pretend to deal with recreational use and its impacts on wildlife, there’s not a sentence about it. You do absolutely nothing. I think I know why. I think I know why. I think it might be that members of the public view themselves as having property rights for the access to the wildlife, to the use of the wildlife, and they view themselves as having some property rights to be able to kill them, to be able to fish for them, to be able to stomp around in their habitat, to be able to mountain bike right through the middle of their habitat, to be able to ride horses through the middle of their habitat, to be able to go climbing where the birds of prey often wander. And I believe that the public doesn’t want to give up any rights to help wildlife here. And I believe that you did not put any of that in here because you felt that there might be a public outcry because you might have taken some of their property rights or some of their rights to enjoy their wildlife. And so it’s not there. Lisa daCosta’s public comment talks about property rights. What I see here is a lot—actually, every bit of it—that speaks to landowners and their rights to their property and how you’re going to limit their...maybe the setback of their house. I can tell you my house sits on a stream and Daffy Duck swims up and down the stream every day. I didn’t kill her. And yet you spend a whole chapter, two months, three months, four months, five months talking about my house and not talking about anybody who walks over the bank and shoots her. I don’t get it. I suspect that’s because there’s not too many of us who have property rights that can come to these meetings and say, hey, you know, shouldn’t we balance property rights and wildlife values, which I think you should do, which I don’t think you’ve done here. I don’t think you’ve done it at all. And, in fact, that one indicator to provide more public access into crucial wildlife habitat is exactly the opposite. Exactly the opposite. Show me a study where more public access to waterways is going to be beneficial to the wildlife. I’ll give you my e-mail; please send me the study that says more people there will help. And yet there it is in your indicator in the final draft. Thanks for your time. If I missed something, please let me know.
Hi, Kathy Tompkins, Cottonwood Park. I’d like to take this opportunity to fully support the Jackson Hole Conservation Alliance’s position and recommendations to theme one of the Teton County Comprehensive Plan redraft. Everybody at the Jackson Hole Conservation Alliance works very hard to make Jackson Hole the very best it can be, and they have my the respect, and by the looks of all the comments on the Plan’s site, they have the respect and trust of a lot of other Valley residents. I hope that you still take into consideration a funding source that can help us achieve permanent open space. It is a worthy goal that the community already agrees with and wants. It starts in the Comprehensive Plan as a goal and then defines it later. We need to be creative in preserving open spaces and protecting wildlife, so this is not the time for mediocrity and overcompromising. On the subject of property rights, I hope that all residential property rights will be respected in the new Comp Plan. I keep repeating this and hoping that people do take it serious that about the general public and the small property owner taking/footing a lot of the bill for unchecked growth, construction and services. Most small residential property owners here don’t enjoy the luxury of many of the tax write-offs and ??? In West Jackson another concern that negatively affects the small property owner and their rights is the suggestion of extending the industrial sector from Gregory Lane to behind the high school. This will just lead to more open spaces in the next Comp Plan rewrite. Another opened Pandora’s box. I think we should stop at the Sewage...I think we should stop at the Sewage Transfer Station and go no farther. Hopefully, some day the Transfer Station will be gone and be replaced with something that will fit in with the school campus area along High School Road. I mean no disrespect to large landowners and their efforts to do what is right for their families’ future while also being good stewards of the land. We should take every effort and opportunity to work with the ranchers and large landowners, i.e., for a funding source, to achieve a goal that will enhance everybody’s life in Jackson Hole while protecting our surroundings. But along the way let’s not forget the hundreds of hard-working small property owners who most times get lost in the shuffle and end up paying for the mistakes of overdevelopment through higher taxes, less services, higher crime rates, overcrowded roads, kids that slip through the education cracks, and degrading neighborhoods. Thanks a lot.
I wanted to thank you for agreeing to fully fund the additional review and analysis by Fehr & Peers, the transportation consultant for the Comprehensive Plan rewrite. I assume that you will also be formally inviting Rob Bernstein, P.E. to offer clarifications of his submitted analysis and recommendations for the enhancement of the transportation work to date - with his costs I believe covered by Save Historic Jackson Hole (SHJH). As I unfortunately missed both the Town and County meetings - from the staff report my understanding is there are to be two work sessions - the first in the morning would be in the form of a work session with the Transportation Advisory Committee (TAC). The second would the same afternoon as a public briefing of the joint Planning Commissions and Elected Officials.

The meeting of the Transportation Advisory Committee (TAC) will now allow Fehr & Peers to present and discuss with the TAC their technical analysis and recommendations on Theme 6. This work session would also give the consultant retained by Save Historic Jackson Hole an opportunity to comment on concerns raised by SHJH about the technical analysis and content of Theme 6.

My understanding is the second meeting would allow Fehr & Peers to present to the joint Planning Commission, Elected Officials and the public the work completed to date, proposed recommendations and possible revisions based upon the morning meeting. Most importantly, this meeting will now provide an opportunity to engage Fehr & Peers in a discussion and question answer period to begin the community's discussion of the transportation portion of the plan. Likewise I trust you will give Rob Bernstein, P.E. - the consultant retained by Save Historic Jackson Hole - an opportunity at this second session to comment on concerns raised by SHJH about the technical analysis and content of Theme 6.

In closing I felt you once again exhibited vision today when you agreed additional information needs to be gathered on the limited traffic analysis completed to date - and it is the responsibility of government to fund that work. I understand that Save Historic Jackson Hole offered to pay the full costs of the County traffic consultant if this remained a barrier. All of our conservation and neighborhood public interest groups I believe want you – the decision makers – to have the best information available to make the difficult policy decisions you must make. SHJH clearly “put their money where their position was” this morning.

You already know my strong opinion that the best policy decisions are always based on the best and most complete information available. The costs of not doing so is inevitably much larger then the front-end cost in collecting the information in the first place. I only wish the Jackson Town Council would have affirmed the same decision last night and shared this cost with the County.

Respectfully – Rich Bloom
South Park Neighbors
P.S. For transparency I am neither on the board, or a member,

Regarding section 5.1.e, Providing locations for light industry: The recommendations include a preference for the development of “green” industry. One thing to consider is that the infestation of the pine beetle has caused widespread devastation to the forests in northern Colorado and southern Wyoming, and it will inevitably spread to Teton County. In fact, it is recognized that the infestation has already begun in this area. This will result in increasing numbers of standing dead trees. As stewards of our environment, we have 3 basic options: 1) do nothing and let the infestation run its natural course, which will include forest fires, falling trees, and increased run-off erosion in burned areas; 2) use prescribed burns and pesticides in selected areas to control the infestations; 3) harvest the standing dead and infested trees and process them into usable products like wood stove pellets, building lumber, logs, and finished wood products, etc. As a past resident of Grand County, Colorado, I have seen the devastation and would highly recommend researching and designing a program to deal with the coming infestation BEFORE the forests have been destroyed rather than AFTER it has happened. We are about 5 to 10 years behind the Colorado curve in my uneducated estimation. I do not want to see the same thing happen here. I see this as an area to develop “green” industries, jobs, and manage forests to avoid a widespread beetle kill off. Believe me, dead forests are a turn-off to tourists.
When reading the overview and executive summary, I noticed a few planning priorities that do not seem to be adequately addressed. The following are my thoughts on the issues of workforce housing, wildlife conservation, and transportation:

1) I believe that I read at the very beginning of the overview that protection of wildlife habitat and provision of migration routes through human inhabited areas was the topmost consideration and the PRIMARY parameter for design of the land use plan. As I read further, I did not get the sense that this was still the number one consideration. However, I have not yet read the nuts and bolts.

2) The need for Workforce (ie: affordable) housing and Transportation (ie: growing congestion) issues seemed to be linked as a major cause/effect relationship in the executive summary. I believe that this premise is way off the mark! My view is this: It is obvious that this local economy is SEASONAL and is based almost entirely on TOURISM. I would assign an uneducated estimate of the impact of workforce on traffic congestion at 10% and tourist congestion at 90% during the "tourist seasons". To me, the logical approach to solving the North Cache–West Broadway traffic dilemma is to provide additional parking and pedestrian crossing solutions!!!! We already have 2 public parking lots in this area but it is not enough and the problem will continue to worsen. I propose to construct multi-level parking structures at these 2 locations and possibly at a 3rd location farther north. Additionally I would add crossing lights or construct several aerial crosswalks at the most congested/dangerous downtown locations. This may not be in keeping with the authentic Western look, and they may be little used during a portion of the year, but it is the peak season that defines the need. If the congestion issue is to be effectively addressed, then parking and pedestrian crossing MUST be addressed!

3) Another problem I see is commercial truck deliveries to downtown businesses during peak hours. This causes major traffic tie-ups and delays. This is a difficult problem to address because many businesses are only open to receive deliveries during these hours. I think we need additional Loading Only—No Parking zones downtown, or at least instituting time-sharing of parking and loading zones. Ticketing of delivery trucks is not the answer, but allocating loading zones with time slots for deliveries will help. Try to get deliveries on a schedule! (ex: 06:00-10:00 and 16:00-18:00 hours)

4) There is no room to add extra traffic lanes downtown, so providing small shuttles or carts for seniors and the handicapped could help alleviate some congestion during the high-traffic tourist seasons.

5) Partnering with the National Parks toward the goal of reducing camping within the parks and increasing guided tours from the greater areas could help reduce ecological impact from traffic and increase economic benefits to local tourism businesses. Denali National Park has been using this system for years, refer to that as a model.

Please NO NODES and Open Space and wildlife must be a priority.

Thank you for not reopening the vote on ARUs. Mr. Palmer needs to play by the rules. You can't change them because you weren't there for the vote. Too much time was wasted on the subject. And I thought I was stubborn! Kathy Tompkins
Dear County, Jackson and Planning commissioners,

I would like to make the following comments about Theme 1 in the current draft Comprehensive Plan document.

First, I would like to commend everyone directly involved with the drafting of this document on all their hard work on this critical but difficult task. I have lived in the valley for over 20 years and was involved with the drafting of the 1994 plan.

Here are my general thoughts:

1. I believe that there is an overall direction in the community to place the protection of the wildlife in this county as the top goal of this plan. I support that notion but it need not come at the expense of economic development. If you don’t grow at lease a little you will probably die. To me what is most important is protecting three critical wildlife protection measures. They are preserving the major migration corridors that exist today, the riparian areas around the valley and protecting the wildlife at road crossings. For example, when WyDot reconstructs highway 22 at the Teton Science school entrance, a moderately long section of elevated roadway (1/8 mile) will do more to protect wildlife and their migratory habits than any regulation ever will.

2. Providing affordable housing in areas throughout the valley is vital to the community. Although the concept of “Nodes” has become a dirty word these days, every land planner worth anything will tell you that our plan needs nodes to function more efficiently and to achieve the plans goals. I live in Wilson on 3rd street and I welcome and support some more density in this community as long as there are other nodes with increases around the valley. This will help protect critical wildlife habitat in other areas.

3. The issue of growth is important but a no growth concept is unrealistic and leads to a poor plan. One thing that needs to be address is the amount of guess houses currently allowed in the county. This development potential will have a huge impact on total build-out figures and needs to be address in the plan one way or the other.

I know this is a political process but the leaders of this community have to take a strong stance on critical themes of the plan and try to maintain a balance in between human needs and wildlife needs.

Like its predecessors, the newest version of the draft Comp Plan’s chapter titled â€œPractice stewardship of wildlife, natural resources, and scenic vistasâ€ fails to include the policies necessary to achieve its statement of ideal: â€œMaintain healthy populations of all native species; and preserve the natural, scenic, and agricultural resources that define Teton County’s character.â€ Specifically, to reach these goals, this chapter needs to:

• Incorporate the recommendations made by the Wyoming Game and Fish Department (the local authority on wildlife in Teton County) on June 26, 2009. â€œ Add a strategy to establish a dedicated funding source to acquire permanent open space in Teton County to protect wildlife habitat and preserve scenic vistas and agriculture. Most of the people polled in Comp Plan surveys during the past two years said they would be willing to pay more in taxes for open space preservation than for any other issue, yet thereâ€™s no provision for this in the draft.â€

• Incorporate specific language stating that wildlife protection should be the primary consideration in all land use decisions. Our unparalled wildlife species make our community unique from all others - their presence is a key factor in Teton Countyâ€™s economy and our communityâ€™s quality of life. Letâ€™s protect the goose that lays the golden egg. All impacts of development on wildlife â€œ direct, indirect and cumulative â€œ must be considered and monitored.â€

• Outline a science-based monitoring program and provide a clear explanation of how indicators will be used to draft and amend land development regulations.â€

• Incorporate science-based language from the 1994 Comp Plan and recent scientific data to help inform decisions. This latest rewrite of the draft planâ€™s wildlife chapter highlights what many in the community have been saying since the release of the second draft in April â€œ overall, the draft Comp Plan (including this latest effort) is inferior to the 1994 Comp Plan that it was supposed to improve. Itâ€™s high time to cut our losses and start back at square one. Thanks for your consideration of these points, sincerely, Dorothy Jankowsky Teton Valley resident and commuting Jackson Hole worker for the past 14-plus years. P.O. Box 656, Victor, ID 83455 â€œ
dorothy@ninetyfivefivefive.com

First, I want to thank you for all the time and effort you have put into the comprehensive plan rewrite. Wildlife needs to be the primary consideration always, in any land use decisions, development plans, etc. This has consistently been the public’s mandate. I urge you to include the Fish and Game comments in the final draft.

<td>11/12/2009</td>
<td>Ewing, Patty and Frank</td>
<td>Thank you again for your time, effort and attention to this grueling process of rewriting the 1994 comp plan.</td>
</tr>
<tr>
<td></td>
<td>Interested Public</td>
<td>The overriding thrust of the Comprehensive Pan must to permanently preserve wildlife, open spaces and community character in each theme, district, and zone in town and county. It should be the primary consideration for all land use decisions.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Theme 1, as proposed, still fails to provide “specific data, language and mechanisms to protect wildlife.” Please reinstate the verbiage from the 1994 plan which has “science-based language”, and update the Natural Resources Overlay maps with the most recent data.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Collecting current data from all available sources, to be used by the proposed Environmental Commission is a good idea. However, the plan should start with the inclusion of the Wyoming Game and Fish comments submitted in June, 2009 into the comprehensive plan. Who has better expertise in monitoring wildlife than the Wyoming Game and Fish? Their specific recommendations should be a part of the plan.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Protection of open space is critical, and to do so, the plan should have a permanent mechanism to fund open space. One method would be the additional (allowable by legislative statute) 1% sales tax which would ONLY be used for open space protection, not for a myriad of projects which are currently the result of misguided, unrestrained rampant growth. Consider that every visitor, every resident loves the open agricultural spaces and most of us recognize that large land owners are great stewards of the land and wildlife, and would, we believe, much rather see cows, horses, haystacks and wildlife on their lands than houses with all their impacts. Include the strategy to establish a dedicated funding source for the acquisition of permanent open space, for the protection of wildlife habitat, and for the preservation of scenic and agricultural vistas.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>We urge the Planning Commissions to be clear in directing the Planning Staff to adopt clear, concise language which unequivocally accomplishes the above. We support the succinct and accurate review (of the Theme One rewrite) made by the Alliance.</td>

<td>McCloskey, Kelly</td>
<td>Comments on Updated Draft of Theme 1 - Nov. 12, 2009! I have been following the planning process, and have attended two public meetings in 2008 and 2009, however I have not commented up to the present. First I would like to let you know that the additional time and effort put into the plan since its initial draft release have resulted in a much improved plan. A general comment: Perhaps I missed it, but nowhere did I find mention of the fact that most/much development in the county is in 'winter range' for wildlife species identified as focal. This was covered in the 1994 plan as &quot;crucial winter range&quot; - it seems important to understanding the overall distribution of wildlife, and the importance of the 3% private lands in the county to the Greater Yellowstone Ecosystem to mention this somehow. This relates both to Principle 1.1 and to Principle 1.4, as well as Strategy 1.2 bullet #6 which I'll address below. Principle 1.1 c: &quot;Private efforts have been successful in permanently preserving such strategic lands&quot; Please change this to &quot;some such strategic lands&quot; - as written it sounds as though all the most important areas are preserved - I would add to this that little or none has been restored - thus the work really is not complete in a couple ways. I would also support, as others have, a mechanism/funding source for public conservation and restoration of such strategic lands. Related to this, in some ways, is the policy on conservation of Agricultural Lands - this seems to prize these lands for their agricultural/rural character over their habitat/wildlife value which while relevant today may be short-sighted and therefore not in keeping with the timeframe of the document. Strategy 1.2, Bullet #6 states &quot;Map areas appropriate for public and private ecological restoration efforts.&quot; Does the Strategy somewhere suggest restoring these areas? Or using them to prioritize restoration should funding/mitigation be available? It seems that it should, else we are mapping for no reason. Principle 1.4 or Policy 1.4a fail to recognize that agricultural lands once were, and to a large degree still are, extremely important winter wildlife habitat. These lands are likely to be identified under Strategy 1.2, Bullet #6 as areas for restoration efforts. It should somehow be conveyed that if the agricultural lands are no longer economic as agriculture that they hold their highest value as areas for restoration and conservation of habitat. This was moderately clear in the 1994 plan, where ranchers were recognized for preserving habitat on ranch lands, but is not openly addressed in the current plan. If these lands are to go out of agriculture the highest use for natural resources should be recognized as restored habitat, a condition that, in fact, is more in keeping with the Natural Resource emphasis than the agricultural use they are currently in, and secondarily as open space, and thirdly as sub-divisions. This may be implicit in the land development guidelines that would give density bonuses for open space in these and other areas, but I believe it should be mentioned in Principle 1.4. As Principle 1.4 reads it appears that the best thing for Natural Resources is for the Agricultural lands to remain in Agriculture and that the County should do whatever it can to help ensure this - failing to recognize that native plant communities with ecological structure and function intact would indeed be more beneficial to natural resources should the ranching activities cease, or should there be an opportunity for restoration of some acres. The use of Ag lands and other open space as migration corridors is currently being deterred by some land owners, even at key times of the year, through the use of fencing, which is elsewhere, appropriately, addressed. Thank you for your continued efforts on the plan, and for your review and respect for the comments you receive from the public. -Kelly McCloskey</td>
</tr>
<tr>
<td>11/12/09</td>
<td>Karahadian, Kathy</td>
<td>Please get rid of the &quot;node&quot; concept and put the development in town or in the village-where the JOBS are. What jobs are there in Wilson???? Everyone ends up driving on 22. The bus ridership is actually down. The community has made it CLEAR that open space and preservation of wildlife are the most important issues. Let's not forget that. Read Peter Pilapian's letter which was in the Jackson News and Guide a few weeks ago &amp; take it to heart. It was well said. Thank you.</td>

<td>Community character should consider allowing increased home sizes above 8,000 and 10,000 square feet as an incentive to obtaining conservation easements</td>
</tr>
<tr>
<td>11/12/2009</td>
<td>Tillson, Becky interested</td>
<td>Thank you for taking comments on the rewrite of Theme One. This process will serve to point out things that may have been missed, or things that deserve reconsideration based on subsequent votes. Thank you for engaging the public in this. Many positive changes were made in the rewritten draft of Theme One; here are a few of my suggestions for improving it further.</td>
</tr>
<tr>
<td></td>
<td>Public</td>
<td>First of all, to have completed the discussion on Theme One: Stewardship of Wildlife and Natural Resources (now &quot;practice stewardship of wildlife, natural resources, and scenic vistas&quot;), without a detailed and comprehensive discussion of the comments from the preeminent local wildlife agency is a pretty significant oversight. Please go back and review the Game and Fish memo from June 26, 2009. Important points from that memo to consider include: the importance of recent data and information about wildlife and habitat types in making development decisions, including an update of the NRO; the value of buffer zones; more discussion on the importance of wildlife permeability (including both daily and seasonal movements and the value of habitat that is not explicitly critical winter range); and the necessity of a buildout number and its impacts on wildlife. The memo will also be important when discussing transportation, infrastructure and the FLUP maps, so please keep it on hand.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Second, the incorporation of recommendation #54 (&quot;throughout theme one do not limit wildlife protection policies to implementation in the NRO&quot;) on page 6 of the rewritten theme only seems to go part of the way towards achieving the intent of the recommendation. Simply adding the line, &quot;do not limit wildlife protection policies to implementation in the NRO&quot; would be sufficient.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>This theme needs to include language that prioritizes the establishment of conservation easements on agricultural lands and other open spaces. A permanent funding source would be a perfect addition to such a policy.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Lastly, in regard to indicators, we need to acknowledge that we have a baseline already and are not starting from zero. We already have degraded water and air quality, suffering wildlife populations, loss of habitat etc. We need to do more than just monitor where we go from here but rather be proactive about management and restoration starting were we are today, not next year, or in five years. We have the data; we just need to commit to using it. And, under the strategy to update the NRO (strategy 1.2), there are provisions for under/over passes, road speed reductions and wildlife friendly fencing. These, per recommendation #54, should not be limited to the NRO, and so for clarity’s sake should be relocated to another strategy or made into their own strategy.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>I would also like to express some disappointment that many of the votes that would have enable the strongest protection for wildlife, open spaces and natural resources, were passed in the County and effectively stalled out by the Town.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Thanks again for all of your hard work on this. And again, I appreciate many of the changes in this rewrite, including the language about human recreational impacts on public lands (policy 1.5a), habitat protection (policy 1.1a) and permeability (policy 1.1g).</td>
</tr>

<tr>
<td></td>
<td>Interessed Public</td>
<td>While we know the people who have been represented at the various meetings favor wildlife over all other priorities this is not necessarily in the best long term interest of our community across the board. First of all wildlife is a very important component of the unique nature of our valley and community but in this case it is being used as a shill for no growth interests. There must be a balance of growth in specified locations within the plan. Wildlife is protected through our unprecedented public lands, open space and raparian habitat protection measures. Specifically, growth zones or nodes (while this is now apparently a negative term) should encourage growth within logical, supportable, transportation focused areas such as Town and Teton Village. All future growth and flexibility in our Master Plan should not be viewed through the priority lense of wildlife. Thank you for the opportunity to present my thoughts.</td>
</tr>

<td>Staff should research and bring back additional light industrial areas for consideration by the Commissions and the public as part of Theme 2.</td>
</tr>
</tbody>
</table>
Thank you for all of the time and effort each one of you have put into the Comp Plan Review. Also thank you for considering all of the public comments during this process. Much of Theme I is good, however it is really the next chapter "Managing Growth" that is the main support for the policies in Theme I. After reviewing the re-write of Theme I, I have the following comments:

- Page 2, paragraph 3. I feel that language should be added that states that wildlife should be the primary consideration in all land-use decisions. The amount of new growth regardless of where the growth occurs greatly influences our success in protecting wildlife and scenic values. The least growth solutions are a critical component of wildlife policies.
- Please incorporate the Game and Fish comments into Theme I.
- Please consider eliminating the box on page 4. I feel some of the statements are not absolute truths and this page is trying to justify the policies in this theme. The exact polling results should be included in the appendix and not here.
- All references to "best management practices" should be amended to indicate "written policy decisions". Any member of the community should be able to look up what this means and what exact policies are required somewhere in the county files.
- Policy 1.4.b. is in conflict with Strategy 1.2 last bullet.
- Page 13. first paragraph: substitute "will" for should. "Should" lacks any real action or meaning here. This is very weak.
- Strategy 1.1 second bullet. Please consider adding the following to the end: which will establish a current baseline for future monitoring.
- Removal of vegetation via pre-scribed burns and establishing defensible space should be considered with regards to maintaining or improving wildlife habitat in Theme I. These policies have been successful in our National Parks and National Forests.
- The public should be given a chance to vote on a dedicated funding source to acquire permanent open space in the valley. This should be one of the Strategies.
- A corrective action plan needs to be added to Theme I in connection with a failure of one of the indicator goals.

Existing "non-conforming uses" should be encouraged/allowed to be maintained and in some districts expanded to address community character and vitality.

Hi, I’m Kate Meade, and I guess I represent our family. I had a...God, I got this strange feeling that because we sit on a big piece of land, that we’re being demonized here. Were it not for our family and our good stewardship, most of us in this room would not live here. The same goes for Kelly Lockhart’s family down in South Park. To suggest that we somehow control the future of Teton County is hogwash. We don’t. We do what we’ve always done—raise cows, enjoy our life here just like you do—and we’re not in this to become big developers. If we were, we would have done it long before now. So, I want to suggest to you that if people want to have a workshop about the PRD, we are more than happy to attend. But since 1994, and even before that, we’re saying the same things to commissions just like you, that we just want to be able to ranch. We have to do some things because the tax collectors come after us when members of our family die. It’s not that we’re all greedy young people wanting to divide up a family ranch. That’s just not it. So, don’t let people suggest to you that somehow the big job you have is limit the big landowners. Those are the least of the people you have to worry about. It would be great to have every inch of Teton County in private ownership on conservation easements. But quite frankly, I don’t want to have a conservation easement on the rest of my ground. I want to be able to ranch. I don’t want people telling me how I have to ranch. So, we’re probably not going to do that. And maybe down the road, if our children come along and decide they don’t want to ranch, well, maybe they’ll use the PRD. But maybe they won’t. Maybe they’ll just keep ranching. So, I’m here to tell you that I’m really annoyed to come in this room and have people suggest that they’re at the mercy of us, because there’s no reason for anybody to treat us that way. Thank you.
Hello, Gail Jensen. I agree 100 percent with what Kristy Bruner had to say. She has some excellent points. The build-out number, which is extremely important to most of the community here, is being ignored again. We spent quite a bit of time coming up with numbers and that, and I feel that it’s off the table now. It’s not even being considered. And I think that the forum for a workshop for the PRD is an extremely important process that we all need to vent and to get ideas out, and I’m really disappointed that that did not pass. I think it’s extremely important, and it still is, and I think it still can be done. So, I would really like to see that that vote be changed or at least somehow happens. There’s so many questions with the PRD, as what Greg had just pointed out, and those questions haven’t been answered. I still have a lot of questions. And I know the PRD tool very well and I still have a lot of questions. So, I really hope that we can get that back on track. Thank you very much.

Thank you. Armond Acri, representing Saving Historic Jackson Hole. I’ll be brief so you guys can get onto the rest of your agenda. What I’ll just quickly say, I do agree with comments made by Kristy, Rich and a bunch of others, so I won’t belabor or bore you with that, especially the comments on the PRD workshop. I do want to express concern about the vote for incentives for convenience commercial. I think one of the things we caution you is that you can encourage someone to build something, but I think, as Mr. McCarthy pointed out, you can’t make it succeed. That’s up to the marketplace. And I think what happens there is we end up in a case of bait and switch. It’s happened I think in other things where someone comes in with something that everybody thinks is a good idea—I’m not going to pick on any particular project tonight—and then when it fails, they come back with another plan, which makes people suspicious that may have been their initial plan all along but they went along with what they thought they could sell it by. Then one last thing I’d like to do is in terms of priorities, I do want to encourage you to maintain our rural character. It should remain a key principle in theme two. Thank you.

| 11/12/2009 | Griffith, Gregory     | Gregory Griffith, West Bank. On the followup and discussion points for tonight on light commercial, I don’t have any specific comments on light commercial, but it’s a good time to ask the question, how are variances going to be treated moving forward? That’s a good entry point to that question that should be answered for the public. On the second bullet point, nonresidential use outside of resorts, light industrial areas and areas formerly identified as nodes, there should be a focus on what we should strive for, conversion of nonresidential into residential out of those five potential bullet points. On the third bullet point, how can community character be addressed in theme two? I agree wholeheartedly with the first bullet. The second bullet I feel should be changed or modified slightly. And that it should state bulk, scale and density of future structure should be compatible with existing neighborhoods. And the third bullet point, residential home limitation should be maintained. I think there should be more. There’s exponentially more employees and vehicle trips daily generated by larger residences because of their increased need. They aren’t...doing their own landscaping, etc., so there’s a known cause for that. We enter into a pay-to-play society; that should figure in strongly. On the next page, which is page 3, I’ll reiterate something that Kristy covered, conservation of wildlife habitat and open space, and their success should be determined by the open space conserved, not the development allowed as a tradeoff. That’s treasuring on dangerous ground there, I think, the semantics of that wording, because there are varying values to everything we do. There’s varying values to open space. Touching on something Ms. Tompkins said about SRA Shooting Star, Shooting Star Golf Course is 256 acres. That’s considering padding the numbers for open space. So, there are varying degrees in values to open space. And nowhere in our daily life, or very few instances in our daily life, do we pay the same price for goods that vary in value. So, I don’t think Mr. Reid said it tonight, but he had some excellent points that would or could have been discussed in a PRD forum about that very subject. Moving forward in policy 2.5.A, it states continue Town of Jackson/County coordination to address growth management and is a mutual concern. You missed a golden opportunity last week for this PRD forum. It’s one of the best ideas that have come forward. It had universal support or nearly universal support. It’s 5-0 the County. We all know that the County is disproportionately affected by the PRD. All the neighborhood groups, every large landowner I personally spoke with, and some that others spoke with, you know, to Mr., or I guess Chairman Pruett’s comment last week that the PRD is working, I maintain that it is not working. There’s...It has massive need of improvement. If the PRD is working so well, how come the noncontiguous PRD has only been used once? And that was a questionable tradeoff to the community. It’s the amount per 35 that we spend so much time discussing. If it’s so valuable, how come it’s only been used once? We have 2300 acres of open space which has been directly generated by the PRD tool. And it’s, you know, in a commensurate fashion, it has generated 184 additive units. That’s only 12 acres of open space per additive unit. We could do that at 3 for 35. That’s not for me to say. That’s for, you know, we run a risk in this community, and we have for quite some time, that it’s not one man, one vote; it’s one acre, one vote. But this is the time when we need the large landowners to tell us why that this tool has been available forever and a day but yet they have not utilized it. It’s been available for every possible position on the economic bell curve from hyperinflated market to the position we find ourselves in today. But yet they have not used it. Why? We need these answers from large...only the large landowners can give it to us. So that was the motivation behind having a PRD forum. And since it so disproportionately affects the County, I think it’s going to happen anyway. It would be very beneficial to reiterate that vote, I think, at some time when everyone is here and try to allow the Town Planning Commission to have some input into this. If not, it’s just going to occur at the County level and it’s supposed to be a joint Plan. There’s all kinds of questions we could ask and I’m going to go ahead and ask some of them now in hopes of stimulating this moving forward. Should we raise the acreage requirements from the 350? Should we raise open space percentages to 90 percent? Should we raise, believe it or not, or lower the multiplier? There’s a...Brad Meade—I think I saw Mrs. Meade sitting here—Brad Meade had an excellent article in March that actually laid out some rationale behind why we should raise the multipliers in the PRD to look some of this stuff up. Do I believe that? Not on the evidence I’ve seen, but it’s worth of discussion. Should we lower the multiplier and then add in different ones based on percentage of NRO, percentage of SRO, ??, whether or not the development is clustered beside adjacent development? You know, we also have to discuss things like projections moving forward for predictability, etc., because we’ve had a 78 percent utilization record of the PRD. In other words, 238 units could have been created, and we created 194, so a really high number which projected forward through the remaining potential is that very large number. We also have to ask ourselves very difficult questions, like assuming the County population of 20,000, how long should 19,990 of us sacrifice future predictability, long-term planning for ?? services, waiting on ten large landowners to decide to put in a conservation easement and why that hasn’t occurred? This can only be done with a productive, substantive dialogue with the large landowners, because, you know, whether we want to admit it or not, they control the program here. We also need to discuss things like we have a generational time bomb. You know, this is something that’s not discussed. We have a large landowner who has a very similar age demographic. Within the lifespan of this Plan or the next Plan, we’re going to have a tremendous amount of development potential come online at the same time. I won’t comment on any individual families because that’s not my purview, but in other areas that this has occurred, it’s been devastating, because the generations tend to stack and the kids tend to sell, basically, to put it in a nutshell. Should we institute quotas for the PRD? Should we make it a competitive system to address Commissioner daCosta’s point last week about having the large landowners reluctant to come in and basically spell out their net worth. If it’s competitive, they bring the proposal forward. We also need to discuss or think about how arbitrary three, six, nine is. We almost...
act like we threw a dart at these things. There’s no rationale economically. If you talk to our tax attorneys, they’ll tell you the ultimate multiplier is somewhere around three, that nine is not needed, but I need to hear that in a large forum. And to finish up, something directly relative to tonight, maybe—indicators. We should consider entering into the indicator list conservation acreage additive units ratio. And we should also strongly consider externalized cost and fiscal impacts for additive units ratio. Thanks very much.

Hello, Kathy Tompkins, Cottonwood. Just a few things. Just concerns and a couple of comments or recommendations. One is I like the idea of establishing a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural lands. And the other things that Kristy and Rich alluded to was that, you know, predictability, cost of growth, the burden it puts in these receiving areas to the people next door, specifically, you know, like Cottonwood Park and West Jackson. And also please correct the Staff estimate of the number of units created by the PRD. It was too low. It ignores SRA and other projects that use the PRD to justify their density. Saving Historic Jackson Hole stated Staff ignored the SRA project at Teton Village. This controversial project did not use the PRD for its 1517 acres but used the amount of development potential allowed buy the PRD on greater than 35 acres to justify 339 market units versus 331 that are outside the PRD. This was an increase of 296 units <<inaudible>> 43 units. This is almost twice the reported number of ?? This is just one example. Technically, these units were not created by the PRD mechanism, but the PRD was used for the justification. And I sent that out to my neighbors and friends in Cottonwood Park. So, people do read this stuff. And it’s really important to go over it. Clarification, and this is, you know, I’m still learning this stuff. If we could have clarification that is needed on the creation of conservation easements though the PDRs [sic], can the development rights that were supposedly extinguished actually be transferred to somewhere else? So, I’m still learning, and if you guys could answer that for me, that’d be great. And I represent a group of families in Cottonwood Park and the common thread that runs through our families—retired couples and young couples just starting out—is that we matter, too. We would like to protect our future in Jackson Hole just as much as the ranching families in this Valley. The best way to do that is to sit down and discuss our needs and concerns to make this Comprehensive Plan work for everybody, not just a few families, only to give the burden to hundreds of small landowners who just happen to be next to a so-called desirable area for dense development in northern South Park. It is a misconception to believe that High School Road can handle any more dense development without seriously impacting the lives of so many working families that live off of High School Road. When the vote failed for the reduced PDR [sic] of three for 35, you are basically ensuring the further failure of High School Road and the neighborhoods around it. That means we are back to 370+ units—I think that’s right—that could be built along High School Road with the nine per 35 PDR [sic]. When you combine that with the proposed Indian Trails Connector jumping onto High School Road, the die is cast to save degraded neighborhoods and unsafe roads for children walking towards schools in that area. This would make a mockery of preserving neighborhood character and the transportation ?? for West Jackson in the Comprehensive Plan. That is why it is so important to take into consideration the recommendations, corrections and concerns I made at the start of my comments. I also think you missed a great opportunity when you turned down the chance to have a workshop with the ranching families and on the PDRs [sic] to gather info and come up with possible alternative and creative solutions that would resolve their concerns. This Comprehensive Plan should be all about research, science and connecting people with solutions to the people with concerns. And we have a lot of concerns. Okay. Thanks.
Dear Commissioners and Planners,

We would like to commend both the Planning Staff and the Planning Commission for their thorough and thoughtful review of the draft Comprehensive Plan thus far. Thank you for taking the time and energy to make this plan more reflective of the community’s vision for the valley. Even with so thorough a review, however, it seems to us that there is room for further improvement. Specifically, we whole heartedly support the November 9th “Preliminary Comments on Theme One Rewrite” of the Jackson Hole Conservation Alliance.

Two of these comments:
1- The need to incorporate specific language that wildlife protection should be the primary consideration for all land use decisions (re: recommendation 115); and
2- The need for a funding source for open space and habitat preservation (re: 105); are crucial if the plan is to reflect the true community vision for Jackson Hole.

Several other comments:
3- The need for more specific science based baseline information, language, and mechanisms (re: recommendation 113); 4- The incorporation of the Game & Fish Department comments (re: 103);
5- The need for a science-based monitoring program and a clear explanation of how it would be used relative to land development regulations (re: 109); are critical if we are to have a fact- and science-based comprehensive plan which can be realistically applied, monitored and evaluated.

We urge the Planning Staff and the Planning Commission to incorporate these recommendations into the revised draft of Theme 1 - Practice Stewardship of Wildlife, Natural Resources, and Scenic Vistas.

Sincerely,
Bob & Kim McGregor
Jackson Hole
11/12/2009 Bloom, Rich
South Park Neighbors

Yeah, Rich Bloom, and tonight I am speaking on behalf of South Park neighbors. And Ms. daCosta is right, 45 minutes is still in play because both groups <<inaudible>>. But in a given week, I ?? e-mail ??, or bump into 20, 25 neighbors from this County. In fact last night at 9 p.m. I got a call from ?? via Skype wanting some fact-checking before they submitted their comments their ?? in the Valley. So, ??, so anyway having talked to them again in the last few weeks, I guess I’m frustrated—sorry about that—but it has to do with the Staff’s questions and the outlines that you’ve been working from. They are modified and agreed upon by Mr. Hamilton and Mr. Pruett, as I understand it, but I think you have to recognize some of us here our communication happens with a large segment of the population and the issues that we put forth are not our own but rather their representation of what you’ve been hearing for a year and a half. So when those do come up and are not on the outline and they get bypassed, I think there’s something that could be improved in the process. I guess tonight, again, I was wondering whether I should come, as I imagine many of you have better things to do with our time. You know, I’m missing the entire season of Grey’s Anatomy because I don’t have TiVo. And I did want to go see Jennifer Lowe <<inaudible>>. But I think when the public does come here, they want to participate. When we’re bringing things forward from a wide ?? in the community, we want to make sure it’s on the topic at some point in the discussion. So, I hope you’ll consider that. And with that in mind, please discuss—it’s on your outline—the mix of growth in a bit more detail. You’ve touched on it. Job creating, commercial growth is considered hand in hand with residential and large homes versus small homes. We touched on local convenience and a few other things, but I think there more detail in the chapter that ??. The cost of growth, again, growth regardless of location or type residential or commercial should pay its full share of direct impacts on workforce housing and constructing social systems. I think you need to go back a little bit on the total amount of growth in the end state because you had some confusing votes. And I think you’re very clear what the public at large wants. And if you want, you can include some of these discussions in your community character <<inaudible>>. As far as last week, I think you missed completely Paul Hansen’s request. That was a request, whether or not the electeds--?? is here tonight—they do listen to you from time to time. And they take your recommendations to heart. They did that with the environmental group. What was meant there was to try to get it out of your hands and get it to the County Commissioners, frankly. And really the only vote that matters I think are the County Planning Commission’s. So, I hope you’ll consider passing on or doing a joint vote that you have them start working on that. Jeff Daugherty and I had a brief conversation—you can always correct me—but I asked him what was done a few months ago when they extended the moratorium for six months, which runs out March 31st. And they directed Staff to work on two things as far as text amendments. And those text amendments had to do with the PUDAH and with growth caps, but no direction to Staff to do anything with the PRD tool. So, Staff is not working or reviewing the PRD tool as per a directive of the County Commissioners. It’s very unclear if the County Commissioners intend to merely down zone rural areas. I’m unclear on that from what I’ve been told with the two for 35. I don’t see a lot of large landowners in here, but I would be worried. So, please declare a vote tonight to recommend that the County Commissioners that they convene a workshop on the moratorium PRD tool that’s going to run out March 31st, that includes all stakeholders, especially the rural landowners, the Land Trust, the conservation groups and the public. So, however you want to do that by process but I think it’s critical. And again, Jeff can clarify if I got anything wrong here.

11/12/2009 Hess, Jeff and Melanie
Interested Public

Dear Alex and Jeff: Everyone professes to put wildlife first. The largest impact is the inordinate number of dogs. The Town and County should put a desired cap on the number of dogs the Town and County can comfortably handle, and then discourage dog ownership beyond that number. While PAWS, the County Animal Shelter, and some of the other organizations have done a great job of instilling responsible pet ownership, they encourage people to have even more dogs such that the number continues to spiral upwards, to wildlife’s detriment. Wildlife and dogs simply do not mix. There are many responsible pet owners, but the sheer number of dogs is taking its toll. Ideas to cap a number include: low income housing and certain other density housing projects should contain covenants that prohibit all dogs and outdoor cats, with the exception of seeing eye-dogs. The County Animal Shelter should cease importing dogs from Idaho Falls and Casper for adoption, if it has not already done so. Leash requirements should be mandatory within the Town limits, not just “under voice control”. The Forest Service should require leashes in all of the Cache Creek drainage. Dogs should be prohibited from the Farmer’s Market. The Town Ordinance against dogs in restaurants and on the outdoor decks where food is being served should be strictly enforced. There are no doubt other actions and ideas that could be implemented. Abandonment of pets should be a serious matter. This is no doubt a political hot potato, but it simply must be addressed if wildlife is to co-exist. Thank you.

<td>11/12/09</td>
<td>Bruner, Kristy</td>
<td>Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Just a few brief comments tonight. Thank you for all your hard work on this theme. As you know, the Alliance and public has submitted an enormous amount of written comments and presented verbally at hearings. I would imagine by now you know the issues that we see as important, so I will not reiterate all of them tonight. A lot of it is stuff we presented in hearings and are in your Staff Report here tonight. So, with that, tonight there are still a lot of broad-level issues that are missing in the discussions so far. I hope that those are addressed. A couple of other comments. One concern with the review of theme two is that much of the recent discussions has centered around issues that are not directly a part of theme two, but rather influence the future land-use plan and Appendix I, even though the future land-use plan is supposed to be off the table. It’s not that these issues, such as the PRD multiplier, aren’t important. The public did expect this Plan to establish a predictable end state. But many of these specifics relate to changes in the lot maps in Appendix I. And meanwhile we feel that many of the discussions directly pertaining to theme two and the overarching topics that the public has raised have been put off. And they haven’t been included in the recent Staff Reports on the items of discussion, which are continuously driving the actions you vote on. One example would be a policy regarding cost of growth. You know, it was one of the original objectives for this theme, but it still hasn’t been raised. It’s should this theme have a policy on that? And second just a little bit on process given that we’ve now seen a rewritten chapter on theme one. It’d be great to clarify just generally what the public should expect with the theme-two rewrite to make sure we’re all on the same page. Just a couple of questions, since you haven’t discussed or revised the statement of ideal, are we to assume that the rewrite will include one? Another example is, you know, if there are incorrect, misrepresented statements in what the community has said about these themes, are we to assume they’re going to be removed? It just seems odd to move to specifics on strategies and indicators if we haven’t yet discussed, you know, a statement of ideal and some of the specific policies. And, you know, one last thing, we were really disappointed that the vote to hold a PRD forum failed due to a lack of support by the Town Planning Commission. This concern was particularly elevated due to one of the sentences in the Staff Report summary that says the success of the PRD should be measured in acres of conservation easements not the development allowed as a tradeoff. We agree that success should be measured by the preservation of open space, but we also feel like we need to have a realistic discussion on the costs associated with the highest multipliers of this tool, including the development allowed as a tradeoff. A PRD forum, which could have been supported by numerous members of the public, would have given us an opportunity to discuss this in an objective way, analyzing both the benefits and the costs of different multipliers. In general, the success of an action should always consider the net benefit which requires a look at cost as well. So, we would hope that you would reconsider your opposition to this forum tonight. Thanks.</td>

Varley, Jay
11/12/2009
Interested Public

My name’s Jay ??, I’m a resident of downtown Jackson. This theme number two is entitled manage growth responsibly. I’ll explain the way I interpret managing responsibility here in a few minutes. And I don’t think it’s about numbers as much as it’s about location, uses and smart development, and reduction of negative impacts through the location and uses. The assumption of the people who are talking about the absolute numbers are the most important thing, I think is that we’re going to continue the kind of lifestyle that we have now out into the future. I don’t think that’s going to happen in this community, in this nation, and in this world. There’s going to be a lot of changes in the kind of lifestyle people live going forward. I think they’ll be positive. So, I think managing growth responsibly...I believe that growth has both positive and negative impacts. And I think that most of the negative impacts can be successfully mitigated. But if we just limited the number of people here by a lot, we’d give up the positive aspects of growth. So I want to talk a little bit about those. I think one of the primary negative impacts is the potential for traffic gridlock. And that especially...the most important there is in the peaks. If we can reduce the peak traffic, that will go a lot to limiting the impacts. And then there’s the impact on government services, particularly infrastructure. And then there’s the impact on wildlife. I think we need to do things to limit the negative impacts. And that’s minus positive impacts. I think that’s managing responsibly. Some of the positive aspects. If it’s denser, particularly in downtown, that yields a more casual social interaction among people. An example of that...and which yields a better sense of community. An example of that is like what goes on at the ?? Street Bagel Shop in ??, and what goes on at the downtown Post Office in Cottonwood. When people are walking around Town because they live and work here, that I think strengthens the sense of community, not decreases it. You end up with more services and choice of goods. For example, more diverse restaurants, better air service, more diverse clothing and food sources, more economically sustainable cultural ??, things like a stronger center for the arts, music festival, the National Wildlife Museum. All these require critical masses of people to be successful. They don’t have to be huge critical masses, but they do need a number of people. Another possible one is more choice in housing types, styles and price lots. Also better, more complete health services, a stronger ?? because there’s a greater number of people that can be served. And so we can therefore offer more services cost effectively. I think you can have more competition, lower prices and many different kinds of activities. So, how do we deal with the negative impacts? Location of the development is critical. We need to have residences near sources of employment. We need them near schools. An example of near employment is obviously downtown. Near schools. I think norther South Park is an example. There’s a high school and an elementary and a middle school there. And one of our peak traffic problems is people taking their kids to school. That really is a lot of our traffic in the peak times. So, both of those, the employment and the schools, impact peak traffic. Or they can be near public transit. Or near alternative means of travel, bus, bike and walk. And walk is a real big one and that involves location. Near existing water, sewer and electrical services. Near road and street map, especially in a few places where we have redundant street ??, which is basically Town. We don’t have a lot of redundancy in most places. So, and then this involves development being in places like Town, Teton Village and maybe a few other places. Because that puts people close to employment, puts them close to a service that they want. West Jackson is another place. It’s close to Albertson’s. It’s close to the post office. It’s close to a lot of other things that people drive to. Anyway, I just wanted you to consider both of them and think about what managing growth responsibly really means. Thank you.

Coon, Dave
11/12/2009
Interested Public

My name’s Dave Kuhn, neighbor-at-large, Teton County, speaking for myself. I’ll keep it real quick here. (Is that on now?) Okay, I’ll keep this real quick. Thanks last week for voting to keep the meetings a little shorter. That kind of helps out everybody I think. And just as a matter of fact on that, you did cut public comment by 33 percent on the round down, and you cut your part of the meeting by 14 percent. So, you can either give us seven more minutes, or you guys drop off 40 more minutes, whatever, it doesn’t really matter. And....Well, it did get cut down to 30 minutes. It’s on for 45, but just to keep us longwinded people in line, there’s a three-minute timer. Anyway, just commenting on this week’s stuff, if we do get to the light industrial, that’s probably one of the hardest mixes to fill in the community. Those are the people that do your electrical, do your plumbing, fix your lawn mower, install your stereo systems in your cars. Let’s not eliminate any more of that space. It’s going to be really hard to create more if there’s a movement afloat to kind of start changing some of that existing space into residential units. Don’t let that happen. But anyway that’s an important part. On the summary statement for theme two, I guess my main concern is the way the PRD is being looked at. It is a tool to allow large landowners to do their thing with their land and preserve open spaces. Preserving open spaces and getting conservation easements are two different things. They’re not the same. So, if you look at the wording in this, where are we really going with this? This says in exchange for conservation easements, that’s one thing, but that’s not the way it starts out; it’s just preserving open space. Conservation easements was another step. If that’s the step we go towards, you know, good, but make sure that is in the Regulations on that. And you can’t just ignore the effects of increased density of a PRD and not weigh the costs of it, which are increased density and how do we pay for those costs and infrastructure and all that. So, just keep all that in mind when you’re really looking at all that stuff. You can’t just ignore overall growth and rate of growth as not considered necessary. So, that’s pretty much it. Thanks.
important point and adds to misunderstanding. Perhaps a memo summarizing all errors (these things happen) certainly before this passes on to the electeds. Of course the draft sent along will have the corrections already made I assume? Also it would help if this one memo had the corrections all on one or two pages – in one location – and that be posted to the web site now. Meanwhile with the N&G’s help – they can make the correction also next week in the paper. There is a big difference – Proposed NW South Park node (of course the joint PCs have now recommended dropping all nodes – keeping current zoning along with PRD option on Rural) = 8% actual zoned Suburban (92% Rural) versus reported/published 100% zoned Suburban and 210 actual potential units versus 370 reported/published potential units – all via current zoning along with the PRD option on the Rural acreage using the maximum multiplier of 9/35. Remember also the community would also be getting 85% permanent open space on all Rural acreage (92% of the identified node) if the PRD tool is used – and the 4 units per acre on the 35 acres zoned Suburban. Meanwhile 25% of any actualized units would be category 1-3 affordable per the LDRs. The devil is always in the detail. Acri, Armond Save Historic JH

Save Historic Jackson Hole wishes to express complete support for the Chair’s decision not to revote or allow votes to be cast on issues covered in past meetings. It is an unfortunate fact that not all Commissioners will be able to attend all meetings. Reopening votes will slow the process tremendously as it would mean every vote could be redone at any time. We hope this ends the debate and no more time will be wasted on this discussion. Meeting time is too valuable to be spent beating a dead horse. Armond Acri
Save Historic Jackson Hole

I would respectfully request that you allow time at an up-coming meeting to permit Save Historic Jackson Hole’s consultant, Rob Bernstein, to comment on the Traffic element of the Comp Plan. This will be an extension of your consultant’s work, and not criticism of it. Likewise, if you feel that you need Carlos Hernandez to be present during that presentation, I believe SHJH has offered to help defray that cost to the Town and County. Traffic is such an important element to the Comp Plan’s success in keeping our Valley an attractive place to live, we hope all expert voices are allowed - and facilitated - to be heard! Prayzich, Elise Interested Public

Alex, though I am not a resident of Teton Village I do feel that the village lacks some of the basic amenities that other mountainside resorts offer. I feel that in the last thirteen years that I have been employed at JHMR, construction has been constant and the wildlife seems to adapt year after year. I do realize and cherish the valley we live and work in but finding the proper balance will not be easy. I feel you do need to concentrate on growth verses sprawl and Teton Village is an appropriate community to consider growth in the future. Thanks for allowing me to express my concerns. Hope to see you on the hill some time soon. Tim Mason, Tim Interested Public

I applaud your dedication, time and input developing recommendations that will make the draft Teton County Comprehensive Plan a document reflective of the community’s wishes and preserving our wildlife and scenic values well into the future. A few items have yet to be included that I feel are quite important to secure these goals. First, please include in your recommendations the Wyoming Game and Fish’ observation that no matter WHERE grow occurs, it greatly impacts wildlife and scenic values. Thus, the least growth or no growth beyond that is presently permitted is preferred. Second, please recommend creation of a dedicated funding source to acquire permanent open space to protect wildlife habitat and scenic vistas and/or agricultural preservation, also an important part of the valley’s heritage. Finally, when conflicting land use arises, please specify that wildlife and scenic vista considerations take top priority. Thank you, again, for your valuable time and insight. Woods, Becky Interested Public
On behalf of the members of the Jackson Hole Conservation Alliance, we would like to submit the following comments regarding Theme One discussions scheduled for the November 19 hearing. As volunteers, thank you for your hard work throughout this process.

We greatly appreciate that some positive steps were made as you reviewed Theme One. However, particularly given the high level of priority for wildlife protection by the community, we believe that a number of additional changes could be made to strengthen the chapter. On July 30, the Conservation Alliance submitted detailed written comments on this chapter, which were followed by broader comments verbally presented throughout the hearings on Theme One. While we still believe a number of detailed changes are warranted, we request, at a minimum and at this time in the process, that the following issues are discussed and addressed as you finalize recommendations on this very important chapter of our community’s new draft plan.

Below are issues and recommended actions organized via the preliminary votes taken in Theme One hearings:

1. Recommendation #113 – Add a strategy: creation of an additional Wildlife Stewardship Plan under the direction of the Environmental Commission to detail implementation of Principle 1.1 (County 2-2 Fail, Town 1-4 Fail)

Action: Vote to ensure that more specific data, language and mechanisms to protect wildlife are incorporated into the plan, and that existing data and knowledge are efficiently utilized. Science-based language from the existing 1994 Plan, references to specific reports that can provide a basis for land development regulations, and recent data (including updated maps of overlays) should be incorporated into the new plan. If the new plan is not going to include this specific, but necessary, information, it should refer to a plan, process, or document where the information will be gathered and available.

Background: Since the release of the new draft, the Conservation Alliance has repeatedly raised concerns regarding the removal of significant portions of the community’s existing 1994 Plan that include specific language and mechanisms for protecting wildlife and wildlife habitat. While some positive steps have been taken in the new draft (such as the establishment of an Environment Commission and additional policies on wildlife permeability), far too much of the science-based language in the 1994 Plan has been removed. Some examples of language/topics that have been removed include: highly specific descriptions of the role of private lands for wildlife, statements of existing conditions and challenges (such as “wetlands have been severely impacted by development” and “current development trends pose a real threat to wildlife habitat now and in the future”), references to detailed science-based reports (such as the “Biota report”) as a basis for policies and land development regulations, specific definitions and examples of direct, indirect and cumulative impacts, specific descriptions of important habitat types, clearly outlined criteria for formation of the Natural Resources Overlay, clear rationale for the need to regularly update the Natural Resources Overlay, and a list of additional species of concern that are currently not included. To put it into practical terms, the new rewrite does not adequately integrate science nor does it efficiently use what our community has already spent considerable resources to produce – such as the Biota report prepared as part of the 1994 Plan or the recent Conservation Alliance-sponsored compilation of wildlife data conducted by the TSS Conservation Research Center.

The idea of a supplementary “Wildlife Stewardship Plan” to compensate for the lack of detail in the new plan failed. Without this supplementary plan on the table, and to make the process more efficient and effective, staff should be directed to reincorporate and update language from the 1994 Plan. It appears that in an effort to be concise, essential components were removed that should not have been removed. Sections from the existing 1994 Plan should be built upon and in some instances clarified, such as adding new information on topics such as climate change and its potential impacts on wildlife habitat, rather than removed altogether.
Also, upon close review of the 1994 Plan chapter on Natural and Scenic Resources, it appears that there was not a lack of stated intention or vision, but rather a lack of enforcement to carry out specific actions (such as "regularly update all natural and scenic resource inventories"). To improve upon the 1994 Plan, timelines for specific actions must be identified in the new plan. The same concern with removal of important details also applies to the rewrite’s approach to scenic resources.

2. Recommendation #103 - Include all appropriate Game and Fish language into document (County 4-0 Pass, Town 2-3 Fail)
Action: Vote to ensure that the red-lined, rewritten draft of Theme One that is sent to elected officials includes an incorporation of Wyoming Game and Fish comments.
Background: In June 2009, Wyoming Game and Fish submitted five pages of comments that included science-based concerns with the draft plan, as well as recommendations for improving it. Unfortunately, these suggestions were not collectively reviewed. Some of the agency’s individual recommendations relate to: the need to update the Natural Resource Overlay, the need to identify a timeline for developing a list of focal species, a need to include important habitat types in the plan, a need to establish buffer zones, a need to realistically address the implications of a high buildout on wildlife health and landscape permeability, a need to add increased emphasis on the impacts of dispersed recreation, and a need to address a potential increased demand for wildlife management services. Wyoming Game and Fish provided the following statement in their comments: "The draft plan could incorporate more specific language, data and mechanisms to provide the degree of stewardship identified in the introduction of the Comprehensive Plan...". Unfortunately, due to a failed vote by the Town Planning Commission, no attempt was made to incorporate the agency’s suggestions in the rewrite released October 30, 2009. As a result, the chapter rewrite currently lacks critical science-based language that would more accurately describe our existing conditions and the extent of action necessary to increase our chances of actually protecting wildlife.

3. Recommendation #105 - Add a policy/strategy creating a public funding source for the acquisition of conservation easements and/or open space (County 3-1 Pass, Town 2-3 Fail)
Action: Vote to add the following strategy: “Establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation.”
Background: Across polling surveys done as part of the comprehensive planning process, 59.8 to 78 percent of citizens voiced support for a funding source for permanent open space conservation. Citizens expressed that they would be willing to pay more in taxes for open space over any other issue. However, unlike other issues in the plan (affordable housing and alternative transportation), a strategy to establish a funding source for conservation was not included. Continued acquisition of permanent open space is a critical wildlife protection and growth management policy, an ESSENTIAL component to uphold our top priorities. The Conservation Alliance believes that the public has a right to vote on this issue. While we are currently in troubling economic times, the plan should include policies with the long-term community vision in mind.

4. Recommendation #115 – Incorporate statement, “Recognize that any and all growth in the valley impacts both wildlife and natural resources” into Theme 1 where appropriate (County 5-0 Pass, Town 3-2 Pass)
Action: Vote to incorporate specific language that wildlife protection should be the primary consideration in all land use decisions.
Background: We greatly appreciate that the above motion passed in preliminary votes. However, we believe that the rewrite did not go far enough to explain why “least growth” solutions are such a critical component of wildlife protection policies, and how the levels of growth, regardless of where the growth occurs, will greatly influence our success in protecting wildlife. By directing that wildlife protection be the first consideration in every decision, it is assured that all forms of impacts are considered, including direct, indirect, or cumulative impacts. Because wildlife needs can be incredibly dynamic through time, overall development in the valley must be comprehensively approached. Policy 1.1b should include strengthened language regarding the need to reduce cumulative impacts through “least growth” solutions (in addition to monitoring impacts as they occur).

5. Recommendation #109 – Look at indicators suggested by public and include in list for elected official
Comment

review (County 4-0 Pass, Town 5-0 Pass)
Action: Vote to direct staff to add language that clearly explains how indicators will be used to draft and amend land development regulations. Language should be added that explains how a science-based monitoring program will be further developed with appropriate agencies and partners. A baseline column, with quantifiable documentation of existing conditions, should be added to all indicator tables in the new plan. Background: The use of indicators to “monitor achievement” is a great, key improvement upon the 1994 Plan. However, as they are currently designed, their potential effectiveness is highly questionable. Since July, the Conservation Alliance has emphasized that this table must include an initial column that summarizes quantifiable baseline conditions. The goals should also be measurable and review periods should be realistic for the variable being measured. Variables that are critical in defining and implementing local land development regulations should be prioritized. Staff should also incorporate more language to explain how monitoring will be translated to modifying land development regulations and directing changes in policy. For instance, some of the Wyoming Game and Fish monitored populations (which are also identified as species of concern) are ALREADY below target. How does this affect future policy?
6. Recommendation #98 - 1.6c: staff will rewrite to focus on goal of policy which is the last sentence (County 3-1 Pass, Town 5-0 Pass)
Action: Vote to direct staff to add language that provides greater detail on potential types of exemptions and allowances for agriculture.
Background: The title of what is now policy 1.4b “remove regulatory barriers to continued agriculture” could be broadly interpreted. The intent should be clarified given the range of possible regulations for which exemptions could be requested. Recent discussions on wildlife-friendly fencing come to mind. Conservation of agricultural lands is a community priority, but it would be helpful to have clarification beyond “remove regulatory barriers” in the new plan.
7. Recommendation #106 – 1.6a: expand to apply to all parcel sizes (County 4-0 Pass, Town 5-0 Pass) & Recommendation #54 Throughout Theme One do not limit wildlife protection policies to implementation only in the Natural Resources Overlay (County 4-0 Pass, Town 7-0 pass)
Action: Vote to direct staff to add language that clearly explains why the protection of diversely sized-parcels is important. (The rewrite of what is now policy 1.4a, page 11, does not adequately capture this.) Vote to direct staff to include more language on the importance of maintaining connectivity throughout the valley as a whole.
Background: While the protection of large, contiguous parcels is a top priority, policies should direct that diverse parcel sizes, including small parcels of critical importance, also be prioritized for protection. The edit in the rewrite is too concise and lacks clarity on the intent of the recommendation.
The draft lacks sufficient detail in explaining what is meant by “crucial habitat” and other lands between these “habitat” areas that wildlife use. As stated in our point 1, more specific policies should be included that clarify the need to consider habitat connectivity and seasonal variation in use of lands.
8. Other
In addition to the broad points raised above, attached are comments that we verbally presented at the Sept. 3 and Sept. 10 hearings on Theme One, which include more specific suggestions for implementation.
Again, we appreciate your work on this very difficult task. As we have stated before, our community should not lose sight of what we set out to accomplish in this planning process – an improvement of the 1994 Plan. While we fully recognize and appreciate some of the new positive steps in this process, we also note that the rewrite process has not adequately and efficiently included existing documents and data as strong components. This concern is not limited to Theme One.
Thank you for your hard work and consideration.

| 11/12/2009 | Acri, Armond, Save Historic JH | Save Historic Jackson Hole would like to acknowledge that significant improvements have been made in the revision of Theme 1 of the Comprehensive Plan. We appreciate all the hard work that has gone into the document so far. We feel there is still room for improvement and offer the following comments:  
- The current document acknowledges the goal of conservation easements is permanent protection of open spaces. Additional language is needed that states when conservation easements retire development rights, those rights are not meant to be transferred to other parcels at that time or in the future. This would only apply to easements that retire development rights. We cannot prevent future generations from upzoning land without easements, but we should record for future generations what the intent was when rights were retired.  
- Theme 1 should acknowledge that there is a maximum carrying capacity for human beings. We do not have to establish a hard number, but we should acknowledge that "least growth solutions" are our best protection to avoid displacing wildlife and degrading our environment.  
- Theme 1 should address the need to establish a dedicated funding source to acquire permanent open space for wildlife habitat protection and scenic vista preservation.  
- Any land use decision should use wildlife protection as its primary evaluation criteria. If there is any doubt, a "tie" must go to wildlife.  
- There needs to be a clear cause of action if the goals are not met for indicator species populations and WGF monitored populations. It could be as simple as stating that missing the goal 2 years in a row would require hearings to establish the cause and determine a course of action.  
- Wyoming Game and Fish is the recognized expert at managing wildlife in our State. Their comments should be included in Theme 1.  
- Policy 1.4.b should be changed from "Remove regulatory barriers to continued Agriculture..." to "Reduce regulatory barriers to continued Agriculture..." Removing all regulatory barriers for any industry is unrealistic and invites abuse. The goal should be to remove regulations that hamper Agriculture and provide little benefit to the community goals. The language should reflect that goal.  
- The last bullet point on Strategy 1.2 to eliminate all exemptions from wildlife friendly fences is in conflict with policy 1.4.b. The goal should be to carefully examine who should qualify for an agricultural exemption from the requirement for wildlife friendly fences and limit new installation of buck and rail fence. This style of fence is one of the most unfriendly to wildlife and is not practical for most "real" agricultural operations. Consider using this phrase "develop penalties for failure to remove fencing that fails to comply with the regulations."  
- Please remove the section "What the community said." Like the pictures it serves no real purpose in this section. It should be addressed in the appendix where the appropriate statistics can be included with the comments. This is more meaningful than the general statements in the text box. |
| 11/12/2009 | Joint Planning Comm | Nonresidential use outside of the Resorts, Light Industrial areas, and areas formerly identified as nodes should be addressed district by district in the Future Land Use Plan. |
| 11/12/2009 | Horn, Scott, Interested Public | As you continue to work on the comprehensive plan I would like to provide the following input; while wildlife is important, it cannot override every other aspect of the plan. There needs to be a balance with the economic development of our community. In particular Teton Village needs special consideration as it strives to compete with the variety of mountain resorts in the American west and the world. |
| 11/11/2009 | Prayzich, Elise, Interested Public | Please know that I strongly support the JH Conservation Alliance's November 9, 2009 Key Points – Initial Recommendations.  
We ask that our hard working Planning Commissioners ensure that more specific data, language and mechanisms to protect wildlife are incorporated into the plan, and that existing data and knowledge are efficiently utilized. In short, reincorporate science-based language from the 1994 Plan and recent data (including a map of the Natural Resources Overlay) into the new plan. |
I urge to incorporate the JH Conservation Alliance's recommendations in language in the general plan. My husband, Michael, and I believe that wildlife and wildlife habitat protection should be the foremost consideration in all land use decisions. The uniqueness of Jackson Hole centers around wildlife. Without the wildlife that make their home in the Jackson Hole area, Jackson would be just another town in a very cold place. with pretty scenery. .....we need to remember what is special about the place we live.
Theme 1: Practice Stewardship of Wildlife, Natural Resources & Scenic Vistas

Note: To supplement and reinforce my previous Theme 1 suggestions of 10.8.09 and 11.5.09.

Incorporate Wyoming Game and Fish Comments:

- Theme 1 needs to incorporate comments by the Wyoming Game and Fish Department submitted on June 26, 2009.
- To not address the detailed and specific concerns from the state’s primary wildlife experts in this Theme is irresponsible.
- Since Game and Fish comments were not incorporated - Theme 1 currently lacks critical science-based language that would protect wildlife.
- Incorporate the Concept of “Least Growth” Solutions into Theme 1:
  - Please strengthen language that the levels of growth, regardless of where that growth occurs, will greatly influence our success in protecting wildlife and scenic values.
  - You passed Recommendation #66 – “Insert in Vision chapter text a discussion of "least growth" solutions in order to meet human needs - emphasizing wildlife and natural resource protection while acknowledging private property rights.” (County 5-0 Pass, Town 4-3 Pass). You also passed Recommendation #115 – Incorporate statement, “Recognize that any and all growth in the valley impacts both wildlife and natural resources” into Theme 1 where appropriate. (County 5-0 Pass, Town 3-2 Pass).
  - In summary please address “least growth” solutions and its concepts in BOTH the Vision and Theme 1 chapters.

Update or Rewrite – How will you Incorporate Critical Missing 1994 Comp Plan Language?

- Why is this plan a rewrite versus a promised update?
- We keep asking and the planners have never answered. There is specific, beneficial language from the long thought out 1994 Comprehensive Plan that still has not been included in this update rewrite.
- Before finalizing this chapter, and moving on to other chapters where the same broad issue applies, an explanation should be presented as to why significant portions of the 1994 plan that include specific language for protecting wildlife, wildlife habitat and scenic vistas were not utilized in the plan update rewrite.

SO WHAT IS THE ANSWER – AND HOW WILL YOU CORRECT THIS BEFORE GOING ON TO OTHER THEMES?

Connectivity Between Natural Resource Overlay Areas - Policy 1.1.c

- As stated in my 10.8.09 comments: Please improve Policy 1.1.c: to add “connectivity between Natural Resource Overlay areas” so it recognizes your Recommendation #54 (“Throughout Theme 1 do not limit wildlife protection policies to implementation only in the Natural Resource Overlay”)
- Specifically suggest rewriting/adding in Policy 1.1.c: “Additional efforts are critically important to preserve open space that either lie within or provide connectivity between portions of the Natural Resource Overlay.”

Open Space Funding Strategy:

- As I have commented multiple times including in my 10.8.09 comments in detail.
- Add the following strategy: “Establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation.” Housekeeping Items: sent in my 11.5.09 Theme 2 comments also:

  - Vision Chapter: When will we see it and in what form?

<tr>
<td>11/11/09</td>
<td>Harrington, Steve</td>
<td>If wildlife preservation is truly your #1 priority, then how could you not include recommendations from the Game&amp;Fish into the new plan? You use the term “healthy populations” throughout the “theme”. Who but the Game&amp;Fish is qualified to make judgments as to when or if a population is healthy? Without the latest scientific data on the current condition of the wildlife in the county, it would seem to me impossible to make any rational decisions about future development.</td>
</tr>
<tr>

<td>Heileson, Marv and Juli</td>
<td>We wish to add our comments to the many others you’ve no doubt received asking that the Plan strengthen its provisions for wildlife protection. This was the highest priority identified by the citizenry in the pre-plan survey; together with our scenery, it is our greatest resource. It should be a no-brainer to beef up the protections in the Plan. In particular, Theme One should specify that planning decisions specify wildlife as the most important criteria in considering land use decisions. In addition, it should identify the need to provide some funding mechanism for the acquisition of open space -- in other words, other than density transfer -- to preserve land for wildlife habitat and migration corridors. Thank you for your attention; and for your consideration of the public's input during this planning process.</td>

<td>Jerger, Karen</td>
<td>Dear Commissioners, I have read the updated Theme 1 of the Comprehensive Plan, and would like you to know that I consider it a BIG improvement over the previous draft. I also have observed some of your meetings, and understand that revisions were made with considerable thought and discussion. I am especially encouraged by the proposal to set up an Environment Commission. I hope that this body will focus on collecting and evaluating a range of scientific data in order to advise the community (planners, commissioners, public) about the specific impacts (known and potential) of our growth. This data-based assessment is critical for guiding, and controlling future growth. I understand that many in the conservation community feel that this draft is still not acceptable. I don't have a strong opinion about that. However, I think it would be an important act of good faith to review (once again) the 1994 document, and make sure that the more general language in the current draft isn't inadvertently stripping the power of the original plan. Thanks again for your diligence. Respectfully, Karen Jerger</td>

<td>Salter, Andy</td>
<td>Thank you for all of your efforts and energy in connection with the rewriting of the Town of Jackson/Teton County Comprehensive Plan. While this portion of the Comprehensive Plan has seen significant and positive improvement, I strongly urge you to also incorporate the key points and recommendations found in the Jackson Hole Conservation Alliance's November 9, 2009 &quot;Key Points&quot; memorandum. The comments you have received from the Wyoming Game and Fish Department should be incorporated as well. Wildlife protection should be a primary consideration in all land use decisions. The “least growth” solutions are critical components of wildlife protection policies. I also urge you to investigate and establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, the preservation of scenic vistas and agricultural uses. Thank you for your consideration of these comments.</td>
</tr>
<tr>
<td>11/11/09</td>
<td>Shea, Nancy</td>
<td>I wanted to email my comments on the plan before the deadline on Thursday. The protection of our natural resources is the keystone to the entire planning process so I support the most meaningful and clear messages in this section. In general, I support the items presented by the JH Conservation Alliance on this theme. Particularly the notion that ALL our growth plans in this valley impact wildlife and natural resource health and vitality. We cannot relegate protection to outlying areas in the county. Growth plans in Town are also dramatically impacting the long term health of the wildlands of Jackson. Thanks, Nancy</td>
</tr>
<tr>
<td>11/11/09</td>

</table>
Tomorrow, Nov. 12, is the deadline to submit written comments on the new comp plan’s rewritten version of Theme One – now titled “Practice stewardship of wildlife, natural resources, and scenic vistas.” Town and County planning commissioners plan to discuss this chapter one last time, Nov. 19, prior to forwarding it for review by elected officials. A good plan is critical to the future of this valley, so our community should make sure that we have the best possible plan moving forward, one that will help to protect a Jackson Hole that we still want to see in 20 years. If you appreciate our valley for the conservation legacy that it holds, you should be aware of the successes and failures of the recent chapter rewrite and how you can help make it better.

We appreciate the hours and hours of work that the volunteer commissioners have put into this process. It is no easy task, and their efforts should be commended. Some important improvements were made during their initial review, such as the establishment of an Environment Commission, the commitment to identify more wildlife indicator species, and a reinstatement of the value of scenic vistas. However, there have been some significant failures, due partly to a lack of support from both planning commissions. Following are a few major issues that must be addressed in the next round of review in order to improve this chapter.

First, the rewritten draft of Theme One that is sent to elected officials should incorporate comments submitted by the Wyoming Game and Fish Department. Unfortunately, despite numerous requests by the public, these specific recommendations were never individually reviewed in public hearings. Also, due to a failed vote by the Town Planning Commission, no attempt was made to incorporate the agency’s suggestions in the rewrite just released. As a result, the new chapter still lacks critical science-based language that would increase our chances of actually protecting wildlife.

Second, because the presence of wildlife is something that makes our community unique from all others and is a driving factor in our economy and quality of life, specific language should be incorporated that states that wildlife protection should be the primary consideration in all land use decisions. This way, all types of impacts of development on wildlife are considered in a decision, including direct, indirect and cumulative impacts. Also, the rewrite did not go far enough to explain how the amount of new growth, regardless of where the growth occurs, also greatly influences our success in protecting wildlife.

Third, in the future, the public should be given the chance to vote on a dedicated funding source to acquire permanent open space in the valley. Continued acquisition of permanent open space is a critical wildlife protection and growth management policy, and therefore an essential component to uphold our top two priorities. While we are currently in troubling economic times, the plan should include policies with the long-term community vision in mind.

Fourth, the role of indicators and monitoring needs to be better defined. While the intention to monitor achievement of different policies throughout the plan is a step in the right direction, and an improvement upon the 1994 Plan, its effectiveness is still highly questionable for a couple reasons. The new chapter still lacks a description of baseline conditions or quantifiable starting points for each of the indicators. It also lacks language to explain how monitoring will actually be used to direct changes in wildlife-related policies. For instance, moose and mule deer populations are already below agency targets. How is this observation expected to shift the way we make decisions? Currently, the new chapter provides no guidance on questions like these.

Last, but not least, our community should not lose sight of what we set out to accomplish in this planning process – an improvement of the 1994 Plan. The rewritten Theme One chapter raises some fundamental questions about whether this process is efficiently building upon what our 1994 Plan already provides. Before finalizing this chapter, and moving on to other chapters where

<td>11/11/09</td>
<td>O'Brien, Kristine</td>
<td>Thank you for all the time and hard work you continue to dedicate to the creation of a better draft comprehensive plan. I especially appreciate your responsiveness to public input. I have read the JHCA Key Points 11.9.09 as well as the WGFD comments. I urge you to incorporate both of these documents into your revised draft comprehensive plan. It is clear that preservation of our ecosystem, wildlife and wild life habitat are first among community priorities and the basis of Teton County's quality of life and economic vitality. Why wouldn't we want to use scientific methods and all available data to insure that the comprehensive plan does that in an objective, analytical way? If wildlife and the environment are a priority, a sincere effort to make them so would be to start with this as a goal and plan for it (It goes without saying that this would be done respecting base property rights). It seems the original draft plan was written without first addressing the question of how much density (total buildout) is compatible with the goals of Theme 1. Measures of the cost of adding density (fiscal as well as to the environment) are absent. Planning for lots of growth in commercial and residential development might have made sense to planners and politicians, they might serve some special interests, but they clearly do not resonate with the general public and are way out of line with the community's goals. In the same vein, density bonuses to achieve goals might seem a tempting tool because the costs are not well defined, but they are a tax and the community knows it. More density means running down our natural capital. It also means digging deeper into our pockets for taxes to pay for infrastructure; roads, schools, water, law enforcement, etc. Our planners planned for as much growth as possible, putting their efforts into finding places to put it. The community, their employer, prefers they study the unique attributes of Teton County and create a plan that minimizes disruption of our ecosystem. Such a plan would be a least growth plan, a plan that does not increase the total buildout number. Quite obviously, this requires including environmental and wildlife scientists and their work in the process. While I appreciate your tremendous efforts and the improvements made (such as the recommendation to establish an environmental commission) the current draft continues to put growth first and conservation, the community's number one priority, second. Objetive methods, scientific data and updates are available. Please incorporate them.</td>
</tr>
<tr>
<td>11/11/09</td>
<td>Christel, Tammy</td>
<td>Before I add my comments, I'd like to make an overall comment about the integrity of the Jackson Hole Conservation Alliance staff. In my opinion, the JHCA staff is composed of individuals driven whole heartedly by mission, and NOT by ego or personal agenda. That is why I support their efforts and will continue to do so. In truth, I can point to relatively few individuals and organizations in Teton County where I feel this is the case. The Alliance's efforts to conserve and preserve this region are at the core of progress achieved to date. I echo their recommendations to: Establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation. Incorporate specific language that wildlife protection should be the primary consideration in all land use decisions. Further work with appropriate agencies and partners to outline a science-based monitoring program and to provide language that clearly explains how indicators will be used to draft and amend land development regulations. Tammy Christel Jackson</td>
</tr>
<tr>
<td>11/11/09</td>
<td>Robinson, Sami</td>
<td>I am in favor of the public given the chance to vote on a dedicated funding source for permanent open space in the valley. I am not in favor of nodes in Teton County. Wildlife and open space should be the foremost focus of this new comprehensive plan. Thank you.</td>
</tr>
</tbody>
</table>
Regarding Theme 1 The staff and planning commissions are to be commended for their consideration and inclusion of many concerns regarding this theme. There still are gaps however to achieve the goal of protecting wildlife resources in the face of increasing population and development in the town and county. Still missing from consideration is the revised NRO map. To not have this as part of the draft makes it very difficult to comment on what areas might be impacted by new development— and what is actually being protected. Additional information has been available for months. Why is it not included? The 94 plan also had text to protect wildlife and habitat that is no longer part of the plan— what happened? Wyoming G & F has submitted information and comments for inclusion in the plan. To ignore this important resource is very strange— what is the problem? Why is it being ignored? Developing ongoing methods of monitoring whether plan policies are actually working is equally important. The cumulative impacts of development have been a serious concern for decades— and it keeps being ignored. We no longer have the luxury of assuming that animals/habitat loss will take care of themselves. WY G & F have expressed serious concern about this issue also. Please include laguage that will not only monitor and correct problems as they arise, but focus on how the LDR’s will address wildlife issues on an ongoing basis. There are wildlife issues within and adjacent to the town and these can no longer be ignored. Some issues can only be resolved by outright purchase of some critical lands. Developing a long term funding source is important. One option is to provide local taxpayer funding through a vote. Again, thank you for all the time that is being put into updating the plan.

Theme One progress has been tremendous, and I would like to thank you all for your commitment to addressing the needs of the community in the revisions for the 2009 Comprehensive Plan. There remains some concerning points in the revision process I would like to bring to your attention. As so rightfully stated in Theme One, “Teton County’s abundant wildlife and natural and scenic resources are an international treasure. Most members of the community live in the area because of the unparalleled access to wildlife, natural resources, and recreation.”

The international desire to live and/or visit Jackson Hole depends upon the continued stewardship of wildlife and natural and scenic resources.”

Revision #113: Given the extreme importance we all recognize of our unique and valuable assents in Jackson, we should establish an Environmental Commission, dedicated to data collection from all local agencies, baseline study of current populations, habitats, and NRO criteria necessary to maintain the delicate balance of wildlife/human livelihoods. A Wildlife Stewardship Plan utilizing thorough and updated wildlife data would keep track of records and watch for new and existing migration patterns as predictors of stress among species. This group would work toward protection of scenic values, natural resources and proper maintenance of wildlife issues. Revision #103 & #120: Wyoming Game and Fish is an excellent resource for both Town and County. Their recent recommendations, sent in June 09 to the County Planning Office, were most appropriate. These recommendations addressed needs with specific outline on how to achieve key important wildlife issues and impacts going forward. These should be fully incorporated into Theme One to serve as an outline for considerations to future growth and planning, as well as the development of an Environmental Commission.

Further stated in the Comp Plan, “Protection of wildlife and open space has consistently been identified as the highest priority of the citizens of this community.”

Revision #115: We must continue to recognize that any growth negatively impacts our wildlife balance, and impacts natural resources to varying extent. Therefore, we must include the statement that all growth directly impacts wildlife and natural resources to assure that all consequences will be considered before any level of growth can occur. This strong attitude will further ensure our “needs vs. wants” criteria for upholding “least growth” policy going forward.

Comp Plan statement “Scientific study of cumulative impacts is an ongoing and complex process from which the community may draw conclusions and make policy decisions, but it can not provide all of the answers. Local, state, and federal governments must work with local biologists to create, and keep current, a baseline inventory of habitat, wildlife and climate.”

Revision #109: It remains imperative that baseline data be established and easily measurable in order to monitor achievement and goals. As outlined by the Conservation Alliance, “goals should be measurable and review periods realistic”, in this way we can more accurately predict and control the outcomes we wish to achieve in reference to both wildlife preservation and natural resource allocation. Attention to collaboration among local agencies and staff members can assure that proper data is being collected, analyzed, and processed before potential land development can occur. Local agencies should be openly established between town and county staff to ensure comments and concerns are being transferred among all groups in a timely fashion.

<td>11/10/2009</td>
<td>Huff, Mercedes</td>
<td>I would like to ask you to please incorporate the comments from Wyoming Fish and Game in the Comp Plan, and make sure that wildlife remains the number one theme in all of your planning decisions.</td>
</tr>
</tbody>
</table>
| 11/10/2009 | Stone, Cindy Hill | I have been assured that the red lined revised version of the comprehensive plan draft Theme 1 is status quo and I should get passed the fact that I find it hard to read, confusing and quite self serving towards the original draft. It is indeed a neon sign that the average citizen squints to understand. Wildlife and its habitat is our utmost concern in the valley. Please make sure Theme 1 acknowledges wildlife and habitat in all land use developments regulations.
I still have Wyoming Game and Fish comments on my computer from this summer and I am wondering if it was an oversight not to include them in the comprehensive plan or whether you chose to ignore them. The indicators in Theme 1 need to have base-line data that precedes further land development. That data should then be monitored and analyzed by agencies and individuals that have expertise in those areas. We can not hope that this responsibility will be met. It needs to be written into the plan.
Moving forward, I find that dismissing the Conservation Alliance’s suggestion for a public workshop on PRD tools a serious mistake. Anytime you can bring citizens together to educate each other, results are usually positive. |
| 11/9/2009  | Mahood, Ken       | I will keep this brief, Kathy Tompkins asked cottonwood residents to email you protesting adding density to the northwest corner of the Portor Estate. As a resident of cottonwood park I disagree with Kathy’s opinions, the northern portion of the Porter Estate is exactly where density should go, I just ask that it is designed to respect the neighbors to the north, by adding a better pedestrian path and a possibly a linear park that both PUD's can use. |
I am writing to urge you to improve the language in the draft comprehensive plan relating to wildlife before you send the draft of Theme One to the elected officials. It is disturbing to see how much of the specific language relating to wildlife and habitat protection in the current plan has been stripped out of the new draft plan. A great deal of work and thought and scientific expertise went into the current plan. In contrast, the language in the new draft plan is vague, incomplete, and weak—in short, a giant step backwards. This needs to be remedied if the plan is going to even begin to meet the community’s most important goal, protection of wildlife.

In the absence of information-based, specific standards for protecting wildlife habitat, it’s easy to make endless incremental decisions, each of which may appear to have minor impacts on wildlife, but which cumulatively will mean the end of Jackson Hole’s ability to support the numbers and diversity of wildlife we now have. Each new house, subdivision, commercial facility, road, power corridor, water diversion, and backcountry trail fragments and degrades habitat. There’s no question that adding more human population to the valley will diminish wildlife populations, whether it’s by blocking migration routes with fences and subdivisions, or destroying habitats of less visible but no less important species (such as amphibians) by modifying wetlands and watercourses. The most we can hope for is to use the very best information we have, combined with clear regulatory mechanisms, to try to minimize human impacts. The plan needs to guarantee that future officials will use the scientific expertise that is available, and the plan should incorporate as many science-based standards as possible to protect our remaining wildlife. Ongoing monitoring of wildlife, combined with clear direction for corrective actions if monitoring indicates unacceptable declines, are also critically important.

Therefore, I urge you to incorporate language into the plan that makes it clear that protection of wildlife is the primary consideration in all land use decisions. The most fundamental component of protecting wildlife is to limit the amount of future human growth. I also ask you to incorporate the comments of the Wyoming Game and Fish Department in your rewritten draft of Theme One. The letter submitted by WGF contains many useful and specific suggestions, and these should be taken seriously. Also please reconsider the removal of so much of the wildlife standards and information contained in the current plan. Much of this is very valuable and useful and should be retained.

Finally, I urge you to add a strategy to the draft to establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation, and agricultural preservation. No value, in my opinion, will be more important to future residents (wild and human) than protected open space, and we should establish a funding source and mechanism to make open space acquisition an ongoing program in Teton County. There are countless examples around the country of successful funding mechanisms for open space—in a place as special as Jackson Hole we should be able to implement such a program.

Thank you for all your work, and for considering these comments.

Please include in the final improvements for Theme I to establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation. Thank you for listening to the residents. We appreciate what you are doing. Emily Smith
Nov. 9, 2009 – JHCA Preliminary Comments on Theme One Rewrite (which was released on Oct. 30, 2009)

Please Speak Up – Jackson Hole’s Wildlife Need Defense!

Written comments on the Comprehensive Plan’s revised Theme One, “Practice Stewardship of Wildlife, Natural Resources, and Scenic Vistas” are due Nov. 12.

To help you get started on your comments, here are five broad issues we believe the town and county planning commissioners must address before the new Jackson/Teton County Comprehensive Plan is sent to elected officials for their review. (To be incorporated in revisions to the draft Comp Plan, the town and county planning commissions must both pass the same recommendations. Here is a link to their preliminary recommendations as of Oct. 30: http://www.jhalliance.org/CompPlan/RecsToDate.10-30-09.pdf.)

- Recommendation #113 – Add a strategy: creation of an additional Wildlife Stewardship Plan under the direction of the Environmental Commission to detail implementation of Principle 1.1 (County 2-2 Fail, Town 1-4 Fail)

What You Can Do: Ask the planning commissioners to ensure that more specific data, language and mechanisms to protect wildlife are incorporated into the plan, and that existing data and knowledge are efficiently utilized. In short, reincorporate science-based language from the 1994 Plan and recent data (including a map of the Natural Resources Overlay) into the new plan.

Background: Since the release of the new draft, the Conservation Alliance has repeatedly raised concerns regarding the removal of significant portions of the community’s existing 1994 Plan that include specific language and mechanisms for protecting wildlife and wildlife habitat. While some positive steps have been taken in the new draft (such as the establishment of an Environment Commission and additional policies on wildlife permeability), far too much of the science-based language in the 1994 Plan has been removed. Some examples of language/topics that have been removed include: highly specific descriptions of the role of private lands for wildlife, statements of existing conditions and challenges (such as ‘wetlands have been severely impacted by development’ and “current development trends pose a real threat to wildlife habitat now and in the future”), references to detailed science-based reports (such as the “Biota report”) as a basis for policies and land development regulations, specific definitions and examples of direct, indirect and cumulative impacts, specific descriptions of important habitat types, clearly outlined criteria for formation of the Natural Resources Overlay, clear rationale for the need to regularly update the Natural Resources Overlay, and a list of additional species of concern that are currently not listed. To put it into practical terms, the new rewrite does not adequately integrate science nor does it efficiently use what our community has already spent considerable resources to produce – such as the Biota report prepared as part of the 1994 Plan or the recent Conservation Alliance-sponsored compilation of data conducted by the TSS Conservation Research Center.

The idea of a supplementary “Wildlife Stewardship Plan” to compensate for the lack of detail in the new plan failed. Without this supplementary plan on the table, and to make the process more efficient and effective, staff should be directed to reincorporate and update language from the 1994 Plan. It appears that in an effort to be concise, essential components were removed that should not have been removed. These sections from the existing 1994 Plan should be built upon and in some instances clarified, such as adding new information on topics such as climate change and its potential impacts on wildlife habitat, rather than removed altogether. Also, upon close review of the 1994 Plan chapter on Natural and Scenic Resources, it appears that there was not a lack of stated intention or vision, but rather a lack of enforcement to carry out specific actions (such as “regularly update all natural and scenic resource inventories). The same concern with removal of important details also applies to the rewrite’s approach to scenic resources.

- Recommendation #103 - Include all appropriate Game and Fish language into document (County 4-0 Pass, Town 2-3 Fail)

What You Can Do: Ask the planning commissioners to ensure that the red-lined, rewritten draft of Theme One that is sent to elected officials includes an incorporation of Wyoming Game and Fish comments.

Background: In June 2009, Wyoming Game and Fish submitted five pages of comments that included science-based
concerns with the draft plan, as well as recommendations for improving it. Unfortunately, commissioners did not collectively review the agency’s individual recommendations including: the need to update the Natural Resource Overlay, the need to identify a timeline for developing a list of focal species, a need to include important Nov. 9, 2009 – JHCA Preliminary Comments on Theme One Rewrite (which was released on Oct. 30, 2009) habitat types in the plan, a need to establish buffer zones, a need to realistically address the implications of a high buildout on wildlife health and landscape permeability, a need to add increased emphasis on the impacts of dispersed recreation, and a need to address a potential increased demand for wildlife management services.

Wyoming Game and Fish provided the following statement in their comments: “The draft plan could incorporate more specific language, data and mechanisms to provide the degree of stewardship identified in the introduction of the Comprehensive Plan...”. Unfortunately, due to a failed vote by the Town Planning Commission, no attempt was made to incorporate the agency’s suggestions in the rewrite released October 30, 2009. As a result, the chapter rewrite currently lacks critical science-based language that would more accurately describe our existing conditions and the extent of action necessary to increase our chances of actually protecting wildlife.

- **Recommendation #105 - Add a policy/strategy creating a public funding source for the acquisition of conservation easements and/or open space (County 3-1 Pass, Town 2-3 Fail)**

What You Can Do: Ask the planning commissioners to add the following strategy: “Establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation.”

**Background:** Across polling surveys done as part of the comprehensive planning process, 59.8 to 78 percent of citizens voiced support for a funding source for permanent open space conservation. Citizens expressed they would be willing to pay more in taxes for open space over any other issue. However, unlike other issues in the plan (affordable housing and alternative transportation), a strategy to establish a funding source for conservation was not included. Continued acquisition of permanent open space is a critical wildlife protection and growth management policy, an ESSENTIAL component to uphold our top priorities. The Conservation Alliance believes that the public has a right to vote on this issue. While we are currently in troubling economic times, the plan should include policies with the long-term community vision in mind.

- **Recommendation #115 – Incorporate statement, “Recognize that any and all growth in the valley impacts both wildlife and natural resources” into Theme 1 where appropriate (County 5-0 Pass, Town 3-2 Pass)**

What You Can Do: Ask the planning commissioners to incorporate specific language that wildlife protection should be the primary consideration in all land use decisions.

**Background:** By directing that wildlife protection be the first consideration in every decision, it is assured that all forms of impacts are considered, including direct, indirect, or cumulative impacts. Because wildlife needs can be incredibly dynamic through time, overall development in the valley must be comprehensively approached. While we greatly appreciate that the above motion passed in preliminary votes, we believe that the rewrite did not go far enough to explain why “least growth” solutions are such a critical component of wildlife protection policies, and how the levels of growth, regardless of where the growth occurs, will greatly influence our success in protecting wildlife.

- **Recommendation #109 – Look at indicators suggested by public and include in list for elected official review (County 4-0 Pass, Town 5-0 Pass)**

What You Can Do: Ask the planning commissioners to direct staff to further work with appropriate agencies and partners to outline a science-based monitoring program and to provide language that clearly explains how indicators will be used to draft and amend land development regulations.

**Background:** The use of indicators to “monitor achievement” is a great, key improvement upon the 1994 Plan. However, as they are currently designed, their potential effectiveness is highly questionable. Since July, the Conservation Alliance has emphasized that this table must include an initial column that summarizes quantifiable baseline conditions. The goals should also be measurable and review periods should be realistic for the variable being measured. Variables that are critical in defining and implementing local land development regulations should be prioritized. Staff should also incorporate more language to explain how monitoring will be translated to
modifying land development regulations and directing changes in policy. For instance, there are Wyoming Game and Fish monitored populations (which are also identified as species of concern) that are ALREADY below target. How does this affect future policy?

Gregory Griffith, West Bank. I’d like to thank the Alliance for that great idea. I support it 100 percent. We need more discourse on the PRD specifically. I have a suggestion on meeting duration. I think we should limit it to 8:30. I know that would be a hard pill to swallow, but there’s a lot of research in group dynamics that shows that mental acuity and meeting efficiency is down that slippery slope at about two and a quarter hours, and it’s over at three and last week was a prime example of that. We were spinning our wheels from 8:30 to 9:00. And if this in any way contributes to allowing Mrs. Chong to continue—I don’t want to put words in anyone’s mouth—but she could continue in every other meeting or when there’s a known lack of quorum, she’s an absolute asset to this process. We want her on board. And what we really don’t want to do is bring somebody in cold off the street right now in the middle of this process. Additionally, January 1, we’ve got two County Planning Commissioners positions up. We don’t know if they’ll be reappointed or seek to be reappointed. It may contribute to their staying on if the meeting duration is less. We should be striving for meeting efficiency, not meeting duration. That’s just a suggestion. The PRD specifically. In this County, where we value above all wildlife and open spaces, this should be the primary focus. Open space has so many values, not just to wildlife and to wildlife habitat, but there is scenic values, there’s preservation of the agrarian esthetic, so to speak, and there’s removal from development potential, quite frankly. We generally don’t like to mention that one, but it’s a part of the process. The 2002 transportation strategy included at the top of the list, believe it or not, for multimodal transportation needs, acquisition of open space. They did a study that showed that the first 1400-unit removal reduced the traffic demand average daily trips by 13,300 trips daily. That’s equivalent to the Lake Creek traffic. Keep traffic demand on Highway 390, which we know is well traveled. The PRD potential, the PRD forum, or the workshop, is the best idea I’ve heard yet, because there’s so many unanswered questions. You and we don’t have enough information to make these decisions to send forth strong recommendations. I have a bit of a disagreement with something Commissioner, Mrs. Rutzick said a couple of weeks ago. (What’s that?)...Oh, Miss, I’m sorry, no disrespect. Miss Rutzick said a few weeks ago and that is that she felt strongly that we don’t...that you don’t have a mandate or the duty to perform, to send forth certain recommendations, including multipliers. Well, I disagree. I think you not only have a right but the responsibility. We’re forming our future here and the electeds are not going to kick you out of your position if you send forth strong recommendations. Six of the ten electeds are up for re-election next year. I feel strongly they won’t make wholesale changes to what we do here unless it involves issues of budget or legality. They won’t go line by line, mostly likely, and they won’t go word for word. They’ll accept a lot of the work that’s done here. So, where the rubber meets the road is right here. There’s a lot of outstanding questions as far as leaving the PRD multiplier at nine. As regards to school section, other communities have addressed this by grandfathering in the multiplier for the existing landowners to prevent potential for school sections or from property transfer. They’ve also addressed it by using quota systems for the PRD. The PRD has a very high utilization rate—77.3 percent. That’s a tremendous potential right there. It bears a discussion on its own merit. We also have to address issues like according to the appendices, we have been successful at preserving over 37 percent of SRO, but yet we’ve been successful only in preserving about 26 percent of the NRO. This brings up something that Mr. Reid, I think, was getting at last week. This is a...having a qualitative assessment of these large parcels, these ten or so landowners that have the 350-acre parcel size or greater. And engage in a targeted acquisition based on value. And there’s something that really resonated with me last week when Mr. Wilson’s presentation with his spearheads, that the value of broken spearhead is less than that of the intact, the large intact parcel. That resonated strongly. And we should seek to target these areas of high biological value, scenic value, etc., etc. Thank you.

There should be no expansion of the land area designated as Resort (Teton Village, Jackson Hole Golf and Tennis, Snake River Sporting Club (Astoria), Grand Targhee)

There should be no expansion of allowed non-residential floor area in designated Resorts unless it is exchanged for residential floor area

Hold a workshop on possible PRD multipliers and bases, with PC, staff and community groups
In designated Resorts local oriented nonresidential use should be incentivized to reduce the impact on transportation and wildlife.

Thank you. I’m Paul Hansen, Executive Director of Jackson Hole Conservation Alliance and I have a brief summation, starting with thank you again for all your work on this. Last week, a number of groups met together and we listened very carefully to large landowners. We know that they love land as we do and we also know that there needs to be a Planned Residential Development tool. We want to be sure that it’s one that will properly incentivize voluntary land conservation agreements. However, we also do not want to see this tool potentially raised to build-out our community or force current residents to subsidize growth that many of us don’t want. We have a recommendation. This is a recommendation of the Alliance and many of our colleagues in the community. Our recommendation is that we agree that we need a PRD tool, and in the next few months we hold a PRD-specific workshop that includes large landowners, the Alliance, the Land Trust, Saving Historic Jackson and others. We think in this way we could find common ground and come up with what the multiplier should be. We don’t really know what the multiplier should be. I don’t think any of us do. And I think by getting together in a fashion like this, I think we could figure it out and we could have a win-win solution to this. We certainly need to do this in an informed basis for an LDR. Rather than have a lot of the other groups come up and repeat this recommendation, I’ll just ask people who agree with this to just stand up so that you can see that there are a number of others out of respect for your time and ?? Thank you. I have a couple of other things. We hope that you’ll consider as part of this theme again leaving open the option of letting voters decide on public funding for land conservation. I know you’re taking a look at this. Laurie Andrews mentioned it last week. A lot of people think it’s critical. The strategy and indicator section needs to be discussed and I believe you’re going to take this up. We need a way to measure progress against our goal, obviously. The community has expressed a strong desire to let there be no new resorts or resort expansion. We hope that will be discussed. And of course the draft, as written, theme two covers both Town and County, as it should be, and cumulative impacts of growth in any portion of our community should be accounted for. And of course we hope that the statement of ideal will be discussed and amended as part of the work on this theme. I wanted to end by speaking for myself as a relatively new observer in community planning, though as someone who has been in conservation for many years and one who has worked with business a great deal over the years. And it seems to me that I wonder if we don’t have a disconnect in our discussions on this issue that kind of hampers the progress and fuels mistrust a bit, right or wrong. It seems to me the public has asked time and time again for a vision on how much growth will be enough eventually. We know this will be eventually. Planners properly plan on the lifetime of this Plan, 10 or 15 years, which is primarily answers on how we grow and where we will grow. I think a lot of the public still wants assurance that our leaders here are all for this Valley and our desire that at some point there will be a limited growth. We realize that this reassurance or reaffirmation of an end state is a community value that will have very little tangible effect over the life of the Plan. What’s on the books already will ensure robust growth for many decades to come, probably for my entire lifetime. But we think that this ?? that this reassurance that we as a community share this vision that our Valley will never look like ?? or even Vale would go a long towards bringing us together a bit more and understanding that we do indeed share a strong vision for the ?? moving forward. Thank you very much.

<td>11/5/2009</td>
<td>Bloom, Rich</td>
<td>Yeah, Rich Bloom speaking for myself. Thanks again for allowing public comment and all your hard work, and I do think you did get some thank you's via e-mail. You probably don’t get enough of that. A couple of housekeeping items. Vision chapter, when will we see it and in what form? Another one is just light industrial. I already turned in my comments, but I hope we would not focus on location, because that’s totally a future land-use map discussion. You already have my concerns on that. Theme one and the other chapter format is thinking ahead. A suggestion is a straw on what the community said about these theme pages. That section is not scientific, but rather Staff interpretation of what we've said. That’s better served through the Appendix with the actual questions and responses from the various surveys and forums. I would add back in critical maps and charts, such as the NRO map, and also consider dropping the redline when this passes on to the electeds. Otherwise, there might be too much focus on trying to decipher language that has changed or been modified by this group. And I’ll put those in writing formally if you want. Growth management, these are not in the ??; I just want to talk about them briefly and cover a number of them. One is I strongly feel that you need to have a principle followed by policies and strategies that talks about cost of growth. A lot of the drivers of growth has been sometimes we’re chasing sales tax revenues, sometimes we’re chasing visitors between Town and Jackson, sometimes there’s a chase to try to solve housing issues. It’s very simple as far as principle, growth regardless of location or type, residential or commercial should pay its full share of directive tax on workforce housing, infrastructure and social systems. I just want to talk briefly about impact fees, if you’re not up to speed. Most of you are. I think you know that impact fees exaction and mitigation can only legally be assessed on the direct incremental impact on new development a business produces. It’s never used to catch up on past shortages or past mistakes. So, there’s…don’t confuse the ask that new development pay its full share that you’re asking it to pay anything more than it’s ?? . It covers infrastructure, roads and sewers, social systems, parks and schools, affordable housing, which will be re-visited in theme four. I think there’s always a worry when you’re looking at impact fees or mitigations or exactions that it’ll impede development/redevelopment, and yet we’re only asking for what that impact is. If you don’t do that, you end up privatizing the profit on projects, and eventually having to pay the cost which you end up socializing those costs on the public at large. You eventually have to pay for those costs. It has to come one way or the other. As far as impeding development/redevelopment, I guess I’d go back to this winter. We were looking at raising the employee mitigation, the current mitigation rate for the Town of Jackson to match the County. If you remember that, it was a 15 percent rate on the seasonal month giving up to 25 percent on that arcane methodology on a seasonal month. And we found out in the process, thanks to Jay Barley, that we did our map on in 2006 when it was converted to numbers of people per square footage, they had raised the rate all the way to 25 percent three years previously. They found out we didn’t have to do it. So, here the mitigation rate was raised for three years. Nobody knew it. Yet, the submittal of ?? and regular redevelopment plans were at the same pace. So, if you create a level playing field that’s not too onerous and it’s level across the board, everybody will still come and play and planning and development will rule projects. Of course, we’re in a different economic climate now, but we’re looking out 15 years. The last is mix of growth. You already have my comments on that. I think that’s a very important principle that you get back to, because we know that that mix of growth between commercial and residential, large second homes versus regular residential homes, is critical to this Plan. Thank you.</td>

<td>Joint Planning Comm</td>
<td>Good evening, transcriber. I’m Cindy Stone. I live in south of Town. I have a beagle and I wanted him to be here tonight, but my husband won’t let him stay out that late. But if you could, rabbits, if you know about bunny rabbits, a rabbit will run in a circle. And I can put my beagle out to hunt and ?? but he will not go catch that rabbit ?? . When I put my beagle out to hunt, he will track it and he will chase it and he will &lt;&lt;inaudible&gt;&gt;. And he will continue to do that until that rabbit comes back around and ?? . Now, my point here is that what I’m seeing here is a lot of chasing and a lot of baiting, and that rabbit &lt;&lt;inaudible&gt;&gt;. You know, I printed out the theme one rewrite. And I showed it to some of my family and talked to some neighbors and we all agreed that this is not the representation of the hard work that all of you are doing. It does self-?? the Planning Staff, but this is a convinced highlighted copy of this. Now, you go to…I’m sure you all have, maybe not right off the bat, but have copies of this. If you go to page 15, it talks about the indicators, and that’s a really good idea. But that indicator goals are vague and there are no consequences. Now, for those of us who have raised children, we don’t know about that—vague goals and no consequences ?? . Such as in five years if on, number four, &lt;&lt;inaudible&gt;&gt;, which is right here, if that increases, what are we going to do? Are we just…are we going to be chasing that rabbit? Maintain existing potential outside of the areas formerly known as nodes and add PRD options</td>

<td>11/5/09</td>
<td>Acri, Armond</td>
<td>Armond Acri, representing Saving Historic Jackson Hole. Thanks for the opportunity to speak. I did submit some written comments. I’m not going to repeat them out of respect for Mr. Palmer ??. I did want to make one point. Any talk about, and I think this has been one of the speaking points in the past, to transfer or retire density does have to have a realistic estimate I think of what the actual potential was to develop as it gets retired. That’s been a sticking point I think on a lot of contentious projects in the past, so I just wanted to throw that out as something that hopefully you will consider. I do also want to agree with Paul on the need to limit resorts. Hopefully, you will discuss that tonight. I think the public was pretty clear on that in the polling. And last, a real quick point, I want to agree with Greg on the suggestion to end at 8:30. My dad always said quality over quantity. You know, you guys, I appreciate you sticking on, but the productivity does go down and, you guys, I believe you need to stay in the long haul. I do appreciate what you’re doing. We want to see you still here at the end of the process, that’s all, so please consider that. Thank you.</td>

<tr>
<td>11/5/09</td>
<td>O'Donoghue, Tim</td>
<td>Tim O'Donoghue with the Jackson Hole Chamber of Commerce. Actually, I’m of the opinion that in a caffeine-free environment, 8:30 is a good end time, but I suspect that if you go a little longer with a little bit of help of caffeine, which I suspect some of you have. I understand that commercial development may be something that’s going to be discussed this evening or in perhaps the next meeting. An important set of information for this discussion should be what kinds of business the community needs and wants. Based on the kinds of business the community needs and wants, we think a square footage estimate can be derived. For instance, in order for Teton Village to be assessed a sustainable Village center that can compete with other destinations, a study should be conducted to determine what kinds of business and associated square footage is needed. Obviously, building a center in Teton Village will lessen traffic on 390 and Highway 22. The outcome of such an analysis could be a recommendation for keeping the amount of commercial space allowed under the ‘94 Regulations, or perhaps more or perhaps less. The Jackson Hole Chamber of Commerce is offering to be a resource for getting this information and supporting such an analysis. We appreciate the opportunity to be of service to the employee generation, the Task Force in the future effective population studies, and studies that show where commercial development the community needs and wants. So, thank you. I hope you’ll think about the opportunity or the offering that we’re making here to support the work that you’re doing, and we really do appreciate all the time and effort you put into this, whether it’s assisted by caffeine or not.</td>

| 11/5/09  | Joint Planning Commiss             | Development location – larger multiplier for clustering on-site or off-site development potential in a desired area should be a basis for the PRD:  
-Outside crucial habitat areas (i.e. NRO, certain habitat types)  
-Outside scenic areas (i.e. SRO)  
-Adjacent
Date: 11/5/2009  
Name: Bloom, Rich  
Comment:
Housekeeping Items:

- Vision Chapter: When will we see it and in what form?
- Light Industrial: see my comments on District 12 - HWY 89 along South Park.
  - Specific locations should only be discussed during the FLUP map discussions.
- Theme 1 and other chapter format:
  - Drop the “What the community said about this theme” pages – this section is not scientific but rather staff’s interpretation of what we said - this is better served through the appendix with all applicable questions and responses from the various surveys and forums.
  - Add back in critical maps and charts – such as the NRO map in Theme 1.
  - Consider dropping the redline format before this passes on to the electeds – otherwise there is too much focus on draft planning staff language that was changed or deleted by the joint commissions. Keep the split vote footnotes – and color code them Town or County.

Growth Management – Theme 2:

- In Theme 2 address the Principle: Cost of Growth
  - Growth, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems.
  - Need a principal, policies and strategies
  - Impact fees, exactions and mitigation can only legally be assessed on the direct incremental impact that a new development or business produces.

It is never used to catch up on past shortages – do not confuse that you cannot legally fund past shortages via current impact fees.

This covers infrastructure (roads, sewer water), social systems (parks and schools) and affordable housing – a very important point which needs to be reinforced in Theme 4.

- Always a worry of impeding development or redevelopment.
  - In 2006 the TOJ inadvertently raised its commercial mitigation rate for affordable housing from 15 – 25% of the seasonal employee bump when it converted its methodology from ‘employees to be housed’ to ‘square foot required’. During last winter’s discussion to increase the migration rate as the County had done the previous year – Jay Varley brought the mathematical error forward – and we discovered we had raised the rate three years earlier – with no impact to the rate of building permits and applications for PMD’s.
  - Simply when accidentally raising the rate – which achieved an even playing field which went unnoticed but was immediately applied – there was no disincentive to continued development & redevelopment.
  - In Theme 2 address the Principle: Mix of Growth - that job creating commercial growth is considered hand-in-hand with residential development.
  - Address the mix of future growth – discuss and address the balance between job producing commercial and residential. Address the balance between resident housing verses large second homes.

<td>Saunders, Allen</td>
<td>Recommend reducing and/or converting some of the proposed commercial square footage into residential instead. Thank you for taking the time last week to visit with me about the Teton County Planning Commission’s recommendation to eliminate from the Comprehensive Plan the allowance for property owners to build “guest houses”. Per your suggestion I am emailing my comments on the matter to you for the record. I own a home on Plot J of the Rogers Point Subdivision at Hoback Junction. In the fall of 2007 I began the construction of a detached building I designed for enclosed shop and vehicle storage space and a roofed storage space for a motorhome. Construction was completed in 2008. The enclosed part was designed for the option in the future of converting it into a two bedroom guest house with bath, kitchen, and living area. Windows, plumbing, electrical circuits and raceways for future circuits, residential insulation standards were installed for the potential conversion at substantial additional expense over the cost of the garage/storage option. The bathroom was completed. Only a few partitions, electrical wiring, kitchen, and change out of the overhead door would be necessary for the guest house conversion. It has not been our intent to do that while we own the property, but could be a possibility. The potential would be a valuable attractant if we decided to sell, and the initial additional cost would be recovered. There are other Rogers Point properties which currently have guest houses. If there becomes, in fact, the elimination of allowable future construction of guest houses, we, and possibly other property owners, are being denied the privilege enjoyed by those with such existing facilities. Our investment would be lost. The current guest houses I am aware of are providing rental homes in a rural setting for valley workers, at affordable rents.</td>

<td>Acri, Armond</td>
<td>Save Historic Jackson Hole would like to submit these comments on discussion at the October 29th Joint Planning and Zoning meeting. We think it is worth noting that the number provided by staff for the number of units created by the PRD on large parcels is misleading. It ignored the SRA project at Teton Village. This controversial project did not use the PRD for its 1517 acres, but used the amount of development potential allowed by the PRD on greater than 35 acres to justify 339 market units (vs. 331 allowed by the PRD). This was an increase of 296 units over the 1/35 allowance of 43 units. This is almost twice the reported number of 184 units. This is just one example. Technically these units were not created by the PRD mechanism, but the PRD was used as the justification for what was approved. Much of the controversy over this project centered on the value of the open space provided by the project. If you decide to continue the tiered incentive for open space, we hope careful consideration will be given to ensure that open space truly has value. We would begin that conversation by asking if golf courses are valuable open space. We agree they are open and they are space, but recent events on 3 Creek cause us to question the value of golf courses for wildlife. We support the suggestion by Chairman Pruett that the Joint Commissions communicate with members of the public who do not attend the meetings. We acknowledge concern by Commissioners Allen and daCosta that the chairs cannot speak for individual members, but believe this issue can be addressed. We support the suggestion by Commissioner McCarthy that the final vote on all recommendations remain on the screen long enough for those in attendance to read it and take notes. In regard to Commissioner Duncker’s question if development will occur in “difficult” rural areas, we believe the experience in other communities has been “If it is legal to build, someone will try.” Forty years ago no one envisioned there would be many people living on the West Bank or down Fall Creek Road. We must plan for what is allowed by law. When it will happen is out of our control. We agree with Commissioner Read’s statement that we need creative tools to accomplish our goals. The current Comp Plan prefers to use incentives to accomplish our goals. It appears the Joint Planning and Zoning Commission is leaning in that same direction. We believe a creative solution would be to consider other incentives in addition to density bonus. Density bonuses are not free. The cost to the community is reduced predictability and a change in the character of the area with increased density. A creative solution would be to acknowledge all properties in Jackson Hole are not equally desirable. Allowing the same density bonus for a steep hillside and flat agricultural land makes no sense. The cost to develop the steep land is much higher so the profits are lower.</td>

</table>
Good evening, Town and County boards. My name is Meredith Wilson. Wyoming ranches and farms are disappearing at an alarming rate. Farmers and ranchers have withstood drought, economic downturns, development pressure and other man-made and natural threats to their livelihoods.

Wyoming’s agricultural heritage, however, have managed to preserve these important places that make up our state’s agricultural heritage. The farms and ranches are not just history but remain vital today and highlight the importance of agriculture to Wyoming. You need to know that as you consider passing this Plan, you may be looking at the last generation of farmers and ranchers in Teton County. As this discussion continues, it is not my desire to cash out on the land that I have. My heritage is important to me. However, I have a fiduciary responsibility to my family. My mother is 72 years old and her sole income at the present consists of her retirement as a teacher’s aide in the school district and Social Security. Before my father passed away, he said that he intended the land to be my mother’s retirement. He also supported me in my desires to continue ranching. When one thinks of view corridors on this side of the Tetons, probably one of the most photographed views of the mountains, is the ?? with Grand Teton National Park and the Tetons in the background. It is our ranch on the west side of the Tetons that probably has that distinction. It is the view across our ranch that is seen on numerous postcards. It is the view across our ranch that the entire Alta community and most traveled Grand Targee look across as they gaze up the Tetons. It is the view across our ranch of our lands every spring and big draft horses pulling a sleigh every winter that you see in our local newspaper.

I opened the National Sheep Industry Magazine recently and saw our ranch with the sheep in the foreground and the Tetons in the background as the first-prize winner in a photo contest for mountain state photographers. As I before stated, our ranch is a migratory route for big game animals. We are conduite...we live right next to...our place is right next to the National Forest. We have moose, deer, elk, coyotes, the occasionally wolf, bears, mountain lions, Sandhill cranes, gold and bald eagles, hawks, pheasants, ducks, geese and more. Haven’t I heard others here say how important wildlife is. Wildlife don’t respect political boundaries. How will the view corridors on the west side of the Tetons be affected by 35-acre ranchettes? I have here two spare points that I found on our ranch. If the chair and board would care to look at those. One was broken into pieces when it was run over. If you would care to look at that. And even though it has been glued back together, it is not as valuable because the divisions can be seen and mar the beauty of the whole piece. The other spare point I found is three years ago, which would be the white point. It is much more appealing to look at and it has more value to the observer because it is intact. My analogy is that land is similar in that if it is broken into pieces, it loses its value, but kept all together and it’s untouched and unchanged, it’s a beautiful piece of art. If my mother is to have a better retirement than she currently has, we need to have tools to help that happen without subdividing her land. If valuable view corridor and wildlife habitat areas are to be maintained, we need to have the tools available. One of the tools could be transferring my development rights to someone else’s property where a greater density is appropriate. Another tool may be a noncontiguous development, who I part with my cousin, Lauren Wilson, who you met last week, and others to move development rights from one of our properties to another, thus allowing larger tracts of land to continue being ranned and farmed. Let’s keep all the options available. I don’t know what the number should be in the PDRs, PRDs, excuse me, but don’t eliminate the tools that provide for these options in some way. We all want the same thing, I believe, all those who are here. We’re not in opposition in the truest sense of things. I strongly feel that my ideas allow for both in the Plan—open space with the ability to realize value from that open space. I feel that a Plan that has more vision will have a better result for all our futures in beautiful Teton County. Walter Williams, a noted professor of economics at George Mason University, states that many today think, and I quote, that in a democracy, the majority rules. But America’s founders didn’t found a democracy. They founded a republic. The authors of the Federalist Papers arguing for ratification of the Constitution showed how pure democracy has led historically to tyranny. Instead, they set up a limited government with checks and balances to help ensure that the reason of the people, rather than the selfish passion of the majority, would hold sway. Unaware of the distinction between democracy and a republic, many today believe that a majority consensus establishes morality. Nothing could be further from the truth unquote. I’m asking you as a Planning Commission to do the right thing with this process of redoing the Comprehensive Plan. As Cody Lockhart stated last week, you will get what you plan for. Don’t eliminate the tools that we use to take care of all the people. Let’s maintain our open space for a better life. Thank you.

<td>10/29/09</td>
<td>Varley, Jay</td>
<td>My name’s Jay ??, resident of the Town of Jackson. I was distressed to see the decision made on nodes and because, as I’ve said before, I don’t think it’s the total number of people that are here that is so important, as to where they are, to where they’re located in relationship to their jobs and to the other activities that they have. And the nodes I think we’re trying to address. And I also don’t understand, I mean, I think north South Park, given that there’s grocery stores there, that there’s schools there right on High School Road, that should minimize transportation in Jackson. And I think transportation in Jackson is one of the most important things in a lot of development patterns. It’s what I think people find most maddening and has the most impact in Town. I think Teton Village, also from a transportation standpoint, I think that there ought to be more, particularly workforce housing, but housing out there so that they’re not ??, I just I would urge you to pay close attention to these landowners when you talk about conservation easements and the Land Trust. And, I mean, they need some financial incentives to do this, too, to do these conservation easements. And they have federal tax problems of various kinds that they need to deal with. And in some cases the conservation easements help them with that. It’s a very important consideration. On that note, it sounds like the only node that’s acceptable is Town. And if people end up living in Town, if they don’t work in Town, they are going to take transportation ??, And I think that would be pretty troublesome to the County. I meant to mention something else on the PRD, that discussion, and that was regarding… I don’t think you should ever forget how many platted lots you already have and folks are likely to be where the residential development will occur. And I don’t know that the PRD is actually going to create that much new development. It does get us front and center to the conservation easements, though. Thank you.</td>
</tr>

<td>10/29/09</td>
<td>Bloom, Rich</td>
<td>Rich Bloom, speaking for himself. Yeah, I won’t overly revisit my ongoing support for retaining the PRD tool. I’ve been doing that for over a year. I’m glad all the large landowners are here. And I also do not want us to go backwards and revisit the discussion on nodes. I think they’re really separate and we’ve been there. I think we do know that this whole process ended up not being the forest for the tree. I think the whole process got bogged down on trying to control pattern of growth and lost sight of too many things, which is trying to control the total amount of growth and also how to preserve permanent open space. And I think by now we know that the creation of permanent open space versus temporary zoning is the end goal, and that’s why I’ve continually been supporting this PRD tool or to be part of it and not going down the idea of up zones and down zones. And that’s exactly what nodes are, they become up zones. As far as new information, a couple of things here. I want to make sure you visit before we get out of theme two, and clearly we’re not going to get out of it tonight, one is a request that you have a task force or direct Staff to have a task force look at excessive population. In fact, the Gills have wrote a good article on that. That’s what was promised in this Comp Plan process. It’s what we did in ‘94, and it brings in the idea…it’s not more work for that group, just bring in what the effect of all the lodging units and camp grounds and commuters into those numbers, because that gives you an idea of impacts on social systems, police, fire, sewer, water, roads. Theme two, I want to make sure you revisit that it does cover both Town and County. And there was significant language in there saying it covered both. Obviously, you’re going to go into more detail in theme three, but theme two does cover Town and County. That you do, before you get out of this theme, which is solely focused on pattern of growth, that you go to cost of growth. It’s not been addressed in your discussions. Growth regardless of location pays its fair share of its direct impacts on workforce housing, infrastructure, social systems. That you address the mix of growth, the whole reason why we are continuing to try and grow. which is chasing sometimes it’s housing, sometimes it’s chasing jobs, but you address that mix of growth and then you balance that commercial versus residential. Third, and next to last, please make sure you’re clear to Staff that you are remanding this theme to them and that you don’t then go back to it line by line until they do a rewrite based on your directives from this. And then last I’ll just summarize again. Please do not go backwards. Don’t go to nodes. Let’s have a good PRD discussion, understand how it’s really used and also how it’s really used to achieve conservation that many times doesn’t even end up in development units. Thank you.</td>

</table>
My name is Jim ??, I'm here on behalf of Robert Gill and his family, but I'm also here as somebody who has been involved in the planning process at least five days a week over the last 30 years on a board similar to your board that long, which is longer than I care to think about ??, What I'd like to do now will be brief, because I know there are a lot of people here to speak, your action last week and your vote, at least on the surface, you come across as a one-size-fits-all kind of approach to the question of the PRD and how the PRD is used ??, Having been involved in the 1978 plan intimately and I'd been involved in the '94 plan, a step that was taken between the '78 plan and the '94 plan, as I mentioned to you last week, was we wanted to get away from the three-acre-grid subdivisions to create a stronger direction to cluster development ?? and drop the underlying zoning of one per 35, but what we got was one per 35's I don't think that that's necessarily been bad in all cases, but I think if we're going to advance the effort this go round to the next level, that we need to be thinking in terms of what do you want for 35's somehow and, or at least doing it in a way that we get significant amounts of open space. And to do that you've got to look to these large ranch owners. You can say that three per 35 works across the board throughout the County and it's an incentive, but it's working with the market and isn't really being accurate to say that the market that exists on the West Bank and the market that exists up in Buffalo Valley is the same as the market that exists in the South Park, So, to take a broad sweep, that's what concerns us and concerns me is that you have disincentivized the desire for large landowners to come in and conserve significant large open spaces. And landowners come in at this juncture and in future because the way the state statutes are set up is that they have few choices. They could come in through the planning process and the LDRs, or they can come through the state statute of 35-acre tracts. And they could bring those tracts in individually through the County process, or they can sell them off and then come back through the planning process. And you could get open space that way. But you're not going to get the kind of significant large chunks of open area that I think this board has been striving to achieve. And I think it would be the step to elevate this effort above and beyond the core plan. I think you've heard testimony that the PRD process is good, I think there was a lot of effort in '94 during the PRD process. There's a lot of tiers of incentives in there, including incentives to not come in as 35-acre parcels but bring it in as larger contiguous parcels. The vote last week on the surface would imply that you're disincentivizing that by dropping that multiplier down to three per 35 I see that on your discussion points tonight that you are going to discuss tiers of multipliers ?? I would urge you to consider that as you move your discussion forward, I would also urge you to take a step back and look at the other side of the equation in terms of what you want for these rural areas to look like. I think you need to go a step beyond that to begin to look at areas by areas. When the '94 plan was done, four of the people that sat in your positions at that time, pulled out the map and they'd go around and look at parcels, mostly ?? because they realized each one is different. At that point in our process where we're getting down in margins smaller in terms of our planning and our choices. So, I would encourage you to do that. I made the suggestion last week to perhaps bring in people on all sides of the equation that could help, the Land Trust, Staff, large landowners. Look at that issue in more detail I would encourage you henceforth to do that. And reconsider your votes from last week and really kind of look at and be more strategic about how you're going to approach getting results that you want to see ??, So thanks for your time.
Given that the Theme One rewrite will be released tomorrow, we just want a clarification on when the public will see the rewrite of the vision/intro chapters. For example, direction was given to the staff to draft three different vision statements for the entire plan--When will the public review those again and be able to provide input? We recognize the process has changed since, but moving forward, we just wanted this clarified. Second--Could you clarify how broad level rewrites will differ from the line-by-line approach of Theme One? For example, for Theme One, staff was only going to make red-lined changes to the draft in the case that the recommendations passed both boards. In other words, the rewrite was very narrowly focused to your specific, jointly passed, recommendations on Theme One. Is the process moving forward going to primarily include broad level rewrites on the individual chapters? And if so, will the planning commissions do line-by-line review at some future date? Or was this broad approach just for Theme Two? A practical example--since you haven't yet discussed modifying the Statement of Ideal--is it expected to be generally changed by the staff, or would you need to make a specific recommendation tonight? We also ask these questions about process given the motion to discuss town issues only/primarily in Theme Three. We're not sure where the idea of separating the town discussion from "managing growth responsibly" originated (it was very strongly implied even in just the powerpoint presentation last week that omitted town numbers). Because it is quite clear, as a joint plan, and the way Theme Two is written, that it is supposed to apply equally to both jurisdictions. Also, there are some issues of relevance to town in Theme Two that are not addressed in Theme Three. So, to clarify, if you skip discussions about town until Theme Three, will you wait to do a rewrite of Theme Two until discussions on Theme Three are finished? We think that if you move forward with the proposal to skip town issues in Theme Two, there need to be assurances that town issues will be directly addressed in the rewriting of Theme Two also. Overall we believe that it is confusing to suggest separation of town from the Theme Two chapter, as all the issues of growth management cross jurisdictional boundaries. And one more thing about the rewrite process--Given the repeated references to the Future Land Use Plan in Theme Two, will staff no initiate a rewrite of the Future Land Use Plan chapter and associated district characterizations? Or, is that going to be addressed as a separate issue later? Are you largely skipping line-by-line comments on Theme Two given the need to first drastically modify the FLUP? A clarification on next steps would be helpful. If you are going to vote on additional broad level directives for Theme Two at this time, please vote to direct the following as essential elements that still need to be in the new plan: Incorporation of an effective population study component in this chapter--See chapter 2 of the current plan for direction. Incorporation of text regarding "least growth" solutions--including a more objective sampling of public polls in the section "what the community has said about this theme" regarding preferred amounts of development; Incorporation of language that that addresses issues that planning typically addresses such as age population demographics and makeup of economic industries—that enable use to adequately plan for schools, housing needs, etc.; Incorporation of language that addresses the importance of the type of development (Setting maximum structure sizes, type of commercial, balancing growth in different sectors, etc); Reinvestatement of the objectives for which the public supported "managing growth responsibly"--For example, not all of these issues have been addressed--One key example is to "fully address the costs of growth"--Not only is fiscal responsibility an issue of great concern to the public, it is typically a huge component of responsible growth management and should be specifically addressed in this chapter. In line with documented community will, please add the following strategy for Theme Two--"Establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation and agricultural preservation." In order to protect open space in perpetuity, our community and landowners need diverse options to secure open space. Alongside the use of lower density PRDs, a funding source is critical. Please take a vote on this issue and establish it as the first strategy of this theme. Pointing to a fundamental point of this chapter, and the plan as a whole--A clear underlying framework for defining desired land use characteristics (not just “according to Future Land Use Plan”) should be reintegrated--We strongly recommend building upon efforts of the 1994 plan. As we have stated before, the new plan must clearly provide a foundation/legal underpinning for future land development regulations. So far, it doesn't. This chapter should also define community character--first defining the type that exists, and second, what to protect or create. While it certainly could use refinement, the 1994 Plan clearly laid out guidelines for regulating character using relationships of density/structural mass to the site area/open space. We would recommend that staff be redirected to refine the framework of community character during the rewrite of Theme Two, to be consistent with an earlier position to incorporate community character into the overall vision statement of the plan.
Effective Population: Make sure you allow the numbers task force to identify the EFFECTIVE population of current and potential housing units, commercial AND lodging units plus commuters.

- This was our understanding of what the comprehensive plan would provide. The process needs this understanding as it is directly related to our transportation network, water, sewer and other infrastructure – along with implications on police and fire capacities among other social services.
- I have attached the 8/27/07 Defining Issues and Concepts piece again with highlights that this information on effective build out was a promised outcome of the comp plan review. These defining issues were the agreed upon plan role and also identified key issues to be further defined as part of the process. Effective population build out has been something we all have expected as a promised outcome.
- Direct staff to have the task force deliver an estimate of the future EFFECTIVE population.
- My understanding is members of the task are requesting to do this – but planning staff has said that is not part of the work they have been assigned by the planning commissions. Please correct this misunderstanding.
- Still also let the task force complete the work on the job creation effects of commercial square footage and also large second homes.
  - Then address what is not in balance rather then simply going to additive growth via considering density incentive tools whether they are tied to possible nodes or Town.
  - Light Industrial
- Specific locations should only be discussed during the FLUP map discussions. I will be addressing the FLUP map for District 12 (South Park) – later and its intended increase for light industrial that is in direct conflict with our current comprehensive plan.
- Current Comp Plan language – chapter 4 - Natural and Scenic Resources
Visual Enhancement Areas

Some areas along and adjacent to major roadways could have been designated as scenic vistas or scenic corridors, had they not already been developed with visually intrusive or distracting structures. These areas have instead been designated as visual enhancement areas.

The most obvious such area is along Highway 89 in South Park. In this area, haphazard development of heavy industrial and commercial structures has blocked vistas to the west, and has diminished the scenic qualities of one of the gateways into Jackson Hole. be permitted to be built forward of the front setback line of existing structures. Extensive landscaping should also be required, to screen parking areas and to soften structural mass.

Comprehensive Plan
Chapter 4 – Natural & Scenic Resources Page 4 – 12&13
Third Printing, October, 2002
Growth Management – Theme 2
- Theme 2 currently covers both Town and County – although you can go to
more detail in Theme 3 on Town – please remand Theme 2 to staff with the understanding it still covers the County as a whole (including Town).

- In Theme 2 address the Cost of Growth – this has not yet been addressed.
  - Growth, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems.
- In Theme 2 address the Mix of Growth - that job creating commercial growth is considered hand-in-hand with residential development.
  - Address the mix of future growth – discuss and address the balance between job producing commercial and residential. Address the balance between resident housing verses large second homes.
  - Recommend reducing and/or converting some of the proposed commercial square footage into residential instead.
- Please REMAND Theme 2 to staff – and ask for a draft back BEFORE going through line-by-line.
- Finally - during the non-contiguous PRD discussion tonight – please do not revisit the nodes. Let’s not go backwards.
  - The non-contiguous PRD is not tied to nodes and is more of an organic flexible process between various large landowners to achieve permanent open space protection.
Mr. Chairman, members of the Planning Commissions, my name is Bill Resor and I’m speaking on behalf of myself and my family, which owns the Snake River Ranch. I also was a Planning Commission member for a number of years leading up to the adoption of the ‘94 Plan. I gave a letter for your… I submitted a letter for you on September 3rd, which I was out of Town for, and I think Brad Meade read parts of that letter. So, I’m not going to reread that whole thing, but I wanted to just to read one part of it and then make a few other comments. The basic thrust of what I want to talk about tonight is how do you get real open space created that’s permanent, that protects wildlife values underlying and protects community character? Because, as Jim ?? just pointed out, you can’t just do it with regulations. The state has not given the County the right to just zone down certain, you know, one per 35, it can’t be done by just under state law, and that really isn’t what we’re talking… real open space, that’s not what we’re talking about. It’s critically important to encourage landowners to work with the Land Trust so that the public and wildlife get real permanent protection of open land that we want. Development gets the attention. Conservation easements are hardly noticed because nothing happens. Indeed, that’s the point of conservation easements. I think it would be good to look back… have your Staff do this for you, and I think they’ve done a lot of work already, from ‘94 till now how much land that was in a rural zone in ‘94 has been changed? Has gone from rural zone to something that’s been decided? It’s either gone to conservation easements, or it’s gone to rezoning to something else, or it’s been developed under the rural zone. From my review of that, it’s amazing how much of it has gone to conservation easements. There’s been very little development within the rural zone without just plain up zones. The development has not come from the PRD being used in the rural zone. It’s come from rezoning to something else. Most of what’s changed in the rural zone has actually been really good from ‘94 till now. Teton County has been incredibly successful in preserving its private lands. I hope the Planning Commissions retain the key regulations that encourage land protection. We cannot zone our community into real open space. The real open space happens when we maintain fair Regulations and let the Land Trust work with landowners. And you can ask me, you know, what I see is great for me. I’m one, you know, I represent one group of landowners and a large extended family. And you should ask others. And we will give you different answers. If you want to protect more open space, you want to come up with regulations that encourage as many landowners as possible to work through the County, through the Land Trust, to plan big pieces. The difficulty is it’s so much simpler to chop things up into 35- and 40-acre pieces. This even happened under the old ‘76 Plan. There were people who—I won’t name names—but, you know, people who said, well, I want to sell land. And I said, why are you doing it in 40-acre pieces? I don’t want to go to the courthouse. You know, you could just send your attorney down there, file a 40-acre, you know, map 40-acre pieces and sell them. That doesn’t get you very good development—sometimes it does, if it’s done thoughtfully—and it doesn’t get you good open space. So, if you want people to go through the process, your difficult job is how do you make the process welcome it? How do you make landowners want to use the PRD options? So, basically, the more flexibility there, the more incentives, the more real wildlife protection you’ll get permanently and the more thoughtful development you’ll get. I know on the other side you’ve got the peaking interest of having… of people wanting assurance that something totally out of character is not going to happen there anyway. And that’s very understandable. If you go back to the ‘94 Plan, one of the things we failed to do was we did not designate a town-expansion area like there had been in ‘76. In ‘76, the Plan said what is now Cottonwood was the Town-expansion area. So, between ‘76 and ‘94, when developments came in, if somebody wanted to do up zoning, they would have to get a change in the Plan and then get the project approved. They tried to do that with Kelly. The County approved an up zoning in Kelly with commercial and other stuff. Well, the Jackson Hole Alliance sued, because even though it was allowed by the regulations, it violated the Plan. Because the Plan had certain expansion areas, primarily what became Cottonwood Park, and the County lost the lawsuit. So that development never happened. On the other hand, after ‘94 when you had no nodes, no Town expansion, everything is through gain. You’ve got a suburban up zoning on Log Island, you’ve got affordable housing PRDs on the Village Road. And I’m not saying… in some of these projects there’s good aspects to them, but the decisions were made on a spot basis. So, when… I know you for now tossed out all the nodes and fine, you know, this process takes a number of iterations. If you throw out the nodes, what you’re really saying is development up zonings can go anywhere in the County. Seherr Thoss came through twice since ‘94. The first time it was proposed by the County Planning Director for a thousand units, and that failed basically because of financial reasons. Then it was proposed by a private developer for about five hundred units, and that failed for lack of approval. But the problem there was that you were making the decision on Seherr-Thoss, not by looking at the whole County, but by just looking at Seherr-Thoss, and if a couple of votes had gone the other way, you would have had a development there. That does not give the people in that neighborhood security. If you come up with nodes and say, here’s where development will go—and I know that’s very hard to do, it’s hard to draw the line on the map. We failed to do it in ‘94—you know, we didn’t have the guts or whatever—but if you do that, you’re saying that everything else is not in the node. So, in those zones, in those areas of the rural zone, an up zoning cannot be done without a much more difficult process. And so those people are safer. And those areas would be developed only using bonuses that are allowed within the rural zone. And getting to that, a couple of people asked me, you know, what are the right level of bonuses? That’s an impossible question really to answer. The more bonuses you offer, the more open space you will get. I think, from my personal perspective, for actual development in most areas of the rural zone that are not near sewer lines or, you know, close to nature, infrastructure or other major development, in general 3X has worked pretty well. I’m just going by what’s happened from ‘94 till now. It’s created, I think, over 2000 acres of open space and created
about 80 new units. That’s a pretty good deal. So, I think the 3X is very useful; it’s working; and sort of my attitude on that, if it ain’t broke, don’t fix it. You know, leave that for everywhere in the rural zone. If you are taking density to the rural zone and moving it closer to infrastructure around the high school or maybe there are certain areas in South Park that are served by the sewer line. Higher bonuses will get you better results. It’ll get you more open space. It’ll get you the development where you want it, not scattered out. So, I think you should be looking at these tools for what they can do for you. And at this point, you’re only dealing with the Plan, you’re not dealing with the Regulations. So, whether it’s three or nine or fifteen, or whatever, you don’t even need to worry about it now. But conceptually, I think it’s very important to say, yes, we want to use bonuses within the rural zone, some kind of bonus, to get better planning and permanent open space. And, yes, we want to have bigger bonuses, bigger density allowed. If you take that density and move it and stick it where there’s a sewer line or, you know, not just a sewer line but an area that’s pre-approved, whether it’s near the high school or the center of Teton Village or maybe there’s some areas inside Wilson, you know, that’s your decision. But if there’s an area where this is a good place to get development, why not allow density to be moved in, because your other options are just simply up zoning it, and just, you know, you’re putting in new money for that spot. Or, you know, dealing with it on sort of an ad hoc basis when it comes along. I think if you leave those significant density bonuses for moving density into an appropriate area, you’ll get landowners that will do that. The funny thing here is that the people that still own large tracts of open space here, you know, frankly own because they like it. And if you give them options to do permanent things that leave open space here and development there, they’ll try to do that. If the people who really didn’t, you know, who frankly are probably smarter or more flexible or more reasonable have sold land and sold it very profitably. And the simplest way to do that is into 40-acre pieces. The people who ?? that own land today, large pieces, are looking for ways to keep a lot of it open, for each individual, each family, for different reasons. But leave those options there. If they get used, it’s to everybody’s benefit. So, anyway, the gist of what I’m really saying is, you know, there’s a lot of land still undecided in the County that could go to development, one house per 35, which really does not do anything for ranching and doesn’t do...it actually doesn’t hurt wildlife that much mostly. But it’s a lot for distance and for ranching, it’s better if it’s in bigger pieces, and for wildlife, it’s better if those lands have conservation easements, because then all the little things that matter to wildlife, like fences, dog control, stuff like that, are monitored and are much more involved there. So, whatever you can do to encourage more permanent protection through open space, more clustering, I think is really to the County’s benefit in the long run. Thank you.
On behalf of Robert Gill and his family I am writing to express concern over the votes taken at last week’s joint planning commission. While I was out of town and unable to attend the meeting, it is my understanding from press accounts and others who attended the meeting that the joint commissions voted to limit future density outside the legal boundaries of the Town of Jackson and Teton Village to 1 density unit per 35 acres, with the exception that 3 density units per 35 acres could be authorized as part of a contiguous Planned Residential Development ("PRD"). If my understanding of the votes is correct, the effect of them would be to divest the Gill family and other ranching families of the bulk of the development rights they hold under existing regulations. As a drastic down zoning, the votes are very unfair to the very people who have stewarded the land and livestock so enjoyed by this community for generations.

Beyond that, as explained below, the votes are directly antithetical to the long-established community goal of discouraging sprawling 35-acre “ranchero” developments for wealthy part-time residents.

It should be remembered that a great deal of time, thought, and expense went into developing the 1994 Comprehensive Plan & LDRs. Just as you might appropriately think that future generations involved in planning efforts will respect and give due deference to the efforts you are currently making, I would hope you agree that fundamental goals and concepts established by prior planning professionals and elected officials after a lengthy public process only 15 years ago should not be summarily disregarded by the current planning regime. Yet, by its votes of last week apparently eviscerating critical development options outside the Town and Teton Village, the joint commissions appear to have done just that.

The authors of the 1994 Comprehensive Plan (the “94 Plan”) went to great lengths to explain the special nature of Teton County and to identify specific community values they believed the public wished to preserve. Of paramount importance was the preservation of “rural character.” They wrote: “A fundamental objective of this Comprehensive Plan is to preserve rural character and enhance it where possible; to allow development, but to make sure that new development is consistent with rural character. Primarily, rural character is defined by large amounts of open space in relationship to the floor area and volume of structures. Therefore, reserving rural character requires that very large amounts of open space be set aside as development occurs.”

Jackson/Teton County Comprehensive Plan, May 9, 1994, at p. 3-2 (emphasis added).

The authors of the 94 Plan noted that, of all open space, ranch lands provide “the most powerful statement for the image and character of the County.” 1994 Plan, at p. 3-3. Yet, they observed, because of many factors ranching had become “at best a marginal business venture in Teton County” and ranchers faced many pressures, including estate taxes, to sell at least some of their land for development. Under county regulations existing at the time, the drafters noted that ranchers were authorized to create "rural subdivisions" with lots ranging in size from 3 to 20 acres. Beyond that, state subdivision statutes empowered them to avoid county regulatory authority through the sale of 35-acre parcels. According to the drafters of the 94 Plan, if ranchers continued to break up their ranches into 3 to 20 acre lots as "rural subdivisions", or if they sold them off in grids of 35-acre parcels as permitted under Wyoming Statues, the County’s rural character would be destroyed through sprawling estate-type developments affordable only to wealthy part-time residents. Id. at p. 3-3. To discourage such undesirable development, the authors of the 94 Plan concluded that "it is necessary to create flexible regulations which insure that clustered developments which support preservation of open space, rural character, and the agricultural base, are as successful in the market place as conventional subdivisions have been." Id. at pp. 3-3, 3-4 (emphasis added.)

The promotion of "clustered development" is the key implementation strategy identified in the 94 Plan to preserving open space and rural community character. According to the 94 Plan, the "technique of clustering is based on "linking" open space to development, meaning that open space is dedicated in perpetuity when the clustered development is approved." Id. at p. 3-9. Notably, according to the 94 Plan, the promotion of clustered development would not only preserve open space (and discourage 35-acre grid development), but it would also help ranching to remain viable. With clustered development, the 94 Plan observes:

“A rancher only need sell off a relatively small percentage of his land holdings in order to receive an economic return on the development potential of the whole property. Agriculture is established in the regulations as an accepted use of open space which means ranching can continue on the remaining land. This also makes it easier for the 2 rancher to pass the ranch on to his heirs, as the real estate development value will be gone, sold off with the cluster development land. For estate purposes, the remaining ranch land will be taxed on the basis of its agricultural use rather than at its "highest and best" potential." Id. at pp. 3-9, 3-10.

The Land Development Regulations associated with the 94 Plan created specific tools to promote clustered residential projects in lieu of undesirable 35 acre-grid developments. The principal tool established for this purpose is the Planned Residential Development ("PRD"), which is defined under the 94
LDRs as a specific "development type" separate and distinct from other development types, such as "Planned Unit Developments", "Conventional Single Family Subdivisions", and "Working Ranch Subdivisions." See Teton County Land Development Regulations, May 9, 1994, at Section 2220 A. Section 2230 and Table 2200 of the 94 LDRs identify the uses allowed in various zoning districts, and designate those uses which are "permitted as a matter of right", those uses which are permitted subject to the issuance of special or conditional permits, and those uses which are not permitted under any circumstance. The Gill family's ranches are located primarily in lands zoned as "rural" with some land near high-school road zoned "suburban". Notably, the PRD development type is identified in both the rural zone and the suburban zone as a "use permitted by right." See 1994 LDRs at Table 2200 (emphasis added). Table 2400 of the 1994 LDRs goes on to specify the number of density units available as a matter of right in the rural and suburban zones utilizing the PRD development type. By way of example, for properties with a minimum base site area of 360 acres in the rural zone, Table 2400 provides that 9 density units per 35 acres are permitted as a matter of right, so long as 85% of the land is protected as open space satisfying the performance standards set out in Division 4300 of the 94 LDRs. Given the nature and location of the Gill family's ranches, no one could reasonably argue that preserving 85% of them as open space would not meet-and indeed far exceed-the "public benefit" performance standards set out in Division 4300.  

Much public comment has included the assertion that the density units associated with PRDs are a "bonus" to be awarded on a "discretionary" basis by the County and that therefore PRD density units are somehow not part of the "base density" associated with all rural lands. That commentary, which posits that current regulations allow only 1 base density unity per 35 acres, is misinformed and misleading. As noted above, the 1994 Plan and LDRs clearly provide that 9 PRD density units per 35 acres are available as a matter of right to landowners, like the Gills, who own sufficient land in the rural and suburban zones that can satisfy the open space performance standards of Division 4300. If the language of Section 2230 and Table 2200 of the Those PRD density units were what ranch owners like the Gills received in lieu of the "rural subdivision" rights they held before the 94 Plan. Perhaps not surprising, the exchange of PRD density units for preexisting rural subdivision rights was not an equal trade and, in fact, resulted in the net loss of significant development rights to the Gills and other ranch owners. Thus, current efforts to reduce the number of PRD units available under the 94 Plan represent a further down zoning of ranch lands that were already down zoned in 1994.  

94 LDRs are to have any meaning, then PRD density units "permitted by right" should properly be considered as "base density" and not some sort of potentially illusory "discretionary bonus" less worthy of legal recognition or protection. With the above in mind, it should be apparent why Robert Gill and his family are very troubled by last week's votes, as we understand them. By voting to reduce the maximum number of density units available through the PRD development option to 3 per 35 acres (as opposed to the 9 per 35 acres currently available to the Gill family), the planning commissions have effectively voted to eliminate 2/3rds of the density units currently available by right to the Gill family on their rurally zoned lands. Who among us would not be terribly upset by a public vote in favor of taking away 2/3rds of their development rights?  

But last weeks votes are even worse than that for the Gills. By apparently voting that lands outside of the Town and Teton Village should be unifonnnly treated as rural lands with only 1 base density unit per 35 acres, the planning commissions have seemingly voted to eliminate the suburban zoning previously approved by the County in the North West corner of the Gill family's upper ranch. Under current regulations, that suburban-zoned-land (consisting of approximately 26 acres) is permitted by right for approximately 105 density units utilizing the PRD option. That would be a particularly devastating loss for the Gill Family, who as part of the process of dividing the Porter Trust with the Lockhart Family, received the 26 acres of suburban zoned lands in part to equalize the disproportionate value stemming from Mrs. Lockhart's receipt of a greater number of total acres of the upper and lower ranches.  

The planning commissions' votes must thus be seen for what they are-a vote to dramatically down zone the property of those few remaining large land owners in the County who have not heretofore chosen to develop their property for real estate sales. Putting aside the legality of such a down zone, it is a bitter pill to swallow for the people who have forded the "rural" character that the community now clings to preserve. Bruce Porter and his descendants have for over 70 years continuously operated the Jackson Hole Hereford Ranch. They have tended to their cows and hay, while in every direction around them other ranchers threw in the towel and sold off property for residential real estate. They have helped the community in many ways over the years, providing the school district a large piece of land in the middle of their ranch at a heavy discount and donating land for the installation of a sewer line that now serves persons throughout the County, including the West Banle They have participated in hundreds of hours of community meetings going back to the early 1980s in the spirit of crafting long-term plans for their ranches that would provide them a fair return for their property while at the same time creating important community benefits, such as land for public facilities, land for affordable housing, park land for public use and enjoyment, and the protection of open space for scenic vistas and wildlife movement. While they are not asking for any reward for their past efforts, they have been expecting careful consideration of the very unique attributes of their property as well as honest recognition of their
property rights and interests in the planning process.
Now it appears, in service to perceived public sentiment that treasures "reduced density" over any other value, the planning commissions have seemingly voted to draw a line in the sand at High School Road beyond which neither urban nor suburban density shall occur. Those votes, whether intended or not, have sent a clear message to the Gill Family that its ranches will not be needed to accommodate the exigencies of future growth---even though the ranches have been identified for decades by countless prior planners and elected officials as the single best area in Teton County to accommodate future town-like densities and associated public facilities. Not only does this represent extreme short sightedness to the future needs of the community (which surely can be known by no person, no matter how well informed), but it results in a final bitter irony. That is, by voting in favor of measures that would strip the Gill Family's land of all its suburban-zone density and 2/3rds of its PRD density, the planning commissions have signaled their desire to remove most all "clustering" opportunities available to the Gill Family and, thereby, most all of the incentives created under the 1994 Plan to preserve large portions of open space. Lacking strong incentives to cluster development through the PRD process or otherwise, the cheapest, easiest, and likely most profitable way for the Gill Family to address its long-term financial needs would be to sell off those "35-acre rancheros" in the second-home market under the authority of Wyoming subdivision statutes. Perhaps that is a result desired by some, but to most-including the drafters of the 94 Plan-it would be both a pity and a planning failure.

In closing, I hope that you will reconsider the votes taken last week and that you will abandon any notion that Town-like densities should never be permitted beyond High School Road. Beyond the impact on the Gill Family, that is a policy decision far too blind to the goals and objectives of the 94 Plan and far too constraining on future generations to be a proper part of the task before you.

<td>Huff, Mercedes</td>
<td>I want to express to all of you how thankful I am for the direction you took last Thursday evening, October 22, 2009. I have been so worried over the last several months, that our valley was headed down an irreparable path of growth and, in many instances, destruction. Now I feel as though this sensitive issue has really been embraced by all of you, and that Jackson Hole will remain the incredibly special place that it is today. The significance of that meeting is on a par with the first adoption of a plan. It’s an enormous statement of values! Thank you for listening and for all of the unselfish time you’re contributing!!</td>

### Hansen, Paul
**Date:** 10/24/2009
**Comment:**
A narrow focus on development pattern as the only important element of "managing growth" is, as we have stated throughout this process, a flawed approach. This theme must more adequately address not only the location of development, but also the overall amount, rate and types of development. Changing the Meaning of "Managing Growth Responsibly" since public polling (see handout presented today and included in our July 30th written comments.) Please address why some of the four original key objectives of the "manage growth responsibly" theme were largely changed/ignored in the current iteration of the Theme. (Obvious important ones are "defining the end state" and "fully addressing the cost of growth" that are now completely absent in this theme.) It is questionable to substantially change the basis of a particular theme that people voted for as a priority and still identify the second priority in the overall plan and the first priority in a majority of districts. Language will need to be rewritten so that this document does not imply that the Future Land Use Plan and accordant maps will guide the formation of the policies. Unfortunately, the policies as written, instead of describing values/types of character that are preferred and that would then be depicted in the FLUP maps, primarily includes language that "development should be consistent with the FLUP."

While we support concentrated development patterns as a general principle, this plan misapplies the concept by essentially proposing sprawling "nodes" throughout the county. The idea of planning for both county "nodes" and town intensification would be defined by many as sprawl. It is critical that the nodal concept be rooted in the unique contexts of the county (wildlife issues, transportation capacity, etc) as well as in the acknowledgement of existing development patterns and the establishment of clear node boundaries. This plan's language is inconsistent and unclear regarding growth in "nodes." Specifically, in some instances, it is suggested that growth in "nodes" is intended to be substitutive growth (i.e. not adding, but shifting growth). Other sections of the plan, including the FLUP itself and Appendix I, clearly demonstrate additive growth. This plan rests on a fundamental assumption in many areas about shifting growth, but it is highly vague about realistic applications.

What is missing--a few examples: An analysis of the amount of growth allowed and a recognition of the community's preferred amount of growth are critical aspects of managing growth responsibly, and are currently absent from this Theme and from the plan as a whole. The community strongly supports limited growth. This must be incorporated. This theme must address our unique planning challenge as a gateway community with high visitor population (growth-related issues regarding permanent population, visitor population, commuters, seasonal variations in employment numbers, etc...). We should be establishing clear goals (growth rate/cap) based on adequate understanding of where we are today. This chapter must define character--without defining what we want to protect, we won't end up protecting it. This theme needs to ensure growth in one sector (e.g. commercial) does not outpace growth in another sector (e.g. residential accessible to the workforce). This theme needs to include other key aspects of planning responsibly--population demographics, makeup of economic industries, etc... to be able to adequately plan for future community infrastructure needs. This theme must ensure that new growth pays its way regardless of location. This theme must mention heritage preservation. The indicators in this theme must actually measure growth impacts and help us determine whether or not we are "growing responsibly."

<td>We would like to add our comments to the many other residents that are against the usage of nodes as a planning tool for our valley. Public feedback has repeatedly shown a lack of support for these nodes, and residents in the targeted areas (i.e. Aspens, South Park, etc.) do not want them or need them. The addition of high-density nodes adds costs to the total community -- significant infrastructure will be needed including roadway additions and other expansions negatively impacting our wildlife and the quality of life for residents that currently live here. Unlike other communities, we do not have a surplus of lands for expansion. The parks, forests, wildlife and their wildlife are why we are unique and frankly why we’re here and why this is a tourist destination. The type of sprawl inherent in the current planning models is inappropriate for this area and threatens this incredible landscape and the values of the community. We ask you as stewards of the ENTIRE community to focus on controlled, limited growth, which has been clearly identified as the priority by the community, and limit the expansion of commercial development and the resulting residential growth. You have an incredible opportunity to keep this special place special. Please take advantage of it. Nodes are not the answer. Thank you for your consideration.</td>

I want to add my voice to the many Teton County citizens who are urging you to SAY NO TO NODES. As many others have pointed out, the enormous increases in density and numbers the draft plan proposes for Wilson, South Park, and the other “nodes” will require the destruction of all we most value about Jackson Hole. These “nodes” do not have the services people require and do not have on-site jobs for the majority of residents, so if they are developed the way the draft plan anticipates, this “planning” will simply add to the traffic on County roads as the residents drive back and forth to town, increase air pollution, diminish wildlife habitat, and decrease the quality of life for all residents.

If the proposal for vastly increased development in the “nodes” were matched by a precise and realistic plan for preserving the open space between the nodes, then there might be grounds for considering them (and even then I’m not sure they’d be desirable, for the reasons I mention above). But I haven’t seen any such open space plan. Have you investigated how other communities are using transferable development rights in combination with open space protection, and the measures that would be required to make them workable here? Which areas of the County would be downzoned for open space protection? What minimum size acreage would a land owner have to deed restrict for no development in order for the landowner to receive one TDR? How would you create a market for TDRs? Unless there is a strong incentive for a landowner to deed restrict his/her property (as in severe County restrictions on development rights combined with a market for TDRs) then the system won’t work. If landowners are already entitled to develop their property, why would they purchase TDRs? Only by imposing strong restrictions on existing development rights can a market for TDRs be created. It can be done—Pitkin County in Colorado is one example I know of that has a workable TDR system—but the underlying system of zoning and restricted development rights had to be put into place for the system to work.

One of the many frustrating things about the current comprehensive planning process is that we’re being given only part of the story. The plan proposes huge increases in density and population, along with the flawed “node” idea, but speaks in only vague terms about the other necessary part of the plan, the part the community has vocally demanded—protection of wildlife habitat, scenic resources, and open space. I can’t support a plan that destroys Wilson, South Park, and the Village Road area with no rational reason, and that also fails to protect the remaining open space in the valley. I urge you to drop the node idea, and focus on really constraining growth in Jackson Hole. I don’t consider it “progress” if the new plan increases proposed growth over what’s allowed in the current plan. Even under the current plan, at least 6,000 more homes and 6,600,000 square feet of additional commercial space can be added to the town and county. Isn’t this enough?

The bottom line, in my opinion, is that Jackson Hole has world-class resources of wildlife habitat, scenery, and open space. We aren’t any community in Ohio or Illinois or New Jersey, dealing with standard questions of how to meet human needs in an already degraded locale. We have something worth protecting, something that should take precedence over the never-ending demands of humans for houses and roads and jobs. The easy path is to ignore the voiceless needs of wildlife, allow the incremental destruction of the scenic values of this valley, and continue eating away at open space, until we end up much like any other place. It’s far more difficult to put on the brakes, and really plan for preserving what still remains here. I urge you to eliminate the nodes from the plan altogether, and focus your energies on genuine, far-sighted planning to limit growth and protect open space.

Thanks for all your work on the plan, and for considering these comments.

<td>Tompkins, Kathy</td>
<td>Hi, everybody. I’m Kathy Tompkins from Cottonwood Park. I did have a letter that I sent to you. This is just kind of an extension of that. Our single-family neighborhoods are becoming less inviting and &lt;&lt;inaudible&gt;&gt; and more inviting for landowners to make a quick buck by turning their heads and renting to a group of unrelated transient workers, who can chip in together to afford the rent. Job generators like the Village and Town each provide seasonal rentals on their property or close to it. This will lighten the load on the roads and help to keep single-family neighborhoods safe and inviting for the owners and caring homeowners. This will also, with the help of the reconstructed High School Road, which includes pedestrian and bike paths, convince moms and dads near the schools that it is safe to let their kids walk or bike to school instead of driving them. We have no more busing close to the schools and there is a lot of people who live, including myself, &lt;&lt;inaudible&gt;&gt; all of the traffic on High School Road. And then, plus, if you wind up sticking hundreds of more houses across the road with no qualms of what parallel roads, it is going to be a real mess. I remain optimistic that we can change these negative resort market-controlled outcomes, but if we don’t start now, this will only continue into the ill-proposed high-density neighborhoods, and the same problems with even more negative intensity will repeat there. We can’t afford to allow established neighborhoods, especially near the schools, to transform and degrade into transient ?? with resorts and unmitigated commercial growth. Job generators need to take most of the responsibility for this. Only then will the Valley have a symbiotic relationship with the resort and high-end developments. This will be an important part of achieving the goals of a caring and thoughtfully rewritten Teton Comprehensive Plan. And thanks again, guys; good job.</td>

<td>Stone, Cindy Hill</td>
<td>I...I am Cindy Stone and I don’t really know where I’m from, and you’ll understand that in time. Last week, you talked about nodes and how the community was opposed to them. And then somebody came up with the idea, well, maybe that’s a bad word, maybe we need to think of a different word. Well, I graduated from ?? and I want to tell you that if you put in a different word for node and it mean county areas that will accommodate proportionate town-level density, I’m not sure ?? and I don’t think my neighbors will either. Last week one of the things that was mentioned, communities. Well, this...everyone’s been trying to hold this Valley together as a community for years. I grew up on the Village Road. The ski areas were ??, I went to Wilson School and my business is in Town and I live in South Park. My parents’ address is at the Gros Ventre. You can find me in the summer usually down the Hoback on my horse. My husband mowed the plains of Golf &amp; Tennis in high school and his folks had the Heart Six Ranch in Buffalo Valley. That’s community. That...&lt;&lt;inaudible&gt;&gt;, but now I’m wondering maybe I need psychiatric help because I’m not sure which community I’m from.</td>
</tr>
<tr>
<td>10/22/2009</td>
<td>Turner, Sheri</td>
<td>Hi, my name is Sheri Turner. I wasn’t planning to speak, so this is going to be a little bit disjointed. I’ll just give this thought on one thing. It’s not your decision exactly on what’s being done ??, but the public has been giving you their input on what they want. And it feels to me like that’s what you need to be listening to and what they want to go for seems be ?? or ?? or down zoning. I’ve loved what we’ve had to say. That was the voice of our community on all aspects of valor. I thought that was terrific. My daughter stood before you guys and talked before. She’s 29. She’s one of the under-30-year-olds who no longer lives in the Valley. She stood before you and said she wasn’t entitled to anything. She didn’t feel that you owed her something. She recommended that you have more rentals for people. She’s choosing to live outside of the Valley because she knows it’s too expensive for her here. Maybe sometime she will come back. But she doesn’t want neighborhoods to suffer and change their characters to accommodate the 20-to-30-year-olds. You know, maybe they should be renting, not owning. Her &lt;&lt;inaudible&gt;&gt;. Anyway, so I’ll just give this thought on that—listen to what people have been telling you. Listen to the entire Valley, their opinions. I don’t think anyone wants nodes, whatever turn you might put on them. I don’t think that’s what people want. I think they want to feel a cohesiveness with each other and to preserve what we have. There will always be people who want to come in. There’s always going to be people that want to have it denser. But is that what we really want? Thank you.</td>

10/22/2009  Bloom, Rich
Interested Public

Rich Bloom, speaking for myself. Really, last week I commented on the exclusion of the Conservation Alliance from the Numbers Task Force. I regret that I compared the Alliance’s work with Staff’s work. And while I greatly respect the work of the Alliance, I also believe the quality of work and integrity of all Planning Staff is at the highest ?? . Theme two comments: I would ask that the county nodal development concept just be dropped, including the 1500 units for South Park. Last week’s votes on the TDR made the necessity of nodes irrelevant. Absent the northwest South Park node, again, I would strongly refer you to go towards the letter of September 17 on behalf of Robert Gill. Not only are there significant connectivity in South Park to Highway 89 connector road, impediments pointed out in the letter by the family, the family also highlighted their ranching conservation interest, and believe me, we’re all paying attention. Please reread that significant letter. If you also look at the maps, you might have noticed that it showed how the property would be broken up between the Gill’s and the Lockhart’s. Both families have noncontiguous parcels holding about 700 acres. Either or both families can move forward at any time and ask for an exemption from the present moratorium to cluster development near the high school via the PRD tool and permanently protect 85 percent of their noncontiguous and separate ?? parcels, the ones down by the river. In addition, any housing created with the tool will still have to meet the 25 percent Category 1 through 3 affordable housing requirements. So, both open space and housing benefits are achieved. The community will support them with an application. I will support them. Even with a 9 per 35 on Lockhart’s parcel of 700 acres, that would be 180 units on about 100 acres with 85 percent permanently protected. Of that 180, 45 of those would be Category 1 through 3 affordable. If we take away the PRD tool, or got it to zero, or just up zoning and down zoning , you remove that opportunity. Do not replace nodes with simple up zoning and down zoning. Tim already talked it and I’ve worked with Tim on a number of conservation easements. As the only areas of significant possibility are the rural zones, and you’ve already recommended a reduction of the PRD 9-per-35 multiplier. Do not remove any remaining incentive for the creation of permanent open space. Permanent open space is the holy grail. Zoning is temporary. As the Land Trust and Brad Meade testified—and Laurie is here tonight, she can speak for herself—but the great majority of the use of the PRD tool overwhelmingly has never resulted in an extra housing unit. Mostly, it ends up as a conversation between the landowner, the Land Trust, their appraiser, and the IRS. So, when you see the grid later tonight about moving these units or reducing them, a lot of those are phantom units that never would have occurred, not because of topography but because of how they’ve been used in the past as a way to devalue the property, get an IRS write-off, and make the conservation happen. The noncontiguous PRD tool needs to remain intact except for a consideration of a modest reduction and you’ve had that conversation. Nodes should not be used and are not needed to achieve affordable housing. We’re currently comfortably above our goal of 65 percent and that’s improving each month. Look in the paper. The housing bubble has burst, we’re coming out of this recession, but the number of condos, town homes and homes, the affordable rentals, are all moving. Workforce housing is best achieved going forward by keeping up as new development occurs. And keeping up, and the way to address affordable housing, is talking about positive growth. So, if we can get past nodes, please include in theme two a conversation that’s not in the chapter now about cost of growth. That growth, regardless of location and type—residential/commercial—should pay its full share of direct impacts on workforce housing, infrastructure, and social systems, like parks. Then when you get to theme four, revised housing mitigation rates, especially on commercial, take a look at those. Residential I think we have covered Town and County. And in theme four again identify a permanent funding source for any misses or gaps. Do not use nodes or up zoning to achieve affordable housing, because they’re not needed, it’s not supported, the community has asked for something else. Please, in theme two, address the mix of growth, that job-creating commercial growth is considered hand in hand with residential development. Recommend reducing or converting some of the proposed commercial into residential. Revisit the role of ARUs. As to the concern that Lisa has brought up about the very large homes in the County also contributed to job creation, revisit that section in the LDRs. Right now, if you’re on a 35-, 50-acre parcel, you can even build 15,000 square feet, 8000 of those habitable. If you’re on a half-acre parcel, you can build 10,000 square feet, 8000 habitable. Maybe that’s too high. Maybe that should be reduced to reduce the job creation along with commercial. Thank you and I’ll submit these online.

10/22/2009  Lewis, Becky
Interested Public

Hi, my name’s Becky Lewis. Short and sweet. Under existing developments right now, we can have over 6000 new homes in the Valley. You’ve just denied transferrable development rights, which would have put some of those homes in a greater cluster in a node. Since that is no longer a vehicle, a node ?? represents more growth than the 6000 homes that are currently permitted. Say no to nodes. We don’t need that kind of growth. Public comment has consistently been against it. Thank you.

<td>Ewing, Patty and Frank</td>
<td>Thank you again for the time and effort you are volunteering to rewrite/update the 1994 Comprehensive Plan. As you are considering Theme 2 and growth management, we urge you to drop the node concept particularly for Wilson, South Park and the Aspens. Neither growth nor density as a result of growth is desired nor needed. Nodes are not the solution to workforce housing, which currently, we are told, exceeds the 65% goal. A quick review of available commercial space, affordable rentals, and homes/condos on the market seems to confirm that. The plan update does not need to be driven by affordable workforce housing. Theme 1 identifies the community value of wildlife, open space and community character. Growth and density, wherever in the valley, impacts those values. We urge you to cap growth in town as well as the county. We have long supported the concept that any growth should pay for itself. Maintaining the integrity of Theme 1 throughout the plan review process will be difficult. Current allowable growth numbers already exceeds the capacity of the valley. Instead of seeking more growth, identify ways to reduce growth.</td>
</tr>

<td>10/22/09</td>
<td>Lockhart, Cody</td>
<td>My name is Cody Lockhart. I would like to encourage the Planning Commission to keep the noncontiguous PRD in the new Plan and to continue to explore the concept of TDRs. My family has been and continues to be dedicated to ranching in this Valley. And with that, we’re committed to continue to provide all the community benefits that come along with ranching, such as open space, wildlife habitat, and community character. However, there are and continue to be obstacles that will change the way our ranch and many other ranches in the Valley operate and look. I think it is fair to say that our ranch will not forever look the way that it does today. At some point we are going to have to seriously explore our options. One of the questions that has been put in front of this Commission is what will our options be and what will existing ranches in this Valley look like. I believe the answer is quite simple. You will get ?? If you take zoning down to basic property rights, one house per 35 acres, and take away or dramatically change current by-right property rights, PRD, you’ll get what you asked for—a Valley full of 35-acre ranchettes and McMansions and no more permanently, truly protected open space. I think we can do better than that. I believe in proper use of the noncontiguous PRD and some type of TDR concept if the future in the Valley is to remain ranching intact and provide true permanent open space and maintain our community character, last on the list. When I look at potential units that exist today on the ground with by-right property rights in the County and compare that to the numbers that are proposed in the new Plan, it appears to me that it’s a 15 percent reduction in growth, or a less-growth plan. I’m not making the concept or idea of nodes—that would be responsive to something different—but what the nodes do do is they simplify the noncontiguous PRD and the TDR concept. Without the nodes, we’d just end up fighting about receiving areas on a case-by-case basis, just creating one more obstacle to protecting permanent open space. I would like to encourage you not to get bogged down in the details of how this will transfer or the development rights concept will work today. There will be plenty of time for that when the Land Development Regulations are written. You just have to embrace the idea of moving density from areas of high natural resource value to areas that make more sense for growth. Thank you.</td>
</tr>
<tr>
<td>10/22/09</td>
<td>,</td>
<td>Please vote down nodes for west Jackson and Cottonwood Park. In fact, doing away with nodes in South Park or anywhere, so that a fair zoning map can be developed Jackson and county folks. Thank you all for your hard work during this difficult and anxious time for most of us.</td>
</tr>
<tr>
<td>10/22/09</td>
<td>,</td>
<td>Base property rights in the County should be the minimum level of development.</td>
</tr>
<tr>
<td>10/22/09</td>
<td>Wilson, Loren</td>
<td>My name is Lauren Wilson. I’m from Alta. ?? families over there. And my family’s been in agriculture since 1888 and this family just a very long time, and which I’d also state that our interest is in conservation and taking care of the open spaces available. And my worries is that this group is going to take away options that we have. Most of the ranching and farming families that I know of need opportunities to cash out, if you will, those members of our family who no longer live here. And so we need tools left in place. The TDR, particularly noncontiguous, the opportunity to do conservation easements. If all these things are taken away, I think Scott said it best, you’re going to end up in this County with nothing but 35-acre ranchettes and I don’t think that's what anyone wants to see. So, please, I encourage you to keep in place the controls that we have, as well as the opportunity to have density bonuses and transfer those in appropriate ways. Thank you.</td>
</tr>
</tbody>
</table>
My name is Meredith Wilson and I’m a cousin to Lauren who just spoke to you. And it’s been a month and a half since I was at one of the meetings, because I make my living from agriculture and it’s been harvest time, it’s been a busy time, but thank you for your time. I live on the original homestead, Lauren’s and my great grandfather’s homestead back in the 1800’s, and agriculture is very important to us. And the open space and maintaining that is important to us. And because of what we’ve done, we have wildlife of various kinds and species that reside on our place, and we feel that we’ve been good managers of the land. I would concur with Mr. Lockhart when he said that if we have all the options that are currently on the books, that I’m afraid will be taken away from us, you will see 35-acre ranchettes, and that’s detrimental to livestock and, excuse me, that’s detrimental to the wildlife and the migration corridors and so forth. So, please don’t take away the options that we have as far as the noncontiguous, the TDRs—and that’s already gone in this ?? anyway—and also by reducing the option that we have for the base density, which, in my mind, almost <<inaudible>>. Thank you.

I’m Kristy Bruner, Jackson Hole Conservation Alliance. We’ve submitted a number of written comments on some of these issues you’re discussing, so I’ll keep it brief. I’ll look at the broader topic of the node. First, scattered nodes that quote town-level densities, which is how this Plan uniquely identifies them throughout the County, doesn’t represent the public vision. One, take a brief objective look at public comment, and it’s abundantly clear the public doesn’t support the idea of nodes as this Plan identifies them. One just specific example, the compact centers and housing scenario, which this theme and the associated ?? was the least-liked scenario of all those that were presented and ended up being the basis of the new Plan. We don’t feel like this is okay and neither is promoting an across-the-board town-level characteristic throughout different communities in the Valley. Also, the rationale for the approach, town-level densities and nodes is not explained in this Plan. The benefits of this approach are not clear in the language of the Plan, and it doesn’t appear to be realistically tied to other elements in the Plan, like transportation, community character, preservation of wildlife protection. At the heart of this, we shouldn’t be identifying places for additional growth without first clearly articulating why it is needed in the first place. No one else <<inaudible>> would result in net community benefit. For example, what were the alternatives? Are we assuming increased density is the only means to achieve current open space and workforce housing? Given this lack of analysis, and the formation of the maps, the public’s desire for limited growth, the fact that we still have ample development potential under baseline zoning, and the fact that our highest priority, such as wildlife protection, would benefit from a reduced development potential, please keep allowable densities at baseline in the proposed county centers. In summary, please remove this concept of expanding county centers and nodes as this Plan finds them from the Plan. This combined with the PRD at lower density allowances and the options for noncontiguous PRD would result in a Plan that’s much more in line with public vision and with the land-use pattern that will actually help us meet our highest community priority to protect wildlife. Second is regarding Town. Do not simply up zone parcels throughout the Town. A lot of speakers have already addressed the problems with the temporary nature of zoning, so I won’t elaborate on that, but if you just up zone also additional development not assured to result in the type of development that the community supports. The last thing you would want is the use of density options on top of an increased baseline development potential in Town, because right now the Plan isn’t clear about this fundamental point. Are you promoting increased baseline zoning and the potential use of density options in Town? And one quick item just to clarify the process. When you went through the vision chapter, you made a recommendation to reinstate the concept of community character. Will this concept be reintegrated throughout the entire document as Staff rewrites each chapter? I guess more specific to this theme are you going to use community character definitions to frame the way in which growth will be managed in the Valley? Thanks again for your work.

| 10/22/2009 | Bloom, Rich   | I ask that the County nodal development concept be dropped including the 1,500 homes targeted for northern South Park.  
- Due to last week’s votes that recognized the near impossibility of transferring density from rural areas to receiving areas via the TDR tool – then the primary reason for nodes has been removed.  
- As to the NW South Park node.  
- Again I will refer you to Bill Schwartz’s letter of 9/17/09 representing Robert Gill.  
- Not only are there significant connectivity and South Park to HWY 89 connector road impediments pointed out in the letter - the Gill family also highlighted their ranching and conservation interests. Please re-read their submitted letter and review the attached maps.  
- The accompanying maps clearly showed that both the Gill and Lockhart families have their own separate non-contiguous parcels each totaling approximately 700 acres.  
- Either or both families can move forward, at any time, and ask for an exemption from the present moratorium to cluster development near to the High School via the PRD tool and permanently protect 85% of their non-contiguous and separate family parcels. In addition any housing units created with this tool will still have to meet the 25% Category 1-3 affordable housing requirements. So both open space and housing benefits are achieved. The community would support them with such an application. I would support them even under the 9/35 option.  
- Do not replace nodes with simple upzoning and downzoning as the only areas with significant possibility are the rural zone and you have already recommended the reduction of the PRD 9/35 multiplier – do not remove any remaining incentive for the creation of permanent open space protection.  
- As the Land Trust and Brad Mead testified - 90% of the time the PRD tool has been used - it has resulted in no additional housing units – but rather was a private conversation between the land owner, the land trust, their appraiser and the IRS.  
- The non-contiguous PRD tool needs to remain intact except for a reduction of the upper multiplier of 9/35.  
- Nodes should NOT be used - and are NOT needed - to achieve workforce housing objectives.  
- We currently are comfortably above our goal of housing 65% of our workforce and that is improving each month with the recession generated opportunities for more affordable homes and abundant affordable rentals. Just look in the newspaper on the available inventory of affordable housing, increasingly affordable rentals, condos, townhomes as well as single family homes.  
- Workforce housing is best achieved going forward by “keeping up” as new development occurs.  
- With ‘keeping up’ – this is the way to address workforce housing without needing any density incentives. Again then the nodes are not needed. In Theme 2 address the Cost of Growth  
- Growth, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems.  
- In Theme 4 revise the housing mitigation rates especially on the commercial calculation (both Town and County) that now only is calculated on the seasonal bump in employment – so is wholly under mitigating the commercial workforce housing impacts.  
- In Theme 4 identify a permanent funding source to correct any past under mitigation issues. Increasing build out and density is an onerous tax in of itself. The community does not need – and does not want - solutions that increase build out and unnecessarily put our other higher community values
Comment

of wildlife, open space and small town character at risk.

• In Theme 2 address the Mix of Growth - that job creating commercial growth is considered hand-in-hand with residential development.
• Recommend reducing and/or converting some of the proposed commercial square footage into residential instead.
• Revisit the role and effect that ARU’s may have.
• As to the concern that very large homes in the County also contribute to under mitigated job creation – then consider reducing the upper limit of allowable square footage from 10,000 to 8,000 square feet also in Theme 2.

In summary:

• Remove all County nodes, including South Park. Let’s move forward.
• Retain a significant portion of the PRD tool – do not simply downzone the rural county further and upzone certain locations. This would be the worst approach as permanent open space protection (versus temporary zoning) will not be achieved.
• Address the costs of growth in Theme 2 – that all future development, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems.
• Make sure in Theme 2 and in Theme 4 we address commercial mitigation rates.
• Address the mix of future growth – discuss and address the balance between job producing commercial and residential. Address the balance between resident housing verses large second homes or possibly problematic ARUs.
• Make sure you allow the numbers task force to identify the EFFECTIVE population of current and potential housing units, commercial AND lodging units. Let the task force complete the work on the job creation effects of commercial and also large second homes.

Then address what is not in balance rather then simply going to additive growth via considering density incentive tools applied to possible nodes.

<td>Bruner, Kristy</td>
<td>First--scattered nodes at &quot;town-level densities&quot;--which is how this plan uniquely identifies nodes--throughout the county do not represent the public vision. If elements of the plan do not represent the community vision, they should not be included. One can take a brief, objective look at public comment, and it is abundantly clear that the public does not support the idea of nodes as this plan identifies them. (One specific example--the &quot;compact centers and housing&quot; scenario which this theme and the associated Future Land Use Plan (FLUP) promote--was the least liked scenario of all presented...yet it ended up being the basis of the new plan.) This is not ok--and neither is promoting an across-the-board town-level characteristic throughout different communities in the valley. Also, the rationale for this approach--town level densities in nodes--is not explained in this plan. To be blunt, the benefits of such an approach are not clear and they are not realistically tied to other elements of the plan like transportation, community character preservation, and wildlife protection. We shouldn't be identifying places for additional growth without first clearly articulating why it is needed in the first place. No analysis was done to show that this preferred pattern and amount would result in the greatest community benefit (For example, what are the alternatives? Are we assuming increased density is the only means to achieve permanent open space or workforce housing?) Given this lack of analysis in the formation of the FLUP maps (i.e. any proof that this added density will actually have net benefits for the community), the public's desire for limited growth, the fact that we still have ample development potential under baseline zoning, and the fact that our highest priorities would benefit from reduced development potentials, keep allowable densities at baseline in the proposed county centers. In summary, remove the concept of expanding county centers, and nodes as this plan defines them, from the plan. This, combined with the PRD at a lower density allowance, will result in a plan much more in line with the public vision, and with a land use pattern that is more likely to help us meet the highest community priority of wildlife protection. Second--related to town, do not simply upzone parcels throughout the town. By doing so, additional development is not ensured to result in the type of development that the community supports. The last thing you want is the use of density options on top of an increased baseline development potential--and, as of right now, the plan isn't clear about this fundamental point--are you promoting increased baseline zoning AND the potential use of density options in town? Regarding some of the earlier votes on reinstating community character in the vision chapter, will this concept be integrated throughout the entire document--are you going to use community character definitions to frame the way in which growth will be managed in the valley?</td>

<td>Adams, Justin</td>
<td>My name's Justin Adams and I live here. I first want to say that I'm fascinated with Mr. Lindstrom's idea about noncontiguous PRDs, with the exception of one word he used and that's multiplier. You start moving density with a multiplier, I think you've defeated the purpose. Now, this meeting is about nodes. I just want to tell you, every time I hear that word node, I think of tumor and tumor all too often grows in the ugliest way. Thank you.</td>
</tr>
<tr>
<td>10/22/2009</td>
<td>Tompkins, Kathy</td>
<td>Cottonwood Park. I wasn't going to speak today since I spoke last week, so I don't have anything prepared. But obviously something has hit me and I do want to talk to you tonight about something. Last week at this meeting there was a member of yours that in my estimation embarrassed himself and I was embarrassed for him. He made some comments about worrying about the large landowners and the millions of dollars that they could lose potentially. He was concerned about the large landowner's rights. And I have to tell you, after hearing words tonight about large landowner's obstacles, options being taken away from them, their rights, talking about high-density losses, I keep thinking I've been involved in developmental issues approximately &lt;&lt;inaudible&gt;&gt; since 1991. And I have never once heard anyone at a table in front of me argue about the rights that I might lose due to a large landowner developing across the street from me. Never once have I heard anyone say, well, what about the rights of Cottonwood Park and how much money they might lose in their homes if high density goes across the street from them. I feel bad for that neighborhood. This neighborhood has been crying, well, what about me, since 1999, when the annexation issue came into play. And we're still talking about high density across the street. And we still hear people saying, well, what about the rights of the large landowners and how much money are they going to lose. I don't want to hear anyone mention to me their concern about how much money they might lose.</td>
</tr>
</tbody>
</table>
Good evening, I’m Scott Pierson. I’m talking on behalf of myself. I’ve been in Teton County for about 34 years now and I think development community for that entire 34 years, starting as a surveyor and then a planning and development consultant all through the Valley, as well as surveying landscape architecture and those things. I think everybody in the Valley acknowledges that up until about a year ago, the community was growing at too fast a pace, growing too fast. And I think that’s a national dilemma, as well as just a Jackson Hole dilemma. I’ve been here, as I said, for quite awhile. My family’s here. My wife’s family has been here since the ‘50s off and on. I think you guys need to go back and take a larger view as to where you want the community to go. That’s what the Plan part is supposed to be about. It’s not about the LDRs. During the planning process, during the chapters that you’re generating, create the ability and all the tools that you need and all the reasons that you need to direct growth as it happens in the future to where you want it to occur and how you want it to occur. There are still too many tools now. In particular, I want to make sure also that you provide for the people that are under 30 years old, you know, and some of the people right now that seem to be moving into the Valley and staying in the Valley are over 55. So, they’re retired people that have the wealth and the money to move into the Valley, and reducing that middle-aged group of people that a lot of you are representative of but you see your friends moving out of the Valley as well. We want that middle-aged group to remain here through this Plan so that you provide for them. Part of that I believe involves villages as well as density in the Town. You’re headed that way. You talk about nodes. A lot of Wilson right now that doesn’t have an existing ?? on it is one unit per 35 acres, NCSF. It really doesn’t make a long-term lot of sense to let it sit there at that density when we see the changing character of what’s going on. We want to create the places that we can serve with transit. I think that’s the intent of the Plan when we generated this. If you don’t have a critical mass in these villages, it’s hard to sustain transit ?? Every time you try to run transit out, you can’t run it frequently enough to service those ?? to get the people to come back into Town. It just doesn’t make sense to run empty buses ?? Some day in the future this Plan, as we go...it’s at least a 10-15 year Plan. It’s been 15 years since the ‘94 Plan. It looks like it will be about three before this one is done. So, it will be close to 20 between Plans. The one you’re generating, it’s going to be around 15 to 20 years probably. Luckily, you won’t have to do it again probably. One last thing with regard to the PRDs. Some people have said that it’s not an entitlement for the additional density. The additional density for a PRD is an on-the-ground entitlement. If you give the open space and it’s acceptable to the community, you get your density. It’s not a question of, oh, it’s a bonus. It’s an outright density. Where that came from was when in ‘94, they took those ranches, larger parcels that had been RA3, RA6, RA10, RA5, RA20, and they took those and they decided what we wanted to do is get mandatory clustering that people develop large parcels like that. If you take the nine units on the biggest parcels, 340 acres, or twenty acres and you clustered that to 85 percent, you get nine units, which brings us back to about RA3. That’s where the nine units basically came from. If you go to 35, it’s about 12 units. The other thing that happened that additionally down zoned at that point in time, since then, was in about ‘96, we went and instead of rounding up, you could have 24 acres and get ?? in Teton County until about ‘96, when we stopped rounding up and we started saying give us a round-down type figure. So, you needed a full base-site area of 23.66 units to be able to get two point units on 35. Previous to that, you could get two dwelling units for 11.33 acres, 3-4 acres, because you round up the next dwelling. That all changed in ‘96. A lot of the development that we’ve seen in the past 15 to 20 years since ‘94 is legacy development, Melody Ranch, the Wilson area, Cottonwood Park building out. Three Creek Ranch is a legacy from the pre-‘94 Plan. That density was part of a Master Plan that included the dairy that transferred those units from the dairy down to the Three Creek Ranch and enabled the Three Creek Ranch to develop the way we’ve seen it. So, a lot of that density that we’re still seeing over the past ten years in the County, okay, actually is a legacy from the pre-‘94 Plan and the pre-‘94 Land Development Regulations. I want to encourage you to plan with looking towards the future. What you plan for, you’re going to get. When we planned for three-acre parcels, we got three-acre parcels throughout the County. Since then, we’ve planned for 35’s. We’ve got a lot of 35-acre parcels now. What you plan for, we’re going to get, more or less. This should be a Plan for the future. And it should include the community that hasn’t passed away so far by now. It should be more about the next generation than the past generation, like myself, who’s closer to the grave <<inaudible>>. Thank you.

10/22/2009 Discuss the Town in Theme 3 - Town as Heart

Joint Planning Commiss
I’m Sharon Nader. I was talking to a colleague at work last week and she grew up in Sun Valley, Idaho, which is quite a similar community to Jackson, and was saying that she returned last summer and was shocked that some of her favorite businesses had gone out of business and so many large homes were up for sale and, you know, that aspect was distressing to her. But then as she spent the summer there, she said, you know, what I noticed was that there was a really positive side to this, because the core community of Sun Valley reemerged and came back together and actually started working together like neighbors to recreate the community that they are and that they have always been. And she saw that as a very positive side of a very scary recession for many of us. And I thought about our community and, you know, I think we have that potential here and that the constant growth and pressure and drive to build here has really created a lot of divisions between people in our community. And I think the slowdown, although I’m extremely sensitive to people’s losses and, you know, businesses going out of business here in Jackson, I think also gives us an opportunity to slow down, take the heat off of commissions like yourself and really think about who we are and where we want to go. I think the concept of nodes is distasteful to me. I think it pits neighbors against neighbors and it doesn’t allow us to work together as a community, because, you know, Wilson, you know, gets ?? about the level of the density discussed there. And they say, well, let’s push it to South Park. And South Park comes back and says, okay, well, put it, you know, adjacent to existing growth like Cottonwood. And the point is that we’re not at a point anymore where we need to consider those extremely high-density developments and that is what nodes connotate. They represent high-density development. And, as I go through this Valley, I was really involved with the ?? series on national parks, and it struck me how, you know, despite all the specific history that has occurred throughout this Valley, the best way to explain it is through stories. And I love the national parks, but I also love the views of Wilson and I also love the character of Town and I love South Park, my backyard. You know, last year, when we were going through the whole thing about the Teton Meadows development, there was a whole dialog about whether this represents wildlife habitat or not. And I had a funny experience at the end of this winter where an animal had died out on the ranch behind my house, and my neighbors had guests in Town and they said, well, there’s the best place to see wildlife. And they said, well, come in my backyard, because there was a constant procession of coyotes, of foxes, of eagles, of hawks just moving through that ranch. And I just think that it’s not about sacrificing one part of our Valley for another. We really need to recognize that as a community we have to work together. And I don’t think nodes are a productive part of this conversation. And I do believe that taking the heat off is helpful for us in this discussion, and I hope you will make some very thoughtful decisions about how we can move forward and work together as a community and not have one area of our County or another be a receptive node for unwanted high-density growth. Thank you.
Mr. Chairman and members of the Commission, these two Commissions, my name is Tim Lindstrom. I’m here on my own as an attorney in Jackson, and I’m going to speak briefly about something that I typically wouldn’t give you any background from myself, but since I don’t think you need to know who I am, I’ll give you a little bit of background. I’ve spent 22 years teaching accounting and planning at the University of Virginia. I have a masters in planning from Virginia. I’ve written books on zoning and planning in Virginia "inaudible". And I also have been very involved with conservation easements and represent the Jackson Hole Land Trust, although I’m not speaking for the Land Trust tonight. I did send an e-mail communication back in September to the County Commission and, Mr. Chairman, I’ll give you that...Mr. Norton circulated that, but it does sort of summarize what I’m going to talk about tonight. I know that you had a vote that was reported in the paper to dispense with transferrable development rights, and I’m not here to talk about TDRs, but I am here to talk about a tool that you already have in your Land Development Regulations that I believe, with very little additional structure, can be used, if what you are trying to do by increasing density in some places is to reduce density in other places. I don’t want to talk about transferring density. I know that’s a hot button for some of you. If your Plan ultimately ends up saying, well, we really don’t want to change anything, then you don’t need any tools. You don’t need to make any changes. But if you plan to increase density, either by saying we want more density here or there, or by having a point system where land can be scored without identifying in advance, or "inaudible" density. If there’s a increase in density and there’s also, as the Plan certainly indicates, and as the poll certainly indicates, a desire to reduce density potential in the rural areas, then you have a tool right now that you can implement as soon as you wish—"inaudible" a five-year plan or anything else—with a noncontiguous Planned Residential Development.

That is already on the books. And I know that TDR programs are complicated, but the noncontiguous PRD program is not. You have all the tools in place to do it, and literally it’s as simple as saying we are going to recommend in this Comprehensive Plan that there be no increases in residential density unless by zoning "inaudible"... unless the zoning application brings with it a conservation easement on land in the rural area in the same form that you currently have for noncontiguous PRDs. And you don’t have to have nodes. You don’t have to designate growth areas. You simply say if there’s any rezoning to increase residential density, and whether you want to do it one for one, or you want some multiplier, that’s a function of whether you want to zero some gain, i.e., we don’t want any increase in overall density, we just want to reduce it here and increase it here. Or if you want to increase density, which the initial Plan suggested, then you have a slight multiplier. As far as setting the value of these things, the markets do that. If somebody knows that in order to get a rezoning they have to bring in a conservation easement, they will find a landowner and they will negotiate a price. You don’t have to create a market. It’s a publicly managed market. It’s a market that sets itself up. Now, I know there’s also talk about reducing the potential density in the rural areas, and the initial thrust of the Plan was we’re going to up zone here and we’re going to recommend or create the potential for up zonings here and down zonings here. I spent 12 years on the ?? County Board of Supervisors, which is the equivalent of your County Commission, which is where ?? grew up, and I worked to use zoning to try to control growth. And I can tell you when the economics are there, zoning is here today and gone tomorrow. And that’s why if you are interested in increasing density and interested in reducing density in the rural areas and only secure even "inaudible". But you can do it with a conservation easement. That is not going to change when the next County Commission takes office. And what you’re doing right now is talking about changing zoning. Zoning changes all the time. So, it’s a simple—not foolproof—you may have to test it, but you haven’t got anything to lose. If you implement it and it doesn’t get used, that means we’re not getting any up zonings, we’re not getting any down zonings. You’re simply status quo. You can afford to change it. The last thing I’ll say is that one of the virtues of using the noncontiguous PRD is if...there’s been discussion we’re going to reduce density in the rural areas and we’re going to increase density elsewhere. Well, that’s what’s "inaudible" get the up zoning, all of a sudden you get the nice economic benefit—they only have to pay their lawyers and their planners to get it. And if there’s a down zoning, there’s no compensation. Whatever value, and I think there’s a huge oversupply of development potential in the Teton County rural areas now, so I don’t think that development is really worth that much. But psychologically it’s worth something. And so if you say, well, okay, we’re going to let them use three or nine potential units in the rural density cluster, and you can sell the other six, you’ve automatically created a market. You’ve got people moving there. You’ve got things that they can sell that they can’t use. You’ve softened the blow of that change in zoning. Now, again, you can make this as elaborate as you want. You could have sending zones and receiving zones and all of that stuff. But it can be done as simply as saying no up zoning for residential use unless there is a corresponding reduction in rural density by the use of conservation easement. I’m more than happy if anybody has any interest in pursuing that further or to talk about it more. It’s something I spent years working with. And TDRs and transfer of density usually don’t work, simply as most communities are so horribly overzoned that you can’t even begin to get to the heart of the problem. In Teton County that’s not the case. You can literally have a zero sum indicator where we’re simply going to increase density here and reduce it here. You aren’t so horribly overzoned that you really have to cut back across the board and work at planning to. So, it really is an opportunity that’s unique and I think the thing, more than anything else, as an academic matter, it strikes me as a truly unique opportunity to make a very simple tool, which it really is, that you already have, work in a slightly different way to accomplish what I think is one of the key parts of the Comprehensive Plan. So, thanks very much.

<td>Parker, Jon Interest Public</td>
<td>Please drop the “node” concept. South Park does not need a high concentration of new homes. It is an important scenic and wildlife area. We need to set an overall growth target rather than looking at each development separately. We should also reevaluate density bonuses.</td>

<td>Please accept our comment on the Theme 2 discussion. We do not at this point see any point in increased development &amp; use of the nodal concept. With the amount of space currently available in the town/county, we should first be utilizing those spaces. By creating more growth we increase the need for more infrastructure &amp; jobs, that we cannot fill currently. Thank you for your great work in this plan.</td>

<td>As a resident of the Town of Jackson for 20 years and Teton County for 40 years I urge you totally abandon the idea of &quot;Nodes&quot; as a method of directing/controlling growth in Teton County. I believe it is the wrong way to achieve planned growth in this community. If you want to direct/control growth, build it into the Comprehensive Plan uniformly. The Node approach is too susceptible to politics, government, and money. Set the rules for growth/development and the &quot;end game&quot; (i.e. total build out) in the Comprehensive Plan and stick to it.</td>
</tr>

<td>I recommend that the county nodal development concept be dropped including the 1,500 homes targeted for the northern South Park area. Say NO to all county nodes. We do not need nodes to achieve workforce housing objectives. I recommend constraining growth equal to or less than allowed under the current plan minus all discretionary density tools. Nodes are damaging to current neighborhoods.</td>

<td>Any discussion involving nodes is a very difficult one. Your thoughtful discussion last week showed the difficulty in making a decision. I would like to respectfully suggest that you ask the following high level questions that are simple yet definitive: a) Is my vision for this area that it is suitable/capable of absorbing greater density than defined in the 1994 Plan? b) Is my vision for this area that it should remain the same density as defined in the 1994 Plan? c) Is my vision for this area that it is should have lower density than defined in the 1994 Plan? Pick one answer for each of the proposed nodes, the Rural County (break it down if need be), and Town. Subareas of Town can be discussed with the same questions later. For now just ask the question of the Town as a whole. Do not combine areas. To use Commissioner Wall’s analogy it would be like asking if he likes ice cream when he only likes chocolate. Ask the question for each &quot;flavor.&quot; After you answer the question of your vision for each area, you can drop down in detail and discuss “how much” for each area. You can also ask if it is consistent with your prior recommendations. Rather than struggling with the definition of nodes, these simple targeted questions should help your discussion. Keep up the good work. We appreciate the efforts you are making.</td>

<td>Tompkins, Kathy</td>
<td>I would like to respond to a comment made at last week’s Teton County’s Comprehensive Plan rewrite meeting, during the public comment segment. A gentleman said that the Northern South Park area around the high school should be a receiving area for development because the area is already “messed up” or ruined. Please don’t treat the residents of the neighborhoods around the high school as if we don’t matter. I hope that the planning commissioners and the elected officials respect the small home owner’s future in West Jackson as much as they respect the large landowners, concerning their property rights and the money they may gain or lose on their land investment. West Jackson also has a lot to gain or lose in the rewrite of the comprehensive plan, not only in our home values but the very existence of viable and safe family neighborhoods. There is a simple formula that we can aspire to for the location of any needed housing. If housing is needed, it should be placed where the jobs are generated. Affordable homes and rentals should be placed near or where service people are needed for the upkeep of high end homes, high end developments and resorts in town, Teton Village, The Aspens and the Wilson area. There should be a shared responsibility by everyone who generates the need for service people. If we dump dense new bedroom communities in Northern South Park, people will still rely on their cars to get to and from work in town, Teton Village, Wilson, and The Aspens. We do not need more traffic on the already overburdened High School Road, which will be even more dangerous if the Tribal Trails connector road goes through. It will threaten the safety of all our children in and around the schools here. It defeats the purpose of smart and managed growth. We need to keep commercial and unneeded residential development to a minimum in all areas, protect wildlife, open spaces and preserve our family neighborhoods. Most of all, everybody should share in these responsibilities, not just the small homeowner who works very hard to call Jackson their home. Please be considerate of the neighborhoods in West Jackson. We matter, pay taxes and vote too!</td>
</tr>

<td>Griffith, Gregory</td>
<td>Gregory Griffith, West Bank. Last week was one of the more focused meetings that we’ve had. Thank you. TDRs, I think they’re on the agenda for tonight. TDRs are basically the foundation of this Plan. I don’t agree with a straight TDR program. I think it requires a funding source to implement. There are some indications for the Pitkin inclusion that maybe there will be some discussion of competitive-type TDR programs, whether it’s a hierarchy or prioritization of project. TDRs, as proposed in this Plan, require a two-and-a-half multiplier, for one thing, an additional 4000 units that are allowed to the 10,000 that we had in the Appendix. Sun Valley tends to do their TDR program and requires a three-point-four multiplier. You have to have something to make that program go to potential to connect essential for lack of a better phrase. And we haven’t asked ourselves the question, is what we gain temporarily worth what we lose permanently? You have to have a pre-identified ?? . This will allow targeted acquisition of properties that have high biological value—habitat, interconnectivity, etc. If not, we’ll end up with a program where landowners who weren’t planning to develop or sell will get into the fray simply because there’s now a monetary value attached to the TDR itself. We’ll end up with more the cow-pasture, hayfield-type preservations as patterns, instead of targeted, high-value habitat. The Montgomery County inclusion from the planning pamphlet either last week or the week before was very interesting. I’ve studied a lot of these proposals and that probably, with Pitkin, or a combination of the two, is the most interesting, because what they did is downzone the agricultural area but allow the existing landowner to trade TDRs at the existing rate prior to the downzone. This makes for ?? growth, which is what I think the community wants. That should move forward and discussed very thoroughly; it might help you. The competitive system also holds promise, if we even go to a TDR program, because it allows a prioritization, a hierarchy, so to speak, of getting an equitable exchange for what we’re giving away. So, that’s all I had specific to the TDR discussion. Thank you.</td>

Date: 10/15/2009  Name: Varley, Jay
Comment: My name is Jay Barley and I’m a resident of Jackson downtown area. I’d like to encourage...I’ve always been upset that the ’94 Plan was to me pretty much an American suburban plan. And I always...I think that the United States is going to be changing and I think certainly a place like Jackson Hole should at least try to ?? So much has been done here already making it that kind of development ?? that it’s hard to change. I mean, there’s I don’t know how many different private lots there are in the County, which I don’t think you have any real affect on limiting the development on those in terms of at least one house. So a lot of that is outside the purview of the Plan now. But I believe that it’s not so much while the number of people in the Valley matter, it’s the extent of their impacts is what really bothers people. And their impacts are heightened the more spread out they are, the more driving they do instead of walking, more they drive instead of ?? So, I think the key thing is to get people to walk and that means your land-use planning. And that’s really...I think we should be gearing towards that, so try to make it convenient for people to walk where they want to walk. I think there’s going to be behavior changes anyway in transportation, but it won’t be enough unless the land-use plan is crafted. The other thing I’d like to comment about is, and these are really kind of broad concept things, is the danger of map looking at a complex system of the community as a complex system. And what I really mean by that is the tendency to take and try to break down every issue into pieces, hoping that if we solve each one of these and put them back together again, we’d end up with a good solution. As one who has been trained in systems analysis in my college years, we used to refer to something called sub-optimization and what it meant was if you took every piece and you optimized that piece and you put it all together in a complex system, you’d end up with a system that’s about 60 percent of the optimal solution of the overall system. It’s not a very effective ?? and it’s not easy to do it that way. But it’s a very human thing to try to take pieces and try to solve all that and hoping to put it all together and, you know, it works out right. In fact, it tends not to. And that’s because of the interaction ?? Then I guess the one other issue I’ll talk about is the whole idea of growth caps and things like that. The big problem with that is how to implement it. And to have a certain rate of growth every year regardless of market conditions, which are very, very important, as we all well know right now, and it just...I don’t like the implication that sometimes people take that we can control everything that happens by regulation. The markets...the best regulated, the strongest <<inaudible>>, but they are the strongest, so somebody can’t make any money doing development, he won’t do it, regardless of whether the regulation allows them to. So, we have to consider those things. And I’m sorry I didn’t offer a lot of solutions, but I’m not...I wanted to issue some warnings. Thank you.

Date: 10/15/2009  Name: Coon, Dave
Comment: Dave Coon, a neighbor at large, Teton County. First off, thanks to all of you for the hard work and time you’ve put into this, Staff, too, and everybody from the public that keeps showing up; it’s really appreciated. I commit you on all your work on theme one. That is the most quality stuff. And don’t lose sight of that as we go finishing managing growth and we talk about incentives because in the end more people is probably the biggest detriment to the wildlife and the open spaces that we have worked so hard to deal with in theme one. Quickly, as kind of hitting on what Pete talked about on TDRs, it’s going to get down to how we are who is going to pay for that, so keep that in mind on nodes. I think that’s a very tough subject. And nodes, just keep in mind when discussing nodes, how are we really going to deal with the infrastructure and the transportation that goes along with those. They’d have to be in place before the nodes can go, so just keep those in mind. Thanks again very much.

Date: 10/15/2009  Name: Acri, Armond
Comment: Thank you. Armond Acri representing Saving Historic Jackson Hole. I’ll be real brief in respect of you guys’ time here for being here. On the subject of nodes, our opinion is that we’ve become too big if we need nodes. It means that we’ve failed to adequately manage the growth rate. The issue really is predictability, and if we start doing these nodes and expanding what the people had expected, we’ve lost our predictability. With respect to South Park, we’ve consistently said that any attempt to change density anywhere, regardless of South Park or anywhere else, needs to look at the overall impact in terms of traffic and things like that and not just on one particular road but in terms of the whole network. We’ve consistently asked that things be looked at that way and we still think that needs to be there before we even agree to add in more density to South Park, we need to make sure that there is a plan, a true plan to connect ?? whatever the impact would be for that additional growth. Thank you.
Peter ??, Wilson. Actually, I’m a proponent of slow growth. I’m glad to see it’s taking effect with the actions of this Commission, which is going extremely slowly. It’s a good thing in my view. I want to thank all of you for your patience in seeing this thing through. Let’s see, a couple of things, I just have something, I think it’s in the record, so I won’t bother to read that. But one thing that occurred to me as a very early advocate of new urbanism, I, of course, have a little bit of a tough time of applying that exact phrase to Jackson Hole and I just realized maybe we should have started calling it new villages, because with the idea of mixed-use urban density, we are starting to make this thing look like a city. So, that’s just something I think in general to... that got carried along in some of these early concepts. Or maybe it’s going in kind of the wrong direction and that’s one of them. But the Village <<inaudible>>. I’d also ask that another... be supportive of the idea of the Town and County. I think they’re really separate and I’m personally one of those that does not particularly like to see <<inaudible>>. The situation is like joint houses of congress, you know, the senate and the house talk and then talking together afterwards. The ?? business, well, one thing, the SRA out there as developed has got so many people in it. I think there was a flaw in that commercial approval, which reduced the commercial and retail. I would sure like to see that brought back into balance with the number of people. If you want to call that new village a node—I don’t think is the right word, I think it should be a town or whatever you want to call it—but it really needs to... I think you look at it in terms of a balanced amount of residents who are living there and the commercial services, local services that are going to supply that number of people in its estimation. So, I think the node idea is... I hope it goes away. I don’t like to hear that word; it implies a huge amount of density. And I can only close by quoting the Mexican bandito in the <<inaudible>>. He says, nodes, we don’t need those stinkin’ nodes.

Rich Bloom. Thanks again for all your comments. The idea of nodes again are really just tied to the pattern of growth issue and about the transfer of development rights and about unit-to-unit transfers. Yet, the danger of nodes and why I think at this point in this conversation we should just say no to all county nodes period. If you feel the TDR is not going to work, then the only thing that will occur is the simple up zoning of an area and some temporary down zoning in other areas. If you were to do that in the northwest corner, then you’re going to disincentivize the ?? potential of the 1800 units in Town by having a new subdivision across the street. We certainly don’t need nodes other than for the TDR. If you decide the TDR does not work, the nodal concept falls away. You have an operative as PRDs, which is to achieve a lot of the transfers that we want. As far as workforce housing, we’re at 70 percent of the workforce living here right now ??.. We have mitigation rates that have been put into place leaving residential at 25 percent. If we would only address the commercial mitigation rates as we go forward with development paying its own way for both infrastructure and workforce housing, we’ll be fine. With a little bit of money when we come to that statute in the theme to fund some of the retirement issues will go into solving those problems plus the creativity in Town. South Park, if you read the letter that Bill Schwartz delivered on behalf of Robert Gill, the node that was identified now lies three quarters on Robert Gill’s land. He seems to tell Ralph he has a very different interest. He wants to ??.. Perhaps it will work in the County but more importantly to keep it open space and agriculture. That’s being listened to by those well-to-do neighbors around there and the Land Trust as far as potential. He points out in the letter again <<inaudible>> an east/west connector is very problematic. Then you may not be able to consider that. Simply, do not go to these nodes where they’re simple up zones not tied to the TDR, or it will be additive growth, absolutely. Last is the Task Force numbers, the Task Force, you address that tonight, Staff was asked to come up with numbers on the existing baseline housing and commercial and where that would take us in population job creation. A memo was sent out two days ago to invite everybody from the existing Task Force to participate but excluded the Alliance and invited Tim O’Donoghue from the ??.. I’m fine with having Tim on that, but I don’t know... I don’t have a clue why the Alliance was excluded from the Task Force to generate those numbers. Those two, Paul Hansen, who would probably delegate Kristy Bruner, should be invited back on the Task Force, along with Hal Hutchinson, Armond Acri, Mike Whitcomb, and Scott Pearson, who were invited on this new one. So, I hope that’s an oversight. I’ve asked Alex directly about why the Alliance was dropped, as they... as a citizen in the Valley tend to believe whatever the Alliance produces, it has a higher level of credibility than sometimes what the Staff delivers, so I’d like to see them involved. Thank you.

Becky Tillson, Jackson Hole Conservation Alliance. Thanks for listening. This is going to be really brief because we’ve already submitted pretty extensive comments on where we stand on a lot of this. To begin with, as we’ve said before, this Plan should aim to provide solutions to growth-related problems, which includes answering the question of how much, not just the question of where. In regard to the task of nodes, we urge you to not oversimplify this. And I just wanted to state for the record that we cannot support the concept as it is presented in this Plan, as town-level density development without clear boundaries. This is inappropriate anywhere but the Town, as ?? from the way the concentrated growth was discussed in the ’94 Plan. We know you guys had significant discussion on this and we really appreciate all of your efforts. Thank you.
Mr. Chairman, Commissioners, thank you for the opportunity. I’m Franz Camenzind, a Jackson Hole resident. First of all, I’m going to say I’m probably going to leave the meeting early tonight and I don’t want you to think there’s any disrespect meant by that. I have some out-of-town friends I’d like to have dinner with later on, so I wanted to let you know. I want to cover a subject that maybe isn’t on the agenda but keeps coming up and that’s this crazed growth caps. And I think it’s an extremely misleading phrase. In the context that we’re working here, we’re dealing with setting up a Plan and in fact putting sideboards around what we’re going to do for the next ten or so years. That’s all it is, is sideboards on the Plan that’s going to be in place and then reviewed in about ten years. I think using the word, or the phrase, growth caps, is very inflammatory. I think it’s very polarizing. I think it sets the wrong, you know, agenda and the impression here in the community. So, I wish we’d come up with something else. This is a planning sideboard; that’s what we’re going to be reviewing again in about ten years, plus or minus, and let that generation then, you know, make the next decision. So, I think what we need to do here is figure out what those sideboards are. In other words, how big that bag is so we know how much stuff we can put in it. And I think that’s what we’re dealing with here tonight. And to define those sideboards, I’ll go back to what I said a month or two ago—nothing more than what is okayed in the ’94 Plan, the legally defensible minimum numbers. And if we could find any way to even shrink those, I think we should. It’s as simple as that. And that’s still going to give us a great growth potential for the next ten years. And that’s what we’re talking about. We’re not talking about a forever cap. Things that are forever are the things that you allow to happen for the developments that occur. Those are forever. They don’t just break up. But when you say, no, or limits, those are temporary. They can always be reevaluated, readdressed. So, let’s just put this in that concept. I think another one of the things that we have to do, not only to just stay with the ‘94 Plan, but I think we really have to get rid of those density bonuses, those incentives that we have out there, perhaps with one exception, and that would be when we can apply growth or development that will absolutely meet workforce housing needs. Very clear, very necessary items, not just growth for growth’s sake. When you talk about growth rates, personally, I don’t see the growth rate as a big issue, as I do think the markets will take care of that. I don’t think we’ve ever had a growth rate here that’s been a problem. I think the problem is not monitoring what’s happening when growth occurs. And then not having the triggers that will instigate reaction. In other words, monitoring and find out what’s going on. Are our public services holding up? Our infrastructure holding up? And at some point, if they aren’t, is that trigger pulled so that it comes back to you all and the electeds to say, okay, timeout, folks, we need to readjust this? I think that’s really as important as just saying some arbitrary number that you’re going to have to place some name with. That’s just my own personal impression on growth rates. It’s what happens and how it’s monitored and the triggers that are involved. The idea of nodes, you know, I don’t really care what you call them. Wilson is there. Teton Village is there. South Park is there. Aspens is there. It’s what we do with them, that’s what matters. Whether it’s called a node or not, I don’t really care. And, again, I’ll go right back to saying, it’s the ‘94 Plan. Nothing more than the ‘94 Plan. There’s a lot of growth potential and maybe too much growth potential in some of those things. The one place where I would like to have some discussion represented—Jorgensen brought it up this evening and I know it’s been in the minutes that I pulled out, or the summaries from the last couple of meetings on this. The idea of taking South Park and considering it as a special zoning district. How would two special zoning districts, the north and the south, and looking at that for that reason and looking at finding ways to make that happen, but not let what happens there spill out into other areas. In other words, a special zoning district that has special advantages or restrictions. It might be one of those places where a density bonus is okay if the bonus is used to provide workforce housing only, not just more housing. Workforce housing only. Maybe there’s some formula there, and I would love to have this community and I’d love to have the Planning Staff and you all have a really informed discussion on this. What would be that bonus? If we have a three-times density bonus just for the rural lands, should there be then a three-times or another three units that are workforce housing? And if they can’t build the workforce housing, maybe we should have two parcels of ground that are buildable for workforce housing. Or three—I don’t know what the right ratio is, but I think that’s what this community should be discussing. I think that is the logical place where growth can occur and when that workforce housing is looked at, it should be applied to what is being developed in South Park, or it should be made available to appropriate other developments that may not want to put or be able to put that workforce housing on their property. It’s a concept that I bring forth. I think it’s worth discussing. I think we should have that open, and I think that’s the only place that we should be putting density bonuses and looking at anything more than what the ‘94 Plan gives us. I guess I’ll just leave that at that. Again, I do want to thank you all. This is taking an awful lot of your time. I think it’s time to start making some of these hard decisions and it’s time to start identifying the specific things that you want to talk about. And looking at, you know, what the ‘94 Plan gives us. I haven’t had the chance to look at commercial property and how many units or, excuse me, how many employees that would generate, but it’s a lot. It’s probably more employees than the housing units that we have in the Plan right now. There’s a total missing, and I think those numbers have to be worked out. And again, thank you for your time.
Thank you. Pete Jorgensen, state legislator. Commissioners and members, I appreciate the time you’re putting in. I think you’re probably doing a lot more than you expected to do when being asked to do essentially Planning Staff work here. As all of you know, this has all been looked over before and done before. So, I guess I would just like to make a comment based on the short period of time I sat in on meetings previously, and my experience here in the Valley of planning since 1960. We seem to do these things over and over and over and the issues are the same. It appears to me that the attitude of the public is pretty clear that, whether they’re valid reasons or not, their attitude is pretty strongly towards controlled growth. How do you do that ?? If you make it complex, you’ll probably never do it. If you depend on funding TDRs, I don’t know where the money is coming from. There are only two sources that may…private folks contributing, such as the Housing Trust for the public money, the Housing Authority or some other organizations. And believe me, there’s no more public money in this table. We’ve had eight good years on a thirty-year binge, so it’s seriously ?? It impacts these towns and counties and impacts the social programs and in fact everything. Other things I’ve heard are will you get help from state legislature and legislation that deals with zoning and will it be appropriate to Teton County. This is not going to happen. If the Teton County Commissioners who have the zoning authority don’t use it, no one else is going to help that happen in the state. If this County can’t do it, no one can. There are a couple of things I’d like to say as background. No piece of property in this County whose value represents an inadequate concern to the owner didn’t involve the market. I’m not saying an inflated market ??, but normal markets you can expect that in the next five to ten years. No piece of land will return a ?? for the owner unless they speculated within the last five years. But the rate that was going on previously is going to continue. We won’t know no matter how many papers you read or what papers you read. The importance of planning I think is only underlined by any of you who may have seen the ?? film series on parks. National parks and public lands ?? our state. It’s very different than the rest of the economy. And it almost is an obligation on us in this County to not degrade the value on these lands to what we do on private lands. The impacts of development on private land this County do impact all of those other resources. And we all acknowledge that 3-4. TDRs, as I said, ?? the paper today, the paper, that you’re going to talk about nodes. And it seems to me that the only node that makes any sense at all is the north part of South Park, because that’s adjacent to Town, should be contiguous to the Town. I believe that folks say Town is heart. I think that’s important. This is not a big enough County to have competing Centrex, if you will, density and services. Every other node that’s listed has adequate local services, as well as. As far as the north part of South Park, I think that will probably be a separate zone in the County Plan designated for future annexation to the Town of Jackson and with some conditions to be considered in annexation, such as street setbacks, highway setbacks, types of uses. I would expect only disagree with residential and public uses, such as schools or libraries, or ?? But you get into commercial, ?? I think the whole question of what happens with the density in planning by virtue of that would reside within the PRD presented to the Town. It depends on the Town, it depends on the Town. Counselors who may have heard from Planning Commissioner that if you folks could see your way clear to separate the County part off of this to the extent that that’s off the table, I think a lot of the folks that are objecting will be taken care of. I heard at the recent meeting some comment that all this density that can’t be accommodated because there’s no bonus deal in the County will have to be held in the Town. It doesn’t have to be done in the Town. Just as you can up zone, you can down zone. And just to draw a parallel, we’re used to having raises every year, public employees ?? Colorado has now indexed their minimum wage to inflation ?? and they’re lowering their ?? payments. So, the whole concept of I’ve got what I’ve got and it’s going to keep increasing and getting bigger and bigger and bigger, it’s not the ?? And we in this Valley should be extremely sensitive to and aware of that and realize what it takes in the long-term right now ?? Thank you very much. Thanks for the time that I know you’re putting in. I hope you keep doing it. Thank you.

TDRs are viable option to include in the plan

To begin with, as we have said before, this plan should aim to provide solutions to growth-related problems, which includes answering the question of how much, not just where.

Regarding the concept of nodes, we urge you not to oversimplify. We cannot support the concept as it is presented in this plan—as town-level density development without clear boundaries. This is inappropriate anywhere but in Town, and is a clear departure from the way that concentrated growth was discussed in the 1994 Plan.
During your 10/15/09 meeting a comment was made that perhaps having a ‘node’ in Wilson was not a good idea because the START bus only comes to this person’s Wilson neighborhood twice an hour. According to her, this is not enough to ‘get people out of their cars’. Thus, according to her thinking, a ‘node’ in Wilson is not a good idea (and later in the meeting another Wilson resident voted the same). I utilize the START bus system in Jackson and I was almost sure most stops in town are twice an hour; Wilson at no exception to its Jackson counterparts. So, I called the START Bus offices and verified that, yes indeed, most all stops are scheduled for twice an hour (stops increase for all areas during the Holiday Season). Thus, if START bus stops are governing where to place a node (affordable housing areas) and where to not place a node (affordable housing areas), I see simply changing the START bus schedule as a valuable tool. I highly disagree in the thought that nodes (affordable housing areas) should be withdrawn from Wilson and the Aspens. Is this Comp Plan not called the Jackson/Teton County Comprehensive Plan? Wilson and the Aspens are just as much a part of Teton County as Jackson and Teton Village. The affordable/workforce housing issue must be shared by all communities in this valley. One of our county’s largest employers is in Teton Village - and arguably you could say Teton Village as a whole. To steer the Village’s employees to find affordable housing in Jackson is ridiculous when Wilson and the Aspens are so much closer. I suggest that all communities/neighborhoods in this valley share the need for areas for affordable housing.

‘Employees’ live all over this valley! Keep in mind the definition of ‘employees’ – just not food service, office & retail workers. Where are most of the residences in this valley located that require maids, housekeepers, greens keepers, grounds keepers (gardeners) and caretakers? It’s along the Westbank, Fall Creek Road and North of Town. Where are most of the construction trades (a huge section of our workforce!) driving to each day? Certainly not in the town of Jackson. Please, I don’t care what you call the areas provided for affordable housing (zone, node, or developments), just don’t treat Wilson and the Aspens as if they don’t need it or deserve it. As I said before – EMPLOYEES ARE EVERYWHERE IN THIS VALLEY! And face it, you know as much as I do that the majority of employees will always drive. Do you? Of course you do. Most of us do. I suggest a couple days a week you take a ride on a START Bus all the way around Jackson ... and actually see WHO uses the START Buses. Don’t plan on affordable housing areas only where the START Bus stops. I have yet to see a START Bus take carpenters and subcontractors to their jobsites, or stop at the Pines or Crescent H Ranch to drop off the ‘house help’. Gardeners, landscapers and groundkeepers will always drive their trucks to work (you can assume most not into Jackson proper). And how many people on any given weekday or on weekends do you think drive to Teton Village to ski or golf at the Pines or North of town? I hope I’ve proven my point .... We are doing something (playing, eating, working ...) everywhere in this valley, all the time! Every community (the Aspens, Wilson, Teton Village, Jackson, and even north of town!) should be in this thing (providing affordable housing areas) together. No community should be exempt from pitching in and providing its share to affordable housing areas .... or higher density housing .... or nodes .... or whatever you want to call it.
WE NEED TO RESIST THE IDEA OF USING SOUTH PARK AS A NODE. WE NEED TO SAY NO TO NODES ALL TOGETHER AND PROVIDE HOMES IN THE ALREADY DEVELOPED AREAS THAT PRODUCE THE NEED FOR HOUSING WHICH WOULD BE IN TOWN AND THE VILLAGE. USING SOUTH PARK AS A RECEIVING AREA FOR PHANTOM DENSITY FROM ALTA, BUFFALO AND OTHER OUTLYING AREAS IS UNFAIR TO THE RESIDENTS OF WEST JACKSON AND ESPECIALLY AROUND HIGH SCHOOL ROAD. WE GET NOTHING IN RETURN EXCEPT MORE GROWTH AND TRAFFIC PROBLEMS. THIS DOES NOT SOLVE THE TRAFFIC PROBLEMS! IT WILL ONLY MAKE THEM WORSE! ANY NEW RESIDENTS FROM A DENSE NODE IN NORTHERN SOUTH PARK ON HIGH SCHOOL ROAD WILL STILL NEED TO TRAVEL TO GET TO THEIR JOBS IN TOWN AND THE VILLAGE. THIS WILL ONLY EXACERBATE THE PROBLEMS ON HIGH SCHOOL ROAD AND AT THE Y INTERSECTION. HOUSING SHOULD BE PLACED WHERE THE JOBS ARE GENERATED! WE CAN NOT CREATE MORE BEDROOM COMMUNITIES AND OPEN UP SOUTH PARK TO DEVELOPERS. WE NEED TO ADDRESS THE GROWTH PROBLEM DRIVEN BY COMMERCIAL AND UNNEEDED RESIDENTIAL DEVELOPMENT AND RESIST LOOP HOLE INFESTED DENSITY BONUS TOOLS. KEEP THE PRESENT DEVELOPMENT RIGHTS BASE NUMBER OR EVEN LOWER THEM AND SOUTH PARK MUST BE TAKEN OUT OF THE DEVELOPMENT SHELL GAME OR THE HUMAN WANTS FRENZY WILL NEVER END! WE NEED TO TAKE CARE OF THE RESIDENTS WE HAVE; NOT THE UNFORESEEN TRANSIENT RESIDENTS CREATED BY COMMERCIAL AND UNNEEDED RESIDENTIAL DEVELOPMENT. PLEASE LET US BE HEARD AND RESPECTED. TO SAY WE HAVE IT WRONG IS PUTTING YOUR HEAD IN THE SAND. THERE WILL BE NO CHANCE OF SAVING SOUTH PARK AND ULTIMATELY THE VALLEY IF YOU DON'T TAKE BIG AND SWEEPING ACTION NOW. BABY STEPS WON'T DO. THIS IS NOT ABOUT NEIGHBORHOOD AGAINST NEIGHBORHOOD. IT IS ABOUT WILDLIFE AND OPEN SPACES COMPETING WITH UNCAPPED AND EXCESSIVE GROWTH. WE NEED TO THINK HUMAN NEEDS VS. HUMAN WANTS AND NOT NAIVELY LUMP THE TWO TOGETHER UNDER HUMAN NEEDS. HUMAN WANTS HAS NO ROOM FOR WILDLIFE AND OPEN SPACES. HUMAN NEEDS INCLUDES PROTECTION OF ALL WILDLIFE, OPEN SPACES AND FAMILY NEIGHBORHOODS NOT JUST FOR A SELECTED AND LUCKY FEW. THIS IN TURN CREATES A MODEL SCENIC AND HEALTHY GATEWAY COMMUNITY THAT WE ALL CAN BE PROUD OF, FAR INTO OUR CHILDREN'S AND THEIR CHILDREN'S FUTURE!
**Comment**

My name is Barbara ??, <<inaudible>> It is a reminder of the letter that was sent to you approximately a month ago from a lawyer of the northwest corner, a landowner in South Park. And I was hoping that you would take a look at that again and really study it and see what it has to say. It’s important. I don’t like to speak in public and I’m glad that Franz said a lot of what I was already going to say, so you can just say that Barbara ??, That will save us some time. But I’d like to be more specific of what I want to say. And that is the node that you call the northwest corner of South Park. I know a lot about it. I’ve lived on High School Road since 1991, and I say on because I live at the corner of High School Road and Ranch View Drive. And I’ve seen what development in all of South Park have done to this road, in particular High School Road. In 1999 or 2000, the Town decided that we needed a ?? in order to deal with the situation that was happening at High School Road. Jim ??, who <<inaudible>> steering committee for the annexation of South Park attended. I was one of those eight members. At that time Jim ?? of ?? Associates had deemed that High School Road had already met its match, so to speak. But yet South Park development has increased and will increase, obviously, with the node at the northwest corner of South Park. High School Road can’t take anymore development. We already know that the Travel Trails Road is going to be the buffer. Eventually, it will happen regardless if anything gets developed in this northwest corner. The traffic on Travel Trails Road will eventually find its way to High School Road. Will eventually find its way, unfortunately, to someone walking on that road can be hit. I, unfortunately, have had the opportunity to repair my fence, which borders High School Road, a number of times because of traffic, traffic sliding off the road and hitting my fence and going through it, and I only can be happy to say that my daughter was not building a snowman on the other side of that fence, or my neighbor’s boys. It could have gone through their fence. And this is going to happen again. The ?? are going to increase when the northwest corner of South Park is eventually developed. I know everybody says, but that’s the most common-sense place to put development. And just because it’s a horizontal surface, doesn’t mean that you need to put everything you can on it. Please, when you talk about the northwest corner of South Park, please consider what it’s going to do to High School Road. You have multiple owners in South Park. Some want to develop; others do not. You have a connectivity issue with this. There’s a strong possibility that you’re going to be having high density in the northwest corner of South Park and there’s not going to be any way to develop an east/west connector or connector road meeting Highway 89 to South Park Road. Then what? We’d like to see this all in writing before you say how many people and how many units you can put in this corner. Let’s not think about how many people. Let’s not even think about how many houses. Let’s think about how many vehicles this development will entail. All I can say is at this point South Park cannot handle any more development. It’s not the way it’s set up now. It’s not the way that the owners want to do with their...the letter states that one of the owners wants to continue ranching. Unfortunately, this owner is in the middle of South Park. But that’s where all the people want to put high density and the development. All I can say is, please, think about High School Road and the students that are on it and the people that live on it. You’re going to be affecting all of their lives by what you decide about that corner. Thank you.

---

**Comment**

Good evening everybody. My name is Kathy Tompkins. I live at Cottonwood Park. And again I’d like to express my gratitude for all the hard work you guys are doing and keep up the good work. We need to revisit the idea of using South Park as a node. We need to say no to nodes altogether and provide homes in the already-developed areas that produce the need for housing which would be in Town and the Village. Using South Park as a receiving area for phantom density from Alta, Buffalo and other outlying areas is unfair to the residents of West Jackson and especially around High School Road. We get nothing in return except more growth and traffic problems. This does not solve the traffic problems; it only makes them worse. Any new residents from the dense node north of South Park on High School Road will still need to travel to get to their jobs in Town and at the Village. This will only exacerbate the problems on High School Road and at the Y intersection. Housing should be placed where the jobs are generated. We cannot create more and better communities and open up South Park to developers. We need to address the growth problem driven by commercial and unneeded residential development and resist loopholes such as density bonus tools. Keep the present development rights base number or even lower them. And South Park must be taken out of the development ?? or the human-wants frenzy will never end. We need to take care of the residents we have, not the unforeseen transient residents created by commercial and unneeded residential development. Please let us be heard and respected. To say we have it wrong is wrong. There will be no chance of saving South Park and ultimately the Valley if you don’t take big and sweeping action now. Baby steps won’t do. This is not about neighborhood against neighborhood. It is about wildlife and open spaces competing with uncapped and excessive growth. We need to think human needs versus human wants and not naively or smartly lump the two together on meeting human needs. Human wants has no room for wildlife and open spaces. Human needs includes protection of all wildlife, open spaces and family neighborhoods, not just a selected and lucky few. This in turn creates a model scenic and healthy gateway community that we can all be proud of far into our children’s and their children’s future. Thanks.
My name is Barry Sibson, and I hope I’m not too far behind the curve, but I’ve been gone for a month on grandparent duty. So, I will pick up maybe too far behind. But first, I’d like to thank you all for redirecting this process and getting us back more in line with what I think is a reasonable outlook for the community. I do not, however, with respect to the ‘94 Plan, I would ask you to look at the amount of commercial that would be permitted within that ‘94 Plan. In my view, that still is too high. I’ve been told by planners that it would be something <<inaudible>> square feet of additional commercial space. If one were to use a factor of one employee per 400 square feet, which is actually pretty high if we’re moving more toward office space as seems to be occurring, which would be in the 150 to 200 square feet per employee. But using the 400 to be generous, it would say that we...if we built another 1200 or, I mean, two square feet of commercial, we would have approximately 3000 more employees in this County that might, considering double up between employees, that might mean 2000 new homes just for employees. If you put a ratio of three to three and a half people per dwelling unit, that would put us to about 6000 to 7000 more people in the County, just employees. That’s almost a doubling of the population of the Town of Jackson at this point in time. So, in my judgment the commercial allowance under the ‘94 Plan really needs to be reconsidered. With respect to South Park, which is a special interest of mine, the community has spent a lot of its money, the Land Trust has spent a lot of its time to protect the view corridor along Highway 22. It’s very appropriate. It seems to me that Highway 89 is just as, if not more, important as an entry to Jackson Hole than Highway 22. So, the view corridor along 89 I think is of utmost importance. And, therefore, I don’t think that the growth in employee housing or any other type of housing should be figured all to be in South Park. I think first of all I have no idea what Robert Gill’s views are with respect to his future. When I heard that he wants to continue ranching, I would be most happy. But in my judgment the placement of the High School where it is on the south side of High School Road has, excuse me, but already ruined the northern end of South Park. So, it seems to me that development as deep as the high school property is to the south on either side of the High School would not be a tremendous detriment. And if you talk about nodes, that is the South Park node there already. With respect to the balance of the unplatted land in South Park, which is if that great geographic computer system we have is accurate with this, and I know how to use the area calculations, there remains about 1500 acres that is unplatted. In my mind, that area would be a good area to use bonus densities for open space. I think it would be important to keep open space along 89. I think it would be important to keep open space along South Park Loop. And making some calculations, it seems to me that if we were to allow six to one in the remaining areas, with 70 or 80 percent open space, and if there were more density allowed in the depth of the high school property, that the owners, if they wished to develop, could gain what under current procedures they would be allowed, which is nine to one, and therefore they would not have a loss of economic value. So, there are the two points that I would like. I think South Park, I think it’s got to develop in some respect but the amount and how I think is the key question. Thank you.
As Theme Two approaches its final analysis, it has become quite clear that we as a community have the answers right here in front of us. For far too long we have made, and are continuing to make, this Comp Plan process far too complicated. Community opinion has been surveyed, studied, calculated and recalculated. The answer is always the same; limited growth and wildlife protection are our priorities. At no time have we expressed interest in increased footprints or density build out. I keep asking the question who is driving this build out? Who will actually benefit from more congestion in the Valley? The quick answer might be developers, retailers and large land owners ready to sell family holdings, but 20 years from now what will our town look like? We will be Anytown, USA. We will be left without the precious qualities that bring thousands of tourists and pleasure seekers to our beautiful town.

To date, the town planners and elected officials have done an incredible job with solid solutions for supply and demand of services, schools, utilities, and medical care. There will always be a continuum for revising and upgrading infrastructure, but to continue to expand a small town and deplete its natural beauty makes no sense.

This brings up the Comp Plan buzz word, “node”. By labeling Comp Plan’s expanded development ideas as nodes, it will not make us “swallow the pill” easier. Nodes constitute a sterile pattern of development which produces anti-community behaviors. Nodes establish segmentation of a community by their design, forcing the surroundings to be self contained, thereby limiting social interaction. Nodes do not encourage public transportation or shared services. Nodes are a big town design strategy, not a small family oriented community vision. Furthermore, current proposed nodes are aggressive in some areas, non-existent in others, establishing an unfair burden of commercial services, traffic, and density in these targeted nodes. Just because there is available land to build does not make it a responsible decision. The few “blank slates” we have left in this Valley need to be held in the highest of regard for quality design, not quantity. Any limited growth patterns should be shared equally and dispersed among the communities of Jackson so as not to alter established scenic value. The idea of trading densities, phantoms, or easements for wildlife in order to surpass established buildout numbers is unacceptable.

The only “node” which should be considered for further development would be our Town of Jackson, to include accessible public transportation. This effort will bring us together as a community for enhanced work opportunities, shopping and entertainment. The outcomes would build life long opportunities for a continued small town atmosphere of cooperation and support, while exciting the tourist market. Our town could incorporate pedestrian friendly shopping and restaurants in cohort with business settings. Upgrading public transportation could bring both public and visitors alike to all parts of the Valley. We could build a lifestyle for other communities to admire much beyond LED light bulbs and sidewalk upgrades. Now this is a pill that is easy to swallow.
Let me first congratulate you all on the cooperative and scrupulous way in which you are addressing issues in the current draft Comprehensive Plan as well as the extensive public input you have received on same. Your efforts will result in Jackson Hole remaining the unique place that it has always been.

The community has spoken very clearly of its desire to limit future growth and to effect policies that protect wildlife and open space. The question is how to implement these two preeminent values.

In general there seems to be a consensus that future development be limited to that allowed under the 1994 Plan, but even here the issue of accessory residential units (ARUs) may cause actual buildout numbers to be modified. Zoning and land use planning tools ought also to be specified so that unintended consequences do not stem from approved policies. The issues of density bonuses, transfer of development rights and the concept of "nodes" are particularly critical to assure that policy is not frustrated by planning tools. One cannot deny that Jackson, like virtually every municipality, contains a plethora of special interests, each of which construes what is allowable in terms most closely aligned with their own interests. Your job is to approve a Plan that conforms most closely with the majority opinions expressed to you.

I would recommend that the concept of "nodes" be stricken from the Plan since the three areas specified (Aspens, Wilson, South Park) should not be singled out for high density housing. Each area wishes to have development transferred to another node and does not wish to accept densities from unaffected areas. Similarly, density bonuses which "promote community goals" are dangerous in that they are vague and subject to abuse.. The only clear mandate emerging from throughout the county is: limit growth, preserve open space and foster habitat connectivity. Policy needs to conform to these values above all. The community is opposed to the nodal concept and the upzoning recommended by Planning staff.

Some will say that limiting growth will not work. Yet this is the only way to protect the Jackson Hole that the community wishes to preserve. The task force of local residents which has proposed new buildout numbers can be seen as representative of the community and provide Commissioners with a balanced view that both protects future growth while accommodating the values Jackson residents hold dear.

I think it may be fortuitous that Commissioners are making these critical decisions in the middle of a recession. Recessions force individuals to make decisions by focusing on the difference between needs and wishes. Growth is not inherently good or bad, but it can only proceed if infrastructure and social systems are in place. As economies contract, allowable growth should be reduced; as they expand growth should expand if it sustainable. So too the concept of nodes can be useful if they address shifting growth patterns rather than specifying mandated areas of new growth. When they are used to impose growth on certain areas, at the expense of open space and habitat preservation they will encounter strong opposition.

The Plan should not impose 'workforce housing' on any area. Jackson currently underestimates the commercial workforce housing impacts and thereby adds to the jobs/housing imbalance. The Plan cannot be designed to mitigate needs that are exponentially growing without trampling on the majority views concerning wildlife and open space. This problem must be addressed outside of the Comprehensive Plan--and soon.

In conclusion, I applaud the Commissioners' efforts to put in place guidelines that honor community ideals and tools that assure their preeminence. A balanced and flexible Plan that treats each area of Jackson Hole equitably and promotes sensible compromises on the basis of future realities will be your real legacy to the Jackson Hole community.

Thank you for your kind consideration of the above thoughts.

| 10/12/2009 | Pilafian, Peter | To the Teton County Commissioners and the Joint Planning Commissioners: Tor the Teton County Commissioners and the Joint Planning Commissioners:  
As an early advocate and proponent of Traditional Neighborhood development and the New Urbanism, I have seen the erosion and pre-emption of those values in the hands of profit-motivated developers across the country.  
Instead of looking at the ways in which small towns, villages, and communities have grown organically to nurture a pedestrian-friendly, neighborly, sustainable way of life, developers in America have turned front porches into a sales gimmick, exploited density as a way to increase profits, and insisted on a fast turnover so they can move on to the next county, or the next state.  
As elected and appointed officials, I suggest that it is your duty and your right to take the long-term view, and to look out for the interests of the people who elected you. Time and again we have spoken out loud and clear in favor of the quieter, traditional values. Wildlife, a sense of community and family, and sustainable long-term neighborhood stability – these are fundamental to the Big View of life in our valley.  
High Density encourages increased population. No two ways about it. It is not a solution! It exacerbates the problem it attempts to solve.  
JUST SAY ‘NO’ TO ALL NODES, and please try to think about future community and wildlife values, not profit-motivated short-term commercial exploitation, as you work through the complexities (and the long hours) of creating a New Vision for our future. And on a personal note, we here in Wilson are horrified by what will happen if you continue to designate Wilson as a Node. Please remove that word from the draft.

| 10/8/2009 | Walles, Brooke Interested Public | I understand that Nodes and density bonuses within them are going to be discussed at tonight’s meeting. I am glad that they are finally on the agenda as these concepts are at the heart of what is wrong with this plan revision as written. Nodal development patterns may work in larger areas such as the suburbs of Salt Lake. Nodes are probably discussed in the textbooks planning staff may have studied recently in school. Jackson Hole is a special place and planning tools from Anytown USA simply do not apply to our special valley unless that is what we wish to become. First what is a node? What are the nodes meant to accomplish? My understanding is that a node is an area that has sufficient services in a pedestrian friendly environment so that people may work and live in an area. I would assume that the main goal of nodal development would be to reduce traffic. There are only three areas that remain as “nodes” that are targeted for high density housing which are the Aspens, Wilson, and the northern portion S. Park. The first two areas simply do not fit any reasonable definition of a “node”. With Highway 22 bisecting the town of Wilson will it ever be pedestrian friendly? Anyone who lives in Wilson knows that the answer is no. No one coming from Idaho obeys the posted speed limit. Maybe a traffic light would solve the problems? Do you want to be sitting in a line of traffic when a tractor trailer is speeding off Teton Pass? Every year there are multiple runaway trucks. Adding more pedestrians and traffic at the base of Teton Pass is not only bad planning but it would be irresponsible. It is a serious public safety issue that must be taken into consideration. Neither area has or ever will have a sufficient commercial core to reduce traffic trips to town enough to justify any additional density. If you were to allow density bonuses in these two areas you would be putting dense islands of housing in areas that by necessity people would be taking their vehicles to town to Albertsons, Smiths, work, kid’s school, soccer practice etc. People may occasionally pick up a gallon of milk at Hungry Jack instead of making the trip to town but the vast majority will not be working in Wilson. In the real world people simply do not ride public transportation. The current ridership in Teton County is 1.96%. If you put thousands of more people on these islands and even assume that ridership increases by 500% (not going to happen) you would be putting substantially more cars on the already strained roads of Highway 22 and 390. It is time we start planning for the real world that we live in; not some utopia that will never exist. Increasing traffic not only would impact our wildlife in the short term but in the long term the nodes would increase the pressure to expand Highway 22 and 390 to 4 to 5 lanes which would kill even more of our wildlife in the long term. The nodes will not only have disastrous impacts upon our wildlife but will impact our quality of life. The people of Wilson have dealt with this issue for over seven years through the mixed use village planning process and I am shocked that this nodal concept is even up for discussion. In the Fall of 2007 the planning staff offered the people of Wilson the choice of a Density neutral Option “A” sub area plan that would allow for Wilson to grow to roughly twice the size within the development rights of the current zoning. They also offered option “B” which was proposing an additional 98 units in Wilson. The people of Wilson “overwhelmingly chose option “A”. They chose option “A” for sound reasons. Wilson and the Westbank already had accepted the majority of up-zones since the 94 plan. The additional housing proposed in option “B” would negatively impact the character and quality of life in Wilson. Traffic, noise pollution, light pollution, and degradation of critical wetlands/wildlife properties such as the Waldron Property were all valid reasons to allow Wilson to only grow to twice the current size. Staff said that option “A” was Wilson’s preferred subarea plan with the caveat that it could change during the Comprehensive Plan Revision Process. Change it did as they are proposing up to 500 additional homes making Wilson 4 times the current size. I attended nearly comprehensive plan meeting. I read the data provided by the surveys etc. There was little support for the nodal concept and zero support from the citizens of Teton County for the type of up-zones the planners are proposing. Just as the planning staff had done throughout the Wilson Mixed Use Village Planning process they failed to listen to the feedback provided. If they were not listening to the people who have they been listening to? They have been listening to a handful of special interests including commercial interests, affordable housing advocates, certain elected officials, and large land owners. While the above interests are part of the fabric of Teton County they do not represent the
will of the majority of the people. I do not envy the position that this has put the town and county planners. You have to reconcile the irreconcilable. You are not getting the feedback you once were because people have been worn down by this lengthy process. The public comment you received in May is just as valid as the comment you are receiving today. If this plan moves forward to the County Commissioners with the nodal concept/density bonuses for the Aspens and Wilson areas the people of this county will see this process as the illegitimate farce it has been thus far. You have the power to make recommendations for responsible growth that reflect the people’s will and are good for our quality of life into the future. I applaud the concept of a growth cap and I think that you are on the right track. My opinion is that the only reasonable areas for “receiving areas” are the north of South Park near the High School and the town of Jackson. The reasons are simple. The majority of the schools are in walking distance. Smith’s and Albertson’s are readily available. The highway is already four lanes. You have a blank slate to create the pedestrian friendly environment that is critical to a “node”. The vast majority of jobs are available in the town. The numbers that the planners are proposing for either area are not justified and should be lowered. There should be language assuring South Park and Teton County that there will be no up-zones allowed outside of these two areas in the future. Thank you for all you hard work and taking the time to read my letter.

| 10/8/2009  | Bloom, Rich     | Previous straw votes – Theme 1: Recommendation #105 - Adding an Open Space Funding Goal – This passed the County 3-1 and failed the Town 2-3 on September 10. Both Jessica Rutzick and Forrest McCarthy expressed their lack of support unless public money was spent for open space that ALSO allowed for PUBLIC ACCESS. As an alternate then please consider a separate vote on this point with PUBLIC ACCESS added. Also allow the partially supported recommendation #105 to still move forward as a ‘footnote’.  
  - Specifically add a policy under 1.1, 1.5 or 1.6 that is consistent to other language from this draft plan used in the transportation and housing themes:  
    - Policy: establish a permanent funding source for open space acquisition THAT ALLOWS FOR PUBLIC ACCESS.  
    - Strategy: Dedicate a seventh cent sales tax, additional mil property tax, or other funding source to the acquisition of permanent open space THAT ALLOWS FOR PUBLIC ACCESS.  
    - May 14, 2009 - The Jackson Hole Land Trust recommended: “Creation of a permanent funding mechanism, such as proposed for affordable housing and transportation (both important but neither at the top of the list of goals for either the Plan or the community for the purchase of conservation easements...”  
    - Taxing ourselves first for the acquisition of Open Space will leverage the enormous philanthropic potential that exists in this valley. See the JH Land Trust’s 1989 Hardeman Barns/Meadows story following.  
    - In the end - any and all funding strategies will take a public vote by the electorate to implement. Let the public decide to tax themselves to achieve broad community goals.  
    - Public polling overwhelmingly supported this policy as well as recommendation #105.  
    - This is not an unfunded mandate as there should be no administrative costs. The Teton County Scenic Trust Preserve (TCSTP) already exists with the County Commissioners as its board and a portion of planner Maggie Shilling’s time allocated to this area. In addition the Jackson Hole Land trust will likely offer assistance on the crafting of easements and has been willing to accept easements from the TCSTP in the past (see the last page of the following Land Trust article) in order to provide privately funded stewardship oversight, in perpetuity, to protected lands.  
    - Please see the following article I shared last night on the history of similar public private partnerships in 1989 with the Hardeman Barns/Meadows with the County and also again in 2003 with the Town of Jackson on Karnes Meadow. Recommendation #71 – “Leave Policy 1.1.c as is” (Conserve large, contiguous, and connected open spaces) Recommend improving Policy 1.1.c: to add “connectivity between Natural Resource Overlay areas” so it recognizes your Recommendation #54 (“Throughout Theme 1 do not limit wildlife protection policies to implementation only in the Natural Resource Overlay”)  
    - Specifically suggest rewriting/adding:  
      - “Additional efforts are critically important to preserve open space that either lie within or provide connectivity between portions of the Natural Resource Overlay.”  
      - STAG recommended: “The group agreed that connectivity of open space is important. Further explanation of what open space means and the importance of connectivity should be incorporated into this theme.”
10/8/2009, Joint Planning Commiss

Strategy 1.2 third bullet: add "floodplains" to focus

10/8/2009, Joint Planning Commiss

Incorporate statement, "Recognize that any and all growth in the valley impacts both wildlife and natural resources." into Theme 1 where appropriate

Gregory Griffith, West Bank. I had major problems with last week’s meeting. First of all, I implore us all that we must do better. We, I included we, I didn’t say you. We’re not playing tiddly winks here. We’re planning our very future. Some, most or all of us, chose this place to make our stand. We owe it to ourselves and the future generations to give it our best shot, and last week was not a good example of that in my opinion. I feel it was so bad, if we held some of the same votes right now, some of them different hands would go up. That’s how disjointed and disorganized last week’s meeting was. I also had a problem with what I’ll mention that’s already been covered and that’s when you get up and leave and essentially abandon a quorum. I would suggest if you’re going to leave, I understand why it happens, believe me, but if it’s going to happen, at least inform the Chairman so that we know a quorum may be lost and Ms. daCosta covered that one, so I won’t chime in further. We have a major problem that’s been developing and nearly came to a head last week and that’s Staff’s relative comfort at chiming in whenever they want. I understood the procedure, and Mr. Pruett evidently went and signed off on an alternative procedure, that Staff would speak when spoken to and then only to explain and not to defend. To their credit, I would think they crossed the line last week. I think they came really, really close a couple of times, picking up the microphone, and it actually guided some of your discussion internally and some of the votes up there. But that’s my feeling; if no one else feels that way, then so be it. Also, some of the votes I feel were voted on in haste based on Staff interpretation ?? And, you know, we had too much impetus to finish that checklist instead of having meaningful discussions on each and every point. A couple of other items which I feel tie in. There seems to be some question, and I’ve spoken to some of you in the interim, on when to rewrite. Are we going to rewrite this thing by chapter as recommendations become finalized, such as theme one, or are we waiting till the end? That’s a major question. That literally is the question. I don’t know the answer to that. So, maybe someone could answer that question later on. Also, when we come…we really needed it in theme one, and we definitely need it in theme two, and that’s traffic analysis, traffic impact analysis, etc. At the GYM meeting on Monday, they explained that it’s going to cost $4800 to bring the traffic consultant here for one day. I wish you would discuss this internally and recommend that maybe they teleconference or either you mail him questions to answer and then anything that’s unclear at that stage, we can teleconference to save the community some money. Because we have to talk about it again for the electeds also. I’d like to just, you know, suggest to you that you send a recommendation to the electeds, especially the Town level, there’s been some quite good movement that most of us can agree upon, and that’s the real-estate-transfer tax. I have no problem with allocating that fund to lobby for that not to be constitutionally prohibited, so keep that open and that ability for us to decide amongst ourselves whether we want to tax ourselves. So, that can be an actual something that most people in the room can agree upon anyway. And lastly I don’t know how long…this has been the tenth straight meeting that I don’t think any we do here is going to be very successful as a public funding source. You know, at the Town level, selling or suggesting the selling of ?? T-shirts, I don’t have a problem with that either, you know, so whatever creative mechanism is available. But I really don’t feel the TDR program, which they’re going to present tonight, in other areas has been effective without an ID funding source. Thank you very much.

10/8/2009, Cindy Stone, Cindy Hill

I’m Cindy Stone, south of Town. And I’ve only been to the last meetings. Life has just been hitting me hard lately. But I have teenagers coming and asking a questions that I couldn’t answer. So, now <<inaudible>>. And the first one is who’s running this show? <<inaudible>> Because I heard that last week ??, so you might think about that. Then the second one that I couldn’t answer was I had to get on my computer and I’m not good at that, but as all of you voted ??, there should be density bonuses for community values. What in the hell is that? I mean, for Joe citizen, goes on the computer to see how you guys are coming along, and we get, there should be density bonus for community values. I couldn’t answer it. Here’s another one. This one is directed towards the Town. Density bonuses should be discretionary incentives. I mean, are we wasting our time here? Why are we even doing this? We all have better things to do <<inaudible>>.

Springer. And just again from meeting last, and really want to...would like to discuss the importance of adding an air-quality-monitoring system, especially for elevated ?? ozone to the development regulations. There’s been some monitoring done in Jackson ?? in the past, but I talked with the Environmental Health Department and no one has ever tested ozone layers in the County at all. And just to go over for the last time, elevated ?? ozone is an expected occurrence. Strong temperatures, ?? winds, altitudes, snow-covered blanket and sunlight facilitate a photochemical reaction in terms of pollutions from the combustions, fuel combustions, cars, trucks, buses, heavy equipment, jets landing at the airport, to the ozone. Last year, a person by the name of Perry Walker, he’s a retired Air Force and probably the most knowledgeable person over in Pinedale on elevated ozone. I had a reading in Wilson of over a hundred. A reading of a hundred over in Pinedale <<<inaudible>>>. So, ozone is one of the few air pollutants that the Federal Clean Air Act sets specific thresholds for, specifically because it’s so toxic. And it was a totally unexpected occurrence in Pinedale, and we have no idea what ozone levels are here in Jackson. It seems to me the air-quality monitoring is a major piece that hasn’t really been tested out. And it could at some point bring the whole build-out question, it could be irrelevant, because once you...it’s basically against the law when it gets to these levels. And the state government will step in and can regulate for you, and if the state doesn’t monitor it, it doesn’t work, the communication doesn’t work, the federal government comes in. So, it’s very important that we ourselves take care of this problem. Thank you.

Strategy 1.1: Define the Environmental Commission’s role to make land use and transportation recommendations

Hi, Gail Jensen. First of all, I want to thank everybody on the Planning Commission for all their efforts. We’re all trying to move this process forward. But the public input is extremely important and it is supposed to be the community’s Plan, so public comment is real important here. So, thank you for keeping it at the beginning of the meeting. I think it’s real important that you consider our comments while you’re considering the Plan and the specific ones that day. I also want to thank you for putting the wildlife as the first priority, because it is the community’s desire. I was very disappointed in last week’s meeting. The public comment was nonexistent in the Commissioners’ discussions. Instead of asking what the community had said over the last six months, Commissioners followed the script produced by Staff and questions that were directed at Staff for their input. For the result of the straw poll votes, much of the 1994 Plan was re-emerged and in density bonuses and incentives both performance and discretionary based. The total build-out number or growth cap is no longer the high priority the community has demanded. Call it management growth, limiting growth, whatever you label it, the numbers of humans matter with all of our needs, wants and impacts. The community has said, let’s keep the numbers at the base 1994 entitlements end state. We need to work towards a better Plan, the community’s Plan. Thank you.

Add indicator: Air quality
Please forward to planning commissioners as a comment from me regarding the importance of noise pollution and current legal procedures with the National Park Service and US Fish & Wildlife Service National Wildlife Refuge System. Grand Teton National Park has participated (may still be ongoing?) in noise research, but I am not sure if the results are out yet. Note, many communities regulate trucks, for example (e.g., jake brakes), and how late people can make noise, so there are many precedents for regulating noise. Also many studies on negative health effects of noise (e.g., in Swiss (?) valley communities where traffic noise reverberates off mountainsides as reported in National Geographic).

Thank you for your consideration,
Geneva

PARKS: Solitude becomes exhibit A in battle over NPS management (Thursday, October 8, 2009)
Scott Streater, special to E&E

Great Sand Dunes National Park Superintendent Art Hutchinson was walking in the remote south-central Colorado preserve last year when he was startled by the ringing of bells from a Catholic monastery 8 miles away.

“If I’m hearing these bells,” he recalled this week, “they can hear what sounds are out here,” in the park, home to North America’s highest dune, formed by ancient lake sediments piled high by winds from the nearby Sangre de Christo Mountains.

Then he thought about an energy company's pending proposal to drill two oil and gas exploratory wells in the adjacent Baca National Wildlife Refuge, 2 miles from Great Sand Dunes' western border, and another realization sunk in.

What was later confirmed by NPS’s Natural Sounds Program Office to be the quietest national park in the United States could become an echo chamber for the state’s burgeoning energy industry, Hutchinson feared.

Now Great Sand Dunes is at the center of a lawsuit and growing national debate about the effects of sound pollution in national parks and wildlife refuges like Baca.

Two environmental groups are suing the Fish and Wildlife Service to block the issuance of permits to Toronto-based Lexam Explorations Inc. that would allow for the drilling of two 14,000-foot-deep wells on the Baca refuge. Their argument hinges in part on sound monitoring data collected by the National Park Service in Great Sand Dunes, which they maintain would be ruined by the pounding hydraulics and thundering machinery of oil and gas wells.

A federal judge in Denver last month handed a partial victory to the environmentalists by issuing a injunction against any drilling at Baca until the lawsuit is resolved. U.S. District Judge Walker Miller concluded that plaintiffs "presented adequate evidence that the drilling of these wells is likely to cause irreparable injury" not only to wildlife but also to the refuge's "significant 'sense of place' and quiet."

If Miller's view becomes law, it could have far-reaching effects, park advocates say, by forcing federal agencies nationwide to more seriously evaluate the "natural soundscapes" of the lands they manage when permitting nonconforming projects, including roadbuilding, logging, energy development or other activities.

"Noise pollution, like light pollution, is becoming an increasingly big problem at our
parks," said Bryan Faehner, associate director for park uses at the National Parks Conservation Association. "The uniqueness of a national park and the special experience you can have at a park is less special if you can't see the stars or if you can’t listen to the amazing songs of migratory birds."

Faehner pointed to a recent string of court decisions endorsing the notion of natural soundscape preservation at national parks, including U.S. District Court Judge Emmet Sullivan's landmark 2008 ruling that the managers of Yellowstone National Park must account for snowmobile noise in the park's winter use plan.

Among other things, Sullivan wrote that stewardship of park resources “apply equally to the conservation of the parks' natural soundscapes.” And while the 1916 legislation creating the Park Service orders the agency to preserve “natural soundscapes” along with the scenic vistas and wildlife at each park property, only a handful of the 391 park units nationwide address sound issues in their general management plans. And none have formalized parkwide sound management plans, despite a 2000 NPS director's order that called on park managers to develop plans "to preserve and/or restore the natural resources of the parks, including the natural soundscapes associated with units of the national park system."

So far, two park units -- Zion National Park in Utah and Minute Man National Historical Park in Massachusetts -- are writing noise action plans that will be incorporated into park management rules, said Frank Turina, a planner with the agency's Natural Sounds Program.

The value of sound, or no sound
The Baca wildlife refuge drilling controversy further highlights the Park Service and Interior Department's ongoing struggle to balance conflicting land uses and competing public interests on federal lands. And for critics of government regulation, it raises the thorny proposition that even activities not directly occurring on a park property may somehow be subject to government restrictions.

Sound monitoring done by the National Park Service has found that Great Sand Dunes National Park and Preserve in Colorado is the nation's quietest park. Photo courtesy of NPS.

3 Stefan Spears, vice president of strategic development for Lexam, said the company went to extra lengths to address noise concerns, which included an agreement to use quieter diesel-powered rigs and fit "muffling equipment" on all engines used in the field.

"We were disappointed," Spears said of Miller's injunction. "We're going to try and keep things on track and see if it can ever reach a logical conclusion."

The Park Service, too, has been trying to reach a logical conclusion about noise in parks since 2000, when it quietly launched a research program aimed at determining whether cars and trucks, maintenance equipment, park buildings and recreational vehicles such as Jet Skis or off-highway vehicles (OHVs) diminish the enjoyment of park visitors by filling their ears with unnatural sounds. A separate line of research is examining the effects of noise pollution on wildlife in the parks.
The goal, according to Park Service officials involved in the effort, is for each park unit to have a sound management plan that accounts for the variety of unnatural noises at each park and ways to mitigate such disturbances. "When people talk about hearing quiet or having a quiet experience, you hear them use words like 'soothing' and 'peaceful,'" said Peter Newman, an expert on protected areas management at Colorado State University in Fort Collins. "An essential part of the park experience is to have relaxation."

According to visitor surveys done by Colorado State researchers on behalf of the Park Service, the hearing of natural sounds remains an important component of park visitors' experiences. Among the sounds visitors most value in park settings are the movement of water and wind and bird songs, said Newman. Such findings support NPS's own extensive surveys, done nearly two decades ago and reported to Congress in 1994, which found that roughly as many people said they were visiting a park to enjoy "natural quiet" as to take in the visual beauty of the place.

Among the sounds that visitors do not want to hear, surveyors found, are loud talking, truck and car engines, and aircraft noise, Newman said.

Wildlife impacts
Meanwhile, a growing body of research suggests that certain unnatural sounds -- particularly loud, repetitive noises -- affect wildlife and impede certain animals' ability to evade predators. Other research has found that such noises can disrupt the breeding cycles of some animals and may even discourage birds from singing.

In a forthcoming analysis to be published in the journal Trends in Ecology and Evolution, Park Service and Colorado State researchers cite clear evidence that unnatural sounds can be highly disruptive in natural settings, with a range of impacts from mountain goat migration times to habitat locations chosen by greater sage grouse and mule deer.

Among the findings cited by the NPS and CSU researchers was a 2007 investigation by the University of Alberta that found noise from compressor engines at oil and natural gas drilling sites created a "significant reduction" in ovenbird pairings. "We hypothesize that noise interferes with a male's song, such that females may not hear the male's song at greater distances, and/or females may perceive males to be of lower quality because of distortion of song characteristics," the researchers wrote (Land Letter, Aug. 7, 2008).

Similarly, a 2006 study by the University of California, Davis, found that noise from wind turbines in remote sections of Northern California interfered with the ground squirrels' ability to warn each other about approaching predators. These and other findings prompted Park Service and Colorado State researchers to conclude in their upcoming analysis that "the preponderance of evidence argues for immediate action to manage noise in protected natural areas."

Moreover, they noted, "Quieting protected areas is a prudent precaution in the face of sweeping environmental changes, and a powerful affirmation of the wilderness values that inspired their creation."
Ongoing battle
But questions remain about whether the proposed drilling project at Baca National Wildlife Refuge should be subject to restrictive noise standards. The case is complicated by a number of factors, including that Lexam acquired mineral rights on the Baca ranch before Congress authorized purchase of the 92,500-acre property in 2000 and designated it a wildlife refuge. Lexam has sought to move quickly on its drilling project because the surface-use agreement it negotiated with the property’s previous owner expires in 2011. The company has already obtained the necessary permits to drill from the Colorado Oil and Gas Conservation Commission, and drilling would not last more than 180 days and would directly affect 14 acres, according to court records. The Fish and Wildlife Service, in its final environmental review of the project, concluded that the initial drilling activity would have no significant impact on the surrounding environment. If the exploration revealed large deposits of oil or gas, regulators would complete another environmental analysis before the project could proceed to the development phase.
The two plaintiffs in the lawsuit -- the San Luis Valley Ecosystem Council and the Citizens for San Luis Valley-Water Protection Coalition -- argue that Lexam officials had undue influence over the environmental assessment process and that the focus of the assessment’s scope was narrowed to avoid examining concerns about noise on the refuge and the adjacent Great Sand Dunes National Park.

5
"We just thought it was a very superficial analysis," said Christine Canaly, director of the San Luis Valley Ecosystem Council in Alamosa, Colo. NPS also was not happy with the analysis, submitting comments criticizing FWS for failing to adequately analyze the project’s noise impacts on the park, much of which is designated wilderness. Among the points NPS’s Hutchinson challenged in the FWS document was a finding that the proposed drilling would not be audible "under most atmospheric conditions." In submitted comments, Hutchinson said a review of FWS’s analysis "does not allow us to reach that conclusion."
Hutchinson further noted that the criteria FWS used to analyze noise impacts was "designed for use in urban areas when studying the impact of aircraft noise on humans during the nighttime hours. "These are inappropriate metrics for use in a natural area, particularly an area adjacent to a unit of the National Park System," Hutchinson said.
Perhaps most critical, however, are the NPS sound studies carried out by the agency’s Natural Sound Program, which found the Great Sand Dunes park is exceptionally quiet.
"We view the soundscape or the acoustic environment as a resource to be protected," said Karen Trevino, director of NPS’s Natural Sounds Program. "From our perspective it goes to the heart of what we are in protecting these resources." At least for now, however, FWS has no plans to revise its findings.
“Right now, we’ll wait,” said Michael Blenden, FWS project leader for the San Luis Valley National Wildlife Refuge complex, which comprises three refuges in south-central Colorado, including Baca. Scott Streeter is a freelance journalist based in Colorado Springs, Colo.

About Land Letter

Land Letter is written and produced by the staff of E&E Publishing, LLC. For more than 20 years, Land Letter has been the publication professionals have turned to for objective, accurate coverage of natural resource policy issues. From lawsuits over national forest management, to water resource allocation in the West, Land Letter is the source all sides turn to for clear, timely, objective information. Land Letter publishes Thursdays at 10 a.m.

10/8/2009  Acri, Armond
Save Historic JH

Thank you. Armond Acri, representing Saving Historic Jackson Hole. Every week after these meetings, like tonight or tomorrow morning, people call me and ask me how things went. And generally up until last week, my report has always been the same. I’m cautiously optimistic. I recount what I thought happened to them, and I have to tell you that my comments to everybody last week was that I was disappointed in the direction. I felt the exchange drastically and not in a good direction. I think the votes were made, they were confusing and in conflict with public comments and some of your past votes. So, hopefully, we can do better this week. In terms of some of the points that were discussed last week, I think one of the most was on density bonuses to convert commercial to residential. And I guess I would submit that we already have a tool and it’s called the PMUD and nobody likes it, with a few exceptions. So, I would ask you to reconsider that vote. It is a discretionary tool. In theory, it’s not, because there are criteria, but two of them are so vague, they’re not numerical, they’re completely qualitative instead of quantitative, so I think it becomes a de facto discretionary tool. And also in terms of the build-out numbers, there was some discussion on the count of ARUs that aren’t allowed by CC&Rs. I would suggest that you continue to leave that in for the simple reason that we don’t have jurisdiction over those CC&Rs and they can be changed by a small group of people. So, since we don’t have the discretion, for the ones that you do enforce it, it makes sense to me that you not count those ARUs, if you continue to do that. But in terms of the ones that you have no discretion over, whether they’re allowed or not, I would suggest that you count them because you don’t have control of them. Lastly, I’d like to comment on a comment by Chairman Pruett on...I think he was dead on when he said last week that we need to base your Plan not on the current economic conditions but it has to be a vision of what you want to be. Then all the LDRs and all the other things won’t matter. If you base it on a vision and not fret about the current economic conditions, that will truly be a strong Plan. That’s I think what the people are asking for. Thank you.

Rich Bloom, speaking as an individual. I almost didn’t come tonight. I left last week also confused. I think some of you may have been confused, too, the ones I talked to, but also very disappointed also, trying to interpret what the votes meant last week. I don’t want to reiterate the points you’ve already heard, but the community has been crystal clear that they do not want to have the growth. They are willing to consider substituted growth in a unit-to-unit or density-neutral shift to address the patterns of growth. I want to remind you that nodes are really only tied to the transferrable development rights tool, the TDRs. The TDR, if you find tonight, is not feasible or not something you want to recommend, then there’s no reason to have a discussion about nodes. You already have noncontiguous PRD, the Planned Residential Development tool, that’s not integral to the whole node concept. As far as the process, because I have yet to write any of the folks that I communicate with on a regular basis for several weeks because I’m not sure on what happened when to weigh in. My understanding was from Michael Pruett when he published a new structure that we were to consider chapter by chapter when recommendations are finalized, and that would include portions that are remanded to Staff for verbiage changes. So, I’m hoping what we see, before we have that two-week window, is not only your final votes, but all the suggested language changes from Staff, so that then the public can respond how that chapter’s going and they’re given adequate time to do it. There is confusion that that’s changed from how Michael had first laid it out that we may not see those changes until the end of the whole Plan. Well, then, I cannot invite anybody to the table to give you feedback on theme one when we don’t have a finished theme one. So, I’m hoping that those portions remanded to Staff, the first draft of their work will be what we’re to do as a public perhaps at this October 22nd meeting. Tonight, when you’re revisiting theme one, I want you to go back to recommendation 105, which was a split Town/County vote on a funding source for open space. And I’d like you to consider having an additional vote either tonight—I think it would be tonight or when you review it—and that is one that would supplement that after talking to Forrest McCarthy and hearing Jessica Rutzick’s concerns, and that’s consider an additional vote which would to pursue a permanent funding source for open space that agency either directed purchases or provide a public access. So, that means we’re very positional about the public access, which I can understand that concern. These I’ll deliver by PDF so it will be in your reports next week. But there is a good picture of Tony Wall in here from 20 years ago. I just did three copies. Tony’s on page two. That is just to remind you that the public/private partnerships that were successful 20 years ago, the Hardeman Barns, the Hardeman Meadows project was a public/private partnership where the County took in $500,000 to achieve open space, but in their portion there would be public access in some hayfields on the north side of the road. And you can see Tony there flippin’ burgers as a fund-raiser, or making chicken or something in there. So, I highlighted into that a couple of other things, too, because you all are familiar with the Carnes Meadow, which is another public/private partnership where the Land Trust, the Town of Jackson came together on projects. Those are projects that didn’t move very fast, but I really think there’s going to be opportunities coming forward where a critical public access like on Fish Creek across that private land now that was problematic under the Forest, the mountain bike route, that would be nice to generate a sum of money so that when those opportunities come up, the County can buy an access and buy the parcel, the County and Town. It would not include any bureaucracy. There’s no Housing-Authority-type unit that would have to be created. There’s already a Teton County trust preserve with the County Commissioners. There’s already Maggie Schilling ??, and I did test with the Land Trust today that they would be happy to assist in writing easements, and even accepting easements for the management of those easements, you would have the Town and County became the parcel like in Carnes Meadows. So, I think it would be something that wouldn’t be a burden to steward, to manage, and give you opportunities. So, I would like to see an additional vote on a permanent funding source for the acquisition of land or public access for open space, to tie it to that, as Ms. Rutzick and Mr. McCarthy are quite concerned about. Thank you.
Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. As one Planning Commissioner stated at one of the first hearings, it’s time for Commissioners to show whether they have reviewed and are going to respond and listen to the community input. I will speak for not only those in the room tonight but for all the individuals from over the last two years that have dedicated time, energy, and research to provide feedback. We really feel that now is the time to show you are willing, as appointed officials, to recommend a revised Plan that truly speaks to the public’s long-term vision. At this point in the process, one of the key musts is to include a policy that calls for providing the end state and limiting growth. I understand some of these topics were discussed last week but without these fundamentals on a preferred amount of development, it’s difficult to move forward with discussion on development patterns, nodes, etc. At a very practical level, as an example, if you support nodes, as this Plan defines them, without supporting the concept of an end state, you are essentially supporting a never-ending expansion of the development footprint in Jackson Hole. Why is defining the end state so important for your discussion on theme two? Number one, which we presented before, defining the end state was listed as the first objective of the community’s second highest priority at the time of gathering community feedback. The second, the importance of defining a predictable amount of development, the concept of density-neutral planning, not just pattern, was very clear in the June 2008 draft of the new Plan. Now, it’s no longer in this Plan. And as a joint board, as of the recommendation you voted last week, you voted to not reinstate this high community priority in the Plan. We see this in direct conflict with public will. Until this Plan includes an end state that represents the public support for limited growth, this Plan is not going to benefit our community. At a very basic level we ask you to reinstate the objectives for which the public supported the concept of managing growth responsibly. As far as the specifics for tonight, I understand you’re going to discuss nodes, a future land-use plan, while we support the concept of a concentrated development pattern as a general planning principle, we do not support the way this Plan applies to concept. It oversimplifies it. It essentially fails to acknowledge the scale at which we are planning and, by doing so, proposes sprawling nodes throughout the County or places with sensitive wildlife habitat and nodes that lack transportation capacity. Arguably having both County nodes and Town ?? is promoting a sprawling development pattern. Second, in your discussions, please do not oversimplify the public vision. Always keep in mind the tradeoffs on which the public was asked to vote. We hope that blanket statements such as the public supports density in Town are avoided. These statements misrepresent the outcomes of the public process and what the public truly supports. Specifically, the public voiced more development should be pursued in Town, but only in cases with specific tradeoffs and assurances are met for the protection of habitat in the County or truly affordable housing. Overall, even with this preferred pattern, the public supports limiting growth overall in both the Town and County, which this draft unacceptably avoids. We recognize you were trying to stay at the 30,000-foot level of the details of whether or not the policies in theme two are effective or feasible lines of details, our community must be assured that development within these strategic locations you’re going to be discussing tonight would occur only in the case if it’s really helping density-neutral redistribution from outlying areas. There’s some language in the current Plan regarding tradeoffs, but at this point it’s far too vague. This Plan should not move phantom density from outlying areas, particularly at a level of development that would not have occurred anyway. By doing so, it can actually accelerate the rate of growth valleywide, and the public has made it very clear that the acceleration of growth is unacceptable. At the end of the day, in your discussions, it’s important to understand the rationale for limiting the amount of development in Jackson Hole. As our organization has expressed before, limiting growth is in and of itself not the top community vision. However, it is a fundamental, necessary goal to meet in order to protect the most important assets of Jackson Hole. These include its small town, its rural landscape, it’s home to irreplaceable wildlife, amazing scenic vistas, and a high quality of life and experience for residents and visitors. As for other specific comments, including those on theme one, we will submit them in written form. We know this task is difficult and we thank you for your efforts. But please always keep in mind that this Plan should be the community’s Plan. To be effective, it must, moving forward, better incorporate years of public input, and how you vote to amend this theme, again, will demonstrate to what extent this process is on the right path. Thanks.

Move to Theme 8, Energy Conservation: Strategy 1.4, bullets 3 and 4; and Indicator 6

Strategy 1.2, first bullet: strike "Wyoming Game and Fish" leave it as "most recent data" and include Wyoming Game and Fish as the primary partnering agency

<td>Jensen, Gail</td>
<td>Thank you for all of the time and effort each of you have spent on the Plan in addition to the regular duties of a planning commissioner. The commitment to participate at your level is beyond reasonable for volunteer boards. Though the discussion of Theme 2 last Thursday was to be held to the 40K level, I really feel the density bonus and incentive tools need to be analyzed much more closely. The community has been and is very concerned with including any of these in the Comprehensive Plan. Predictability is of utmost importance. If included in the Plan, none of the tools, especially in their present form, can offer the growth limits and buildout numbers with absolute certainty that the community has demanded. The discussion on growth cap (total buildout number) was very discouraging. I feel that many of you, had forgotten what the community has said. Jackson Hole is at a very critical turning point. The numbers of humans is of greatest concern as this drives all of the following: increased traffic, loss of open space, diminished quality of life, losing community character, wildlife impacts, etc. Yes, with proper planning and regulation one can hope to control some the negatives of growth but let's not kid ourselves - it is the numbers of humans. The numbers task force did an excellent job of showing where the concerns were and again confirming the base entitled building potential. I do feel that the rate of growth will be more economy driven. A rate of growth number that averages the last 10 years of growth and also takes into account an averaging of maybe 2 years at a time for regulating this could be more acceptable. The concept and this tool should be a part of this plan so that there is a mechanism to do something if we can not keep up with infrastructure needs as development occurs, as is currently happening. Please consider my comments I read at last Thursday's meeting and pasted below. The mechanics of each tool need to be seriously analyzed to really evaluate the true value verses potential impacts.</td>

<td>Hudnall, Marion</td>
<td>It amazes me that the powers that be feel they can bulldoze public opinion with no repercussions. One meeting I hear about is all positive and you are actually listening to the public. The next meeting you reverse your vote and go with what the planning commission set forth. Why would this happen?? Why would you allow density to be higher with incentives for that?? The only answers I can come up with are not pretty and lead me to think that the public, let alone wildlife and the environment, are not the consideration. The vote is only influenced by what the moneyed people want and it follows that somehow you as elected or employed officials will also benefit. I sincerely hope I am not right and that the public and the environment and their well-being will finally be the major consideration. We, the &quot;common&quot; citizens are confused and bewildered by the process. It seems to me that's the way you want us. Drag it out as long as we can and they'll give up so we can do what we planned to do all along. Not a pretty picture, is it?</td>
</tr>

<td>Acri, Armond</td>
<td>Save Historic Jackson Hole requests that the Town Council and County Commissioners authorize Staff to bring in the outside consultant used for the Transportation Theme for discussions with the Joint Planning and Zoning Commissions. A proposal was made by staff at the last JIM that Carlos Hernandez be brought in to meet with Joint Planning and Zoning Commissions. We feel there is great value in having Mr. Hernandez meet to answer their questions and discuss issues. We also would like to have Robert Bernstein P.E. a traffic consultant retained by Save Historic Jackson Hole participate in the discussions. Mr. Bernstein has submitted comments for us that detail the concerns we have about the traffic component of the Comprehensive Plan. Traffic is an important issue that is connected to other themes. There were several questions on traffic raised at last night's Joint Meeting. We feel the most effective way to address the concerns and answer the questions is to get all parties involved at a meeting. We hope you will approve the request to bring Mr. Hernandez to Jackson for meetings.</td>

Growth Management

• What we have said that Theme 2 should focus on - managing growth which includes:
  o Defining the end state – the total amount of growth
Constrain growth to be equal to or LESS THEN allowed under the current plan and LDR’s minus all discretionary tools – PMD, new or expanded resort districts, the PUD-AH, PUD and the PMD (PRD discussed later)
  o Address the rate of growth
Restrain the rate of growth so we can “learn from our mistakes” and that infrastructure (water, sewer and roads) and social systems (schools and jails) can keep pace
  o Address the type of growth
That job creating commercial growth is considered hand-in-hand with residential development.
Address the cost of growth
Growth, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems
Address the pattern of growth – this theme only did this one bullet and very poorly
Find growth REDUCTION opportunities beyond our current plan minus the discretionary tools:
  Down zoning is legal if done uniformly.
Reduce the accessory residential units in the county (ARU)
Reduce the Plan Residential Development (PRD) tool in the County and do not replace those "saved housing units” anywhere.
Convert commercial density via rezoning to residential density in Town.
Recommend a permanent funding source to achieve open space thus removing development potential further.

Nodes versus no nodes
• Why are citizens reluctant about nodes – why does it not seem there are no acceptable receiving areas?
  O The nodes were additive growth as proposed in the draft plan
  o The nodes were much too aggressive in footprint and in total housing numbers
  o The nodes did not appear to solve any problems such as achieving the permanent protection of open space.
  O The approach in the plan appeared to not be sustainable.
• The community will be willing to support the concept of nodes if it is considered WITHIN the following constraints:
  o Absolutely can not be ‘gamed’ to achieve additive growth.
  O That nodes be used to address substitutive growth only – not adding, but shifting growth patterns.
Rich Bloom – October 1, 2009
• Nodes should NOT be used to achieve workforce housing objectives
  O Workforce housing is best achieved going forward by “keeping up”
  o Revise housing mitigation rates especially on the commercial calculation (both Town and County) that now only is calculated on the seasonal bump in employment – so is wholly under mitigating the commercial workforce housing impacts.
  O Recommend and identify a permanent funding source to correct past under mitigation and the emerging retirees’ issues.
• The Planned Residential Development (PRD) tool does NOT depend on the node concept to work. So nodes are not connected to the PRD.
• The node concept only should be considered if tied to the use of the to-be-determined Transfer of Development Rights (TDR) tool. Do not include
Nodes if you do not link it to the TDR concept.
• Nodes should be much more modest in footprint and housing units. Reduce both.
  O Given a 10-15 year plan – then the total of all receiving areas should be no more then 500-750 housing units as that is all that is foreseeable – especially if the PRD is reduced to 3/35 within the same rural land parcels or 6/35 if ‘exported’ to these receiving areas (nodes).
  • Change the word node – every one hates that word - to “Designated Receiving Areas”
  o Still a danger that by identifying these areas - the land itself will by default become more valuable – almost as with an upzone.
  • Sending areas should be regional. Simply potential density from Alta or Buffalo Valley should not be exported to South Park or Wilson as an example.
  O If the TDR tool is connected to these designated receiving areas – then in addition to the nodes identified there should be additional areas in Alta and Buffalo Valley as well as Hoback Junction.
  Again these need to be modest in footprint and scale to COLLECTIVELY only gather a maximum of possible 500-750 transferred development units.
Gregory Griffith, West Bank. I’d like for you to revisit something that I requested very early in the process and that is codify this Plan for a lifespan of 10 years, not 10 to 15 years as was stated. There’s numerous pros and very few cons to this. Number one is predictability. There’s nothing predictable to the public about a 50 percent?! If we leave it at 10 to 15 years, it will be 15 years. That creates a problem because there’s nearly universal acknowledgement that a lot of our problems were created or exacerbated by allowing the ‘94 Plan to go to map. So, we’re repeating the sins of the father, so to speak, and those who don’t know history are bound to repeat it. Another reason to do this is we have an ethical imperative for future generations to provide them the insight or the experience that we learned. And we learned the lesson that we went too long in revisiting this. World, national and local events change with increasing frequency, so we need to account for that in the 10 to 15 years and reduce that to a period from the date of adoption of this Plan, 10 years, must be revisited. That’s just my opinion. Also, I’d like to take a different direction with the node concept, and my good friend, Mr. Bloom, here. I’ll maintain this node capacity is not needed for the period of the next 10 years. Staff lets us know that on page 86 of the Plan that, based on the 2000 and 2008 growth rate in both commercial and residential, that the residential requirement will only be 1200 units. So, I don’t understand why we’re planning decades and decades ahead and dragging ourselves through some of these battles when what we should be doing, in my opinion, is focusing and targeting the next 10 years in a manageable chunk and concentrating on how best to site the development instead of concentrating on numbers in the build-out analysis like the 9880 units would be four to 5,000 units of discretionary density bonuses, which will provide the transferability of some of its development rights. Throughout this process the Town numbers have been virtually unchallenged on both potential and existing units. The reason for this, in my opinion, is because in the parcel-by-parcel analysis that they engaged in. The numbers only moved 17 units between Clarion, Build-Out Task Force, Town Planners, all manner of documents throughout this process, whereas the County numbers, as we saw last week, I think could benefit from parcel-by-parcel analysis. It’s relatively unacceptable to me as a taxpayer, as a citizen, that we don’t know how many ARUs are in the Valley. And we’re counting as potential units in the future NCSF zoning, which probably has less than a 5 percent utilization rate of that RA 6-to-3 split that was presented last week. CC&Rs are going to figure heavily into this, and I really don’t see any other way to do it except for parcel-by-parcel analysis because, empirically, the Town numbers are so unchallenged and accurate and consistent throughout this process. On a relatively unrelated note, theme eight, energy conservation, I think you voted to include that. I really think we should get on it so that once we arrive at that point you’ll have it to peruse and the public can comment on it, instead of waiting for that time to...maybe that’s already been done, I don’t know. Growth cap keeps being mentioned and surprising to some. I’m against a growth cap because it’s never been a force. We’ll have to wait 40 to 50 years for the municipalities who have instituted growth caps to see if it actually worked, if it withstands 10th and 14th Amendment challenges. And it’s probably a waste of time because we won’t do it anyway. I’d like to reiterate another request I made in the past, and that’s for public funding for open space. It’s incredibly high polling...the lead article in the paper yesterday, Open Space Dwindling, is a statewide think tank from UW that’s contributing to this that there are all types of reasons to do this. More cost efficient to preserve the open space in perpetuity now than it is to provide infrastructure for potential development later. So, in other words, to the taxpayers, it’s actually cost effective. Whatever we do, moving forward into theme two, we have to strive for density neutrality. In other words, a unit-to-unit transfer. I don’t think that anything less will fly off the public. There’s a disturbing, on page 86, once again, the Staff has let us know that based on growth rates, 2000 to 2008, which is a Town chunk they chose to break off, that we build on average 195,000 square feet of commercial a year. That will project in 10 years to 1.95 million. Based on the charts which are provided to us in the appendices, that we’ll have a job creation of 8125 people. We don’t have the capacity in units now to house those employees, so we really need to think long and hard about using the currency requirements to slow commercial growth. In other words, infrastructure, everything from schools, water, sewer, waste management, etc., etc., etc., has to be in place as a requirement before some of these commercial entities can go forward, or else we’ll be spinning our wheels with trying to house...we could even consider forcing the commercial entities to house their employees in district and on site, etc., etc. It’s something that’s a macro problem that needs to be addressed. Thank you.

<td>Tillson, Becky</td>
<td>Okay. Becky Tillson, Jackson Hole Conservation Alliance. Thank you for the opportunity to comment. Like last week, we'll be focusing our comments on probable issues. As you continue to review this theme, we hope you will refer to our written comments submitted on July 30th that raise specific questions, concerns and recommendations. To start with, this theme needs significant attention. We appreciate your taking the time to properly review the overall concepts central to this theme. First, we believe that the community has voiced strong support for limited growth below what is currently allowed in both the commercial and residential sectors. We must keep below baseline and then have incentives that are only there for the type of development the community actually wants. Anything above baseline would have to be exclusively for community benefits, specifically for affordable housing and permanent conservation. These incentives must be performance-based and not discretionary, and they must be prescribed in the Plan’s policies, not just in future land-use plan and maps. We support the concept of infill development in Town, but want to ensure that the community character and the community benefit are considered in the creation of meaningful policies and strategies. Development in the Town must directly result in reduced development in the County. While redeveloping in Town, it will be extremely important to balance commercial and residential growth because, among other things, supply of and the demand for workforce housing. And when we do grow, we need to be aware that impacts, particularly cumulative impacts, of increased development anywhere in the Valley do not stop at property line. We have responsibilities to our overall region as possible. Overall, this theme needs to acknowledge the amount, rate, type of development matter, in addition to location of the growth. Lastly, we’re very concerned that the meaning of managing growth responsibly has been changed so dramatically between public polling and the current draft. This has to be addressed. Two of the main goals of the theme used to be to define end state and to fully address positive growth. These are exceptionally important goals and must be reinstated. It is questionable to substantially change the basis of why people voted for a particular theme or policy as a priority, and then still identify it as a priority. Again, we believe that the best way to move forward with this theme would be to return it to Staff with some high-level advice and some suggestions to be addressed and incorporated. Thanks.</td>

Okay. Rich Bloom, I’m speaking for myself. Thanks again to Staff and the Numbers Group. It is clear now that this discussion is about growing, to grow or not grow. As we saw last week, there’s a huge amount of growth potential that we have and we’re going to be able to unwind. So, I think that discussion’s off the table about a no-growth agenda. Growth management, I’ll be very short on this, and then I want to talk a little bit about nodes versus no nodes, because there’s been a lot of questions, and I had a few conversations last night at a party, mostly about this issue. I think what the public has said on this theme two in general is managing growth, which includes defining the end state, which is the total amount of growth, addressing the rate of growth, addressing the type of growth, mostly commercial versus residential, addressing the cost of growth, addressing the pattern of growth, which this theme did address and was one of the few things. And then also let’s not forget looking for reduction opportunities of what we already know on the table. And last week was a good example because I think ARUs are promised Accessory Residential Units that we need to define more carefully and look if there’s opportunities for down zoning. The PRD tool, which we’re looking at reducing, which is a way to reduce growth, and we certainly don’t want to remove those numbers anywhere, and other things like funding source. The ?? already know, the nodes versus nodes, there’s been a big conversation. I would share with you my summary of why citizens right now have been reluctant about nodes and why they pushed back initially. They saw the nodes as presented in the Plan as palliative growth, not just moving patterns that was going to be pushing our numbers out further. The nodes, as they were proposed, were way too aggressive in footprint in local numbers. In my region in areas zoned for 210 units, both were 1,500, half a mile went to three quarters of a mile. The nodes do not appear to solve any problems, such as achieving permanent protection of open space, because there didn’t seem to be a connection. We didn’t see how they were connected. And the approach in the Plan appeared not to be sustainable. It seemed like it was a never-ending trying to have growth to solve this goal and housing problems and that was ??.

I’m saying the community would be willing to accept the concept of nodes within the following constraints, and Ms. daCosta has pointed this out, and I’ve talked to folks in the Aspens and Wilson and all these areas, would you accept additional density in your neighborhood? What would it take? And it comes down to these things: It absolutely has to be to be not be able to be gained to be additive growth. It has to be truly moving those patterns of growth. They need to be addressing the substantive growth only, the pattern, it should not be used to achieve workforce housing. I’ve been hearing that loud and clear. Workforce housing is best achieved by keeping up, since we’re not in a deficit right now revising housing mitigation rates, especially in commercial, looking at funding sources for emerging problems like some employees retiring into their homes and those homes not being available. The PRD tool does not depend on the node concept. So, unless the PRD tool has been placed, there’s no need to have this node concept. The node zone concept only should be used to this whole idea of transfer of development rights, and whether the PRD is morphed into some sort of TDR, then it starts becoming acceptable and making sense. The nodes should be much more modest in the footprint in housing units. If you go back to the numbers report last week and then you reduce the PRD down to three for 35, or six for 35, there’s not that many units that need to be transferred. So, instead of some 4000 that are in the nodes, a more reasonable number of 500 to 750 across all and every node over a 10- to 15-year period would seem reasonable. Otherwise we’re just looking at additive. Change the word node. Everybody universally hates the word node. Designated receiving areas, I mean, that’s what we’re talking about. Still there’s the danger that once you designate it, that land may become more valuable. It’s just like an up-zone. So that...Tony Wall has brought that up. Sending areas should be regional, if possible. Simply, potential density from Alta and Buffalo Valley, as an example, should not be exported into South Park and Wilson. That just feels bad to people. If the TDR is used, then what you might want to consider is actually adding more small receiving areas into Hoback, in Alta, in Moran, to accept densities from those areas, so they see a regional impact plus a regional benefit. Designated receiving areas should be fairly spread. This Plan doesn’t start on that, but it is way too modest and way too big, but if people are seeing a benefit, and from the South Park perspective, it was so hard when we saw our whole region being taken off the map, which you all have rewritten. All of a sudden South Park would be accepting of some density near Cottonwood Park if they saw a part of Game Creek and the Lucas Ranch and areas in our region being protected. It’s much more acceptable if people can see that. Then make sure that phantom densities aren’t moved. The best example I know is the Three Ranchers, LLC, which disappeared under the moratorium, but the idea was that some densities on Game Creek was going to be moved onto the Lucas and Robertson properties. But everybody knew that Game Creek is never going to be able to be built out at nine per 35, because of topographic and water-supply issues. So, it seemed like it was moving density to the swampland on the buildable acreage. And so that’s sort of the game that since then needs to be tied into that. If those things were done, you would actually see people supporting the concept, because they would see the regional benefit to their local impacts. We are all ?? by nature. I spent all my life teaching people about their backyards so they could care about their backyards, and it’s only natural when people do reach out to the region when they see a benefit and if it’s a problem being solved, it will accept impacts. When problems are not being solved, they’re not going to accept impacts. Thank you.
Hello, Gail Jensen. First of all, I’m not going to repeat what I had put online, that I noticed was in your Staff report that...my general comments from the meeting, 9/17, I think that was cancelled and that as a bulletin was just some kind of global issues that I had gone over. I would expect that you all would have already read that. What I did review was...I missed last week’s meeting and I missed the actual presentation, though I did look through the presentation on the build-out numbers from the Numbers Group. And with looking at that, looking at their report, I do have some comments that I think I’ll just read to you, which I’ll also put online this evening. After reviewing the build-out report presented at last week’s meeting, it is clear that one of the most significant issues affecting potential growth, especially in the County, is the PRD tool. With 3651 additional residential units possible, due to the PRD tool, we double our current base residential build-out number. If the PRD tool is kept, a major down-zoning of many entitled properties via the 1994 Plan would need to occur just to keep up within the build-out numbers we have been discussing. If the only reason to keep this tool in place is to incentivize more conservation easements, then how can we justify this? The pluses and minuses with respect to public benefit need to be weighed. I feel actual scenarios need to be reviewed that show the true reality of whether there is a real significant gain to the donor via tax credits, and/or whether the real benefit to the community is accomplished using the tool, versus just keeping the base zoning of one unit per 35 acres without PRD. Is the PRD tool still a real motivating factor for donations of conservation easements? What is the real value in tax dollars that somebody receives who gives a conservation easement? I feel the real net dollar amount of tax credit minuses the cost to go through planning process, etc., may be insignificant and will not influence the decision for someone to get an easement. Why should we include the PRD tool unless the numbers, dollars really add up to a motivating factor? I know these Jackson Hole Land Trust have said they do add up; however, let’s do the math to prove this is the case. The most recent easements may have been donated anyway without the tax credits and the PRD tool that helps you establish those. With our current rural zoning structure, how do you get around only offering the PRD tool to only conservation-easement situations without endangering the viability of a donor to receive tax deductions? To create a new different zoning classification which includes an incentive tool just for specifically targeted potential conservation properties make more sense. Now I’ve got a number of comments on the transfer of development rights. We need to do the math on what potential receiving areas per unit values could be. The highest and best use via the market value approach in many rural areas is one per 35. I question how the math could possibly work when the value of a 35-acre parcel is so high. Currently, in our multiple-listing service per the Realtors Association, the average is about $5 million per every 35-acre parcel that is listed. This would mean a ten-times increase in density for the receiving area if one used a generous $500,000 unit value to achieve an equal value spot. Transfer of development rights appears to be an interesting idea, yet the huge one-per-35-acre value surely cannot match up with higher density, lower value no-node development. Where in Teton County are there receiving areas capable of accepting such additional densities above the 1994 base zone? The Rock Springs Stilson swap, which has been used as an example for TDRs, works; however, you had to have the same on or moving density around their property, and this was a very unique scenario. I believe a better way to retain open space on rural zoned properties of 35-plus acres could be to limit the size of the potential building envelope and restrict to specific types of uses on remaining property on each parcel. Many existing conservation easements are already structured this way. They allow minimum building site or sites, and sometimes agricultural or other non-structured use on the remaining part of the property. Why not take this example and require similar restrictions on development permits within the rural zone? Essentially, that is what has to be done in order to develop with our current regulations that in the real zones and also have a natural resources overlay. Why not eliminate the PRD and just use development restrictions on 35-acre parcels? Yes, not having a conservation easement may allow the potential rezoning of property in the future; however, are we not planning now to control that potential event? The maximum build-out number, growth cap, could protect us from the up zones if density is reduced somewhere else in the Town or County. Thank you for considering my thoughts. There are no easy or simple ways to manage imminent growth. I thank all of you for all of your time and energy.

Create a predictable land use plan based on community values with buildout numbers compiled to determine consistency between community goals and land use policies
On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment. This is a short memo regarding two specific issues that arose in your review of Theme One of the April 2009 draft Jackson/Teton County Comprehensive Plan. Both of the issues will come before you as a joint body again when you finalize your recommendations for Theme One, and then for a third time when you finalize your recommendations for the entire draft plan. The first concern has to do with the Wyoming Game and Fish Department’s comments, dated June 26, 2009. While the County planning commission voted in favor of a request that the planning staffs incorporate Game and Fish comments into the draft plan where appropriate, the Town planning commission did not. We urge the Town planning commissioners to revisit their dismissal of these recommendations from the local government wildlife agency as they relate to Theme One and wildlife. The Conservation Alliance agrees with the County planning commission that the Game and Fish recommendations should all be incorporated into the draft plan, and we also believe that the memo deserves your reconsideration.

Please re-address this vote and the Game and Fish comments before finalizing your Theme One recommendations. Our second concern is two-fold, regarding both your willingness as a joint commission to listen to public sentiment and the issue of a permanent funding source for conservation easements and open space preservation. Again, the County planning commission voted in the affirmative for a policy that would allow the residents of Teton County to consider options for public financing of land conservation and to have a chance to vote on a permanent funding source for conservation if they so desire. The Town planning commission voted against it. Again, we encourage the joint commission to revisit this vote, particularly considering the overwhelming public support for public funding, as acknowledged in the draft Plan. Because the public has voiced such strong support for public financing, it seems an odd thing to remove from the table. We will submit comments regarding some of the other recommendations shortly, but before moving on to Theme Two, and before finalizing the joint commissions’ recommendations for Theme One, the Conservation Alliance believes that it is critical that at the very least these concerns be addressed.

Thank you for all of your hard work, and please do not hesitate to contact us with any questions.

Commissioners and Planning Departments: At the 9/24/09 meeting, I read the following suggestion for the revision of the Statement of Ideal for Theme 2: Preservation of the community values of wildlife protection, community character and quality of life will be the determining factors to limit buildout and rate of growth. I’m sure these comments are part of the public record. Hopefully, you will revise the Theme 2 to reflect the priorities of all community comment. Thank you. Patty Ewing
After reviewing the buildout report presented at last week’s meeting, it is clear that one of the most significant issues affecting potential growth, especially in the County, is the PRD tool. The 3651 additional residential units possible due to the PRD tool would double our current base residential buildout number. If the PRD tool is kept, a major down zoning of many entitled properties via the 1994 Plan would need to occur just to keep within the buildout numbers we have been discussing. If the only reason to keep this tool in place is to incentivize more conservation easements, then how can we justify this? The pluses and minuses with respect to public benefit need to be weighed. I feel actual scenario’s need to be reviewed that show the true reality of whether there is a real significant gain to the donor via tax credits and/or whether real benefit to the community is accomplished using the tool verses just keeping the base zoning of 1 unit per 35 acres without the PRD. Is the PRD tool still a real motivating factor for donations of conservation easements? What is the real value in Tax S’s that someone receives who gives a conservation easement? I feel the real net $ amount of tax credit minus the costs to go through the planning process, etc., may be insignificant and will not influence the decision for someone to give an easement. Why should we include the PRD tool unless the numbers ($) really add up to a motivating factor. I know the JHLT has said they do, however, let’s do the math to prove this is the case. The most recent easements may have been donated anyway without the tax credits the PRD tool helps to establish. With our current rural zoning structure, how do you get around only offering the PRD tool to only conservation easement situations without endangering the viability of a donor to receive tax deductions? Could creating a new, different zoning classification which includes an incentive tool just for specifically targeted potential conservation properties make more sense? Transfer of Development Rights. We need to do the math on what potential receiving areas per unit values could be. The highest and best use via the market value approach in many rural areas is 1/35. I question how the math can possibly work when the value of a 35 acre Parcel is so high (current MLS average of $5 Million). This would mean a 10x increase in density for the receiving area if one used a generous $500,000/unit value to achieve an equal value swap. TDR’s appear to be an interesting idea, yet the huge 1/35 acre value surely can not match up with higher density, lower valued, nodal development. Where in Teton County are there receiving areas capable of accepting such additional densities above 1994 base zoning? The Rock Springs/Stimson swap worked however, you had the same owner moving density around their property - which is a unique scenario. I believe a better way to retain open space on the rural zoned properties of 35+ acres could be to limit the size of the potential building envelope and restrict to specific types of uses on the remaining property on each parcel. Many existing conservation easements are already structured this way - allowing a minimal building site or sites and sometimes agricultural or other none structure use on the remaining part of the property. Why not take this example and require similar restrictions on development permits within the rural zone? Essentially that is what has to be done in order to develop with our current regulations that are in the rural zones and also have a Natural Resources Overlay. Why not eliminate the PRD and just use development restrictions on the 35 acre parcels? Yes, not having a conservation easement may allow the potential rezoning of the property in the future; however, are we not planning now to control that potential event? A maximum buildout number (growth cap) could protect us from the up zones if density is reduced somewhere else in the Town or County. Thank you for considering my thoughts. There are no easy or simple ways to manage and limit growth. I thank each of you for all of the time and energy you have given to us.

<td>Tillson, Becky</td>
<td>First, we believe that the community has voiced strong support for a limit to growth below what is currently allowed in both the commercial and residential sectors. We must keep a low baseline and then have incentives that are ONLY there for the type of development that the community actually wants. Anything above baseline should have to be exclusively for community benefit (specifically affordable housing and permanent conservation). These incentives must be performance-based and not discretionary, and they must be prescribed in the plan’s policies, not just in the Future Land Use Plan and maps. We support the concept of infill development in town, but want to ensure that community character and community benefit are considered in the creation of infill policies and strategies. Development in town must directly result in reduced development in the County. While redeveloping in Town, it will be extremely important to balance commercial and residential growth, because, among other things we need to focus on both the supply of AND demand for workforce and affordable housing. And when we do grow, we need to be aware that the impacts, particularly cumulative impacts, of increased development anywhere in the valley do not stop at the property line, or the neighborhood, or even the County line. We have a responsibility to our overall regional ecosystem to minimize our cumulative impacts as much as possible. Overall this theme needs to acknowledge that the amount, rate and type of development matter in addition to the location of the growth. Lastly, we are very concerned that the meaning of “manage growth responsibly” has been changed so dramatically between Public Polling and the current draft: This has to be addressed. Two of the main goals of the Theme used to be “define an end state” and to “fully address the cost of growth.” These are exceptionally important goals and MUST be reinstated. It is questionable to substantially change the basis of why people voted for a particular theme or policy as a priority and then still identify it as a priority.</td>

<td>Acri, Armond</td>
<td>Thank you. Armond Acri, representing Saving Historic Jackson Hole. A couple of quick comments. Before the meeting I reviewed the public comments on theme two, went back and reviewed them all, and it seemed that they’re all consistent with past surveys and two referendums in the Town. And it seemed that the message was pretty clear, that people do want limits on growth. People want to maintain rural character; they want to limit the heights, and it’s pretty clear that they would like to eliminate a PMUD. One other point that I think ties in with this from a study I read on the socio economic impacts in resort communities and the lesson there that kept coming back to all these other resort communities was that, if they can build there, they will. And I think, you know, when people start talking about not being able to build on certain parcels, I think when the financial driving force is as high as it is in this community, you have to recognize that there really are no sites that won’t be built on to the fullest that’s allowed by law. There’s a way around almost everything. Discussions on limiting development in the County, the base potential last week was good; we’re very encouraged by that. I’d like to see a similar discussion about the Town. I don’t know if they’ll come to the same conclusion, but I’d like to at least hear that discussion about that concept. Also, the data from the Numbers Task Force last week shows potential commercial will create many more jobs, as was mentioned earlier, than the potential residential we have. And I think that brings up the need to consider shifting some of that commercial entitlements to the residential as a solution that would respect property rights and start solving the problem without requiring any type of downzoning. Thank you.</td>

<td>Smith, Margaret E. Cree</td>
<td>Please amend Theme 1 in the plan to recognize and reaffirm the wildlife, connectivity, scenic and agricultural values in the greater South Park region. Every day I see sand hill cranes, eagles, ospreys, hawks and many other birds that are living in this corridor. Also there are lots of elk, foxes, cows, horses, occasional moose and pronghorn antelope. There are beautiful vistas, and it would be a crime to turn this scenic area into a congested housing project. High density is what we would like to avoid. Please think of all the schools that are already here and the traffic we currently have.</td>

<td>Bloom, Rich</td>
<td>Rich Bloom, speaking as an individual, and I also thank the volunteers for this effort. A couple of things. As far as what was presented tonight, three areas here that might be helpful. As with the ARU, that’s probably the most shocking number, but I think what Paul Duncker asked for is important. Although I’m speaking as an individual, I am on the board of the Melody Ranch Homeowners Association and I know our CC&amp;Rs and maybe we don’t allow ARUs at 330 units, to change those CC&amp;Rs would take two thirds a vote of all owners, not just a two thirds vote. And anybody that’s gone through the process, it’s very, very difficult to change CC&amp;Rs, especially something at that level. So, it would be good to know because we need to know how shocking that number really is. Second, the PRD again I think the utilization rate, I'll just remind everybody, the Land Trust is not here today, but a lot of that is utilized and is never visible to the Planning Office. It’s a private conversation that goes on with the landowner, the IRS and the Land Trust and the appraisers. Meaning that they’re valuing the property stripping off the development potential, donating amounts. And so when we look at what that potential is before we move it anyway where we need to make sure we’re not counting what I would call phantom density. The last one, again I’m speaking as an individual, but I am on the Blue Ribbon Panel. We just had our second meeting. We still have another five and a half months to go, but we were just presented with very complete data on all the employee and affordable housing in Town and County. So, Emily’s here and I think I’ll ask Christine to deliver that, but we have a very good breakdown of every type of employee and affordable housing in Town and County plus what’s in the pipeline. I mean, those are the ones that are being produced as we speak. So that might be helpful and thus you want have to do it. As far as an approach to this chapter, I guess, having looked at the first chapter, I would have given it a C and you were able to go line by line and improve that greatly. I would say that I would rate this chapter, as far as representing community will, as a B-, and as you work into this chapter I think the overall approach would be to really have these discussions come up with those dozen to 15 to 20 key things that you’d be on or vote on, and then basically remand the whole chapter back to Staff. To go through line by line on this, I think it might be very, very difficult. And I say that because I go through certain sections like the statement of ideal, meet the human needs of the community and locations identified through development, I think the public said their clear intent was to work within the current development potential minus the floating density tools, and the only one that maybe look at was the PRD about how that could be revamped. When I look at the section here about what the community has said about this theme, I won't break it down, but that is so far from what the questions were asked and so does not represent what the community said. You know, again, I would just really emphasize and taking a different approach on this chapter than the last one when you get to that point, instead of getting bogged down in that line by line. Because it may be...it's going to be an interesting conversation already among this diverse group, especially between Town and County, and to do that in a wordsmithing way I don’t think that will work. Again, thank you for your time.</td>

<td>Verdone, Jim</td>
<td>Thank you. My name’s Jim ??, Teton County. Again, I would like to thank the Task Force and I hope you don’t let them go because I think there’s...I appreciate...[Laughter]...they’re regretting that. I appreciate their assumptions that they put into this, and I think that they touched upon some of the nuances of the ARUs and the PRDs. You don’t talk much about the PRDs and I would appreciate hearing from the Task Force about any kind of assumptions in the PRDs, particularly with relationship to trends, because I think what’s surprising here is those are the two biggest numbers that surprised everybody here. But the flip side of that is that they’ve been in place for 10 or 15 years and those numbers are still there. So, I think it says something to the fact that those potentials haven’t been realized over the last 10 or 15 years, why, or the assumptions, and that would go I think a large degree to whether or not you look at that as something that is of large concern, such that you throw that tool out, or that maybe you just...there’s some tweaking that needs to be done to that tool or either one of those tools. So, I would encourage this board here to direct the Task Force to have either pull those numbers forward or I’d like to see more discussion on those nuances of those two tools as we go forward. The other thing I would like to know and this as a question of whether or not this will get posted someplace? We didn’t talk much in terms of the last page, and I can’t read mine at all, even with my glasses, so it would be helpful to know where that would be available.</td>

</table>
This is a list of the Conservation Alliance’s broad, high-level concerns regarding Theme Two. We hope that throughout the review of this Theme you will refer to our written comments submitted on July 30 that raise a number of specific questions, concerns, and recommendations.
This theme needs a lot of attention and work to get it to a place that accurately reflects the community’s priorities. There needs to be a focus on not only what is currently written in Theme Two, but, more importantly, what is missing.

General
• A narrow focus on development pattern as the only important element of “managing growth” is, as we have stated throughout this process, a flawed approach. This Theme must more adequately address not only the location of development, but also the overall amount, rate, the types of development.

Changing Meaning of “Managing Growth Responsibly” since Public Polling
• (See handout presented today and included in our July 30th written comments.) Please address why some of the four original key objectives of the “manage growth responsibly” theme were largely changed/ignored in the current iteration of the Theme. (Obvious important ones are “defining the end state” and “fully addressing the cost of growth” that are now completely absent in this theme.) It is questionable to substantially change the basis of a particular theme that people voted for as a priority and still identify it as the second priority in the overall plan and the first priority in a majority of districts.

FLUP maps
• Language will need to be rewritten so that this document does not imply that the Future Land Use Plan and accordant maps will guide the formation of the policies. Unfortunately, the policies as written, instead of describing the values/types of character that are preferred and that would then be depicted in the FLUP maps, primarily includes language that “development should be consistent with the FLUP”.

“Node” Concept
• While we support concentrated development patterns as a general principle, this plan misapplies the concept by essentially proposing sprawling ‘nodes’ throughout the county. The idea of planning for both county “nodes” and town intensification would be defined by many as sprawl. It is critical that the nodal concept be rooted in the unique contexts of the county (wildlife issues, transportation capacity etc…) as well as in the acknowledgement of existing development patterns and the establishment of clear node boundaries.
• This plan’s language in inconsistent and unclear regarding growth in “nodes.” Specifically, in some instances, it is suggested that growth in “nodes” is intended to be substitutive growth (i.e., not adding, but shifting growth). Other sections of the plan, including the FLUP itself and Appendix I, clearly demonstrate additive growth. This plan rests on a fundamental assumption in many areas about shifting growth, but it is highly vague about realistic applications.

WHAT IS MISSING – a few examples
• An analysis of the amount of growth allowed and a recognition of the community’s preferred amount of growth are critical aspects of managing growth responsibly, and is currently absent from this Theme and from the plan as a whole. The community strongly supports limited growth. This must be incorporated.
• This Theme must address our unique planning challenges as a gateway community with high visitor populations (growth-related issues regarding permanent population, visitor population, commuters, seasonal variations in employment numbers, etc...).
• We should be establishing clear goals (growth rate/cap) based on an adequate understanding of where we are today.
• This chapter must define character – without defining what we want to protect, we won’t end up protecting it.
• This Theme needs to ensure that growth in one sector (e.g. commercial) does not outpace growth in another sector (e.g. residential accessible to the workforce).
• This Theme needs to include other key aspects of planning responsibly - age population demographics, makeup of economic industries, etc... - to be able to adequately plan for future community infrastructure needs.
• This Theme must ensure that new growth pay its way regardless of location.
• This Theme must mention heritage preservation.
• The indicators in this theme must actually measure growth impacts and help us determine whether or not we are “growing responsibly.”

Given that many broad issues are not addressed at all, it is likely more effective for you to give broad direction for revisions to staff prior to a detailed line-by-line review. Many important concepts related to “managing growth responsibly” must be incorporated for this chapter to be an acceptable representation of community vision and goals.
I have to refer to one and [Crosstalk]...Mr. Chairman, Commission members, I’m Paul Hansen, Executive Director of the Jackson Hole Conservation Alliance. An interesting part about coming to the last of our meetings is everything’s been said but not everybody has said it. I passed around a couple of handouts. I’d like to review just a couple of the broader level issues for this theme, but I’d also like to ask that on theme you set the date for clarifying the hearing schedule and let us know when the meeting date will be for re-reviewing theme one, so we can plan for it and put this on our calendars. The first handout tonight is the guiding principles for managing growth responsibly, which is part of the public polling that was done as the Comp Plan was beginning to be written. There were four key objectives there and two of the key objectives don’t appear in this theme. They are very obvious and important objectives to discuss in broader...but one is the finding of end state. We feel we need to know what the end state, what the limited growth in our County, in our Valley, will be going forward. We also need to fully address the cost of growth. As you know, most of development doesn’t pay for itself and we need to certainly have a robust conversation about impact fees and other means of addressing a growth mixture. That growth pays its own way and that citizens are not forced to subsidize growth by higher taxes or higher utility bills. We also need to focus in on not just answering the how questions, how to manage growth, but how much growth. And the key question of what limited growth will be. We’re certainly supportive of the concept of concentrated development patterns, the general principle nodes. We want to be assured that nodes will be substantive growth, substituting for assisted growth, not additive growth. We don’t want to end up with more growth in nodes and of course more growth in rural areas as well. The community has been clear in its support for limited growth, and we hope that this end state will be defined. The theme also doesn’t really contain a robust discussion on the policies that are unique to a gateway community such as ours with high-density populations. The 1994 Plan included a concept of analyzing effective population, and the Alliance has done some work pertaining to commerce to develop some of this data. And we found that an effective population was in the summertime of course about three times what it is, or about three times as many nonresidents as residents here in the summertime. Even in the shoulder season, in the spring, 22 percent of the people in Town are not residents. So, we have a significant nonresident population. We certainly need to include that in our considerations and have that become part of your deliberations. In this chapter is a principle to predict, to protect existing character but the chapter doesn’t define character. We know that’s difficult, but how can you protect something if you haven’t defined it? We know we need to strategically plan to be sure that our sectors are in balance, that we don’t have commercial development that outpaces our abilities to meet those demands with residential development, and there was some that were reflected in the numbers that we discussed tonight. We should take a look at some demographics, age, makeup of our industries, impacts on schools and housing needs, which other people have covered already tonight. And of course we need to again address the fiscal impacts of growth and make sure that growth pays its way so taxpayers won’t be responsible for subsidizing new growth. The theme doesn’t mention heritage preservation. We think that’s also important and of course the indicators and metrics that we decide and measure this going forward will be a great favor to the people down the road, who will be trying to follow this work and to measure it in the future. There are a lot of broad issues that Staff is...that are not addressed at all. We think that it probably would, as has been mentioned earlier, may help the Commission to ask Staff to kind of revise some of this beforehand so we don’t get quite so bogged down in the line by line. And I appreciate all the work the Commission has done. That was tedious for you and us, too, and hopefully we can move that forward a little more expeditiously and efficiently. Finally, I always thought it was a privilege to participate with Staff and others on the build-out panel. I’m certainly the person on the panel that has the least background in community planning, but Kristy Bruner did the lion’s share of the work on behalf of the Alliance, and I appreciate Kristy’s work. I will say on the subject of acronyms, I, starting at the beginning of the meeting, charge $1 per acronym use and I have now $13,412 coming into the Jackson Hole Conservation Alliance budget. However, I do anticipate collection from some of these ??.
My name’s Ernie Anderson. I first came here to Jackson in 1969 and maybe just a couple of sidebars to lighten up the atmosphere a little better. I was <<inaudible>> and I asked the tram conductor who was the ??, He said, well, you’re not going to be ??, So just watch out for cliffs, and if you do get back down to the bottom, we’ll give you a ride back up again. [Laughter] So, I did make it. So, in 1977 I decided to move here. I’ve lived in a couple of other resort mountain communities and with some very favorable experiences, although I did move from one Town, which I won’t mention…All right. Specific to one of the towns that I moved here from, which I won’t mention, because we don’t want to draw parallels and we’re not like such and such a Town, but I saw some perfectly good buildings and houses being scraped, and that was in the mid-70s, and I thought, well, okay, maybe it’s time to move. So, anyways, getting back to goals and objectives and statistics and how to gauge build-out, and quite frankly I’m just going to touch on a couple of things that I can’t imagine each and every one person in this room isn’t experiencing. And to be specific to guidelines, quite frankly, I think they can be gauged. One would be traffic flow, commute time. One would be sewage flow and water treatment plant capacity. Another one would be air quality and another one would be energy use. And in any of these meetings and/or where I’ve read in the paper and what I’ve seen tonight, I’ve not seen any of those goals or objectives being outlined. Quite frankly, I think each and every person in this room would be asking themselves by coming to Town tomorrow morning or traveling to Town, you go to the Y, you’re at the intersection of ??, whatever it might be in Town and you’re in Wilson, all right. You’re coming across <<inaudible>> and the amount of traffic flow. Unquestionably, it’s increased dramatically here, okay. The sewer plant, I’m not sure where it’s at right now, as far as build-out and water treatment plant as far as capacity. The air quality can be moderate. It has been moderate to a degree, but I know it’s been affected. The energy use, we’re like a little red hot spot on the universal map, right. And, you know, it’s just that I’m baffled that there aren’t statistics and you’re not just going in circles here debating so what’s the maximum traffic flow? What’s that going to look like? What’s that number going to be? What’s the maximum amount of commuter time, if we’re going to be, you know, ?? from here to Wilson or Teton Village? As long as you build a planned unit development of some type, and I’m told, well, okay, while our ?? is about two more years out and it’s maxed and then it’s going to be ten years before we can have another capacity that’s going to accommodate your 555 units that are going to be in South Park, whatever it might be, okay. So, without berating these points too much, you know, beyond this, quite frankly, you know, with all the statistics that are put down in LDRs and Comprehensive Plans put in place, you know, I think you have to look at who’s in the room today and who’s going to be here five years from now or ten years from now and is going to be interpreting the Comprehensive Plan much less the line-by-line items that are in the LDRs. Because I’ve been in a few situations where I’ve had to come before the Planning Commission and the County Commissioners, and I was really quite baffled at the interpretation that was made of the LDRs that I thought were in very simple plain English, but they were interpreted in a way that, quite frankly, I couldn’t understand. So, that’s all I’m just saying is that whoever is being paid by the taxpayers, and I’ve been a taxpayer for a few decades, if you could add into your Plan statistics, goals, ??, I mean, I know places that put chips on license plates and they can determine if it’s a local commuter, if it’s someone who’s in a rental car, someone who’s an out-of-state commuter, and you can verify very easily, you can have a stream of information that comes into your database and tells you, okay, this is what’s going on with the traffic, right. So, thank you for your time, right. I hope I was specific enough. At least I shed a light on who I am and where I’m coming from and that fact that I’m still here.
Hi, my name is Elizabeth ?? and I live in Town. And I’d like to thank the Staff as well. I’m sure this is like struggling with an octopus. So, thank all of you for...including Council, I mean, you’re all volunteers, so thanks a lot. I’d like to offer a suggestion to occasionally use real words when you explain this because I think we can get caught up in the letters and not only just because of my ignorance, I think when you talk about a letter and it’s really a house, why can’t you call a house a house? And I think there are aspects in the community that actually have people and account services, you know, the guys down there that turn the water on and off, they know how many people they’re serving. And the hospital and the EMTs and the rest of it, if they didn’t know, we wouldn’t have water to flush those toilets. So, I think there is an estimate out there for real people. And the other piece that I’m not really hearing and maybe didn’t want to, you certainly were asked to do it, was that as you project what our build-out is, I would assume that isn’t just house here, and I’m not saying you have any control over it, but you have all those people living in all these other places who actually come here. They drive here, they eat here, they drink water here. Occasionally they sleep here, but most of the time they go back to ??.. And they should be counted because they are part of this build-out. It’s not just the number of houses that we’re allowing to be...or guest houses to be constructed. They may not be something you can control, but they better be counted. And I guess that speaks to the piece of it that more of a systems approach. I kind of agree with a couple of the people who talked about this. And the systems approach could include, not necessarily at this point, but admission of a limiting factor. And what is a limiting factor in any good system? It is the weakest member, whether you’re a mouse or an eagle or a person. It’s what’s going to happen when you double the number of actual residents and then have all the people out in this County come here to serve them. All of those things. What’s going to get squeezed? Not just the traffic, but all those other things that we value that are hard to quantify. And I would suggest those are the real limiting factors here. You know, there aren’t going to be any more bunny rabbits or elk on the street or moose that you have to avoid. Those are the limiting factors in the ecosystem that we currently have. I’d like you at least to consider those as part of it and not just the number of units. Thank you.

Limit development in the County to current base (by right) zoning with allowance for as yet to be determined incentives for conservation easements through acquisition and the use of PRDs and TDRs.
Gregory Griffith, West Bank. The first thing I’d like to do is answer Tony’s question, page 105 of the Housing Needs Assessment, Table 60 outlines employee generation for every known category of employment, and the average is one per 240 square foot for a total of 4.17 employees. Obviously, restaurants higher, they’re around 11, and lodging is around one. But that information does exist. The next thing I’d like to do is enter, since we’re moving into chapter two, actually the next thing I’d like to do is thank these guys, Staff included, that this incredibly difficult task, 500 hours, wow. I would like to introduce for the public record, whoever I could hand it to, this is ?? County’s transferrable development rights. Staff, okay. It’s their feasibility report for its language and graphics. They have a whole different take on it in some of the other…some of the areas of it. As far as a multiplier goes, they generally use 2.37 people per unit. But when the University of Wyoming did their sampling, which was supposed to be more statistically valid, they actually called on households, and if you extrapolated that information, it came out to about 2.6 per household, the 500 and some households they contacted. So that deserves some more discovery also. As far as census data goes, Jonathan Schechter said for years, and he’s pretty much the numbers guru, that the census data understates the people on the ground here by at least 10 percent. So that’s something to consider also. I have a question about ARUs. There were actually more ARUs than there were dwelling units, and if they’re assigned to a dwelling unit, I don’t really understand where the discrepancy comes from. So, that’s a question also. I’d like to echo some of the sentiment I think Franz touched on and then Tony. A lot of the Town numbers are better received because of parcel-by-parcel analysis. I really think to clear up some of these questions in the County we should also engage in whatever time it takes to do parcel-by-parcel analysis. This would end some of these floating questions, which no one...this is not sloughing off on the panel here, but I really think that would be valuable. There’s so many unanswered questions here and so many deviations in the numbers, I don’t see how it could hurt. As far as chapter two goes, I would like to say that we change the statement of ideal to protect our wildlife and open space...sorry, protect wildlife, open space, and quality of life by limiting development to the smallest possible. As it reads now, human needs will only escalate in the future for future generations, and what we will do, and we all know that it will occur, we’ll just simply create another node. So if we don’t have some open space offsets...Chairman Pruett made a comment last week about the 97 percent. That’s...without commenting on Chairman Pruett specifically, that’s too simplistic an argument to have right now because we should focus, in my opinion, our discussion on the 30,000 plus acres that are still in play to be developed. Fifty percent of our population lives on 1000 acres. So, it’s not a question of available land. It’s a question of how much we value our wildlife and open space to create a public funding source, which the public has called for in incredible percentages. It’s actually essential. I had discussions with planning directors across the west, including PhD planner in ?? County, the information I received there, it took ten years to do a project. They transferred, in the very first project this year, five acres of agricultural land...sorry, five units of agricultural land transferred into 17 units in suburban not even urban. That’s the first time they used the three and a half times up zone. TDR by itself requires up zone. That’s one of the inherent problems with it. So, it has to be accompanied by some public funding for ?? and valuable habitat. I’d like to comment on a ?? capacity not being needed. I don’t think we should even be discussing Aspen, Wilson and northern South Park other than to desensitize clustering of existing entitlements, because Planning Staff tells us on page 86 that the growth rate from zero to ‘08, 2000-2008, was 1.2 percent. That’s telling us, and it’s actually doing that on that page, that we only need 1200 units in the next ten years. So, why are we talking about 9880 units? It’s an error problem. It will solve a lot of grief. There’s also a problem with the whole concept of Town ?? moving into the next theme where there’s a linkage here. Town ?? states the Town will continue to be the primary location for Town-level density. However, this Plan entitles 62 percent of the vote in County and only 38 percent in Town. If we’re going to stick to that, we should eliminate theme three, because it’s not Town ?? It’s disingenuous. As far as growth caps and that type discussions go, Boulder, since 1995, has capped at 1 percent growth rate. They’ve had no economic downturn; it’s worked like a charm for them. It actually has put development into the downtown area and revitalized downtown because of the preferential permitting. The indicators, conservation easements as a percentage and as a total should be added to the indicators. There should be a hierarchy of placement for where this development will go has to be assigned. And policy 2.5.C, for the lodging overlay expansion, we have a situation in almost half of the Forest Service because that has allowed several hundred thousand square foot of commercial to that ?? So, we have all these unanswered questions, which are all additive to build-out numbers, and it warrants some serious discussion. Thank you for your time.
Mr. Chairman, Commissioners, Franz Camenzind, a Jackson Hole resident. I’m going to just keep my comments focused on what occurred tonight and, believe me, I’ll have to sit down and look at this a lot closer. But one thing I do want to say is absolutely thank you to the volunteers that put this together. I can’t express enough thank you for the effort that went into this, and having said that I also can’t not say that we’re almost two years in this process, $250,300, two hundred and fifty thousand dollars into this process, and it’s a group of dedicated volunteers that have given us some of the most important information so far. And, I don’t know, it’s rather troubling to know that we spend so much money but the most important information comes from some really good volunteers. I appreciate that. One of the things I’m very concerned about, and Commission daCosta brought this up right away was the ARUs. This is definitely the wildcard here in this community right now. The numbers are all over the map. ARUs will affect so many things—the density, scenic overlay, NRO value and the integrity there. Do we have any kind of multipliers on people? I think a number of you have asked that. I would certainly reiterate that and see if we can’t come up with some numbers and multiplier. There’s a good chance that these people, if they are the working people in this Valley, they will have a number of children, too, so how that impacts goals. And then obviously the traffic. The ARUs, the traffic impacts are just huge. Until we get a better handle on this, I think we’re really punching clouds in the dark to try to get the solutions. Another thing that I think would help me ?, and again I haven’t had time to see it, the distinction between employee housing and the affordable housing. Right now, I think I’m seeing primarily employee housing. And, obviously, one is financially restricted and one is employee restricted. It would be helpful to get a breakdown there. And then I think it was Commissioner Wall and a number of other Commissioners that asked this question, too, that I would really support, and that is do we have some kind of multiplier to determine how many employees are going to be generated by commercial uses? And right now we don’t have…that’s a blank on the graph. And some kind of ballpark figure I think would be very helpful. The Town of Jackson, the lodging overlay units, and this is a question of clarification, the numbers that are in here include all the units both within and without the outside of the lodging overlay, but do they include any prediction on PMUDs? I don’t know if they do or not, and what would that be? And again I can’t emphasize enough the number of the occupancy rate for both employee units or the denser units and then the Town units. Are we up to date on this? Are we still using numbers that are valid? Or should they be corrected? And then I would hope that when this is all said and done—this may be quite a ways down the line—but you can generate a new Appendix I. But again I really do want to thank the citizen volunteers on this. I think this has been incredibly helpful. Thank you.

I’d like to start off by saying the whole build-out scenario I think misses the point. My name is Jay ??, resident of the Town of Jackson, property owner in the Town of Jackson. I think that the whole build-out, the idea of build-out, sort of misses the point. For one thing, it doesn’t consider the affect of markets. It assumes a long period of time, I mean, if anybody...people ought to know the affect of markets ??, I mean, they’re significant. There’s the kind of the assumption that the build-out could occur during the life of this Plan, which I don’t think any person really thinks about or could ever believe that would be the case. It doesn’t really take into adequate account the idea that there’s a lot of people that choose not to do what they could do in terms of allowances. It doesn’t take into account the fact that FAR is not the only thing that determines how much development you can do. At least before recent times what was really the limiting factor was the ability to provide parking. And you combine that with the affect of markets, that’s still important. Even if the Regulations don’t require you to provide the parking outside, that doesn’t mean you can sell or rent anything if you don’t. So, I mean, it’s not a totally useless exercise. But I’m saying it has such limitations and such lack of ability for decision-making based on it. The real method of growth management that works is by land use. And the idea I think should very much be to consider transportation factors of land uses, because that’s one of the biggest impacts of overdevelopment or a higher amount of development is the transportation ??, if the land uses that are allocated in areas which allow public transportation to be effective, which allow walking, biking, to be effective and a real choice that people would likely make, then the impacts of greater development are <<inaudible>>. So, the key is really the land uses, where they are, how they’re done and the incentives for development that limits the impacts of growth. I get very concerned, too, of any growth management thing that says, okay, we want an average of 3 percent growth a year, 2 percent growth, 1 percent, some number. And if we’re going to only let that amount of development occur because that ignores markets again. Sometimes nobody’s going to want to do it during the time. Other times the factors are there that allow it to happen. So, to set it in any kind of regimented thing…and I don’t know if you’ve considered these things. I haven’t been coming to these meetings. I’ve been out playing <<inaudible>> to get a PhD in something. But I’m just saying these are the problems with this whole idea. I would actually focus more on land use and transportation before any effort is set to try to limit growth in an artificial way. Thank you.
I’m Patty Ewing and I won’t reiterate all of the situations that the public has made, but I do want to thank all of you because you are all volunteers, as well as the Task Force that has been asked to put it together, incredible numbers...an incredible amount of information for us. I just have one thing that I would like to propose, and reading the documentation that came on the internet, I looked at the theme that directed to rewrite the statement of ideal, and it seemed to me just at first glance that the order of importance should have been to read something like this—I just took the same statement and put it in the order of importance that I feel the community has definitely talked about. I said, preservation of the community values of wildlife protection, community character, and quality of life will be the determining factors to limit build-out and rate of growth. And I’d like to propose those and have you put those perhaps as something to consider. And then just one other quick thing. Perhaps going forward too quickly, but it is in theme two on page 36, in terms of strategies, I would promote the idea that in order to provide any kind of predictability that both the Town and the County needs to eliminate any discretionary incentive tools. The PUD, the PRD, <<inaudible>> PUD for affordable housing and the ?. Thank you.

Steve Harrington, the Town of Jackson. First of all, I’d like to, because everybody has, thank everybody for all the work that has been done. But several members of the audience have commented and kind of skirted around the issue, but I would like to ask this one simple question that the Staff or the committee actually go through all of the different groupings that we’ve had, whether it’s dwelling units, auxiliary units, whether it’s long-term rental, short-term rentals, whether it’s employee housing, whether it’s affordable housing, and actually put the multiplier to it that’s appropriate, the 2.6 or whatever it is for dwelling unit or, you know, 1.4 for motel unit, and take those categories and project those numbers, be they units on the ground currently or projected units or possible units, so that the public can actually get a feel for the number of people that we’re talking about that can be here on any given day. Because, as has been talked about in your previous discussions regarding wildlife and quality of life and so forth and so on, and particularly the wildlife situation, the enemy of wildlife is people. So, if you’re looking at...I can’t even comprehend the numbers that we’ve looked at today when you actually set a multiplier to them. And I think that would be very, very appropriate for future public comment and for yourselves in terms of public discussion and when others have talked about infrastructure. What is that? How does that affect the roads? How does that affect your sewer? How does that affect anything? I mean, any engineer can back those numbers out once they have a total to work with and make some serious projections. So, I think that would be most appropriate. Thank you.

Jeff ?? I’m not quite sure when in the process this is the best place to bring this up, but it’s definitely related to build-out in a very serious way. And that is air quality. And over Labor Day, we were at ?? Lake. We ran into some friends in Pinedale who are very actively involved in monitoring their air quality there for ozone. And they’ve done a lot to educate themselves. They’ve brought in outside consultants. They’ve brought in scientists and experts in the field of air quality. And so, as we move towards build-out, one of the things I think the Plan needs is an environmental...to use ozone as an environmental and an air quality indicator that is added to the development Regulations. And just for kind of a brief overview, ozone is an air pollutant that causes respiratory health problems, especially for children, the elderly and those with existing respiratory conditions and weak immune systems. And ozone acts as a poison that accumulates in the body. Once it’s inhaled, it cannot be eliminated. Children are especially at risk because infections from ozone can inhibit lung development. Ozone pollution typically occurs in large cities in the summertime with a lot of daylight and it’s hot. But elevated winter ozone is an unexpected occurrence, which is being studied by the Wyoming Department of Environmental Quality in the Green River Basin. Strong temperature inversion, slow winds, high altitudes, snow cover and bright sunlight create a photochemical reaction that turns glutens into fuel combustion such as cars, trucks, buses, and heavy equipment into ozone. Jackson has almost the same exact weather conditions as the Green River Basin and although it’s a little lower in altitude, it doesn’t have the gas fields, it still has the potential for ground-level ozone, which means we’re not talking about ozone like on the top of a building. We’re talking about ozone from road level to head level, the air that you actually breathe. And so the potential for this ground-level ozone build-out is increased by the proximity of surrounding mountains and our larger volume of traffic. Wyoming’s Air Quality Division recommends the general public avoid strenuous activity when an eight-hour ozone level reads between 85 and 105 parts per billion. A Pinedale resident working on monitoring ozone in the Green River Basin on one occasion met with ozone level in Wilson at over 100. And what they’ve done over there, there’s these ozone badges that you can place around, you can wear them on your coat, put them on a fence post, throughout schools, on the side of the road, and it will give you these ozone readings. And especially after when we have these like a large snow fall, the weather clears off, the temperature drops, it’s a perfect scenario for ozone increases in the air quality. So, air quality is probably the most important indicator for the health of our community. And it should be monitored closely as we bring more development and people in vehicles into the Valley.

<td>Acri, Armond</td>
<td>Save Historic Jackson Hole feels any proposal to schedule more than 2 meetings during any week for Planning and Zoning Commission members is unrealistic and will be non-productive in the long run. We do not support the proposal to increase the number of Joint Planning and Zoning Commission meetings to allow time off for the Holidays. We have consistently stated we feel the process to revise the Comprehensive Plan must respect all three groups involved: 1) The Members of the Planning and Zoning Commissions 2) The General Public 3) Staff Having more than 1 Joint meeting in addition to the regularly scheduled Planning and Zoning Commission meeting in a one week period will result in reduced public participation and will burn out your Board Members and Staff. Neither is desirable. Revising the Comp Plan is a long term process. The key to success in a long term event is to pace yourself. We hope you will keep this in mind as you plan a schedule for the Holidays. We do support taking time off around Christmas and New Years to allow all the participants to celebrate the Holidays and spend time with friends and family.</td>

<td>COMMENTS â€“BUILDOUT, NODES ETC.Sept. 17, 2009Thank you for the opportunity to offer my comments- â€“Your challenge in this process - Recognizing that our greatest financial asset in Teton County is something that came to us for free-our wildlife and incredible scenery, we can conclude we do not have to build it or advertise it- our greatest asset is already in place.â€“How do we welcome new residents without losing our greatest asset? We have a critical and challenging balance to achieve. The saying âœbuild it and they will comeâ€ has been proven true time and time again, but here in this unique valley, we donâ€™t have to build to âœget um to comeâ€. They will come anyway. â€œMy point is- incentives for development are unnecessary to preserve the wildness of this area. Market forces will drive the residential developmentâ€In my opinion, conservation easements, although wonderful and accomplish the preservation of open spaces, it is a long shot to expect the dollars to be available to purchase lands for preservation unless we use a segment of our sales tax for this purpose. If everyone pays, everyone benefits in this case.â€If there is a place for incentives to not develop, they should be to create density connectivity, â€œhighwaysâ€ for migrating animals and their food, for parks and other public spaces, pathways, and agriculture.â€Congratulations to the planning commissions for their acknowledgment of the huge community support for addressing further development in nodes, considering conservation easements as a tool, specifically identifying our flora and fauna baseline to determine our starting point for managing these resources in concert with our growth potential.â€Best of luck to you all. This doesnâ€™t have to be a daunting task.Nancy Hoffman, Teton County</td>

The Porter Trust ranch properties have been the subject of a great deal of public discussion over the years and they continue to be a large part of the ongoing debate over the shape and scope of future development in Teton County. As revisions to the comprehensive plan move forward, it is important that public officials and others involved in the planning effort understand recent changes concerning the Porter Trust and the ownership of the Porter Trust ranch lands. As the attorney for Robert Gill, I am writing on his behalf to inform you of those changes.

Robert Bruce Porter established the Porter Trust in 1960 for the initial benefit of his daughters, Jeannine Porter Gill and Roberta Porter, and upon their death, for the benefit of his grandchildren. Under the terms established by Mr. Porter, upon the death of his children, all remaining trust assets were to be distributed equally to his grandchildren. Jeannine Porter Gill and Roberta Porter are now both deceased, leaving Robert Gill and his sister, Elizabeth Lockhart as the only surviving grandchildren of Mr. Porter and the sole beneficiaries of the Porter Trust.

As directed by the terms of the Porter Trust, Robert Gill and Elizabeth Lockhart have been engaged for sometime in the process of dividing the trust assets in equal shares between them. Those assets include the Porter Trust’s interests in the “upper” and “lower” ranch properties located in the South Park area. Although the ranch properties have not yet been completely transferred, the division of the ranch properties has been determined and the transfer documents are in the process of being prepared. I expect that the transfer process will be largely complete within the next month.

I am enclosing for your reference two maps which depict the pending division of the “upper” and “lower” ranch properties. As can be seen in the maps, the western side of the “upper” ranch and the southern portion of the “lower” ranch will be conveyed to Robert Gill or his designees; the eastern side of the “upper” ranch and the northern part of the “lower” ranch will be conveyed to Elizabeth Lockhart or her designees. The pending conveyance of ownership of the Porter Trust ranch lands to two separate families represents a changed reality that should be taken into account as the planning process moves forward. Among other things, the separate ownership could have important implications on planning for interconnectivity between the ranch parcels, other parcels and public roadways, as well as the future location of density, open space, and public facilities.

For his part, Robert Gill presently intends to continue the family ranching business on the property distributed to him for as long as he can, recognizing the challenges created by the division of the ranch lands as well as surrounding development. He is mindful that the planning process will no doubt result in decisions that will impact the uses he and his family can make of their ranch properties. Nevertheless, he does not feel he has the expertise to represent the interests of his family in the planning process without assistance. For that reason, Robert has asked Jim Verdone and me to monitor and advise him in the planning process. You should feel free to contact either of us as questions arise regarding the properties to be distributed him.

In closing, at this time of transition for the Porter Trust, it only seems right to recognize its remarkable stewardship of the South Park ranches. The Jackson Hole Hereford Ranch has operated continuously on the land for approximately 70 years. While surrounding lands have undergone significant development, the Porter Trust ranches have remained open and largely unchanged for generations. But for the longstanding dedication to ranching and agriculture of Bruce Porter and his descendants, the public would have considerably fewer planning options to debate going forward. Robert Gill is pleased that he will be able to continue the ranching legacy and traditions of the Jackson Hole Hereford Ranch on his property. At the same time, he recognizes the public significance of his family’s property and is willing to work with the community to address the needs of working families and other individuals who make Jackson Hole such a remarkable place.
Thank you for the opportunity to submit comments on the Teton County, Wyoming, Comprehensive Plan update. As stated in the Wyoming Local Sage-Grouse Working Group Charter “The purpose of Local Sage-Grouse Working Groups (LWG) is to develop and facilitate implementation of local conservation plans for the benefit of sage-grouse, their habitats, and whenever feasible, other species that use sagebrush habitats. The plans will identify management practices and the financial and personnel means to accomplish these practices, within an explicit time frame, for the purpose of improving sage-grouse numbers and precluding the need for listing under the Endangered Species Act.”

Although our working group area is dominated by public lands and our group’s plan (http://gf.state.wy.us/wildlife/wildlife_management/sagegrouse/index.asp) reflects that, Greater Sage-Grouse are directly affected by development and human impacts on private lands and public rights of way in Teton County. In addition, the Jackson Hole population constitutes one of the core sage-grouse populations in Wyoming as designated by the Wyoming Governor’s Office.

Recommendations:
Sage-Grouse Species of Special Concern
Based on the comments submitted by the Wyoming Game and Fish Department (June 26, 2009: Tim Fuchs, Regional Wildlife Supervisor and Rob Gipson, Regional Fisheries Supervisor) we request that Greater Sage-Grouse be considered as a species of special concern with subsequent consideration related to: the Natural Resources Overlay (NRO); Indicators and Monitoring of Ecosystem Health; Inclusion of Important Habitat Types, Buffer Areas between Nodes and adjacent NRO Designation; Build Out; Maintain Viable Populations; Dispersed Recreation; and Wildlife Vehicle Collisions. We expect that the Planning Departments and, eventually, the Environmental Commission will work with the Local Sage-Grouse Working Group and the Wyoming Game and Fish Department regarding impacts (initial and cumulative) of development on Greater Sage-Grouse.

Development in Critical Habitat
Specific development impacts of concern include, but are not necessarily limited to issues related to habitat connectivity and direct mortality. Greater Sage-Grouse are sagebrush obligates although recent research in Teton County has found birds using treed areas for winter shelter even as feeding occurs in the open sagebrush (B. Bedrosian, Craighead Beringia South, unpublished data). Winter habitat should be considered as limiting, and critical winter habitat on private land (e.g., East and West Gros Ventre Buttes) thus requires special consideration during development. Although dependent on sagebrush overall, Sage-Grouse have different seasonal habitat needs for breeding, nesting and brood rearing in addition to crucial winter habitat.

Transportation Issues
Transportation has significant impacts on habitat connectivity and direct mortality and additional development can be expected to have additional, cumulative impacts on Sage-Grouse. The airport and its surroundings are a critical area for the local Sage-Grouse population because they use the area year-round. Transportation issues include direct mortality (e.g., airplane strikes, vehicles driving to and from the airport and through the Park) and, potentially, disruption of other life-cycle phases (e.g., breeding, nesting and brood rearing). A significant number of Sage-Grouse mortalities resulting from vehicle collisions have occurred recently on HWY 191 and the Gros Ventre road and should be included in data regarding wildlife-vehicle collisions. At a minimum, speed reductions should be enacted on Highway 191 to benefit all wildlife. Development of the new pathway between the Town of Jackson and Grand Teton National Park adds an additional bisection of critical habitat (e.g., the National Elk Refuge and the pastures and cottonwood forests between Highway 191 and Spring Gulch Road) and potential negative impacts due to increased human presence on the landscape. Impacts will need to be monitored and mitigated (e.g., through seasonal and potentially other closures as identified in the Environmental Assessment).

Conservation of Open Space
Conservation of existing open space could be beneficial to Sage-Grouse on several fronts. Restoration of pasture and hayfields to native sagebrush vegetation could increase habitat connectivity and/or availability. Research ongoing in Grand Teton National Park will contribute to the development of best management practices for such restoration (J. Mooney, Grand Teton National Park, unpublished data). Removal of fencing and/or requirements for wildlife friendly fencing that includes consideration for birds could increase connectivity and reduce potential direct mortality from collision with fencing. Prohibition of man-made or altered water features that permit mosquito breeding will reduce potential direct mortality from West Nile Virus.

Effects of Fire on Habitat
Development can both increase the risk of fire (e.g., many fires are ignited by humans) and alter the patterns of fire (e.g., buildings in the wildland urban interface (WUI) force fire fighting to focus on saving property). Historically fire would have played an important role in maintaining functional sagebrush habitat over large areas. Currently, however, local sagebrush habitat has become fragmented by human use, and fire has removed areas that historically were important grouse winter range. Protecting key sage grouse habitat is now essential for the survival of the local population. Therefore, current fire management plans need to recognize that some high-value sagebrush areas may need to be aggressively protected from fire even if fire may have been beneficial in the past. That said, creation of defensible space could permanently remove sagebrush habitat, and such development actions must be required to be mitigated (e.g., restore meaningful habitat elsewhere).

<td>Jensen, Gail</td>
<td>Theme 2 General - Overall Comments: Keep the 1994 baseline zoning entitlements numbers without incentives or bonuses for the total buildout number for this new plan. Do not increase the total buildout number for any reason, including conservation easements or affordable housing. Build any potential incentives into the total number. The relationship (nexus) between commercial and residential buildout numbers must be quantified and balanced. Monitoring, identifying indicators, triggers and an action plan must be very specific in the plan so that growth is controlled. Redevelopment of older neighborhoods and commercial areas with possible density increases must be considered within the buildout numbers. Development patterns, densities and scales should be strategically implemented to protect wildlife (connectivity), ecological functions, maintain no net loss of level of service and ideally improved level of service, and retain a high quality of life. The growth rate mechanism should be implemented. Transportation and other infrastructure needs, impacts, capacity and costs to the community for all growth to be entitled with this plan must be analyzed. All needed expansion and improvements should be in place prior to any new development approvals. Only after all of the above issues/concerns are addressed should any of high density development and their possible locations be considered. Thank you for considering these comments!</td>
</tr>
<tr>
<td>9/16/2009</td>
<td>Camenzind, Franz</td>
<td>THEME 2 COMMENTS: 1) I strongly recommend that the focus of the remainder of the Plan re-write should be first: Protect (as in cause to be perpetuated) our current wildlife populations, numbers and distribution, second, do whatever it can to protect open space short of compromising the first concern and third, plan to have workforce housing at or near work places and/or existing community infrastructure (schools, food markets as well as public services including, but not limited to the START system). 2) I recommend that all growth and development categories be reduced to the lowest, legally defensible base-line zoning numbers (based upon the 1994 Plan) and that these new, reduced numbers become the maximum values for the the new plan. (I am convinced that even these numbers will far exceed what can be built in the life of this new Plan.) 3) The Planned Residential Development should have the maximum density bonus lowered to 3 units per 35 acres and applied only to proposals/parcels of 35 acres or greater. 4) Transfer Development Rights should be included in the new Plan. However, TDR's should be applied only if they create conservation easements and/or deed restricted and permanently protected open space. 5) In the Town of Jackson the Planned Mixed Use Development must be eliminated. (I can think of no single thing that has changed, and in my estimation degraded the character of the ToI than the application of the PMUD.) 6) It matters not what they are called- nodes, neighborhoods, or communities, it is what happens within them that matters. None of the developed areas should be allowed to exceed what is legally defensible in the current (1994) Plan. 7) Workforce Housing: If the community goal is to house 65% of the work force and we are currently housing that portion, then we have met our goal and we have no back log in housing needs. Consequently, all new workforce housing should be directed at and should meet the needs generated by new development only.</td>

<tr>
<td>9/11/09</td>
<td>Grimes, Matthew</td>
<td>In every city I have lived in, they have a 1% for Art program. This simple concept has led to some amazing works of public art that spark dialogue as well as imaginations. It enriches the community on so many levels and supports the art community. Allowing people to visually comment on and document the place they live allows them to feel ownership and investment in their surroundings which ultimately leads to positive growth and development.</td>

<td></td>
<td>Public art in Jackson is a wonderful thing for our community. I have seen the ArtSpot sign act as a motivation for conversation amongst all ages. I have known kids who have been excited about joining in on public art classes that have kept them occupied and engaged, helping them to make good choices in other areas of their lives. Public art is a necessity to our town as it provides a cohesion.</td>

</table>
These comments are presented in order of appearance in the April 2009 Draft Comprehensive Plan and are meant to reflect my opinions only. Thank you for considering these comments and for your dedicated work on this important process.

Principle 1.5: Maintain the scenic resources of the area

The last sentence should be re-written as follows: “Interruption of those natural forms by built forms detracts from the character and will be regulated.”

Rationale: This simply gives direction to write LDR’s that will regulate this activity, it does not say to what degree. Without this, it is a weak directive.

Policy 1.5.a: Maintain natural skylines. I agree that this language should be tightened to include “…as seen from all public roads, streets and parks.”

Rationale: Again, ‘restricted’ does not prohibit, it only strengthens the directive when writing specific LDR’s to allow such activity under determined circumstances. This does not prohibit berms and vegetative landscape screening, it simply allows for the LDR’s to establish standards that would avoid the unreasonable blockage of natural vistas.

Policy 1.5.c: Maintain natural landforms

The last sentence should be re-written as follows: “All land disturbances will be completed and mitigated implementing “Best (Lanscaping) Management Practices” so as to resemble the natural landscape.”

Rationale: “Resemble natural landscapes” does not mean recreate, it allows for a reconfiguration plan that blends with the natural, surrounding landscape. It gives direction without requiring the development to exactly replicate the former, natural landscape.

Policy 1.5.d: Maintain dark night skies

The third sentence should be re-written as follows: “Some lighting is required for safe urban transportation corridors; however, non-essential lighting will be limited and all lighting will be designed to meet dark skies “Best (Dark Skies) Management Practices.”

Rationale: This allows for lighting in urban areas, but not along rural roadways and pathways etc. throughout the county.

ADD: Policy 1.5.e: Maintain ambient sound conditions

Quiet environments, like dark skies are signature features of Teton County. Restrictions should be put into place protecting natural, ambient sound levels within and immediately adjacent to Residential areas and those areas designated as NRO and SRO.

Rationale: We know that not all human-caused sound can be limited everywhere, but with recognition of the importance of noise control in residential areas and within the NRO and SRO, we should manage as best as possible longterm humancaused noise pollution in and adjacent to these special areas.

ADD: Policy 1.5.f: Establish a Scenic Resource Overlay for the County and Town of Jackson

The scenery found in Teton County is world-class and is a major component of our community character and quality of life in addition to being a foundation of our tourism economy. Updating the current SRO map and accompanying standards is central to guiding future development so as to best protect our unparalleled scenic resources.

Rationale: Adding the Town of Jackson is appropriate because it has many scenic viewpoints and with the majority of our visitors spending some time within the town, we should do what is reasonably possible to retain views of the surrounding mountains. For what is this place called but Jackson’s Holea valley surrounded by mountains? Let’s not forget nor degrade this asset.

Principle 1.6: Conserve remaining agricultural resources

Policy 1.6.a: Conserve agricultural lands and agriculture throughout Teton County

The second sentence should be re-written as follows: “The county will support efforts of landowners and land trusts to permanently conserve all parcels of land being used for agricultural purposes and/or determined by professional land trusts and resource management agencies to have importance as open space, wildlife habitat and/or as wildlife movement corridors.”

Rationale: We should not suggest to any landowner that their parcel is not worth putting into a conservation easement. In the end every acre thus protected is an investment in what makes this place unique and therefore it is an investment in our future.

Policy 1.6.b: Prioritize conservation of agriculture in Alta

Alta should not be given special attention over other agricultural areas of the county. Remove exclusive reference to Alta. The first sentence describing this Policy should be removed. The remainder of the Policy should be re-written as follows: “Viable agricultural practices operate through the county and should be encouraged to continue so as to maintain historic lifestyles, open space stewardship, and the calming rural setting residents and visitors alike have come to associate with Teton County. The county will continue to explore incentives to assist landowners in conserving agricultural lands.”

Rationale: This should be obvious, doing this will not only perpetuate historic uses but will also maintain open spaces and wildlife values throughout
the county. This effort should not be focused on Alta only.

Policy 1.6.c: Recognize agriculturalists for their stewardship This entire policy can be eliminated as it only re-states what is in the Principle. In particular, the last sentence must be removed because as currently written- (“Regulatory exemptions and allowances will be provided to ensure that continued operation of agricultural stewardship...”), it allows for a complete circumvention of all land use plans that now apply to rural, agricultural lands. This provides an open door to non-planning.

Rationale: As now written, this Policy allows for an agriculturalist to propose nearly any activity if he/she can make the case that it will help perpetuate agricultural use. That could include a request to simply develop a portion of their property without regard to existing LDR’s so as to “increase operating cash flow.” However, IF this is meant to apply only to activities directly tied to and supporting continued agricultural practices (developing new or modifying existing irrigation systems etc.), then this should be made clear in this Policy so that the LDR’s can be written to only accommodate such circumstances.

Principle 1.7Maintain public access to public lands This title should have the following phrase added to the end: “...while minimizing impacts”

Rationale: Protecting the public land environment from degradation brought on by inappropriate types or levels of recreational uses is as important as retaining authorized public access. In addition, this Principle is confusing and should be re-written for clarity and consistency- is it meant to address public lands only or in combination with private land recreational uses?

Policy 1.7.a: Provide recreation opportunities on private land The last sentence should be removed from this Policy and placed at the end of Policy 1.7.b. It should also be re-written as follows: “Additionally, public and private efforts will be made to prevent resource damage on public lands from harmful recreational activities.

Rationale: It is a public land concern and fits better in Policy 1.7.b and I don’t believe we need to promote recreational activities which are self-starters in this community, we need to protect the resource from damaging recreational activities. Or: The last sentence should be re-written as follows: “Additionally, public and private efforts will be made to prevent resource damage on private lands from harmful recreational activities.

Rationale: Perhaps by separating the public lands recreational activities from the private lands opportunities this confusion can be eliminated.

Policy 1.7.b: Provide continued access to waterways and public lands The second sentence should be re-written as follows: “Local government and private interests will coordinate with state and federal agencies regarding the (omit: creation and) maintenance of access points to...”

Rationale: I am not aware of any situation where reasonable access to public lands (or waterways) is now being denied. In addition, with every access opportunity there comes the danger of increasing impacts to native habitats and wildlife populations through more habitat fragmentation via establishment of new human use corridors. Maintenance of existing access points is the most that this Policy (and subsequent LDR’s) should address.

STRATEGIES

Strategy 1.1: Establish an Environmental Commission The wording should be re-written to say that this commission will make recommendations to both elected officials and planning commissions.

Rationale: Environmental information should be available to both the Planning Commissions as well as the elected bodies.

The first bullet point should be re-written as follows: “The Environmental Commission should be made up of 5 or 7 individuals with a majority having a professional background in the environmental sciences and with at least two but not a majority of members who are not required to have a professional background in the environmental sciences, but have a significant interest in and familiarity with local environmental conditions and are fulltime residents.

Rationale: This Environment Commission should have members familiar with environmental sciences as well as individuals who have a significant interest in and familiarity with local environmental conditions. This combination of backgrounds should generate credible and representative perspectives to environmental stewardship discussions and recommendations.

Strategy 1.2: Update Natural Resources Overlay (NRO) mapping and natural resource protection standards Added to this should be “Update Scenic Resources Overlay (SRO).” This addition should be reflected in each ‘bullet point’ where appropriate and should incorporate all defensible data, not just that coming from the Wyoming Game and Fish Department. OR- There should be a new Strategy 1.3 (Moving the remaining Strategies down one count): “Update Scenic Resource Overlay (SRO) mapping and view shed protection standards. This should incorporate the existing SRO district and be reviewed by the Environmental Commission with consultation with professional land trusts and with public input.”

Rationale: The discussion on including an updated SRO with a review of standards is essential. Where it appears in this Comp Plan should be left to staff. The second bullet point should be re-written as follows: “Reevaluate and amend where necessary standards for development location, density, intensity, and design within the NRO to reduce development footprints and minimize
impacts to native wildlife and their habitats.”
Rationale: Placing more emphasis on habitat protection is warranted. The third bullet point should be re-written as follows: “Evaluate and amend where necessary natural resource protection standards to increase protection of water bodies, wetlands, and riparian areas.”
Rationale: As now written, an amendment could also include weakening standards. This Strategy should direct the LDR’s to maintain current protection and where possible/necessary, to increase protection. The fourth bullet point should be re-written as follows: “Create or adopt a bestscience vegetation cover map of the county.”
Rationale: It may not be necessary for the Town or County to “create” a vegetative map if a scientifically defensible map is available from a government agency or private sources.
Strategy 1.3: Map natural hazard areas The three bullet points are adequate, but there should be a concluding statement (for each point or collectively) that directs the LDR’s to minimize these threats, set standards, including restrictions on development etc.
Rationale: As this now stands, it asks for data/information to be collected but neglects to direct that standards be included within the LDR’s.
Strategy 1.4: Amend Land Development Regulations and the zoning map This is clearly a ‘catch-all basket’ of concerns, all of which deserve more attention luded; than one-liners. Having said that, there should be at least one more item inc• Adopt standards for the recycling/disposal of items generated through re-development projects.
Rationale: We generate a great deal of refuse through our redevelopment projects and this will only increase as we do more infill and redevelopment both within the county and the town.
INDICATORS Number four should be re-written as follows: “Water quality and sediment loading in all waterways.”
Rationale: Clearly, every waterway in the county is subject to sediment loading, some naturally occurring but others not so. There should be at least five more indicators added:
• Acres of land rehabilitated to improve either or both wildlife value and scenic view sheds (In support of Policy 1.1.f).
• Population and distribution changes of the ‘Focal Species’
• Air quality
• Dark skies
• Noise pollution
Rationale: Rehabilitated land can be measured with the assistance of land trusts and county records. Focal Species data should be available from government agencies and
from information gathered through private/public partnerships such as the Nature Mapping effort now underway. Air quality data should also be available from existing monitoring efforts and where inadequate data exists, programs that will provide the necessary data should be explored, and when possible implemented. The last two points, noise and dark skies may be a challenge, however, listing them as Indicators respects their inclusions within the Policy section AND should encourage the incorporation of such information when monitoring techniques are available. The discussion of inconsistencies regarding the wording of access to public lands can be addressed in the Goal column of the Indicators section by adding: No net loss/ of authorized access points.

<td>9/11/09</td>
<td>Resor, Turner</td>
<td>Jackson Hole draws over 3 million tourists to the valley annually. People are drawn for a multitude of reasons and as a result Jackson has a unique opportunity to set new precedents, to show its visitors what a small tight knit community is capable of doing. Visitors are stunned by the valley’s scenery in the mountains, why not add to what they can experience visually in the town with the addition of public art works. Not only does public art make for a more enjoyable visual experience but it brings community members together - artists and builders, town employees and more abstract thinkers. The opportunity to bring public art to jackson is greater now than it has ever been since we are in the process of drafting a new comprehensive plan. Let’s act now and get some language that includes community and public art out on the streets for us all to enjoy.</td>
</tr>
<tr>
<td>9/11/09</td>
<td>Nocchiero, Peter</td>
<td>Public art is key to a town’s cultural significance and residential ambiance. For example, the giant blue bear at the Denver convention center is inspiring and tickle’s the soul. Jackson needs art like this. Do it.</td>

</table>
I’m Kristy Bruner, Jackson Hole Conservation Alliance. Thanks again for all your work on this. Tonight I’ll just provide a few brief comments on the topics that you’ll discuss. First, and then second, I want to be as brief as possible but I’d like to take some time to specifically address the need to incorporate Game & Fish comments in some of the earlier policies and principles you discussed. We feel it’s critical to revisit some of these policies since these important agency comments were not widely reviewed by all Commissioners prior to our discussion on these earlier principles. First, on principle 1.7 that you’ll discuss later tonight, to better describe the types of broader policies that are listed under this principle, we’re requesting modify like it currently reads to include the concept of responsible stewardship of public lands, not just access. And then if you read down on policy 1.7.A, the last sentence should actually be it’s own policy. It’s not directly related to the policy above it and it directly relates to responsible land stewardship. And then as part of that new policy, you can incorporate some of the Wyoming Game & Fish comments regarding responsible use. And a lot of that language tonight, there are too many specifics but just to give broad directions. Point nine of Game & Fish comments regarding disbursed recreation, they include some good language in their comments. It’s just that the cumulative effects of an expanding human population may well require an expansion of human needs restrictions to early and spatially, and it goes on in the next sentence. So, I would recommend that some of that language be an additional policy. In terms of strategies, it’s already been echoed, but I feel in the Wyoming document, if the community will plead that, the strategy number one to establish a dedicated funding source to acquire permanent open space for wildlife habitat protection, scenic vistas preservation, agriculture preservation. As we’ve stated before, in themes four and six, when you go look at their strategies, they list dedicated funding sources for housing, multimodal transportation, even though that was actually a less preferred over the conservation objective and it’s absent in theme one. So, please reinstate that. Regarding strategy 1.1, insert language under the Environmental Commission that should be sufficiently funded to carry out its duties, including high levels of Staff commitment. I mean, in short, the wildlife protection as the community’s top priority and our investment of resources should reflect this and the Plan should direct that. It would be good to insert another bullet point when describing the Commission, that the Commission should work with agencies and private citizens, including the Nature Mapping Program to acquire more comprehensive knowledge of the County’s wildlife resources. And to echo what Gregory mentioned, it seems...is there a way to propose that this Commission is established as soon as possible, because when you look at some of the tasks that they’re set to do, it would actually greatly benefit this process? So, it should be established now, or a timeline should be established so this Commission should be identified there. The same with strategy 1.2, a timeline should be established for these. We would ask that the NRO should be updated prior to a review and adoption period of detailed future land-use plan maps. And I would ask that a timeline is distinguished for an updated map specific to the current species of concern we have versus the other objective, which is to create another map including a broader scope of species. So just timelines for both of these. And for contacts ?? from Wyoming Game & Fish regarding their concerns about not using the most recent information. Strategy 1.4, perhaps add just a little bit of clarification, if possible, about the criteria by which the SRO will be remapped. Moving on to indicators, you know, the commitment to monitoring indicators is a welcome change in this Plan. It wasn’t in the ‘94 Plan, but we feel like in order for it to be effective, they have to be a right one. We agree with the County Planning Commission recommendation that Staff shall work with other agencies and organizations to develop a plan for these indicators. So what that means to me, specifics, we would just ask that you give direction to Staff to develop a better framework for monitoring indicators. These indicators should include wildlife population numbers and trends. There should be a column for baseline conditions. And then the group of these scientists, including agency employees and citizens, should identify this ?? and also in a way to make sure they can help us actually be able to monitor cumulative impacts. We want to make sure we’re identifying the ones we need to. With one part of that as a new component of this is I think it’s important to remember that the desire of the community is not to weigh and to monitor the impacts of land-use decisions, but it’s to prevent the impacts from occurring in the first place. So prevention of impacts whether the documentation of them is the ultimate goal. For this reason we would also ask...it’s also just to make sure the indicators have a very clear role in the writing and implementation of the Regs, that you direct incorporation of some more language to explain how monitoring will be translated in modifying the Land Development Regulations and directing changes in policy. For example, what happens when an indicator demonstrates a decline in wildlife population? In terms of land-use policy, what will be required to be changed? The Comp Plan should give some direction with that. Along incorporating some more specifics, in early discussions, Commissioner Chong mentioned the idea of a wildlife stewardship plan. The ?? of this idea was going to be revisited before you concluded ?? on theme one. We do feel it’s really important given the removal of a lot of the specific language that we already have in the ‘94 Plan, and as Wyoming Game & Fish summarized, that the Plan could include more specific language, data and mechanisms to provide the degree of stewardship outlined in the Plan reduction. So we would just like to see some discussion on that in terms of where it would be most effective to have our specifics. Not just too much or to provide too many specifics on the other recommendations that you’ve already made, but we do feel that it’s important to revisit some of the earlier policies just at the broader level with Wyoming Game & Fish comments in mind. Some just broad level ones. I’ll just mention some broad ones and will submit the rest of them in written form. Policy 1.1.A, Staff should reincorporate additional specific language regarding habitat and vegetation types. See Wyoming Game & Fish point four for a reference. Related to policy 1.1.B, which is monitor cumulative impacts, we appreciate the recognition of the need to
monitor cumulative impacts but also feel like there should be a policy that actually gets more at the targeted goal. So, we would recommend a policy that actually says reduce cumulative impacts. And as part of the overall under that you could reference a lot of the Wyoming Game & Fish language that talks about the amount of development impacts on wildlife as build-out levels are approached. I highly recommend an additional policy that’s very clear that we’re not just monitoring cumulative impacts, but we’re actually trying to reduce them. Also within this new policy, Staff could incorporate the concept of buffer zones and their function in lessening the indirect cumulative impacts. And that’s Game & Fish point six. Policy 1.1.B concerned that states repeatedly that impacts can be easily mitigated. We would like the language to be added that not all impacts can be mitigated and would ask that language be taken from the existing Plan that defines direct and indirect cumulative impacts, and that’s paragraph number seven on page 2 of our existing Plan, just pull that language directly. Policy 1.1.G regarding permeability, again, Wyoming Game & Fish has a lot of language that could be integrated into this policy to make it stronger and clearer. And there in section ??, it says many wildlife species can be found even in higher density areas and how remaining development directed the level and type of development allowed all determined by wildlife facilities that move through such areas. We ask that that language be put into that policy. Also part of this policy related to permeability, we would also like to see a much stronger focus on wildlife friendly fencing. It doesn’t have the emphasis that it deserves right now. Quickly, sorry, to wrap up, in terms of permeability, 1.1.G is very specific mostly to individual developments. It says permeability with development design. But the possibility to have another policy 1.1.H that would be broader policy related to transportation and habitat connectivity issues related to permeability where you could have clear language about wildlife crossings, travel speeds, goals to limit new road location and expansion, and other activities that relate to that. So, I’ll stop there. Thanks.
Recommendation #54 – Strongly support - “Throughout Theme 1 do not limit wildlife protection policies to implementation only in the Natural Resource Overlay”
Recommendation #71 – “Leave Policy 1.1.c as is” (Conserve large, contiguous, and open spaces)
  • Recommend improving Policy 1.1.c: at a minimum to add “connectivity between NRO areas” so it recognizes your recommendation #54. Specifically suggest rewriting/adding:
    o “Additional efforts are critically important to preserve open space that either lie within or provide connectivity between portions of the Natural Resource Overlay.”
  • STAG recommended: “The group agreed that connectivity of open space is important. Further explanation of what open space means and the importance of connectivity should be incorporated into this theme.”
Recommendation #93 – Strongly support – thank you for putting South Park back in this policy: “The County will support efforts of landowners and land trusts to permanently conserve intact parcels of land throughout the County.”
  • Suggest also encouraging other permanent open space protection, regardless of size, initiated by landowners and/or land trusts.
  • Teton Science Schools specific example of 3.5 acre Cody Creek.
Tonight’s discussion: Conclusion of Theme 1:
Recommendation - Making Open Space it’s Own Principle –
  • STAG recommended: “The group thought more emphasis should be placed on obtaining conservation easements to protect natural resources and open space by inserting it as its own principle.”
  • STAG further recommended: “The group agreed that connectivity of open space is important. Further explanation of what open space means and the importance of connectivity should be incorporated into this theme.”
  • Have staff add a principal that consolidates open space policies in 1.1, 1.5 and 1.6
    o The 1994 Plan focuses on the protection of open spaces for three primary functions: scenic preservation, agriculture and wildlife habitat protection
    o Expand with language from 1994 Comp Plan language related to Open Space.
Recommendation - Adding an Open Space Funding Goal –
  • May 14, 2009 - The Jackson Hole Land Trust recommended: “Creation of a permanent funding mechanism, such as proposed for affordable housing and transportation (both important but neither at the top of the list of goals for either the Plan or the community for the purchase of conservation easements...”
  • Add a policy under this new Open Space Principle (or in 1.1, 1.5 or 1.6) similar to other language from this draft used in the transportation and housing themes:
    o Policy: establish a permanent funding source for open space acquisition.
    o Strategy: Dedicate a seventh cent sales tax, additional mil property tax, or other funding source to the acquisition of permanent open space.
  • Taxing ourselves first for the acquisition of Open Space will leverage the enormous philanthropic potential that exists in this valley.
    o Personally TSS fundraising experience – “always start the big asks with the bake sale”
In the end - any and all funding strategies will take a public vote by the electorate to implement. Let the public decide to tax themselves to achieve broad community goals.
I am writing on behalf of no one but myself to comment on the possible expanded use of the “non-contiguous planned residential development” in the implementation of the pending comprehensive plan. Subsections 2460.A.4 and 4330.A.5 of the current Land Development Regulations already provide for PRD open space to be located on a parcel separate from the location of increased residential density provided by the PRD.

A major part of the current comprehensive plan proposal is devoted to a reduction of potential density in the Rural Areas, and increased density other areas of the County and Town. The risk in relying entirely on zoning to accomplish these goals is that, in the long run, the increased density recommended will be achieved, but the reduction in density will be reversed as economic and development pressures build. Zoning is always reversible.

It seems to me that the non-contiguous PRD is an excellent tool to accomplish both the density increases and reductions suggested in the pending plan. If the result of adoption of some version of the comprehensive plan is to recommend specified areas where increased density is recommended, and if actual increases in density can only be achieved through use of the non-contiguous PRD, the County can be assured that density increases will be offset by corresponding permanent density reductions in the Rural Areas.

An additional benefit to use of the non-contiguous PRD in this manner is that owners of land recommended for increased density do not receive a “windfall” when their land is rezoned: they must acquire offsetting open space from rural landowners before they can utilize the increased density. This is very like the requirement for affordable housing that is tied to re-zonings, and is compatible with current affordable housing requirements.

 Provision of affordable housing and open space protection are not, and should not be, mutually exclusive.

Furthermore, requiring that increased density be tied to open space protection through use of the non-contiguous PRD will also help offset some of the loss that rural landowners may suffer as a result of density reduction in the Rural Areas.

There are two keys to the successful use of the non-contiguous PRD for the purpose described above:

1. Allow no increase in density that is not paired with the preservation of open space in the Rural Areas.
2. Make permanent the reduction of Rural Area density that has resulted from increased density elsewhere with permanent conservation easements, as is presently the case with all PRDs.

There are several alternative means of dealing with existing Rural Area density:

1. Allow existing density to remain and create a market for this density outside of the Rural Areas by requiring that density increases be offset by permanent Rural Area reductions through use of the non-contiguous PRD.
2. Allow some existing Rural Area density to be used on the rural parcels to which such density currently pertains, but prohibit use of density in excess of such amounts except when “paired” with density increases in areas where density is planned through the non-contiguous PRD.

Elimination of, or substantial reductions in, Rural Area density by zoning alone will not ensure the long-term protection of the Rural Areas. For this reason any reduction in existing Rural Area density should allow such reductions, along with allowed Rural Area density, to be used to offset increased density in other parts of the County through the non-contiguous PRD.

Clearly the County believes that the non-contiguous PRD is a lawful zoning technique or it would not be part of the existing LDRs. I believe with very minor modification this existing tool could be made to facilitate desired density increases in a manner that ensures permanent reductions in Rural Area density.

For what it is worth, I have an extensive background in both planning and conservation easement law, including density transfer programs quite similar to (but more complex than) the non-contiguous PRD provisions of the LDRs.

I would be happy to discuss all of this with you at your convenience. Again, the contents of this letter has been neither authorized nor reviewed by any organization or person other than myself and should not be taken as representing anyone’s views but my own.
Page 17 the 2008 polling indicated that: and following verbage should be stricken. Generalities and conclusions that are stated are not necessarily accurate. Please consider eliminating the right hand side of the box. \[\text{Policy 1.1.b. Last sentence.} \]

This is not measurable, \[\text{behavioral best practices}\]

Verbage related to the cumulative effects of human impacts. \[\text{Policy 1.1.d. Private property rights.} \] What happens to these? Which is not what happens today. Numerous variances have been granted. Properties within the NRO should be consistently regulated. That is why a mapping of all habit needs to occur. Agricultural use alters landscape. \[\text{Will this no longer be allowed if in the NRO or similar defined area? Private property owner should still have some use of their land.} \] \[\text{Policy 1.1.e. Mitigation policy already exists in the County. The recent LDR requirements are so onerous that I challenge any Rural land owner to try and deal with them. Our current regs require in some cases that a land owner would have to purchase another piece of property, that needs mitigation, a permanent conservation easement must be placed on it and inspections and bonding are required to assure the mitigation is forever successful. How much more restrictive can one get? A list of disturbs properties that need and can be mitigated need to be listed and part of approved mitigation projects the land owners could fund that have the off site mitigation issues.} \[\text{Policy 1.1.f. Is this only on properties to be developed? Is this fair not to include existing developed properties? How can this be required? Can these areas be mapped and identified as areas for off site mitigation?} \]

What about ag uses? \[\text{Best management practices}\]

Be specific! Too vague! This would be interpreted by planning staff if so, not appropriate. The more you limit the rural areas the more property rights you are infringing on! An owner should retain some use of their land. Are you now saying ag uses are not exempted? How do you control trespassing, keeping livestock and horses in, protecting dangerous slopes from travel? Come up with a better wildlife friendly fence design that works with ag use. Maybe break away rails yet allowing the height to keep animals in? \[\text{Policy 1.6.c. is inconsistent with this policy.} \] \[\text{Policy 1.2.b. Best management Practices}\]

This again is not specific and clear. Don’t you mean to say new regs will be written. I have heard this terminology used at the planning office yet they can never give you a specific document to refer to. This is a way of manipulating the regulations in a very vague way.

\[\text{Policy 1.2.c. Why not just say Town and County will do baseline studies in various areas of Teton County so that any net loss of water quality can be mitigated.} \]

\[\text{Policy 1.2.d. Most roads are private. How can this be measured and who pays?} \]

\[\text{Policy 1.4.f. Some of the LDR’s with required mitigation are in direct conflict with wildfire mitigation} \]

\[\text{Sagebrush is extremely flammable yet the County requires this to be mitigated when removed for development. Bridger Teton and Grand Teton are doing prescribed burns of sagebrush to lessen the fire hazards.} \]

\[\text{Policy 1.5.a. This policy and the SRO LDR’s are poorly written and do not respect the construction that may occur at the bottom of a hill or butte that because of the road being recessed, a home can be classified as a home that skylines would} \]

\[\text{Bottom of south facing Bar Y Estates on W. Gros Ventre Butte. Numerous complaints were made to correct this error were made yet the language has never been change. I hope that this wording can be changed to reflect the true intent.} \]
Gregory Griffith, West Bank. For about four or five weeks now I’ve requested that we commit sending forth to the electeds very strong recommendations in regards to wildlife friendlier fencing standards. There’s been virtually no discussion on that, even though it was policy number six on the County’s list of recommendations. In some areas it’s the number one human cause of wildlife mortality, period, that’s away from roads, etc. It’s very important. And I really think we should adopt more stringent standards in regards to wildlife friendlier fencing and this is something that needs to be open to discussion. The Environmental Commission, I think it needs to be established now, even if it’s in an informal or ad hoc capacity, because we desperately need to be making future decisions on the best available science. The electeds could best use expertise on this committee prior to and during the deliberations, not afterwards. So, I think you have the power to make that recommendation, so that the electeds, when they get these proceedings before them, they have the ability to ask this Commission or this committee pertinent science-based questions. It would simply be more valuable now than later. I’d like to reiterate my request for an open space conservation easement PRD-type forum or workshop. The prime time would be to have it next week. I know that’s short notice but it’s a bridge theme between theme one and theme two. It ties into theme one and theme two in many ways. To obtain the best available information on the PRD, which will be a primary topic of discussion in theme two, managing growth, because it leaves so many units out there so to speak. I’d like to reiterate the call for a viable…for discussion about a viable open space funding source. I mean, this request has come from the Land Trust and the public at large. It’s reflected in polling, etc., etc. And it’s a discussion we need to have. Too often we spin our wheels talking about real estate transfer taxes, which are illegal unless voluntary. We spin our wheels talking about ?? taxes, 40 percent or more, and that’s to be used for promotion. We spin our wheels for ??, which are not going to be passed because of ?? tax. So, we kind of narrowed it down now and I’d at least like to have that discussion. Indicators, there’s fairly strong…I mean, I have a list of about 40 indicators. That’s probably something that would be better sent in written form, but on indicator number one on the last page, wildlife, it’s a conservation easement NRO-type balance of open space procurement. Some research I’ve done in the appendix indicates we’ve been successful in preserving over 37 percent of the SRO, but we’ve only been successful in preserving under 26 percent of the NRO. I really feel that, you know, habitat priorities should be emphasized in procurement of open space. And whether that ties into the funding source remains to be seen. I have a real problem with semantics on 1.1.G. I know Mr. ...sorry, Chairman Pruett indicated that he had that on his list, but I wanted to, since this is our last shot at theme one, the potential mischief so to speak...there’s enormous potential harm out there leaving except in 1.1.G instead of either. It permeates through the rest of the themes. That one word change could affect the entire Plan as we know it as far as wildlife permeability, etc. And the last problem I had is page 10, first paragraph, and page 14, last paragraph, the word tradeoffs. I really think that word should be removed. That also has a lot of potential for mischief and selective rationalized interpretations by electeds in the future. And we’re going for predictability and the word tradeoffs doesn’t always figure in predictability. Thanks.

Stronger language in 1.1.g

Strengthen 1.1.g language regarding transportation

Regarding Policy1.5 recommendation, I support the wording passed by the county....."and will be regulated" instead of the wording "and will be prevented as much as possible". The phrase "as much as possible" is far too vague. It will lead to compromises that undermine the intent of this policy.

Include all appropriate Game and Fish language into document
Mr. Chairman, Commissioners, Franz Camenzind, Jackson Hole resident. I’ll have some written comments in to you tomorrow and I won’t dwell too much on what we did last week, but there are a couple of points I’d like to go over with you and just indicate my reaction to them. I think where we were dealing with policy 1.5.F, establish Scenic Resource Overlay for qualifying areas of the County and the Town of Jackson, I think incorporating the Town into this, I think is important. There are many important viewpoints in the Town of Jackson, and I think that nearly every visitor that we have coming into Jackson Hole, spending some time in Town, I don’t think we should try to keep from them the view that’s here. This is, of course, call Jackson Hole, which means it’s in a valley and I think we should be able to see the mountains around us. So, I think having an SRO in the Town of Jackson I think would be important. Policy 1.6.A, conserve agriculture lands, I would suggest that the second sentence should be written as follows:

The County will support efforts of the landowners and Land Trust to permanently conserve all parcels of land being used for agricultural purposes and/or determined to have importance as open space, wildlife habitat and moving corridors by professional Land Trust or resource management agencies. The rationale there is we should not suggest to any landowner that their parcel is not worth putting into a conservation easement.

Conservation easements are done out between the landowner and the party that will take charge of that, and I don’t think we should ever indicate in this Comprehensive Plan that any lands that would fit both the landowner’s desire and the Land Trust’s desire. We should be encouraging this. It is, in fact, an investment in our future. So, I would take out the words large parcels, and I wouldn’t just emphasize agriculture. And again we went over this somewhat last week with Alex, I think ?? would really agree with that. All these lands in the County are important. Anything that’s being used as agriculture I think, if we can work with them to keep that in place, I think that would be a good move for not only our character, but our historic value and our scenic and wildlife areas. I do have a serious problem with 1.6.C. To me, this entire policy 1.6.C could be eliminated because it only really restates what’s in the principle itself. However, the last sentence, I am very serious about, must be removed because of its wording. And the wording is regulatory exemptions and allowances will be provided to ensure that continued operations of agriculture stewardship. When you put a sentence like that in there, will be provided, that basically negates all planning on rural land. Just about anybody who says I have agriculture land and I want to maintain that will be able to come into the Commission and say, I want an exemption, and this says they will get it. And that exemption could simply be I want to build ten homes on it without any conservation easement. To me, this provides an open door to non-planning on our agriculture lands. And I think I know what this is supposed to do. It’s supposed to encourage agriculture and the continuation of that and open space, but when you put that sentence in there, I think you negate so much of what you’re trying to do. Moving forward now to what will be discussed today. There are a number of things. In 1.7.A, provide recreation opportunities on private lands, I’m not sure about the entire sentence here, but I think it should be removed from this policy and perhaps placed at the end of policy 1.7.B, because it refers to the public aspect and this is private. I don’t know why this got put in there. But also additional public and private efforts will be made to prevent resource damage on private and public lands from harmful recreational activities. The rationale here is that recreational activities in this community are self-starters. Everybody’s coming up with new recreational activities. I don’t think we have to encourage new ones. I think what we need to do is protect our environment, both public and private lands, from the abuses that could occur with certain kinds of recreational activities. And I think this thing has to be reworded to do that. I don’t think we need to go out there and encourage recreational activities. They’re going to come to you. They’re going to come to land management agencies. So I think what we need to do in the County on private land is have a mechanism that says we can respond to that to try to protect private land interests and resources on there. Strategies in this section, now strategy 1.2, update Natural Resource Overlay, now here we can do I think either one of two things. We should either add Scenic Resource Overlay to this, but I think we might be better off just adding a new strategy 1.3 and dealing with the Scenic Resource Overlay as a separate issue. A lot of the same things will be coming into this, the same kind of wording, the same kind of input into determining what are our scenic resource values. I think we should go back to the ‘94 Plan and start with the scenic resource definition and description and map and work from that point. I think it would be cleaner to have it as a separate strategy. I’ll jump down to strategy 1.4, amend Land Development Regulations in the zoning map. I think we should add at least one thing here, one of the bullet points I guess, depending on how they’re designated, and the wording should be something in effect of adopt standards for the recycling and disposal of items generated with green building projects. That’s really not pointed out in here. A lot of development now is green development, tearing down older buildings and infilling and so forth. And I think there should be some recognition that we need to start looking at how we’re going to deal with these wastes. We call them waste but they are a resource and they should be looked at as a resource. So I think we should try to find some wording there that would highlight that. And then last year, when we get down to indicators, I think number four indicator, water quality and sediment loading, I think it should be rewritten. Water quality and sediment loading in all waterways. It’s not just Flat Creek. Now, I recognize that a lot of our waterways and sediment loading is a natural occurrence. But we do have other situations where it could be man-caused. So I don’t think we should be singling out just ??, I think it should be put off waterways. And last I think we should add at least three more indicators. The first one would be acres of land rehabilitated to improve either or both wildlife value and scenic vistas. Rehabilitation should be one of the what we’re looking for here in our new Comp Plan, not just protection but also rehabilitation where we can. We’re not mandating it anywhere. I think it should be an indicator, because we do talk about rehabilitating some of our?? Another one would be monitor
population and distribution changes in our indicator species, and I’m using the phrase indicator species. You all may adopt a new phrase for that. But the point is we have these species but no where is it stated in here that we should be monitoring and check what’s going on with them, probably on a yearly basis or certainly a five-year basis. And then the last one that should be added, or at least what I came up with so far, monitoring air quality. That’s not been designated very clearly in this document. It will give us a basis then to start adding. So, with that again I will try to get this to in written form tomorrow morning, and I apologize for going over the details here tonight but I hope it provides a little bit of direction. Thank you.
Rich Bloom, Teton County. <<inaudible>>. Speaking as an individual, one housekeeping piece for Staff. It’s a little bit hard to understand what’s going to get final vote, what’s got a straw vote, what’s coming up for a final vote or would be topical that evening. I assume you’re talking about theme one tonight, but in the future it might be helpful so we...especially if we choose to invite anybody here, you know, that maybe that policy will be voted on that evening or revisited that evening. A couple of things, and I do want to ?? 5000-feet level and a 2-foot level and I did bring a piece. I put some colors and I’ve got a couple of stories and I’ll try to be brief. I think you’ll will wait. I added green and blue. The first one is I guess just a story. I think when we work on this Plan, I would hope that we see parts of it be a vision and a possibility and a statement of ideals. I think we’ve been constrained in some of our discussions and I got <<inaudible>> last week where he walked out of the meeting and was a little bit negative on the possibility of finding a funding source for open space. And I guess the parallel I’d use is two things, one that occurred to me this week. I was invited over to the dedication ceremony for the new public school, which is gold LEED. I was an assistant member of the design group. Everybody said that would be impossible to be a partnership of that ?? gymnatorium or to get state funding of LEED certification. And that’s a concrete example that things can be done. Relative to this Plan, I’ve been making some comments through other venues and on page 65 under transportation strategy 6.3, they put in my ?? mail delivery as a goal. We’ll get to that when we get to that chapter. But I had to speak to that quite a few times. And it’s a small thing, but home mail delivery, as I found out, has a capture rate of over 5 percent over transportation ??, That’s equivalent to the whole START system. When I pursued home mail delivery for Highway 2 and Highway 22, nobody said we could get it there for my six homeowners up in ??, and they were able to do that. I've was appointed to the board of Melody now, on the board of directors, and we had discussed it for awhile and we started moving forward. And ?? was very direct that we would never achieve home mail delivery in Melody Ranch. It was an impossibility. The post office would not work with us. David ??, the developer’s representative, said in the PUD we were told not to ask for that and we would never get it. But the board went ahead and we pursued it with our management company and the post office has agreed to do home mail delivery at the ??. The board was then cynical that folks in the subdivision would not participate. So, we did mailing to all of them and we had overwhelming response without one person out of 350 homes wanting to participate. Some 50 people responded back to us, knowing that was going to cost money. Our mailing this month is to have a committee to look at the ??, The money’s been set aside; we have a commission; we have a commitment; and next spring we’ll have home mail delivery at our subdivision. So, as we’re looking at possibilities in this Plan, stretch goals, statement of ideals, please don’t limit yourselves. And I’ll come back to that. On a couple of items that I put forward here, 54 you know the feeling there about wildlife protected throughout. I wanted to come back to recommendation 71, leave policy 1.1.C as is with a recommendation. I guess I’d like to remind you that a lot of minds think alike. STAG recommended that the group agreed that connectivity of open spaces is important. A further explanation of what open space means and the importance of connectivity should be incorporated into this theme. So, I’m giving you the same language as I did last week, I’ve parted down. So, please put that in about...in that policy, adding not only the NRO but connectivity between portions of the NRO as a minimum. Recommendation 93 is similar to what Franz said, which had to do with a big thank you on 1.6.A about conserving. And, by the way, some of you were concerned that the public maybe didn’t get that South Park was back on the list the list, might not be, even though they were on the list, and the public gets that and they appreciate that. I hope they talked to you. But I would say, again, like Franz mentioned, encouraging all open space protection regardless of size. And my parallel to that is a year ago I was called back to the Science School to unwind the Indian Springs Ranch Equestrian Pool Center near Boiles Hill and to do a boundary lot adjustment, but as part of that we were able to get 3.5 acres of Cody Creek into permanent conservation easements. And 3.5 acres, it cost the School a fair amount of money to do that, move the boundary and to unwind that property, but it’s riparian, it has a lot of values and it’s about 630 acres of protected conservation easements. Across the street are 212 acres of conservation easements that the School owns on the other side of the highway. So, small parcels, maybe we can change the language there to along Franz’s line to encourage all land. Tonight’s discussion, I’ll go back to STAG about making open space it’s own principle, because it is all mixed up, scattered between 1.1 and 1.5 and 1.6. STAG recommended the group thought more emphasis should be placed on obtaining conservation easements to protect natural resources and open space by inserting it as it’s own principle. And STAG also went along and had further explanation of what open space means should be in here. So, I would strongly recommend that you have Staff just add a principle that either repeats or pulls out some of the policies in 1.1 and 1.5 and 1.6, that you also bring in some of the 1994 Plan, the provision chapter and the open space chapter that also broadens open space for that scenic, agricultural and wildlife values. And then the last general comment, and I’ll tell you another story to keep you awake, is most of you know that I worked at the Science School for a long time when they embarked on the second campaign, which turned out to be a $40 million capital campaign. I was mostly in charge of spending the money when in that position, building, but I was pretty familiar with doing apps. But in that, as we launched that campaign, the board first had to tax themselves before we went out. And of the 36 board members, every single one of them had to pledge money to the maximum of their ability until we were able to get actually eight million pledged. And they went to staff, 50 staff working at nonprofit wages, wanting 100 percent of staff commitment. All the staff signed on and that brought in another $100,000 in pledges. The graduate students in the ?? campus who were paying for the semester thought that was pretty cool. And every one of them, all 24, pledged money to the tune of five thousand to that campaign. Then we went out and did the apps. I

<td></td>
<td>personally was involved in a $25,000 app, a $50,000 one, and I did on my own go to a donor and do an app for $100,000 for the ?? property, on a project that’s on the campus. But the biggest one, I was sent out to revisit with ?? on the purchase and conversion of ?? Ranch. &lt;&lt;inaudible&gt;&gt; out there to ask this donor for $3.3 million and that was to close the deal. And when you have those conversations, the first thing they ask is have you taxed yourself. Have you contributed to this project? Do you have a strong vision? And will you take care of my money and use it wisely? Without that, we can’t close the deal. And we did close that deal. So, coming back to this on thinking big, thinking bold. They put up mailboxes in Melody Ranch this spring and the new red school that’s green. The Land Trust submitted comments May 14 about the creation of the permanent funding mechanism. It says to promote for affordable housing and transportation &lt;&lt;inaudible&gt;&gt; for either the Plan or the community for the purchase of conservation easements. I would add a policy under the new open space principle, or however you want Staff to structure that—let them do the work—but I’d fold the language what’s in the transportation and housing section, if there’s a policy about establishing a permanent funding source and then there’s a strategy that’s mentioned. And whatever you do throughout the document, you might want to be consistent. I think all these are actually possible. Including a real estate transfer tax. It just means going to the state and getting some changes, and ?? wife is the head of the state democratic committee, and I’ll be talking to her. But taxing ourselves first for the acquisition of open space will elaborate the enormous philanthropic potential that exists in the Valley. If we can get a real funding source going, the other money will flow with that. We saw that two weeks ago in Wilson where we taxed ourselves for Pathways. An anonymous donor came forth with a half a million dollars to build an underpass to the school. The County doesn’t really know what to do with offers like that, but hopefully they’ll find a way to say, great, let’s work it in and figure out the solution and see what maps we need. The last is with all these funding sources they’re always going to come back to the voters. They’re always going to go to the polls. So, there’s really no risk cause in the end the voters will either vote them up or down no matter what mechanism we find. So, I do feel very strongly about that. And thank you for your time.</td>

Hello, Gail Jensen. I just uploaded to the online site a few of the comments that I made last week in writing because they were kind of detailed and I’m sure you don’t want to listen to all the specific words I have initiated. So, those have been uploaded. And I just thought I’d just touch on a couple of the...just a couple of the same points I made before after you had discussed the best management practice wording, which I don’t know if you all had decided or have done a recommendation on how to deal with that. There was some discussion about that, but I strongly recommend that you not include that in this Comp Plan. I had a couple of very specific issues with that going through some applications this year and none of the best management practices written policies ever came to pass. I never saw anything in writing. It was a very vague and just was put in there or was approached from a flexibility standpoint so that some of the LDRs could be negated or some of the Master Plan wording could be negated in some of the applications. And I got extremely upset about that and I really feel this wording doesn’t belong in here unless you have specific LDRs. And why not put the specific comment back to the Regulations instead of some best management practices where nobody can find manuals or even tell you what they are. I just think it doesn’t belong in this document. And with regard to policy, or to recommendation 76, it’s with regard to policy 1.1.G and 1.1.H have or contradict each other actually. And it’s about ag uses. And it goes into a little best management practices, but it’s very vague and it’s saying that in one of them it’s saying that we’re going to respect ag uses and exempt them. And, similar to what Franz was saying, one of them says it’s going to exempt ag uses and the other one indicates another direction. And part of this goes into my feeling about fencing, too. And we all would like the all wildlife friendly fencing, but if you look at the LDRs, the wildlife friendly fencing isn’t compatible with ag uses. So, why don’t we design a wildlife friendly fence that is compatible with ag uses? Then you can get rid of this exemption stuff. It’s all about the height and for some reason and some of the people have been designing ?? or something like that. So, you know, if you could change the LDR, making it exempt, you could get rid of the exemption for ag uses, but you can’t do it unless you come up with a better description of wildlife friendly fencing because it just doesn’t work for keeping horses and livestock in. And that’s kind of a disconnect with that this whole fencing thing. So, I don’t know if you can work something in connecting it with a description of wildlife friendly fencing that also works with ag uses and put that as some sort of policy in there. Maybe that would solve a lot of those fencing issues. Let’s see, in recommendation 81, policy 1.2.C, why not just say that the Town and County will do a baseline studies in various areas of Teton County, so that any net loss of water quality will be mitigated? And just, you know, have a strong policy on that if there is. Set the baseline, do studies and just make sure that we don’t regress. I mean, it would be nice to improve water quality but at least not regress. And recommendation 82, I think this has to do with...I don’t have it right in front of me, but I think it has do with dusty roads. Well, most of our roads are ??, so I’m kind of confused with this one. Is this saying that we’re going to require that all private roads be paved or that all of them have to do the dust ??? I mean, it’s a...I don’t know, I have a little problem with the way it’s worded. I mean, it would be nice but I don’t see that you’re going to be able to require to go back to private roads and require that they do real expensive pavement or improvements on them. Policy 1.4.F, some of the LDRs, and I know we’re talking Comp Plan, but his kind of goes with required mitigation for vegetation. A lot of the LDR does not...it conflicts with wildfire mitigation for controlling wildfires. For instance, sagebrush is extremely flammable. Grand Teton National Park and the Forest Service are both doing prescribed burns to get rid of sagebrush and that. And yet the LDRs and the mitigation, the vegetation, they’re protecting sagebrush. So, you know, what is it? These seem to be in contradiction to each other. And policy 84, or, excuse me, recommendation 84, policy 1.5.A, this has...you wrote a recommendation as far as skylining goes. And the ‘94 Plan never was corrected for a proper definition of what skylining is. My...the home I built and lived in for 30 years at the very bottom of West Gros Ventre View meets the definition of skylining. And does this because the Highway 22 is sunken down and was dug down into the hill. And so every single house at the bottom of West Gros Ventre View, along Highway 22, meets the definition of skylining. And we were promised that it would be corrected and it never was. And the Regulation still reads the same. And your wording here is a lot better because it says hilltops, but it doesn’t say that in the LDRs. So, you’ve got be a little careful when you want to add in SRO to Town and to various areas, that you write the proper definition. It depends on how the road height is and you can look at the rough, and the old definition was if you can see the sky, any blue sky behind the rough, then it skylines. So, you might do little exercises. You might drive around the County or Town and you look. A lot of places skyline that are in Town, that are flat as can be and, you know, the definition needs to be worked on, so that it really is hilltops and ??.. Anyway, those are my comments, and I went ahead and put them online so they’re there now. Thank you.

<td>Acri, Armond</td>
<td>Armond Acri, representing Saving Historic Jackson Hole. A couple of brief comments. One, this was in my written comments, but I think it’s important and I’ll bring it up again real quickly. For the Environmental Commission, consider at least maybe two non-professionals in there. I think there would be some benefit in having some diversity and not having it limited to just professionals. Also consider using citizen scientists for updating the NRO. I think ?? at Wildlife Mapping is a good example of something where you can leverage from the public and not spend a lot of money doing that. A quick comment on the best management practices. I think Gail talked about that. I think the only way that is going to work is if you specify a goal I think tied to a specific practice and recognize that it’s going to need revision periodically, because best management practices means just that, that as things go along and evolve, you come up with better practices. So, recognize, if you do go that route, it’s going to require revision. I do support wildlife friendly fencing. And one last suggestion on the indicators, I think there would be some benefit to using a rolling average of some of those things, rather than taking a yearly data point, because some of those data points are going to be up and down, especially… a good example would be the conservation easements. One year you might get a big easement and you’re going to look stellar, and then the next year, because those things tend to come in, you know, drips and drabs, or a big-hit homerun, and then the next year, you go to bat. So, I think a rolling average will probably give you a little bit more meaningful information. And look at that &lt;&lt;inaudible&gt;&gt;. Thank you.</td>

<td>I was in the audience last evening as you were hard at work hammering out wording for the Comp Plan, most specifically, the Dark Skies segment. I wanted to get up to the microphone and say : ) .... Dark Skies does not necessarily mean NO light .. it means limited light, BUT what IS used should cast it's light DOWN and not OUT or UP! That is accomplished by using &quot;can&quot; lighting on homes, and guards such as the newest lighting exhibits. The newer lamps cover the source of the light, so it shines down only and not out. One should not see the source of the light. It's the old &quot;You don't need to light up your neighbor's back yard to see your back steps.&quot; You may visit darksky.org (International Dark-Sky Association) to see examples and definitions. I am delighted that that section will be in the comp plan .. My first &quot;nomination&quot; for correction is Flat Creek Motel! I can see those lights from the other side of the Refuge!</td>
</tr>
<tr>
<td>9/8/2009</td>
<td>Prayzich, Elise</td>
<td>Thank you so much for changing the wording in 1.6(a) to read ... “support efforts of landowners and land trusts to permanently conserve large intact parcels of land throughout Teton County.” We are impressed with your willingness to incorporate this information, received during public comment, into the revised Comp Plan! We look fwd to when the document is completed and sent to our Mayor and Council and the County Commissioners for final adoption, that they will follow the joint planning commission’s recommendation and not unwind this statement affirming South Park’s value - and value of all large, open parcels. Again, thank you for your tireless work to get the planning document for the Town and County right - instead of quickly done!!</td>
</tr>
<tr>
<td>9/6/2009</td>
<td>Jerger, Karen</td>
<td>“Dear Commissioners: I attended the Comp. Plan meeting on 9/3, and want you to know that I appreciated your attention to public comment, and the discussion that followed. I was pleased with your decision to leave out specific area references when acknowledging the importance of open space, scenic vistas, agricultural activity, and wildlife habitat and travel corridors. This was a better solution than the initial proposal to re-insert South Park into the text. Thanks again for all of the thought and work that you are putting into this important effort. Sincerely, Karen Jerger”</td>

Previous straw votes:
Recommendation #54 – We strongly support - “Throughout Theme 1 do not limit wildlife protection policies to implementation only in the Natural Resource Overlay”
Recommendation #71 – “Leave Policy 1.1.c as is” (Conserve large, contiguous, and open spaces)

- We recommend improving Policy 1.1.c: at a minimum to add “connectivity between NRO areas” so it recognizes your recommendation #54. Specifically we suggest rewriting/adding:
  - “Additional efforts are critically important to preserve open space that either lie within or provide connectivity between portions of the Natural Resource Overlay.”

- Further we suggest the following changes to Policy 1.1c (Conserve large, contiguous, and connected open spaces) to recognize you recommendation #54.
  - “Large and contiguous open spaces of habitat are the most valuable to wildlife because they protect connectivity between crucial areas, enable migration and reduce human conflict. Private efforts have been successful in permanently preserving some of these strategic lands. Continued public, private and cooperative efforts are critical to conserving open space, particularly with the Natural Resource Overlay. Continued public, private and cooperative open space acquisition efforts for the purposes of wildlife protection, scenic vistas preservation and agriculture, should be encouraged. Additional efforts are critically important to preserve open space that either lie within or provide connectivity between portions of the Natural Resource Overlay.”

Tonight’s discussion: Open Space Conservation Strategies, South Park:

- This plan must encourage the continued acquisition of permanent conservation of large, contiguous open spaces in order to uphold the community’s top priorities of both wildlife and open space. Open space conservation, for the purposes of wildlife protection, scenic vistas preservation and agriculture, should be encouraged and not be limited to the narrowly defined NRO. The 1994 Plan focused on the protection of open spaces for three primary functions: scenic preservation, agriculture and wildlife habitat protection.

- Expand with language from 1994 Comp Plan language related to Open Space.
  Policy 1.6.a: Conserve agricultural lands and agriculture throughout Teton County: “The County will support efforts of landowners and land trusts to permanently conserve large intact parcels of land and to continue farming in South Park, Alta, Buffalo Valley, the Gros Ventre area, Spring Gulch, and south Fall Creek Road.”

- Add South Park to this list.
  - South Park is first on the list in the section of our current legally binding 1994 Comp Plan. The new language inadvertently strips South Park of such protection, implying that the entirety of the South Park district does not deserve conservation and directly unwinding the protection in our existing plan. Whether a node is or is not included on one very small portion of the South Park region – as in the 1994 plan, the greater South Park area should be prioritized for conservation.

- Expand in this section Principle 1.6 (Conserve remaining agricultural resources), under Principle 1.5 (Maintain the scenic resources of the area), and under Principle 1.1 – (Maintain healthy populations of all native species) by utilizing some form of the 1994 Plan expanded language which focuses on the protection of open spaces for three primary functions: wildlife protection, scenic vistas preservation and agriculture.
  - Recommended using some form of the following language from our current 1994 plan within Principles 1.1, 1.5 and 1.6:

  “These are lands on which ranching should continue, wildlife habitat preserved, and the visual qualities of scenic vistas protected. These areas should be kept free of development to the maximum extent possible to help preserve rural character, critical wildlife habitat and important image-setting
scenic vistas and river corridors, and to encourage the continuation of ranching and other types of traditional agriculture as a vital part of the community's character. The County should encourage the preservation of the rural character, critical wildlife habitat and important image-setting scenic vistas and corridors, and encourage the continuation of ranching and other types of traditional agriculture as a vital part of the community character. Where possible, the County should be flexible with its development regulations as an encouragement to landowners to permanently protect these wildlife, scenic and agricultural areas. In addition, where nonregulatory options are available, these should be encouraged.

I feel very strongly that wildlife permeability MUST be protected in ALL areas. Writing off wildlife in the county nodes is unacceptable and clearly will cause harm to the existing wildlife populations, year round or seasonal. Therefore, the preliminary recommendation on policy 1.1.g, "do not except any areas from policy" should be made a final recommendation. On policy 1.1.f, the recommendation to change 'support' to 'require' should be enacted. This definitely should be made a requirement. The concept of mere support is not strong enough. The changes to the wording of paragraph 1, Theme 1, that was passed by the county and not passed by the town, are infinitely preferable to the original wording. That recommended new wording is more precise and a far more accurate statement of the community's desires and intentions. I strongly urge that this change be made in spite of the fact that the town planning commissioners did not pass it.
Hello, Gail Jensen. I tried to make my comments based on the recommendations that you had formally passed last week, which I’m sorry I wasn’t here to listen to those, so I’m giving you comment on what I’ve read. And generally I’ve got some pretty specific things and I don’t know if you want to hear them now or you’d rather look at them online. Some I think you’re voting on this tonight, correct? Okay, well, I’ll try to make them a little bit more general because I have these things written out and it might take a little period of time. But, generally, you know, quite a few of your changes and comments and recommendations were pretty good; however, what I saw consistent failure was to respect private property rights and the acknowledgement that right now developing, for instance, a 35-acre piece is extremely, extremely difficult and very restrictive already. And it seemed like a lot of the recommendations was going to be restricting it even more, which I have just helped a landowner with a project and it took almost two years to put it through. And they didn’t ask for one variance, nothing. And it took almost two years to get it through the process. And a lot of the process was written with innuendos and not based on the LDRs either. It was extremely upsetting to the landowner, who has owned the property since 1918, and they are still wrestling with the anger of what went on. And so I would caution you to be extremely careful and respect the private property rights, because if you don’t really think hard about it, it’s going to be a litigious period of time for the County coming up, if you aren’t a little more thoughtful and careful in what you do. And something a little bit…and I won’t go into complete specifics on it, but the mitigation part of our Regulations, and you touch on this in the Comp Plan, and saying…it’s almost written like you don’t have mitigation or vegetation mitigation. There is an extremely very difficult Regulation in place that…and landowners can’t even comply with in a lot of cases where they are required to buy purchase property that they don’t...outside of their ownership in order to mitigate something, and there aren’t options. I mean, the values are so extreme in Teton County for purchasing land, it just makes it impossible. And you really need to think about what you’re doing in trying to tighten up some of these things, because I think they’re so tight already that it’s impossible to deal with. And these mitigation rates for vegetation and these changes have just happened in the last two years. So, they haven’t been tested and there haven’t been a lot of people that have had to go through this. And when you really read the Regulations, it is unbelievable. You will not believe it if you really understand what one would have to go through. The other thing that bothered me generally in a number of the policies is the wording best management practices. What does that mean? Does that mean the Planning Staff sets the Regulation? What does that mean? I’ve heard that a number of times when I’ve been dealing with some complaints through the Planning Office on some Regulations, and they come up with this wording, but they can’t give you any written policy. I’m upset about this wording, because there are no written policies to back these best management practices up. They pull these things out of the air, out of the sky, and you have no idea where they came from. So, I would avoid that terminology in the Comp Plan. It’s not specific enough and it doesn’t direct any very specific policy. So, if you could please look at eliminating, or changing the wording wherever it is—it’s in about three or four of the policies. I’d appreciate it if you’d consider that. Let’s see, my other comment, and I don’t know if you’ve discussed this yet, but on the Wildlife Commission, I feel that the structure of that Commission should be kind of a mixture of scientists, of people from the public, some of the Wildlife Foundations, and a contributing interest of Game & Fish. I think it should…any kind of recommendations, they should try and produce specific and current data to back up any recommendations. And that’s where it should be more of a research type of Commission, instead of a policy-setting Commission, because I feel that policies should be set by the electeds. And so this should be kind of a gathering-information Commission, rather than a Commission that’s trying to dictate policy. I did have some…I have some good comments. I liked your wording in 70, in recommendation 70, which is why this is theme addressed. And one more thing that I really did take issue with, on page 17, in the box, it says, what the community has said about this theme. The second column 2008 polling indicated that, and I took offense to this, because it was drawn, this whole side of the box was drawing conclusions that I don’t think are necessarily accurate from the polling. I think it was…I don’t know where some of these comments came from and I don’t think some of the numbers even support them. And I would suggest that we leave out that whole side of the box. So, the left-hand side was all right; the right-hand side I thought drew some conclusions that I don’t think are supported. And one comment about the presentation that we just heard. Being a real estate broker for many years here, I understand the whole concept of transferring development rights and doing the conservation easements, but as our values have gotten so skewed and so extensive, I find it very difficult to make the math work between the non-connected PRD, non-contiguous, I guess it’s called, PRD and also transferring development rights. I find that the value of these 35-acre rural parcels are the rural areas that’s gotten so valuable where people coming in that want to purchase them that I don’t know how you’re going to make the numbers work with transferring that to no development. I just don’t see how it can work with the numbers. So, those would be my comments. Thank you.

| 9/3/2009| Hansen, Paul       | We’re happy to see some positive steps in the right direction. For purposes of efficiency, we will not reiterate all the comments that we have already submitted in written form on July 30 regarding theme one. In that correspondence we raised a number of questions, and provided a number of recommendations, that we hope you will consider in your discussions on this theme. With regard to the recommendations you made last week, we will submit specific comments and suggestions in written form prior to the hearing at which you will take final votes. We do this also because we anticipate that there will still be a two week time period between when you finish discussing theme one and when you take final votes, allowing the public to submit written comments in time to be included as part of your staff report. So, tonight, I’d primarily like to simply provide a few comments on broader level issues that we hope you’ll consider as you finish the first round of theme one recommendations. **Wyoming Game & Fish** The first regards the Wyoming Game and Fish comments released earlier this summer. In our written comments, we repeatedly referred to their comments and we urge you to direct the incorporation of the many issues they raised into the new plan. Given the lack of reference to them to date in your recommendations on theme one, and the hope that they will be considered more specifically tonight, we anticipate that you will make some additions/changes to the principles/policies you already discussed to better incorporate their suggestions. We feel that Wyoming Game and Fish raised some fundamental issues that must be addressed and did an excellent job articulating the importance of using available science to inform policy decisions. **Principle 1.1** As I mentioned earlier, we will submit comments specific to the initial recommendations you already made in written form, but right now we’d just like to make the broad comment that policies under principle 1.1 need more work. For example, regarding recommendations 71 and 72 to leave policies 1.1c and 1.1d as is, we disagree, and feel that policies should be strengthened. Commissioners that voted against this, for purposes of either including specific language about conservation easements or strengthening the level of priority for permanent protection of open spaces, made excellent points, and we hope that you will reconsider your votes on these policies. As we stated in written comments, policy 1.1c (regarding conservation of large, contiguous and connected spaces) should include stronger language and play a larger role in the plan. This topic gets to the clearest departure from the 1994 Plan’s fundamental objective to protect “rural character” (which by definition directs that significant amounts of open space should be protected.) In the 1994 Plan, rural character preservation was a fundamental objective to protect wildlife habitat, scenic vistas and agriculture. This plan should carry on that objective; to date, it doesn’t far enough. Moving on to issues that you will likely discuss this evening…we have a few brief comments: **Principle 1.5** We appreciate “scenic vistas” being added to the title of this theme. In general, this section should include more specifics about desired scenic policy. (Referring to the 1994 Plan chapter, which we submitted alongside our written comments, is a good starting point.)
Comment

Right now, what’s listed as an objective under strategy 1.4 “to evaluate and remap based on changes in scenic policy” is too vague. What are these “changes”? This section, principle 1.5, should include a map of the SRO. Also, as we have raised with other issues, why are we removing so much of the specificity and clear guidance about scenic vistas preservation that we already have in our existing plan?

Principle 1.6
At a minimum, those geographic areas called out as targets for preservation in the 1994 Plan, should remain so in the new plan. (In this section, the obvious omission is the South Park region. If geographic areas are called out, this should be reinstated as a priority for conservation. Given all the community benefits that accompany open space protection, we feel that permanent conservation of large parcels of land should be encouraged whenever and wherever possible.)

Principle 1.7
To be brief, we simply ask that you refer to Wyoming Game and Fish comments regarding cumulative impacts of human activities and their specific discussion on dispersed recreation.

Beyond existing principles and identified policies...

To be objective, a “least growth” policy is appropriate in the wildlife theme, to clearly acknowledge the links between the amount of human-related development and activities and potential impacts on wildlife. Without recognizing the linkage clearly, regulations are not likely to address this critical issue. (It could be logically incorporated more clearly in principle 1.1.)

Indicators
We agree with the recommendation that staff should work with other agencies and organizations to develop a plan for indicators. Perhaps existing collaborative groups, including some members of the Technical Advisory Group, could work on focused task forces to come up with the best indicators for each theme. A Task Force could begin work now to identify indicators, including some that we have baseline data, to be ready for review at the end of your final recommendations on the entire plan.

As for indicators, and to always keep in mind with this plan – the community’s wish is not to simply wait and monitor the impacts of our decisions – it is to prevent irreparable degradation from occurring in the first place.
9/3/2009 Hiddleson, Marv

Interested Public

Yeah, my name is Marv Hiddleson. I live in South Park. Actually, I’m a neighbor of Rich’s. I want to just comment on my overall impression of the presentation. It all premised on the fact that, as I think Laurie said, landowners who wish to protect the land. And God bless ‘em. I mean, my family, my grandfather was born in Freedom in ’88, ’89, I mean, where I went to law school. I was a Future Farmer of America. But I’m a member of ?? . And so what my concern is, as I listen to this… I also have a Planning Commission background in our cities and the like, so I’m attuned to this and I did a lot of land-use work in California and I’ve had developers in the plan, so I think I understand what’s going on. And so you have to anticipate people like most of my former clients who don’t wish to protect the land. And so I’m just saying we’re in a dilemma, and God bless anybody who wants to protect the land and who would grant conservation easements, although I’m not really aware of a lot of conservation easements that they’ve granted in South Park. And I really wonder why. We’ve have all these tools, there’s been a lot of great work done to get conservation easements, but somebody needs to ?? in South Park. And what’s concerning me as I see this whole process is, you know, transfer, density rights or non-contiguous PRDs, well, you have to put the density somewhere. And what is making me nervous is that South Park is not, at least up to a lot of the point in the Comprehensive Plan the discussion in the works, viewed as really worth being protected. And so it’s sort of a dumping ground for density is how I read it. And that can’t be because we’ve heard so much about how valuable the South Park area is to the greater Jackson environment. It’s ?? . You drive in the from the gateway coming from the south, it’s just as important as the gateway coming from the north. The gateway coming in on Highway 22. I can understand there’s a lot of conservation easements that have landed in that area. And that’s why it looks so beautiful. So, we’ve got to work out tools to preserve this. And just to really be smart. If we do continue to use non-contiguous PRDs, the key is, as I think Rich said, where you put the density. <<<inaudible>>. Also, you know, we had this Tetons Meadows battle. I mean, that would have been a beautiful area to have had somebody grant a conservation easement, but nobody did. So, you have these bonus density tools and it’s a two-edged sword. The good guys can utilize them to help their families and realize on their land, but the bad guys can do a Tetons Meadows. And so how do you prevent that? How do you have the tool sort of just produce for people who want to protect their land and not people who basically want to destroy the land? And then I also want to just finish by saying, you know, there are no guarantees at all in life. And Brad was saying how there’s no assurance through zoning that there can be protection. Well, actually, there’s no assurance you can even do it through conservation easements. Hell, there have been condemnation of conservation easements in the past. So, I mean, nothing is for sure. But I wouldn’t get overly carried away. I think we can do a real good job with zoning. And I hope we can work out some scheme where the ranchers and those who wish to protect the land can utilize these things. But I surely am worried that if we don’t have some type of control, people who do not wish to protect the land can wreck havoc on the land. Thank you.

9/3/2009 Heilleson, Marv and Juli

Interested Public

We sincerely hope the two commissions will respond to the views expressed by the public and amend the Plan to preserve the scenic, wildlife and historical/agricultural values of South Park. The current Plan recognizes the importance of South Park to the overall environment of Jackson Hole, and no compelling reasons have been established why this should change — in fact just the opposite. The visitors and residents of the valley, and certainly the wildlife dependent on it, recognize that the Park, the town and all the surrounding neighborhoods are part of a unified ecosystem and scenic landscape. Please modify Theme 1 and Policy 1.6 accordingly. Present and future generations will be eternally grateful to you.

9/3/2009

Interested Public

I’m Denise ?? from East Jackson. And I want to first thank these two bodies for their mammoth undertaking here in revising this Comp Plan. It’s going to be long and time consuming and we appreciate your efforts. I also appreciate your efforts of realizing that you need to include wildlife and open space in every portion of this Comp Plan, not just in one place. So I thank you. I would like to also support putting South Park back into the 1.6.A. That’s an area that certainly needs protection. And I would urge you to also keep in mind that focus on wildlife, connectivity and agriculture values as well. That’s all. Thank you very much.

9/3/2009 Scheznie, Esquesene

Interested Public

I’m Esquene Scheznie. <<<inaudible>>. And I’m interested in knowing, this is sort of new, how many acres of conservation easement <<<inaudible>> in 2009 ?? compared to 2008? And under the options you have now for conservation easements, how does it look for the future?

<td>9/3/09</td>
<td>Harger, Don</td>
<td>In your discussions on our new Comprehensive Plan, please keep in mind what makes our area so special: wildlife, open space and the uncrowded feeling of a small, connected community! Most communities with these values lose them within a generation because of growth pressures and an absence of sound long-range planning. As you are well aware, our resources are not inexhaustable and can disappear in the relative blink of an eye. Breckenridge, Aspen and Vale are excellent examples of what can happen to our special valley. Elk Ridge, North Carolina no longer has elk and the last sighting of a grizzly bear in the Los Angeles area was in 1903.</td>
</tr>
<tr>
<td>9/3/09</td>
<td>Tompkins, Kathy</td>
<td>I am Kathy Tompkins of Cottonwood Park. Let me say again how much we appreciate the time and effort you are putting in to achieve a workable comprehensive plan that benefits wildlife and defined human needs. I am a small property owner in Cottonwood Park. I can vacuum my whole house from one outlet. I don't need a slew of house cleaners, landscapers, nannies or personal assistants. I do all the above. I take pride in taking care of my small home and sharing what I grow in my garden. There are two things I do need help with though; property taxes and property rights. My property taxes have gone up over a thousand dollars in the last year. With all the new services needed in the future because of the large increases in residential and commercial development in the new draft comprehensive plan, I am afraid I will be taxed right out of the valley when my husband and I retire. I am also concerned that only the property rights of the large landowners are going to be respected in the new comprehensive plan. Even though our homes are modest, Cottonwood Park stands together as a community and as property owners we have rights too. By protecting wildlife and open space in all of South Park we will be protecting the reasons why we work so hard to stay in this valley. We are not &quot;no growthers&quot;! South Park must be put back at the top of the list when it comes to protecting wildlife and open spaces. This will then guide and help us properly plan how much and what kind of development will happen in the NW corner of South Park after infill in town has been completed. We need to keep the base development rights that exist now without density bonuses. Both protection of wildlife and open spaces and managing growth by limiting growth are needed for South Park. They are inseparable. One without the other will result in failure of any new plan. On the subject of managing growth, all too often the small homeowner is left to fend for him or herself to protect their property and its value. We are shuffled between town officials, police and our home owners associations when we alert them that our neighborhoods are deteriorating from overcrowded homes that are being used as boarding houses and employee dormitories. We need to attend to this problem or we will find our most precious commodity, working families, being exported to areas outside the valley. The town of Jackson will be then known for its boarding houses and the problems they bring with them. This does not mean building thousands of new homes. This will only lead to abandoning the older neighborhoods and supports what we don't want; growing our way out of our growth problems. We need to manage what we have by working together. That means town government, employers, homeowners associations, and especially landlords and rental management agencies. The burden to protect a neighborhood falls on the shoulders of the small property owner who lives in his or her home; while absent landlords and rental management companies profit from encouraging over crowded single family rentals by looking the other way. Employers need to help more by housing their employees on or near their job site. We should be mindful of the unintended consequences that unchecked growth resulting in over crowded rentals has on the single family neighborhood however you define a family; whether they are straight or gay couples, unmarried couples with or without children or the traditionally defined family. However we achieve it we cannot afford to have a laissez faire, not my problem attitude toward the small property owner. If you want to preserve community character and make a revised comprehensive plan work, it starts with protecting wildlife and open spaces, managing growth by limiting growth and last but most important, stabilizing and protecting our family neighborhoods. Without them we are just another spot on the map.</td>
</tr>
</tbody>
</table>
Gregory Griffith, West Bank. I have a lot to say here; it’s going to be long. I guess I’ll start out with due reference to the forum you have here about open space. I think we should have a dedicated forum about open space like a workshop where you could get more information. I find it troubling that the Land Trust, and believe me I love the Land Trust, can’t come up with more concrete data on where that PRD should be based on historic uses patterns current utilization rates, etc., etc. I’ve heard in previous forums that only 12 percent of the land we preserve is a direct result of a PRD. I’ll defer to Mrs. Andrews. It’s actually in a recent newspaper article, about 2300 acres. Mr. Resor at the workshop echoed this forum. So, I have a problem with concentrating so much of our dialog in a way, the discourse on something that has proven 88 percent inefficient in the past. There has to be a PRD, obviously. But we need to focus this number down, where it’s going to be. We’re going to be running out of time for you to provide that recommendation to the electeds, etc., on where that should be. We should just have a knock down drag out about what the number should be and send forth that recommendation. Primarily because it’s almost all a matter of the negative impacts and the effects of unintended consequences are lower and lower base number. And this PRD, as is currently written, maybe not down to the three but somewhere in between, leaves too much discretion to our elected and that hasn’t proven ?? I’d like to… I’m very sympathetic to the agriculturists and families and ranching families. Whether you acquired your land nepotismly it doesn’t matter. You only hold onto it by the sweat of your brow. I grew up working the land also. So, if we could even find out a way to ID viable ranches and have maybe a different rate for those ranchers, maybe that’s something to consider when we move forward with the PRD. Because as people so eloquently stated here, Mr. Wilson and Mr. Meade, the agriculturists historically have been disproportionately responsible for our open space. And we need to recognize that and maybe maintain that going forward. If we do it in viable properties, it doesn’t lead to opportunity to selectively interpret development applications. It may or may not be, you know, of benefit to the community. As far as the TDRs go, a little bit of research reveals and the way it’s currently written into the Plan more or less, it requires up zones. It requires entity uptakes. It’s probably not the best Plan. I would like to propose right now that we put our money where our mouth is in this community. Mr. Hansen touched on it. A polling data, was it 77.8 percent in one poll for, and 13.8 against having an additive tax, two hundred bucks a year ?? If we propose a six cents non-additive tax at a 70 percent procurement for open space and 30 percent for affordable housing, it’s something we’ll probably get through. I doubt Mrs. Christine Walker would turn down three and a half million dollars a year, and I doubt Mrs. Andrews would turn down six and a half million dollars a year, especially since the unbelievably successful campaign for the Valley generated twenty-six million in four years. That’s six and a half million dollars a year. And it makes one unbelievable ??, 1200 acres of targeted high-value habitat. I think that’s it. Again, I’d really like to see an open space forum. Mr. Resor, I mean, Mrs. Andrews, Mr. Meade, Mr. Wilson, you have so many large land owners. If we could do it in a more relaxed fashion with that as the only topic for the night to extract maximum information. I think that’s ?? As far as the wildlife you’ve discussed so far, I’d like to echo several speakers. Since policy 1.6.A, open space and wildlife habitat, connectivity, scenic value in South Park. It needs to be re-added. I’d like to say in going forward as we’re going through this process, keep in mind as we move out of theme one that the largest impacts of theme one will occur in theme two. So let’s keep this wildlife and conservation and community character and quality of life focused moving forward. Theme two will have the most impact on theme one. Environmental Commission, great addition. Strategy 1.1, I think we should convene it now, even if it’s ad hoc. Convene it now. We’re making decisions in a vacuum of information on wildlife. The expertise is here. It doesn’t have to be a formation of a committee, but let’s start extracting information. We’ve got people here that are world class sitting in this room right now. You know who I’m talking about. We can engage the Wildlife Foundation, the Alliance, Fish & Game, Park, everyone. Let’s get on it; it’s important. Again, I’d like to reiterate that on page 1 the very first table, what is a Comprehensive Plan, does not list wildlife. That’s a, you know, in a lot of ways this Plan in some ways is being adjusted with a scalpel and a pair of tweezers, and we should adjust it with a machete and sledge hammer. But that’s one area where semantics, you know, work. I have a real problem with policy 1.1.G, the language, even instead of except needs to be inserted. Moving forward, we don’t know what’s going to happen in district maps, ??, etc. But if we leave the except in there from just how wildlife values for South Park, Aspens, Carnes Meadow, the Flat Creek deer herd, etc., all these districts should be permeable. If we make the Carnes Meadow and Radio Grounds district impermeable, that could be disastrous to the Flat Creek deer herd. Access to water and ?? I agree with 1.3 going into a dedicated energy efficiency chapter, which was suggested previously. It’s so important moving forward in our community and globally that we need to focus attention on it by giving it its just due, which is its own chapter. Also, going back to the first part of the open space, whatever we do and however we choose to implement it going forward, there has to be a unit-to-unit offset for any density transfer. It has to be. It has to be achieved. Density neutrality. The public commented on this ad nauseam. So, right now, we’re looking at 4020 units in the County and Town combined as base entitlement. Yet the Plan allows 9880 units potentially but via density transfer. So, whatever we do, it has to achieve density neutrality moving forward. That’s about all; that’s enough time. Thank you.
I’m going to talk for a minute or two before I get to this piece, but I just want to leave this as a leave-behind piece for you. Rich Bloom, Teton County. First I want to thank Meredith and Laurie and Brad. I think most people know that I’ve been a strong supporter of the PRD and I’ve been trying to broker understanding amongst the conservation groups and neighborhood groups <<inaudible>>. Not to say that it doesn’t need perhaps retooling the upper end of nine per 35. And I do think too one of the issues we had in the planning process was an assumption that it was going to be used at a rate that was not reasonable in these rural areas like Alta and Buffalo Valley, what I call ?? in that they took that number and then moved those to the nodes as a way of coming up with the upper end of the nodes. Meaning I think there was an assumption that the PRD would be used on 70 percent of the remaining rural land, yet the pattern of experience hasn’t been that. But anyway I support the PRD. I think it’s an important tool. And I think it’s critically important. The non-contiguous portion of it has damages. I think Ms. daCosta’s point of, yes, identifying receiving areas is an important piece of it so everybody can support it. And there are those areas in the Valley that people will accept it, especially if they see conservation occurring somewhere else in the greater region. I think that’s a major key. A couple of things I wanted to touch on from the previous week. One is the Fish & Game memo I think is critically important for the Game & Fish, excuse me, of June 26. And I hope you highlighted a few points on that. One, I read under build-out for the first time it talked about the inescapable connection of not just pattern growth but pure numbers that we have on off-site impacts. They mentioned identifying certain districts for wildlife and open space as top priority is very important, but it is an opportunity and important for other districts for wildlife. They’ve done a lot of talking about the NRO right now as a tool, but it doesn’t mean that a place that doesn’t have the NRO does not have values, especially when you add in scenic and agriculture. But they mentioned that the future land-use map is not available, although they recognize that. We have concerns regarding the picture of how the community would look if development themes in the Plan are fully implemented, which is the upper range that we’ve all been talking about. Wildlife in Teton County depends upon access to seasonal habitats that are often separated by developments, subdivisions and roads. While the Comprehensive Plan does not provide guidance regarding appropriate location of open space and development, the Plan should acknowledge that moose, deer, elk, bears and other wildlife will be negatively impacted if maximum build-out is approached. Permeability is crucial. So, with that in mind, a couple of things. Recommendation 54, they had a straw vote on it, which was throughout theme one, wildlife protection policies to be implemented only in the Natural Resource Overlay. We also know that there’s a scenic and agriculture value of open space. I think we’ve got hung up on open space only applies to wildlife but there’s three very distinct values we’re trying to achieve here. Our agricultural history, thank God for the ranchers who have been the best stewards we’ve had in this Valley. And continuation of ranching is something we want to achieve currently with them and help them out. Scenic is another value and wildlife. But even wildlife gets focused on in the NRO is not achieving. You’ve already approved that in 54, yet in recommendation 71 that was the large and contiguous open spaces. Under the wildlife principle, you left that policy as is. And I would recommend at the very least if you approve that policy, to add connectivity between NRO reference. There’s a focus sentence in there that talks about additional efforts of ?? open space that line ?? My alternative language is consider either lies within or provide connectivity between portions of the NRO. Connectivity, what I will tell you that these animals, even though the critical winter range might be in one area or not, they move between them and achieving open space between those are something that can support wildlife. Somewhere in here you have to hook in some of the other ??, which is more strongly acknowledging scenic and agricultural. Policy 1.6.A will be coming up tonight. That’s the only place where you talk about what’s done in a whole chapter of our current Plan about conserving agricultural lands and agriculture throughout the County and that the County will support efforts of landowners. And you list Alta, Buffalo Valley, the ?? area, Spring Gulch, and Fall Creek. But South Park, which is number one on the list in our currently legally binding ‘94 Plan, has been left off. South Park is a region of 5000 acres. The current Plan identifies the same node. It mentions a node up by Cottonwood Park. But it doesn’t throw out the baby with the bathwater. It doesn’t say because there might be a node or some sort to achieve some goals, both open space and housing, that you all of a sudden take the whole 5000 acres off the list as a focus, as a vision, to achieve scenic, wildlife and agricultural goals. So, I think you’ve gotten plenty of input from the public on this. We’ve visited this over numerous times in our community, a new neighborhood back in 2001, down by the Seherr-Thoss property. To support an organization which was not handled well by the community because that’s a good family down there and yet they’ve ended up in referendum where the folks in the Town of Jackson overwhelmingly voted against the annexation plan as it was done. Teton Meadows Ranch in 2007 and 2008, you know how that turned out. There was over a thousand people that commented on that Plan. Surveys and polling and then the most recent published ?? bibliography of all the studies that the Alliance lead on. So, obviously, I would like to see on behalf of South Park neighbors and the community at large that South Park is back on the list. That does not preclude the discussion about a node or no node. We’re talking about a very big region from the Snake River over to Highway 89 all the way up to really Highway 22, is what’s considered biologically or in our minds as South Park. Lastly, in principles 1.1, 1.5, 1.6, which is where we touch on open space, I’m not sure of the appropriate location at the last page here some of the language that’s in our current finding the 1994 Plan. I think we need to expand upon why we’re achieving open space beyond wildlife and NRO to kind of include agriculture and scenic value as well. All this acknowledges at the base of all this are private property rights. We’ve always know and we’ve never stipulated private owners. So there’s some language there. There’s actually a whole other part in that chapter. I think there’s some very good

<td>language that could be pulled from the current Plan if it’s truly an update and moved into all or one of these sections. Thank you. I am looking forward to attending your meeting tonight, but do not plan to speak unless I feel that something is being left out of the conversation about South Park. My main concern is that the proposed plan disregards the important scenic, agricultural, and wildlife attributes of the South Park Area. These qualities are recognized in the previous (current) plan, and should not be ignored in the new plan. I have lived in the Rafter J subdivision for 21 years. There have been a lot of changes in the areas south of us over that time. I do not see that the current plan has deterred thoughtfully planned growth. But without formally recognizing the importance of open space and connectivity for wildlife, developers/planners have little incentive to consider the significant impacts of their proposals. We need to continue to publicly state in our Comp. Plan that South Park has qualities that are to be (at the very least) carefully considered and creatively addressed. Thank you for your consideration. Please do the right thing by maintaining the descriptions and protections already provided in the 1994 Plan.</td>

<td>Thompson, Colleen</td>
<td>I would like to add my voice to those who see wildlife conservation as the #1 priority in not only South Park, but the entire county. Growth cannot continue forever; it will have to be strongly constrained at some point. Wildlife, once pushed out, may find it impossible to recover. So let’s stop developing now, before we lose any more. I believe we have more than enough commercial development already. So much commercial space is standing empty. The amount set aside for commercial development in the recent proposal was way, way too much.</td>
</tr>

<td>Simms, Barbara</td>
<td>I would like to offer a comment. I’m not sure I’ve heard mentioned in the many discussions about South Park: the “view corridor” approaching the Valley from the south, just after the little rise north of the South Park bridge, is beautiful. The remaining open land and hayfields with horses and grazing cattle provide a sense of continuity with the Valley’s ranching history and a quietly stunning welcome to the Valley. I believe we need to value that open, spacious view corridor and all that it represents.</td>

**Date:** 9/3/2009
Hi, I'm Kathy Hopkins of Cottonwood Park. I think what I have to say here all ties into theme one, even though it might touch on a little bit of growth management. Let me say again how much we appreciate your time and effort you're putting in to achieve a workable Comprehensive Plan that benefits wildlife and defines human needs. I am a small property owner in Cottonwood Park. I can vacuum my whole house from one outlet. I don't need a slew of house cleaners, landscapers, managers, personal assistants. I do all the above. I take pride in taking care of my small home ensuring what I grow in my garden. There are two things I do need help with, though—property taxes and property rights. My property taxes have gone up over a thousand dollars in the last year. With all the new services needed in the future because of the large increases in residential and commercial development rights in the new draft Plan, I'm afraid I will be taxed right out of the Valley when my husband and I retire. I am also concerned that the only property rights that will be respected will be that of the large landowners. Even though our homes are modest, Cottonwood Park stands together as a community, and as property owners we have rights too. By protecting wildlife and open space in all of South Park we will be protecting the reasons why we work so hard to stay in this Valley. We are not ?? South Park must be put back at the top of the list when it comes to protecting wildlife and open spaces. This will then guide and help us properly plan how much and what kind of development will happen in the northwest corner of South Park after ?? has been completed. We need to keep the base development rights that exist now without density bonuses until we can figure out a fair way to do this. Both protection of wildlife and open spaces and managing growth by limiting growth are needed for South Park. They are inseparable. One without the other would result in ?? of any new Plan. On the subject of managing growth, and I know this is going to be down the road a little bit, but I think this just will tie in. All too often the small homeowner is left to fend for him or herself to protect their property and its value. We are shuffled between Town officials, police and our homeowners associations when we alert them that our neighborhoods are deteriorating from overcrowded homes that are being used as boarding houses and employee dormitories. We need to attend this problem or we will find our most precious commodity, working families, being exported to areas outside the Valley. The Town of Jackson will then be known for its boarding houses and the problems they bring with them. This does not mean building thousands of new homes. This will only lead to abandoning the old neighborhoods and support what we don’t want—growing our way out of our growth problems. We need to manage what we have by working together. That means Town government, employers, homeowners associations, and especially land and rental management agencies. The burden to protect the neighborhood falls on the shoulders of the small property owner who lives in his or her home while absent landlords and rental management companies profit from encouraging overcrowded single-family rentals by looking the other way. Employers need to help out more by housing their employees on or near their job site. We should be mindful of the unintended consequences that unchecked growth resulting in overcrowded rentals has on the single-family neighborhood however you define a family, whether they’re straight or gay couples, married couples, with or without children, or the traditionally defined family. However we achieve it, we cannot afford to have a laissez-faire attitude toward the small property owner. If you want to preserve community character and make a revised Comprehensive Plan work, it starts with protecting wildlife and open spaces and managing growth by limiting growth and last, but most important, stabilizing and protecting our family neighborhoods. Without them we are just another spot on the map.
Good evening. I’m Paul Hansen. I’m executive director of the Jackson Hole Conservation Alliance. I want to start by expressing our appreciation for the positive movement and all the hard work that you folks have put into this process. I know it’s long and tedious. And I’m glad to see things moving in a positive direction. We’re going to be submitting specific comments and suggestions in paper form in a timely fashion for your consideration for final vote, and we have submitted a number of recommendations for your deliberations tonight and I hope you’ve had a chance to read them. I’d like to provide a few general comments and start by echoing our feeling on the importance of the Wyoming Fish & Game letter that you received in late June. We feel that the professionals at the Fish & Game Department have surely done an excellent job in discussing and incorporating many issues of Fish & Game and science into the Plan. We hope that you’ll consider those comments more specifically tonight. I understand from prior meetings that some of the Commissioners have not had a chance to read some of those comments, so we think they really do have a great deal of importance for some of the topics that you considered at the last meeting, Sections 1.C and 1.D, and for many of the topics you’re going to consider tonight. But wildlife mortality, for instance, on the highways. The number is 236 animals per year in the letter and of course this underreports what’s actually killed on the highways because we only count what’s killed instantly and stays next to the road. I have lived a couple of miles off the highways several times in my life and we had deer that would stagger in and die or we’d find back in the woods. So, most of the science, the wildlife science would suggest that the actual mortality figure is about two or three times that. And we feel like this is an area that most of us really could come to some agreement on and really do some things to reduce this mortality. And it doesn’t really even reflect at all the difficult decisions on development. It’s just a positive mitigation strategy and think that the Game & Fish folks really they expect some recommendations in this area. In the 1994 Plan we think had particularly good recommendations when it comes to scenic protection. And the scenic vistas, the title being added to this theme, we appreciate; we think this is a good idea. We also would recommend you take a good look at the 1994 Plan chapter. We think it would provide a particularly good starting point for your discussions on the scenic vistas issue and we certainly would recommend that there be a Scenic Resource Overlay map included, as you’ve done with the Natural Resource Overlay map. We certainly agree with previous comments of geographic areas that have been pulled out as targets. And in principle 1.6 we think South Park really needs to be added back in and stipulated as one of the key areas. And given all the benefits of open space protection, we feel that a good deal of emphasis needs to be included in this area. I’m sure a couple of weeks ago there was a conversation about science and the need for wildlife science in the NRO and we had some questions as to why particularly for private lands. And it took me, drawing on that in my business and my conversations with the private landowners in the Valley. These folks love the land as much as any of us. And I’m absolutely convinced that we have good science beyond its use in regulatory framework. It would be very useful to these private landowners. I believe that each and every one of them if they knew that development here was going to cost less probably than development there they would find time to attend and put the development in a place where it was less intrusive. And so I think that we all need to remember that our neighbors that own these lands love this land as much as we do and respect the fact that we enjoy the amenities and scenic vistas there and really would pay anything for it. And I certainly agree with Brad that we need to really find a way to establish some public funding mechanisms to help the land conservation in the Valley. I’ve lived in places where there were real estate transfer taxes. I know it’s a tough lift here in Wyoming. But there’s a great deal of data now in the country that there’s a strong willingness to pay the people for land conservation. In the last 20 years, people have voted in ballot initiatives throughout the nation in strong Republican districts, in strong Democratic districts, $53 billion on themselves. The most recent examples was my own state of Minnesota, which in November voted to create a 1 percent sales tax dedicated to conservation. It would be $250 million a year and it would be $50 per person but about a 4 cents on a $10 purchase. And it won by a very strong majority of 59 percent to 37 percent. It got 60,000 more votes than the President did in Minnesota in spite of the fact that the vote was taken in the deepest recession in 70 years and when 90 percent of the state’s newspapers opposed the initiative because they don’t like ballot initiative government in Minnesota. Just not what Minnesotans like to do. So, as you probably know, we’ve had polling data here in the Valley, two professional scientific polls that were done. Both found that by strong majorities that a two-to-one margin in one case that people really did favor an establishment of public funding. One of the polls found that people favor by a strong majority, not quite two to one, but as much as $200 per person. So, I think we need to explore this deeply and find a way that we can all fairly share the cost of protecting wildlife and scenery that we all value so much. And do it in a way that respects private landowners and their rights of their land. Finally, once again referring to the Game & Fish letter, there was some excellent thinking in there about ?? and how there really is a direct relationship between growth and between the fate of wildlife. We hear a lot about only 3 percent of the Valley being private land. We need to keep in mind that that 3 percent incorporates about 40 percent of crucial winter habitat for ??, which of course are the fundamental basis of the food chain. Scavengers and predators all depend on these ??. In the summer season, the percentage is even higher in the low elevation river valleys. By some studies account for about 75 percent of the birds nesting habitat and this includes species like the bald eagles and trumpeter swans. So, I think we need to pay particular attention to Game & Fish’s comments in this area. On the subject of indicators, we agree with the recommendations that Staff should work with other agencies and organizations to develop a plan for indicators. I’ve had the pleasure of serving on the build-out data committee and found that to be an excellent structure for kind of doing some work on the side that we can bring back to the Commission, and we
recommend that model in the area of indicators, too. Again, thank you for all your hard efforts on behalf of our community, our wildlife and our open space. Thanks.

9/3/2009, Joint Planning Commiss: 1.6.a: delete the list of places in last sentence

9/3/2009, Joint Planning Commiss: 1.6.c: staff will rewrite to focus on goal of policy which is the last sentence

9/3/2009, Joint Planning Commiss: 1.6.c: language should provide incentives for permanent open space

9/3/2009, Joint Planning Commiss: 1.6.b: prioritize conservation of agricultural use throughout Teton County

9/3/2009, Camenzind, Franz Interested Public: Mr. Chairman, Commissioners, Franz Camenzind, Jackson Hole resident. Thank you for this opportunity. I do want to thank the previous members that came in here early this evening and talked to us about the conservation easements. I appreciate that a lot. Last week’s discussion, one of the things that was brought up was this idea of growth caps. If it’s been sort of subverted into a different discussion, population control or population caps, I think that’s unfortunate. I would just like to recommend that all growth and development categories be reduced to the lowest legally defensible baseline zoning numbers that exist today, and that these new numbers become the maximum values for the new Plan. I think that’s as simple as that. It’s something you can defend and roughly looking at the numbers that have been available to the community and what I expect to come out from the spilled-out committee, I think this is still going to show a potential for about 50 percent growth in most categories. And I can’t imagine any developer invested not being enthusiastic about the potential for 50 percent growth within the next 10 or 15 years. So, it wouldn’t be cutting down growth. It’s not a no-growth scenario. But it’s one that is legally defensible. So, I really urge you to weave that into your thinking as this process goes forward. I would also like to emphasize the need for the Environmental Commission. I would recommend that that Commission be made up of five to seven members and that the majority of them have some kind of environmental science background, but that there be a clear number of people there that are full-time residents of this community and have first-hand experience and not necessarily that they’re environmental scientists. I would also like to, and I will emphasize the information that was presented in the Game & Fish letter of June 26th and, as an aside, I’m a little frustrated last week to hear that many of you hadn’t seen that yet. And this was late August and this letter was submitted in June and again tonight I may have mishandled, but apparently the Resor letter hadn’t been distributed to all of you. And I think that’s a little frustrating to know that there’s good input from people who have a lot of good information that is not getting to your hands in a timely manner. And I would hope that would be addressed. I think the last thing that I’ll talk about right now is the…my population viability scenario that I talked to you about in the past. And it is number eight I believe in the Game & Fish letter and they make that point also. So, if we’re dealing with a Future Plan here that is going to be science based and if you’re not going to incorporate the recommendations of the one committee, or the one organization in this community that is totally dealing with Game & Fish on wildlife issues, then I don’t know where you’re going to turn. So, I think you should put their recommendations right on the top of this. Viability should be defined as much by population goals that the federal and state agencies put out, not just the biological definition that was done over the past 46 years.

9/3/2009, Joint Planning Commiss: 1.6.a add: "The conservation and agricultural use of large contiguous private land is also the most consistent land use with the goals of the Comprehensive Plan. Efforts aimed at the permanent conservation of such lands have the greatest potential to posi

9/3/2009, Joint Planning Commiss: 1.5: staff will research the addition of Scenic Resource Overlay policies for Town
9/3/2009, Joint Planning Commiss

Margaret Creel. I live in Rafter J, and some of you in the room know me and some don’t. I’ve been very outspoken over the years about development in South Park. And I have no problem in stating that South Park has tremendous wildlife value. It has for years and continues to have tremendous value. One of my hopes is that the Game & Fish at some point will change their paradigm in giving some sort of importance value to small mammals that include rodents. Because the agricultural meadows in South Park as well as a large portion of Teton County is just ripe with small rodents that are the base of what so many of the animals eat. Elk, you know, they’re certainly at a different place on the food chain, but at any rate, I just want to… I don’t want anyone to ever forget how much value small rodents do have in agricultural meadows to ?? and bears and wolves and raptors and eagles and weasels. Every member of the weasel family, which includes everything from skunks to badgers to martens to river otters and so on and so forth. So, of course, I would like you to put South Park back into the Plan where you removed it. Something else has been really curious to me and, having just read the letter from the Game & Fish that have a lot of tremendous and valuable information, is that I haven’t heard anyone address the chronic waste disease that’s on our doorstep in Teton County. And one of the places it would profoundly affect is South Park, a well-known elk refuge. No one has talked at all about what is going to happen when those thousands of elk come down with this disease and start wandering aimlessly through the developments in South Park and elsewhere in Jackson Hole. And I think this is an issue that everyone involved in planning and involvement in this Plan have to address because it is on our doorstep. The first documented case of chronic waste disease in elk and moose was documented in this past year I think in Teton County or one other county. It is coming. For one thing, I was trying to do a little bit of work reading some of the work that you all have done in terms of changing maybe some of the… I don’t have that either, do I… something that I’d like to be changed because I took tremendous issue with usage of sustainable development from ?? report from, where was it, the 1980s? Where are we right now, 2009? I thought that was incredibly outdated and, I’m glad, it seems like you removed that. Am I correct? And so kudos for that because I was going to fire off a letter to say, come on, you know, we’re in the 21st century. So, sorry, I was disjointed but thank you again.

9/3/2009, Joint Planning Commiss

1.6: staff will draft language that recognizes permanent conservation of large contiguous properties as one of our highest land use priorities

9/3/2009, Joint Planning Commiss

1.5.a and 1.5.b: expand skyline/foreground protection beyond public roads/parks to all roads

9/3/2009, Joint Planning Commiss

1.5: add a policy of continuing support of a Scenic Resource Overlay for the County

9/3/2009, Joint Planning Commiss

Principle 1.5: ...as much as "reasonably" possible

9/3/2009, Joint Planning Commiss

Principle 1.5 "... and will be regulated" instead of "...and will be prevented as much as possible"

9/3/2009, Joint Planning Commiss

Staff will research the legality of a policy regarding noise pollution and insert the appropriate policy in the appropriate location in the Plan

<td>O'Brien, Kristine</td>
<td>Thank you for volunteering your time and for all the work you are doing to insure that the Comprehensive Plan Update is a transparent, public process reflecting community priorities. Below is my input for tomorrow’s themes. Please maintain the commitment made in the current plan to conserve the scenic rural beauty and wildlife of South Park. Removal of this theme is arbitrary and unacceptable. Transferring development rights from rural areas (e.g. Buffalo Valley, Alta) where growth is not likely to occur to areas where growth is most likely to occur (South Park) does not conserve agricultural land. To the contrary, it makes development of such lands more likely. The community has expressed in several polls and in numerous public comments, it prefers slow, smart growth, that it does not want increased build-out. There are sufficient development rights to grow for many years. Up-zoning South Park would serve no community purpose. It would make a few individuals wealthy (or wealthier) and that’s about it. The cost of the proposed scale of growth in terms of infrastructure and run-down of our natural capital are high. Imagine the mess an enormous, 500-home development like TMR would be now had it been allowed to move forward. Growing slowly makes sense from an economic as well as an environmental perspective, especially for economies like ours that are heavily dependent on natural capital.</td>
</tr>
<tr>
<td>9/2/2009</td>
<td>Greger, Art</td>
<td>Just a follow up asking you to consider the enormous input of public opinion asking for the protection of South Parks scenic and wildlife value as the plan moves forward. Please also consider the costs of growth as it impacts the quality of life for all residents. The public has asked for low growth and protection of South Park... please listen.</td>
</tr>
<tr>
<td>9/2/2009</td>
<td>Salter, Andy</td>
<td>The broad South Park area contains critically important wildlife areas and migration routes. Its scenic vistas are precious and must not be lost. Theme 1 must recognize and affirm the scenic, wildlife, connectivity and agricultural values of the greater South Park area. These values were recognized in the prior version of the Comp Plan and must be affirmed once again in whatever version the County and Town Planning Commissions develop.</td>
</tr>
<tr>
<td>9/1/2009</td>
<td>Omlor, Kristen</td>
<td>We find it very disheartening that the new comprehensive plan places low priority on the wildlife and scenic values of the South Park area. We have lived in Jackson Hole for 13 years and in Melody Ranch for 4 of those years. In those 4 years, we have seen and heard a variety of wildlife. We have had moose, elk and fox in our backyard. We have eagles, osprey, hawks, cranes and numerous other small birds fly around our house. We have heard the coyotes and frogs toads. We have incredible views of the Tetons, Glory Bowl and Munger Mtn. We love driving by the open space whether on the highway or South Park Loop Road. Being affordable home owners, we understand the need for affordable units and are very grateful that we are able to live in this beautiful place. However, we are very aware that the wildlife and the scenery are reasons we love living here.</td>
</tr>
<tr>
<td>8/31/2009</td>
<td>Thomas, Shirley &amp; Dan</td>
<td>As concerned citizens we would like you to take into consideration the value of the South Park area. It remains a wildlife corridor. We have moose, fox, coyote &amp; elk even in our back yards during the migration &amp; the Winter months. It has wonderful scenic value &amp; serves as agricultural land for several farms. Please do not lessen this value for our future generations.</td>
</tr>
<tr>
<td>8/31/2009</td>
<td>Prayzich, Elise</td>
<td>Thank you for your difficult and hard work on revising the comprehensive plan to more closely represent the feelings of the community in their desire to protect wildlife and open space. Crowding anywhere in this Valley will result in degradation of the land, water, habitat for wildlife, and our quality of life. Most especially, I trust you will see the wisdom of reaffirming the wildlife, connectivity, scenic and agricultural values in the greater South Park region. South Park needs to be needs to be returned to Policy 1.6a!!</td>
</tr>

<td>Thank you, Commissioners, Franz Camenzind, Jackson Hole resident. I would reiterate what I said two weeks ago on sustainability, but I know you wrote that down and have it tucked away nicely and incorporated into your comments or your thoughts now. So, I won’t go over it. But I will dwell a little bit on this character base. I know there’s been a lot of discussion through the community on this new Plan not being character based. Some people say you can’t have a character-based Plan, that’s what caused part of the problems. Well, I say you can have a character-based Plan, if you define what character is. And if you take each neighborhood or each area, if you will, and start saying, okay, this is a rural area, this is a single-family-home neighborhood, and say that’s the character. And then when you say maintain the character of your single family homes, that will direct the LDRs. It should direct them and keep them from intensifying those neighborhoods. It should write LDRs that wouldn’t allow commercial. I think character base is a huge issue in this community. I think you just have to go to each neighborhood or community and say, this is the character that exists now, and do we want to maintain it or not? That will be the decision to come forward with. But character has meaning, it has a lot of residents in this community, and I think you just have to take the neighborhoods, define it and then say whether we want to deviate from that or maintain it. The other question that comes up a lot, and I’m talking more as a biologist here, caring capacity is very...it sounds great, but it’s a tricky phrase. Because if we’re looking at human caring capacity in Jackson Hole, we’ve already exceeded it, if we’re looking at it and defining it in any natural sense. We’re hauling in our energy in a pipe, we’re hauling in our energy in high voltage power lines to Memphis coming into the Valley. We’ve already exceeded our caring capacity, human natural caring capacity. So, I would rather that we think, at least, in terms of tipping points. Where are we on tipping points? Where are we...How close are we to losing migration corridors, losing, you know, our terration areas, losing the quality of life here? This caring capacity, particularly if you start defining it around humans, we are good at creating environments and we could live on golf holes now, where naturally we couldn’t have done that. So, I think we have to be careful about the way we use that phrase. So, I would think we should think more about tipping points, which means we have to have good, scientific, environmental data. And you have to use the best that you have and try to ascertain where you are in some of these tipping points. And I think that’s going to be critical to the future of this Plan. Thank you.</td>

<td>Acri, Armond Save Historic JH</td>
<td>Armond Acri, representing Saving Historic Jackson Hole. Thank you for allowing me to speak tonight. Real quick, one simple solution I think to reduce the size of the Plan by about 40 percent...this is a plan that I’ve already submitted...is to consider taking out the pictures and the text boxes. I’d ask you to think again about things in the future and what the point of this document is. The point is to be as a reference document, not a sales brochure. And certainly we do need to sell people on the document, but I think the final document should be typed, so that’s a simple thing, or that it’s already written, but I want to reiterate that one more time. Secondly, I’d like to agree with the comments that Mr. Schechter submitted after his presentation two weeks ago, and would echo comments that have been made about using his suggested filter for statements of ideal that’s in the Staff Report. Thank you.</td>

<td>Jensen, Gail Jensen.</td>
<td>Hello. Gail Jensen. I just have a few tweaks that I feel to clarify or simplify on the vision statement. I would like to have while meeting our community needs crossed out in the vision statement. I just don’t feel it belongs there ?? And I know that was a comment that a few of you all had at the time, but &lt;&lt;inaudible&gt;&gt;. My second comment is the definition of sustainable. I would like to replace it and just tweak it a little bit with the language, a system of practices that are healthy for our environment and for our community and can be maintained indefinitely. And the reason I have done this, I crossed out economically viable and I feel strongly about this, because whenever you consider a private property application at the planning level, economics are not to be considered. And that’s kind of in a review in various statutes and legally in that and you’re not to consider that. Why is it in here, then? And adding the economic viability to the Plan when you’re not considering it. When you bring an application for review, you’re not supposed to for that individual owner or applicant. My next comment is on the teeter-totter. I find this a very manipulative, possibly, concept that is not real clear, and I feel like it could be interpreted too many different ways, that I find a simpler, what’s existing on page 9, I find is what the community wants, and it’s simple and it’s meaningful, and it really can’t be messed with. I see this teeter-totter changing constantly, depending on who’s reading it, who’s looking at it. I don’t see it’s very clear and concise, and I think the community would like something simpler, that this wildlife and natural resources right up here on the top and there’s no question about it. That’s what the community comment has been, and I would like to see it stay that way. Those are my comments. Thanks a lot.</td>

<td>Wang, Louis Wang, Louis</td>
<td>My name is Louis Wang, and I live in the County. I’d like to make a comment on sustainability in the vision statement. And I know you’ve redefined sustainability and the ?? Commissions’ definition is no longer quoted. But I’d say the more poignant issue, the more important issue, is whether we focus on community, or we focus on growth. One of the major changes between the draft as it now exists in the old Plan is a change to a focus on sustainable growth, rather than sustainable community. The old Plan centered around sustainable community not dependant on growth. And it’s really a mega change to go away from community as the focus. So, I’d like to see it go back to the community. Also, in terms of this room for interpretation, if you have a kind of a Plan that is to get from point A to point B, or any other kind of plan that you want things well defined, you lay it out in terms that are obvious, not open to a lot of interpretation. And I see in this Plan terms that are open to interpretation. And I don’t think that’s helpful. It’s going to create chaos down the stream eventually. Now, I’ll just talk to one term, vibrant. Certain people in government, elected officials, are fond of this term vibrant. Vibrant community. Before I looked up vibrant and started to play with it, it just sounded healthy to me. Who could be against a healthy community? But vibrant to a business man means growth, often times constant growth. And healthy to somebody who lives here is a focus on community and keeping the precious things we have as a pretty unique community. And I’ll just close with that. Thank you very much.</td>

<td>Peggy ??, Town and County resident. I agree with everything that Kristy Bruner and Gregory Griffith have said here this evening. But before we get much further down this road, I’d like to comment on this process...at least my interpretation of this process, a kind of majority determination to continue with this long draft Comprehensive Plan. I understood that the public would be invited to join in the conversation with the goal of improving this draft, and I want to express my extreme disappointment with this process, particularly last week, of how the public was made to feel. You were all looking at your watches and mostly ignoring the public’s comments and, in addition, I strongly object to the lack of, you know, your discussion on the public comments as they’re brought forward to you weekly. We all express our comments and then we all just walked away, and there really isn’t any, you know, conversation. So I just really feel, before we go any further, if we could just kind of address at concern, or those concerns. I’d appreciate it. Thank you.</td>

Joint Commiss

1.2: Change and enhance water and air

Joint Commiss

1.2.a last sentence changed to: “Consequently, development will be designed to protect water bodies...”

Joint Commiss

1.2.b Strike the word "urban"

Joint Commiss

1.2.c Staff to redraft language to clarify intent of surface water protection beyond requirements of other jurisdictions

Staff will insert County recommendation 8 into Theme 1 where appropriate

Gregory Griffith, West Bank. The first inset on page 1, I mentioned it before, on what is a Comp Plan, there’s no mention of wildlife. I think that’s minitua, but I think it should be inserted. Also on page 1, next 10 to 15 years, I feel very strongly that should be changed to a concrete 10 years from the date of adoption of this Plan. We see from ’94 to the present that 15 years is too long. So, I think that should be...that’s ambiguous also, 10 to 15 years. Let’s just concrete it to 10. Also, I think there should be some mention or explanation in the introduction of the vision chapter on why this Comp Plan will work when others have failed. And that could be something we do afterwards in an administration chapter, or something...but we need to delineate why seriously we think this Plan will work when the others have obviously created angst and acrimony in the community on various issues. I feel the vision statement’s too long. It should be, as Mr. Schechter pointed out, made more measurable, except I really don’t like the language about export our values. I think it should be changed to something...that’s in the sustainability definition. It should be changed to something about lead by example, because exporting our values gets into some shaky ground. The teeter-totter itself, I really, really am opposed to the teeter-totter concept. If we do have a teeter-totter, let’s put wildlife on one side, existing property rights on the other. Everything else can be the bulk. Nothing should come in the way of our wildlife and open space values, except existing property rights. It leaves too much, as I think it was Louie who pointed out, of selective interpretation. Selective interpretation got us into some of the problems we’re in today. And that can go back to predictability issues also. And the complies as conditions syndrome from Staff, they have no choice but on contentious developments like ??, SRA, Teton Meadows, etcetera, if they don’t have that predictable element. We get 23 items of conditions, which generally don’t make a good Plan, for any development. I really enjoyed...I think it’s was Ms. Allen’s attempt to insert language about this goal. I’ve spoken to this previously. We really should put it in there because there are restoration projects going on all over the County right now, and it’s ideal to attempt to adhere to. I like Ms. daCosta’s economic reality argument...very valid...and her property rights. It should be mentioned early and often, if for no other reason than that we are on the way toward removing this ridiculously simplistic sophomoric rhetoric about no growth...there are no no growth. Believe me, there were no growth cause I would know. There are no no growth, you know, there’s no one proposing any reduction in existing entitlements, any involuntary expenditures. The question lies in the 4400 units that are allowed without any density bonuses to the ?? units proposed in this Plan now. That’s where the rubber comes in. We need to acknowledge wildlife is in fact a human need. The public has some comment on this ?? I enjoyed Mr., I think it’s was Duncker’s, open space, attempt to insert stronger language about open space and its procurement. Hopefully, maybe that can come up with at the next meeting with Mrs. Andrews and Mr. Meade’s attendance. And I could go on and on, but I’ll sit down at the meeting and all, but whatever we do, whatever we write, whatever minutia we focus on has to be ethical, has to be identifiable, it has to be verifiable, and it has to be enforceable. If not, we get the selected interpretation from these development applications that’s ripped the community apart. What the community really doesn’t want is anymore SRAs, ?? and Teton Meadows, and angst and acrimony today assuredly without predictability, we’ll just have, you know, as soon as the moratorium’s over, and this Plan is adopted, and we’re right back to ?? Thanks.
Rich Bloom, Teton County, speaking as an individual. Thank you for all your time in these meetings, really. Just a few things, and it does reinforce some concepts, but ...I guess reinforcement is okay. I've spent a lot of my life as an educator, and I do have, along with some of my other background as a financial Planner and ??, I was trained in ecology and I have a masters in environmental education and worked as ?? in this Valley for some 20 years. But I would reiterate that I think what's missing that we're almost there, there does need to be something stronger about these growth solutions while respecting private property rights. A worry on this Plan as it was delivered to us by the Planning Staff and was talking about an overriding concept of using additional density as currency to achieve affordable housing and open space above and beyond where we are already going. And I think what's missing in here is that there’s an unlimited demand for this place, as we all know, yet it has a caring capacity, as we mentioned before, both on public lands and infrastructure, road systems, etcetera. So, a recognition of that insatiable demand for this place, yet there’s a limit to how much we can ultimately grow. And then going back to that end point, that we have to eventually reach an economy and community that’s not continually dependant on growth. At that time we were looking at ?? At some point, we'll be at build-out and we should have a sustainable economy that can replenish itself within that. And that, I think, is what troubles us is it seems like it's focused on continually pulling ourselves out of growth issues instead of realizing there are limits to that growth. That’s really it. I think it does apply to the sustainability issue, though. Thank you.

| 8/21/2009 | Tompkins, Kathy    | First I would like to say thank you for the time and effort you are putting in to change the comprehensive draft plan to represent the input from the concerned residents of Teton County. Cottonwood Park greatly appreciates what you are doing. I would like to put in writing what I tried to say at the meeting last night. It was a long day and my brain was definitely somewhere else. I read Rich's letter below the other night and liked the changes that were made. Where Rich and I differ is the map he presented and where he represents a new development in the NW corner of South Park. This area should only be developed when infill is complete in town and other developed areas of course. We respect the present base unit development number (around 200 with out any density bonuses which should be done away with, as described in the county planning commissioners recommendations along with doing away with all nodes. The difference is; Residents of Cottonwood park would like to see open space along High School Road set back further to the southern border of the High School property and continue to South Park Loop Road. This area can serve as a wildlife corridor and improve the connectivity of the area. Bringing the fences down will allow the wildlife to pass through Cottonwood Park to South Park with out any of the detours they have to make presently. This should hopefully reduce the nuisance calls that Cottonwood 1 (Corner Creek Lane) makes to game and fish officials about the wildlife that gets backed up in their neighborhood. Yes we do have have wildlife (no bears yet Forrest). Coyote, moose, deer (an eight and a four pointer were feeding on my broccoli stumps in the winter), osprey, etc. We do hear the elk at night in the fall bugling from across the fields to the West. The antelope mate and feed in the fall right across the road in the NW corner of South Park where future homes are planned. The other purpose this open space can serve is as a park for West Jackson and all the schools along High School Road. You have probably heard me mention this before but it is worth mentioning again. Even Kelly Lockhart liked the idea when he came over one morning for coffee and a walk through Range View Park and the immediate area to show him what works and doesn't work here. He loved Range View Park and the way it leads right to High School Road. He said he would like to continue it across the road. Of course we respectively disagreed on the amount of development. I liked his base number development rights without any density bonuses and he liked, well, way too much. The schools could use it for the xcountry running instead of running on the streets and winter cross country ski track loops that can double as a running track in the green months with exercise stations. Outdoor learning facilities for the schools like solar panels that can operate the rest rooms, lights etc. xeriscape areas and native species areas, playgrounds and maybe even a farmers market on the weekend. A parallel road that connects 89 and SPLR on the other side of the park can alleviate the traffic on HSR while using the back entrance to the high school for bus loading and unloading. I would like to see High School Road narrowed using woofers; European style traffic calming, no curbs. Instead pavers that delineate the bike and pedestrian paths on both sides of HSR. Covered bus stations like the ones in town. Removable posts that separate vehicular traffic from pedestrians. The posts then can be removed in the winter time for a clean sweep with the plows that don't have to worry about curbs and plowing separate paths. Wildlife friendly snow fence can be put up in the park along HSR to prevent build up of snow drifts on the North side against the long wooden fence that was just replaced because of the weight of the snow on them. They don't last very long there. High School Road should be a campus road that will encourage the use of biking, xcountry skiing and walking and keeping Mom and Dad's car at home because it will be a lot safer for kids who don't have bussing being so close to the schools. I know a lot of the above is too detailed for the comp plan but if you set it up in the plan as a goal, this could happen. Don't get hung up on funding. Like Rich said "there are some deep pockets here that would like to help keep South Park open space for wildlife" which in turn helps our economy and quality of life in 2
the valley. I also respect the landowners’ right to build what is allowed them, but you also have to take into consideration the negative impacts on wildlife and landowners across the road in Cottonwood Park that the larger landowners’ actions will have.
Give me a call and I will gladly show you around. It's a great area. We want to work with you to make it better for wildlife and people who already live here. Kathy Tompkins 734 6211

8/20/2009 ,
Joint Planning Commiss

8/20/2009  Wang, Louis
Save Historic JH

Staff will Insert the County's 2nd and 3rd recommendations regarding Theme 1 into Principle 1.1 where appropriate

Under the umbrella of transportation, Travel Demand Modeling is a subject for this evening’s meeting. Unfortunately, many of us at Save Historic Jackson Hole are on vacation and unable to attend tonight’s meeting. A volunteer has graciously agreed to read the following comments during the public comment portion of this evenings meeting.
The current plan noted that we were “exceeding the capacity of the existing roadway network” in the mid-1990’s when it was published. Deterioration in roadway level of service has continued to the point where incoming traffic from the north on highway 89 was recently seen to be backed up beyond the museum. We have a serious problem that’s getting worse.
The Appendix H study is well intentioned but lacking in substance. The “Technical Transportation Analysis” concludes that we “measure the progress” by “monitoring travel behavior” and that we “create a master traffic study for all new development.” This lightweight treatment is unsatisfactory. It simply sweeps a clear and present community-wide problem under-the-rug. Appendix H notes traffic has been growing at 3.5% annually but projects future growth at 2.0%.
We will have a 50% increase in traffic in only 12 years if recent growth continues. We need a real plan based on comprehensive facts and analysis. Simply “monitoring” and studying “new development” will not do.
As a community service, SHJH hired an acknowledged traffic expert to assist local planners in executing a comprehensive traffic study/plan. He is privy to all the technical material in Appendix H and has spoken with both Clarion and our local professional staff. On August 20, 2008, one year ago today, he laid out in writing what needs to be done to complete this comprehensive work effort. He followed that up with additional comments and guidance on May 6, 2009. Unfortunately, his work appears to have fallen on deaf ears. Mired in pretense, ‘we have an elephant in the room’ that no one wants to see. And all the while, full traffic gridlock gets a little closer year-by-year.
We now appeal to you commissioners to direct a real ‘comprehensive’ study and plan be accomplished before we find ourselves in an unrecoverable traffic calamity.
APPENDIX H
Travel Demand Modeling
Uses WYDOT travel model. Assign motor vehicle trip to roads in the network using the Shortest Path Possible. This method does not take into account wildlife, school zones, and neighborhood density, quality of life.
Looking at Future Scenarios:
#1 No land use or roadway network changes. Not acceptable. We already have failing intersections, the first being the Y intersection. Clearly, we need to address our main intersections for cost effective, green methods of resolution, ie roundabouts.
#2 Existing network with Indian Trials Road connection. This proposal seeks the shortest path possible approach, and does not account for neighborhood density, majority (6) of schools in area, or wildlife migration/habitat. This proposal violates community values and places a great risk to the above established circumstances. This also represents the greatest impact on existing area of all the scenarios presented.
We are appreciative of the current Micro study being conducted by consultants FHU, to study these issues on a much closer look. We are anxious to see the results. At the very least, this study should show origin-destination surveys, traffic counts, and intersection turning movement counts. Only then can we get a glimpse of the impacts this cut thru would have on the area. Future projection of population numbers must be considered as well , with Comp Plan build out included for South Park region/node.
This section also admits that “improvement to the Y intersections to facilitate motor vehicle, transit, bike, and pedestrian travel may still be warranted after the Indian Trails Road connection” THEREFORE, we should be addressing the Y intersection as a FIRST PRIORITY, then reassess traffic patterns as necessary. Y redesign could easily accommodate traffic demand without new road construction thru existing neighborhoods/wildlife corridors.
#3 Existing network with Spring Gulch Road improvements: Could reduce 20% of traffic on Broadway, results in 6% more traffic at Y. Again, let’s take the 20% reduction on Broadway, and redesign the Y so that a 6% increase there would be deemed insignificant! No new road construction, limited neighborhood density in this area, no schools. Must be combined with Y redesign, can not evaluate individually.
#4 Existing network with North Bridge crossing: Shortest Path Possible approach again. No regard for wildlife community values. Redesign at the 22/390 intersection would relieve congestion. Possibilities are another round about. With combined improvements at the Y intersection, Spring Gulch Road, and the 390/22 intersection, we would see significant traffic flow and quality of life benefits for everyone.
Let us examine the problems at our current “failing” traffic intersections and roadways and address these issues. We are ignoring the obvious solutions. I have a lot of information on roundabouts for discussion and how we could make this a 2 community effort in a “Gateway design.”

Focus on a predictable, measurable plan
Add a Theme: Energy Conservation - and have Staff compile principles and policies that belong in the new theme and relocate principle 1.3 into the new theme
Policy 1.1.[c]: Replace "behavioral best practices" with "policy decisions"

<td>8/20/09</td>
<td>Tompkins, Kathy</td>
<td>Kathy Tompkins, Poplar Wood Park. About the connectivity analysis Biota has been...is when you take down those fences, when it comes time to take down those fences, which I would like to see at the South Park at the north end across from Cottonwood, and then automatically you have greater connectivity through ranging park area, or through that ranging park itself, right across the road instead of the wildlife not knowing which way to go and everything. And the map that Rich gave you for South Park, I agree with most of it, but I would say even extend, widen, that setback on the northern part of South Park along High School Road, the width of the high school, and make that a beautiful transition area for wildlife from the surrounding areas. And double as a park, which would serve the community and the wildlife also at the same time. Bring down those fences and minimize the development there as much as possible. And I think that the medium that you have here in the analysis that is at right now in the northern part of South Park, I can guarantee you that would go even better if we could get rid of those fences and widen that area as much as possible. So, that’s it.</td>
</tr>
<tr>
<td>8/20/09</td>
<td>Harrington, Steve</td>
<td>I only have one, just quickly. Steve Harrington, I live in Jackson. I applaud what you’re doing this...I’m excited about your public on the wildlife situation which just seems like what the community wanted. But I would encourage you to do one thing. It seems like one of the things that is missing regarding wildlife is any kind of baseline data as to what you have currently. It would seem like that if you spend an x-number of days and weeks and months going through this whole Plan and then the first thing you know when you get some official data on wildlife and you find that certain populations are already in decline, then what do you do? Because you’ve gone through this whole process and you’re talking your first principle is viable, or wildlife populations, healthy wildlife populations is the word you used. But what if they’re already unhealthy, then what happens?</td>
</tr>
<tr>
<td>8/20/09</td>
<td>Barrett, Dave</td>
<td>I’m David Barrett from Teton County and I want to reiterate my appreciation for all the hard work you guys have done in the past. I mean, it’s incredible and it’s highly appreciated. I also want to support I’m not in your position &lt;&lt;inaudible&gt;&gt;, but I would like to bring and it may be a simplistic concept that I haven’t heard by anybody here tonight, and that is wildlife being our number-one priority. And the question is what is wildlife’s number-one threat. And it’s the population and classically we have seen throughout the ??, historically and currently, that population displaces wildlife. And if we allow the population to dominate and grow and expand and not have limits in this County, we won’t have wildlife. It’s pretty simple. And so the basic things that we’ve talked about in terms of stewardship and health and abundance and roadways and barbed wire and all that are really good things, but unless we begin to focus on how we manage our population growth in this County, then the rest will be &lt;&lt;inaudible&gt;&gt;. And so I would suggest a couple of possibilities. I can’t remember all that was offered by the County Planning Commission and the 35 suggestions or whatever it was, but among those suggestions was some excellent concepts I thought. And I want to throw the possibility in a general sense as you are trying to be global. It might be reasonable to take those suggestions and maybe add to them and focus on those as an organization, as a committee, and come to some resolution amongst all of you and then pass those on as you are doing these other items to the planners and let them do some writing on those 35 or so items as agreed upon collectively by your group. And then I’d like to suggest that we consider doing a build-out based on our current rights, current platted rights. And find out what that generation in terms of densities, locations of populations, and do a projection based on that in terms of where there are going to be people based on without additional bonuses. Take the bonus plans out. And find out where we’re going to have population sites, find out how they’re going to be moving, what the roads are going to need to look like, and then decide whether we should go further in this Plan. Because I fear that, you know, I’ve had this crazy notion from the time of this process in saying planning should be based on the size of the roads we can tolerate to allow for sustainable wildlife. And so if it’s a two-lane road, that determines where people are going to live and how people can travel &lt;&lt;inaudible&gt;&gt;. And to be talking about five-lane roads I think is becoming ?? in terms of preserving the valuable wildlife. I'm not sure &lt;&lt;inaudible&gt;&gt;. So, I would suggest that we do a build-out thing and then I would suggest we take a serious look at a long-term commitment to capping population in this Valley in a sustained to preserve the values we say that we want and that we should allow for that cap to be achieved through a growth rate that is very slow and &lt;&lt;inaudible&gt;&gt;. So, I guess that’s kind of where I’m at. I would certainly support and encourage conservation easements and that there’s a public funding potential for that to aggressively create monies that could go out to purchase lands as they become available with some incentives. ?? the Land Trust and ?. I think that would be &lt;&lt;inaudible&gt;&gt;. So, anyway, thanks.</td>
</tr>
</tbody>
</table>
Griffith, West Bank. I’ll keep it short as possible. I think we’re at the point that we should drive it home. We should utilize all possible methods of mortality mitigation, whatever they may be—electronic, overpasses, underpasses, wildlife friendlier fencing, etc., etc. One other point was brought up, Town absolutely has wildlife value, 100 percent, and those need to be considered just as strongly where they exist as County values. Two quick points. I’ll try to keep it only on what we’ve discussed, but one was very important to me and it was irrigation ditches. Policy 1.2A includes all water bodies, except irrigation ditches. Irrigation ditches, some of them existed for 70, 80, or 90 years. They’re the ecological equivalent of ?? and the upper Gros Ventre. Multigenerational usage, families have learned these areas of respite, loaf and play, etc., etc. Habitat connectivity of ?? species just as ??, bald eagle, raccoons, whatever is utilized, cottonwoods and the willow fields that accompany these ditches. Ditches should be indistinguishable to us as they are to the animals that utilize them in our LDRs, etc. The last thing I want to present is wildlife friendlier fencing statutes. They need to be strengthened. After developmental displacement or habitat loss and, of course, wildlife collisions, wildlife unfriendly fences contribute probably in third place to our loss of wildlife. We had a situation. Here are some pictures and I’m presenting this to Staff. These are some pictures. What’s special about these pictures, they were taken weekend before last, is that there’s nothing special. This occurs on a daily and nightly basis throughout the County. We received permission from various, it was collaborative, from the land owners who removed the bottom strand of this fence. We received it one week too late for this elk calf. This is nothing new. I pulled a second fence less than a mile that had four entanglements in it. We absolutely have to adhere to wildlife friendlier fencing statutes. There is no wildlife friendly fence. So, friendlier is semantics, I know, but… the picture, this impetus for the importance of this, absolutely have known standards that numerous fences, in fact, most fences in the County do not adhere to. So, we need to remove all those exemptions. We did all this with volunteer labor, volunteer equipment, and we provided the materials also to replace some of these barbed wire strands with smooth wire, which is just as efficient as wildlife containment. It was collaborative with the land owner, who graciously allowed us to do it. And we really need to hammer home these standards into the LDRs. So, I’m asking…what I’m asking of you is to send forth a very strong recommendation to the electeds that we adopt and adhere and enforce these standards in the County. We’re losing a lot of wildlife. We have hundreds of pictures like that. We don’t take them because, you know, for our health. We take them because, by analyzing them, we can best determine the method and manner of entanglement, so we can design fences that adhere to that. Thanks.

Jensen, Gail

I’m Gail Jensen. I just wanted to say that thank you very much for adding information to the website. It really did improve. I was able to get information from it. What I have not been able to get from it is any current comments from some of these…there is no ongoing blog, but it says there is. And I know I’ve entered a few comments and I can’t find them anywhere. So, I don’t know what’s going on with an ongoing blog that doesn’t exist. So, that’s…but it’s way improved. Thank you very much for adding all the information. Now, you can really follow what was said at the meeting and think about things and really see what’s on paper. Cause it’s hard to scribble everything down as you all are talking really quickly, so that was very helpful. And then I’m also pleased to see that a lot of my comments on theme one were reflected in a lot of your comments. So, I think everybody’s thinking in terms of similar direction, so I’m very pleased with that. And one more comment. I really do believe that the ag interests, agricultural interests, are really missing from this Plan, and that was one of my major comments and it was so prevalent in the ’94 Plan. And if you really want to try and conserve or protect those ag lands, you really need to work in a cooperative way with the land owners. And it sounds like there’s some hostility there with the large land owners and these 35-acre parcels. And I think it would be to everybody’s best interest to work some language out that is, yes, has some direction that the public wants to go with how to keep in mind those are private property owners and they need to be respected and a lot of them have held their property for many, many years without developing it and they need to be respected. And I guess I just got kind of a tone, negative tone, with, you know, the large land owners. I don’t know, guys, maybe I’m too sensitive, but I would be very careful and tread lightly there but yet still take the Plan in the direction that the public would like to go to. So, anyway, thank you.
Yeah, Rich Bloom, Teton County, and I am going to change hats up here; somebody else made a request of me. A couple of things here. I have a suggestion, you know, because I talk to large land owners. I have a masters in ecology. I’ve worked with conservation easements and large land owners. And I think this debate we are having, especially in going forward with some of these critical policies, until it kind of resolves, this discussion that Lisa brought up, my suggestion is because I don’t want to… I think we should bring the experts in, because I see a very different thing. I see this as a vision document where we should strive for. We all know there’s basic property rights and this has to do with Paul Duncker’s ideas and his inputs and kind of the reaction to that. And those two people I would invite and tried to get them here tonight, but I don’t think it can occur until you do a specific jumping shepherd kind of approach. Now, that would be ??, as a rancher, someone who’s dealt with conservation easements and nodes, ?? and all the other issues, and how to work with also the private sector, and Laurie Andrews from the Land Trust. I think the discussions on open space, because I would support Paul Duncker’s comments as well. He’s actually listened to developers. That is what the public wants. I think what you’re talking about is it is achievable. I am not naive. David Quinn here, he and I chat all the time. We connected with the Robinson family, the ?? family, the Lucas family. And the South Park area can be critical in the discussion cause in the southern portions, the Land Trust is already working with the Lucas’s just south of South Park Loop where they’ve set aside 300 of their acres and they’re trying to do the additional 600. And there are private efforts. We don’t have to get hung up on this funding source. It would be nice, but it also applies to how applications come forward. When Melody Ranch application, that was old. Let’s look at Three Creeks. When Three Creeks came forward, using, because they could have done a PRD, they didn’t do any more testing, rearranged the property, got a whole bunch of permanent open space and ?? I don’t necessarily agree that a resort community is what we want for our Valley, but I got to present to the homeowners association on Monday. I was invited to talk about the Comp Plan at their annual meeting. I was talking to so much money in that room. Had about 45 people that attended. And they’re committed. They have now formed their own network of a neighborhood group. And they are committed to start caring about what’s on the other side of their gates, which is the other Lucas family and the Porters. If we can establish a vision for this Valley, it doesn’t ever strip away private property rights. But it tells the land owner, it tells the Land Trust, it tells the public what we value and where we’d like to get to. And there’s a whole bunch of comments I submitted on behalf of my network, and I would say, unequivocally, because these were put out to my network, not one person disagreed with these. Some people disagreed that there should be a node or any node at all. Some disagreed about a east/west connector. Some disagreed about the Tribal Trails Connector. But nobody disagreed about what I submitted. And it really has some language in there. So, that’s my suggestion. I think Brad, me, Laurie Andrews, come up with a different arrangement, if you want, could I think enlighten and answer some of these questions, or we’re going to get hung up as we move through the next policies. A couple of other things. When we get to South Park, as far as an affirmation for that area, we’ll worry about how you actually achieve it, or even achieving it. I think the affirmations… my discussion with Three Creeks was wonderful. The discussions I’ve had with other land owners. And and Indian Springs Ranch and ?? subdivision. And I fund raised. I worked in an organization where we raised 40 million dollars to achieve things, including conservation easements on lands. We may not like where the journey’s going and up as far as private lands being steward and work that’s being done on restoration and ?? is incredible. I worked with Indian Springs Ranch. I am tying those people in the discussion and getting them committed and they will partner with Ralph Gill and Lucas and even Roger Seherr-Thoss to try to achieve some things, all right. So, that’s the suggestion on that. Let me just switch hats, because you have my comments and I’ll be bringing more next week. One thing I wanted to give… this was submitted as public comment, but in case nobody printed out the map, I just wanted to give those to you, pass those around. And those just came to you as e-mails as a map. That’s just one to help frame the discussion where the NRO is, SRO is, Land Trust is, etc., and the idea of connectivity that’s so key. The South Park region has values in all three areas, established wildlife values on the land, connectivity values between the land, scenic values and agricultural values. To switch hats here, because transportation was talked about as if there’s been a transportation study, and I am more familiar with transportation than you’ll ever know, dealing with the Mad Dog Ranch, Jackson campus projects, Teton Meadows Ranch, working with Rob Bernstein on traffic. So, I am not a member of Saving Historic Jackson Hole. I do not give them money. I am not on their board. But as everybody knows, I collaborate with everybody and everybody. And there is a comment Lewis submitted from California today, so I’ll pass that out… could you pass this to the right there for me? And he wanted me to read that, but it’s not in my voice so I prefer not to read it. But that is the head of a conservation group in the Valley that’s modified not for profit. I will, because I know how it is with thousands of pages of input you have, reissue some things he refers to there. Robert Bernstein was contracted last summer to submit suggestions on what should be covered in a transportation analysis and in a transportation plan. That was submitted as part of the public record and I’ll pass that out shortly. Then Bernstein reviewed everything that ?? saw, everything in the Plan you saw, talked to Clarion, talked to Paula Stevens, talked to County Engineering, and he is an expert, and has submitted on May 6th, and some of you have this by e-mail, so this is a repetition, but… I just want to pass these around. He already has commented that there have been no comprehensive traffic analysis done. What you saw was a macro-simulation that purely looked at the Y-Intersection, Spring Gulch, and Tribal Trails. It’s a very focused one, it’s based on the initial Clarion work. And I think Tyler alluded to that. Even that simulation that came up with the Tribal Trails Connector, WYDOT and the County met on that, agreed that was not by itself enough information. So, they’re spending WYDOT

<td>Bruner, Kristy Conservation Alliance</td>
<td>Hi, Kristy Bruner, Jackson Hole Conservation Alliance. First, we recognize how difficult of a process that this can be and you’re all volunteers. We really appreciate all the work that you’re putting into this. One of the things that we’ve stated before but I really think it’s important. That’s why when we submitted our comments regarding this theme, we did submit the 1994 Plan existing chapter. We really encourage you to revisit the structure of the existing Plan for guidance on some of the things we talked about tonight, as it outlines a very clear structure of the difference between goals, objectives and limitation strategies. If you look on page 16 of the existing Plan, it breaks down recommendations and regulatory actions versus non-regulatory actions and it’s very specific. So, just in terms of discussing future things, I just encourage you to look there. In terms of a lot of the discussion on the specificity, I think sooner or later it would be good to talk about whether or not this concept for wildlife stewardship plan would be promoted. That is one of our concerns that we raised about some of the things that were removed from the ‘94 Plan, is that there’s a lot of specificity in areas where it is warranted. Wyoming Game &amp; Fish brought up this same issue. They expressed the concern of why, you know, the identification of important habitat types were removed. So, I just hope that you look closer at that. It was good to see that you discussed the wildlife protection policy should extend beyond the NRO. We will continue to push and hope that there is language in this theme that wildlife protection will be the primary consideration in all land-use decisions, whether it’s the prevention of direct, indirect or cumulative impacts. Again, protecting wildlife cannot be successful focusing on development pattern only, so we do hope that somewhere in this theme that there’s a policy that clearly calls out the effects of the amount and rate of development. It could be in principle 1.2 when it talks about human impacts and resources, but we feel like it needs to be more explicitly stated. Wyoming Game &amp; Fish, in their comments, you know, spoke to this quite a bit on cumulative impacts, ?? recreation, a lot of those factors about the amount of development on some of these. We need to see that more. I’ll try to...I know you all want to move on. We’ll submit some things more in specific comments. Other things, I feel like if the idea of how much specifics are going to go in this theme is absolutely essential, and I think Game &amp; Fish summed it up the best in their comments when they said, the draft Plan should include more specific language, data, and mechanisms to provide the degree of stewardship identified in the introduction of the Comp Plan. So, everything else is submitted in written comment, but thanks for your efforts.</td>

Replace "viable populations" with "healthy populations" in Statement of Ideal and throughout theme, and add an indicator of 'health' and associated strategies

Kathy Tompkins, Cottonwood Park. Just wanted to submit something Patti Ewing gave to me and then I have another comment from ??, It is more petitions for wildlife and open spaces. And she would just like me to read this letter for you. Dear Commissioners and Planners, thank you for the opportunity to again voice our opinion and for allowing public comment during each of your joint planning meetings. We recognize the huge expenditure of your time, energy and the effort to thoroughly improve the draft Plan live online. Thank you. Attached are a few more signatures of citizens of Teton County, who sometime ago included their names on wildlife and open spaces. The value this community has cherished for decades will be reinstated as the community’s top priority to become the organizing theme of the entire Plan. Please include these for the public record. The new vision statement, which was approved last week in part, states preserve and protect the areas unparalleled natural ecosystem to ensure that wildlife and open space is protected. Theme one in the Comprehensive Plan must clearly meet the guiding principles in each section of the Plan. Keep considering relaxing the schedule of meetings. The existence schedule is burdensome for everyone. Would you consider scheduling the joint meetings every two or three weeks, instead of every week? It seems to us it is expecting a great deal from volunteer Commissioners, as well as members of the public who continue to be interested. It is difficult to attend each meeting. Thank you. Sincerely, Patti and Frank Ewing.

Rich Bloom submitted a memo this week about policy 1.1.C, 1.1.D, and, let’s see, on the second page of his memo, he has some changes to what was that "inaudible". I just got these last night and so I just ran through them and I just wanted to mention that 1.1.C, 1.1.G, and 1.6.A, I do like some of the changes that you’ve made and I just want to concur with that. And I speak for quite a few of my neighbors who would like to see those changes, too. And that’s about it. Thank you.

Save Historic Jackson Hole would like to submit the attached document from the Fremont County, ID Comprehensive Plan on Property Rights. After listening to discussions in the Joint Planning and Zoning Commission meetings, we believe there may be some confusion on the issue of Property Rights. That is understandable as the topic is very complex. We hope this document with help the Joint Planning and Zoning commissions as they revise the Draft Comprehensive Plan. I have marked three key points. We believe the most important point is that property owners have a right to reasonable use of their land. There is no guarantee of the most profitable use. The Idaho Attorney General’s checklist is also helpful in evaluating the impact of zoning regulations with regard to property rights. My apologies for not providing this document electronically. Time constraints prevent me from converting this to an electronic document in a timely fashion. Please include this in the packet for the next Joint Meeting. Thank you for assistance in this request.
Armond Acri
Executive Director
Save Historic Jackson Hole
For anyone who cares about this valley's wildlife and scenic treasures, a recent report from the Jackson Hole Conservation Alliance is well worth reading. "The Greater South Park Region: A Summary of Wildlife and Scenic Resources" assembles 30 years' worth of information on the southern end of the valley. It is an amazing and rich portrayal, pulled from existing records and accounts from multiple sources.

What I walk away with is the following: greater South Park is as consequential to wildlife and scenery as any other part of the valley, and as deserving of conservation. Because of how interdependent each element of the ecosystem is, degradation in this one place could not be isolated and would inevitably have impacts elsewhere.

Picture this: It is winter. You are a moose. You are hungry, thirsty, and need to get to your next resting place. You may have a calf with you. You have to travel between crucial winter range in the Cache Creek or Game Creek drainage and along the Snake River. As you move through the South Park area, you take refuge among tree stands, adjacent hillsides, and in the open meadows of ranch land. You must forage and find water as you thread your way, attempting to avoid humans and their domestic animals and get across or around their fences and buildings. You would be better off if you could avoid crossing roads, but this is impossible. You should especially avoid 'hotspot' areas, such as Highway 22 between Spring Gulch and Skyline (the road with the highest rate of wildlife-vehicle collisions in Wyoming), and Highway 89 from High School Road south to Melody Ranch. Maybe you're not a moose. You might be a big-horned sheep, mountain lion, river otter, bald eagle, great horned owl, trumpeter swan, cutthroat trout, chorus frog, or any of the over 80 mammal, bird, fish, reptile, and amphibian species catalogued as residents or users of the South Park ecosystem. You confront your own survival issues every day.

OK, you are not any of these creatures. But you are a first-time visitor to the valley or you live in the area. You are driving up from Hoback, the road just widening from two lanes to four, WYDOT's wildlife crossing / kill zone sign flashing. At 55 mph, it might be hard to stop for that unfortunately-timed elk or moose crossing - wish there were a tunnel or overpass for our mutual protection. The valley opens up, to iconic foreground, mid-range, and far views that are familiar and loved, or heart-strummingly new. If instead you were coming in from the pass and Wilson, you'd have a similar 'gateway' experience, with all the same elements - wildlife traffic and rural viewscape included.

The Conservation Alliance documents what we already know if we have been observant, and makes vivid what a first-time visitor might experience. No longer can we just toss away South Park as inconsequential to wildlife and scenic resources valley-wide.

We should make planning decisions based on the best available information, including what is in this report. The low prioritization of South Park's wildlife and scenic values in the current Comprehensive Plan draft is not supported by the evidence. Significant language from the 1994 Plan, recognizing and prioritizing these values, should be restored as the present draft goes through planning review.

Further development in the northwest corner of South Park should also be reduced in footprint and scale. As development occurs, significant portions of adjacent lands should be protected permanently, giving attention to continuity with other protected areas. Finally, the potential Tribal Trails connector should be evaluated with full recognition of the habitat types and wildlife movement that exist in the area, and the disturbance and fragmenting impact that such a road would have.
I have a few comments for this Thursday's joint Comp Plan review of Theme 1 that are focused on the South Park region. I can attest that the now 400 members of my network have complete and universal agreement on the following suggested changes:

- Policy 1.1c is a critical policy in this plan and is very relevant to the South Park region. This plan must encourage the continued acquisition of permanent conservation of large, contiguous open spaces in order to uphold the community's top priorities of both wildlife and open space. Open space conservation, for the purposes of wildlife protection, scenic vistas preservation and agriculture, should be encouraged and not be limited to the narrowly defined NRO. The 1994 Plan focused on the protection of open spaces for three primary functions: scenic preservation, agriculture and wildlife habitat protection.

  We suggest the following changes to Policy 1.1c “Conserve large, contiguous, and connected open spaces”

  “Large and contiguous ... Private efforts have been successful in permanently preserving such some of these strategic lands. Continued public, private and cooperative efforts are critical to conserving open space, particularly with the Natural Resource Overlay. Continued public, private and cooperative open space acquisition efforts, for the purposes of wildlife protection, scenic vistas preservation and agriculture, should be encouraged. Additional efforts are critically important to preserve open space that either lie within or provide connectivity between portions of the Natural Resource Overlay. Of equal importance are the continued efforts to protect important gateway image setting vistas as well as community character setting agricultural lands.”

- Policy 1.1 g: “Permeability of development for wildlife: In all areas, except those designated for mixed use or more intense development in the Town of Jackson or County nodes, development will be designed to accommodate wildlife movement.”

  See changes above: We believe, to achieve Draft Plan Principle 1.1 (maintain viable populations of all native species), the design of development in ALL nodes identified for growth must allow for wildlife movement permeability. Likewise perhaps this policy should be removed in its entirety as wildlife movement issues also apply to town. Staff has publically acknowledged this language was an oversight and that especially the County nodes (if in fact they remain in the plan) be designed for wildlife permeability.

- Policy 1.6a: “Conserve agricultural lands and agriculture throughout Teton County: The County will support efforts of landowners and land trusts to permanently conserve large intact parcels of land and to continue farming in South Park, Alta, Buffalo Valley, the Gros Ventre area, Spring Gulch, and south Fall Creek Road.”

- South Park is first on the list in the section of our current legally binding 1994 Comp Plan. The new language inadvertently strips South Park of such protection, implying that the entirety of the South Park district does not deserve conservation and directly unwinding the protection in our existing plan. Whether a node is or is not included on one very small portion of the South Park region – as in the 1994 plan, the greater South Park area should be prioritized for conservation.

- Below is the specific language from our current Comp Plan (with emphasize added) - from Chapter 1, Community Vision, Third Printing, October, 2002:

  2

  “In Teton County, the major issues tend to be broader and were of necessity mapped at a much smaller scale. The County Issues Map primarily depicts three areas of concern. The first is "open space." These are lands on which ranching should continue, wildlife habitat preserved, and the visual qualities of scenic vistas protected. Examples include the hay meadows of South Park, the Spring Gulch scenic area, ranchlands along the Teton Village road, Buffalo Valley and the western most entrance to Teton County from Alta. These lands also include the Snake, Hoback, Gros Ventre and Buffalo Fork river corridors and those hillsides and butte sides which are crucial winter range for ungulates.
These areas should be kept free of development to the maximum extent possible to help preserve rural character, critical wildlife habitat and important image-setting scenic vistas and river corridors, and to encourage the continuation of ranching and other types of traditional agriculture as a vital part of the community’s character. The County should encourage the preservation of the rural character, critical wildlife habitat and important image-setting scenic vistas and corridors, and encourage the continuation of ranching and other types of traditional agriculture as a vital part of the community character. Where possible, the County should be flexible with its development regulations as an encouragement to landowners to permanently protect these wildlife, scenic and agricultural areas. In addition, where nonregulatory options are available, these should be encouraged. For example, a land trust’s resource analysis in preparation for a conservation easement, may be sufficient to replace the County’s site analysis.”

Respectfully,
Rich Bloom – South Park Neighbors
P.S. Please note the attachment which contains a proposed land use map by myself for our South Park region which helps to put the rural zoned land in context of it’s relationship to the NRO, SRO, federal and state lands, and protected open space easements. Also attached is a two page summary plus species list of the JH Conservation Alliance’s very detailed The Greater South Park Region: A Summary of Wildlife and Scenic Resources delivered to you via hard copy June 23. The Greater South Park Region: A Summary of Wildlife and Scenic Resources A Report by the Jackson Hole Conservation Alliance
Release Date: June 23, 2009
Report Summary
Introduction/Purpose:
Balancing competing objectives – preservation and development – is a monumental task. South Park is a microcosmic representation of this struggle in Jackson and Teton County, between preserving and protecting wildlife, scenic vistas and habitat, and providing for our community’s housing needs. In response to a draft Jackson/Teton County Comprehensive Plan, released 04/13/09, that slates South Park for massive development potential with little data or analysis to justify it, the Conservation Alliance, with the support of several neighbor groups, collected existing data to document and bring forward the wildlife and scenic values in the region. South Park is defined in this report as the area between the National Forest Boundary near highway 89 to the Snake River, and between the southern end of South Park Loop Road and Highway 22, and includes District 12: South Park and portions of District 5: Eastbank, as defined in the draft plan. A majority of South Park should be prioritized for wildlife and natural and scenic resources protection even as one portion (the northwest corner) is called out as a node. This report focuses on South Park because it is slated for the most potential residential development of any district in the draft plan, and because the draft plan places very low priority on the protection of wildlife and scenic values in the area, which represents a significant departure from our community’s existing 1994 Plan. The draft plan also proposes up to 1,500 units in northern South Park, and includes unclear language about the extent to which the remainder of District 12 should be slated “as an extension of the town development pattern.” By allowing for dense development in the northwest corner, and without prioritizing the preservation of wildlife, scenic and natural resources in the remainder of District 12, the draft plan leaves an open door for similar levels of density throughout the district in the future. Due to the drastically proposed changes in land use in the South Park (from rural to town-level densities in certain areas), it is critical to take into account the area’s documented and understudied wildlife and scenic resources before the community considers a plan that stands to eliminate those resources and values.
Key Findings:
Baseline inventories, environmental assessments, wildlife-vehicle collision data and citizen and expert observations all indicate a significant wildlife presence in the greater South Park area. Elk, mule deer and moose, raptors, songbirds and migratory birds, along with a variety of waterfowl, amphibians and reptiles utilize the region to both live in and move through. Cumulatively, the habitats provided in and around South Park contribute to the overall ecological health of the larger Snake River ecosystem, and establishing protected connectors both north to south and east to west are crucial in ensuring successful wildlife utilization of the area. (Attached is a list of species that were documented in the area; citizen observations would add to the list significantly.)

According to Jackson Hole Wildlife Foundation data, roads in the study area present some of the highest fatality rates for large ungulates in Teton County. While there is not much data regarding ungulate use of private lands not protected by easements, there is documented evidence of ungulate movement across the roads and through the study area. Specifically, both the Highway 22 area proposed for the Tribal Trails connector road, and Highway 89 near the junction with Game Creek have been considered appropriate areas to construct wildlife overpasses, due to the high ungulate use and road-related mortalities in those areas. Wyoming Game and Fish Department has also designated the area flanking Highway 22 from Town to Wilson as crucial for a variety of wildlife species and as an enhancement area for future rehabilitation work.

The true gateway from the south to both Town and the resort facilities, South Park has long been epitomized by its scenic hayfields and long-range vistas of the mountains. It is one of the most widely noticed and clearest materializations of our rural character. Maintaining these scenic viewsheds is an important community objective and should be noted and prioritized in the Plan.

Recommendations:
There are several formidable data gaps in the wildlife studies for the area, particularly on private lands; for example, there is no consistent, long-term ecological monitoring program, no vegetation map, and no comprehensive analysis of the health of the County’s wildlife populations and habitats. Aside from the wildlife-vehicle collision data, there is very little data on ungulate movement throughout the County. The Natural Resources Overlay needs to be updated and must include a broader set of indicator species. It is important to acknowledge, for example, that a map depiction of an “absence of use” by wildlife does not necessarily indicate that the area lacks importance. Filling these gaps and others with the most up to date data is an important first step; we must base our development decisions on the best available information.

While some residential development is appropriate in the northwest corner of District 12, the new draft should not recommend significant intensification of development in the greater South Park region (or any district) given the community’s goals to limit overall growth and protect wildlife.

And, as development occurs, significant portions of adjacent lands, within South Park, should be permanently protected to balance development and conservation goals in the area. In addition, significant language from the 1994 Plan should be reinstated in the new draft to call out for recognizing the importance of this region for wildlife, scenic and agricultural values.

Teton County, and the surrounding ecosystem, should be looked at comprehensively, with an eye toward the cumulative impacts of growth and development on the ability of wildlife to both utilize and move through the region. While one development might not hinder the movement of an entire mule deer herd, for example, taken together and compounded, many of the proposed and existing developments most certainly will. Likewise, preserving a large portion of the habitats in the greater South Park area will increase the utility of the surrounding areas as well.

This report intends to initiate discussion on the direction of future growth to be sure that it is guided by the best available information. The Conservation Alliance has consistently asserted that planning in the greater South Park region should not be carried out in a vacuum, isolated from the
bigger picture planning issues in Jackson Hole and lacking in important data and research. As the community determines how, where, and in what amount Jackson and Teton County will grow for the next decade, it is important to take into account the cumulative impacts of that growth; the amount of development targeted for South Park and the surrounding areas stands to have significant localized and community-wide effects.

Please refer to the Wyoming Game and Fish comments, submitted 6/26/09 regarding Theme 1, as they bring forward some critical issues for discussion. Thanks.

SHJH believes the Comp Plan could be improved and simplified if the pictures and text boxes were eliminated. The text boxes are redundant and are not appropriate for a reference document like the Comp Plan. The pictures will get very old to the people who refer to the document often and will do little to help the people who read it once. The core of the document should not be a sales pitch. That should be in the Executive Summary and the Appendices. The core document should be focused on documenting the vision of the community on the key issues as they guide us through the life of this plan. Simple and dense should be the goal. Avoid the tabloid newspaper approach. It is appropriate for selling newspapers but not for a reference document.
Rich Bloom, Teton County. I’m speaking as an individual. I only say that you’ll see me throughout this process. I will mention that I have been assigned to the Blue Ribbon panel for ??, So, I do wear that hat; I’m not wearing that tonight. I’m also an elected board member of Melody Ranch Homeowners Association. But my comments tonight are as an individual. Missing data, the only thing I would mention on that, the one that’s glaring, and that is achievable is on transportation and traffic. Meaning with this numbers and where this Plan’s going, what does that mean for current infrastructure and needed infrastructure? It was a promised component, and I think that’s a piece to have, so you know the implications of where we’re heading or where we might head. Current data, that discussion you had on wildlife, I just wanted to make sure you were aware of the alliance piece. I think you all have that, the Greater South Park Region study. That is a wonderful piece of work that I was glad to see. In that, in the appendix, there’s a whole series of collision data maps, critical range, vegetation maps, etc., and I’ll point that out to the Planning Staffs, too, was put together by the Wildlife Foundation and Biota. And it’s in there in your document. So, there’s a really great start point. And those maps do not just focus on South Park. Those are the whole County. So, you don’t have to recreate the wheel while that data’s there. Vision, on Lisa’s, well, for lack of a better word, Lisa’s sentence there on property rights, I would add base to the property rights, because it works both ways, Lisa. Some people don’t understand that, yes, the state has a right to develop that land to those one per 35, but at the same time, a lot of private property owners feel like they should be allowed to do anything they want on their property. And I don’t know if base would help that, adding that word, to kind of clarify, because the community is confused on what private property rights mean. And we know it doesn’t mean zero, and doesn’t mean anything we want to do. So base might help that. The values, especially how to define scenic values, prioritizing open space, that whole discussion you had that’s going to come up in theme one, and it will come up in the future land-use maps in areas 12 and 5. I think it is important for three reasons. One is I think we’re heading towards looking at a transfer of development rights, and within that, I think communities know that should be sending areas or prioritized in receiving areas. So property owners know that, hey, we’ll be looking towards you to be a receiving area or a sending area and we have a priority to try to preserve your open space. You can do one to 35 but if you work with us on TDRs, we might be able to compensate you and achieve community goals. So, it has value there. I’ve met with the Land Trust numerous times, and I can’t speak for them, but they have publicly said, and they said this in STAG, that they also want to know which areas in the community it values for scenic open space. So they can keep those on their list to work the land owners with private money or conservation buyers to achieve community goals, just like they do in ?? Ranch and other properties. And that will come up in parts of South Park, so it’s a value to put this there, even though the ?? don’t have capital to work with them, at least the ?? knows we as a community value that area. Then the third is I think we’ll still maybe be working with the state on looking at real estate transfer tax as a funding source to purchase open space, and that will come back and maybe that will be in a County pot, but that certainly has been done in other communities. It’s surfaced. So, I think it’s worthwhile in this Plan to keep that scenic open space, all those values, while recognizing base property rights, because there’s ways to achieve it while compensating land owners. And then the last thing is just for the future, and Michael and I had a discussion on it, maybe you can give us all direction, because I would like to on a few issues over the course of months represent a larger constituency about how to do that. And whether you want that 50 people to show up or to say that we’ve talked and we have concensus or we have a petition, the idea would be to try to kind of come to consensus in neighborhoods or regions, and then somehow share that with you so we don’t burden you with 20 people all saying the same thing. At the same time, we’ve got to be careful because we can’t say we represent every person in the subdivision. But a number of subdivisions are working on this. I’m actually meeting with ?? on Monday. So, direction would be appreciated. Thank you.

I’m Kristy Bruner, Jackson Hole Conservation Alliance. Just a quick comment tonight. We’ll be submitting comments specific to your recommendations at a later date. As we’ve mentioned in previous correspondences, we really hope that with regard to the overall vision of this new Plan, and particularly as you move into discussions on individual themes, that you really revisit the information that we already have in our existing 1994 Plan. There’s a lot of information there. This process was supposed to be an update. That’s stated many times in the vision chapter. So, we just ask that you look at this because there’s a lot of information that shouldn’t be removed. So, thanks.

I’m Cindy Stone, I’m south of Town. I’m unprepared for any kind of comment because I didn’t think you’d let us, but I want to thank you for letting us comment. I know that you’d rather see it on the web because it’s not personal there. But this is personal to us, and it’s personal to my neighbors and the people that talk to me and care that I’m here. And so if you don’t let us talk to you in the heat of the moment, if you would make me...I’m not good with computers and I don’t take notes. So, that’s probably the downfall of my college career. So, I mean, two weeks from now, I’m probably going to make a mountain out of a molehill, because I’m going to be thinking about this for two weeks. I would appreciate it if you’d just let us say what we need to say. Thanks.

<td>8/13/2009</td>
<td>Griffith, Gregory</td>
<td>Gregory ??, County resident. In the introduction, two quick points. Page 1, what is a Comp Plan? It mentions everything but wildlife. That’s on page 1, in the inset box. Just a small point of contention there. Also on page 1, it says in the next 10 to 15 years. I think that should be changed to a hard number like 10 years. Fifteen years, as we found in ’94, is just too long to go without revisiting some of these issues. Also, on the vision statement itself, I actually preferred Tony’s, some combination of Tony’s and Forrest’s. I think the one we’re looking at now is pretty congruous. I also enjoyed the comment that Mrs. Allen made last, whenever it was, about the ?? I don’t think we can leave out the ?? because we’re engaging in restoration projects today, whether it be beetle kill, invasive weeds, improving spawning habitat, irrigation, I could go on and on, but I want to be brief. So, I really think it should include a goal to strive to restore some of these degraded habitats. And that was struck down at the previous meeting based primarily on semantics of enhanced or restored. I also enjoyed Tony’s, I think it was Tony’s, vision statement that mentions specifically quality of life and community character. We can get into the semantics of, you know, qualitative, quantitative, etc., but most people…it’s like a Supreme Court ruling once was predicated on, it was ?? obscenity. They said, I can’t tell you what obscenity is but I know it when I see it. Most people have a…could verbalize, given enough time, community character, the quality of life as it pertains to wildlife, traffic, open space, scenic vistas, economics, etc. So, if you do revisit that, I would really like to see some quality of life and community character and restoration language included. I had a real problem with, I think it was Mr. Duncker that brought up share our values and influence opinions around the world. We’re 4 percent of the world’s population. We use 25 percent of the world’s resources. Other nations have much better highly developed alternative energy systems, etc. There are things we can learn from outside us. It’s almost a pathantic type statement. Again, we’re getting down to semantics, especially these two first chapters. One final thing, in these processes, I understand this is the process now and this is what we have to go through, but we as a species tend to focus on minutia. We tend to focus on semantics. And we tend not to address the real big hard-hitting problems until it’s…we’re exhausted of energy. We’re exhausted of…the community’s exhausted of etc., etc. so, I understand we’re going through it chapter by chapter. I’m not arguing with that principle now. I just want caution that we maintain the will and the energy and the commitment to address the really, really tough issues when it comes to growth caps, wildlife, open space, etc., etc., etc. Thanks a lot and appreciate the public comment for what it’s worth.</td>
</tr>
<tr>
<td>8/13/2009</td>
<td>Acri, Armond</td>
<td>Armond Acri representing Saving Historic Jackson Hole. I’d like to also thank you for taking public comment. I think there’s real value in having timely comments right after your discussion. One point I think you might want to investigate a little more in terms of the vision statement is this keeps coming up this issue of takings and property rights. I know you guys have heard—I don’t want to keep beating a dead horse—but ?? County Idaho actually has a whole section on that. You guys might want to look at that as a model. It’s actually an appendix. Because they felt it was obviously an important enough issue, so it’s something you might want to look at is to address that issue. The other thing is to look at this idea of takings because they actually talk about that in a lot of detail, and I think you might want to get an opinion on how it applies to Wyoming law. I think it’s going to be similar to what Idaho is. And an important point that they make is that you can down zone property as long as you are consistent and fair to everybody. So, if you make a decision, and notwithstanding Ms. daCosta’s comment on her point, which is well taken on the state law for the 35 acres, there is a legal basis to down zone as long as it’s done consistently and there’s a lot of detail. I won’t bore you on that, but you might want to have maybe Mr. Rada can give you a little bit more on that. And the only other point I would like to do is I’d just like to accolade the comments on traffic and viable ?? and concerns about that. So, thank you.</td>

<td>8/13/09</td>
<td>Gail Jensen</td>
<td>Hello, Gail Jensen, and I really do appreciate you allowing the public comment, because I did write one of the comments last week about, you know, when you’re in the heat of this discussion, that’s the time to make comment and to have more of a community discussion. And I really do appreciate this, because it is very difficult to write down all of the discussion points and then try and revisit them three weeks, or how many weeks later it ends up being. So, I really appreciate that. Thank you very much. I do have just a couple of comments. First of all, the one thing that I guess maybe you all don’t understand, or maybe I haven’t read the statute correctly, but as I understand it, it’s only when you get up into those larger parcels is it 35 acres at the state level. It’s the County that can restrict it now and the County has chosen not to make the minimum of 70 acres, instead of 35. And there’s much more to that statute than just spelling out 35. So, somebody needs to investigate that and really read the statute because you’re mistaking on just strictly the 35s. That’s what changed. You can’t absolutely do 35s on every piece of 70 acres in the County. It changed to 140 being the minimum until you get up to those larger acreages. That’s why there was a huge rush to do the 35s by all these large land owners because they thought that the County in turn would change it to a 78 minimum. So, you need to kind of look into that statute and make sure you’re being correct on that, because that’s how I understand it to read. Anyway, the other thing that I had was I would like the sustainable definition to reflect by putting as the countywide priority putting the environment first. For instance, you’d say, a system of practices that are first healthy for our environment, second for the good of our community, and can be maintained indefinitely. I think for the good of the community also includes the economic issue there, instead of breaking that out separately. So, and I’ll put that in as a comment online, too, but I think you could even simplify it a little bit more. And you could also put the environment, which is the number-one theme for the County. Why not put that first in your definition of sustainability? I also have a problem with the definition of sustainable, whether it be mine or whomever’s definition or group definition that one comes up with, because if you read through this whole document, sustainability is used hundreds of times, and you need to take every single sustainable wording here and make sure this definition fits it, or you’re going to have to change this whole document throughout. I mean, it’s unbelievable how many times everything is sustainable. And as far as Webster’s definition for it, it means prolonging or maintaining. That’s what Webster’s definition for it—I looked it up—it’s what sustainable means as far as Webster is concerned. So, I don’t know. I still have a problem leaving sustainable in here because it’s used so much, and I don’t know that you can use one definition for all these situations. Let’s see, I guess the other comment I have is a little bit on the process. I got on the website, and all your comments and recommendations, the only ones I could come up with on the website was just 6, 17, 18, and then just what you wanted for studies. There wasn’t a vision statement. I don’t know where to find it. I clicked on everything I could click on and new information just isn’t there. And plus the most recent public comments, I couldn’t get either. The only ones I could get, for instance, I made comments, but I couldn’t find them anywhere. So, I don’t know what’s wrong with the website or how, you know, I’m pretty good with computers and I couldn’t get the information on that. So, I felt a little unprepared for this meeting because I came with just two little sheets with not even a fraction of what recommendations were here. That could be prevented. So, anyway, maybe you could kine of work on that and correct it, or get on the site and really play with it yourself because I sure couldn’t. It wasn’t simple. And if it’s there, it’s really hidden. The public...like I said, I’m pretty good with computers, and I couldn’t come up with information online, so.</td>
</tr>
<tr>
<td>8/13/09</td>
<td>Patty Ewing</td>
<td>Yes, Patti Ewing, resident. Two short comments on your vision statement. It seems to me that we could fix it very easily by simply saying preserve and protect the area’s ecosystem and natural resources, period. And then I concur with what Franz said in terms of the definition of sustainability. It seems to me that it’s important to acknowledge the sustainable...sustainability does not have to rely on growth with all its inherent cumulative costs and problems to really be sustainable. And I’d like to see that concept, as Franz suggested, be a part of your sustainability definition. Thank you.</td>
</tr>
<tr>
<td>8/13/09</td>
<td>Franz Camenzind</td>
<td>Thank you, Mr. Chairman. Franz ??, Jackson Hole resident. One, I do really appreciate the opportunity to make public comment, and I would suggest you do it at the end of every meeting wherever you are, because it’s fresh in your minds, our minds and so forth. Two points. One, which it was mentioned that the County workshop a few weeks ago by the Game &amp; Fish representative that the idea of viable populations really doesn’t sit well with some of us biologists because, as an example, a viable elk population may be a few thousand here in the Valley. We want more than that. And the Game &amp; Fish representative here, and I would certainly support that, is use agency numbers. Use agency objectives and things like that and not just viable numbers, because viability is a technical phrase that could be a whole lot less of a lot of species than what we have now. Or current numbers, that sort of thing. The second thing is the sustainability question, and I think we have unequivocal evidence in this community that’s hugely supportive that our environment is the number-one feature here. So, I would just suggest, and I’m not saying these are the right words, but a sustainable statement that is a system of practices that maintains indefinitely our environmental diversity and functionality while allowing for a healthy economy. I would put our environment up first, while allowing for a healthy economy. And I’ll leave it at that. Thank you.</td>

<td>Jensen, Gail</td>
<td>Thank you, both Town and Planning Commissioners for reading and listening to public comment as many of your comments and discussions reflected the public’s concerns. I am worried that the public will not engage in this complicated process you have setup. Without public comment at each meeting, the moment is lost, and important thoughts will be lost in the weeks of delay. The public needs to comment at the time the discussions are held because the background of what you said is critical to a real community discussion. I do not see big turnouts at your meetings in the future. Are you afraid of the time it will take for comment? You will get more public involvement if you ask for comments on proposed reccomendations before a vote like in a normal planning commission hearing - limit each comment to a few minutes. I doubt this will take a lot of extra time. If attending public feel you got it right then the meeting will move quickly. The written comments procedure will of course still be needed. When I click on the Preliminary Recommendations on this page only #10, 11, 16, 17, and 18 are listed, why not all? I have only commented on these as none of the others are here yet. Please see my comments below: #16. I feel just having the Housing Authority writing a white paper themselves is not appropriate. Many in the community, including myself do not agree with the reviews and conclusions reached by TCHA. In the last year, when asked to comment on a particular application, a real review of the Land Development regulations or Master plans were not done and strictly a push for approval whether right or wrong, sighting the &quot;human element&quot; was rendered. This has not installed trust in the TCHA to truly analyze regulations or data. The blue ribbon panel maybe another source for unbiased information, however, this panel was also a handpicked group. During the discussion you had talked about maybe the blue ribbon panel doing some of this work veres the Authority. An independent, third party, citizens review committee needs to confirm whatever is presented on the 65%. I would also like the recommendation to indicate current numbers are used and not the numbers used in the 2007 assessment which are now very dated especially in our current economic times. I know this is what is intended but the wording does not reflect that.#17. The current migration patterns were not part of the reccomendation. I would like to see the the sheer number of humans not just vehicle collisions and how that effects wildlife populations. Counting cars and collisions is not the only factor is really by-product of human numbers.#18. The buildout information is good but again a third party needs to confirm accuracy of the data. I am assuming after the numbers are gathered that a nexus will be set that compares how much new residential housing and what kinds/types are needed to supply the needs of the commercial numbers. Thank you for considering my comments in your review of the draft plan.</td>
</tr>
</tbody>
</table>
I would like to start off by saying Save Historic Jackson Hole is glad to see we are making progress in reviewing the Comp Plan. We feel the initial meeting had good discussions which is encouraging to us. We appreciate your efforts and offer the following suggestions to you as chairs for improving the process:

- Consider allowing limited public comment, up to 1/2 hour after about 1 1/2 to 2 hours of discussion by your boards. This would have a number of benefits: Relevant comments from the public on the discussion you are having are more valuable when they are offered in a timely manner. They can enrich your discussions and could shorten the overall process. One of the things that made the "round table discussion" that the county had so valuable was interaction with the public as part of the overall discussion. Many of us left the meeting last Thursday frustrated that the only option for participation is to submit written comments that will not be reviewed until 2 weeks after the discussion or to wait 2 weeks to make verbal comments. It would also give your members a short break from discussion.

- You are on the right track starting to wrap up the meetings at 8:30. At the end of 3 hours most of you seemed pretty burned out.

- Only having one opportunity for verbal comments on a theme means many people will only have the option of written comments. Many people have plans that conflict with the August 20 meeting. Many people believe face to face communication is more effective than written comments. You might not agree with this belief, but we believe it is important to respect the belief and make a reasonable attempt to accommodate it. We believe a short verbal comment period would achieve this.

- We are sensitive to concerns about verbal public comment being repetitive, so we would support the right of chairs to politely ask someone who is repeating a point from previous meetings to not repeat themselves. On the other hand we know limited input in the process is a source of great frustration among the public. If you err, it should be on the side of allowing more verbal public comment rather than not enough. People wish to be heard. We do not believe people will abuse the privilege of making verbal comments. The most important thing is to encourage public participation.

- Do not overschedule the process. By placing too much on the agenda, it discourages thorough discussion. Commissioners should feel comfortable discussing concerns in detail. They should not feel pressure to "get back on schedule." The final product is more important than the schedule. It has been said before but is worth repeating so we do not lose sight of that fact.

- Since this is a joint process, We believe the districts should be discussed jointly. As you have pointed out, what happens in the County affects the Town and vice versa. This may take longer but we believe it will result in discussions that will produce a superior product in the end.

- One last suggestion is to not get bogged down in the details of data. If you design the proper framework for managing development in Teton County it will accommodate to changing economic and environmental conditions. It will not matter if we are in boom times or a recession, a wet year or a drought. Remain focused on what you want to accomplish first, then determine what needs to be changed to reach that goal. That is the key to successful control of any process.

Save Historic Jackson Hole remains committed to developing the best possible Plan for the Town of Jackson and Teton County. We hope you will consider these suggestions as you move forward.
I share the opinion of many that the current draft Comprehensive Plan does not reflect Community goals, and should be delayed for a major re-write. But I want to raise a different issue. The current draft was designed for an economic era that no longer exists. The new economic environment poses different challenges that this Plan does not address. You are well aware of how the local economy has changed. Town and County face serious budget difficulties. Property values have plunged, and business turnover has fallen sharply. Homes are being foreclosed and businesses shut. A bank has failed and credit is tough to get. This is a new world, and you see how tough things are. The key point you should consider is that this crisis is not like the recessions we have seen previously in our careers. It is a paradigm shift. After many years of easy credit and unrealistic increases in asset prices the old system collapsed. Things will recover, of course, but not back to where we were. The economy will take years to digest a glut of unsold homes, bad loans, and massive increases in public debt. People will save instead of spend. Demand for travel, resorts, and second homes will not return to pre-crisis levels for years.

Before the crisis you could view development as responding to limitless demand. Your main concerns were how to pick among projects, limit the flow, and extract the best concessions. A huge industry arose to feed this demand: developers, realtors, builders, architects, planners, mortgage bankers, appraisers, etc. The construction and development industries provided employment, tax revenues, and affordable housing. The current draft plan was built around that paradigm, to try to manage it but also to get it to continue to pay for infrastructure and public services.

The trouble is, development has lost its supports of high real estate prices, cheap credit, and external demand for resorts and vacation homes. That creates two very important challenges for you. First, the construction and development industries cannot support the community any more, at least not to the scale we are used to. Second, they will not just fade away; they will fight to survive, and vainly claim that the good times will return. They will put additional pressures on you to approve projects and use up environmental capital in the name of saving jobs.

The Plan needs to shift focus from managing strong growth to coping with slow growth or even none at all. It needs to recognize that new development will further reduce prices for existing properties and businesses. It needs to recognize that affordable housing may become less important than preserving public services. It needs to recognize that developers will ask for more and offer less, and maybe put Jackson in competition with other communities. It needs to recognize that developments can fail, and put in place capabilities to ensure financial viability.

One of the few silver linings in this crisis is that gives you the time to slow down and reflect. There is zero demand for fresh development – if you don't agree with me call a local banker and ask him. We have just gone through the most severe economic dislocation in a century and it is hopelessly optimistic to expect the economy to bounce back any time soon. To persist in a planning process grounded in the pre-crisis economic thinking is to willfully ignore what we all see around us. I urge you instead to take the time to understand what this new world means for the Comprehensive Plan and the best way to react. I'd be happy to discuss these points with you further.

| 7/30/09 | Brunty, Kristy              | On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to the discussion items scheduled for the August 6, 2009 meeting: Themes 1 and 2. The Conservation Alliance will submit additional, detailed comments specific to each remaining chapter, theme, and future land use plan in the future as those hearings are scheduled. In general, the fundamental issues of this plan must be discussed and corrected prior to detailed review of policies. It is difficult to provide recommendations for specific language in individual policies because the underlying, base issues have not yet been resolved. The review of Themes 1 and 2 makes this challenge particularly evident. First, the public has demonstrated strong support for this plan to place wildlife and open spaces as the number one priority in all land use decisions in Teton County and the Town of Jackson. The plan’s approach, foundation, and language must reflect this. Second, the public has demonstrated strong support for this plan to limit overall growth, and acknowledge a carrying capacity for the valley’s unparalleled wildlife resources. Theme 2 must address how the amount of development will affect the community’s ability to uphold its top priority, as well as other community issues, such as workforce housing. The new plan should direct that baseline densities should not increase, and that the public concerns (unpredictability and inconsistency with community vision) regarding incentive tools be remedied. We also have concerns regarding the absence of data and analysis to inform the policies and maps of the new plan, particularly considering the geographic specificity of the Future Land Use Plan maps. Many of the policies, as they are currently described, lack an adequate basis, foundation or rationale for their inclusion in Themes 1 and 2. That the statement of ideal for Theme 2 has been dramatically changed since the earlier phase of this process is also troubling, particularly given the overall prioritization of this theme throughout the plan. We provide the attached comments, and raise questions, to encourage increased clarity in the new plan and to ensure that its policies will work to protect the assets that define Jackson Hole. (One of the original objectives of this process, which we support, was to ask and answer the hard questions now, as part of this comprehensive planning process, rather than have to debate isolated planning decisions in the future, application by application.) Thank you for your consideration of these comments and for all of your work. Sincerely, Kristy Bruner Becky Tillson Community Planning Director Community Planning Associate JACKSON HOLE CONSERVATION ALLIANCE, JULY 2009 SUMMARY OF COMMENTS on April 2009 Jackson/Teton County Comprehensive Plan Draft THEME ONE: Promote Stewardship of Wildlife and Natural Resources Key Issues: • Based on the community’s consistently voiced top priority, Theme One should be the foundation of the entire plan. Strategic conservation of the county’s unparalleled wildlife and natural resources should be the basis/organizing theme of the plan and of land-use planning decisions. • The policies should speak to the context of this valley, and what it means to be a gateway community committed to the stewardship of two premier national parks and one of the last relatively intact ecosystems in North America. • Given the parcel-level specificity of the FLUP Maps, and their role in the formation of zoning maps, more wildlife/natural resource data must be compiled prior to map review/adoption. • The detailed definition of community character from the 1994 Plan needs to be reincorporated. If the resources aren’t defined/identified, how can we preserve them? • Smart “development patterns” should also include discussion of the total amount and intensity of development, the rate of development, traffic and other infrastructure demands, and dynamic vegetation and habitat conditions, to name a few. • The plan should identify the major threats to wildlife populations and habitat availability and...
then outline policies and strategies to remove and minimize those threats.

- Indirect and cumulative effects are substantial threats to achieving our community’s goal to protect wildlife and habitat; monitoring must include an analysis of these different “effects.”
- Where data is lacking or outdated, we should be cautious while making land-use decisions. A lack of data does not necessarily indicate a lack of importance of an area to wildlife.
- Habitat connectivity needs to be addressed in significantly greater detail.
- Overall numbers (residents, commuters and visitors) matter. Increased human activities in the region threaten the health of wildlife populations.
- The plan must consider wildlife permeability, focusing on areas of threatened permeability, as well as on thresholds, beyond which both permeability and viability are endangered.
- Stronger language should be incorporated into this plan regarding permanent conservation of critical land and open space, for character-defining rural, agricultural and scenic purposes.
- Air and water quality are essential to the health of the ecosystem, economy and community. This plan’s proposed development potential will impact these resources.
- Language must be strengthened throughout the theme; replace “suggest” with “mandate." Scenic resource policies need a much closer look, particularly as they relate to this theme.
- Often, the direct loss of specific habitat cannot be mitigated for or replaced.
- According to survey data, a majority of the public voted to support taxes/the establishment of a funding source for permanent conservation. Why is this not listed as a strategy in this theme while it is for workforce housing and transportation, which received less community support?
- The plan must establish a funding source and specific role for the Environmental Commission.
- The plan speaks to the importance of monitoring, but needs to specifically identify a framework and timeline that is funded and feasible, as well as guidelines for monitoring and for the subsequent modification of land development regulations.
- The potential role of climate change on our wildlife populations and our economy are not adequately addressed in this theme. There needs to be more language specific to the Greater Yellowstone Ecosystem within the dynamic context of a changing climate.
- As stated by the Wyoming Game and Fish, “The draft plan should include more specific language, data, and mechanisms to provide the degree of stewardship identified in the introduction of the Comprehensive Plan as the community’s primary values.”
- The concepts and ideals presented in Theme One must be incorporated into the rest of the draft plan in a way that ensures that the larger community goal to protect wildlife will be met.
- A separate theme should be added to address energy efficiency and climate responsibility.

This community is trying very hard to plan for a positive future. It’s obvious that we should be planning for the future we are likely to see. It’s funny how the obvious is sometimes missed for the 1001 details we have to work through. It appears that we are now at a fundamental turning point with possible futures being significantly different than our current situation. The buzzword sustainability will likely transition from a trend to a lifeline for a viable economy and decent quality of life going forward. To count on anything else is too risky. We are either at or very close to world peak oil production. That means that future thriving economies will not have the type of fossil fuel dependence that we now see. We’ve known that for a long time, the only uncertainties have been the timetables and the best response. The time is now. On these issues we tend to respond like the large ship with a small rudder, very slowly. The smart response is to chart a good course well in advance. Many have been saying for some time that reduced fossil fuel use will be good for the environment, climate, national security etc. It may also be the only sure path to ensuring a vibrant and sustainable local economy. Last week at the Wolfenson Challenge Climate Solutions presentation, ambitious goals of making Jackson Hole an exemplary community on independence from fossil fuels were discussed. We should take the challenge and set goals for serious reductions in energy consumption. Now is the time to chart a course to reach those goals as our smartest path forward. I thus make the following proposals. 1. Embrace the Wolfenson Challenge. The response proposed by Climate Solutions is only an outline of possible paths we could take. Their program is full of good ideas but generally void of the specific recommendations. Many of those solutions could come from within the community. This community is full of talented problem solvers. We are also familiar with our local climate, both natural and human. We should make sure that the response to the challenge is comprehensive including reductions in all fossil fuel dependence. 2. Use our comprehensive plan as a tool to guide local development toward sustainability. The current draft plan is already moving in that direction but the sustainability ideals need to be elevated from platitudes to defined goals with target levels of performance defined. The task is monumental, Without goals and a coordinated response, our efforts will fail far short. These goals should become an organizing theme of our planning efforts. All future regulations, reviews, policies and planning should be viewed through the lens of our sustainability goals. Two such goals already present but buried, as afterthoughts in the draft plan are energy savings in buildings and transportation. I support the plans stated goal of carbon neutral buildings by 2030. The goal of energy conservation in transportation should be clarified and strengthened. I suggest we show commitment to transportation efficiency by setting specific goals for reduced vehicle miles traveled (VMT) per capita. I suggest a goal of a 50% reduction by 2030. This would correspond to national goals currently being generated. 3. Use the best planning tools to implement our planning goals. Our current LDR’s (land development regulations) fall short. Much of the recent bruhaa over The Plan’s creation of those nasty nodes represents a lack of confidence that the planning process can actually protect community character. Much of that loss of confidence is justified based on recent performance (the stuff built in denser areas of the valley over the last 15yrs.) I suggest we create professionally designed, carefully customized, form based codes for our future LDR’s. They are a more precise and character based tool. 4. Look for synergies. Where the sustainability goals help achieve our other goals such as enhancing quality of life, community character and the protection of wildlife, our efforts should be amplified. 5. Get commitments from strategic partners. Along the line of broad community support, buy in and total commitment from important organizations will be incredibly helpful. A few that come to mind are, The National Park and Forest Services, the chamber of commerce & the local tourism industry, the local architecture and construction industries, the local board of realtors and local conservation organizations. Closing thoughts. Too many discussions related to the plan have recently seemed to focus on build out numbers. I do not wish to minimize their importance but have to emphasize that these raw numbers are just a part of our impact equation. Numbers of people or buildings do not alone define character, traffic generation or energy use. Character is created by the complex interaction of land use / building patterns, our transportation systems and most importantly our community. Many of the concerns we hear about growth relate to transportation, specifically auto traffic. Interestingly neither our planning goals or energy goals will be accomplished if we do not confront auto use and traffic head on. Now is the time for our community to pull together and take significant positive action to control our destiny. This is our responsibility to a hopeful and promising young generation. I am interested in feedback.

7/30/2009

Vision Statement:

Preserve & protect the area’s unparalleled natural ecosystem while meeting our community’s needs in an environmentally responsible manner that celebrates this significant and unique place on our shared planet. (Superseded by Recommendation 64)

<td>As the Comp Plan begins the challenge of a joint review/ rewrite process, my concerns over Theme six Transportation issues remain in the forefront. The redesign of the &quot;Y intersection&quot; as the primary concern for future traffic planning for Jackson is imperative. Please take a look at the article attachment below on the benefits that a round about design would offer our community. This &quot;gateway&quot; approach could save millions of dollars in unnecessary new road build out and provide a safer, greener solution to many of our traffic backups. This concept could be continued at both the 22/390 Moose -Wilson Road and the Spring Gulch light to allow greater vehicle throughput and reduce traffic accidents overall on Highway 22. My colleagues and I have had conversations directly with WyDot District Engineers in Rock Springs, as well as Governor Fruedenthal regarding the Y round about concept. All are favorable to the idea, and are looking for support and cooperation from our town elects to put this back on the priority list of road projects. As you consider Theme six alternatives for transportation improvements, Highway 22 upgrades, and funding sources, a priority placement of the redesign at the Y could prove to be the most prudent improvement we could make for the community. I believe the town would rally behind this process, and I have ideas how to make this a &quot;community effort&quot; project. We need to bring the town back together more than ever before, and this could be the catalyst.</td>

I would like to know what definition the Teton County Draft Comprehensive Plan used to define human needs. It states at the beginning of the plan in the Community Vision chapter that “Ecosystem preservation does not preclude growth and development necessary to meet our community’s human needs.”

The following is from a workbook on Landscapes, Wildlife and People;

“The needs of people are more complex than the needs of animals, simply because people have something that animals lack: wants. Wants and needs are often used interchangeably to describe the essential things that people require in life. Dictionary definitions of the two words even use one to describe the other. Yet human wants can go far beyond human needs in both benefits and impacts. The driving consumer impulse of wanting something--- a new car, a vacation, a lifestyle--- causes people to overlook the basic needs of humans and animals alike. In our quest to satisfy our wants, we might leave our needs, or those of others, unmet. It is important to distinguish between human needs and wants as you explore the ways that community growth and development have an impact on the basic needs of living things.”

I believe that human needs as defined in the draft comprehensive plan go far beyond needs and morphs into the category of human wants without regard for wildlife protection and preserving open spaces. True human needs for Jackson Hole’s success as a healthy gateway community are woven into ecosystem preservation.

You can’t have a socioeconomic successful Jackson Hole without putting wildlife and open spaces first throughout the county. We have to protect the needs of wildlife and humans to have a balanced, healthy, economically viable place to live for everybody, not just for some people in some parts of the County.

There needs to be an annual cap on growth and development to stop the sprawl into South Park and other areas that the present draft comprehensive plan would allow. We need to go back to the build out numbers of the 1994 regulations without any up zoning or bonus density tools. The list of recommendations put forth by the county planning commission is a good start towards realizing the true needs of our unique community. Although as you know I do not agree with moving the rodeo, fairgrounds and Start Bus facilities to northern South Park. That would only lead to wanting more commercial there and continue the sprawl southward.

“Sometimes we forget that all living things share the same environment and basic needs.”[Project Wild]. In order to grow and develop responsibly in Jackson Hole, you need to prove we need it, not just want it!

Kathy Tompkins Cottonwood Park

I have been very disappointed that the current draft plan was and will not be corrected to reflect the overwhelmingly consistent public comments prior to the step by step review by the planning commissions. The vision, the themes, FLUP and the supporting appendices each need to be changed with basically the same nondisputed adjustments. Why not fix those items right now so that a more focused review of each part of the plan can be done without duplicating the same issues at every joint planning commission meeting. When the wildlife priority, growth and buildout numbers are adjusted, as the community has requested, much of the plan will have to change significantly and should become a different document entirely.

Please take a leadership role now insisting on the “global corrections” and by that action, you will restore my and the community’s trust that we will have a plan and a process that reflects our goals.

Sincerely,
Gail Jensen
I have a few comments to summit for next week’s joint Comp Plan review:

Teton County Planning Commission Recommendations

I attended the long meeting where the County planning commission discussed and modified a long list that they had intended to give to the planning staff as formal recommendations so that the draft of our comprehensive plan would be much more in-line with public comment before your joint commissions started your review. These 35 recommendations, although not all-inclusive and with one recommendation I can not agree with (moving the START, Fair and Rodeo Grounds to South Park) – did capture the majority of public comments and concerns to date and I know my neighbors felt they had finally been heard for the first time. The issue for me is you are still starting with a document that is so seriously flawed it was due to be sent back to staff before you even started your work. Given last week’s unsettling events and questionable ethics – that vote was shockingly reversed. I commend the County planning commissioners’ efforts, despite reversal, to recognize our citizens’ concerns that this draft was not ready to be reviewed. Now as I attempt to move forward (after what I firmly believe first should be a convened joint electeds meeting – see next point below) – I am sure those of you familiar with Roberts Rules of Order may believe those recommendations have also not moved forward due to the vote last Thursday evening.

If there is any question on whether the vote last Thursday was only about whether to remand the draft to staff – or not - versus the validity of a very long public process to arrive at the 35 recommendations – then please start your meeting with the County planning commission reaffirming - with a vote - that these 35 recommendations (each approved on a majority basis) are still formally a start point from which they should continue the process.

Need for a Joint Electeds Public Hearing

Given what the public has learned Wednesday in the News and Guide newspaper, and what has been witnessed to in differing levels and in multiple ways by many of us over the past year-and-a-half, I believe holding the scheduled July 23 joint meeting is ill-advised. The meeting should be postponed until a full public hearing by the joint electeds can be held, addressing the complete breakdown in the process and involving Town Council, County Commissioners, and both Planning Commissions.

The hearing should address three key questions:

1. Why has a preferred plan been issued (and reissued), when it is so out of sync with consistent and documented community input?
2. Why has a promised ‘update’ to the 1994 Comp Plan (sound and legally binding, although lacking in some detail) become a full ‘rewrite’ that diverts massively from much of the community-supported intent of the existing plan?
3. What occurred / has been occurring among the County Planning Director and any others, to influence the outcome of the draft and/or process outside of the public forums?

Introduction and Vision Statement

Given recent events, my concern about proceeding until the process issues I have already outlined are addressed - not simply ‘swept under the rug’ - and the short time frame since last Thursday’s vote - I regretfully do not have additional specific recommendations that I had intended to submit for the Introduction and Vision Statement sections beyond my comments that are already part of the public record. As a citizen though I was invited to review the Jackson Hole Conservation Alliance’s updated comments you have received today (July 17) and I fully support the detail you will find in them.

In closing it is important to say that I and the public appreciate the hard work you perform as volunteer appointees. Do not misconstrue out intent when I or anyone from the public challenges positions, process, and/or decisions or when we continually show up and engage in the public process. It is unfortunate I have found myself needing to raise my ‘voice’ simply to be heard. Going forward - I trust that you will still listen to the valid concerns that I and others have communicated – and will communicate - in our specific plan comments despite also having to challenge the process, decisions and some actions in the past.

Simply - do not kill the messenger – at least not until you have heard and listened to the message.

Respectfully,

Rich Bloom
July 17, 2009

Town of Jackson and Teton County Planning Commissions
cc: Jackson/Teton County Planning Team: Jeff Daughtery, Tyler Sinclair, Alex Norton, Jeff Noffsinger

Board of Teton County Commissioners, Mayor and Town Council

Dear Planning Commissioners,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to the discussion items scheduled for the July 23, 2009 meeting. The Conservation Alliance will submit additional, detailed comments specific to each chapter, theme, and future land use plan in the future as those hearings are scheduled. The Conservation Alliance has been deeply involved in community planning over the years and particularly during this plan revision process. We join the public, the planning departments, the planning commissions and the elected officials of both the Town of Jackson and Teton County in our shared desire to create a plan that builds on the will of the majority of the community. To this end, we offer the following comments to the planning commissions with the hope that they will be discussed and explicitly addressed in the new and updated version of our community’s Comprehensive Plan.

This correspondence regards the following items:

- Recommendations regarding the Teton County Planning Commission’s 35 recommendations
- Recommendations for four primary issues related to the new plan’s process, vision, and organization
- A summary of comments and detailed comments on the Introduction and Community Vision Chapters of the April 2009 draft.

Teton County Planning Commission Recommendations

We watched as the Teton County Planning Commission presented, discussed and modified a series of recommendations that they had intended to pass on to the planning staffs to help them in creating a new draft of our Comprehensive Plan. This focused approach seems to have captured many of the public’s concerns. By our account, these actions represented a position that planning documents, of this level of importance, should be at a near complete form prior to entering public hearings and should be more representative of community will.

Now, instead of sending the plan to the staffs, the Planning Commissions have chosen to proceed with the Draft Plan as presented in April 2009. As we have already voiced, we were very disappointed with this turn of events given the extent to which the new draft does not represent community vision. We commend the County Planning Commissioners’ initial efforts to uphold the public’s message that this new plan was not ready to proceed through the hearing process. That said, moving forward, we fully expect that this list of recommendations will serve as a jumping off point for discussions between the Commissions, and that they will play a strong basis for the Planning Commissions’ comments and revisions.

Key Issues

Rewrite versus Update

After hundreds of hours of examining the new draft and working to outline specific recommendations to make this draft become a workable and effective plan for our community, we find ourselves continually arriving at a core question – Why did this new draft end up being a complete rewrite and overhaul of our existing 1994 Plan? We feel that answering this question is not simply “water under the bridge” but instead is a critical first step in terms of moving forward. Answering this question is essential for a number of reasons, including the efficiency of the review process and identifying how to best reintegrate concepts of the 1994 Plan into the new draft.

The original objective of this process was to update the 1994 Plan, essentially improving the elements of the plan that needed to be fixed and increasing predictability in decision-making. Initial meetings related to the update process, consultant interviews, and a short projected timeline all indicated that this process would not be a revision or rewrite, but simply an update. In April 2007, when the Conservation Alliance first held a citizen information forum on the process, planners specifically emphasized the importance of alerting the public to
expect that this process would be an update and not a revision. This terminology in describing the process, “update” versus a “revision” or “rewrite” was framed as important distinction. Why was it determined it would be better to do a rewrite? Not only did the polls and public comments indicate that long-standing values of the community continue to remain the same, but the timeline and funding allocations were more realistically suitable for an update and not a rewrite.

Removal of Community Character-Based Planning Approach & Inconsistency with Community Will

This draft removes the 1994 Plan’s community-character based planning approach, which was the foundation of the Plan. The 1994 Plan included considerable language defining community character and the role of rural character preservation in both the town and county. In the 1994 Plan, the goal of rural character preservation led to policies and regulations that worked to protect open spaces (for scenery, agriculture and wildlife habitat) and small town character (modest scales of development and low-density characteristics). Maintaining this language would be more representative of our current community vision. Also, because the new draft removes the underlying character-based foundation of the 1994 Plan, it does not have a cohesive foundation or organizing theme upon which to base land development regulations.

Specifically, the 1994 Plan states, “In pursuit of the goals listed above, Jackson and Teton County hereby formulate a land development regulatory system which protects the health, safety, and general welfare of the citizens of Teton County by responding to the components of community character.” What cohesive planning framework does this new plan provide to form the basis of land development regulations?

First and foremost, this plan should work to protect the qualities of Jackson Hole that matter most to its residents, and that contribute greatly to its culture and long-term economy—our diverse wildlife, rural landscape, open spaces, and scenery. As currently drafted, it would fail in this objective.

Also, the community surveys have clearly demonstrated that there is support for limiting overall growth potential, which this draft does not address.

Future Land Use Plan Maps

In short, we have major concerns with the disconnect between the degree of specificity outlined in the Future Land Use Plans and a lack of analysis of what they propose. Overall, this new draft does not simply encompass a “big picture” community vision and therefore should not be reviewed as such. The parcel-level specificity of the maps, without accompanying analysis, represents a key issue in the review of the new draft. It is troubling that the new maps send the message that elevated levels of development are appropriate without analysis of impacts. If analysis is absent, we question the “predictability” these maps bring to the draft. A fundamental disconnect exists if data and information was not used to form the maps given that the plan suggests they are the key element of the plan to give “predictability” in future land use decisions.

The Future Land Use Plan maps raise more questions than they answer. These maps provide some level of predictability in development location only. Given the extensive ranges of scale, intensity, and density of development represented by land-use characterizations and Appendix I, minimal predictability is provided on these major factors in land use decisions. These factors are of major importance to the public. In general, the manner in which the future land use plans are organized is not user-friendly or clear, leaving the door open to unpredictable future land use planning.

Data Gaps, Studies and “What’s Missing?”

General

Repeatedly citizens have asked for more data and analysis to support this planning process. This lack of initial data raises the question about the feasibility of analyzing and monitoring important indicators in the future, when these actions have not been priorities for a major comprehensive planning process. If this analysis is not done as part of a major planning process, where it is of the greatest need, what future conditions (particularly with regard to available budgets and staffing) would enable this analysis to be carried out?

Also, in general, the new draft loses key language of the 1994 Plan it was meant to improve, both in terms of specific topics and detail. How can this new draft be expected to provide clearer guidance on important community issues such as ecosystem preservation, workforce/affordable housing, and transportation when it

Friday, May 04, 2012
Wildlife Data Gaps
The geographic specificity of the new draft’s maps pose particular challenges. The new maps propose nearly parcel-level recommendations in each individual district, without the inclusion of an underlying amended and updated natural resources map. Particularly given the specificity presented in the proposed district maps, identifying 1) documented sensitive environmental resources, 2) geographic or species-specific data gaps, and 3) consideration of additional species for protection, are critical steps to take prior to the adoption of such detailed future land use plans.

Clearly Defined Buildout
Please heed the recommendations drafted by Teton County Planning Commission that highlight the major studies necessary to justify the new draft’s policies and maps. Given that it is very difficult to construct a road map to the future without an idea of where we are now, we feel it is essential to have a comprehensive (and corrected) documentation of the development potential, to include baseline entitlements, in all 25 districts prior to review of the Future Land Use Plan District Maps. The collection and presentation of this data should be presented in simple tables and based on the same techniques and assumptions for both the Town of Jackson and Teton County. Assumptions should be clearly outlined. (In cases where consistency cannot be achieved across jurisdictions, then a clear explanation should be given).

As part of this compilation, it would be helpful to summarize other key measurable units in a consolidated format such as: best estimation for existing and potential accessory residential units, the number of already-built deedrestricted residential units (ownership and rental), total square footage of already-built commercial property (this needs to be defined as to whether it includes lodging or short-term rentals), the square footage of already-approved but not-yet-built commercial property, and existing and already-approved but not-yet built commercial, residential, and deed-restricted housing at each of the five Planned Resorts.

Introduction and Vision Chapter Comments
Please see attached comments.

Thank you for your consideration of these comments. To make this process more effective in the long run, we hope that you will address fundamental issues related to the plan prior to proceeding with page-by-page modifications of the draft. The language of the Introduction and Vision chapters will have far-reaching and underlying implications throughout the rest of the plan. Essentially, we hope that modifications to the plan throughout the rest of the document can enable it as a whole to uphold many of the statements and claims made in these initial chapters.

Thank you again for your hard work on this plan and for your volunteerism on behalf of the community. Please contact us with any questions.

Sincerely,
Kristy Bruner
Community Planning Director

Jackson Hole Conservation Alliance Comments

1 This statement of ideal needs to be changed. Refer to the Teton County Planning Commission June 29, 2009, motion, which included possible new statements. In particular, recommendation 3a, “Preserve and protect the area’s ecosystem, natural resources, quality of life and community character in a sustainable and predictable manner” is more representative of community vision.

As it is currently drafted, there is no central framework or filter through which all land use decisions can expect to be guided. “Meet the community’s human needs” is far too vague of a concept to provide any clear guidance in protecting what makes Jackson Hole unique. Also, it is important to acknowledge that through consistent polling in our ‘human’ community, citizens strongly identified a desire and need to remain responsible stewards of the Greater Yellowstone Ecosystem and one of the most unique communities in the world that sits within it. In this new plan, it should be clearly articulated that Theme 1 is the primary goal, and that through other approaches and actions (such as growth management and responsible transportation, etc.), this
goal can be achieved. By meeting this primary goal, Jackson Hole can be sustained as a community that meets the needs of many humans, both residents and visitors, including those of future generations. Our community’s role as stewards of this unique ecosystem requires an approach that extends beyond meeting short-term “needs”.  
2 This figure is approximately three, not seven, percent.  
3 This process should specifically define these characteristics, as well as the “intense pressure” that stands to threaten them. The 1994 Plan provided far greater definition of unique community characteristics than the new draft, as well as what types of “pressure” or development types would degrade these characteristics through time. If our attributes are not clearly defined in a major planning process in a comprehensive way, they will not be protected.  
4 See discussion in note 1, above.  
5 Discuss the inclusion of more specific language regarding sustainability that is unique to Jackson Hole, including the challenge to protect the rare assets that set it apart from other places, and the challenges of living in a remote area with a northern climate. In general, this plan inadequately addresses key issues such as the potential impacts of climate change in our community, and other factors that have particular relevance to sustainability in Jackson Hole.  
6 The new plan, with Theme 1 as the foundation of the plan, should define what it means for land use decisions to be “sensitive” to the ecosystem. To provide clear guidance, it should define what factors are necessary in order to achieve this goal, particularly in regard to the appropriate location, scale, and rate of development and locations for permanent conservation. The best available science should be used to inform these decisions, and when comprehensive data is lacking, the “precautionary principle”, to err on the side of caution, should be applied. Also, this new draft does not appear to be based on directing “sensitive” development, given the amount of development, residential and commercial, that it deems reasonable in Appendix I and the Future Land Use Plans.  
7 This statement is inaccurate. Conservation science has long indicated that conservation thresholds can be crossed. And, given the lack of baseline data on Teton County’s private lands, including 2009 JACkSON / TETON COUNTY COMMUNITY VISION Y RELATIONSHIP OF THE THEMES TO THE FUTURE LAND USE PLAN  
16 Jackson / Teton County Comprehensive Plan vegetation cover, is it hard to determine whether some of these thresholds are already being passed, in terms of habitat loss. At least two species of concern, moose and mule deer, already have declining populations. The plan does not recognize that our community must face, and answer, tough questions about carrying capacity. Increasing the potential for direct, indirect and cumulative effects associated with human-related development impacts, increases the potential for crossing thresholds (in terms of survival of local wildlife populations). At the core of the sustainability concept is the need to recognize limits. In many ways, the new draft indicates a fundamental shift from acknowledging that there are limits to how much development can occur here (as described in the 1994 Plan) to assuming that “ecosystem preservation does not preclude growth,” as described in the new draft. At a big picture level, the new draft takes a huge step backward in terms of integrating a “sustainability concept” because it no longer emphasizes that our economy should not be dependent on population growth. The 1994 Plan’s emphasis to encourage a sustainable economy not dependent on population growth should be reinstated. Impacts from developments can be minimized, but at some point, regardless of “mitigation” approaches, the amount of overall levels of development need to be conservative to achieve the community’s top priority.  
8 See Introduction discussion. The new draft identifies Theme 1 (Promote Stewardship of Wildlife
and Natural Resources) as the community's top priority. However, in other key areas of the plan, such as this section and in the Introduction, it identifies Theme 1 and Theme 2 (Managing Growth Responsibly) as the community's “primary values.” As stated earlier, the vision statement “Preserve and protect the area’s ecosystem and natural resources and meet the community’s human needs in a sustainable manner” is clearly based on meeting the primary values, but does not distinguish a prioritization and introduces vague concepts such as “needs”. Additionally, in this new draft, the meaning of Theme 2 was fundamentally changed in the new draft in comparison to what “managing growth responsibly” meant in the early visioning process and in survey questions. Following is just one example. The following objectives, 1) establish and define the “end state” for development of the town and county and implement it through regulatory and programmatic approaches, and 2) fully address the cost of growth, were listed as two of four objectives that this theme would address. This new draft either doesn’t address these objectives at all or doesn’t elevate them as a key principle in the theme. Similarly, the ideal statement for Theme 2 has fundamentally changed since earlier drafts to just refer to “human needs.” Specific recommendations regarding Theme 2 will be provided separately.

9 This section should specifically refer to indirect and cumulative impacts of growth on the ecosystem.
10 Clarify - What are these “tools”?
11 This Plan should primarily be about finding solutions to uphold the community’s top priority.
12 First, we recognize that the 1994 Plan has needed an update to provide increased clarity, and in a way that responds to current community challenges. However, this statement and discussion that the 1994 Plan was more fragmented and less cohesive than the current draft is highly debatable. Specifically, the 1994 Plan used a community-character based approach, a common planning approach that can be very helpful in solidifying how different community goals are related and in 2009 JACKSON / TETON COUNTY COMMUNITY VISION Y INTRODUCTION

Jackson / Teton County Comprehensive Plan 17

linking diverse goals in a cohesive, comprehensive manner. This approach is absent in this new plan, and is not replaced by a more predictable approach. Specifically, the 1994 Plan states, “In pursuit of the goals listed above, Jackson and Teton County hereby formulate a land development regulatory system which protects the health, safety, and general welfare of the citizens of Teton County by responding to the components of community character.” What cohesive framework does this new plan provide to form the basis of land development regulations? If the answer is that the future land use plans, along with land-use characterizations, are the key guiding element, what is the rationale for the maps presented, and what criteria would amendments to maps (or land use characterizations) be based on? If these maps are the “predictable element”, it is particularly concerning that no analysis was used to form these plans and maps.

Given the benefits that community-character based planning approaches can provide in comprehensive planning, particularly in gateway communities, we recommend reinstating a community-character based approach, with increased clarity in definition and parameters. The 1994 Plan would provide an excellent starting point, particularly Chapter 3. A character-based plan can be quite specific in its language and direction. Refer to Chapter 3 of the 1994 Plan for specific examples, which describe topics such as the importance of clustering and open space protection, and scales of development. While pages 9 and 10 of Chapter 3 in the 1994 Plan could benefit from further refinement, they provide much clearer direction than the new draft for land development regulations.

13 See prior discussion. The new draft does not consider community issues in an integrated and balanced way.
14 As we stated in an earlier correspondence, we question the approach to prioritize themes in individual, isolated land use planning districts. Without an accompanying larger scale approach, the currently proposed approach could result in planning and decision-making that underemphasizes the importance of cumulative, valley-wide impacts. The new plan should include a more comprehensive framework to evaluate all land-use decisions. This new plan should include a comprehensive, larger scale Future Land Use Plan map that depicts how different districts are related across the town and county. For example, there should be a comprehensive Town map that includes all Town districts. With the current approach, a piecemeal, isolated approach to planning is promoted. The very general map for both jurisdictions on page 11 is inadequate.

15 Despite the new approach to use monitoring to allow for increased accountability and measurability, and some new specific policies to promote energy conservation and the use of renewable energy, the plan, at the big picture level, falls far short in integrating the concept of sustainability. In short, the plan does not recognize that our community must face, and answer, tough questions about carrying capacity. To sustain our area’s key assets, this plan should promote strong growth management policies, including significantly lowered development potential.

16 The ranking of priorities proposed in the various districts, particularly with regard to natural resources, wildlife, and scenic protection, lacks a scientific basis and is flawed. Detailed comments will be provided specific to each district.

2009 JACKSON / TETON COUNTY COMMUNITY VISION | RELATIONSHIP OF THE THEMES TO THE FUTURE LAND USE PLAN

18 Jackson / Teton County Comprehensive Plan

17 The land-use scenario most strongly supported by the community did not include the expansion of county “nodes” with town-level densities, which is depicted in this map. Why is this land use plan being promoted in the new draft when it does not represent the community vision?

Comments on THEMES 1-7 summaries, pp. 10-13 of the Vision Chapter*

* Detailed recommendations will be submitted specific to each theme-based chapter and Future Land Use Plan in subsequent comments. Below are just a few comments to contribute to the discussion about the themes’ summaries. There are many statements in this chapter that describe what the plan does. Unfortunately, in many cases the remainder of the plan falls short in actually carrying out some of the claims outlined in this chapter. This disconnect between what these initial chapters say that the plan does versus the proposed principles, policies, and Future Land Use Plans that the plan contains is a major concern.

18 Preventing the “exporting of impacts” is a good goal, but the new draft should first and foremost provide policies that prevent impacts overall, whether within the local valley or in neighboring communities. A lot of focus is given to the prevention of exporting impacts, but in general, the impacts that will occur from the proposed level of development within the valley are strongly understated throughout the document. Where is the discussion of the role of lowered development potential and its implications?

19 This goal is the top priority. Scenic resources preservation should also be reinstated as a primary element of Theme 1.

20 While minimizing impacts to the ecosystem is a worthy goal, the new draft includes no analysis of the impacts expected to result from “town-level” densities in these nodes. There’s no data suggesting that the nodes could handle the amount of development proposed without significant ecological, social and fiscal impacts.

21 “Community needs” is consistently referred to; this document should give clearer guidance as to what this entails.

22 What is the basis for this assumption? Specifically, how does town redevelopment remove growth pressure from crucial wildlife habitats? The current plan lacks assurances that
intensification of development in town is linked to conservation opportunities in the county. These
statements should be removed if they lack a basis in the principles and policies of the plan. It
appears that the underlying premise of the plan – that tradeoffs in certain geographic areas will
be required to uphold the overall community vision – is resting on false assumptions.
23 These outcomes will be based on the types of development promoted in town redevelopment. If
redevelopment results in primarily high-end lodging, commercial and resident development that is
largely inaccessible to workers, these outcomes will not result as described. Given the extensive
level of commercial development deemed reasonable in the new draft, an increased dependence on
commuters is likely. Also, development has direct, indirect and cumulative impacts in this valley,
regardless of where it occurs. This plan understates this fact.
24 The new draft includes a number of strong policy recommendations under Theme 4, including
the emphasis on preservation of workforce housing. A few key concerns include: consequences of
shifting the definition of workforce housing to include market, affordable and deed-restricted units,
a failure to emphasize the impacts of excessive commercial development potential and how it will
impact the ability to achieve a 65% goal and reduce regional and local impacts, unresolved
reconciliation between regulatory and incentive options, and a lack of emphasis on the production
of rental units. Without a focus on a more comprehensive set of drivers for workforce housing
shortages, many policies are not likely to result in long-term solutions.
25 Theme 5 needs a lot of work. Theme 5 should emphasize the importance of promoting
“economic sustenance that does not depend on population growth,” as stated in the 1994 Plan.
Theme 5 must address, in a more meaningful way, how Jackson Hole’s long-term economic wellbeing
depends on the protection of our natural resources, wildlife, scenic vistas, and small town
character.
26 As stated earlier, Theme 6 needs a lot of work. Reinstating significant portions of the
Transportation Chapter adopted in 2000 is essential. Currently, this theme’s chapter completely
lacks the analysis necessary to form sound transportation planning policies. This chapter, in many
ways, begs the question of why so many policies and recommended strategies from the 1994 Plan
have been removed.
27 One of the original objectives of this process, “evaluate whether the town and county can afford
the public commitments in the Comprehensive Plan, and that revenue is greater or at least equal to
the cost of services” was not addressed.
The new draft directs the creation of a countywide Capital Improvement Plan (CIP), but provides
no analysis of the fiscal impacts of the proposed development potential and policies. Given the
parcel-level specificity in the Future Land Use Plans, this lack of analysis is a huge concern.
Also, in general, the new draft contains a number of policies and descriptions that assume the
economic benefits of additional growth; however, the anticipated costs of growth are consistently
underemphasized. In terms of infrastructure demands, this chapter underemphasizes the
impacts of the “effective population” in the county and town, which would include residents,
commuters, and visitors. This variable is a critical component that is addressed in the 1994 Plan,
but is completely lacking in the new draft.
28 We have major concerns with the disconnect between the degree of geographic specificity (and
development characterizations) outlined in the future land use plans and a lack of analysis of what
is proposed in terms of development potential. It is troubling that the new draft maps send the
message that certain levels of development are appropriate without any accompanying analysis of
impacts. In general, the manner in which the future land use plans are organized is not userfriendly
or clear, leaving the door open to unpredictable future land use planning.

<td>Tompkins, Kathy</td>
<td>Hi Paul, Leland, Hank, Ben and Andy, I hope your summer is going well. I think I can confidently say that a lot of Cottonwood Park residents are very worried that what we have commented on so far; in the comprehensive plan survey that was poorly interpreted by planning staff (Jeff D. has admitted that to me at the July 9th joint commissioner’s meeting) and the comp plan website itself will be lost in the shuffle of power plays that is going on right now over the plan process. Cottonwood Park residents want to know how many times do we have to comment before our concerns about the plan are acted upon. We liked the idea of sending the plan back to staff with directions to include public comment and the 35 recommendations by the county planning commission. We do not approve of the fairgrounds, rodeo and start bus depot being moved to South Park though. We are already dealing with the problems caused by six schools, a sewage transfer station, a grocery store that services the whole community and light and heavy industrial that surround us in West Jackson. Please don’t choke our neighborhoods off any more. Even some people who say why not move the facilities are backing off after I emailed them Cottonwood Park’s perspective. I think I emailed it to you also. I hope you read it. We are not nimbys. I get pummeled with that term all the time but it just makes my resolve even stronger because of what we have here already. I envision High School Road becoming an academic road and I think I have told you some of my ideas. I would like for you to hear about my walking tour with Kelly Lockhart through Range View Park where I live. We are the front lines for either an excellent symbiotic relationship with South Park or a disastrous erosion of great neighborhoods here in West Jackson due to the proposed over development of South Park. Please keep Tony and Forrest on the county planning commissioner’s board. They seem to be the only ones that understand the frustration residents here are going through. What do we have to do to get our comments and the public survey acted upon. STAG and the way planners interpreted the plan do not represent us. How may times do we repeat ourselves that this is not the plan we wanted. If the wearing out of the public involvement is what the elected wanted to get this through as is with few changes; I can only say I hope that is not the strategy but many are believing that is the case. My phone number is 734 6211. Maybe we can get together so I can show what works and what doesn’t work in Cottonwood Park. Please let me know what you think so I can believe that our concerns are your concerns. Sincerely, Kathy Tompkins Cottonwood Park, Jackson Wv.</td>

<td>Acri, Armond</td>
<td>Teton County and Town of Jackson Planning Commissions voted on Thursday to adopt a new process for reviewing the Comprehensive Plan. By adopting this major change in the process without taking any public comment, those who voted in favor have betrayed the public trust and insulted the community. It is more proof that public input is greatly appreciated, but has no real impact on the process. It appears some elected officials are not willing to wait for their turn at the Comp Plan. They continue to inject their input and try to pass it off as what the public wants. Why are they ashamed to let us see their input? The current process and the current draft are a sales job for something we do not want. When the plan reflects the wishes of the public, no sales pitch will be needed. Armond Acri Jackson</td>

We are writing to express our disappointment regarding this latest step by the Teton County Planning Commission.

Like a number of people we have talked with, we would like to know from the Planning Commission just how it sees this step as a move forward towards honoring the will of the people. And we wonder just how many rounds of "public reviews" will be required before the Planning Commission acts on what the community already has declared to be its preferences.

We ask you to support a comprehensive plan and process that represents the will of the people and respects our wishes for the future of our community.

Sincerely,
Bonnie Kreps
Inger Koedt

As residents of Melody Ranch, we were not surprised by the results of the survey by the Conservation Alliance, confirming what we know to be true: that our neighborhood provides both habitat and migration corridors for a huge variety of wildlife.

The writers of the Draft Comprehensive Plan, who put wildlife as the second lowest priority for South Park, must not have seen what we see: the great horned owls who nest each season in the adjacent cottonwood trees, the various waterfowl who visit the pond behind our house, the ducks who winter over there, the elk who migrate through, the moose who spends each winter here with a calf, feeding on our neighbor's willows, the coyotes, foxes and other small mammals, even the mountain lion who paid our neighbor a visit last winter.

We own and operate a photography business that is largely dependent on visitors who have chosen Jackson Hole as a destination location. Time after time, they tell us that the wildlife and the scenery are the reasons for that choice. It's been well established that wildlife needs habitat beyond GTNP in order to maintain healthy populations. The Draft Plan, calling as it does for wall-to-wall high density in South Park, would drastically impact not only our neighborhood quality, but our business as well.

We applaud the County Planning Commission for taking a stand for preservation of what we all cherish about Jackson Hole, and sending the Plan back to staff for a major overhaul. And we urge the Town Planning Commission to do the same.

Thank you for your time,
Linda Swope

Swope's Mountain Photography
I offer these insights to help get our planning process on track. There should be a strong link between the challenges of our time and the responses of our plan. We are living in a transitional time, we face monumental challenges both locally, nationally and globally. We will not solve our problems with minor course adjustments. Now is the time for creative holistic thinking and cooperation. Let's clarify our goals and get on with it. SUSTAINABILITY RE Sustainability We need to ask ourselves if we are committed to these goals. If the answer is yes, if we want to preserve wildlife, our economy and be a pioneer city for energy conservation, then success will only be achieved if these goals are treated as central rather than peripheral to the plan. The synergistic potential of these goals is significant. The current plan has made a start in this direction but the dots have not been sufficiently connected. I thus agree with the intent of the planning commission in elevating the place of energy use to a central organizing concept of the plan. This will take considerable attention but for starters lets agree to concepts already roughed out in the plan. Policy 1.3.b is elevate Reduce greenhouse gas emissions associated with development patterns and transportation. Let's suggest that there be a goal associated with this policy. The goal of policy 1.3.c is to achieve carbon neutral buildings by 2030. I agree with this goal and suggest that for 1.3.b that we adopt the goal of a 50% reduction in (VMT) vehicle miles traveled per person by 2030. This would correspond to national goals currently being generated. The long term community benefits associated with this goal will be significant. They would include: Reductions in transportation energy Reduced traffic quality Financial savings to municipalities through law enforcement, school bussing, etc. Financial savings to individuals through reduced transportation expense and time save by driving less. The current plans discussion of this very worthy goal have caused significant concerns in part because of reactions to terms like aεœNodeã€ and a€œdensityã€. This is where the process and the plan have significant room for improvement. (We may be well served to find other terms) One of the reasons people are having problems with the perceived a€œcertificationã€ of the a€œnodesã€ is that the character of new growth in these areas is not defined in the plan. That may be an Achillesã€™ Heel of the plan. It is understandable that people who like what they have are afraid of change. This is particularly true if the change in the form of growth and development is defined in terms of numbers and not character. Numbers alone are not the key. There has recently been significant focus on build out numbers, I do not wish to minimize their importance but have to emphasize that these raw numbers are just a part of our impact equation. Numbers of people or buildings do not alone define character, traffic generation or energy use. Character is created by the complex interaction of land use / building patterns, our transportation systems and most importantly our community. Introduce Form Based Code Planning now. I believe that one of the next steps in the planning process should be to develop the tools that truly define the character, scale and intensity of the places created and recreated. This should be done before the comprehensive plan gets much further along. There are very sophisticated planning tools available. I suggest use of form based codes. Smart Code is probably the best available as a starting point. See http://www.smartcodecentral.org/ Donâ€™t finish the Comp plan, then write the LDRs Do use a Form Based Code for LDRâ€™s, start now. Create a transect based system of LDRâ€™s Use the transect language as a cohesive strategy to link the Comp plan and the LDRâ€™s Predictable placemaking is the strength of the form based codes. These tools will not eliminate all disagreements but it will make the options and choices clear upfront so better more informed choices can be made and subsequently the process should be better understood and the results more predictable. Smart Code is open source and free of charge. It is to be used as a starting point, it has to be locally calibrated by professionals who understand both Smart Code and the needs of the community. The SmartCode is a transect-based code. A transect of nature is a geographical cross-section of a region intended to reveal a sequence of environments. It helps study the many symbiotic elements that contribute to habitats where certain plants and animals thrive. Transect based planning takes advantage of lessons learned from study of natural ecosystems. This logic should be appreciated in Teton County. We have a very inefficient land use pattern which generates significant traffic for the number of people here. It will be a very challenging, long-term and tedious project to rectify this but the alternative is failure on some of our central goals. (energy & quality of life/community character, Wildlife will also greatly benefit from reduced auto traffic.)

The reduction of auto dependence mentioned above is part of the monumental task of retrofitting the Suburbs. This will be one of the more significant land use trends in the nation. We are primarily rural suburban thus face similar issues & are often further behind to begin with.

It is not too late to begin this process. The form of development and redevelopment will either add to or reduce our traffic generation and energy use. There is the potential for significant redevelopment in coming years. Thus I disagree with the belief that it is too late to undertake this process in our valley. I have been working with transect based community design for over a decade. It appears that now could be an opportune time to introduce this elegant tool into our Jackson & Teton County planning efforts. I would be glad to work with the town or county in this regard. Please feel free to contact me. Lawrence E. Thal AIA Design for a better tomorrow Sunlight Design & Mountainside Village 2160

Friday, May 04, 2012
Dear Commissioners,

As you begin looking at revising the draft Comp Plan, I would ask you to examine the attached document. It will only take a few minutes to read. It is a copy of the Fremont County, Idaho Comp Plan. (Island Park-St. Anthony) It was completed in the end of 2008. Some observations:

1) Our draft plan has an 8 page Vision Statement. theirs is 2 pages.
2) Our draft plan is 142 pages. theirs is 20.

They share many problems and concerns with us: a large amount of public land, preserving rural character, affordable housing, and protecting resources. Why is our plan so much longer? One reason is because our plan contains pictures and text boxes intended to sell the citizens on the plan. Their plan includes all supplemental information used to form the policies and goals in an appendix instead of in the main text. Their plan captured the community vision so they do not need to sell the citizens. Our goal should be to produce a simple to read, easy to understand document that does not intimidate average citizens. If the Comp Plan reflects the vision of the community no sales job will be needed. We hope you will consider this model as you go forward.

Armond Acri
Save Historic Jackson Hole

Dear Larry, Tony, Paul, Forrest and Joseph, Thanks for all your tireless efforts and courage in recommending revisions to the current draft of the Comprehensive Plan. There is no question about our community’s wishes and these need to be reflected in the current plan. Otherwise, we are just another resort community without the special values we cherish. Thanks, Don Harger

County Planning Commission Members Town Planning Commission Members I appreciate the discussions last night concerning joint planning commission review of our comp plan process. I believe that the significant work that has been done by the County Planning Commission can be incorporated into the draft document while preserving a predicable joint process. Thank you for your on going efforts for our community. Arne Jorgensen

Like many other citizens of Teton County, my wife and I wrote to you last month, objecting to the April 3rd draft of a new Comprehensive Plan. But, then we were greatly heartened last week, by the newspaper’s report of your thoughtful recommendations for substantial revisions of the initial draft. These recommendations made by your commission reflected careful consideration of the numerous letters and messages you received from the many segments of our community. Surely many hours of hard work were required to formulate such a thoroughly detailed report to our County Commissioners. All of the many citizens who have been so concerned about the unfavorable impacts threatened by the new plan, are indebted to you for your service.

As volunteer members of the Planning Commission, you have undoubtedly given much more time, work and even stress to this effort than you could ever have imagined when you took on the responsibility. But, it has been worth the effort. Whatever direction the planning process takes from this point, your outstanding service has already been of great value to the community.

My wife and I, like so many others, are very grateful to all of you for your contribution to the future of the valley that we all love. Thank you very much.

Respectfully submitted,

Richard A. Jones
Can you tell a servant from a tyrant? Some folks are wondering: is there a difference? President of the U.S., governor, mayor, county commissioner, planner, or dogcatcher, it’s all public service. If you’ve seen the British TV comedy “Are you being served?” on PBS, then you know service sometimes comes with side agendas. Personality quirks and the offhand grandiose gesture are part of the human fabric; at a certain level we accept it. But there are limits. If you order meat loaf at the restaurant and the server brings fish, there’s a problem. If you complain and the manager comes over and says, “Fish is better for you; eat it,” then there’s a bigger problem. And when voters’ order up wildlife and open space but are served nodes and big growth, then the problem is out of hand. The servant has become a tyrant. The servant helps you get what you want. The tyrant uses you as a pawn to get what he or she wants. It’s pretty simple. You won’t go wrong if you do a “reality check” now and again.

My grandson is pretty exuberant, just turned 3, and when he overdoes it, he gets a time-out. He’s taken to the other room to calm down and think things over. A few minutes later, he’s back without his “agenda” and we start anew, on a better footing. The difference between grandkids and elected officials is grandkids have adult supervision. Our public servants could use a time-out to read the public surveys, petition, and comp plan comments. If they sat down and reflected on what their customers wanted, maybe they’d drop their agenda and start anew. Works for my grandson. Part of getting back on track is seeing you’re off track. County planning commissioners tried to point that out, and instead of saying thank-you, the oligarchy got mad. One commissioner had a tantrum. Didn’t say he was sorry either. That’s where 3-year-olds have an advantage: They’re more flexible. And, they learn quicker. Of course not everyone is cut out for public service. I’ve often wondered why folks with strong personal agendas would want to masquerade in public service? But I digress.

So far, local government has said they don’t plan by surveys, don’t plan by referendum, and don’t plan.
by petition. Well, what do they plan by? Ask them.
They can’t show you what they’ve used as the basis
for their plan; maybe it’s their own personal plan?
Tyrants do what they want and rarely explain
themselves.
Now, with the Fourth of July celebration fresh in
mind, a time-out would be useful. Since it’s "selfevident
that all men are created equal," let’s stop
ignoring the thousand-plus public voices that have
spoken out against the comp plan.
Louis Wang,
Jackson Hole
Forrest, Thanks for your reply to my letter about the new recommendations. Sorry for not getting back to you sooner. I had to put on my tour guide hat for friends and relatives who were visiting over the Fourth. I had talked to Tony who was recommending just the fairgrounds be moved to South Park but he stated he did not want them close to High School Road for reasons I mentioned in my letter to all of you. Somehow it turned into the whole enchilada and near High School Road. It is a great idea to keep the work force housing in town near destinations of employment. I understand the planning commission’s frustration about making it happen without exporting the problems to South Park. My fear is that if it all comes down to South Park what’s to prevent the NW South Park node from still being overdeveloped in the future. Things promised today can easily be changed with a vote to permit it after the public facilities are moved. Commercial is one of my concerns around the High School and and the easement would be a great idea. I actually do like Kelly’s idea of a higher education campus connected to the high school sometime in the future. He suggested a dormitory that could double as employee housing during the summer. I don’t know about that but maybe for summer forest service employees, or summer seminars could be introduced to utilize it. I can also see a small Mom and Pop old fashioned coffee shop bakery, deli (owners living upstairs) servicing the campus. Where I disagree with Kelly is that he wants to put light industrial there too. My fear is that we would never see the higher education campus and the light industrial would take over. I talked to Kelly and Jeff Daugherty about High School Road being turned into a true academic campus road, creating a park the width of the High School and extending over to South Park Loop Road along High School Road. We have 6 schools there already. Let’s foster the concept to really take advantage of the area. The park could have a cross country ski track in the winter and double as a running track with exercise stations along it. There could be outdoor learning facilities for the school children covering environmental and conservation concerns (future green jobs). Science tech stations for learning about solar energy and other alternative energy sources that can double to actually support the park, like lighting and bathrooms. I went to a rest station North of Monument Valley where it doubled as a learning station for Solar that ran the complex. Very cool! The park would then act as an East West wildlife corridor. The barbed wire fencing would be down and then the wildlife would have an easier time migrating through neighborhoods. High School Road then can be treated as a pedestrian and bike friendly road instead of the car and truck being the dominate transportation vehicle. If you google ‘woonerf’ (traffic calming measures) it will show you what the Europeans have been doing for years with their small towns and roads. It would be nice if homes are built that they would be offered to school teachers and employees that keep the area schools running. Now that would make the transportation chapter in the comp plan work! (I would still like to see infill in town first to take advantage of infrastructure already there.) The small neighborhood could be on the South side of the park I just suggested. Keep it to the 200 (preferably less) units that are allowed under current zoning. There would be an East West collector Road (from South Park Loop Road to Route 89) to alleviate traffic on High School road. That would be located on the southside of any new residential development. Those are some alternative suggestions that I think would improve High School Road for the surrounding neighborhoods and valley school children. My neighbor Carolyn (she’s an architect and Mom) and I want to get together and draw something up that would include what I tried to explain. Maybe I can say it better with a map. Tony Wall suggested that we do it and if we ever get the time in the next couple of weeks we will. Thanks for letting me ramble on. I want the Hole to be nice for my son who will hopefully live in our house if things work out and we’re not tamed out of it! Sincerely, Kathy Tompkins Cottonwood Park

734 6211

From: forrestmccarthy@hotmail.com To: wozkins@hotmail.com Subject: FW: Public facilities in South Park Date: Thu, 2 Jul 2009 08:28:23 -0600 Kathy, Thank for sharing your thoughts. I have mixed feeling about the idea of moving the fair grounds to South Park. It is an interesting idea worthy of consideration. However, until we consider all the consequences it is hard to form an opinion. Certainly the impact to the existing neighborhood needs be serious consideration. In your comments one of your main concerns was commercial being developed to the South. What if a permanent green belt (conservation easement) was including in the plan that would prevent that from happening?

Forrest G McCarthy PO Box 21 Teton Village, WY 83025 307/733/3742

From: iadams@etonwy.org Date: Thu, 2 Jul 2009 08:14:43 -0600 Subject: FW: Public facilities in South Park From: Kathy Tompkins [mailto:wozkins@hotmail.com] Sent: Wednesday, July 01, 2009 10:25 AM To: Irina Adams; County Commissioners Subject: Public facilities in South Park Dear County Planning Commissioners, Thanks for all the work you and your colleagues did on the recommendations and taking our comments about the plan into consideration. I am worried however about moving the Start facilities, rodeo grounds and fairgrounds near High School Road. I think it will only trade one group of problems for another. I don't think that West Jackson should be dealt that kind of either or scenario and be made to look like we don't want to sacrifice anything. We have already with 6 schools, the public school transit system, heavy industrial, a sewage transfer station, a supermarket that services the whole valley and roads that are school children and pedestrian unsafe. How will South Park deal with the added traffic, light, noise, air pollution and industrial runoff from the new facilities that would include oil, gas, antifreeze etc. How will the traffic in the summertime be mitigated and not just put up with? Will the town’s plowed snow be transported to South
Park also on to the new fairgrounds only to melt off into Flat Creek down here instead of in town? We can't just move the problems around. We have to solve the environmental and neighborhood unfriendly problems these needed facilities continually generate. Will LEEDS type regs be applied to these new facilities such as nonpolluting and quiet engines for the new start busses before the complex is moved. Will there be park and ride to the rodeo and fairgrounds from within town? Will town find somewhere else to dump their snow or use it in the summertime by implementing a gray water cistern system? How do we deal with the garbage that is produced from these public facilities, especially the fairgrounds and rodeo? Can we somehow tie into the composting facility located at the county dump site to accept compostable beer cups, plates, etc. and reduce the amount of garbage being thrown out? How close will the rodeo and fairgrounds be to the High School in relationship to the beer that will be sold; will it be too close to school grounds? Will there be sound and light mitigating measures like heavy landscaping with large Cottonwoods and low shrubs? The most important question is if South Park gets all these public facilities what's to prevent South Park from attracting more commercial in back of the High School and still pack the homes into the NW corner of South Park Loop Rd and High School Road if your other recommendations of reduced build out and dumping density bonus tools aren’t included in the final comp plan. It seems that history will repeat itself on High School Road. Haven’t we learned a lesson with all the problems that condensing all the schools on HSR generated? Kelly accepted my invite for coffee and a walk around Cottonwood to show him what works and what doesn’t work in Cottonwood Park. We met one morning a couple of weeks ago. He loved Range View Park and would like to continue something like it across High School Road. Do we now lose the open space incentive idea along HSR? I respect Kelly’s family’s right to make money off of South Park but at what price to their neighbors in Cottonwood Park and the surrounding neighborhoods? The transfer of these facilities to South Park I believe will embolden the South Park owners to continue with more commercial behind the high school. This only galvanizes Kelly’s belief that this is what the community wants there (The 2008 community survey doesn’t support that belief). Although, at the end of our conversation he did say that he personally doesn’t want to see commercial by the high school. He would rather see a community college campus. I think that statement was just a feel good statement. Will the numbers in The NW corner of South Park be brought back down to the original 200 allowed under present zoning without the bonus density tools? Or will that be negotiated from a higher rate. Kelly seems to think that between 600 and 800 residential units in the NW corner is fine. I animatedly but respectfully disagreed with him. These are Cottonwood Park concerns as well as my own. I have to admit I can’t speak for the rest of Cottonwood when it comes to the transfer of the public facilities to South Park. But I can guess the initial response will be no. Personally, I don’t want them in South Park. Although I am trying to keep an open mind about it. We would like to work with everybody to create a plan that is beneficial to everyone, but we are not willing to be dumped on again and then forgotten about to deal with the consequences. It would be nice if the hardworking people of West Jackson could escape to a quiet home in the evening and not have to deal with the tourists they deal with during the day. Thanks again for all the hard work you are doing to make this plan resemble what the community is speaking up about. Sincerely, Kathy Tompkins Cottonwood Park 734 6211
I am introducing a Revised Comprehensive Plan, sponsored by “We the People, and the Community, of the Town of Jackson and Teton County, Wyoming, rather than the beneficiaries of the “Growth Machine.” The structure and analytical methodology of the current Plan is the product of its Community Vision catalyzed by its concept of “Sustainability” — “The Plan is organized around community values and seven themes . . . Each theme relates to the community vision and the concept of sustainability.” The problem with this structure, however, is that it is conceptually undercapitalized, mischaracterizes the Community Vision, cherry picks the definition of “Sustainable development” from the 1987 Brundtland Commission Report — “Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs” — that speaks only in terms of human “needs” in a way that provides no constraint on limitless development and ignores the priority expressed by our Community for protecting wildlife and the ecology. In the context of the current Plan, it permits an uncontrolled agenda of “nodal development” that deliberately circumvents Community concerns and is self-serving for the mammonic philosophy of “growth for the sake of growth”.

To purge the Plan of these infirmities, I submit the following six-part statement as a more faithful declaration of the Community’s Vision for a Revised Comprehensive Plan, and as a starting point for a more encompassing conversation:

1. To preserve the area’s ecosystem, natural resources, and wildlife from the adverse impacts of unrestricted “Growth” by establishing core “No Growth Zones” in all areas of critical wildlife habitat, migration corridors, and open spaces.
2. To adopt a “New Paradigm” of Community and Ecology Centered development and sustainability rather than an anachronistic mammonic conception of “growth,” and to protect the area from wanton development that disrespects the Community character or externalizes and socializes its costs in order to maximize and privatize its profits;
3. To meet the Community’s human needs in a manner that is organically sustainable, ecologically regenerative, and comports with the Community’s character;
4. To recognize the mutually exclusive nature of “development agendas” that require the merciless marketing of our natural resources to accommodate the demands of incessant “Growth”, on the one hand, and “conservation agendas” to protect the area’s “wildlife, natural resources, and open spaces,” on the other hand.
5. To recognize “Interest”, “Usury”, “Growth”, “Development”, and “Sustainability”, as indispensable conceptions for any Comprehensive Plan, and to define their meanings not in a selfserving way for the beneficiaries of “Growth”, but in a way that addresses their dependence on the jurisprudence of compounding usury, and is thus economically, professionally, and legally sufficient;
6. To manage “growth” and “development” through “Community and Ecological Impact Analyses and Accountability” by establishing a formal arm of the Planning Department, codified in the Land Development Regulations, specifically beholden to the Community and charged with the responsibility of identifying, quantifying, and accounting for the Community and ecological cost and 2 other externalities of all development applications, and reviewing the validity and sufficiency of all applicant submissions.

And I submit the following definition of “Sustainable development”, distilled from scholastic conversations on the subject, as being more appropriate for Jackson and Teton County.

“Sustainable development is development that improves the quality of human life without detriment to wildlife or compromise to the carrying capacity of supporting eco-systems.”

An acceptable Plan, therefore, must be concerned with more than just the Community’s Vision and “Sustainability”. It is intimately concerned, as well, with the indispensable conceptions of “Growth” and “Development”, both of which are grounded on the jurisprudential foundations of compounding usury, and both
of which are essential in raising the conceptual foundation of any Revised Comprehensive Plan to an acceptable level of scholarship and professionalism.

In the case of Jackson and Teton County, the jurisprudential realities of “growth” and “development” mean that the survival of the area’s wildlife habitat, ecosystem, and open spaces requires that they be physically insulated from the various manifestations of development such as urban and commercial sprawl, highway construction, and conspicuous consumption and construction. And this can only be achieved through the establishment of core “No Growth Zones”. Those who petitioned to express their concerns on the Plan’s failure to protect “wildlife and open spaces” can now petition to remedy those concerns through the ecological guardianship of “No Growth Zones” in a Revised Plan they themselves can help determine.

Recognizing that any Comprehensive Plan must be grounded on transparency and good faith, and in order to move the current Plan forward from its present impasse, I have taken the initial step of revising the Plan’s “Community Vision” chapter to provide both a foundation for an expanded conversation, and to commence the unavoidable imperative of revising the entire Comprehensive Plan. Copies of the “Revised Community Vision” chapter can be obtained from the County Planning Department or the Commissioners.

The next step is for both the Town and County planners to return to the drawing board and reconvene their earlier Community discussion groups with one specific mandate: to determine where to establish core “No Growth Zones” to satisfy the community’s priority of protecting wildlife and open spaces, rather than just paying lip service to it. Once these “No Growth Zones” are established, we can then move to a broader conversation on the determinants of the Community’s Western character, and how best to determine, direct, and locate the specifics of future development.

************************************************************************

2009 Jackson / Teton County Revised Community Vision

We the People, and the Community, of the Town of Jackson and Teton County, Wyoming, hereby declare our Vision for the future of our Community and County and request the adoption of this Revised Community Vision statement as the foundation for a Revised Comprehensive Plan:

3

1. To preserve the area’s ecosystem, natural resources, and wildlife from the adverse impacts of unrestricted “Growth” by establishing core “No Growth Zones” in all areas of critical wildlife habitat, migration corridors, and open spaces.

2. To adopt a “New Paradigm” of Community and Ecology Centered development and sustainability rather than an anachronistic mammonic conception of “growth”, and to protect the area from wanton development that disrespects the Community character or externalizes and socializes its costs in order to maximize and privatize its profits;

3. To meet the Community’s human needs in a manner that is organically sustainable, ecologically regenerative, and comports with the Community’s character;

4. To recognize the mutually exclusive nature of “development agendas” that require the merciless marketing of our natural resources to accommodate the demands of incessant “Growth”, on the one hand, and “conservation agendas” to protect the area’s “wildlife, natural resources, and open spaces”, on the other hand.

5. To recognize “Interest”, “Usury”, “Growth”, “Development”, and “Sustainability”, as indispensable conceptions for any Comprehensive Plan, and to define their meanings not in a self-serving way for the beneficiaries of
“Growth”, but in a way that addresses their dependence on the jurisprudence of compounding usury, and is thus economically, professionally, and legally sufficient;

6. To manage “growth” and “development” through “Community and Ecological Impact Analyses and Accountability” by establishing a formal arm of the Planning Department, codified in the Land Development Regulations, specifically beholden to the Community and charged with the responsibility of identifying, quantifying, and accounting for the Community and ecological cost and other externalities of all development applications and reviewing the validity and sufficiency of all applicant submissions.

Introduction
It is the aim of the Revised Comprehensive Plan to adopt a “New Paradigm” of Community and Ecology Centered development and sustainability rather than an anachronistic mammonic conception of “growth,” in order to more accurately reflect the Vision and aspirations of the Jackson and Teton County Community as a whole, and to address more completely the full complement of considerations that impacts the planning process. It is also hoped that the Revised Plan can serve as a framework, reference, and guide for other Communities across the nation, and beyond, that are similarly situated and struggling to protect their own wildlife, natural resources, open spaces, and character.

The Community Vision and the Concepts of Interest, Usury, Growth, Development, and Sustainability
The proposed Comprehensive Plan addresses the meaning of “Sustainable” in Jackson and Teton County, but conspicuously avoids discussing the meanings of “Interest”, “Usury”, “Growth” and “Development” that are indispensable conceptions for any Comprehensive Plan. The Revised Comprehensive Plan corrects this deficit and specifically addresses each of these issues and includes them in the “Community Vision” in order to raise the substantive content of the Plan to an acceptable level of professionalism and legal sufficiency.

The Jackson/Teton County Community is integrally tied to the unique natural environment in which it is located. Yellowstone (the world’s first National Park), Grand Teton National Park, Bridger Teton National Forest, and the National Elk Refuge, all of which are wholly or partially contained within Teton County, confirm the special ecology and international significance of our valley home. These roughly 2.6 million acres of federally protected and resource-rich land foster a strong ecosystem stewardship ethic in the residents of and visitors to Jackson and Teton County. With only 73,000 acres (or 3%) of land in our county available for private development, there are limited resources available to meet the demands of the many people who want to live in and visit the area. This intense pressure on the limited supply of land threatens the very environmental, social, and economic characteristics that define our Community. This is a pressure, however, that has been created to a large extent by the incessant marketing of our natural resources by the beneficiaries of the “Growth Machine.”

The 2009 Jackson/Teton County Revised Community Vision Statement, however, expresses the public’s recognition of the mutually exclusive nature of traditional ideas of “growth” and “development” and the protection of the ecology and wildlife of Jackson and Teton County. And it also expresses the Community’s insistence on subordinating all the prerogatives of “growth” and “development” to maintaining the ecology, wildlife and open spaces that the Community has cherished for decades, and that the current Plan preordains for extinction over the long run, by establishing and enforcing “No Growth Zones” for critical wildlife habitat, migration corridors, and open spaces. The Community desires to meet its challenges in a way that maintains and enhances our Community in the context of our ecologically unique location.

What Does “Growth” Mean in Jackson/Teton County?
“Growth” is the conceptual progeny of “Usury”, and the compounding power of usury impels the exponential power, production, and predation of “growth".
A Commentary on “Growth”, “Interest”, and “Usury”

“Growth” is a central and indispensable conception of any development discussion, and in common parlance the term is often used interchangeably with the idea of “Development”. To understand the essence of growth, however, it needs to be distinguished from development, particularly in its jurisprudential foundations that rest on the mathematical power of compounding usury. And although the mammonic power structure and the “Growth Machine” take pains to ensure that the usurious facet of growth is never acknowledged or discussed, this dimension now needs to be fully understood if Jackson Hole as we have known it is to survive.

The drafters of the proposed Comprehensive Plan addressed the meaning of the concept of “Sustainability” for Jackson and Teton County, albeit in a mammonically self-serving manner, but they conspicuously ignored any definitive discussion on the concepts of “Interest”, “Usury”, “Growth” or “Development”, omissions that clearly serve the agendas of mammonic power and the “Growth Machine”, but that now need to be placed on front and center stage in the on-going discussion on the Revised Comprehensive Plan and the future of Jackson Hole and Teton County.

The concepts of “Interest”, “Usury”, “Growth”, “Development”, and “Sustainability”, therefore provide the expanded foundation for the Revised Comprehensive Plan, and no matter how difficult this conversation might seem initially, it must be understood if Jackson Hole as we have known it for decades is to be saved and prosper.

Any informed discussion on “growth” must start with a clear understanding of one of the seminal scholastic advances of the twentieth century — the correct distinction between “interest” and “usury”.

Webster’s defines interest as: “a charge for borrowed money generally a percentage of the amount borrowed”. It defines usury as: “the lending of money with an interest charge for its use; an unconscionable or exorbitant rate or amount of interest; specified interest in excess of a legal rate charged to a borrower for the use of money”. Both these definitions are inadequate, but the usury definition is not only mammonically self-serving, but deliberately mischaracterized.

The correct definitions of usury and interest are as follows:

Money created by a private lender, when loaned, gives rise to primary debt and the fee for its use (while commonly called interest) is correctly defined as usury.

Earned money, when loaned, gives rise to secondary debt and the fee for its use is interest.

Keeping the distinction between usury and interest in mind, “Growth” and “Development” can be instructively viewed as symbiotic conceptual progeny of usury that as a practical matter are often used interchangably.

While growth is primarily a monetary phenomenon, development can be viewed as the physical expression of that growth. And, under the current monetary system, growth is a jurisprudential and legal mandate to infuse new streams of debt into an economy in order to service the systemic foundations of the compounded costs of capitalized usury.

“Growth”, as a product of compounding usury, is by mathematical definition unsustainable under any definition of “sustainability”. And the collapsing national economy, along with the breakdown of an increasing number of state economies, all quintessential victims of “growth”, speaks eloquently to the disastrous and unavoidable consequences, for both Communities and the ecology, of a long-term allegiance to “growth.” Any Comprehensive Plan adopted by Jackson and Teton County, therefore, must inevitably confront the costly effects of the recessionary economy on the structure and character of our Community, and this conversation needs to start with a comprehensive discussion on the legal foundations of “growth”, “usury”, and “interest”.

What Does “Development” Mean in Jackson/Teton County?

“Development” is the symbiotic counterpart of growth that gives physical form to the infusions of debt impelled by “growth”, and adds to that form a quantitative expression of the cost and value of capitalized usury.

Friday, May 04, 2012
A Commentary on “Development”

“Development” is an indispensable conception for any Comprehensive Plan and can instructively be viewed as the symbiotic counterpart of “Growth”. And in whatever form of physical phenomenon development occurs, it simply gives physical expression to the infusions of debt impelled by “growth”, and that physical form must then absorb those capitalized usury payments into their costs of production. The consequences of this legal foundation of usury are profound. It constitutes the wellspring of inflation, and is the cause of the progressive diminution of the real purchasing power of wages and therefore also of the “housing crisis.” And in Jackson and Teton County usury fuels the engine of “Growth” that impels the usual indicia of “development” namely expanding suburban housing and commercial developments, downtown areas that are forced to expand downward and skyward, beyond any requirements of the Community, but justified on the well-grounded assumption that armies of visitors will heed the siren song of the interminable marketing of our natural resources, and the “conspicuous consumption and construction” of ever more luxurious homes and hotels to accommodate the exponentially increasing demands of the creditors of usury, and the attendant degradations of our wildlife and ecology.

In addition, the ever increasing armies of visitors are also needed to fuel the revenues necessary to sustain the development and meet its usury exactions and then leave an adequate surplus to provide an ever diminishing level of real wages to an ever expanding labor force required to maintain it, while the Community has to deal with the attendant “housing crisis” that inevitably follows. And all these considerations need to become an integral part of the scholastic and professional foundations of a Revised Comprehensive Plan for Jackson and Teton County.

What Does “Sustainable” Mean in Jackson/Teton County?

“Sustainable development is development that improves the quality of human life without detriment to wildlife or compromise to the carrying capacity of supporting eco-systems.”

A Commentary on “Sustainability”

The concept of sustainability, like the concepts of “growth” and “development”, is a vitally important foundation for any Comprehensive Plan and thus needs to be fully addressed and understood. The proposed Comprehensive Plan adopts the “widely accepted definition of sustainability” of the 1987 Brundtland Commission Report, stating that, “Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.”

The Brundtland Commission’s definition is understandably the most quoted definition of “Sustainable Development” as it is vague enough in its terminology of present and future “needs” to avoid any meaningful accountability for the economic and ecological effects of the growth agendas of mammonic power and the mandates of the jurisprudence of usury.

In other words, the Brundtland Commission’s definition reflects a sanitized and mammonically self-serving conception of “sustainability” that implicitly advances the sustainability of the usury system and the “growth machine” rather than that of affected communities, ecology or wildlife. It thus has no place in any Comprehensive Plan for Jackson and Teton County.

Some observers, however, have noted that the Brundtland Commission’s definition “is not universally accepted and has undergone various interpretations.” [http://en.wikipedia.org/wiki/Sustainability, at 3.]

The following are some of the dilemmas, discussed in Wikipedia, that have developed within the Community of scholars trying to grasp the “elusive concept of sustainability” and the essence of “development”.

“Definitions of sustainability may be expressed as statements of fact, intent, or value with sustainability treated as either a “journey” or “destination”. Where we are now, where we need to be going, and how we are to get there are all open to interpretation and will depend on the particular context under consideration. This difficult mix has been described as a dialogue of values that defies consensual definition.” [Ibid.]

Underlying this “dialogue of values” are also the undisclosed “mandates of monetary law” and the dictates of compounding usury that, as a practical matter, co-opt and routinely trump the values of an unsuspecting
Community in order to advance the agendas of the “Growth Machine.” These realities of monetary and jurisprudential power therefore become indispensable conceptions in any meaningful and transparent discussion on “growth”, “development”, and “sustainability.” And without them, the reality of “sustainability” is mischaracterized either willfully or unwittingly. Once catalyzed with monetary understanding, therefore, within the contexts of organic and mammonic law, a “dialogue of values” becomes far more amenable to “consensual definition.”

And by deliberately excluding this monetary frame of reference, the mammonic power structure has effectively deprived preorganic scholarship of conceptual access to the essence of “sustainability” with the result that it “has been regarded as both an important but unfocused concept like “liberty” or “justice” and as a feel-good buzzword with little meaning or substance.” [Ibid.]

Some prescient scholars have also realized that, “The idea of sustainable development is sometimes viewed as an oxymoron because development inevitably depletes and degrades the environment.” [Ibid.] And the oxymoronic nature of “sustainable development” becomes even more self-evident and indeed axiomatic when it is viewed in the context of the jurisprudential mandates of compounding usury. As a result of this contradictory reality, “some definitions [of “sustainable development”] either avoid the word development and use the term sustainability exclusively, or emphasize the environmental component, as in “environmentally sustainable development.” [Ibid.] And numerous influential organizations have embraced these environmental concerns.

“The concept of living within environmental constraints underpins the IUCN, UNEP, and WWF definition of sustainability: “improving the quality of human life while living within the carrying capacity of supporting ecosystems.” [Ibid.] Paraphrasing this definition gives us a more appropriate definition of sustainability for Jackson Hole and Teton County, and for the greater surrounding eco-system, a definition that exposes the pretensions, superficiality, and lack of accountability of the Brundtland Commission definition, and one that is mutually exclusive of the costexternalizing agendas of the “Growth Machine.”

“Sustainable development is development that improves the quality of human life without detriment to wildlife or compromise to the carrying capacity of supporting eco-systems.”

The reality of the Brundtland Commission’s concept of sustainability, therefore, is that it has been selectively adopted internationally as a sanitized and mammonically self-serving framework within which to placate mounting concerns over the use and abuse of the world’s finite natural resources and ecological treasures. Only recently, however, has the concept of sustainability been placed within the power parameters of monetary understanding and the jurisprudence of compounding usury. Under the Revised Comprehensive Plan, an organic conception of sustainability is embedded in the Revised Community Vision for Jackson and Teton County and it needs to be formally addressed by an arm of the Planning Department charged with identifying, quantifying, and accounting for all Community and ecological impacts and ensuring that all externalities are capitalized into development costs rather than passed on to the Community at large. Our location in the Greater Yellowstone Ecosystem, coupled with the high demand for our limited private lands, magnifies the importance of instituting organic rather than mammonic principles of sustainable development in Jackson and Teton County under a New Paradigm of Community and Ecology Centered development.

The concept of organic sustainability within the context of a Revised Community Vision delineates that:

All decisions should be committed to the preservation and protection of the Greater Yellowstone Ecosystem and the area’s natural resources;

Wildlife, open spaces, and ecosystem preservation are mutually exclusive objectives to those of “growth” under the jurisprudence of compounding usury and they require the ecological guardianship of core “No Growth Zones” for their maintenance, protection and survival;

Our Community’s human needs should be advanced by subjecting development applications to “Community and Ecological Impact Analyses and Accountability” that identify, quantify, and account for all cost and other externalities; and,
The impact of local decisions must be understood in a regional context because of the ecological significance of our surroundings and the inevitable export of some of our development impacts to neighboring communities. Organic rather than mammonic sustainability provides the framework within which we are able to actualize the Community’s top priorities:

1. Protect our Wildlife and Natural Resources by affording them the ecological guardianship of “No Growth Zones”; and
2. Manage Growth through Community and Ecological Impact Analyses and Accountability.

These two priorities are the first of the seven Community themes to be outlined in the Revised Comprehensive Plan and that express the Community’s priorities and intent in a regional context. As a result, the Community’s recommended priorities along with the judgment of our success in achieving the Community Vision will include consideration of monetary and legal causation as well as local impacts, and the impacts to surrounding public lands and neighboring communities.

Prioritizing Community Values

The Jackson/Teton County Community Vision for the future has become increasingly concerned with maintaining wildlife and ecological integrity in the face of the increasing capitulation of Town and County planners to the pressures and agendas of the “growth for the sake of growth” philosophy. In this Revised Plan, the Community is expressing its formally intent to have its Vision implemented without being co-opted to serve mammonic agendas.

Past Comprehensive Plans have lacked meaningful accountability and left the Community vulnerable to development abuses. According to the current Plan, “The Community has traditionally addressed our goals and values in separate plan elements, with the hope of achieving them all. The 1994 Comprehensive Plan incorporated nine Community issues into a vision chapter that addressed each issue, but focused more on the balancing and prioritizing within each individual chapter than the balancing and prioritization between the issues.” The 1994 Plan, however, like the proposed 2009 Plan, failed to disclose the interests of the mammonic power structure and the constituents of the “Growth Machine” in the Plan. And these are not merely omissions of material fact, but also omissions of indispensable parties and conceptions that are essential elements of any Comprehensive Plan legitimately professing agendas of transparency and Community concern and accountability. And the 1994 Plan, like the 2009 Plan, also lacked any formal dimension of Community accountability, such as Community Impact and Ecological Analyses, with the result that the Plan was peppered with a proliferation of variances and became the object of rising Community resentment.

The Revised Plan also recognizes that the housing, transportation, and industry impacts of Jackson’s and Teton County’s future development will continue to impact neighboring communities and the ecosystem, and should be minimally intrusive.

The Revised Plan codifies Community priorities using “No Growth Zones”, and

the concepts of interest, usury, growth, development, and sustainability.

The Revised Plan therefore transforms the foundations of both the 1994 and proposed 2009 Plan, and the 2009 Plan’s Revised Community Vision is a comprehensive statement that serves as the guiding principle for all the themes of this Revised Comprehensive Plan. This Revised Plan acknowledges the Community’s priorities and the interrelationships inherent in the Vision statement and between the revised themes that express them, thereby providing guidance and predictability to future decision-making.

Through this Revised Plan, the Community prioritizes two values: (1) the stewardship and protection of wildlife and natural resources through the establishment of the ecological guardianship of core “No Growth Zones”, and (2) the regenerative management of development through the formal adoption of Community and Ecological Impact Analyses and Accountability. The Revised Plan thus recognizes the need for both organically responsible and sustainable development patterns that include “No Growth Zones” to protect wildlife and
natural resources, particularly from “growth” impelled primarily by the legal demands of compounding usury. The Revised Plan also recognizes that these principles should be extended to neighboring communities in order to broaden the protections afforded to the regional ecosystem as a whole.

The Seven Themes of the Revised Plan
Theme 1. To ensure the protection of Wildlife and Natural Resources by affording them the ecological guardianship of “No Growth Zones”.
Theme 2. To recognize the indispensable conceptions of Interest, Usury, Growth, Development, and Sustainability, and to manage Growth and Development organically and regeneratively rather than usuriously.
Theme 3. Maintain the Town as the “Heart of the Community”.
Theme 4. Advance Our Community’s Housing Needs in an Ecologically rather than Mammonically Regenerative Manner.
Theme 5. Provide a Diverse and Regenerative Economy.
Theme 6. Advance a Community-Centered Transportation Strategy.
Theme 7. Provide Quality Community Services, Facilities, and Infrastructure.

Addressing Community Priorities
The Revised Plan is organized around the Community’s priorities and seven themes discussed in the following sections. Each theme relates to the Community Vision and the establishment of “No Growth Zones”, and to the concepts of interest, usury, growth, development, and sustainability. The themes are organized in order of
Community priority and recognize that realizing the Community Vision within our regional context will require tradeoffs and accommodations in certain geographic areas.
Protect Open Spaces, Wildlife and Natural Resources through the Establishment of Core “No Growth Zones” (Theme 1)
Jackson and Teton County are located within the largest generally intact ecosystem in the lower 48 states. Preservation and protection of the Greater Yellowstone Ecosystem and the area’s natural resources is the top priority of our Community. And to this end the Revised Plan requires the establishment of the ecological guardianship of “No Growth Zones” to protect critical wildlife habitat and migration corridors, and open spaces. In addition, the Community understands that all future public and private decisions will have local and regional ecological impacts, and in order to control these impacts in the most ecologically compatible manner, all development applications will be subject to Community and Ecological Impact Analyses and Accountability. All local decisions must be ecologically sensitive to honor the Community’s top priority to protect and preserve natural and scenic resources and maintain the ecological integrity of “No Growth Zones.” Exporting impacts to neighboring communities should be controlled so as to minimize the overall impact on the ecosystem, traffic congestion, and commuting.
Control Growth Regeneratively through Community and Ecological Impact Analyses and Accountability (Theme 2)
The mammonic power structure speaks incessantly on the importance and inevitability of “growth” and concedes only that it needs to be “managed in a responsible and sustainable manner.” The Community, however, recognizes that the very idea of “sustainability” in reference to “growth” is an oxymoron because while it implies that the growth in question is sustaining the Community or environment being impacted, from a mammonic standpoint any sustainability is directed to sustain the monetary system and power structure under the dictates of compounding usury while being deliberately destructive of communities, wildlife and the environment.
The Community thus recognizes that ecosystem preservation and protection is incompatible with the traditional notion of “growth”, particularly when that “growth” is driven by the monetary dictates of compounding usury. The Community recognizes, therefore, that in order to achieve its primary goal of protecting Wildlife and Natural Resources, critical habitat and migration corridors must be insulated from the predatory impacts of
“growth” through the ecological guardianship of core “No Growth Zones”. At the same time, the Community recognizes that human requirements also need to be advanced organically. The Community accepts a responsibility to minimize the export of our impacts to other jurisdictions within the ecosystem and to work with surrounding local, state, and federal jurisdictions to develop regional and Community and ecology-centric solutions to meet our shared challenges. The revised priority of our Town Council, County Commissioners, and planners, therefore, will be to reconvene their public meetings to identify and delineate appropriate “No Growth Zones” necessary to achieve the Community’s top priority of wildlife and ecological protection, including, where necessary, in areas currently designated in the Plan as “growth nodes” such as “in Town, northern South Park, Teton Village, Wilson, and near the Aspens.” Once these “No Growth Zones” are established, the Community conversation can then proceed to determine how best to advance the topics of other themes. The first two themes of this Plan define and explain the Community’s top priorities; the remaining five themes focus on a specific human need. To realize the Community Vision, each of these themes must be achieved consistent with the land use patterns described in Themes 1 and 2.

Maintain the Town as the “Heart of the Community” (Theme 3)
The policies suggested in Theme 3 build on the Community’s Vision and the foundation of Theme 2: Control Growth Regeneratively through Community and Ecological Impact Analyses and Accountability. And while the current Plan speaks of maintaining the Town as the “Heart of the Region”, the Revised Plan speaks instead of maintaining the Town as the “Heart of the Community.” The policies of this theme define how to meet Community needs for an urban center through the controlled advancement of the Town of Jackson as the “Heart of the Community”, without adverse externalities, and in keeping with its current character and height restrictions.

Permitting housing, commercial services, and civic and cultural centers in the Town of Jackson reinforces the Community Vision for “No Growth Zones” by reducing development pressure on crucial wildlife habitats and natural resource areas elsewhere in the ecosystem. The Town of Jackson has already developed the social, transit, and municipal infrastructure to allow for the provision of Community needs with a reduced ecological impact. Controlling future development within town limits improves the likelihood that residents will walk or bike to work or to shop. It also promotes a Community that is potentially environmentally, economically, and socially more contained and sustainable.

Advance Our Community’s Housing Needs in an Ecologically rather than Mammonically regenerative Manner (Theme 4)
Providing for our basic housing need in a sustainable manner is complicated in our Community by the high demand for private land. Much of this demand comes from individuals who make their income elsewhere in the country and can pay more for a home than someone employed in our Community. It is further complicated by the monetary forces of our economy that dictate ever diminishing levels of real wages for labor through the necessity to service the compounding exactions of usury. The effect of diminishing real wages is that those who labor must seek more jobs to subsist, a necessity exacerbated in a shrinking job market, they have less and less time to recreate and participate in Community activities, and “affordable housing” continues to be just a gesture for a few while providing a pretext for an enormous increase in development for the “Growth Machine”. The appeal of an exclusively local provision of housing needs thus increasingly becomes an economically Sisyphean task, and politically problematic.

In short, while commuting has certain negative ecological, social, economic, and transportation impacts for our Community and throughout the region, our housing affordability issues will continue to impact neighboring communities. And while Jackson and Teton County will continue to provide the primary axis for Community housing, neighboring communities will continue to play an important role in housing our work force, and commuting will remain a part of life for many.

In other words, providing for the basic human need of housing in a manner responsible to ecosystem
preservation and protection requires geographically diversified housing for our workforce.
Provide for a Diverse and Regenerative Economy (Theme 5)
It has been a long standing principle in our Community that we are a “Community first, and a resort second.”
Through this theme, the Community acknowledges that the resort characteristics of our Community provide for a strong economy and the provision of a number of Community services that would be otherwise unattainable.
And while the Community welcomes a variety of local employment opportunities, some of which are not resortbased, this Theme reinforces the Community Vision that extends priority to protecting our natural resources over marketing them, and rejects the mammonic promotion of the agendas of the “Growth Machine” through the incessant marketing of our natural resources behind the pretext of striking “a balance between the marketing of our natural resources and their protection.”
Commercial businesses that serve the local population and provide a variety of local employment opportunities are all important components for maintaining a viable local economy. As noted in Theme 4, however, our economy is regional in many ways for both businesses and labor, and our Community rejects any attempt to destroy Jackson’s character by foisting upon it a path of conventional urbanization under the pretext of promoting Jackson’s economic and housing “autonomy”.
In short, Jackson’s future is inextricably bound to its neighbors, even if that does “further complicate the ecological, economic, and social challenges of our region.”
Advance a Community Centered Transportation Strategy (Theme 6)
Theme 6 is essentially an ultimatum to the Community to adopt a “Multi-Modal Transportation Strategy”. It is based on the implicit assumption that policies of “growth for the sake of growth” will be able to continue to indefinitely foist their enormous externalities of visitor expansion, highway congestion, and habitat impairment, for example, on our unsuspecting Community like massive unfunded mandates. It is also oblivious to the “No Growth Zones” contemplated under the Revised Community Vision that could be established in areas of both the Town and County, including those currently earmarked for “nodal development”, and it also lacks the Community centered dimension of growth management and control through “Community and Ecological Impact Analyses and Accountability”.
Theme 6 calls for developing a “Multi-Modal Transportation Strategy” ostensibly to correct our excessive reliance “on transportation by Single Occupancy Vehicles (SOVs)” that, we are informed, “primarily results in negative ecological impacts of higher traffic volumes, increased carbon emissions, and wider roadways that are more dangerous for wildlife and human traffic.” And it also requires us to address the fact that our “major roadways are approaching capacity tipping points”. We are also informed that our only option to avoid the necessity for “road widening and other traditional traffic solutions,” and “[t]o limit transportation infrastructure expansions and their ecological impacts,” is to immediately implement the “policies of this Theme” and adopt a “Multi-Modal Transportation Strategy”. The alternative, of course, is not mentioned, to wit: “To limit transportation infrastructure expansions and their ecological impacts, the “Growth Machine” has to modify its merciless marketing of our natural resources.”
There is no question that as a result of the current “growth for the sake of growth” policies being advanced by both businesses and Town and County planners, and the never ending and unaccountable marketing of our natural resources, “Many of the Community’s major roadways are approaching capacity tipping points that will necessitate road widening and other traditional traffic solutions.” And it is equally certain that the “Multi-Modal Transportation Strategy” envisioned in the Comprehensive Plan is one logical extension of these maximized policies of “marketing” and “growth” that our “Growth Machine” now wants to foist upon the Community.
The reality of this Theme, however, is that our planners are so confident that the Comprehensive Plan will be accepted over any Community objection that they have already predetermined that we will have a “nodal development pattern” implemented “by placing people in closer proximity to services” and then providing them with “alternate modes of transportation such as transit, walking, carpooling, and bicycling.” And to accept this
Our Community priorities, however, clearly require that wildlife and natural resource protection trumps the “growth for the sake of growth” agenda fueled by the relentless marketing of our natural resources. And the Community recognizes, as well, that over the long run these are two mutually exclusive goals. In short, a Community centered Vision requires the adoption of a Community centered Transportation Strategy predicated on an organic increase in population rather than the distortionary effects of a “growth” centered strategy through another artificial bubble of “growth” fueled by bloated marketing budgets and with the constituents of the “Growth Machine” as the sole beneficiaries, and the Community left to fund the massive externalities and deal with the subsequent bust. Under a Community sustainable transportation strategy for Jackson and Teton County, transportation requirements need to be tempered with a corresponding monitoring and modification in budgets promoting our wildlife and natural resources in order to maintain a more sustainable relationship between visitors and our current infrastructure and our priority for protecting our wildlife and natural resources.

Provide Quality Community Services, Facilities, and Infrastructure (Theme 7) The policies of this Theme under the new Community and Ecological centered paradigm of development, address the ways in which the Community will ensure its health, safety and welfare. Fire protection, medical service, water, sewer, schools, arts and culture, and social services are all required by residents and guests of the Town and County. Defining acceptable levels of service, providing the necessary facilities and infrastructure, and ensuring adequate funding is essential to realizing the Community Vision of adequately meeting its human needs. Appropriate service levels, along with Community and Ecological Impact Analyses and Accountability, will help the Community better understand the ecological, economic, and social cost of development decisions and to ensure that development rather than the Community pays the cost externalities that are attributable to growth.

Relationship of “No Growth Zones” and the Themes to the Future Land Use Plan The Revised Plan assumes that the realization of the Community Vision and all the themes in the Revised Plan might require tradeoffs and accommodations in different parts of the county and Community, but does not compromise the ecological integrity of the “No Growth Zones.” The themes in the following chapters provide guidance to where development or conservation is appropriate. The Future Land Use Plan will provide additional discussion on maintaining the ecological guardianship of “No Growth Zones” while also discussing the priorities of permissible development in specific districts of the Town and County.

7/3/2009 Kaplan, Dale and Jay Interested Public My husband and I have lived in Indian Springs Ranch for 10 years. Before there was a house built in either Indian Trails or Indian Springs, there was a master plan that showed PLAINLY and CLEARLY the road connection to Hwy 22. Anyone who built or bought homes in either community only needed to do their homework before buying; the plan for the road preceded their homes. Now some are screaming that they don’t want the road...looking for reasons to stop it. To compound this, there is a major safety issue on 22. The Teton Science School traffic turning towards town and the increased traffic load along 22 are AN ACCIDENT WAITING TO HAPPEN. It wasn’t too long ago that someone had to DIE to get a light installed at Spring Gulch. Please don’t wait for this to happen at this intersection. EITHER put a light at the intersection of Hwy 22 and the Science School/ISR Entry, or build the master planned connector road.

7/2/2009 Wilmot, Jason Interested Public Dear Friends,

Dr. Clark, a 35+ year resident of Jackson, asked me to forward the attached document to you. This was published in 2001, and is specific to planning processes in Teton County. Many of themes and comments will be very familiar to you in light of the recent developments regarding the comp plan. Thank you for your important work and diligent efforts.

Jason (referenced document available in hard copy in the County Planning Department)

7/2/2009 | Young, Tim | Hot off the press, please look over this new paper by Todd Litman on Mobility Management. There is no question the comp plan should include robust TDM goals and solid actions to move JH along a path to better managing travel. This paper can help justify these, and may help provide some guidance on setting up the right action steps. Chapter 8 includes statements that Town and County will do such a program, but we need to be honest - very little beyond some Teton Village steps has been done. I believe Jackson could easily realize a 10% VMT reduction with a very smart and inclusive mobility management system. Todd Litman has been a past Bike Week speaker for Friends of Pathways. He is not an expensive consultant if you wanted to pull in some real focused help on getting the TDM part of the plan right. [reference attached to email; available hard copy at County Planning Department]

7/1/2009 | Jay, Chris | I know, as usual, many local residents have expressed their concern for the development of the South Park area. They state that some of their concerns are for the well being of wildlife and their migration corridors. I have heard implications and some out right suggestions that development should be focused away from Teton County, WY and into the surrounding areas. I am not sure who is naive enough to believe that increasing traffic flow further from town (where animals dwell) as opposed to closer to town (where animals don't dwell) will benefit the wildlife. I, therefore, dismiss this suggestion as reasonable. I also find it disturbing that the people so opposed to the idea of developing ranch land are currently living on just that; developed ranch land. So, whether they are actually concerned for wildlife or the value of their property, I don't know. I am not too concerned with their intentions. What I am concerned about is the potential of a Comprehensive Plan that makes no provisions for folks like me. As a local young professional making a seemingly unwelcome attempt to establish himself and his family in this area, I would appreciate any attempt to protect my family’s future here in the valley. I am strongly in favor of the development of the South Park area and any other potential affordable housing possibilities. I would love nothing more than to be able to stay and continue to contribute to this community, but with housing possibilities within my reach steadily declining, that prospect is diminishing.
Jaubert, Jessica
Interested Public

As a young professional resident here in Jackson for 4 years, I am asking that you keep housing/affordable housing as the most important aspect of the Teton County Comprehensive Plan. That especially includes development in the South Park area as well as East Jackson. The South Park area is a great example of land that is vacant and could be used for housing residents that would like to stay and be a part of the community. Instead they are forced to move out of Jackson, primarily because of housing costs and availability. South Park and East Jackson areas help expand our need for housing while keeping the “heart” of Jackson: Town Square, South Cache, Snow King available for businesses and tourism. I think it is important to keep the “Heart” of Jackson in its historical character since this is one of its greatest charms that draws both residents and tourists alike to Jackson. South Park and East Jackson are much less visited by tourists, so these areas seem like a natural destination for our expanded housing to be located. I know that many residents from Cottonwood, Melody Ranch, and Rafter J subdivisions are the main voices in this community regarding this plan, and have made no secret about how much they do not want to see the South Park continue to grow. I find this incredibly hypocritical being that all of their subdivisions were created for the continuing need for housings years ago. It seems that there is an attitude in this valley that as long as I have a house, why should I care about my fellow citizens in this community who want to stay, but can either not afford housing or have none available to them. Residents of these above referenced subdivisions mention traffic, wildlife, air pollution, and increase in crime as the reasons to keep the amount of units that are essential to Jackson out of the South Park area. As mentioned in the Teton County Comprehensive Plan, “A workforce that commutes adds traffic to Teton Pass, Snake River Canyon, and Hoback Canyon, which reduces safety for both humans and wildlife. Moreover, the impacts of development are displaced to adjacent valleys; and the additional vehicle miles traveled increase carbon emissions, reduce air quality, and require new transportation infrastructure.” I believe this contradicts their whole argument for wildlife, traffic, and air pollution. Air pollution will be increased because of workers driving two hours round trip everyday to neighboring towns where they live instead of fifteen to thirty minutes if they lived in the valley. To be honest, I do not think the residents of these subdivisions are concerned about wildlife so much as their current mountain views from their home becoming semi-blocked from development and the price of their home decreasing because of housing supply increasing. These residents have lost the meaning of community and are only looking out for themselves, however if they continue to block housing development, Jackson and they will suffer in the end because Alpine, Victor, & Driggs will continue to get financial revenue and taxes that should be in Jackson. Who will help continue paying the costs of buildings such as the Center for the Arts and the Teton County Recreation Center when all the young professionals and families are living in neighboring cities and giving their sales taxes to those cities? We need young professionals and young families to stay here in Jackson where their tax dollars can help continue these great civic structures that our town has worked hard to establish and maintain. We need young adults who care about their community, who want to spend money at the Farmer’s Market in the Summer, participate in Old Bill’s Fun Run in the Fall to raise money for our non-profits, stand in the cold and cheer at the Pedigree Dog Sled Race, and participate with their families in the Spring Easter Egg Hunt at the Town Square. What will happen to these cherished events once all of our young professionals and families are living thirty to sixty minutes away from Jackson? Are we going to go the Driggs Farmer’s Market? The Alpine Dog Sled Race? When we talk about “Saving Historic Jackson Hole”, aren’t these community events part of what we should be saving? Also, what will happen to all the shops, restaurants, and bars in Jackson once the young adults and young professionals are living elsewhere? I know these businesses rely on tourism heavily, but they also rely on our own community members just as much. I wanted to make my feelings known as a young professional, mother, wife, and community member of this town. If you do not do something to provide housing for young professionals, seasonal workers, and families now, I think it will be a complete detriment to this town and its character very near in the future. Please do all you can to increase housing and make this comprehensive plan a success. Thank you for all your hard work and everything you do for Jackson and the members of this community.
As a Cottonwood park resident, I have an opinion about the comprehensive plan and its encouragement to increase density south of the high school road. If I look at the idea of increasing density in this area from a purely self-centered NIMBY attitude I do not like it, it will affect my way of life. However, honestly it is one of the more logical places for higher density development. It is close to the schools, it is on a public transportation route and it is right across the street from a very similar development...The Cottonwood subdivision. I would be a hypocrite if I were to say that the comprehensive plan should not allow the develop ranch land into a subdivision because I live in a neighborhood that did exactly that. There have been a number of emails circulating from residents of Cottonwood to you that are against this idea and the idea of a tribal trails connection, they want the number one priority to protect wildlife, and I am not one of them. I believe the number one killer of wildlife is automobiles, if we increase traffic from outside of this valley because there is no workforce housing in the valley close to town how is that protecting wildlife. Secondly, density has the smallest impact on our environment and will reduce carbon emissions because people will not have to drive as far to school, store or work, I know this because that is one of the reason I live in Cottonwood. I hope you do not abandon encouraging density to the south of high school road or the tribal trails connection, it is the most logical solution for future growth. As far as the comment of “exhausting all areas of town with higher density prior to allowing development south of high school road”, this would only work in a socialist government structure, which I do not support. I do support one of notions of this vocal minority, a larger setback from high school road that could be a linear park is a great idea, also existing traffic issues need to be addressed prior to development.

Please consider the impacts that the Teton County Comprehensive Plan will have on the scenic and wildlife values of Grand Teton National Park. The wildlife values of this County continue to be of foremost concern to Jackson residents. We ask that you weigh the impacts growth will have on wildlife and specifically to Grand Teton National Park. Our fear is that increased growth on the Westbank will have adverse affects on the scenic and wildlife values along the Moose-Wilson Rd. and Southern Grand Teton. We also ask that the County update the Natural Resource Overlay with the most recent data and include critical private lands within the Park as valuable wildlife habitat within this overlay. Protection of wildlife and open space has consistently been identified as the highest priority of citizens throughout this process. We ask the Planning Officials to limit growth that may have broader impacts to the scenic and wildlife values of GTNP and Jackson Hole.

The first meeting I went to, it appeared as if you were gathering so much data from so many sources, you could then put forth whatever you wanted. That seems to have been born out. Please go back to put wildlife where it belongs at the top, community character and affordable housing way up there. The growth numbers in Wilson and South Park are un - conscionable if a theme is to tain community character

All indicators of success must have a realistic action plan that relies primarily on outside sources for secondary data. Staff should work with other agencies and organizations to develop a plan for these indicators.

This document lacks three major studies that are necessary to establish and justify a basis for the policy therein. These analyses should have been performed before the drafting of a new plan and doing so before going any further would be the recommended approach. Fiscal reasons make it impractical to do so now so it is imperative for the new plan to require that all three studies be commissioned as soon as they are economically feasible and that the results be incorporated into the document when it undergoes a one-year review. The studies to be completed are:a) a countywide EA for all private land in Teton County,b) a study to establish the rationale for a % of workforce to be housed locally, andc) a comprehensive documentation of the development potential in all 12 County districts and all 13 Town districts broken down by zoning district with a separate column for Accessory Residential Units.

<td>Sibson, Barry Interested</td>
<td>First, I would like to commend Commissioners Hamilton, Wall and McCarthey for stopping what had every appearance of a run-away freight train. It would have been a waste of your time and the public's to hold meetings to discuss details while the problem with the draft plan is with the basics. I was encouraged by your meeting with the Board of Commissioners who gave you complete authority to direct the county staff to make the revisions you believe necessary and to revise the hearing schedule. I look forward to you directing them to take a whole new approach to developing a meaningful plan. I was even more encouraged by your meeting on Tuesday with representatives of other departments and with stakeholders from the community. You were given some very useful information by most of the participants, but the comments by Franz, Bill and the gentleman who spoke of transportation issues where most cogent. Your questions and comments also gave me hope that you will take this plan in a new direction. Preservation of our wildlife has been the community's top priority and it is in the plan's vision statement. Would it not be logical, then, to start the planning with consideration of the needs for wildlife habitat and migration corridors? Expertise with this issue could come in consultation with Game and Fish, Bridger-Teton, the Park and the Alliance. Having identified the necessary land for wildlife, the land left for human development would be identified. Perhaps the next consideration should be what kind of a road network would be acceptable and would maintain community character. Would we want a five-lane highway from Wilson to the Village? Would we want a five-lane highway on Route 22? Would we want a four-lane highway on South Park Loop and the Indian Trails connector? Would we accept a cloverleaf at the Y? Would we want to create a corridor along Flat Creek from Broadway to North 89 for a town bypass? If not, what would be acceptable and what would be the vehicle capacity of that network? That capacity would start to quantify limits for population growth and commercial and residential development. What is the prudent capacity for solid waste disposal and wastewater treatment? How many schools are we able to build and staff? How large can St. John's MC grow and how much staff and doctors can it attract? All of these issues need to be considered and answered before total build-out can be quantified. I was concerned by Christine Walker being so sanguine about the ability for housing to keep up with the commercial development permitted in the draft. If we develop another eight million square feet of commercial space, we would need another 16,000 employees to utilize that space. If there were 1.5 employees in each dwelling unit, there would be a need for approximately 11,000 new dwelling units. Do we have the land for that? Would community character be maintained? Would not a logical step-by-step process such as this be a more meaningful way to prepare a plan than just coloring in different pieces of land and assigning a maximum FAR for that land? I look forward to you taking control of this process and giving the planning staff clear direction to develop a new plan through a logical consideration of what is really possible without harming our wildlife and our community character. My experience says that the development permitted in a plan WILL happen and probably a lot sooner than first thought. Whether it is 40 years from now or 50, the amount of development permitted in the draft will make it impossible for the valley to achieve any of it's stated goals and we here and now who accept this draft will be the culprits.</td>

Recognize that any and all growth in the valley impacts both wildlife and natural resources.

Bob Lenz, Town Council. See, I have great faith in you people. I am very impressed with the diligence and the, you know, the minitlua that you have come up with. I know a lot of people have put in a lot of time. And so I'll tell you where I am coming from, is we have had a joint Planning process going on now every since we decided to bring in the first consultant on this thing. And I have never heard anything from the County Commissioners or from the County Council or from the Town Planning people or the Commission that it ever changed until you people remanded it back, unilaterally, to the County Commissioners. See, my vision was, is that, okay, now we have taken all of this stuff from the public and from the STAG Committee, and then it was time for you two boards to sit down roll up your sleeves and do just what you've done tonight, except as a joint planning effort. See, I don't think you are any smarter than the people on the Town Planning Commission. I don't think that the Town Planning Commission is any smarter than you are. I don't think that, you know, I think they are just as involved in seeing a good plan come out of this as you people are. And now you're about 11 hours in front of them as far as public input and discussion goes. And yet you start out the meeting and you say, will, this is a joint planning process. Are you going to spend another five hours with the Town Planning Commission, plus your ideas and repeat them tonight? You know, they should have been able to listen to you people and all of your great ideas, the ones that flew and ones that didn't. See? So, anyway, you know, I think it's... I have great faith in the fact that it can go forward. It is too bad that the Town Planning Commission, thinking that it's going to be a joint plan all along, is now 9 or 10 hours behind in the process. See, so anyway, I don't know what we are going to decide on, but that was my vision. And so, you know, I see this great work, but where are the other seven people? And that's my problem. I don't know where you go. I am dedicated to the joint planning deal. As far as remanding it back, I mean, you guys have to get it back here, you know, in a formal form. There are a lot of ifs and buts and whatnot. You've got to get it back and decide is this really what we said and so forth. So, you have that to go through. And the other thing is is we have a situation where we have 130,000 bucks in this thing. And so we deserve, you know, if it's going to be remanded, and these people are going to put in all this time, then the two elected bodies should jointly have the opportunity of saying, yeah, Planning Staffs, go back and redo it, and here's the ideas we have. So, as we go forward, I am dedicated to it being a joint plan. Otherwise, I'd have to ask for my money back, and its only $130,000. So, anyway, that's where I come from. Where the rest of the Council comes from, I don't know. But it's really a shame that you people are 9 to 11 hours in front of the Town Planning Commission. That's the saddest part of it all, if you talk about joint planning. So, we'll see how it comes out. I hope it's good. I feel good about it, even though I think it's kind of difficult, but we'll see where it goes.

I applaud the efforts you are making on the Comp. Plan, it's a tough and often thankless job. I wanted to note in writing some of the key points discussed the other day. I believe that one of the next steps in the planning process should be to develop the tools that truly define the character, scale and intensity of the places created and recreated. This should be done before the comprehensive plan gets much further along. There are very sophisticated planning tools available. I suggest use of form based codes. Smart Code is probably the best available as starting point. Don't finish the Comp plan, then write LDRs Do use a Form Based Code for LDRs, start now. Create a transect based system of LDRs Use the transect language as a cohesive strategy to link the Comp plan and the LDRs. I agree with the goal of significant reductions in energy use. I agree with the implementation strategies outlined thus far but it is clear that realistic and specific paths should be further detailed if success is expected. Two significant focus areas are building and transportation. - Many of the concerns we hear about growth relate to transportation, specifically auto traffic. Interestingly neither our planning goals or energy goals will be accomplished if we do not confront auto use and traffic head on. - We have a very inefficient land use pattern which generates significant traffic for the number of people here. It will be very challenging, long-term and tedious project to rectify this but the alternative is failure on 2 of our central goals. (energy & quality of life/community character, Wildlife will also greatly benefit from reduced auto traffic.). The reduction of auto dependence mentioned above is part of the monumental task of retrofitting the Suburbs. This will be one of the more significant land use trends in the nation. We are primarily rural suburban thus face similar issues & are often further behind to begin with. - It is not too late to begin this process. The form of development and redevelopment will either add to or reduce our traffic generation and energy use. There is the potential for significant redevelopment in coming years. Thus I disagree with the belief that it is too late as most potential development is already platted.
Thank you for the alternative STAG meeting at the county chambers. I hope that town officials and the county commisioners now realize that what you have done to get the public’s concerns about the comp plan up front again was the right way to go. I know you have a lot on your plate and can’t please everybody. Do take into consideration the importance of how commercial developments should mitigate their impacts on the community 100% to prevent the type of growth the new comp plan is gearing up for if it is passed as is. The build out numbers need to be brought back to the original numbers that the current zoning laws allow. As we need more affordable housing and after infill in the Town of Jackson is complete then and only then should South Park and other nodes be looked at for future affordable homes. I think Gregory Griffith’s comments got it right. We are so concerned about negatively impacting our neighbors outside of the valley that we overlook the negative impacts of exporting Teton Village, Snow King and other resort impacts (employee housing, traffic, services, etc) to South Park. If we let this happen the transporatation chapter of the new comp plan will be a joke. You can’t expect future workers living in the South Park Node to bike and walk to their jobs in town and in the village. The resorts, other medium and large commercial projects need to house their employees where they work. Period! I know it sounds impossible but looking at all the money that is being poored into the village golf course and knowing that I won’t be able to step foot onto it or even afford to, I would think that other future endeavors if they really want to build to take advantage of the scenery and wildlife Jackson Hole offers, they should be required to house all of their employees on site and help to mitigate other negative impacts their projects will generate. I commend the JHCA Report: The Greater South Park Region: A Summary of Wildlife and Scenic Resources (June 23, 2009). South Park needs the wildlife and open space preservation theme put back as the number one concern. The NW corner of South Park build number out numbers in the new comp plan need to be brought back to the original numbers. We should complete the wildlife and habitat research so we can have a clear picture of what negative impacts future development in South Park will have on the valley’s economy and wildlife. Our economy relies on the preservation of wildlife and open spaces. You can’t have one with out the other! I would like to add to the [above] letter by recommending all density bonus tools be removed and get back to the base numbers. That would actually bring South Parks numbers down even more from 370 to less than 300 units allowed. If we already house 65% of our workforce let’s not complicate the issue by subsidizing developers while we pay the ultimate price; losing the values that brought us to Jackson Hole to begin with.

On behalf of the Jackson Hole Conservation Alliance, thank you for your continued work on the planning process underway. As we stated in our May 15, 2009, correspondence, the Conservation Alliance has major concerns with the new draft of the Jackson/Teton County Comprehensive Plan, released on April 13, 2009. In written form, we would like to reiterate our gratitude for the message sent and action taken by commissioners Larry Hamilton, Tony Wall and Forrest McCarthy on June 11, 2009. We also appreciate your commitment to continued discussions on a future motion, with specific recommendations for planning staff, scheduled for this Monday, June 29, 2009. As we have stated in recent hearings, the significant departure from the original objective of the process – to improve the current Jackson/Teton County Comprehensive Plan – and therefore the difference in outcome (the new draft), is a key issue. We recognize that the complexity of this planning process has been compounded given that the new draft represents a total overhaul/complete rewrite of the existing plan. Because of the extent of the change, and a departure from the initial objectives of this process, the review process should include necessary adjustments in its timeline. We would also like to take this opportunity to thank you for coordinating the public workshop on June 23, 2009. The Conservation Alliance recognizes the importance of public review as a critical component of the process that must occur in the future in order for this process to result in a workable, effective plan for our community. However, we do not see anything wrong with taking a pause, and sending the draft back to staff for initial revisions to ensure that the workshop and hearing process will be more effective in the long run. At this point, the new draft does not represent an improvement of the 1994 Plan in fundamental ways. We value the position that this document should be in a more near-complete form and more representative of community will prior to entering another round of public review. We also believe much of the foundation, vision, policies, and strategies that could help get the most recent draft back on track are already outlined in our existing 1994 Plan. Thank you again for your leadership, and all your work on behalf of our community to protect the values of Jackson Hole that make it world renowned – its wildlife, open spaces, scenery, recreational opportunities and small mountain town character. Please contact us with any questions.

Remove all exemptions to the wildlife friendly fencing ordinances and develop penalties for failure to remove existing unfriendly fencing throughout the county.

Provide a list of Potential Transportation Network Projects including:a) West Broadway 5-Way Main Street Project: roads, sidewalks, bike lanes, a complete street project)b) WY-22 and West Broadway Pathwayc) New START Transit Centerd) Sidewalks in Town and mixed use villages) Hoback-Jackson South Project (Complete Street - highway, pathway, wildlife mitigation, river recreation access, and transit needs)f)Wildlife highway crossings.

<td>Degro, Theresa</td>
<td>I am Theresa Degro, and for those of you who don’t know me, I was part of the planning team that developed the 1994 Comprehensive Plan and Land Development Regulations. And I want to thank you for all the time that you've spent so far on this effort. It’s obvious that you spent a lot of time and effort thinking through a lot of very complex issues. I think I’ll echo Town Councilman ?? about...I was kind of surprised at the move that you made in at the very beginning of a planning process and the public hearing process to, you know, send the draft back before, you know, it was after the first public hearing, which I didn’t get a chance to go to. So, I haven’t even had a chance to let you know what I think about the document that you have before you. I think a lot of your comments are great, and the direction is great. Some of them I don't agree with, and so I really do hope I am going to get an opportunity to make comments on where you’re going from here. And so I would echo Commissioner Duncker in that, please, do get together with the Town Planning Commission, go through that process with them, you know, present your ideas or directives of how you would like to see this changed so far, but take public comment on it. Give us an opportunity, as the public, to tell you what we think about the document, what we think about the direction you are going with that document, have a discussion with the Town Council members or Town Planning Commission members, and move forward as a unit. Because we did it before, and we can do it. It’s challenging. And it takes time. But you’re obviously perfectly willing to put in that time and dedication, and I really wish you success with that, and hear us out from the public.</td>

<td>6/28/2009</td>
<td>Adams, Justin</td>
<td>So, why are you expanding the lodging overlay in the TofJ? Indications are that the most agreed upon item in Jackson is that the people want to be a community first and a resort second, a distant second. The Town is not a resort zone. Town as Heart? Good luck with the traffic that you will generate and the County is going to dump on you. Why do you guys ignore the Bernstein studies? Explain to the public why Bernstein is nuts and your traffic plan is so great. Who benefits from the expanded lodging overlay? How about transferring density from the County into Town? That is how you lost the DRD. Trying to claim density in lieu of sprawl and the public quickly realized that they were in store for the worst of both worlds. Why not an honest meeting with the County and transfer density and have Town as Heart. Are you squabbling with the County over sales tax money?</td>
</tr>
<tr>
<td>6/28/2009</td>
<td>Goralski, Jim and Linda</td>
<td>This is a short note to first of all thank the Planning Commissioners for their courageous decision to recommend that the current draft of the Comprehensive Plan be sent back to the Planners for MAJOR revisions. As we've previously commented at meetings and in letters, we strongly feel the current draft does not represent the input gathered from the community here in Jackson Hole nor does it represent the spirit of the Plan currently in place. The 'band-aid' approach of tweaking is not an acceptable resolution for this document in its current form. It requires a total overhaul. We think Commissioner McCarthy said it best when he said that…urban planning models suitable for cities such as Portland are not compatible with the needs of those living in rural WY. Second, we want to reiterate our comments that the community's desired preservation of wildlife and open space should be the priority of the Plan (THIS INCLUDES SOUTH PARK) and not excessive growth of commerical and residential development. The growth discussed in the draft exacerbates the problems we are currently struggling with and downgrades the quality of 'human needs' for residents currently living here. We wholeheartedly support the Alliance's motto of 'Grow slow, Grow smart'.</td>
</tr>

<td>6/28/2009</td>
<td>Bain, Rhett</td>
<td>WILDLIFE AND OPEN SPACES, VALUES THIS COMMUNITY HAS CHERISHED FOR DECADES, WILL BE REINSTATED AS THE COMMUNITY'S TOP PRIORITY AND BECOME THE ORGANIZING THEME OF THE ENTIRE PLAN Any new development in South Park should only occur after infill has been exhausted in the town of Jackson. The wording “Develop South Park North To South” should be eliminated from the Future Land Use Plan for South Park (District 12). Reduce the number of proposed future units from 1500 units in South Park back to the 370 units that are already allowed under present zoning. Any new development in South Park and the Tribal Trails connector Road should not be even be considered until a new road connecting Route 89 and South Park Loop Road in South Park is completed first to alleviate the traffic on High School Road. If any new development occurs in South Park there should be open space from the High School to South Park Loop Road between the new development and High School Road.</td>
</tr>
<tr>

<td>Adams, Justin</td>
<td>The sewer pipe north of Town is a vector for development that people do not want. State School Lands near Mormon Row can access this pipe. And there is a fair amount of private property along hwy 189 that can go for PRSDs with the sewer pipe because they can build near the highway, access the sewer pipe, and not have to build expensive access roads to their property. And the airport? Is this a deal to accomodate the airport, enabled by the Park?</td>
</tr>
</tbody>
</table>
We would like to thank you again for your recommendation that the Plan be revised to reflect the wishes of the public. As residents of South Park, it is clear to us that the Plan as now written ignores the contribution of South Park to the character and grandeur of the Valley as a whole, in particular: South Park's status as the scenic southern gateway to Jackson; its provision of wildlife habitat and migration corridors; and its rural, agricultural aspect, which still defines the overall character of the area. It has certainly never been a "node" (defined by our edition of Webster's New World Dictionary as "a point of concentration; central point"). A particular threat to South Park is the potential for density transfers, a zoning maneuver that allows developers to receive approval for density in one (presumably favored) location, and then transfer that density to another target location, piling even more density on the "less worthy" area. Another concern (extending beyond South Park) is the concept of density bonuses for affordable or "workforce" housing. Developers should be required to provide sufficient affordable housing to provide for the need generated by their own projects; otherwise, the affordable housing problem is never solved, but is just compounded infinitely into the future. Specifically, we respectfully request that the following be included in your directives to staff to incorporate into the Plan revisions: --Recognize the importance of South Park as a scenic gateway to Jackson, as wildlife corridor and habitat, and as a contributor to the still agricultural, rural character of the Valley. --Remove the designation of South Park as a node. --Retain the Natural Resource Overlay designation in South Park. --Retain the existing density of South Park, codified by the existing zoning of 1 unit per 35 acres. Restrict any increases in density to north of High School Road. --Expressly adopt a restriction to prohibit any density transfers from one project to another. --Eliminate the use of density bonuses for the provision of any housing categories. Thank you for your consideration.

Any new development in South Park and the Tribal Trails connector Road should not be even be considered until a new road connecting Route 89 and South Park Loop Road in South Park is completed first to alleviate the traffic on High School Road. If any new development occurs in South Park there should be open space from the High School to South Park Loop Road between the new development and High School Road. I hope a thank you is proper and adequate. I am glad elected officials are listening. BUT I am cynical enough to feel we are waiting for the other shoe to drop. I am afraid there will be some loophole that will allow this to go through just because of the vote to remand. I sincerely hope not and want everyone to listen to the public. Please make the plan much more detailed and SAVE the WILDLIFE HABITAT that is left.

Dear Official or Manager,
We in the public are grateful for the opportunity to provide input to the ongoing Comp Plan update/rewrite process. Attached as "Comp Plan Remedies" please find a 2-page table of brief comments that recommend specific changes to the proposed plan and process. The third page in the attachment is a revised Table of Contents that would make for a more user-friendly Plan. These comments are my personal input.
As you may be aware, early in the planning process Save Historic Jackson Hole commissioned a scientific voter poll that provided unbiased planning input. This input is now attached to insure it becomes a part of the official record. This is valuable data as those in the public service sector/profession need to understand their customer, the good folks that live in Jackson Hole.
Respectfully,
Louis Wang (referenced table is available hard copy at the County Planning Department)
I write to you today, not in my capacity as an employee of a local nonprofit, but as a private citizen who has called Jackson Hole home for the majority of my life. I have worked to find a way to afford to remain in Jackson Hole because -- even though I have traveled a lot and tried living elsewhere -- I find this to be one of the most unique places in this entire country. No where have I found another place with a similar sense of neighborliness, proximity to nature and vibrancy of community that we share here. As a result, you will find me to be both a supporter of affordable housing AND wildlife and the environment. I firmly believe that the two are not incompatible. However, I believe that this comp plan process is heading down a dangerous road that takes us away from all of the reasons people say they like living here (a "tragedy of the commons," if you will). In doing so, there are components that could actually make the housing situation worse, and there are components that completely ignore the unique experience of being able to live in a community with wildlife. I am lucky to own a house in Rafter J, where I rent rooms to help pay my mortgage. When Rafter J was first built, I and others thought it seemed like a crazy design -- very suburban for rural Jackson... I mean, what was with all of those confusing winding streets and strange layout of housing? Today, a lifetime later of learning about planning issues and wildlife habitat, I see the design for some of the genius it included: corridors along the creek, wetlands and willow stands preserved, and open spaces between the clustered housing. As a result of that forward-thinking planning there and elsewhere in the valley, I frequently enjoy moose cow-calf pairs in my backyard in the winter, nesting ducks in the wetlands along the creek in the spring, the sound of coyote howls on summer evenings, and generous bird life in my trees and bushes. Last winter, I had a deer nest under my pine tree for a couple of snowy nights before it moved on. I cherish these moments, and whenever someone visits me from out of town and experiences this for themselves, they are awestruck and envious of life in Jackson Hole. That's why I was actually kind of flabbergasted when I read the draft Comp Plan and saw the extensive departure from the '94 plan regarding South Park, not to mention other areas, such as the plans for in-town development -- where I, as well as many others in this community also share a stake, even though we may have an address outside of town limits. For now, I will limit my comments to the South Park area. The new plan appears to call for a significant shift in what South Park would look and feel like by throwing mass amounts of development and traffic into South Park as a sacrificial zone... as opposed to working out problems holistically and in a way that would keep us from having the same problems -- and even creating new problems -- in the future.

According to the new plan, here's what's in print and in store for South Park: ...“the provision of housing and light industrial opportunities” and to “Develop South Park from north to south as an extension of the town development pattern to provide for community needs.” (New Comp Plan, Page 110.) I strongly urge you to please return to the '94 Comp Plan values for South Park, where this area was among those that “should be kept free of development to the maximum extent possible to help preserve the rural character, critical wildlife habitat and important image-setting scenic vistas and river corridors, and to encourage the continuation of ranching and other types of traditional agriculture as a vital part of the community’s character.” (Comp Plan, Chapter 1: Community Vision, Page 4; October, 2002.) The Jackson Hole Conservation Alliance’s recently released study of wildlife and open space values in South Park lays out a well-documented framework to support a return to the community's prior vision for South Park.

I also ask you to heed the 2 to 1 vote of the public not that long ago regarding the Porter Estate annexation. There was not then, nor is there now, the public support to put such high levels of density in the hayfields south of town limits as this new plan would support. As importantly, I believe we especially should not allow such high upzones of residential density when it is not balanced with the high amounts of commercial development proposed in this plan, particularly in town. Following simple rules of supply and demand, we will NEVER have enough residential development in the price ranges we need -- no matter how densely we grow -- if we don’t balance commercial growth (which leads to more need for residential), and if we don’t balance the types of housing. Just ask New York City, where housing costs are as sky high as their buildings. We can build skyscrapers like they do, and just like they do, not have any affordable housing unless we structure it in through affordable housing programs that serve our greatest community need. As Aspen, Vail and New York City have learned, free market solutions don’t work very well in an area with unlimited demand and limited supply. I believe there is much support to return to the values of the '94 plan and to ensure that they are included in any revision. The '94 planning process incorporated significant amounts of public dialog. I personally attended many of those meetings, beginning with the Successful Communities process that Luther Probst came out here to conduct. And I watched the town and county share about $1 million in costs, if I remember correctly, to hire a world-renowned planning firm -- Lane Kendig and Associates -- to build a plan that, while it didn't completely please anybody or everybody, provided a balance and a framework to build on the diverse community interests that had come out of the extensive public process. Because of that, the '94 plan has had a reasonable amount of buy-in from the public over the years (though we all acknowledged there was room for adjustments). It’s no wonder that there’s so much community consternation over an entirely new plan that was developed in a significantly shorter amount of time, with seemingly little integration of public input. Instead of improving on the old plan and on well-established visions for the community [as the relatively teeny comp plan “update” budget was designed to do] a whole new document has been created without paying attention to the values this community embodies. What seems remarkably clear to me is that those same values that were expressed back in the '94 process
have been reaffirmed multiple times over the last several years in community sentiment on major planning issues that have arisen (such as the Porter Estate annexation, Downtown Redevelopment District, Teton Village expansion and Teton Meadows, to name a few). Even though it feels like there are more and more new neighbors moving to this valley who would like to live here for its beauty but also want to bring the big city with them, I was greatly heartened to see the same historic community values come out in such strong force in both the scientific and non-scientific polling that was done just prior to rewriting the comp plan this go-around. Those values I am speaking of put preserving our one-of-a-kind wildlife ecosystem first, they preserve a rural, western character, and they balance residential and commercial growth in a way that it happens in a healthy fashion for this community, not in a way that inadvertently destroys the best things about this community. I know you all have an incredibly hard job. I thank you for putting your hearts and souls into it. Please keep those hearts and souls open to what you are hearing from this community. Thank you for your time and consideration of my thoughts.
Teton County Planning Commission – even to me who tracks the process closely - the current situation is clear as mud. I can say from the volume of phone calls, conversations and emails to me this week that the public: -has lost trust in the comp plan process -does not feel the plan reflects their well communicated vision for the future of our County -believes that this time-out in the process, and the County planning commission’s actions, were very welcomed and one of the few times they have felt truly “listened to” Also the public now expects that JOINTLY, in some manner, the two planning commissions will give staff further direction to revise the plan BEFORE the public continues to consider participating in the process further. Process changes are also very welcomed but should come after the revision. I assume that on Monday evening the County planning commission will develop a list of specific directions to staff – although I believe staff already is well aware of what needs to be changed in the plan anyway. I am unclear how Monday’s meeting along with the July 6 JIM and July 9 joint planning commission meetings will all play out – I don’t think anyone does.

So representing a broad and consistently engaged neighborhood group of citizens – I would be remiss if I did not suggest a few points to consider for staff direction with a focus on the South Park region and the excellent and detailed June 23 analysis by the JH Alliance on “The greater South Park region: A Summary of Wildlife and Scenic Resources.” Suggestions for the County planning commission to consider in their recommendation to staff for the revision with excerpts from the Alliance report: 1. “Because of the extent to which the new draft represents a rewrite, rather than an update of the 1994 Plan, the new draft has the potential to dramatically change future land use planning for the greater South Park region in particular. The new draft shifts away from the preservation of rural character, away from the importance of scenic preservation, and away from adequately recognizing wildlife resources in “interior districts,” or nodes, in addition to outlying areas.” a. Reinstate substantive language from our currently binding 1994 comp plan about the scenic, rural and wildlife values inherent in the South Park region. 2. “Specific to South Park, the Conservation Alliance questions the low prioritization of “wildlife and natural resources” in District 12: South Park, and in general is very concerned with the devaluation of scenic resources in the new draft. The study area, like much of the public and private land in this valley, provides critical migration routes and yearlong and seasonal habitat for a wide variety of native species. Based on the information available, the maximum density proposed in the new draft and a low prioritization of wildlife and scenic resources in South Park are inappropriate and should not be promoted. To rank what is the community’s overall top priority so low on the list for South Park is to do a disservice to the area, its residents (both human and wildlife alike) and to the community as a whole.” a.Either spit the South Park district 12 into two districts or perhaps better yet – redraw most of the district from ½ mile south of High School road (not ¾ mile as this was never polled for) to be included with the East Bank district 5. The prioritizing of themes and uses in district 5 better parallel the bulk of the South Park district 12. 3. “Overall, while some residential development is appropriate in the northwest corner of District 12, the new draft should not recommend significant intensification of development in the greater South Park region (or any district) given the community’s goals to limit overall growth and protect wildlife. And, as development occurs, significant portions of adjacent lands, within South Park, should be permanently protected to balance development and conservation goals in the area.” a. Reduce from ¼ to no more then ¼ to ½ mile (approximately 200 acres in the proposed node in the NW corner of the Porter Estate). Also reduce from 1,500 to no more then 400 the number of potential units which would be a doubling of current entitlements/zoning and use of the PRD tool (correct Appendix I to reflect entitled zoning including Suburban and PRD use is 210 units and not 370 units as stated for the initial 400 acre node as proposed – staff has acknowledged this error).

b. Link any development in a new recommended smaller footprint and less intense remaining NW South Park node be tied not only to achieve workforce housing objectives but equally achieving permanent open space within district 12 and/or district 5. c. Recommend that this new reduced node, as well as any others still proposed in the plan - be withheld for consideration until all infill opportunities are exhausted. In summary the community has been crystal clear that they want a plan that presents the “least growth” approach to future land use planning significantly reducing both future residential and commercial development while respecting existing property rights. This is especially important given the plan has completely abandoned any analysis of its potential impacts on wildlife, transportation, workforce housing, schools, infrastructure and fiscal costs. Thank you for your continued leadership. Although I believe the plan should absolutely move forward as a joint process in some manner – no more public hearings should be held until planning staff has revised the document to better reflect the unified, clear and overwhelming public input to date. If this critical step does not take place – the public has made it clear to me that they will likely completely disengage from the process.
Dear County Planning Commissioners, Thanks for all the work you did on the recommendations and taking our comments about the plan into consideration. I am worried however about moving the Start facilities, rodeo grounds and fairgrounds near High School Road. I think it will only trade one group of problems for another. I don't think that West Jackson should be dealt that kind of either or scenario and be made to look like we don't want to sacrifice anything. We have already with 6 schools, the public school transit system, heavy industrial, a sewage transfer station, a supermarket that services the whole valley and roads that are unsafe for school children and pedestrians. How will South Park deal with the added traffic, light, noise, air pollution and industrial runoff from the new facilities that would include oil, gas, antifreeze etc. How will the traffic in the summertime be mitigated and not just put up with? Will the town's plowed snow be transported to South Park also on to the new fairgrounds only to melt off into Flat Creek down here instead of in town? We can't just move the problems around. We have to solve the environmental and neighborhood unfriendly problems these needed facilities continually generate. Will LEEDS type regs be applied to these new facilities such as nonpolluting and quiet engines for the new start busses before the complex is moved. Will there be park and ride to the rodeo and fairgrounds from within town? Will town find somewhere else to dump their snow or use it in the summertime by implementing a gray water cistern system? How do we deal with the garbage that is produced from these public facilities, especially the fairgrounds and rodeo? Can we somehow tie into the composting facility located at the county dump site to accept compostable beer cups, plates, etc. and reduce the amount of garbage being thrown out? How close will the rodeo and fairgrounds be to the High School in relationship to the beer that will be sold; will it be too close to school grounds? Will there be sound and light mitigating measures like heavy landscaping with large Cottonwoods and low shrubs? The most important question is if South Park gets all these public facilities what's to prevent South Park from attracting more commercial in back of the High School and still pack the homes into the NW corner of South Park Loop Rd and High School Road if your other recommendations of reduced build out and dumping the density bonus tools aren't included in the final comp plan. It seems that history will repeat itself on High School Road. Haven't we learned a lesson with all the problems that condensing all the schools on HSR generated? Kelly accepted my invite for coffee and a walk around Cottonwood to show him what works and what doesn't work in Cottonwood Park. We met one morning a couple of weeks ago. He loved Range View Park and would like to continue something like it across High School Road. Do we now lose the open space incentive idea along HSR? I respect Kelly's family's right to make money off of South Park but at what price to their neighbors in Cottonwood Park and the surrounding neighborhoods? The transfer of these facilities to South Park I believe will embolden the South Park owners to continue with more commercial behind the high school. This only galvanizes Kelly's belief that this is what the community wants there (The 2008 community survey doesn't support that belief). Although, at the end of our conversation he did say that he personally doesn't want to see commercial by the high school. He would rather see a community college campus. Will the numbers in The NW corner of South Park be brought back down to the original 200 residential units allowed under present zoning without the bonus density tools? Or will that be negotiated from a higher rate. Kelly seems to think that between 600 and 800 residential units in the NW corner is fine. I animatedly but respectfully disagreed with him. These are Cottonwood Park concerns as well as my own. I have to admit I can't speak for the rest of Cottonwood when it comes to the transfer of the public facilities to South Park. But I can guess the initial response will be no. Personally, I don't want them in South Park. Although I am trying to keep an open mind about it. We would like to work with everybody to create a plan that is beneficial to everyone, but we are not willing to be dumped on again and then forgotten about to deal with the consequences. It would be nice if the hardworking people of West Jackson could escape to a quiet home in the evening and not have to deal with the tourists they deal with during the day. Thanks again for all the hard work you are doing to make this plan resemble what the community is speaking up about.
Thank you for keeping us apprised of the developments and revisions in the proposed Jackson/Teton County Comprehensive Plan. Over the past two years, the Wyoming Game and Fish Department staff has been involved in the planning process and appreciate the efforts the County has made in emphasizing stewardship of wildlife and natural resources and managing growth responsibly.

General comments:
We support the concept of moving toward a plan that is more predictable in determining the extent and location of development within the County. We also support the nodal concept within Districts. Both concepts are consistent with the Plan’s intent to paint a picture or provide a vision of the community with Plan implementation. However, we are concerned that the Plan deviates from the vision and conceptual intent by providing specifics relative to nodal density, design and location within Districts. We would recommend maintaining the overall visionary concept relative to all aspects of the plan, then in concert developing specific build out levels for the nodes/districts while updating the NRO and other pertinent regulatory mechanisms. This would allow for an accurate assessment of potential impacts, appropriate mitigation measures, and identification of possible alternatives while meeting the vision and top priority, “stewardship and protection of natural resources”, of the Plan.

Specific Comments:
1. Natural Resource Overlay (NRO)
We understand the County has utilized information from the updated wildlife GIS layers obtained from the Wyoming Game and Fish Department, Teton County, National Elk Refuge, Teton Science Schools, Wildlife Conservation Society, Grand Teton National Park, B-T National Forest, and the Jackson Hole Wildlife Foundation in developing the revised plan. As stated above, we are concerned that the boundaries and potential build-out levels for districts and in particular nodes were developed without the formal inclusion of much of the updated information. This information would have been helpful prior to the selection of node locations and development of the range of potential build outs. The Plan is generally a visionary guiding document, but does propose specifics with respect to district location and development levels. Developing all of the regulatory mechanisms simultaneously may more accurately identify and quantify wildlife impacts, and clarified opportunities for improved district design and mitigation measures. Our experience evaluating proposed developments in Teton County over the past year has highlighted the importance of using the most current wildlife data and the NRO to evaluate projects.

2. Species of Special Concern
The Plan identifies the need to expand the wildlife species identified as “species of special concern” (pg 18). We support the expansion of the list since it currently does not encompass bear conflict areas, sage grouse, nesting raptors, amphibians, wetlands and other potential areas of concern. Our State Wildlife Action Plan identifies Species of Greatest Conservation Need, which could be helpful for developing additional recommendations for this list. The Department would like to be included in future discussions relating to this matter. Moreover, these additions will be key for updating the existing NRO and providing a more accurate picture of important wildlife areas in the County. The plan should identify a time frame when the list will be developed and how this information can be incorporated into the regulatory phase of the plan. Analyses based on this expanded list could stimulate proposals for modifications of some objectives currently proposed for the different districts.

3. Indicators and Monitoring for Ecosystem Health
The Department supports the Plan's strategy of the development of a list of wildlife species to be
used as indicators to monitor ecosystem health. In addition to focal species, a suite of species found within the individual districts could be identified. The species list, migration routes and seasonal range maps could be used to help identify areas where development restrictions could help mitigate impacts.

4. Inclusion of Important Habitat Types
The Department recognizes that the existing plan identifies and prioritizes important vegetative cover types (NRO, Section 3211) including: 1) mesic cover types (deciduous forest, mixed species forest, coniferous forest and other types), 2) nonmesic cover types (deciduous forest, coniferous forest, shrub-grassland and scrub, and grassland) 3) wetlands, and 4) agricultural meadow. The plan also provides standards for protecting water bodies, floodplains, and wetlands (NRO, Section 3220). We recommend that habitat/vegetative cover types be included and how they are prioritized be reviewed when updating the NRO. The WGFD Strategic Habitat Plan, 2009 could be helpful in this regard as it identifies and stratifies certain vegetation community types as important wildlife habitat. Examples are aspen, mixed mountain shrub, sagebrush, grassland, riparian and wetland habitats, prairie stream systems and cutthroat trout streams. Much of Teton County has been habitat type mapped by the surrounding agencies. We recommend the County strive to complete a current vegetation map and utilize it to identify important wildlife habitat types in need of conservation. The WGFD Strategic Habitat Plan identifies several strategies that encourage the WGFD to engage in habitat inventories and assist local governments and private landowners with management. Including important habitats in the Plan would help to identify areas where future regulatory mechanisms could minimize impacts of development on wildlife.

5. Environmental Commission
The Plan (pg 25,) recommends the establishment of an Environmental Commission to make wildlife and habitat recommendations as well as address cumulative impacts. We support this concept and the County’s commitment to look at the cumulative impacts of development on wildlife. We also encourage this Commission to coordinate closely with the Wyoming Game and Fish Department as they consider wildlife related issues.

6. Buffer Areas between Nodes and adjacent NRO Designation.
It is well documented in scientific literature that wildlife is disturbed by human activity. The zone of disturbance varies by species, habitat type, and type of disturbance. An array of activities will be associated with high-density developments resulting in considerable wildlife disturbance. Thus, we recommend that the regulatory phase of the plan include an opportunity to create buffer zones around high density developments that are adjacent to the updated NRO. Buffer zone widths may vary dependent upon the primary wildlife species and habitat type(s) involved. This buffer zone should entail a gradual reduction in development density as one approaches the NRO boundary.

7. Build Out
Although the Future Land Use Plan is not regulatory, we have concerns regarding the picture of how the community could look if development themes in the Plan are fully implemented. Wildlife in Teton County depends upon access to seasonal habitats that are often separated by developments, subdivisions, and roads. While the Comprehensive Plan does provide guidance regarding appropriate locations for open space and developments, the plan should acknowledge that moose, deer, elk, bears and other wildlife will be negatively impacted as maximum build out is approached. Permeability is crucial and in areas like the Aspens Node along Highway 390 and the Wilson Node, wildlife must to be able to move through areas proposed for increased development. Given the level of wildlife conflicts we currently experience, careful planning will be needed to ensure wildlife will be able to move daily and seasonally through these areas. Other
areas of the county where permeability will likely be an issue in the future can be identified through the wildlife mortality database and the updated NRO. The draft plan could incorporate more specific language, data, and mechanisms to provide the degree of stewardship identified in the introduction of the Comprehensive Plan as the community’s primary values. Identifying certain districts where wildlife and open space have high priority is very important but it does not preclude the importance of other districts for wildlife. Many wildlife species can be found even in higher density areas, and how remaining development is directed, and the level and type of development allowed, will determine if wildlife can still use and move through such areas. WGFD would like to coordinate closely with the county to identify these areas where the maintenance of wildlife movements will be important to allow wildlife access to important resources in the future.

8. Maintain Viable Populations
While we agree that it is important to maintain viable wildlife populations in the County, the term itself is open to broad interpretation. The scale at which a population is evaluated can make a dramatic difference in defining viability. Even though development on the local level will negatively impact and result in loss of individual animals, populations on a broader geographic scale may remain viable. The Environmental Commission and county officials will need to work with more specific objectives when making developmental decisions in the future. We suggest replacing “viable populations” with “populations commensurate with State and Federal wildlife plans”. Examples of such plans are the Wyoming Game and Fish Department’s Herd Unit population objectives for various wildlife species and the WGFD State Wildlife Action Plan, which addresses many non game species and is currently undergoing revision. The US Forest Service also maintains and monitors a sensitive wildlife species list. This will allow a quantifiable measure to determine if populations of wildlife are at desired levels.

9. Dispersed Recreation
The Comprehensive Plan addresses dispersed recreation in Policy 1.7.b. and states that “Recreational access to public lands should be planned and provided for in a manner that is consistent with stewardship and conservation of natural resources. Local government and private interests will coordinate with state and federal agencies regarding the creation and maintenance of access points to state and federal lands and rivers and creeks” (pg. 25). Levels of build-out in both the current Comprehensive Plan and the proposed Plan could result in an increased human population in Teton County, which translates to an increase in dispersed recreation. Historically, the B-T National Forest, National Elk Refuge, Grand Teton National Park and WGFD have implemented seasonal human use restrictions as a mitigation measure to minimize the cumulative impacts of dispersed recreation. The cumulative effects of an expanding human population may well require an expansion of human use restrictions temporally and spatially. It is critical that agencies cooperate in the identification of appropriate sites and types of dispersed recreation if habitat integrity and effectiveness are to be maintained.

10. Wildlife Vehicle Collisions
The Jackson Hole Wildlife Foundation and the Wyoming Department of Transportation coordinate efforts to document wildlife vehicle collisions. The average yearly wildlife/vehicle mortality rate for 1990-1996 and 2000-2006 were 159 and 236 respectively. Average daily traffic volume on routes west and south of Jackson increased 129% from 1990-2000. There is a direct positive correlation between increases in traffic volume and wildlife/vehicle collisions. Therefore, we predict a significant increase in wildlife/vehicle collisions with an increase in human population and traffic volume. The Jackson Hole Wildlife Foundation and WDOT have identified numerous areas where such wildlife/vehicle collisions occur. We recommend close collaboration among Teton County, City of Jackson, WDOT, JH Wildlife Foundation and the

<td>McIntyre, Julie</td>
<td>I fully support the Planning Commissioners’ rejection of the current Comp Plan Draft and ask that you send it back to the planning department for a major natural values overhaul. I have attended a number of meetings, beginning last summer, and have been frustrated by the planners’ callow understanding of our wildlife assets – they appear to view them as just another mitigating factor on their planning chart. In public comment, over and over, residents (not special interest growth groups) have appealed to you and planners to protect our natural environment/wildlife corridors. This week, the JH Conservation Alliance presented you with a compilation of studies that have been done in South Park. The list of mammals, birds, fish and amphibians that have been observed is impressive. I have personally seen dozens of other species as well, particularly on the Snake. This spring there are large numbers of pelicans that can be viewed discretely; if South Park is “red-lined” for development as the current draft allows, such sightings will soon enough be just a fond memory. Attached is a photo taken at the gate of South Park Elk Feed Grounds. Message on the white sign reads: “Important Bird Area: This site is part of a global network of places recognized for their outstanding value to bird conservation - Audubon.” It’s ironic that the Audubon Society understands South Park’s global significance, while local planners consider it an expendable “node”. If Jackson Hole is to remain a healthy and viable ecosystem, we cannot pick and choose our parts. Please protect our treasure. (referenced photo is available hard copy in the County planning department)</td>

<tr>
<td>6/26/09</td>
<td>Stone, Cindy Hill</td>
<td>South Park’s rural character, scenic beauty and natural resources are being shunned in the new draft of the comp. plan. Please help us. We can stand in the face of the planning staff and they all bob their heads. What we say either goes over their heads or is stored in a vacuum box never to be retrieved. We know that development in the northwest corner of South Park is appropriate. Our community agreed on that. The development of South Park starting north to south is way out of line. We need to preserve the wildlife and resources that we have. We have the Nat’l Elk refuge, for God’s sake. Town density in the northwest corner is ridiculous. Please take time to read the data that is being presented. Know that the people of the valley think you have big shoulders and are counting on you.</td>

WGFD to address traffic flow and encourage highway planning to mitigate wildlife/vehicle collisions.

11. Nuisance Wildlife Calls
The WGFD currently answers a substantial number of nuisance wildlife calls, especially for big and trophy game animals. We have recently added a temporary position to assist with nuisance bear issues and have collaborated with Teton County and the Jackson Hole Wildlife Foundation to foster a successful “Bear Wise” program. However, current staffing is not adequate to address additional wildlife nuisance requests that may occur as a result of the proposed increase in human population.

If we can provide you with any additional information, please contact the Jackson Regional Office. Thank you for the opportunity to comment.
Having just read the Conservation Alliance piece assembling three decades’ worth of information on wildlife and scenic values in South Park, I am writing to encourage (urge) your mindfulness of these findings in upcoming direction to Planning Staff. My takeaways: - No longer can we just toss away this part of the region as inconsequential to wildlife and scenic resources. - The impacts of any decisions we make are remarkably interdependent and cumulative. - Without habitat connectivity we won’t have the animals. - The scenery establishes who we are. The report makes all these points vividly (some relevant excerpts are included at the bottom of this message). In your direction regarding Plan revisions, please consider including the following: 1. Restore important passages concerning South Park wildlife and scenic values (from the 1994 Plan). 2. Move most of District 12 (South Park) into District 5 (Eastbank), except for the NW corner and the light industry segments along Highway 89. 3. Reduce the footprint and scale of development in all identified nodes, including the NW corner of South Park. Many thanks for your leadership. Excerpts from the JHCA Report: The Greater South Park Region: A Summary of Wildlife and Scenic Resources (June 23, 2009) The region is consequential to the valley’s wildlife. “Elk, mule deer and moose use the area for annual migrations, daily movements, and minimal foraging. Raptors use the open agricultural fields for foraging, and the cottonwood and aspen stands for resting. Songbirds and migratory birds use the region, particularly the wetlands and riparian areas, for feeding and resting. Waterfowl, amphibians and reptiles utilize the wetlands, rivers and riparian habitats....Some of the spring creeks also serve as spawning grounds for the Snake River Cutthroat Trout. Cumulatively, these habitats contribute to the overall ecological health of the larger Snake River ecosystem.” (pp 7-8 of 49) The report makes vivid how interdependent and cumulative our decisions are. For example: - “the establishment of one easement or protected habitat accentuates the value of the surrounding easements or protected habitats...while the 3.5 acre Teton Science School easement adjacent to the Indian Springs Ranch easement may itself not contribute greatly to habitat connectivity, taken together with the surrounding acres of protected land, its individual value to both wildlife and the preservation of scenic vistas is exponentially increased.” (p 8 of 49, last paragraph) - “the increased presence of roads [more roads, wider roads] necessarily increases the impacts of each [one] of the roads....roads have long been recognized as features that break up habitat connectivity for many wildlife species. According to Jackson Hole Wildlife Foundation data...most large mammals residing in Teton County must cross roads in order to access habitat and meet their daily, seasonal, and life needs. Roads in the study area [South Park and the area around the proposed Tribal Trails connector] represent some of the highest fatality rates for large ungulates in Teton County...[These areas] have been considered appropriate areas to construct wildlife overpasses.” (p 8 of 49, 2nd & 4th paragraphs) Without habitat connectivity we won’t have the animals. Both North-South and East-West Connectivity through the study area are needed, providing corridors “through which animals can pass or use to leave developed areas when they wander in. To allow access to the slopes or...to the river bottom, [a] corridor should be there.” (p 9, 2nd & 3rd paragraphs) Scenery establishes who we are. “The true gateway from the south to both Town and resort facilities, South Park [is defined by] prominent valley viewscapes, connecting vistas of buttes to the more distant Teton mountain range....[likewise] the Tribal Trails area, as a gateway from the west, accentuates and further defines the rural and agricultural character of the Town and County.” (p 9, last 2 paragraphs; top of p 10)

1. End PUMD, PMDs, PRDs, AHPUD, etc. They are administrative nightmares and favor those who grovel best to the high command. 2. Simple is good. Write the plan so that ‘by right’ development is the standard. 3. Nothing wrong with the old plan except for the alphabet soup exceptions itemized in the first comment above.

Sustainable housing, please. That means no more deed restricted sales. Build nicer rental housing for core infrastructure employees only. When they quit teaching to sell real estate, they have to move out. No dogs is the definition of too dense. Build up START so others can live in Alpine or Victor and own property like real Americans, they get to participate in the growth of this great country. Stated differently, affordable housing is the road to serfdom.

I do not favor caps on growth. This is an egregious barrier to put between a man and the enjoyment of his property. How do you administer this system, who gets the building permit? 1. Those who grovel before the high command. 2. Lottery winners. 3. High bidders in a auctions for building permits. None of these programs work; cannot be administered, are magnets for lawsuits, etc. Just have simple ‘by right’ development rules and stick to them without regular exceptions.

One per 35, please. This 9/35 is a bag job. Do not count on tax deductions for conservation easements continuing. Plan for good living. If you are an elk or moose on a minus 25 day in JH, you do not see rich people or poor people, clustered people or 1/35 people, you only see people, and cars. Cars everywhere, slaughtering your friends and relatives as they try to cross the roads. Fewer people is better. Nodes are enticing, but not without 1/35.

<td>Louis Wang</td>
<td>It can't get much clearer, the Comp Plan process and product are both broken. The editorial pasted in below, Jackson Hole News and Guide, June 24, 2009, sums it up pretty well. The question is, do you have the honesty and courage to do what's right? You need a fresh start, not lipstick on the pig. Louis Wang (referenced newspaper editorial available hard copy at the County Planning Dept)</td>
</tr>
<tr>
<td>6/24/09</td>
<td>Justin Adams</td>
<td>1. Mr. Resor talked about 'nodes' protecting adjacent land. Ironic that the 'node' of Teton Village did not protect SRA land. 2. Beware of what can happen in school sections. 2. Gail Jensen's suggestion that the tax deduction for conservation easements is unlikely to endure makes a great case to go to one unit on 35 acres and not give the store away trying to accommodate the Land Trust or large developers. 3. Gene B's suggestion that wildlife has tremendous commercial value distinguishing us from other high end ski resorts is on target. Why do the commercial operators take wildlife for granted? 4. Housing is unsustainable. No way can we house 65% of the work force, even using the base entitlements today. Also, our affordable housing program is unsustainable. What do we do for worker housing when current affordable housing owners retire? Greg Griffith researched the origin of the 65% guideline and it seems flimsy at best and merits more study. Beware of cures that are worse than the disease. 5. End the PRD and PMUDs and freeze resort zones. 6. Include worker housing in resort zones in the buildout numbers, which means you have to define how much you will allow. 7. SHJH submitted a traffic study to the high command and we believe the planners have ignored it. This is based on a discussion I had with Bill Collins where he attacked the credibility of the guy who did the traffic study. Our traffic guy has a PhD from Northwestern and did the very credible traffic study on Teton Meadows Ranch. 8. Ramp up START. 9. Many of my friends and neighbors have two children and three jobs and cannot attend these meetings, they can only sign petitions. On specifics of this email, I cannot vouch for them, but as to the vision of Jackson Hole, I know that they generally agree with the recent actions of the Planning Commission and are disappointed by the First Draft of the Plan.</td>

</table>
My name's Louis Wang and I live in Town. I want to thank you for providing this opportunity. I also want to say that I have a background in planning from a corporate standpoint, different perspective. But for a number of years I had a couple of million dollars a year to spend on plans. This Plan is not a Plan. One of the things when we have draft reviews, we tell people take your ego out, if you contributed to this, just put it down on the chair beside you, cause you don’t want to deal with that. You have to be honest. This is a vision statement labeled in this Plan and it has some pretty concrete beginnings for more entitlements. That’s the essence of this document. It’s internally inconsistent. I’ll just deal a little bit beginning with the executive summary. The executive summary starts by…it repeats the term community vision eight times that I could count, maybe more, and it begins by saying the Plan delineates a community vision. In the next sentence that a community vision becomes the community vision, but it’s not the community vision of the community. From the old Plan the community vision is the sustainable community not dependent on growth. And the exact quote is “promote economic sustenance that does not depend on population growth.” That’s from the old Plan. Page 1 of the executive summary repeats the community vision again and it says that it’s established in 1994, but by the time you get to page 2, they’re going over to sustainability based on a 1987 Run the Land Commission report on sustainability. A report that comes out in ’87 is probably based on data that’s two, three years old at that point in time, so it’s 25-year-old data this report is based on. Then when you go google this specific report and it has the exact same quote.....that’s in the executive summary. It defines sustainable development as development that meets needs of the present without compromising the ability of future generations to meet their own needs. The very next sentence on Google about this report says, the ?? Land Report was primarily concerned with securing a global equity, redistributing resources towards poorer nations. This report was commissioned by the United Nations. So, here we have the United Nations report dealing with how you help out undeveloped areas 25 years ago. And it becomes the key statement in here on sustainability. We are the richest nation in the world and we’re arguably the richest community. The statement according to the IRS is we are often rank number one in terms of income tax as the richest county. And this statement about sustainability gets in here, and it’s not about sustainable community anymore. I’m only into this thing a page and a half, and it switched from sustainable community to sustainable development. This Plan is about sustainable development, it’s not about sustainable community. Having been trained as an engineer and dealt with science and technology engineers who do science in order to get something developed technically and make product, I’ve seen a number of bad Plans based on junk science. I know people put in a lot of hours and worked hard, but this is a bad Plan based on junk planning. That’s just the flat truth. You’ve got a community that wants a sustainable community not dependent on growth, and you’ve got a Plan that says, we’re going after sustainable development. Page 4 talks about how it’s essential to realize the goal of sustainable development. You end up on page 6 with the community’s vision for sustainable growth. We want sustainable community, not sustainable growth. Sustainable growth is an oxymoron—eventually you use it up, you run out. This vision has all of these various...the themes are feel-good fluff. That’s really what they are, feel-good fluff. You can find a lot of stuff to feel good about. You can’t do all the stuff but you can feel real good. So, you’ve got the beginning here, goes through about 87 pages of fluff, then you get to the districts and there’s about 50 pages on districts and you’ve got plus-ups and entitlements. This is the hard part of the Plan, these maps with plus-ups and entitlements. This is not the community’s Plan all at. A real Plan looks at the future and it says, I can see good out there a year, maybe two years, three years, so I put some hard stuff down, two or three years out, this is what we’re going to do, community. Then as I go further and further out, I can’t see so well, can’t predict the future. So, we do a little airy-fairy stuff then. This has the hard data out here 50 or more years. This is really, it’s really a way to do redevelopment of Jackson Hole. This is the DRD on a countywide basis. Every time the voters get a chance, they vote against big growth. You’ve got the DRD that was voted down by referendum. You’ve got the Porter Estate annexation voted down by referendum. You’ve got the ?? over here for a so-called Justice Center because we need a few more jail cells, fifty-three million dollars, and that wasn’t the whole bill. The whole bill is probably sixty million dollars. These things lose by two to one or more. This is a junk Plan. I’d rather be honest than be nice. So, if I’ve hurt anybody’s feelings, I apologize, but as I said in the beginning, if you want a good Plan, you lift your ego out, put it down on the chair beside you, and do a real good analysis. Is this a good Plan? It’s a very poor Plan. You need to junk it and start over. And when you start over, you ought to do 10, 15, 20 pages that people can read and understand, rather than this motherhood fluff in the beginning. Thank you very much.
Okay, I’ll take a spot. I don’t know where to start. I’ll try to be constructive here. I’d like to answer Tony’s question to Mrs. Walker. That 65 percent came from a passage in the Housing Needs Assessment, which stated that Pier Mountain Resort research seems to suggest—that’s the quote—seems to suggest if you go under the 60 percent rate, you tend to lose volunteers, ??, that’s where that came from. That’s just basically what I wanted Mr. Wall to know, ?? observation or research or analysis beyond that point. Around the table, everyone had great ideas, but the cumulative funding to implement a few of these strategies is incredible. There’s a lot of credence given to the transportation strategies, but the appendices state emphatically that we’re at about a 1 percent for local for START Bus, we’re at about 6 percent in the middle of July for bicycle and pathway usage, and most of that is for recreation. I’m the biggest fan of Pathways and START Bus, as Mike knows. But we can’t realistically base development patterns on the pipe dream that people in this climate at this altitude and at this latitude are going to use transport in a mass fashion. In other words, facilitate development based on that alone. We already subsidized our own demise when we, you know, roll in sewer projects, etc., and then the development and the land works come in, well, sewer and water are there so let’s go to town. One suggestion—this is a great, this is a great forum, this is the best meeting I’ve attended and I’ve attended nearly all of them—but what I would suggest is to record this meeting. Record this meeting and hire someone...oh, you are recording it? And transcript, a transcript, get a transcriptionist and let the public be able to see it, and individuals without good memories like myself can go back and look at it. Now, to get into some specifics, I strongly feel wildlife and open space need to be Policy 1 and 1.A. All decisions need to be made for the prism of preservation first in all areas. If you have a density bonus in the Town Square—I’ve been asked this question all the time—yes, that does mean if the Environmental Commission determines and the agencies of record determine that there are no specific wildlife values, say, in the Town Square. We know they’re everywhere else. Even in the CBD. We’ve had, you know, black bears above us. Everybody knows ?? Meadows foxes, etc. But we need to immediately go to Policy 1.A., and that’s to obtain an equitable exchange of permanently protected open space. We’re all kidding ourselves if we think we’re going to manage growth by any other method that’ll lock in development ?? It’s not going to happen. There will never be the political will. If you create a node 20 years down the line, they’ll come back and create another node. We’re doing that in, you know, all over the Valley now. The Plan was originally designed and public comment was centered around density neutrality. We don’t have that now. We have 3000 units of discretionary density bonuses built into the highest number that the public commented on going into this draft. If there is any density bonuses allocated, we need a unit-to-unit exchange. We can’t cram nine units per acre in five acres, 45 units, and then get 25 acres and a hayfield or a cow pasture somewhere, or a golf course, or in rich people’s foreground ?? It needs to be biologically valued. It needs to be a demonstrable community benefit for that open space. We need to explore incentivizing clustering of base entitlements, especially in northern South Park. And if possible all open space should be adjoining, adjacent, and accessible to those who are suffering the negative impacts of said density. You’re going to have a real battle on your hands if you give a district density and then pump their open space over to Alta or to Buffalo Valley. The Environmental Commission is a great idea. I think, you know, I’d have a problem if it was formulated around the categories of the STAG Committee. But I would suggest that all decisions go through the Environmental Commission prior to even going to the Planning Commission. That we have some kind of base analysis, some base research on the issue at hand before anyone goes to the Planning Commission studies as a recommendation to the Planning Commission, and then have another shot with the Environmental Commission prior to the final vote of the BCC. The last thing I’d like to touch on is...actually, two more things. I would suggest delineated hierarchy of LDRs. We can’t...you’ll get to the other end of this process and say, well, what do we do now. We need a hierarchy of LDRs which state that the issues which could potentially affect us negatively to the largest degree are addressed first. And that will be obviously wildlife and land use issues. The last concept is regionalism that I like out of this particular Plan, one of only two. And basically that states we will not export our negative impacts to surrounding communities like ?? or ?? I like that so well that I’d like to propose that we adopt micro-regionalism where we don’t allow the Town and the Village to export their net negative impacts to Aspens, Wilson and northern South Park.

<td>Ferguson, Jean Interested Public</td>
<td>I’m Jean Ferguson. I live in the County and we have property in Town, too. And I would like to second those statements about growth. I think we’ve got to do some hard, hard things to limit growth. And people tell me that percentage growth caps aren’t going to work. And so if density bonus...if striking the density bonuses would work, that’s great. We’ve got to do something about the Plan’s growth. I think the concept of nodes, in response to you, is a great idea, but it’s very impractical. You cannot, in my estimate, have post offices without delivery that people have to drive to every day, have six and eight trips to take kids places from people’s homes. Those are counter to a self-sustaining node. A self-sustaining node with a bunch of commercial things so everybody will stay right in their neighborhood is not going to work. The concept of building density instead of sprawl is a great idea, but how do you do that in our structured Town? With spread-out schools, nobody hardly can walk to a school. People spread out. The fact that we have to go to a post office in this day and age, where there’s no delivery in the whole rest of the United States, and we have fight to have things sent so they finally end up at our post office instead of sitting...I mean, the whole thing is ridiculous. The structure of this Town is not going to fit nodes. People are not going to stay home. They’re going to get in their cars. They’re not going to ride their bicycles in 20 below zero. At 70 years old, I’m not going to ride my bicycle. Let’s face it. So, what I want you to understand is the only answer for the wildlife and the sustainability is to limit the growth. And that’s what I believe. Thank you.</td>
</tr>
<tr>
<td>6/23/2009</td>
<td>Acri, Armond Save Historic JH</td>
<td>Yes, &lt;&lt;inaudible&gt;&gt;. The technical details of overpass/underpass there from where I looked at it, it’s pretty challenging. I really don’t think you’re going to be able to get an overpass or underpass to work right there. I don’t know, Steve, you have a lot more expertise than me, you know, but because of the steep bank coming down the hill and then going out into ... {Mr. McCarthy: So this is site specific, just for Broadway?} Yeah, for that, but certainly in other places. I think you’re going to need to look at that. You’re going to need to evaluate each one I think separately. But there are, as Tim said, I think some other opportunities there and I think that’s the most important thing is just because if we say, well, we should put an overpass in and WYDOT says, well, we don’t like an overpass there. We shouldn’t just say, well, we can’t do anything. You know, we should look at whether there are other alternatives. You know, in that case, maybe the best we can do is to increase lighting and maybe, you know, the visibility so that the deer have a better chance of getting across. But in other places where we can do more, then that’s what we should do. And I think that needs to be part of what we’re doing is looking at more detail, you know, as we go forward. That should be in the Plan identifying some areas like that that we need to look at and come up with a real hard Plan, rather that just keep talking about, well, we’ve got to do something, we gotta do something, and not think it’s best.</td>

<td>Young, Tim Friends of Pathways</td>
<td>Well, potentially on West Broadway, we know it’s a hotspot for deer mortality, wildlife vehicle collisions, a pretty hot spot for the loss of deer there, and it’s a very dark little section of the highway. If there’s enhancements to provide a combination where people walk and ride their bikes there, including downcast lighting that’s appropriately scaled but that would provide vehicles a better visual cue that there’s deer jumping off the bank, I better start slowing down, instead of waiting till they’re right there on the hood. If you get a hundred feet of notice, you can stop. And that might be a way that, in that situation, there could be collaboration and could help pay for some of those improvements that would actually serve a couple of purposes.</td>

<td>Kilpatrick, Steve Wyoming Game and Fis</td>
<td>I just had another snap. [Laughter] Maybe if we took a habitat approach. I know it’s pretty good...and I didn’t mention that in our comments but they are in our written comments. If we could quantify the acres of important habitat types, aspens, cottonwoods, ??, willow ??, those sorts of things, if we could quantify that now, we can always go back and measure that later and say, are we maintaining it, did we expand it, are we losing it at a faster rate than we wanted to? So, that may be one way to quantify how well we do. Yeah, and end up collaborating with Grand Teton National Park and Kiki Forest because they both have good veg overlays, or a good place to start. And I think we could find that pretty quickly for the small amount of private land there is, we could find it. So, that might be one way to help us out.</td>

<td>Jorgensen, Pete</td>
<td>Thank you, sir. I’m Pete Jorgensen and I’m not going to mention wildlife any longer, because everything I do mention will have a beneficial affect on &lt;&lt;inaudible&gt;&gt;. The Game &amp; Fish Commission works very hard to take care of those issues &lt;&lt;inaudible&gt;&gt;. But we are in Wyoming, but we’re in a different part of Wyoming. When you go to Cheyenne, we’re weird. And it’s true in a lot of ways. Part of it is our fault; part of it is their fault. The reason we’re weird is because we’re different and we ought to be proud of that. And let me go to the bottom line—the only way...we’ve heard talk last week with process, and this is not due process or whatever, the only way...the question is that everyone I assume has spoken to is put to the test, is that your board gives the County Commissioners a clear statement about whether this place is worth overdeveloping or not. And test whether they have the political will to vote for something that will utilize their zoning powers and authorities. If not, everything you’ve done is a waste. I’ve been here over 50 years. I’ve participated in every planning process, the local chair of the ?? in the early ’80s, and we fought through this. And the public has said this time after time, and I believe, well, I know in my experience, from running for ?? three times, four times, whatever it is, I could speak out endlessly on this issue and get elected. I think this County is rather unique. The fact that only 3 percent of it is private land, over 15,000 acres of that private land is a conservation easement, that says something. It says that those lands are protected from being spoiled. And human needs, that’s a bunch of baloney. Human needs can go anywhere and survive. In fact, a lot of them are in places where they shouldn’t be and there’s not enough water and all those kinds of things. That’s not our problem. We’d love to dam our water to serve their human needs. But this is a special place. And I notice you’re always in danger of being called elitist. And I really don’t think it’s that, but if that’s what it is, that’s what it is. I’ve been a land developer here on Skyline in the ‘70s or ‘60s. It was the first conservation easement in the state of Wyoming, to the major conservancy, two thirds of the property permanently protected. This County’s been terrific in planning and has good planning staffs. But this sense that we have to grow, we even have to talk about a rate of growth, that just says, let it happen, because it will happen. There’s an irresistible force constantly to develop it and to make more money. And there’s not a piece of property in this County that doesn’t have an intrinsic value and a monetary value in any market that shouldn’t be sufficient for whatever happens to it on our land. Some lands are in the path of what we might consider logical development. And I would say that’s probably a very small area south of High School Road. Anything else would be fine under, not just the ‘94 Plan, but the Plan before that. Where we got in trouble, I believe, was in PUDs and bonuses. Whatever we thought we were doing, we’ve had rampant development. Fortunately, the market now has cooled again but the implications are here. And the reason five-lane roads are proposed is because WYDOT looks back at the projections and the growth in the County and projects what’s going to happen. They know what’s going to happen unless we do something serious. And I would suggest—just skip all the other things I was going to say—we don’t need any nodes. The only density node that we need is adjacent to and hopefully incorporated into Town. What happens now is we have two agencies, the Town and the County, and developers pick their side and utilize the side that works for their development. We shouldn’t be so foolish, but we are. So, what we ought to do, or can do, in the County, and that’s where you folks are, is say, you can do what you want in Town, subject to convincing your population (and I don’t think they can do it), but in the County, this is what we’re going to do. You talk almost...as often mentioned as wildlife is affordable housing. Affordable housing in this County beyond what can be done by the Housing Trust and the Authority is going to require subsidies. And the kind of folks who live here, many of whom are well to do, they don’t like to pay taxes. And we’re seeing that; we’re seeing it statewide. There’s...I don’t know how much of the, I think it’s a regulation, that 65 percent or 40 percent or whatever of our workforce should be living in this County. That’s parochial. And we’re paranoid about it to the point that it’s destroying the values that are here and ?. So, I would urge you to give the County Commissioners a test. They’re the ones who run for election. Give them a Plan that says what people have indicated that they’d like to see and see what they do with it. There’s no sense in fooling around with anything else. Thank you very much. The current Plan, if I understand it, and I don’t pretend to, has densities based on the location of the property and the type, whether it’s land, whether it’s ?, or whether it’s steep. And I think living with those, with no bonus provision, with no PUD provisions, is probably the best ?? we’re going to get. The base density is fine, okay, as far as I am concerned. I think at some point you’ve got to say that. Otherwise, the desire to develop and more money is going to drive...I don’t care what rate of growth you’ve got. There’s going to be a new set of Commissioners. Somebody’s going to have an advantage. Something’s going to happen. You can’t go back. We’re so fortunate to have 97 percent of the land, plus the 15,000 protected by someone...my God, suppose it was the state of Wyoming protecting it? There’d be oil wells all over it.</td>
</tr>
<tr>
<td>6/23/2009</td>
<td>Jensen, Gail</td>
<td>Gail Jensen. You know, a lot of the public not on the panel stood up and basically said the same thing. You know, if you went back and just said, hey, now let’s just do this exercise with the Staff. Let’s cut the number down to the base entitlements and see what the Plan looks like. And do that one exercise that encompasses the Plan. Keep the nodes in place in that, but you move things around a bit in that. What happens with public comment? I think that would dramatically change. And I think if you just worked on that one thing and directed them, what can you do with keeping the number the same, keeping the growth the same, and you put some of the tools, maybe try to move a few things around, if that’s possible, with keeping the numbers the same. Is that possible? Could we do that exercise? Because that’s what everybody’s complaining about is the growth of the numbers.</td>
</tr>
</tbody>
</table>
Well, excuse me, it’s an issue that we have struggled with also. First of all, we would start out with the goal of having conservation and that’s the big one. And it goes in with the whole thing that we’ve been talking about, a number of us about appointing open space and understanding that more people means more impact, particularly impact of things that we would put into our character bucket—wildlife, and scenery, and so forth. So, when you look at those combinations and things, we would agree I think pretty much with what Bill is saying that we need the options. We need as many options as we can, whether it’s TDR, whether it’s a density bonus. The conversations we’ve had in the community is that probably three is about as high as it needs to go to create that incentive. Like I say, we’re still debating the exact number on that, or in some ways, we’re probably even debating whether we want to go there. But I think that’s one of the tools that will give us conservation. And that’s one of our biggest, biggest goals in this whole thing. So, I think we have to make it clear that there has to be a nexus. We have to have things that will allow the movement of that bonus, that value into a node, and predictability. But I don’t think we want it as high as nine, because that really does start losing the idea of a build out or, you know, cap, population cap, predictability.

(If we are to apply wildlife and natural resources to, you know, every district, or node, or however we end up moving forward, what would be the best way to really approach that? Anybody that has any insight into that, I would be all ears. Steve?) I think you, you know, you might develop a suite of species for a district or a cluster of districts might be a good start, and get the specialists together to do that. You know, if you don’t want a grizzly bear in Cottonwood district, you know, state that. But it might be okay to have one further north toward the ski resort or something. But anyway I think that would be helpful and saying that…and getting, you know, experts’ opinion on what critters use the area and how that area is imperative to the continuation of that small population that maybe people want to see. You know, we particularly don’t want a lot of moose in Town and in people’s yards because they just call us. I mean, constantly. It’s like I can’t get in my car. Well…you have to address that, you know, and there’s a moose eating my bush. We don’t address too many of those. There’s a moose stuck under my bridge; we address that. <<inaudible>> from my living-room window; I don’t like the scene. And it goes on and on. So there may be some areas where we don’t want critters to be honest. I think that might be one way to approach it is by district and by, you know, the list of <<inaudible>>. In some ways, it would be nice to have moose because we need the permeability and ?? could maybe help out, but the 390 north, we need moose to get back and forth across that to the Snake River ?? zone. So, it would be a higher priority there. I don’t want to see a blanket for the entire County apply. Here’s the important species that we want to view in every district. I don’t think that’s going to cut it. I think we can do better. Thanks.
I’m thinking about this. So, you’re asking how do we measure the impacts of what amount of housing we have for the development that has been platted and hasn’t been built? So, you’re talking Final Development Plan? And in relation to a goal of housing 65 percent of the workforce? So, currently, and especially with the downturn in the economy and the loss of a number of jobs, we’re well above that housing 65 percent of our workforce here locally. The other thing is that we have quite a bit of development that has been platted, and we can definitely work closely with the Town Planning Department. Our organization also tracks current development proposals and the amount of housing that’s provided within it. The other thing is we’ve got quite a bit of backlog of required developments that are being built out in the County that will help to also house some of the workers that were generated in the development. And so I’m thinking Jackson Hole Golf & Tennis is an example that that will be built out 22 units there. We also have some developments in Town that we’re partnering also with the Housing Trust, and they’re also building housing that will help meet some of that backlog, or to meet the demands that are placed on the community from the development that’s platted. The other thing is that a lot of it will be absorbed in the community through existing rental units and opportunities, because we’re housing more than 65 percent of the workforce here right now. And within those developments they’re required to provide housing. So all the key pieces put together. And we find that businesses tend to also house a large percentage of their workers. I think that you provided some housing for your workers at Anthony’s when you had a business?

{Mr. Wall: Yeah, exactly, because we have numbers in Appendix I that show us what’s here, what could be here under the ‘94 Plan, and then of course we have a brand new Plan. But it’s that link between those and setting a goal, 65 percent, which is what I’m curious about. And then, well, another point was how can we define workforce housing? Ordinarily, you’ve already said that you’re looking at that. But really the question about 65 percent that I have is how we...if we acknowledge that we’re at that point and that’s our goal, we don’t need to gain, we just need to maintain. But how can we maintain that with the current rates we have, particularly for commercial? Can we?}

I think that we can. Part of it is that we’re at a 65-percent level and we’ve had a 15-percent mitigation rate for years that we know we have had in affordable housing, the problem in our community. We’ve upped those mitigation rates to 25 percent in both the Town and County for commercial and for residential. Those two things overlapping will probably house, and this is where we start...we have to do more analysis of numbers, depending on how much commercial you get and how much residential you get, we will probably house around 40 percent of the workers that are generated from those two types of development. Then focusing our attention on providing...on preserving existing housing stock so that we’re not losing that stock in creating opportunities for more housing, the rental product in our community is a great way for the private sector to provide housing. Working with businesses in our community to enable them to build housing more to buy existing housing stocks to house the workforce. And then also we have great housing organizations in this community that are also providing housing. And so instead of a development that has 25 percent of it as workforce housing, we’re hoping that we’re able to get those closer to 100 percent. We’re really fortunate in this community that we really have solid foundations set up in order help us achieve a goal of housing 65 percent of our workforce. That’s what I, I mean, that is really preliminary and not based on hard data. Again, it’s going to depend on what balance or mix you have of commercial versus residential.

{Mr. Wall: But if that were true, it would obviously indicate a need to raise the rate if we want to get the 65?}

I don’t think it necessarily means that. It could mean...it could mean that. But it would also mean that we just have to, if we’re balancing kind of how we’re providing housing for our community, it could mean that we have a greater emphasis on preserving existing housing stock, or providing rental product, or enabling the housing organizations to get a higher level. It’s always going to be kind of a balancing act in trying to make sure that we’re getting really pieces from different segments of the community. And it depends on what the other goals are of the elected officials.

{Mr. Wall: Thanks...just one more and I’ll get my feet down. The other question I have, because it keeps coming up and it’s one that I always had when I was on the Housing Trust board, is the issue of affordable rental housing. I mean, all three housing entities are, not primarily, but exclusively, building ownership affordable housing. And there seems to be a bit of an issue because the last Housing Needs Assessment Study didn’t recognize that as a need. And yet everybody who lives here, with the exception of the recent economic downturn, it has appeared that we had a shortage of that.}

Well, I think it ebbs and flows as far as the need for rental housing. And I would clarify is that the Housing Authority has built several rental products and, through our regulatory tools, we have about 225 deed-restricted units through commercial mitigation. The Housing Authority has partnered with Pioneer Homestead to build 24 senior, low-income housing units. We’ve also pioneered with the...partnered with the low-income housing...tax credit housing developer to build Snow King apartments, which is 24 low-income rental units. We’ve also worked with the owners of the Days Inn property, and they have been very generous and are working on a new model to provide 91 units of rentals for our community, converting lodging into rentals. So there is an emphasis on providing rental product through our organization. It is not a goal of the Housing Trust or Habitat for Humanity. However, we recognize that we need to balance and that also enabling or zoning for the private sector to build apartments, that is an amazing tool to provide a rental product in our community. And it is...rental product tends to be more related to incomes that are current in a community as opposed to an ownership product, which there are demands for ownership product from the world for housing. So it really raises the prices. So just providing rental product provides workforce housing opportunities and they tend to
stay more affordable. I had another point on the rental product. The other piece I think is really important from a planning perspective is that what has made this community really successful in maintaining a rental pool for our workforce is the lodging overlay. And the fact that short-term rentals are not allowed outside of the lodging overlay. It allows for long-term rentals in our community, which is very uncommon in other resort communities. So that is really an effective tool to provide workforce housing in our community, is limiting that lodging overlay.
Forrest, and everybody, my name’s Bill Resor and I was a Planning Commission member for about eight years. And I went off just after we passed the last Plan on to the County Commissioners. I also was a past member, board member of the County schools, as Patti mentioned, and I was involved with the Land Trust from the conception and on the board for many years. Over the last 30 years, I’ve been involved in, and still am involved in, land management, land conservation, and land development in all of Jackson Hole. Really, just three major areas I want to address, but before that I want to say that compared to what we did leading up to the ‘94 Plan, you guys did a much better job. And your Staff’s doing a much better job. The work that’s being done by the County on this Plan is done mainly by County Staff or former County Staff, and because of that it is tailored to Jackson Hole. Now, we’ve all got complaints with it. But the last time around, we were starting with the first draft out of Chicago, and it discussed, you know, how to preserve apple orchards and stuff. It was a mess. [Laughter] And it took a long time just to get people, you know, the consultants, to even listen. So, I’m not saying that your job is easy. It’s very hard, but I think you’re doing a good job already. The problem with the last Plan is it started out ignoring the realities of Wyoming land-use laws. And there’s no point trying to do things that you legally can’t do. And in ‘94, that was the initial idea was one house per two-hundred acre zoning in the rural area, and by the time it got adopted, it was one house per thirty-five because that’s what the state lets you do. Anyway, with that said, the three areas I want to talk about, and I won’t do them all right now, one is why you have to plan for growth and why I think the nodes are a very positive addition to the Plan, not the particulars of them but just the idea of nodes. The second is how…the part of the Plan that deals with creating more permanent, well-connected open space, which I really think is if we’re trying to get somewhere is to where there’s more land that’s permanently protected and how are those protected areas connected. So that, to me, is, frankly, the area of the Plan I’m most interested in. And the third, which plays to that, is state trust plans. What I’d like to do is quickly go through the first point and then get to the others as they come up during conversation time. But basically why do we need the Plan for growth? Well, the thing is you can’t say…you can’t just say no; you don’t have the right to. The County does not have full control of land use. First of all, as I said, the most restricted zoning is one per thirty-five, which does not create large chunks of open space. But more importantly, much development is not regulated by the County. The school board is not regulated by the County. WYDOT is not regulated by the County. Basically, they do what they want, but they will look to the County for advice. If you have plans that say where the things should go, they’re going to look towards it; if you don’t, they won’t. When the County itself needs something new, like a new weed and pest building, if you don’t have a plan where it goes, it just goes opportunistically without thinking it through. So you need to, you know, think of all that kind of stuff in the Plan so that people will abide by it. Also, a big part of why we need a good Plan is the Board of County Commissioners, they make bad decisions. And you need an enforceable Plan so they can be sued and brought into line. [Laughter] I’m not naming names here. Also, such areas as Rafter J and Teton Village can and may incorporate. So you want to have a Plan that encourages that…tries to make that less likely to happen. We’re dealing with…we’ve got two entities now. If we end up with five or six entities, like Freemont County, it gets harder. Why do nodes help with all this? Basically, I’d like to compliment your Staff for having the guts to draw lines on maps. They’ve gotten shot full of arrows for doing it, but that was very brave of them to do it. I disagree with every single node in one way or another, okay, but I’m very much…I won’t even go into my details on nodes. I’m very much in favor of having nodes. The basic reason is it protects everything that is not in the node. In the 1970 Plan, I think it was ‘70, under when Ralph Gill was mayor, I mean a County Commissioner, it was about eight pages long, the Plan and the Regs. Under that Plan, it said all new commercial had to be adjacent to existing commercial. The Board of County Commissioners approved two developments, one that’s now part of the ?? Ranch, ?? subdivision, ??, and one that’s an easement northeast of the Village. It was the ?? project. They got sued. The lawsuits went to the Supreme Court a couple of times, in the County laws and the developer laws. So, even an eight-page Plan, because it had something very definable, the County Commissioners had to stick to it. The ‘76 Plan had a Town-expansion area. Most of the growth happened within that. The school development happened within that. So that was, you know, that was helpful. And in that Plan there was a node proposed under the Wilson benches, you know, ?? Ranch and that area. Everybody went ballistic. The node was taken out. But the idea of having a Town expansion was very helpful. You know, there were areas expanding outside of Town but that really did help to have something identified. The ‘94 Plan failed to have a Town-expansion area. It failed to define nodes. And because of that, what happened? Stuff popped up randomly. The affordable housing PUD could go anywhere. Any neighborhood could all of a sudden have high-density nodes. We need affordable housing; it’s a good thing. But we need to as a community to decide where it’s going to go on a community-wide basis. You know, I think the one in the ?? project on Village Road, it’s a good project. I think it’s a, you know, B-, maybe C-location. It could have been in a better location. But it was discussed as a project, not as a County-wide issue. So that’s why you need the Plan. WYDOT’s new maintenance site, it went where, you know, there was nothing in the Plan telling them what to do. New High School, which I think might be a very good location, but it wasn’t because the County said this is where it should go. So I think the more you actually draw lines, you protect all those areas that are not in the nodes. And then when a future Board of County Commissioners goes and approves, you know, take Seherr-Thoss, it was brought up twice, once by the County Planning Staff, once by a private developer. There was no node for it to be in or out of, so it was a bloody fight for years both times. If you had a node, it would have been clear from day one, like it would in this Plan, that Seherr-Thoss is not in the node, it cannot get an up zone. So I’ll end it there on that but I think that’s a major thing. People are looking at the nodes,
saying I don’t like that node. Fine. Fight with the node. But agree on where they are and mainly agree on everything that is not in the node, because that will be legally defensible and it takes a two-step process in the future to put something there. You’ve got to change the Plan and then you have to approve the development, which is substantially harder and substantially less likely. I’d like to talk about open space as a state-wide issue, but why don’t I wait and soon get right back to that.

I just wanted to dovetail on what Kathy said in terms of the Commission, because my notes, some on those little sticky notes, was that the Commission was to be made up of scientists. And that sort of discounts a lot of people in this room who have been observing wildlife for 40 or 50 years and wildlife patterns. And it seems to me that those...that input is just as significant, or maybe not as significant, but it would an important indicator in the need to mapping, and what Steve was talking about is one way to do it. But in the past the need to mapping has not been a tool; it’s just been those of us who’ve seen critters for a long time. So, keep that in mind when you establish this commission.

Hi, and thank you very much for doing this. I’m Kathy Tompkins; I’m from Cottonwood Park and, Forrest, I have to disagree with you about the wildlife. I think that you had mentioned something about that there might not be much value other than the small critters or something like that in Cottonwood. I live on Range View and Range View opens up on each end on the south side to High School Road on the north, west side over to South Park Loop Road, ?? Road, the ?? area. During the wintertime we always have deer and elk and fox, coyote come through that park. And, you know, nibble away at everything and usually when I see the animals, and especially in the evening, I see flashbulbs, flashes going off on all the houses cause all the kids are in the windows taking pictures of the animals and everything. And I have a question for you. Do you have a ??, Steve, from Cottonwood, as far as nuisance animals? Right, okay, because I heard you saying...thank you for clarifying that, yeah, cause over on Range View where we live on the Park, and it is open ended on both sides, we do get the wildlife in there. And talking with my neighbors and going around the circle there, we like it, we like them coming through. And if anyone’s charging rent to this one moose, he’s staying there quite awhile. But getting back to the permeability...leading up to the permeability with that and the development in South Park, I’m just hoping that I know there was like an easement along South Park Loop Road, you know, for wildlife for the view and everything like that. I would like to see that come around and some kind of park or something across the road, instead of pushing houses or whatever right up to the road and blocking off the wildlife permeability through Range View Park, and then having them actually bottlenecked in there and then disbursing through the neighborhoods. That could be worse. And I’m just hoping that South Park and Cottonwood, and I say Cottonwood because Cottonwood is right next to South Park, you know, District 13 is a lot of neighborhoods, not just one neighborhood, but Cottonwood would be most affected by a new neighborhood on the south side. And we just feel as though we don’t want to be gobbled up by this new neighborhood with the up zoning and take away from the community character that we love so much with all the different types of neighborhoods within this District 13—the affordables, the apartments, and the single-family homes. What we worry about is becoming a dead zone like the area around the new post office has become. That used to be in the old neighborhood, the border of Jackson, and then Cottonwood took over. My opinion is I see those houses around the post office and how disjointed they are now and how they’re all rentals and not really single-family homes anymore. There might be a few in there. What we’re afraid of is that spreading out to Cottonwood as these new neighborhoods in South Park are built. And then becoming rentals, you know, landlords would get more money because they could pile a lot more people into that one house, raise the rent up, and because they’re sharing, you know, they’ll agree to pay that rent. Those are the different kind of things that I think we need to...I know I’m going from wildlife permeability to the community character of Cottonwood, but I think it’s all interconnected. And we just have to be careful that, you know, this up zoning in South Park, what will it do to the neighbors that are already there and how...I would like to see it brought back to the original number and I think it was 370 or 400 plated for South Park, the northwest corner. Does anybody know the number on that? Three seventy? Yeah, and then work from there and get all your studies in and get everything done, you know, before you start throwing numbers out there and before it’s too late and then you see another neighborhood going down the drain, you know, just to make way for a new neighborhood. And again we like the animals in our Cottonwood Park. Right, and that goes back to actually to interviewing people like me and people who are there and live there and see, you know, talking to them about what they see. Range View Park is there; you have to deal with it and the animals do come in there. You just don’t want to start building across the road without taking that into consideration and continuing that permeability across the road, you know, and things like that. And that’s another thing with this Commission, you know, the Wildlife Commission is have them interview, you know, people from the neighborhoods there, cause they’re the eyes on the ground there, you know, they know what goes through those areas. So that might be a good idea. So, that’s all I have to say.
Hi, I'm Franz Camenzind with Jackson Hole Conservation Alliance. I'm a property owner. I've lived here in Jackson since 1970. First of all, I'd like to say thank you for this opportunity tonight. I think this is a good restart on this process. From what I heard yesterday and what was explained tonight by Chairman Hamilton, I think we are in a position now to have some good input and hopefully good results out of this process. We thought from the beginning that this is going to be a correction of the '94 Plan, and quite a few months into it we thought that. And I think the community did. And all of a sudden we've come up with a brand new Plan. And we debated long and hard as an organization, and I'm not sure that we know exactly for sure what we're going to do, but right now, we're looking at sticking with this draft Plan, working off of it, making our comments off of this, primarily because we respect the time that everyone in this community and all of you and the Planning Staff have put into this current document. But we really debated about taking the '94 Plan and trying to correct it like we thought we were going to do. Now, having said that, if during these deliberations you all decide, or whoever decides that you would like to go back to the '94 Plan, because quite frankly, I think would be easier to correct than it would be to correct this one, we would certainly go along with that. Like I say, out of respect for invested time and resources into this one, we're going to try to work with it. And a very general overview, and some of you heard this already, but we're very concerned that some major elements here are missing. The '94 Plan had many, many pages talking about the character and the value of character in this community. And clearly I heard discussions that a character-based Plan is very difficult to instigate, you know, to manage. A character-based Plan can work if you define what the characters are. As an example, if you define a neighborhood in Jackson and say this is a single-family neighborhood, that's the character and that should be maintained. Then you all can write, the Planning Staff can write LDRs that will do that. So, just to say things that character doesn't work, I think is misleading. Character works if you become objective with it. Right now, this is subject that character doesn't fit in and consequently it's not even mentioned very much in here. And we do believe that character is a large part of this community. I think all the surveys have shown that. The character is small town, rural. Again, this draft Plan seems to have abandoned that language completely. And I'm not sure the community has. And I would like to see this brought back into the discussion. And I think there is a lot in the '94 Plan that could be pulled out, inserted here and then corrected. Also lost in here is any discussion of SRO of our scenic valleys in this community. I would like to see more attention put back into the SRO. I don't know why it fell out. I don't know where that direction came from, or if it was an oversight. NRO is somewhat the same. It is talked about. It gets quite a few pages in here and I like a lot of what it says, but it doesn't weave through the rest of the Plan. It doesn't show up. It's not the first filter that a lot of these districts go through. It's not the first filter that these chapters go through. And we, our organization, is environmentally...it is a wildlife-driven organization. And we believe sincerely that those values are also the values that drive the economic engine in Teton County today and I think will be our best investment in the future. So I think that the NRO should not be relegated to just a tool, but it should be brought up, the value should be brought up into every chapter in this theme. Never just scrapped. And right now we feel they're gone. Analysis, there's just a whole ream of missing analyses, if you will. Numbers do count. We need to know where we are, or where we're planning to go. That's the only way we can start doing impact analysis—transportation, school, fire, you can go down the list, recycling, everything. We need to have some idea of where we're going to go with this. And then with those numbers we could start doing an economic analysis, an impact analysis. Those connections are missing in this Plan. For the average person that wants to read this and get a picture of the future, this picture is extremely blurry and extremely wide with very little definition to it. I could go on but I think we'd be better off proceeding with more of a dialog than just to have me sit here and go over things. Needless to say, we want this to be a Plan that works. We should also remember that this is a Plan that will be in existence for ten or fifteen years. That doesn't mean that it won't be changed again. It'll be a new generation. It will be a new time with people making that decision. But we will be responsible for what happens between now and ten, particularly development study ?? will not be taken away. Places that are protected will be protected for the future, either through conservation easements, which are right now talked about, but there's no nexus between keeping the open space and conservation easements. The nodes, virtually all wildlife values are missing in the nodes. The rural areas, they're fairly well represented. In the Town wildlife valleys are almost gone. They're put down four, five, six, and seven on the tier list of importance, and clearly wildlife does have importance. And, Planning Commission, I just handed out tonight a copy of our publication that came out today on an analysis of the reports from the last 30 years from South Park, because South Park is a focus area for development. And what we did is simply a literacy search. It's not trying to make a whole lot of long-term projections out of this. But clearly this literacy search is showing that these studies over the past 30 years, there's an immense wildlife, there's an immense environmental value in South Park. And to ignore that I think is to ignore the best data that we have, which is hopefully in front of you now, and I think the will of this community. So I would urge you to take a look at that, and what it does show is that there certainly are gaps and we would hope that these gaps would be filled through the charge of the Environment Commission that I think will be set up. And I hope that Environment Commission has clear direction, not only as to what to do but the timeline to get it done, to start doing some analysis in this community, and particularly South Park. And I'll just cut it off there.
My name is Heather Overholser. I’m executive director of Jackson Community Recycling. I’ve been in Jackson since 1994. I’ve worked with Franz at the Jackson Hole Conservation Alliance for nine years. I’ve been at JCR since 2003. Since 1990, Jackson Community Recycling has been providing recycling and household hazardous waste disposal services to the Town of Jackson and to Teton County, both residences and commercial entities. A major change in the organizational structure will take place on July 1st. Our organization, which is currently a joint...has a joint power board, will become a County department. It will be known as Integrated Solid Waste Recycling and will be a division under ???. We will still have a board; it will be an advisory board. And our duties will include not only managing recycling operations in the hazardous waste collection facility, but also in the trash transfer station and a composting facility and all the waste diversion that goes on at the trash transfer station. So, I’m very excited about this. It’s a big undertaking but it’s I think for our community, and for the solid waste programs, it’s the best move we can make to have it all under one entity. We’ll be able to prioritize better, make better decisions regarding solid waste, and also we will be able to divert more waste from a landfill, which is our goal. And also to make it very convenient for the public to recycle. So, in regards to the Comprehensive Plan, in looking through it, I did not really see anything about recycling in there. Even in the lists of public infrastructure and utilities, I didn’t see recycling mentioned. But the most important piece for us that I see fitting into the Comprehensive Plan is providing adequate space for recycling in new developments, in existing neighborhoods, and most important is to provide a permanent community recycling site in the identified neighborhoods. As you may know, we have seven community recycling sites located throughout the Valley. These sites are very heavily used. They make recycling more convenient for the public, and they also limit the number of hardships down to our facility at Adams Canyon, which is definitely not centrally located for most residents in this community. So the community sites are important. All but two of our sites, the Teton Village site and the Wilson site, are not permanent, meaning the land owner generously allows us to use that property for our site and they can kick us off at any time. So we are very grateful to them, but we really would like to have some permanent sites where we will not risk losing the site at a moment’s notice. Right now, in Wilson, I have a perfect example, they are constructing new development next to Wilson Gas and at the permanent site, the Commissioners put a recycling easement on that site, so they will have a site in perpetuity in Wilson. But for the next ten to twelve months during construction we have not been able to locate a temporary site. And so every day I can’t tell you how many calls I get from the Wilson community complaining that there is no site for recycling. They show up there and they’re car loaded and there’s no where to put the stuff. Yes, the Village now has a site at the new parking lot in the maintenance area, which will be there in perpetuity as well. So, sites in the Town of Jackson, outside the Town of Jackson, in the County are really important. With this integrated solid waste recycling system you’re creating an integrated solid waste Plan and hope to implement curbside recycling, food waste collection, yard waste collection. These are all dreams of mine for the future. They are not implemented yet, of course, but if we do move to a system of more widespread curbside collection, these sites still will be very practical and make a lot of sense, especially in the County, because curbside collection only makes economic sense in densely populated areas. Once you get out into more rural zones, curbside collection is not an easier way to collect recyclables. So, even if we did move in that direction, permanent community recycling sites would make sense. So that’s really it. I would just love to see the mention of recycling besides just the general facility in the Comprehensive Plan. It’s an important piece for the sustainability of our community, for our environment, and people really appreciate it. Thank you.

So, I’m Carol Waters. Well, I have a number of things I want to comment on. One of them is that I’m in agreement with the present people who said they think this is way too much growth, way, way, way too much. And the other thing that...and way too much growth in both ways—residential and commercial. I’m concerned that there seems to be a very cavalier attitude about the question of rate of growth. It is sort of mentioned and it is said, well, we will monitor it, but we’re only going to monitor it after the fact; we’re not going to set an intention about what we would like the rate of growth to be. I think that’s foolish. And I guess the other thing that I wanted to talk about is the wildlife. I mean, I think the permeability issue is huge. I don’t understand how you can expect wildlife to get to where it needs to get for its winter habitat if there isn’t permeability allowed for and protected. And the last thing I want to say is I really like the idea that this event is taking place. I would like very much to be assured that the input that you’ve gotten tonight will not just stay with you, that it will go to the other people that are responsible in this arena for evaluating the draft Plan and coming up with a way to alter it. And I don’t know if there’s anybody who’s thought about the way to have this kind of thing go on. And it seems to me that the STAG group has been—I don’t know if I can say this in public but I am going to—the STAG group has been biased in the way it’s set up. It looks skewed in a certain direction. And I think that in and of itself has caused a lot of suspicion and unhappiness on the part of the general public, because they don’t feel as if their voices have been heard, and they look at the makeup of the STAG group and they say, obviously. So, I would hope that if there’s any way you can suggest that these kind of voices that you’ve heard tonight get heard by the other two and three entities, I think that would be terrific.
My name is Nancy Taylor and I’m a resident of the County. I just want to address the whole issue of sustainability, because the word is used rather, you know, loosely in this document. And if we’re going to have a truly sustainable community, I think it takes on different meanings in terms of sustaining the wildlife population and also in terms of sustainability on a global basis. So, in terms of emissions that Tim was talking about and our human carbon footprint in Teton County, it’s a different kind of sustainability. And I’d like to see the Plan address that differently from the sustainability of our wildlife population and permeability of how that wildlife travels through our County. The Plan mentions on page—excuse me, I dropped my glasses—page 26 under the indicators that we will monitor...we will look at the following indicators, and Indicator 6 is building related carbon emissions, and it states that we will be carbon neutral by the year 2030. And that’s the last time it’s mentioned and it’s not addressed as to how this would be implemented. So, I’d like also, and I’ve been put off many times by different people saying, oh, if you’re going to address green building, that will be in the LDRs so don’t worry about it now. I’m not convinced that we can achieve this goal of being climate neutral by 2030 if it’s not addressed significantly in the Plan as well. And if it’s addressed in the Plan, then it can be implemented through the LDRs, but the Plan needs to give the LDRs direction. So, whether we have some kind of mandated green standards where all further commercial building in Teton County will meet, for example, LEED silver, and that there will be green building mandates for residential building. And I’m not suggesting that right now, or that that has to be written in the Plan, but I think that’s something that we have to think about, because buildings contribute more significantly to our carbon footprint than does transportation. About 48 percent of all carbon emissions are coming from our buildings. So, if we’re building, you know, log houses that are not...that have no insulation except for the thickness of the logs, we’re continuing to create quite a big carbon footprint. So, anyway, the whole issue of sustainability needs to be I think broken down more specifically and address our carbon footprint as well as our animals. Thank you. Yes, I think it just has to be different from the wildlife portion, and right here it’s lumped together, the stewardship of wildlife and natural resources. And in the building, rebate of carbon emissions is put in there. So, I’d suggest a separate one, because if the ?? Plan is going to go forward and we’re going to become some kind of pioneer community—and I said this to you guys the other night—then...and we are going to be carbon neutral, there has to be some kind of teeth, not only in the LDRs, but in the Plan itself that’s going to help us, you know, take those steps to get there. And, believe me, it’s not easy to be carbon neutral. It’s not even easy to build a carbon-neutral home. So, we have a ways to go on this, and if it’s going to be in here and not be a joke, we have to do the homework that’s necessary to back that up. Thanks.
Let me go...first shot at it. It’s an extremely important issue and you have to first look at the legal basis. But you can do the zone stuff to one per 35. Anything you want to get beyond that is going to take some kind of incentives. So what I would...and you can’t legally require someone to do a conservation easement. You can have it as an option, it’s attractive, and they can end up doing it. In setting up incentives, the best thing to look at is what happened with the ’94 Plan. I think that’s one of the most successful parts of the ’94 Plan. The ’94 Plan resulted in a lot of permanent protection of wildlife habitat and open lands. Alex Norton’s analysis, you know, shows this. The density bonus is the rural zone resulted in over 3000 acres of permanent conservation easements while creating only 184 additional units. That was, you know, that’s from ’94 until now or until I think about six months ago. That’s an incredible result. If you look at buying those easements, you’re talking millions and millions of dollars. So that really worked well. And my sort of basic point on that is that’s something that’s worked. That’s like Tim saying, hey, don’t miss this part of the old Plan; it worked. Make sure you don’t throw out the stuff that has worked; fix the stuff that needs fixing. So, I would keep in two kinds of incentives, and so far the Plan has kept those in. One is if you’re in the rural zone, you should have some kind of bonus opportunity for clustering. If you look at the three times per 35, how that’s been used, that was really, from ’94 till now, it’s averaged about 2x, just the actual PRDs that’s come in under the 3x have been effectively averaging about 2x. And they, you know, really have worked well. The thing that you don’t recognize in that is by having that...by allowing that multiplier in there, my estimate, just from personal knowledge of various conservation easements, is at least a thousand acres of conservation easements that were given because that zoning really didn’t change from the ’76 Plan to the ’94 Plan. Roughly, keeping about three units per 35 acres is sort of seen as sort of baseline. If you look at the old Plan, it’s one per three, one per six, one per ten, one per twenty, depending on slope and stuff. So, because that didn’t get taken down, people kept getting conservation easements. I think if you were to drop that, you would see way fewer, you know, permanent conservation easements given. People would just be waiting. You wouldn’t be willing to make a decision at this time. The other bonuses in the Plan today, one of the things that’s unpredictable in the Plan, is you can go to the 9x bonus anywhere. What I think is good about the new Plan, it’s saying, okay, we’ll give some kind of bonus in the rural zone, but if you want to go to a higher level of bonus, you’ve got to move it into a node. So that does two things. It makes it if you’re out of a rural area, you know that, let’s say, they kept 3x, the worst case is one house per ten acres and that requires significant clustering. If you are in a node, you’ve got a couple of options to get more density there. One is you print money. You just up zone it. Okay, that does, you know, that doesn’t do the County...it helps the County’s predictability. The County gets nothing for that zoning. The other is you say you can get a higher zoning if you do more affordable housing. That’s a very good tool. That’s in this proposed Plan. And another one is you can get higher density if you move it into the rural zone. The best example to look at ’94 till now on that is Rocks Spring Canyon. That was I think about 280 acres. It’s steep high ground but, you know, I’ll promise you somebody would have built a road to it and put a house up there sooner or later. It would have happened. The Ski Corp., ??, took all the density off of that and moved it to Stilson. And, you know, people don’t realize that when they ski through there. They’re skiing through permanent private open spaces that was created through a density movement. If you get only two or three of those in the next ten years, maybe from, you know, density in Buffalo Valley or out of the south end of South Park and move it to the north end, even if that happens only one, or two or three times, each time is a really good protection. And the other way of getting that density is printing the money <inaudible>. So, I think you’ve got to look at that very carefully, listen to the Land Trust on what really what they see is really working. But I think you’re getting pretty darn good predictability when you get rid of the high-density bonuses in the rural zone and keep the low end of them, you still get most of the conservation. 

[Mr. McCarthy: Do you have any, brought any insider thoughts on what type of multiplier is needed to still create the incentives?] 

Yeah, I’ve analyzed this and actually thought of this a lot. The one...the existing rules basically work well, the 3x. In other words, it’s one per 35, but its base density is not the whole site. You remove certain things like rights-of-way and ponds and stuff. So, in reality...and then just, you know, nothing ever quite works right in the real world. You know, you’re always ending up with rounding and you round down and all. So, in reality, the 3x, three units per 35, if you leave 70 percent open, ends up being about two units per 35, depending on which group you’re looking at. There’s a unit and a quarter per 35. I think what you need to do is come up with better objectives on that design, but to leave it loose enough so there’s an incentive for people to come in. What you don’t want happening is what happened at Bar-B-Bar, sorry, Bar-B-C, where they basically chopped it up into large lots and then came in and ??, in other words, you want people to come in with more than 35 ideally, 70 acres, larger, and plat it and get better clustering. Or you want them to move it into a node. And I think if you leave that three times multiplier for internal bonuses, it’s somewhere in the range of the six to nine, that’s harder to predict. And it depends on other options into the nodes where you take it all off and move it to the node. I think those will, you know, they will happen. The interesting thing is you don’t...you can’t look at it purely economically. Almost every time that this has been done, it’s been the desire on the part of the land owner to do something like that. You know, the ?? family wanted to protect, you know, Rocks Creek Canyon. So they were willing to do that. My family has done, you know, years ago did that under the old Plan with Granite Ridge. You’ve got to have that desire to say, okay, I want to keep this open, but you don’t say, well, would this work better; you say, would this work. So you’ve got options there. I think you’ll see people moving density into the nodes, or people leaving more stuff open and doing better design, better covenants. And the big difference that I see in land that’s...
there’s an easement on it or there isn’t is there’s been more thought in it, there’s more care about fences and stuff like that. So, having someone go to the Land Trust, or go to the County PRD, you end up with a significantly better land-use result, from a wildlife point of view, from a scenic point of view, from everything.

Richard Ferguson. I live in the County. This Plan was designed to confuse and get what they wanted done. I feel that from the get-go. And when you have something like that, like you have a car that’s a piece of junk and you try to fix each part, it’s time consuming and wasteful. I think you ought to take this Plan, take the covers off, keep the covers, trash the rest, go with the summaries of the ’94 Plan. Cause you guys know what we want, and I think you want what we want. And you’re going to be…each time you look at each item, you’re going to have to figure out where they were trying to go and what we could do to fix it. You know better. You’ve got the sense to do it. Junk it.

There’s two questions there. One is predictability. Right now in the rural zone it’s very unpredictable. You can go from one to 35 up to nine to 35, or it can go to an affordable housing PUD. So, it’s extremely unpredictable. What I’m saying is they’ve already made the decision to say the affordable housing PUD would not happen. So that removes the most unpredictable thing. And by having nodes, there won’t be other ??, So, we’re now down to just bonuses. So, I think the rural zone, within the rural zone, staying in the rural zone, if you drop it down to three times 35, the worst case is three units per 35 acres. So that’s your predictable maximum. I think you can realistically plan, based on what has happened from ’94 till now, you could do your road counts and all that. You could Plan at 2x and probably you’ll come out high, because if you look at ’94 from now all of the rural zone land that changed from undetermined to determined, in other words, raw land to conservation easement, or raw land to subdivision. There’s a few odd-ball things you have to take out that were rezonings. The land that stays within the rural zone, the land that changed, it’s closer to about, when you put in all-over conservation easements, the potential build out that’s been created is about 1.2 to 1.5 units per 35. In other words, even with all the flexibility you’ve got now, that ?? really isn’t enough. So I think you do have predictability if you make it, if you, within the rural zone, you have one…three units per 35 is the maximum, okay. The second one is incentives. The incentive to do a conservation easement is primarily the desire to protect the land. If you’re giving a conservation easement, you’re effectively selling the land for 35 cents on the dollar. It’s more complex than that, but that’s the basic incentive is you want to do it. Now, that being said, you know, financially, the more beneficial it is, the easier it is to do and the more that gets done. I can’t, you know, every single conservation easement that I’ve known and looked at the finances behind has been different. So, you can’t really say if you change a rule, it will have this effect or that effect. A conservation easement on a large piece of land, let’s say, 400 acres, where you take all the density off, the appraisal really doesn’t even go into the multiplier. The one house per 35 is financially the highest and best use. So, you don’t really need that bonus to get…for large conservation easements. It’s more for when the guy only owns 35 and he wants to…he’s trying to get some of his cost back of the land by saying, I could do three, but I’m only going to do one. He then gets, frankly, gets money back from the IRS. But you get the conservation easement. So, basically, we’re all in here discussing who’s going to get what done in Teton County. The IRS is not in the room. So, if you set up rules where the IRS ends up paying for that open space, that’s good for the community. So, I don’t want to get into details of this, and Tony and I can go through them later. It’s very complex as to why the 3x were significantly better, let’s say, than 2x. But I’d be glad to go over it with you, you know, later. Yeah, all it takes for the really large pieces is the desire to protect the land. You get a deduction. If you remove all the density, you know, if you go from a potential one per 35 on <<inaudible>>, you know, you’re giving away a lot of the value. And then you get to deduct, if you’ve got the income, you know, 30 percent of that, you know, in most cases. [Mr. Wall: I’m just trying to picture, and I get the theory on the smaller, the 35-acre pieces, but how many 35-, you know, acre pieces, 35-, 40-, 50-acre pieces are leaps and bounds that are still out there that could even qualify? They haven’t been platted or something, I mean.] I’d say hundreds. I mean, it’s more than you think. I mean, just think of the state land as 5000, I think that, you know, some, correct me on this, I think it’s on the order of another 15,000 land in the core of Jackson Hole, not counting Buffalo Valley or ?? of large pieces that are undetermined.

Mr. Wall: I have one just real quickly for Michael. About how much land would be required for the new START facility?

Mr. Wackerly: Just in rough terms, six acres, something like that; six acres approximately in round numbers.
Jensen, Gail

I’m not going to repeat; I think I sent around, though the public doesn’t have it, maybe in tomorrow’s paper, but my comments about the Plan were to fix, oh, six different kinds of more global major points. But the one thing that I wanted to talk about was the numbers, and I’m talking not just a build-out number, but we don’t have baseline studies for most of the things that are supposed to be monitored in this Plan. There are no numbers to start with, so how are you going to monitor something that you don’t start with a number at? I don’t understand. How can you do that? And we don’t have numbers on wildlife really. We don’t have current studies on our transportation, I mean, they’re old. We have no numbers. How are we going to do it? This is no plan really. Yet, in order to plan, you have to have numbers to start with. And from the get-go there was a real desire, we-don’t-plan-by-the-numbers attitude when they started the draft of the Plan. And I think that’s very, very wrong, because how many people up on the panel said it’s the number of humans that create the impacts and that we need to plan for and the wildlife. It’s the number of humans versus wildlife, and if you don’t start with the numbers that we’re talking about and avoid them, you know, stop avoiding the numbers. Let’s get to the real numbers. What is the true base density that is in this Plan? That’s the true base without incentives. And I think that was stated in January of ‘08 by Clarion. They came up with the number. Well, the number in Appendix I is another 30 percent higher than that because the incentives have been added to the base zoning to create those starting numbers. And I’d like to see us get back to that original number and of the entitled property rights. Stick with that number; that’s what we were promised at the original hearings last early summer, last year. And somehow the numbers have gotten juiced up. And then they’ve gotten juiced up again by more incentives over and above those juiced-up numbers. So, that’s why a lot of the community is having a problem with the growth. Let’s get back to the real numbers. Let’s get some good studies so that we can really plan our future. You know, I’m just having a real hard time with this, because we can’t...we don’t have numbers on our infrastructure, on the cost of what the infrastructure’s going to be, I mean, there are a lot of big pieces missing. And I just don’t see where we’re...how we can get there with what is in this draft Plan. So, please, start with the numbers. Thanks. Well, my feeling is is I would stick to, and I know this isn’t keeping with Bill or with Franz, but I would stick with the one per 35 and I would forget the multiplier. I think that the federal government is going to eliminate the tax incentives for conservation easements. I think that’s coming down in the next couple of years, so there are going to be no tax advantages. So, what’s the point of the multipliers? Myself. So, anyway. That’s what I feel about it. Thanks.

Resor, Bill

Thanks, Larry. There are over 5000 acres of state trust lands in Teton County. And the draft Plan correctly maps those as agricultural rural. It doesn’t put them in like state land, because they eventually can get developed. You may think of these as public lands but they’re not. They’re trust lands. Sooner or later the state’s got to get the money to <<inaudible>> around the state. That being said, the State Land Board, as trustees, you know, they may be the single largest owner of unprotected land in the Valley, but they want to work with the County. They’re politicians, they want to have win/wins. The kind of uses on those lands are regulated and you can regulate that. Frankly, lately, Teton County has done a poor job of that, even little minor leases the County has overlooked. In the past, the County I think did a better job of that. The Plan should...our Plan should directly address how the County will move forward cooperatively with the State Land Office. A good example of past cooperation is the ?? School section, you know, what’s down in Indian Springs. That was put up for sale by the state to be auctioned off, and they appraised it and set the auction date. The County Commissioners went to the State Land Board and said, if you require that the developer go through a PUD is that they not just divide into thirty or how many tracts. The State Land Board talked to persons willing to make the opening bid, the ?? family, and they said, we’ll make the same opening bid whether the restrictions are there or not. So, the state put the restriction on. So, when that was sold, it was bought. The state got the money out of it, they were happy getting. And then that had to go through a PUD process; it couldn’t just be divided up. So, another really good example is the small state piece adjoining the National Park in the Snake River next to the ?? . There the Land Trust went to the state and just bought a conservation easement on a 20-acre ??, literally amongst the park and amongst the river. The state still owns it, <<inaudible>> horses, but it’s public land but can never be developed. So, there are a lot of solutions here. I think you need to actively work with the State Land Office to have a Plan, you know, deal...and you’ve got to look at each piece differently. Some are in the Park, some are, you know, surrounded by private land, some are on the border of National Forest and private land. So, I think if you really look at that, you can come up with a specific Plan on how to maximize, how to make sure you let them get their money out eventually, but still protect public resources.
Dear appointed commissioners, elected officials and planning team,

On behalf of the Jackson Hole Conservation Alliance, thank you for your attention to the following report and for the opportunity to submit preliminary research on the wildlife and scenic values in the South Park area as part of the Comprehensive Plan update process.

The Conservation Alliance believes that planning decisions for our county’s dwindling undeveloped private lands should be based on the best available information, research and science. As we determine the growth patterns and the community's priorities in the different districts of Jackson and Teton County, it is important to base our decisions on the best available information. Additionally, when this information is outdated or incomplete, which is not uncommon, we believe planning should err on the side of caution, particularly given the community’s top priority – to protect wildlife and promote stewardship of the Greater Yellowstone Ecosystem.

This report focuses on South Park because it is slated for the most potential residential development of any district in the draft Comprehensive Plan, released 04/13/09, and because the new draft plan places very low priority on the protection of wildlife and scenic values in the area. This low prioritization represents a significant departure from our community’s existing 1994 Plan. Due to the drastically proposed changes in land use in the district, we believe it is first critical to take into account the area’s documented and under-studied wildlife and scenic resources before the community considers a plan that stands to eliminate those resources and values.

The enclosed report is simply a first step. It is a summary of readily accessible environmental reports, studies and documentation from the past 30 years that refer to the wildlife and scenic resources in South Park and along the proposed Tribal Trails connector road. While it demonstrates that much of the available data is old or incomplete, and that more complete data collection and comprehensive analysis is warranted, this summary also reveals that the area includes high wildlife and scenic values. Also, given the historical importance of the South Park area for scenic preservation, this study (which includes a review of the 1994 Plan) reveals how differently the new plan addresses scenic resources. This shift is a broad concern, but it is strongly demonstrated in the new draft plan’s proposed South Park district.

In general, this report intends to initiate discussion on the directions for future growth outlined in the draft plan and to what extent these proposed directions were guided by the best available information. Please see the enclosed report for more detailed information, and feel free to contact us with any questions. [referenced report, The Greater South Park Region: A Summary of Wildlife and Scenic Resources, available hard copy in the County Planning Department]

I would concur with that completely. I think you add that to the NRO information we have now and I do think you would have a reasonable means of measuring over time. So, if you’re saving a habitat and if you’re still having the animals connectivity through there. When we submitted the NRO information to the Planning Department over a year ago, one of the first things that we saw that was a need for habitat mapping on the private land. And we’re trying to get funding to do that and contract that out also, again, working with Game & Fish. I think habitat is something that everyone can see, can measure, and it is what the critters need, first of all and most of all. Well, again, we’re trying to get the funding to put that kind of study together so that it can be turned over. Quite honestly, also, that needs to be incorporated into the Plan.

Forrest, but if you looked at it as a crossing, the Town and County said this is a major crossing, I mean, just forget about the expense, the engineering per se. If you’re coming to Jackson in 20 years and you hit there a 500, 800-feet-wide, you know, concrete structure that still had four lanes under it, and a bike lane, a sidewalk on both sides, where it came off the hill flat and then dropped into the park, I mean, that would be an incredible symbolic entrance to Jackson that we cared enough about wildlife to build a crossing right in the middle of Town. And Franz is absolutely right, mitigating that without an overpass, I think you're only, you know, you're working on the edges. I think the goal to have an overpass there I think is technically, if you look at stuff that's been done in Europe or in Canada, it's technically feasible and financially feasible if you start planning now for 20 years out.

<td>Acri, Armond</td>
<td>Armond Acri with Save Historic Jackson Hole. I guess I’ve lived here since 1996. Like most people, I value wildlife and it shows in some of the things that I do. I’m on the board of directors for the ?? Federation and I volunteer to remove barbed-wire fence in Teton County with the Jackson Hole Wildlife Foundation. I also don’t neglect people, so I also tutor adults and children through the Teton Literacy Program. Do you just want that, or do you want me to go into some....? Okay, well, I guess a couple of key things is obviously wildlife, that’s been a big issue. People have said I think one of the things that we could do maybe to improve on things is, even in areas in Town where maybe it doesn’t have as high a wildlife value, there are still specific areas within those sub-areas I think that have wildlife value and that would be ?? Meadow, you know, recognizing the value of that. Or it could be through other parts of Town where wildlife need to move through. So that would be one raw comment. The other is I think, you know, from the ?? study and the UW surveys, there certainly was a strong support for some kind of rate of growth mechanism. And I think it would be easier to implement it now and work on adjusting what that threshold should be than it would be if we waited until we thought we were at a point where we needed to take action. And I guess the point along that would be, in terms of just the indicators that were talked about, that if we didn’t get the data that we thought because people got too busy, that would be evidence that we’re growing too fast regardless of whatever the target rate was. I think generally, I didn’t get a chance to send you, Forrest, but I sent to Staff a copy of the Freemont County, Idaho, which is Highland Park, their Comprehensive Plan. And I think we could maybe learn something from that because it’s a very tight, dense I think, without a doubt, supporting document. The supporting documents are all separate so that the core document, which is the 2-page vision statement, 15 pages that contain all the principles, are I think a lot less imposing to people. So that would be I think a good example. Let’s see, and then also on the indicators, that’s I think an area for improvement. I think we can...I’ve detailed this in suggestions for that that have been submitted on what we can do. And I think, you know, one of the things is we’re trying to increase allowable densities to provide a sense of redevelopment. And I’m not sure that the community really wants that kind of redevelopment. That I think is part of our controversy. That’s kind of what we have, overview.</td>
</tr>
<tr>
<td>6/23/2009</td>
<td>Acri, Armond</td>
<td>I guess the other thing is, and I think Forrest brought this question up, is it (node) is an urban tool. Is it appropriate? Are we that urban now? But I guess the real thing is—I think that was touched on earlier—is the question is I think the concept is probably admirable. The question is it the appropriate year?. The other thing is, as noted earlier, is which one, you know, what do you make a node and then how much do you put there. And I think that was really that’s a real big issue I think when you start looking at some of these nodes that were identified. When you start talking about increase in the density, you know, in terms of dwelling units per acre, just as an example, Wilson, which is now like point nine dwelling units per acre, could go under the ‘94 Plan to like double that, one point eight. And under the proposal going to a node it’s going to go...it could go to three point six. Well, that’s over three point six, that’s a four times increase. That’s a tremendous change in the character of a place. So then you have to really ask is is that node then killing the character. I think that’s an important question that we have to ask. Maybe it is admirable for a bunch of other reasons, but if it kills the character of that community, then you really have to ask whether there is a benefit, or I would ask whether there’s a benefit. But as a relative comparison, that’s the point there is. I acknowledge, it’s like I go there, but in the terms of...it’s a tool to try and understand what’s going on and what’s being proposed. And so you can compare apples to apples, because under the one Plan, it could go to a maximum of, you know, double what it is now; under the other Plan, it could go to a maximum of four times what it is now. That’s a big change from what’s currently allowed. So, in regards to where it actually ends up, I think that the important fact that you have to take away is it’s a tremendous change to that community. And there are other ones that are proposed as nodes that are similar. I think when you start looking at that much change in density, it’s a big change to the character. I guess the question is do we need all that, is one of the questions. You know, given that the data shows in the existing, we’ve got like a 50- year supply already. You know, ??, that’s what we say for housing anyway. We’ve got...certainly, even in Town, if we did nothing, I’m not saying that we don’t change anything, but the question is I guess is whether we need to at least especially if we’re saying we’ve got a 10, 15-year Plan, do we need to...we’ve already got a 50-year supply, how much more do we need to increase that.</td>
</tr>
<tr>
<td>6/23/2009</td>
<td>Camenzind, Franz</td>
<td>Part of this growth, too, if I might jump in here, we have to be careful that if we do assign potential growth to a node, any node, that’s it’s really performance based, not just discretionary, just growth for growth’s sake. Performance based meaning does it supply housing, does it earmark percentage for housing, does a percentage of it have to come off of rural land. You know, we can make those things, we can make those value statements. And then getting right to the basic question, or the point that Armond made, do we need that much to begin with. So, you know, I think our organization would look at a little growth in those nodes, particularly if it’s performance based. It really solves the problems. It’s connected to other results that we want.</td>
</tr>
</tbody>
</table>
Jean ?? of Wilson and I, of course, have a zillion things to say, but I don’t know where I want to say them, except, I guess, I would start out by adding on to what Nancy Taylor was saying about sustainability. And that is I was struck by what Steve read in his report about, you know, viable populations. And what struck me was that we have spent I don’t know how many hours, days, months, years, the planners have spent, working on this Plan, and I know it was very hard and there’s been a whole lot of comment on it from the public. And what struck me was that in just about every other area, whether it is a transportation plan, or affordable housing or, you know, whatever else, that term hasn’t been used. We’re going to have viable, just viable. And so it struck me as so outrageous that that term was used over and over again in this Plan. And this is where I’m going to sound really, really hokey, okay. But, we are different. This Valley is different than any other place. There are lots of places that have five-star hotels. There are a lot of places that you can ski. There are a lot of places that have fabulous shops. There is no other place like Jackson Hole and Teton County. And for us not to have wildlife and use the sustainability of our wildlife populations as the filter through which we compare and contrast the plans that we are following, to me, is really, really unfortunate. I’ve said this before, I know what lie means. I came here in 1948 and I never forgot it. I came back; I came back with my children. I now have my grandchildren. And this is priceless. You know, I don’t care if people don’t even, I mean, maybe there are people here who don’t care about wildlife. I know that everybody does care that’s in this room and I know the planners care. But even from just a commercial standpoint, it is wildlife and the natural, staggering beauty of this place that has people coming back and bringing their children and their grandchildren. So, I think, you know, I’ve learned a lot of things tonight. And I was really interested in it all, you know, from recycling and dog parks and so forth. But it’s like building a house, for example. If you don’t say to your architect, we want a house that’s 4800 square feet, or 2500 square feet, and we have ex amount of money, you just don’t know what you’re going to end up with. And none of us would do that. So, I am urging that before this Plan can possibly be adopted, that the Planning Commission and then the County Commissioners, really put wildlife, not just the easy thing which is, oh, everybody likes wildlife, but, you know, we need information. Game & Fish needs information. I don’t know how they do what they do. And so, you know, I urge the Planning Commissioners to (a) reduce the growth that’s proposed, (b) somehow or other insist that the studies be conducted so that we don’t end up with the draft Plan as it is now, which is very vague, but has very specific maps. So, I don’t know how we can have specific maps when we have just a vague wish list of things. And that, again, it sounds so hokey—remember why we came here and preserve it—not just grow it, preserve it. I’m so tired of listening or reading—I shouldn’t say listening—but over and over again, human needs, human needs, human needs. You know, I think they can work together, you know, but we can’t, you know, what… I think overpasses and underpasses are fabulous, but what difference does it make if we have underpasses and overpasses if we have 20,000 more people and ex-thousand more cars, and we don’t even have the animals to use the overpasses or the underpasses? I mean, I think that we just, those of us who have lived here for awhile, just come to, in a way, take it for granted. And so we think it’s going to be here always. And then I know that there’s some thought that because we have national parks here, that it doesn’t matter if we have it in our yards anymore. But we can go to the park. And I don’t think that’s what the population wants. I really don’t. And I think that’s why many of us were disappointed in the Plan because I think there are people…I think many of us who have made the sacrifices that we need to make in order to preserve our wildlife population. I do, I believe that we are willing to do that. And I know people say sarcastically, well, how many people have you, you know, how many came to this meeting tonight in your car. And, yes, of course, we did come in our cars, because, no, there isn’t a START bus from Wilson. But, honestly, you know, I don’t think that our wildlife populations, for example, can stand widening highways. And yet the Plan doesn’t address things like that, you know. If we go ahead and allow these kind of commercial buildings, for example, what happens to our highways? Anyway…

Well, first of all, I agree on the way I address the value, you know, that incentive value that Bill is talking about. I just don’t have that expertise. In fact, those are the questions that we’re asking in trying to figure out where we should go. Predictability is very important. It’s rather ironic that we…I don’t mean to be countering you, Mr. Wall, but this whole document has very little predictability in it. And this would be one place where we would have some predictability, as Bill said, maximum predictability. And, you know, if there are a hundred units out there in the 35-acre range, that’s either a hundred units of 35-acre pieces. That would be either a hundred units, or if we went into a three or a two, that would be two to three hundred. And those are real numbers—don’t get me wrong; I’m not trying to downplay them—but when you look at the range of unpredictability that’s in some of these other parts of this chapter, it’s fairly small. So, we have a lot of predictable work to do here

<td>Wang, Louis</td>
<td>Hopefully your P&amp;Z Commission will be tasked with giving guidance to planners to re-write the plan. Here are some comments and suggestions: 1. The plan is not a plan. It’s a vision statement packaged with lots of motherhood and feel-good fluff. It begins the entitlement process and guarantees an unlimited annual rate-of-growth. It’s dangerous! The format of the current plan is better than the one proposed. 2. By increasing allowable densities it incentivises redevelopment that the community doesn’t want. Redevelopment incentives are community destruction incentives. 3. A real plan states hard objectives in the near term and gets less definitive in the out years. Measurable indicators found in the draft plan may be an end-run substitute for hard near-term objectives; many of them are fluff and nonsense. They’re dangerous. 4. Given that we’ve grown fast for two decades, and folks don’t like it, a real plan might protect the citizens by limiting annual growth to the national average. 5. Lodging and commercial are the real growth engines of JH. They need to be measured, limited, and managed properly. I’d suggest a limit of 1/2% annually as an interim measure until a management program can be developed and installed. Other comments are included in the attachment, which you may have already received. It’s only 1-page, and I’ve included it because you folks probably get a ton of official mail and may have missed it.</td>

<td>Heileson, Marv</td>
<td>I wish to thank the Planning Commission for its courageous and timely action on June 11 in recommending that the Comprehensive Plan be sent back to staff to take into consideration the wishes of the public. This was the second time I’m aware of in the entire CompPlan process that someone in authority has spoken up for the interests of the great majority of the residents of Jackson Hole. Thesubsequent criticism of your action is unwarranted. The Planning Director’s comment that he did not know whether he was being directed to incorporate comments for or against the Plan is disingenuous at best, and just plain sad at best. It was patently evident from the speakers at the meeting, as well as the petitions submitted, and letters to the newspapers, that the public at large does not support the proposed Plan, with its emphasis on more growth and density. Likewise, the comments made by some County Commissioners that you should have spoken up sooner are unfair. When the general area maps for the Plan were presented last summer, and concerns wereexpressed at your meetings about the apparent density and growth patterns, the staff said that people should wait for the final draft. As late as several weeks ago, they were saying to wait till the indicatorsand benchmarks are worked out. The citizens have been raising these issues from the start; and finally someone in county administration has acted on the concerns. The first time someone in authority spoke up for the interests of the public was during the community meeting in Rafter J last summer, when the Planning staff announced that the public would not be allowed to speak, but only to leave &quot;sticky notes&quot; and written comments directed at specific themes of the Plan. The people were outraged, and Leland Christensen stood up and took control of the meeting, insisting that some members of the public be allowed to talk. Memorably, he said, &quot;This is the community’s Plan.&quot; The Planning Commission’s action offers the hope that it could still become the community’s Plan.</td>

<tr>
<td>6/22/2009</td>
<td>Davenport, Mark and B</td>
<td>Planning &amp; Zoning commission, Thank you for voting against the current Comp Plan. We believe it is ill conceived and not in the best interest of the community. We have even less confidence in the Planning departments ability than before for supporting this plan. Please do not give in to a plan that is bought and does not benefit our community for the long term. The reality is not everyone can live here or it will be like Los Angeles. Please only approve a plan that perpetuates the wildlife habitat and character of the town as it exists.</td>
</tr>
<tr>
<td>6/22/2009</td>
<td>Mortensen, Sue</td>
<td>I support the recommendation of the planning commission. Clearly there is a sizable number of folks in our valley who feel that the planners went forward without listening and considering and dialoging about wildlife and open space needs. It is a mistake in Jackson to disenfranchise large groups. If we need affordable housing then let’s use our own model for how this has been done in the past in low key, absorbable ways.</td>
</tr>
</tbody>
</table>
The large price tag and huge amount of time spent on the ongoing comprehensive plan rewrite are strong indicators that an annual review of the comp plan and associated land development regulations is fiscally, politically and administratively untenable. If this is the “meat” of the comp plan rewrite, the proposed plan is a turkey. Analyzing fiscal, environmental and traffic impacts of a considered course of action forestalls nightmarish problems: it is, after all, hard to unring a bell. Yet Teton County Planning Department’s blueprint for our future contains zero impact analysis. Zero. It wants us to believe it will effectively identify and address developing problems in “real time” to keep the valley’s character and qualities intact. Performance to date gives me little confidence this will happen. Equally disturbing as the rewrite’s backwards planning approach is the growing community dissatisfaction with the process. The depth of this widespread frustration is reflected in a petition drive reminding our elected officials that wildlife and controlled growth are top priorities. Love it or hate it, the petition is emblematic of serious disaffection. I doubt a drive would have been initiated if the public at large sensed planners were listening to—and addressing—valid concerns and comments. In January 2008, Mr. Daugherty discounted the results of community polling, saying they were based on “special interests.” Since then, planning staff has variously characterized public input as “artificially engineered,” “cherry-picking” and “people only concerned with density in their own backyards.” Planners didn’t want to hear verbal comments at neighborhood meetings and confined written comments of their lengthy presentation to Post-It notes. The department refused to release a Word document to neighborhood groups, the county planning commission, and the Alliance for line-by-line analysis until a county commissioner stepped in and told them to get it done. Such remarks and actions by staff are unprofessional, dismissive and condescending towards citizens and groups who care enough about the valley to weigh in. With respect, members of the planning staff are not—as Ms. Froedge perhaps unintentionally asserts in a recent Jackson Hole News and Guide article—community leaders. They are county employees hired to serve the citizens who pay their salaries. I remain optimistic that the appointed town and county planning commissions and you, our elected officials, will critically analyze the comp plan rewrite and LISTEN to divergent voices. I applaud the courage it took Planning Commissioners Forrest McCarthy, Tony Wall and Larry Hamilton to recommend sending this back to planning staff for further work. It is both unworkable and clearly not in line with the results of consistent community surveying.

I would like to add my voice to those hundreds (or thousands) of county residents who have written or commented on the faults of the existing Comp Plan. The plan must be re-worked to accommodate this community’s wishes. It will fail without community support. I fully support the recommendations of the P & Z staff in this process.

I’m writing to give my support to the Teton County Planning Commission in their motion to return the Comp Plan as submitted, back to the Planning Staff. I believe the Draft Comp Plan should be a document that is acceptable to a majority of the people in the community. The submitted Draft Comp Plan is contrary to our community character and values. Please support the commission and return the plan back to staff!!!

I am writing to you to express my support for the Planning and Zoning Commission’s recommendation with respect to the draft of the new Comprehensive Plan. The Plan is way off base and should have community support before it continues forward.

I support the County Planning and Zoning Commission’s vote to recommend that the Comp Plan be rewritten to better reflect the community’s values. The plan must have community support before it moves forward.

By declaring the draft Plan unfit for review, the County Planning Commission has done Jackson Hole a great service. Getting the Plan “back on track” is political doublespeak. The Plan never represented the community. That’s obvious, just read the community comments and public surveys. The plan got off on the wrong foot. It’s built on an unfortunate format that’s prone to misunderstandings and manipulation. It’s not repairable. Save Historic Jackson Hole submitted the Fremont County, ID Comp Plan to staff for consideration as a new planning format. It is more user friendly and less confusing. We thank Forrest, Larry, and Tony for having the courage to tell the truth. As in the “Emperors New Clothes,” these 3 brave souls had the courage to point out the farce. They should be commended instead of condemned. Save Historic Jackson Hole asks that you accept the recommendation of the Planning and Zoning Commission and allow them to meet and add more guidance to their comments so staff has a clear direction for the rewrite. Getting it done right is more important than adhering to a schedule.
I am writing in hope you will consider the following Monday when discussing how to proceed with the comp plan. I feel the action taken by the County Planning Commissioners last Thursday was the right and only way to proceed. The plan's driving principles do not represent the sentiments nor do they reflect the public comment of the overwhelming majority of our County neighbors. Please send the plan back to the planning staff to first correct and address the following "big issues". Only then can we review and incorporate the many proposed new components and ideas of the plan.

1. The "numbers" are of utmost importance to wildlife, infrastructure, community character, quality of life and the future of Teton County. The refusal to plan based on the current base zoning entitlement numbers (without incentives and density bonuses) has enraged our community. We need to get back to the honest and real numbers as presented in January 2008. The claims that the plan is one that allows no additional growth beyond current base zoning, is far from the truth and insults the intelligence of all of us. The resistance to plan by the numbers is an attempt to disguise the massive growth this plan allows. Residential and Commercial development numbers and their combined effects must be honestly calculated and analyzed. We should embrace these numbers as this is true planning. 2. The public comments were very clear, wildlife and open space protection must be considered as the number one priority. While recognizing private property rights, all themes, mapping and future development must put first the consideration of impacts on wildlife and open space. This is not the case in the draft plan. 3. The plan must spell out the what, how, when and where with regards to infrastructure needs and improvements and who pays for these. This is missing and is critical to planning. Again, I urge you to send the draft back to planning staff with a clear message to correct the major flaws and adjust the plan to reflect the communities desires.
Dear County Planners:

On behalf of the Greater Yellowstone Coalition (GYC), I would like to thank you for your work on the Draft Teton County Comprehensive Plan and for the opportunity to provide comment. We recognize that the Comprehensive Plan is a visionary document to guide future growth in the County and that there will be future opportunities to comment on land development regulations, which will define how this vision is implemented. The County should be commended for the exhaustive public input opportunity used in defining the vision for future development. However, we do have concerns that this vision may not have been fully implemented in the planning process on specific nodes and in regards to the Natural Resource Overlay (NRO). We are also very supportive of the Jackson Hole Conservation Alliance and their efforts to analyze this plan for impacts to the wildlife, scenic, and rural values of this community.

While growth is inevitable, wildlife values continue to be of foremost concern to Jackson residents. We would like to remind the planning effort that the community's top value continues to be "Promoting Stewardship of Wildlife and Natural Resources." We feel it is important for the comprehensive plan to balance residential and commercial growth, with workforce housing and the wildlife, scenic and rural values that we all regard.

GYC commends Teton County for using tools such as the NRO to determine appropriate levels of development in specific areas. The County should seek to update the current 1994 NRO before proceeding with the next step of Land Development Regulations. Current research is available on wildlife use that has not been incorporated into this map for this planning process. Additionally, indicator species have not been specified, and we feel the county should consult with State and Federal agencies to identify species and habitat types that are sensitive to the proposed growth. Using biological data to map development suitability is a critical step in reaching the community's goal of preserving wildlife and their habitats. Successfully utilizing the NRO largely comes down to consistently working with partner agencies and organizations to assemble the appropriate data needed to make informed decisions regarding density, design and other important factors. GYC supports the county's goal of increasing the amount of permanently protected private land within the NRO boundary.

The Draft Comprehensive Plan directs the county to regularly update the NRO. GYC recommends expanding the NRO to cover critical private lands within County Rural Districts 2, 3, 4, and 6. Specifically, GYC is concerned about private inholdings within GTNP and their future potential for development. These inholdings within the National Park System not only provide key habitat for many wildlife species, but they also provide important scenic and open space values that contribute to the overall health and sustainability of the park. The county should work with GTNP staff biologists to obtain the necessary data and information that will facilitate the expansion of the NRO to include park inholdings and adjacent private lands within the aforementioned Rural Districts. Clearly, the private lands located within and adjacent to the national park are some of the most important in all of Teton County. As the NRO boundary is expanded to include these lands, the county should develop standards that provide adequate protection and, in some cases, a plan for permanent protection through conservation easement or acquisition.

We also would like to voice our concern that strategies outlined in the Draft Comprehensive plan which promote increase residential development in the Westbank district may fail to meet the priority of promoting stewardship of wildlife and natural resources in this district to the degree of the principles of Theme 1. Protection of wildlife and open space has consistently been identified as the highest priority of the citizens of this community and to GYC. Our primary concern is that increase in growth of the Wilson node will put undue pressures upon our current...
transportation system and increase pressures on Grand Teton National Park (GTNP). These strategies would likely result in an increase of traffic volume along the sensitive Moose-Wilson Rd, and a decrease in park visitor experience in southern GTNP, specifically at the Lawrence S. Rockefeller preserve. The planned redesign of HWY 390, will only lead to increase in disturbance to sensitive habitat and unnecessary pressure on an already less than perfect road system. We feel that the redesign and improvement of HWY 390 would likely result in a perceived need to “improve” the Moose-Wilson Rd. We are opposed to improvements of the Moose-Wilson road within the park that would include widening, paving, straightening, or would otherwise increase traffic volume, creating a myriad of impacts to sensitive wildlife habitat. This area has important scenic and wildlife values and lies in a crucial migration corridor and wetland that is used by wildlife.

GYC believes the County should incorporate the future expansion of the mass transit system between the GTNP and the Town of Jackson and Teton Village, within the “Potential Transportation Network Projects.” A partnership between GTNP and the Southern Teton Area Rapid Transit (START) could benefit both entities. We encourage the County to consult with GTNP and START to explore what a partnership could look like in this plan. Reducing single occupancy vehicle trips by Park visitors and Park staff with the option of START buses between the nodes of the Town of Jackson via HWY 26/89/191 and Wilson/Teton Village via MooseWilson Rd should be detailed in the transportation and modeling plan. Reducing these vehicles can help the County achieve its goals of reducing negative impacts on the rural character, conservation of wildlife and natural resources, and limiting energy consumption in the Valley. Our comments are focused primarily upon the real and potential impacts to GTNP that the Draft Comprehensive Plan may create. We encourage the County to continue to work collaboratively with the Park in creating this visionary document. We hope to continue to engage in the development of the regulatory framework that will define this vision. Offinal note, the valley of Jackson Hole and the surrounding public lands are a national treasure and vital to the Greater Yellowstone Ecosystem. The decisions you make in planning future growth and development have consequence for not only the wildlife and residents that make this place home, but to the millions of visitors that choose to recreate and visit Grand Teton and Yellowstone National Park’s. We hope that Teton County can find a balance in sustainable growth and promoting the values of wildlife and natural resources.

Thank you for considering these comments,
Respectfully,
Chris Colligan

Interested Public

I’m writing to support your vote and say I think you did the right thing in sending the Plan back to the planners (not because I oppose the Plan, which I mostly do) but because it is not your job to rewrite the Plan.

6/18/2009  Jorgensen, Jean
Interested Public

Here is why I support the Planning and Zoning Recommendation and hope that you are listening: the people do not support the Plan as it is being presented. Not long ago I re-visited an area of Switzerland that I had been to nearly 50 years ago and was pleased and frankly surprised to find that it looked much the same as it had then: beautiful open farm land and small villages. The people there had resisted “growth for the sake of growth” and the special flavor of their region was still alive and well. I ask you to be bold and act to save and protect what we love about this valley. If you’re not convinced, please take an hour from your busy lives, go to the National Museum of Wildlife Art, and read every word in the LORAX display. Then maybe you will understand. Our children and grandchildren and the visitors of the future will thank you for having the vision to step up to protect what is special about this place.
Please allow this attempt of another comp plan to go back to the planning stage. The process is practically a joke whereby the county commissioners have only heard, but not listened to, the overwhelming public input. Consider writing into your plan that town councilmen and county commissioners do not retain ultimate power to grant exceptions and variances to every developer that asks for special privileges. The past twenty years have proven that these plans have little to no real value and no substance or backbone when it comes to the power of financial persuasion (what some refer to as “economic vitality” and various other catchphrases). We have a plan in place with intent to help preserve Jackson Hole and curtail some growth; it has rarely been adhered to.

Dear Forrest: Thanks for listening to the public and its concerns regarding the proposed Comp Plan draft. We were out of town last week, attending our grandson’s high school graduation, and couldn’t attend the Joint Planning Staff meeting. Had we been there, our comments would have echoed the concerns of most of the attendees. Thank you for your vote - recommending that this draft be sent back to the planning staff. I think the entire Plan should be scrapped. Using 15 year old NRO maps flawed its credibility from the outset. The Community repeatedly said that preserving wildlife and open spaces was its top priority. The Planning Department’s marginalization of using the most current maps made it clear (from the very beginning), that the Planning Department had a very different list of priorities than those stated by the Community. Their willingness to use out of date information also indicates a lack of professionalism that I found disturbing and disappointing. Jackson Hole deserves better. I’m in the process of writing a letter to the Commissioners supporting the Planning Commission vote. Thanks, again, for all your time and effort on behalf of our Valley.

Thanks for stepping up to the plate for your community. The Planning Commission’s role is to refine the Draft once it is largely supported by the community. Since that support is lacking and a substantial re-write is necessary, Planning Staff should be required to re-write the document so that it reflects public sentiment. Once we have met that criteria, then it will be your turn.

I hadn’t come here tonight with the intent to speak, but I will feel inclined to chime in, especially when...I guess I’d ask the question of all of you up here, at any point in time, did you have any conversations with the Planning Commission from Teton County, in terms of their action? Because you need to recall one thing. They ain’t driving the bus here, and I think...and what you’re hearing tonight...and I don’t say this out of being divisive and not working in concert with them, but you have work you could be doing within the jurisdictional boundaries of the Town that I think you would be doing a disservice to say, let’s just kick it to the curb and not do anything until Staff comes back. I think there’s a lot of work you can be doing. I think it would be a disservice...It doesn’t mean that you can’t bring your timelines back together later on for overall approval, but I don’t think you’re doing anybody any service kicking it to the curb. waiting for them to do whatever they want to do. And this has always been, historically, you know, having been in your seat, when we’ve had these joint...you have joint Planning Commission meetings and instead of saying, oh, well, you’re all sitting up here, and then, oh, you can’t vote on this portion, they get to vote on that, and then you get to vote and you try, as you’re sending something up, let’s remember, you’re recommending body to the electeds. But I’ve got to tell you, this discussion tonight bothers me that people think that you should somehow be subservient to whatever the County board did. I might be more open to that if there had been something done in concert where you had met with your cohorts at the County and said, we’re uncomfortable with these things, we think we need to go back and talk to Staff about how we want to go forward. And I really think you all were done a disservice by them by doing what they did, because you all have done a lot of hard work, and I think getting put in this position, is rather unfortunate. Thank you.

We the undersigned, as citizens of Teton County, expect that the comprehensive plan will be revised to reflect the following: wildlife and open spaces, values this community has cherished for decades, will be reinstated as the Community's top priority and become the organizing theme of the entire plan. To preserve these values and our Small Town Character we will not support any plan which doubles residential and commercial development. {submitted as a petition, signed by many; hard copy available at Teton County Planning Department}

<td>Whitcomb, Michael Interested Public</td>
<td>I applaud the Planning Commission's vote to reject the Draft. It was a tough decision to take, but the correct one. Let me explain. All of you have been exposed to the public's reaction to the Draft through open meetings, letters or one-on-ones. While some may want to dismiss the input for various reasons, resistance to the Draft as written will not go away until major revisions are made. The Draft has been sold as an &quot;update&quot; to the 1994 Plan. It is not. Fundamental changes to our Community Vision were made and Theme 1 was demoted in many districts to provide for 'human needs'. Discussion of build out population by district is deliberately discouraged and the consequences of growth not assessed. Lacking any assessment of outcomes (traffic, tax burden etc) what we have is a forecast, not a plan. Please read the ad run by Planning Staff in the News and Guide on Wednesday, October 15, 2008. In that ad Staff implies they heard what the public said and would be responding. They may have heard us, but they did not heed us. Given the magnitude of the re-write it is appropriate to send the task back to Planning Staff. Ask them to re-read what they published on October 15, 2008 and set an expectation that it is their job to gain public support for the Draft. Once the public is behind the Draft, it will be ready for the Planning Commission's scrutiny.</td>

Comment

Community Vision
The Jackson Hole Community Housing Trust supports the delicate balance articulated by the Vision Statement of the proposed Comprehensive Plan: Preserve and protect the area’s ecosystem and natural resources and meet the community’s human needs in a sustainable and predictable manner. We recommend adding a theme to the Comprehensive Plan that speaks directly to, and is supportive of the second half of the Vision Statement: Ensure the Health, Safety and Welfare Needs of the Community are Fulfilled. With this addition, Theme 1, with a new Theme 2, can better provide the community with clear guidance to work through the complex and interrelated challenges facing our community. These two themes should be awarded equal importance in the umbrella Vision Chapter of the proposed Comprehensive Plan.

The current themes Two (Manage Growth Responsibly) through Seven (Provide Quality Community Services, Infrastructure and Facilities) should be reorganized as sub-themes of the new proposed theme Two. The prioritization of each of the eight themes would be noted in each of the districts in the Future Land Use Map according to the natural resource values found in each district. In addition, we support the concept of Regionalism that has been introduced into the proposed Comprehensive Plan.

Theme 4 Statement of Ideal
The proposed wording of the Statement of Ideal seems to unnecessarily pit community against one of the primary economic engines in our community. We support the essence of the Statement of Ideal for Theme 4, though we believe it would benefit from some clarification: “Remain a Community by ensuring that at least 65% of the people working in Teton County, Wyoming live in Teton County, Wyoming”.

65% Workforce Housing Goal
We agree that it will help our community maintain social diversity and economic stability by striving to ensure 65% of our workforce lives in Teton County, Wyoming. A 65% goal will provide a tool to measure the ability of our working community to access housing. This goal acknowledges the fact that some in our workforce will always choose to live in certain areas based on lifestyle preference.

A More Inclusive Term: Community Housing
JHCHT recommends the Comp Plan embrace a new term: Community Housing. Community Housing would include all housing occupied by people working in Teton County, Wyoming regardless of whether the unit is restricted or not. Community Housing would include free market housing, permanently restricted ownership housing, employment-based housing as well as rental housing. It includes subsidized and non-subsidized housing. It includes full-time persons and seasonal persons earning their living in Teton County, Wyoming. Community Housing would include retirees, people with special needs, stay-at-home parents, and caregivers who are not paid employees but nonetheless make a significant and meaningful contribution to our community. This number is inclusive of all primary residents of our community.

Note: The Plan should address our community’s need to address inadequate and substandard housing.

Theme 4 Introduction: Why is this theme addressed?
We believe it would help promote understanding of Community Housing if a brief paragraph could summarize the current housing landscape including the primary programs that have enabled our community to create affordable housing to date and the percent of our workforce currently living in Teton County, Wyoming. It is our understanding that the combination of programs and policies in place to date have effectively resulted in 65% of people working in Teton County living in Teton County.

Principle 4.1: Housing for Diverse Population
Policy 4.1.a: Policy 4.1.a titled “House all members of the community” fits nicely with the term Community Housing. It includes and accounts for every primary resident of Teton County, Wyoming irrespective of their employment status.

Policy 4.1.b: This Policy, titled “Set strategic targets for restricted housing opportunities” is the appropriate place to define Workforce Housing. In addition, Habitat for Humanity should be included as an entity that will work with TCHA and JHCHT to provide elected officials with valuable information to
Policy 4.1.d: This Policy should identify the full spectrum of housing:

- Non-subsidy (free market) and subsidized housing (permanent, restricted ownership housing and rental housing which generally responds to seasonal demand); and
- Single family detached, duplex, townhomes, condominiums, and multi-family.

Policy 4.1.e: JHCHT agrees with this statement. In addition, we believe there is an overriding responsibility to minimize impacts on our neighboring national parks.

Principle 4.2: Requirements for Workforce Housing

Policy 4.2.a: This policy would benefit by clarifying the partners that will work with the Town and County: TCHA, JHCHT, and HFH. All will work together to update requirements for restricted workforce housing in residential developments (and non-residential developments where appropriate). To ensure the policy’s objective: ensure the program is fair and understandable, JHCHT recommends adding an action item to Strategy 4.3: Create a task force to support the efforts of the Town, County, TCHA, JHCHT and HFH to update the requirements for workforce housing. The taskforce should include the lending and development community as well as major landowners. This task force would help expand understanding of and appreciation for the challenges inherent in meeting the community’s housing needs. We recommend that this task force review and update the requirements every five years.

Policy 4.2b: We believe annual monitoring of indicators noted at the end of Theme 4 will help our community measure the extent to which rental housing is lost through redevelopment. It may be most appropriate to refine the policy goal for 4.2b: Results generated from the careful monitoring of redevelopment and residential turnover should be used to guide the creation of requirements and incentives designed to minimize the net loss of workforce housing.

Principle 4.3: Preservation of Workforce Housing

Policies 4.3.a and 4.3.b that support Principle 4.3 are based on the premise that it is most efficient to restrict existing market units (vs. build new restricted units). This is a strong and general statement that does not take into consideration the financial expense of this initiative nor does it account for the liability that could accrue to Town and County governments (tax payers). While we support language that encourages cautious pursuit of this strategy, we do not believe it should be given the weight it is given in the Comp Plan. We believe it would be most appropriate to eliminate Principle 4.3 and Policies 4.3.a and 4.3.b and relocate the concept as a strategy to be explored under Strategy 4.2. In addition, this strategy should flag that while the concept has potential to be a community sensitive strategy, the benefits of the strategy must be thoughtfully and cautiously considered and balanced against the potential cost and long term liability to the tax payers.

Principle 4.4: Construction of Workforce Housing

We recommend the introduction to this principle be simplified to read: The community will continue to provide incentives for the construction of restricted workforce housing. Given the evolving definition of Workforce Housing, the Comprehensive Plan should clarify that density allowances should be considered in exchange for permanently resale restricted housing.

Strategies

Strategy 4.1: Establish a dedicated funding source for workforce housing

Strategy 4.1 should be as inclusive and broad reaching as possible. Specifically, strategy 4.1 should clarify that a dedicated funding source would allow local housing organizations to meet our community’s housing needs. The second bullet should acknowledge that a statewide legislative strategy will be necessary to secure approval of a real estate transfer tax. The third bullet should recommend broad financial support of the work of THCA, JHCHT and HFH to meet our community’s housing needs.

Strategy 4.2: Establish a Workforce Housing Action Plan

JHCHT strongly supports the idea of inviting a broad range of community voices to help THCA, JHCHT and HFH draft a comprehensive, coordinated 10-year Action plan to house 65% of our working community (Blue
Ribbon Panel). The goals and objectives of the Blue Ribbon Panel should be elaborated in Strategy 4.2. Specifically, the Panel should:
- Evaluate the strengths and weaknesses of existing programs;
- Review and assess the capacities as well the limiting factors facing program providers;
- Work to understand the full spectrum of challenges and opportunities that could be an obstacle/resource as we work collaboratively to meet our community's housing needs;
- Identify opportunities to enable public/private partnerships and pro-actively identify short and longterm funding sources;
- Prioritize methods to meet our community's housing needs.

The Action Plan should be reevaluated every two years so it is accountable to changing economic conditions and demographics.

The first bullet should be amended to read: explore the costs and benefits of a program that would restrict existing workforce housing.

Strategy 4.3: Update LDR’s and the Zoning Maps

TCHA, HFH, JHCHT and a Blue Ribbon Panel of developers, contractors, lenders etc. should participate in revising LDRs, Workforce Housing criteria, guidelines and methodology.

In addition, non-profit housing organizations that have been incorporated for a minimum two year period, whose charitable mission is to develop affordable housing, should be recognized as qualified, exempt providers of permanently restricted housing in the Comprehensive Plan and the LDRs. JHCHT, TCHA, and HFH’s programs and tools, including selection and pricing policies, bring a variety of permanently restricted housing opportunities to members of our community. Each organization strives to serve a broad range of household income levels and offer a variety of housing options.

While we support the shift in the proposed Comprehensive Plan away from strict definitions toward a broader definition of Community and/or Workforce Housing, we should not lose sight of parameters that make housing affordable (i.e. permanent resale restrictions). The revision of the LDR’s creates a unique opportunity to update policies and definitions so that the existing housing programs can better respond to the changing and evolving needs of our community. This will enable local housing organizations to serve a diverse range of household incomes in Teton County that cannot be met through the free market.

The LDRs should be updated to streamline and simplify the review process to enable affordable housing providers to build the highest quality units for the lowest possible price.

The Blue Ribbon Panel should consider moving away from HUD statistics (typically used to determine income eligibility) toward a set of income information that is more reflective of the reality of employees/households in Teton County, Wyoming.

Strategy 4.4: Increase Outreach and Educational Opportunities

Develop a strategy to communicate annually the results of measuring and monitoring the number of houses lost from the workforce, the number of permanently restricted units created, and the percentage of our workforce housed locally.

Future Land Use Map

Many districts in the FLUP have multiple land use classifications in one district. In districts where there are two distinctly different land use types, it would help to reduce future conflict to be very explicit in the theme prioritization section of each district.

For example: District 15, East Jackson, identifies Responsible Growth as the most important theme. To mitigate future conflict, the first bullet and second bullet should be expanded as noted by the italics below:
- Continue to support the stable low density residential pattern of development in the Single Family Low zone.
- Consider additional activities and incentives to enhance characteristics of a mixed-use neighborhood, including local convenience retail and workforce housing in the Single Family Mixed zone.
As the commission and staff grind thru the comp plan process I thought this interesting. Sent from a friend and good to know that other communities are going thru similar things. http://planwithus.blogspot.com/ I found the approach to review in the 5th paragraph interesting. Seems like it might help? Please pass along to the powers that be.

First I would like to offer a couple of apologies: -I had hoped to get a more detailed note off before I left town. -I had tried to send an email earlier yesterday morning but did not get an indication that it went through. If the earlier email was successful, I am sorry to be sending a similar repeated note. As I know you are, I am quite concerned with the action of the County Planning Commission last week. As with any difficult planning effort, a successful process is built on trust – I feel strongly that this trust has been violated. The current draft document has been available for public comment based on a published schedule that included a range of opportunities for input. The schedule indicated a series of public hearings; these hearings, and the comment opportunities they provide, are certainly equally important to the written comments that have been received to date. Yet with the action last week, significant comments now may not be able to be weighed. From my standpoint, it appears that the well orchestrated efforts of a few to generate a large amount of written comment may have unduly limited the opportunity of others to weigh in on the current Comp Plan document. There will obviously be delays in a complicated Comp Plan process. While I have been somewhat skeptical of the scheduled goal, I have been supportive of the notion to move forward. Any considerations of the challenges and decisions about impacts on the schedule should take place at strategic points that allow for comment opportunities. This has not been the case with this action. I am not smart enough to suggest a way forward, but I trust that you will be able find a way to continue this process in a manner that allows for the timely consideration of the Comp Plan by both the Town and County that is somewhat similar to the past expectations. On a separate but related note, I am most concerned with the rather harsh, sometimes insulting and demeaning language that seems to be driving much of the community discussion around the Comp Plan. Hopefully I am not adding to that as I would expect more from this community. Thank you so much for the work that you do for our community.

Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment, and thanks for your work on this document. I know it’s going to require a little....we are going to be presenting a number of specific suggestions in the future, for future discussions interview, but tonight I just want to focus on one larger picture issue which, in our minds, is directly linked to the intro and the vision as a joint process. We want to preface that we respect the hard work of the planners and the challenges placed upon them to balance a number of community goals, objectives and input. We recognize it’s not an easy, black and white process for anyone. We also respect that a public review process is part of Planning Commission hearings as a critical component to move forward with but, that said, we don’t see anything wrong with taking a pause to ensure that this hearing process is more effective in the long run. As a result of that, we appreciate the message and the action taken by Commissioners Wall, McCarthy, and Hamilton to enable some reworking prior to entering an aggressive timeline for public review. And as we have discussed suggestions for how best to move forward, we really think it’s important, and I want to encourage you to keep into perspective why the need for that action, possibly why it occurred. We think that the complexity of this process has been compounded by the fact that this draft truly does represent a total overhaul and total rewrite of the existing Plan. And because of the extent of this change, and the departure from the initial objectives of this process, which truly was to update the ‘94 Plan, we see that this process has necessarily shifted and that we need to respond accordingly. We respect the County Planning Commissioners for what was likely a very difficult decision on them to recognize that a hearing-based review of this draft was not yet workable or feasible. We didn’t view this action as trying to stop the process, but simply sending the message that a planning document of this level of importance should be at a more near-complete form before it goes through Planning Commission hearings and it should be more representative of community will. So, with that, just the request that, given the County Commissioners’ vote to remand this draft to Staff, we recommend that the Town Planning Commission have a discussion on that same motion and consider taking the same action. We feel that this would uphold the joint process and increase the potential for the best possible outcome, which is a public review process. They’ll ultimately be more effective, and ultimately a Plan that truly represents the citizens of Jackson Hole. Thanks....Kristy Bruner. Just one other comment, just specific to theme II. As someone who voted in the surveys....I’m speaking, I guess, as an individual...I would give a lot of thought for how differently managing growth responsibly that concept has changed throughout this process. If you look at the objectives and the meaning of managing growth responsibly and what it meant when people voted on it as the second highest priority, it means something very, very different than it means now, and that is of major concern, particularly given that it’s a leading priority in 13 of 25 of our districts. Thanks.

<td>6/17/2009</td>
<td>Ewing, Patty and Frank Interested Public</td>
<td>The vote to reject the draft comprehensive plan was a surprise to everyone. The draft does not provide any assessment of the impact of the commercial and residential numbers it proposes on the community’s resources. When the first conversations of revisiting the 1994 plan were being held, it seemed a prudent path to take, considering the changes that have already taken place in the valley. It would be a chance to reassess the priorities of the community, which it turns out, based on all the surveys, public meetings, comments simply reaffirmed the recognition that wildlife and open space remains the overriding community vision, and set Jackson Hole apart from other communities and resorts. Considering the draft as proposed, this primary public concern was in large part ignored. It is clear the “growth nodes” effectively double the densities, both commercially and residentially, thus creating the need for more workforce housing; solutions to already existing traffic problems; impact on utilities such as water and sewer; more schools, teachers and staff; law enforcement; and all social services. All result in higher taxes and a reduction in our quality of life. Therefore, thank you for the decision to reject the draft comprehensive plan.</td>
</tr>
<tr>
<td>6/17/2009</td>
<td>Acri, Armond Save Historic JH</td>
<td>Armand Acri representing Saving Historic Jackson Hole. Observations primarily on the vision. Obviously, a lot of controversy here. Trying to understand that. I’ve been doing a little research and looking. And Fremont County, Idaho, just completed their Comprehensive Plan. They’ve been on about the same schedule as us. They’ve gone through...this is their third one, I think, and this is our third one, depending on who you count. They’ve been about two years ahead of us all along. And one of the things I found interesting is that’s the Fremont County, Idaho, Comprehensive Plan; that’s our Comprehensive Plan. Their vision statement’s two pages long; our vision statement is around 16 pages. Their future land- use plan map is one page. It’s pretty much at the landscape level; ours is much more detailed, pretty much looks at it not quite parcel by parcel, but pretty close. And I guess I asked myself why the big difference there? You know, because we actually share, if you read their Comprehensive Plan, some common issues. They have a large amount of public land. Granted, not as much as us, but still a significant portion. The majority of it is public land. Rural sprawl is a concern for them just as it is for us. Wildlife and open spaces is a concern and, not coincidentally, affordable housing is also an issue there. So, we share some common concerns with them. So I started asking myself why is that big difference there? Are our issues that much more complex? And I think the conclusion that I come to is the Fremont County Plan documents the vision of the citizens, and this Plan really has a lot of stuff in there in an attempt to sell a vision to the citizens. And that’s where I think a lot of the controversy comes from, is that it still doesn’t represent accurately the vision of the citizens. So, I think what we need is a simpler document that more accurately reflects what’s going on, and then we don't need all this other additional stuff to sell things. It should be a simple statement. And I think if we try and boil this down, it’s going to take a long time. We’re all willing to do that, but we need to recognize that going through and trying to simplify this down rather than…I recognize the attempt was to try and make things more predictable and, I think, correct the problem from before, but I think what we’ve done now is complicated it so much it causes problems of its own. So, that would be our recommendation, is that we take as long as it takes to get it down simpler. Thank you.</td>

<tr>
<td>6/17/09</td>
<td>Harrington, Steve</td>
<td>Steve Harrington, I live on Hanson Street. As I sat last week at the meeting and listened to all the comments and what I've read in the paper and so forth from the public, the major concern seems to be wildlife. And you set that out as one of the top priorities in terms of the governing of the entire plan. And as I understand the Plan, in the future, once the Plan is adopted and yourselves or the elected officials are asked to vote on some project, they have to somehow filter that project through a wildlife tool, and I don’t see how, at this point, at least, you have anything in the Plan or the prospect of making decisions regarding nodes or population areas or roads or anything else, that when you make that decision that you have any ability to determine whether it will have an effect on wildlife or not. And to me, if...and maybe it can’t be done. I’m not saying you have to do it. But I think somewhere along the way, before you start making decisions about, you know, a thousand more houses here, or 500 more houses there, or wherever, you have to get some advice from experts in wildlife, whether it’s the Game &amp; Fish or Fish &amp; Wildlife Service, or whomever it might be, to tell you what the practicality is of having anything in any place in the County and what effect it will have on wildlife. I mean, you may eliminate a whole node, for example, because it’s impossible to maintain whatever wildlife situation is there now, if you are going to add X number of houses. And as part of that, I would hope that if you put together a committee...I hate committees but, nevertheless, you know, they have their place...if you did that, that you would not only invite some experts on wildlife in the community...and I think we’ve had a long knowledge of wildlife from a professional standpoint...but you would also put on that committee the most vocal citizens who are advocates for wildlife. Because if at some point in time it becomes obvious that wildlife can’t be the most important thing in that area, or you can’t do what you want to do because of the wildlife situation, then somebody besides a government-appointed group making that decision...you know, there’s always the conspiracy theory out there that you guys are...you know, whatever’s happening...so you have to have some really concerned citizens in that group. Because I don’t know, you know, to me, you will hear comments, well, the deer are grazing in my backyard, well, they eat my flowers on Hanson Street. But that doesn’t mean in the wintertime...that’s because they have no place else to go. And the problem is when you make a decision about growth in any particular area, it may be five years before you know what effect it had on wildlife, and then the cow’s out of the barn. So, somehow or other I think that before you get too far down this trail, that you put together some expert opinion about these various areas of the County that you want to have the potential for development or additional growth, and filter that through that wildlife filter, because I think that would be very helpful, and I think it would calm a lot of the public sentiment that’s out there where people are getting really exercised about this whole wildlife matter. And the Plan is just going down this trail, you know, without really taking the time to consider the effects of what happens, especially in that wildlife component of the Plan. So, anyway, thank you very much.</td>
</tr>
<tr>
<td>6/17/09</td>
<td>Griffith, Gregory</td>
<td>I’m not going to say much...Gregory Griffith. I liked to echo Commissioner Duncker’s assertion, and also Kristy Bruner’s. I’d really like to see you take a vote, take a stand one way or the other. I think that would be helpful for the community. In closing, I’d like to say both Planning Directors shouldn’t have to sell us our own plan. That’s hard. I mean, you know, we shouldn’t have to be sold our own plan. So, thanks.</td>
</tr>
<tr>
<td>6/17/09</td>
<td>Kummer, Larry</td>
<td>I don’t know why any of you are surprised or upset with the motion made by your County Planning Commission. It is a necessary part of the process (debate and vetting) in the creation of this most important document. There nothing mysterious or difficult to understand about this recommendation. Tony, Forrest and Larry are paying attention. They have listened to the public’s comments; they have read their e-mail; they have seen the surveys. If there’s any mystery involved here, it is this: They seem to be alone, amongst our town and county’s elected officials, their planning commissions, or their staffs, who are paying attention to this mass of public opinion and input. . . or this fact: The majority of residents in Jackson Hole... those who don’t stand to benefit directly, economically... they don’t want this level of growth. I urge you all to read, and reread, Forrest McCarthy’s interview and comments in today’s News &amp; Guide, along with the writer’s (Cara Froedge) description of the numbers the draft plan allows for Wilson, the Aspens, South Park and the Town of Jackson. It’s all there in black and white. It’s horrifying. Forrest is right on: this is a plan suited to urbanization and promotes continued growth – which is diametrically opposed to open space, scenic and wildlife values.</td>
</tr>
<tr>
<td>6/17/09</td>
<td>Callahan, Mary Lynn</td>
<td>I’m Mary Lynn Callahan. I’m a Town resident and also a business owner in Town, and you’ve already received my e-mail comments and comments at the last County meeting last week, but there’s two other things I wanted to state, and one being in Town these wildlife corridors, like, for instance, Kurns Meadow, which I live right next to, that it really needs to be left as it is. A lot of animals use that corridor, and I’m hoping that they need that area to move across the Valley instead of just north and south in this Valley. And then the last thing I want to do is just encourage this Planning Commission to support the County’s Planning Commission in their motion that they made last week, because I agree with it and would hope that you would support them. Thank you.</td>
</tr>
</tbody>
</table>
Thank you. My name is Pete Halpen, and my wife and I and adult children have property at 565 Trails End in Indian Trails and we also have property in Teton County. So, we have both property in the Town and in the County. And I believe my comments are reasonably connected to the themes. So, it's a hard act to follow, the specificity, of the previous speaker, but I did speak at the previous County meeting, and I appreciated the opportunity to do so at that time. I am opposed to the Tribal Trails Connector. So this is a completely single-issue discussion, and I spoke against it at the previous meeting last week. Just a little bit of background, again speaking from my knowledge of the Connector and its antecedents, there was a time when it was a great idea to have bypasses around towns, and a lot of towns in America have them, and the State planned for that. There was a bypass planned, which would run up the Gulch, and over time, of course, that’s morphed. And there was a time also when, theoretically, and on the County Plan there could be up to 1250 units of housing between the two hills north of Wells Hill, up to the Wilson Road and through the Indian Springs development. Of course, that evaporated, but the Connector stayed on the Plan. And I didn’t like the Connector back then and I still don’t like it. And obviously being in my front yard or back yard, I like it less than most. In terms of...if I could just go through a couple points, and then I’ll follow up later with a letter or more appropriate means of communication, but in terms of the alternatives, which is really what this is about, since the Connector has been in the Staff documents, it’s been identified as a solution to Y-intersection traffic. I think that’s a very relative thing. I think that one of the beauties of the County in preserving the nature of the community and habitat and for planning purposes have been the fact we’ve been able to channel traffic as much as we have into as few arterials as we do. And putting a parallel, high-speed—it’s all relative again, high speed to us and certainly in our neighborhood through that area—is going to be, of course, permanently disruptive. And just to go through a laundry list of some of those damages, which I think would be quite severe to the neighborhood, obviously disruption to the neighborhood and wildlife, safety hazards, permanent noise, speeding traffic, reduction of property values and also damaging valuable view corridor that homes in Indian Trails have westward across the current Tribal Trails Road. And I certainly recommend to you that there are any number of standard conventional engineering solutions to the Y-intersection, and that the kind of money that would be contemplated being spent on the Connector could easily be appropriated in a different direction, including going to the State and getting that kind of support. And I might also add that the additional cost on road modification includes a major change in the Indian Springs access that was contemplated in the original zoning for Indian Springs. But if you talk to people...and I was in a meeting maybe a year or so ago...I heard some language, oh, it’s going to cost a couple hundred thousand dollars to move that road. I would argue that the actual cost of moving that access over to connect down in what are wetlands may be more than the entire cost of improving the Y-intersection. That’s before you spend money on the Connector. So these are very real things to the neighborhood and to people in Indiana Springs on both sides of the creek. It’s pretty obvious that the Connector is going to cut across major open space, which connects the mountains, and anyone who lives in that area sees the wildlife moving through there all the time. And of course there’s significant current agriculture use there, traditional agricultural use, that would be disrupted. So, in terms of looking at the impacts, I would argue that the Connector should be removed and that instead you should appropriate the money and other planning resources toward the Y-intersection improvements, and I think that’d be a good investment. And it’s much more consistent with the overall long-term values of the County and the Town to do that. Thank you.

| 6/17/09| Woods, Becky       | I know it’s a lot of time, and you guys are going to be in the political hot seat. Ultimately, we all want what we feel is best for the community. There may be some disagreement in that, but I wanted to thank you for your time. I also wanted you, if you continue this meeting, which I think you’re going to, to also allow public comment and a continuance. I think perhaps there’s a lot of people not from the County here because there was such uncertainty with what was happening in the process. So, I would ask you to please keep the opportunity for public comment on these particular themes and policies in the continuance, and not just discussion amongst yourselves because of that uncertainty. Okay, jumping right in, Policy 1.1(c), conserve large, contiguous and connected open spaces. It specifically states in the draft that that is necessary for habitat protection. It’s valuable for wildlife and connectivity between crucial areas. My problem with that, one of the largest open spaces is South Park. The way the draft is currently written, it’s basically develop it north to south with no preservation of open spaces. That defeats one of the main themes and priorities that our community values, which is both wildlife habitat and the scenic character of Jackson Hole. So, South Park as really...that language and visioning is not in line with that theme and policy. If you want to protect wildlife and conserve open spaces, the language of north/south development of South Park has got to be addressed, or you’re going to defeat that purpose under Policy 1.1(c). So very important. Same thing under Policy 1.6(a), conserve agricultural lands and agriculture throughout Teton County. Again, that comes down to our scenic character, our Western historic character, and also allowing the opportunity for Land Trust to come in and permanently conserve large tracts of land. South Park is not mentioned. That is one of the largest tracts of land. You go into Alta, Buffalo Valley, and Gros Ventre area, Spring Gulch, and South Fall Park Road. It was one of the first areas mentioned in the vision of the 1994 Comp Plan. I don’t know why it disappeared in this draft. It’s got to go back in, under Policy 1.6(a), again, for our scenic values, for our historic value of our community, and for wildlife. It’s a mystery to me as to why that just disappeared. It doesn’t seem to be in line with any of the surveys that have come out and what the community sees for its vision. Under Strategies, page 25, Strategy 1.1, it says, establish an environmental Commission, and they said it will be appointed by a volunteer committee of scientists. I urge the Planning Commissions to expand that to interested community leaders and neighborhood leaders, who have been working triple time on this, who have analyzed this line by line, who may have a different take on just someone with a strictly scientific background. I think that needs to be broader-based. It’s simply too important to our community. Same thing under Strategy 1.2 when it says, the mapping would be with the Wyoming Game & Fish data. I think there’s also very valuable citizen data that has been collected from people who actually live in our various communities that needs to be addressed. So, I would expand that to beyond just Wyoming Game & Fish, but to use all available credible data to do the mapping of our wildlife, etcetera. And last, just kind of a general comment that really does fit in with these themes and policies, and it’s going to come up again and again. South Park is not a node. South Park is an area. It’s over 2500 acres and it’s the only node that has not been defined. If you’re going to identify South Park as a node, that needs a hard edge, whatever it’s going to be, a quarter-mile pass, the South Park Road or whatever. It can’t be this amorphous South Park. Every other area has very specific boundaries identified with it. I don’t know why South Park doesn’t have it. I really recommend that that be addressed by the Planning Commission so these other themes and policies have a ghost of a chance of becoming reality. Thanks for your time...I’m still Becky Woods, and this is directly related to the themes and policies, actually. One of the problems I’m really having when I go through this draft and see the different themes and policies, which takes precedent? What’s our overall community vision? It seems to me we’re parsing off the Valley and saying, well, this is the area that gets the housing and this is the area that gets the wildlife, and this is the area that gets to have a nice view. And that’s not how any of us feel who live here. We are all integrated, and we’re one. And what I have a real problem with these themes and policies is there’s no one integrating vision. And in think without one integrating vision, we stand the very real risk of destroying the Valley we love. I just have a problem with themes and policies. What I’m looking for in a Comprehensive Plan is a vision. I think we had it in 1994. I don’t think we have it in the draft of 2009.

<td>Duncker, Paul</td>
<td>Paul Duncker, a resident of Wilson, Wyoming. The way I understood this whole process and how the interrelationship of the Town Planning Commission and the County Planning Commission were going to work...because I asked this exact question to my County Commissioners at a meeting that I was present at. I said, well, how’s it going to work when one board with 12 members and another board with five members have to come up with a joint recommendation? And it was explained to me that the Town Planning Commission has one vote on a particular motion; the County Planning Commission has one vote on a particular motion and, in order for that recommendation to get past forward to the County Commissioners, each board would have to vote in favor of doing that. So, if there wasn’t a unanimous agreement between the two halves of the Joint Planning Commission, a resolution would not be made to the County Commissioners. That's my understanding of how this works. So, I've got a request to make. I would request that this board vote on the same issue that the County Planning Commission voted on at the last meeting, which is rejecting this Plan and sending back to Staff for a do-over. You can vote, obviously, however you like on this. But if this board did not pass forward the same recommendation to send this Plan back to Staff for a do-over, as far as I understand the process, that resolution would never get made to the County Commissioners. If both boards are not unanimously in agreement, then that doesn’t go forward and both boards are then still reviewing the same Plan that’s on the table in front of us. So, that’s all I have to say. Thanks.</td>

<td>Tompkins, Kathy</td>
<td>Good evening. My name is Kathy Tompkins. I’m from Cottonwood Park. I agree with Becky that South Park needs more definition and not to just throw it away, defining it as a node. It sounds like something you’d find in your armpit. And I just have some observations that I made the other day and today, and it has to do with Policy 1.1(b) and, first of all, I want to make sure...this is unclear to me. When it says here, local state and federal governments must work with local biologists to create and keep current a baseline inventory of habitat wildlife and climate. And I am relating this to South Park. There is no inventory right now, as I’m understanding it. So, before anything is done, there has to be some kind of impact study done to clarify what we have in South Park, which South Park’s neighbors can pretty much tell you. And then the other thing that this, I think, relates to is the up-zoning of up to 1500 units in South Park along High School Road and down to...I don’t know if you’ve been along South Park Loop Road down to the nursery. I think that’s about three-quarters of a mile down. It used to be a half a mile; they kind of stuck that quarter mile in there...extra quarter mile. With the up-zoning with up to that many units and that much upkeep of that many units and the land that goes with these units, walking around my neighborhood and observing landscape companies coming around with their machines to spray lawns, to spray trees, to spread fertilizer, and especially these last few weeks with all the runoff we’ve had from the rain. And I was standing out there this morning with my cup of coffee and watching the water run down the street and empty into wherever else, and usually it’s into those ditches and the wet areas in South Park so, you know, down along High School Road. We know pretty much where that goes, but do we know where the runoff from the up-zoning of 1500 units in the northwest corner crammed into that northwest corner, what will happen to Fall Creek and the wetland areas around there? When you have commercial fertilizing, pesticides, herbicide programs going on, private and public, and you know that private aren’t always so good at reading directions, and a lot people do it on their own because they can’t afford the companies to do it for them. So, I’m wondering if anybody is going to look into this and see where all this stuff is going to wind up. I have a pretty clear idea where it’s going to wind up, and this is one of the things that happens when you create a whole new neighborhood where there is no infrastructure, there’s no studies done or anything like that. And just to remind you that from Cottonwood all the way down to the tip of South Park, there’s about 1500 homes, give or take a hundred or so. And then to put 1500 units in that little northwest corner, that’s a lot of concentration of chemicals and what we don’t know that’s going to wind up in the system. So, just a little food for thought.</td>

<td>6/16/2009</td>
<td>Harvey, Ann</td>
<td>At last Thursday’s meeting on the Comprehensive Plan draft I was heartened to hear so many eloquent statements in support of the most important values in Jackson Hole: wildlife and scenic resources. Almost unanimously, the people who spoke share my opinion of the draft plan—that it’s deeply flawed and does not reflect the clearly stated priorities of the public, as expressed in public meetings, letters, emails, a petition, phone and internet surveys, comments on the County’s website, and letters to the editor. Although various attempts have been made to dismiss and discredit the genuine concerns of a large portion of people who have commented on the plan, we are not some group of flaky outliers who just don’t get it. We’ve read the plan, tried to make sense of the maps, and participated in the process in good faith. Many of us have lived in Jackson Hole for decades, and have worked over the years to protect this place we love. We don’t understand why the draft Comprehensive Plan, supposedly written with public comments and concerns in mind, is so far from what the community asked for. It’s a plan for the destruction of Jackson Hole, a plan for diminished wildlife and fragmented habitat, a plan to turn Jackson into yet another frenetic, overcrowded, overbuilt mess like many other American towns. Have you read the comments on the County’s website? Have you listened to the public comments at the meetings? Have you read the letters to the editor? People hate this plan, fear the future it will create, and resent the refusal of the planners to listen to public concerns. On Thursday evening, three planning commissioners demonstrated that they were listening, that they have been paying attention to this process, and that they take seriously their job of planning for the future of our valley. Tony Wall, Forrest McCarthy, and Larry Hamilton deserve kudos for their action Thursday night, recommending to the County Commission that this draft be sent back to the planning staff for serious revision. It’s the right thing to do, and it took courage to step up and try to redirect such a seriously misguided plan. If any of you genuinely care about the future of Jackson Hole, then please follow this recommendation. We’ll be a lot better off a year from now, a decade from now, thirty years from now, if we get it right, both in terms of process and substance—and both process and substance are deeply flawed right now. Please don’t insist on ramming this plan through just because it’s what the staff wrote and you have a schedule. This is too important to rush, and community discontent is too strong to ignore. If you think it’s more important to stick to your schedule than to make sure the plan is sound, all of us will regret it down the road.</td>

We are writing in support of your concerns regarding the June 11,2009 County Planning and Zoning Commission's recommendation to the Board of County Commissioners that the draft Comprehensive Plan be remanded back to Planning Staff. The action of the Planning Commission did not fulfill their responsibility to provide specific recommendations on issues under their consideration; disallowed comment by members of the community who may have planned to attend meetings on the issue scheduled through July; and nullified the Town-County joint review process.  
There has been a great deal of public comment on the update to the Jackson -Teton County Comprehensive Plan. It is the job of the County Planning Commission to work jointly with the Town of Jackson to distill those comments, to weigh their validity, and make appropriate recommendations to the Board of County Commissioners regarding modifications to the plan based on their understanding of the will of the public - as well as on good planning practice.  
Further, we strongly believe that there is urgency to completing the Comprehensive Plan update. An extended process will significantly increase expenditure of public time and funds, and will subject the community to additional extensions to the development moratorium. |
| 6/16/2009| Wauters, Carol Wauters, Carol | Thank you for taking the courageous position you have taken, rejecting the current draft. I completely agree that the draft as written needs substantial rewriting before it can obtain the degree of public support necessary for successful implementation. I applaud what you done and hope this will lead to an outcome more compatible with the expressed wishes of the community. |
| 6/16/2009| Adams, Justin Adams, Justin | Congratulations on your courageous stand on the terrible first draft of the Comprehensive Master Plan. Please keep up the good work. Thank you, Tony, Larry, and Forrest. |
| 6/15/2009| Hamilton, Larry Hamilton, Larry | 1. The draft plan needs to be rewritten to incorporate the concerns and data that are a part of the public record. I do not believe that the Teton County Planning Commission has the expertise or the capability to rewrite or redraft the plan. What the Planning Commission does have the capability to do is identify what needs to be added to the plan, what needs to be deleted, what needs to be revised and what needs to be jointly considered by the town and county planning COMmiSSions.  
2. The joint meeting schedule with the town was not the preference of the County Planning Commission, yet it was scheduled anyway.  
3. The County Planning Commission is concerned that the present process will neutralize or negate any input that is not approved by both commissions. The possibility of having two revised drafts (one from the town and one from the county) should be considered as an option.  
4. The goal of the County Planning Commission is to have a draft plan that the community can support and embrace to begin a discussion of what is truly feasible and possible to implement in the next few years. The public comments and suggestions need to be incorporated into a new draft.  
5. To reconsider "the motion to remand the plan back to the Teton County Planning Department for further revision" is probably not an option. The motion was made and approved by a 3 to 1 vote. I do not think that vote will change. |
<p>| 6/15/2009| Stone, Cindy Hill Stone, Cindy Hill | Bravo! It takes a savvy, committed, intelligent group to realize that we do not live in anywhere USA and the livelihood of this valley is based upon the natural beauty that encompasses it. Thank you! The staff planners have been influenced and taught that bigger is better. Hopefully they will take this challenge to heart and realize that they possess the ability to do the right thing and be a model to other communities who are standing in the face of destroying what it took nature so long to build. Again thank you for taking the times to really get a handle on this problem. |</p>

</tr>
<tr>
<td>6/14/2009</td>
<td>Coon, Dave</td>
<td>Commissioners, I urge you to follow the Planning Commission's recommendation and remand the comprehensive draft plan back to the planning staff for a rewrite. As a blueprint to guide the long term growth and development in Teton County, the draft plan in its current form does not meet the vision goals of the community because it allows considerably more residential and commercial build out than permitted in the 94 plan. Nix this extra growth and put &quot;protecting wildlife&quot; as the top theme in each district and you will have a plan worth reviewing.</td>
</tr>
<tr>
<td>6/13/2009</td>
<td>Prayzich, Elise</td>
<td>Board of County Commissioners: It is my understanding that you have recommended that this Draft Comprehensive Plan be sent back to Planning Staff with the direction to rewrite it to better reflect public input. You have now given us a wonderful opportunity to get it right: listen to the citizens of this County and provide for less build-out, less commercial square footage, and considerations of open space and wildlife as the top priority in ALL themes! We hope it works!! Thank you all, once again!</td>
</tr>
<tr>

<td>I can't tell you how much we appreciate your vote last night. Thank you for having the good sense and courage to go against this draft plan. Maybe now they will listen to the real stakeholders who only wish to be responsible stewards of this great place!</td>
</tr>
<tr>
<td>6/12/2009</td>
<td>Wang, Louis</td>
<td>Dear County Planning Commission members, I very much appreciate your honest and straightforward action last night at the Comp Plan meeting. It's tempting to continue the pretense that the planning is going well and only a &quot;fringe&quot; of JH residents are unhappy. As the Mayor might say, just comments from the usual people. Folks have been &quot;dismissed&quot; for too long on this issue. They don't want an &quot;urban&quot; planning solution! Your telling the truth serves the people in a very constructive manner, something no one else has been willing to do. We've got the adult version of the Emperors New Clothes with this Comp Plan; it takes courage and honesty to blurt out the truth. You did it!</td>
</tr>
</tbody>
</table>
My name is Marv Heileson and I live in the County in South Park. And my wife and I have written to the Commissions and to the other bodies here and I won’t repeat that. But I just want to remark from the very outset of this, I’ve lived here for about four years. Born in Rexburg. Grandfather born in Freedom. Practiced law for 40 years in California. And represent developers. So, if I represent developers, I would like a lot of developers. I was a Planning Commissioner for seven years in a wonderful little city that drew the line and said we’re going to be semi-rural, Lafayette, California. And you take real courage on the part of a body like yours to draw lines and say we’re going to preserve what we have here. And low and behold all of the developers have now flocked to live in this little city, between Walnut Creek and Birchwood in that area in East Bay of San Francisco. So, really, you just really have to have a lot of courage sitting behind that desk to do the right thing. The thing that I think disturbed me most when I first got involved in seeing what was happening here is the euphemism being employed in this document by the Planning Staff. I’m not against planners. My wife has a master’s in urban planning, and urban planner most of her life. But the big euphemism is node. Now, what the hell is a node? South Park is not a node. South Park is the same distance, one house per 35 acres, some development down there, a lot of wildlife, talk to the moose and ?? that live in my back yard during the winter. You know, you go wrong when you use terms like node as just an excuse for saying we’re going to have high density in a given area. The same thing with managed growth. That seems to have gone to let’s have growth. It’s lost it’s connotation, managing growth. I think we need to restrict growth along the lines a lot of the speakers have indicated today. And the last comment I really want to make before I run out of time is I’ve noticed a great difference between this year and last year in terms of employee needs. People are crying for employees, you know, two years ago and whatever and they couldn’t get ‘em and, you know, they had classified ads and <<inaudible>>. Now, when a lot of people, even in my neighborhood, have lost their jobs, put their houses on the market, it’s radically different. So you’ve got to take that into account. I mean, we don’t have the workforce it needs today, and then certainly if you can limit your commercial property development, we won’t need that much in the future. But take that into account. Thank you very much.

My name’s Thomas Porter. I’ve been here for this is the year 43, on and off. I came here first in 1966/67. Coming over Teton Pass was awesome. You stand in front of the Virginian Lodge, you know, there’s nothing south of the Virginian Lodge but fields, okay. So, now, I want to know how many of you right here at these tables actually believe this Comp Plan is the real deal? And admit to it, and tell us that you admit to it. Cause I don’t believe it for a second. It feels like you’re forcing it down our throat. We have 3 percent available virgin dirt left in Jackson Hole. It’s been pushed out. The first thing that happened was the sign on top of Teton Pass—welcome...howdy partner, welcome to Jackson, yonder is Jackson Hole. Some two-day wonder thought it would be great to take it down, let’s change the sign. Then you guys put an ad in the paper saying we lost our character. Well, it’s obvious that when we see buildings that go up like the trashcans on Snow King Drive, or the ones that are out on the Village Road. You call it affordable housing. Out in Wilson, you call it affordable housing. Well, okay, let’s go to the next point. Vail Associates come in here and you talk about trust. Vail Associates comes in here. Where’s our affordable housing for Vail Associates? How many years ago was that? They said they were going to start doing something about it. Okay, what about when everybody complained in South Park about Roger Seherr-Thoss’ gravel pit and being a beautiful thing. So, what do you guys do? How many people in this room realize that the County gave Roger Seherr-Thoss a chunk of money to buy him out and then backed out of the deal and then he got stuck in his hand with $250,000 worth of taxpayers money? Does anybody in this room realize that? We have 3 percent available virgin dirt. We need to look at this whole Comp Plan and revise it for what we want, the people in this room. It’s not your deal; it’s our deal. We live here. We’re the taxpayers paying your jobs. That’s all I have to say.

Okay, I’m number three, Craig Schwender. I live in the County and I don’t represent any group. We’ve been property owners since 1978. Paid off our 30-year mortgage last summer and hoorah. We feel the Comp Plan has faults but I’m going to cover briefly just one, that’s the growth rate. Many times over the years the people of the Valley have said in various forms and studies that we don’t want fast growth. We want slow growth and thoughtful growth. The planners in their meetings told us they listened and they understand it, but it doesn’t seem to show up in the Plan. They’ve assumed growth rates that are far beyond what is really reasonable. Certainly growth is inevitable. Property owners have rights that we have to respect. And we will. But to, for example, triple the size of Wilson is not reasonable. To increase the potential build-out of the Aspens from the present ten to three hundred more units is a thirty-fold increase and, to be charitable, that’s absurd. To allow these nodes with such high density essentially subsidizes developers of properties by having us house their workforce. I see no fairness in subsidizing developers, not those who put up a new restaurant in Town nor those who put up a new hotel in the Village. We expect our Commissioners to vote in the interest of today’s residents, today’s voters, not some kid in California who wants to come out in a few years and ski bum for awhile. And to finalize real quickly, I thank you all for your public service. It’s thankless and if you don’t think it’s thankless, just ??.
Taylor, Nancy  
Conservation Alliance  

I’m number fourteen for those who are following. Thank you for having this meeting, for all your public service and for allowing public comment. I think it’s really important and an integral part of this process. I’m speaking as an individual in the County. My name’s Nancy Taylor. This Plan is disconnected without a holistic point of view. There are good values expressed in the introduction and I think they’re values that we all support. But there isn’t adequate follow-through to those values when you get into it, especially the nodes in the specific districts. If you, the Planning Commissioners, are going to be able to implement this Plan, you must have a document that gives you clear criteria based on scientific evidence. The NRO, maps that Franz mentioned and the overriding value of community character, which was what the ’94 Plan was about. The FLUP does not provide you with those tools. The ranges of possible build out within each node will not help you to clearly approve or deny future development. There are no clear-cut standards for how monitoring will be done. And lastly, if Jackson is seriously considering being a kinder community that will teach the rest of the country and the world to be a carbon-neutral community by the year 2030 or the year 2050, and this is under consideration right now quite seriously by members in our community, elected officials as well as community members, making Jackson a pioneer community be carbon neutral, we cannot double our population. We cannot build 9880 new residential dwellings and achieve the goal of carbon neutrality. And I just want to mention that if the maps in this current Plan show that development in Wilson could be a possible nine units per acre. And I remember when the first original Plan was written in 1978 that the designation, because it was in a hundred-year flip Plan, was one house per three acres. So but that designation has changed greatly, and I think that needs to be addressed. So, we have an amazing opportunity as a gateway community to demonstrate to the millions of visitors who come here that we value community character, wildlife and open spaces. Wall Street taught us a recent lesson that fueling greed and growth ends in tragedy. Let’s rewrite the story with new players and a long-term vision that’s truly sustainable. We owe it to our grandchildren and to the wildlife that sustains our souls, not our bank accounts. So, if you can’t implement this Plan the way it reads now, all of you, I implore you to create a Plan that works. Thank you.

Marsiglio, Pete  
Interested Public

I just want to say from what I can see the Plan is a very pro-growth Plan and at the cost of subsidy, of regulation and incentives. I do encourage some growth and from what I’ve heard natural growth is more of a term that I would like to apply to it. But I’m very against regulation subsidy and incentives for the fact that it encourages growth that’s maybe unnecessary. And when you take natural growth into account, you could have someone who’s going to, say, build a hotel and are worried about not having workers, and this comes back down to the affordable housing subsidy, if that developer is worried that they’re not going to have enough workers, that’s a natural, self-regulating type of growth where they say, well, maybe I shouldn’t build this hotel because I’m not going to have the workers. But for a community to just say, well, we’re going to spend money and, you know, the cost to the taxpayers giving that subsidy to help give housing, it gives more incentive for that person to build that hotel. So, it seems like it’s a very forced Plan where we’re trying to force more growth unnecessarily when we can naturally regulate. And then the other big thing is when you look at the current stand of economic affairs in countrywide, you know, in America today, I just look around Town and I see empty lots that were once a development. I see a lot of empty retail space. You know, obviously, it’s every man for himself. It’s an American tradition to want to build something. You think you can sell it, you think you can fill it, you think you can make money on it. That’s great, that’s the American way. So, in a way, you know, I’m... I encourage that, but I also going against my beliefs saying that up zoning and trying to create more space in other places when we already have it. Condensed growth is good, but the sprawl is not very effective when we have stuff that already needs to be filled. And then a lot of this stuff started happening a little more rampant when the 2008 fall money basically from the federal government was just starting to be handed out to just about anybody. Well, all that can do is create inflation, which down the road is going to create more people not traveling, more people not taking part in what I should say excess, which in turn will create more empty buildings and more spaces that will be available, and which in turn will affect an economy down further which can lead to more things. So, natural, I think a natural-growth-type Plan is a little bit more effective than forced growth. And I see it being a little too forced.
Halpin, Pete
6/11/2009
Good evening. My name's Pete Halpin and I have property both in the Town of Jackson, as does my wife and two adult children who are residents, and property in the County. And I'm here to speak solely on behalf of my own family in opposition to the tribal trails connector. And I do intend to submit other written opposition to this connector along with either by myself or with others who share my convictions about this connector. Let me just say I have two principal things to say in regards to the connector, one which I have to say with a little bit of a grain of salt, which is that I applaud the concentration of traffic in the major arterials in Jackson Hole. And I think that one of the principal factors that enabled us to control environmental impacts and lead to a higher quality of life is that we have so few roads. So, my basic thrust is let's throw the money at the WY intersection and not run a second major arterial down the center of Jackson Hole, because that is exactly what it's going to become. Let me say that I'm in my 46th year in Jackson and in the Valley and if you want sprawl, build a connector because that's exactly what it's going to lead to. And I'm not going to spend the rest of my short time I have allotted this evening to speak to all those more technical reasons why I think this is a bad idea, but it's certainly going to be a nightmare for our neighborhood. And I might say a lot of people on both Indian Trails and Indian Springs actually believe that this connector is never going to happen. And as somebody who's spent a lifetime in transportation planning, I can tell you that it could happen. And I think it's a bad idea. And let me just say a little bit about the history as I recollect. This bypass, this connector started as a ill-fated Town of Jackson bypass. And a long time ago that was a great idea. Because planners thought that if you had a small growing town, you needed a bypass. And you can find those bypasses in many small towns around America. And fortunately we didn't choose to have a bypass. And when Indian Springs was developed, I remember one of the principal factors that were involved—it’s not the only factor—some people in the County who were looking ahead for this very kind of meeting to happen, many decades in the future. It's been many years since then. But the reason why was because, well, the state of Wyoming wants it. And I remember that because I was in the state of Wyoming. It's on the plan; you've got to have it because in the state of Wyoming in Cheyenne it's hard to get those things off the plans. That's a fact; that's a fact. So, I leave you with some of those thoughts. How does a bad idea get embedded in a Plan?

Halpin, Pete

Harrington, Steve
6/11/2009
By the way, I'm number twelve, if anybody wants to be thirteen. My name is Steve Harrington. I live in East Jackson. I've lived here for 40 years. I think if you...the way the Plan is set up currently with the two most important factors being wildlife and scenic corridors and whatnot, then we know the problem is, and the enemy of those two things is, people. And it doesn't matter whether they're rich people, poor people, tourist people, or whoever they are. But wildlife and people are at odds. You can't...they can't co-exist if there are too many people that move the wildlife off...out of their habitat. So, if you are...if we are truly wanting to look at that circumstance as the number one priority, as Jean said, you don't to be...we don't want to be ?? The public that we're looking at it but we really know we can't do anything about it. If that's the case, then we ought to be up front about that because...but if you really are truly looking at that, then the only way to deal with that is somehow to limit the number of people that are in this Valley. Coincidental with that, the one thing that I have never seen in my time here is we have always had a population, a resident population. We say the census says there's 20,000 people that live here. That's not really true because that never counts every motel, every condo, every other rental property that has transient visitors. There's a huge difference between the number of residents and the number of people who can be here on any given day. And that is what drives a lot of what happens in the community in terms of public services. Why do we have as many police officers and sheriff's deputies as we have? It isn't because of the 20,000 people that live here; it's for the 50,000 or 60,000 that can be here on any given summer day. With that in mind, I also think that you should be looking at somehow some sort of a way to work backwards to actually look at what the impacts are going to be from any number of additional homes that we put out there. If you say we're going to put...pick a number, 5000 new homes, what does that really mean in terms of people? And if you tell me that, then I can work backwards. I can tell you you need to have five lanes of roads on, you know, going out to Wilson. I can tell you how big the sewer plant has to get. I can tell you all of these things. Those are the kinds of scenarios I think you need to work through before you decide on what the final number is going to be. And somehow I think that is where you have to look more. Thank you.

<td>Brooks, Clark</td>
<td>Yeah...actually, my number is number two but because I never sat in the front of a classroom, I took number two, but unfortunately no one took number one either. My name is Clark Brooks. I live in the County on Thistle Road. I want to, as the meetings come up and since it’s a major driver, is focus your attention on theme #4, which is the housing. And in there it’s stated that we want to provide 65 percent of our employees in the County with housing. And I’m...since this is a major driver, I’m going to reach out and grab the third rail here. There are two issues that I’d like to bring up. One is philosophical. Like most people who have moved to the Valley, I spent a lifetime commuting, and I spent over 30 years commuting to various cities as did a lot of my friends in Chicago, New York and LA and San Francisco. And so the idea of there is some sort of inalienable right we have to subsidize housing that’s approximate to your point of employment, really, I wonder why we have to do this. The second point I want to make is one that’s economic. In this Valley today, you can hardly buy a footprint for a house for less than a half a million dollars. Let’s say that you could buy one for two hundred thousand dollars—there is none available like that but let’s assume you could—if you put a hundred...if you put a thousand-square-foot house on this, then at $200 a square foot, you’re talking $200,000. So, that’s talking, for affordable housing, that’s talking...the reality is $400,000. If you need, under this Plan, let’s say, pick a small number at the housing, employee housing, then you’re talking four hundred million dollars. Now, in the paper I don’t know if these numbers are right, but if you’re talking 2000 employee housing, you’re talking eight hundred million dollars. So, I think someone has to look at this and say is this 65 percent number realistic. And I would strongly suggest you ought to start looking at perhaps we provide employee housing on the other side of the Canyon, south of Town, or over the hill.</td>
</tr>
<tr>
<td>6/11/09</td>
<td>Adams, Justin</td>
<td>My name’s Justin Adams. I’m envious of people who have lived here 35 and 40 years; I’ve only gotten to live here about 15 years. I’m a resident of the County and I own property in the Town. What I’m hearing tonight is people want Jackson Hole to be a community and not a resort. So why are we expanding the lodging overlay in Town? What’s our obligation to house employees of five-star resorts? The density increase which is necessary for this housing is a very subtle tax on everyone’s quality of life. Should taxpayers subsidize vacations of the wealthiest people in the world by building this housing? Let’s house poor infrastructure employees. That’s where the housing focus needs to go—teachers and nurses. Subject to traffic, the Save Historic Jackson Hole presented to the planners and the elected officials a study by a guy named Bernstein. It’s highly critical of the traffic planning in this new Comprehensive Plan and we just wonder if anybody’s read it. I think that this Plan is a vain attempt to solve a development problem with more development. I urge you to dismiss this Plan outright and start over. I attended earlier meetings on the Plan and the Planners must have heard different comments than I heard. Let’s show that we’re not an ?? and radically downsize the Plan out of respect for the people who live here. Thank you.</td>
</tr>
<tr>
<td>6/11/09</td>
<td>Sibson, Barry</td>
<td>My name is Barry Sibson and I live in Polo Ranches. I’m here tonight to plead with both boards to reject this draft Plan out of hand. The basic problem, my belief is that if you plan and have regulations that allow development, that development will come. When I see that this Plan could allow another six to eight million square feet of commercial space, I’m outraged. It’s totally a possibility to achieve the vision, which I agree with strongly. But this Plan has too much development. It’s totally out of line. To me, commercial development should be under new commercial development. It would be under two million square feet. New housing should be under 5000. If we have anything more than that, even if it takes 40 years or 50 years, we have set, those of us here now, have set the destruction of Jackson Hole. And I don’t want to be a part of that. Thank you.</td>
</tr>
<tr>
<td>6/11/09</td>
<td>Callahan, Mary Lynn</td>
<td>Okay. Mary Lynn Callahan. I’m a Town resident and a downtown business owner. I’ve already submitted an e-mail comment, so I just want to hit on a few more items. One of them being that the new Plan it seems like it’s encompassing some old ?? items that were voted down by referendum in this Town, such as four-story buildings, up zoning, and I would like to say please don’t include those. Secondly, the ?? Meadow. I think I read somewhere about that it didn’t have much wildlife value. I really disagree with that. I think it has great wildlife value. I live on the edge of it. There’s deer that need a place to come through our Town, fox, there’s all kinds of wildlife through there. So, I would like to see not much human development in that area. The next thing I would like to say is claiming wildlife is important in not only certain districts, but all districts. They all have to be compared to each other and included with each other. Also, checks and balances in that growth process. Like what happens if it does start growing too fast, you know, are we going to look at it at certain periods of time? Next, specifically, defining what human needs are in the Plan. I noticed those words used often in that language and I’d really like to see that language more specific. What does human needs really, really mean to us today or five or ten years down the line? I just want to thank everybody for all their volunteer work and their service. I know it’s huge. And the other thing I’d like to recommend is if you need some committees and what to have some extra people helping you out, just ask. Thank you.</td>

</table>
Gregory Griffith, West Banker. I'm here to present a petition, a loosely organized yet ?? by eight or nine neighborhood groups. Intended to circulate internally, word spread quickly, interest was high, so it naturally expanded in scope. Momentum in both signatures and sentiment continued. Petition states wildlife and open spaces—values the community has cherished for decades—will be reinstated as the community’s top priority and will become the organizing theme of the entire Plan. Some may be surprised to learn that wildlife is the top priority in only 8 of our 25 districts. At a cost of 25 districts, the average value of our precious wildlife is only 4.2 out of 7 categories and as the County knows, wildlife is a paltry 5.5 ??.

This is completely and utterly unacceptable. How many times do we have to say it? How many forms of communication must we use? We’ve attended meetings and we have commented, we have faxed, e‐mailed, phoned, keypad, internet, questionnaire, polled, surveyed and face to face. All with the same overwhelmingly consistent result—wildlife is to be number one. This petition is not meant to be the full volume of public comment. It’s not meant to be a sentence of public comment. This petition is meant to be the exclamation point to this phase of public comment. It is acknowledged and except for referendum we do not govern by petition. Even though our former government arguably began in what was essentially a petition. A relatively brief document body followed by 56 signatures—the Declaration of Independence. In this sacred document, Jefferson penned a statement which remains amazingly apropos today. I quote. We have petitioned for redress in the most humble terms. Yet our repeated petitions have been answered only by repeated injury. This is precisely how a large segment of our community feels. The Comp Plan as presented bears no resemblance to our well‐documented community will. Therefore, we petition you, as appointed, to send forth to the electives a mandate to reinstate our irreplaceable wildlife to their rightful position to the top of each of our 25 districts. This does not mean that if a member of our rapidly dwindling moose population was once spotted in the vicinity, that all development is off. This does mean that the conversation starts with conservation. That the direct and cumulative impacts to our wildlife and natural resources be addressed first as priority number one. And that an equitable exchange of biologically valuable permanently protected open space be priority number 1.

A prior to discussing any density bonus anywhere. In closing, there is an undeniable symbiotic relationship between our incomparable ecological wealth and our economic health. This is not a coincidence. Our greatest legacy will not be what we build, but what we refuse to destroy in the process. Thanks. [see petition document]

Bob Morris, Teton Village, and these are my opinions only. We should not be encouraging commercial growth, including lodging. And we should not be encouraging free‐market homes. The clustering along High School Road should be accomplished not by up zoning but in accordance with the Plan of ’94 so that the sum of 85 percent of all that land is dedicated to perpetual open space. And lastly I recommend that you call on one‐minute speakers first
Good evening, Commissioners. Franz Camenzind, Jackson Hole Conservation Alliance. I guess I can say I’m a 39-year resident and a short-timer at that. I really do want to thank you for the time you have put in and I don’t envy the time you will put in. This is going to be a daunting task for you. We’ve looked at this Comprehensive Plan, this draft, very, very thoroughly for a long time and we’re sad to say that we feel it’s fundamentally off track. We started out with the idea about two years ago that this is going to be a tweaking, a correction of the ’94 Plan, and somewhere unexpectedly it’s turned into a brand new Plan that I think has lost its way. Gone is the strong endorsement of the small-town character, the western character. Instead we have, I think, a mixed bag of disconnected tools. Absent is a road map that would bring us to a clear vision for Jackson Hole that I think so many of us share. And I think it was expressed many times in the polls in the early part of this process. We want predictability. You want predictability. We’re going through a Supreme Court nomination right now and there’s this discussion about having activist judges. I believe the community doesn’t really want activist planning commissioners. I think we want people who are trained to interpret to make sure that developments fit the rules. And those rules, if they’re clear, I think will give us the picture of the future that we want. Having said that, not everything, excuse me, in this draft Plan is bad. I think the idea of using districts, I think that’s a good way to go. But the way they’re presented, they seem to be existing in vacuums. We really don’t see how one district fits into the next. We don’t see that big map. The discussions aren’t that way and certainly the analyses are absent. We think Chapter 2, which describes vision, has some good points. I think it’s a very clear vision, but again it seems to hang there and really not present itself through the rest of the chapters. The question is will a Comp Plan guide the formation of new LDRs, and I don’t think this Comp Plan can do that. I don’t think it gives you the direction to give good, precise LDRs. And that’s what this is supposed to do. There’s a lot of ambiguity in what we see here. There are a lot of variations in the numbers that we see. One thing that’s missing, this community has expressed for decades—and you’ve heard it tonight again and I’m sure you’ll hear it more—our value, how we value wildlife in our environments. The NRO is absent in this Plan. It’s discussed a little bit but it doesn’t come back in the district maps. It doesn’t form the basis for how districts are determined to be used and how they should be planned. I think that’s a fundamental flaw in this process and I think it’s something that has to be brought front and center is this whole NRO...plan our own mapping....Thank you for allowing me a second opportunity. I’ll try to keep this shorter. There’s one point that I’d really like to make here and one of the favorite things that we’ve ever done as a community is deal with resort district master plans. And right now we have 5 designated resort districts in the County. When I look at these districts, the 25 future land-use districts, 9 of them, 9 of those 25 districts have a mixed-use, visitor-orientation category. That’s the category that allows resort development. So we have openings in 9 districts right now for an Applicant to come in and ask for something that will resemble a resort district. I think this community and certainly our organization would straight out like to see no more new resort district designation, and I think this language has to be cleaned up so that no one can make an application into an existing zone that would allow that debate to go out. I don’t think you want to see me up here arguing against resort districts and I don’t think you want to have to go through that process anymore and I don’t think this community wants anymore resort districts. Thank you.

Brook Bullinger; I’m a resident of Teton County for 35 years. And I want to start by saying I know a lot of people have put a lot of time and effort into this Plan and it’s not the final version. But I do think there’s been some mixed signals arising in the Plan that I’m going to kind of go over here so maybe you can understand why the public is frustrated. This was originally touted as our Plan, so we the public filled out forms, answered telephone surveys, attended and spoke at meetings, wrote letters and e-mails. There’s never been any question whatsoever that the top priority for the public are the protection of wildlife and open space. This is indisputable and it has never been contested. Then the Plan is released and wildlife is downgraded. The initial statement may say wildlife is first but that’s not in the nuts and bolts of the Plan. When apart from the rural areas like Kelly and Buffalo Valley, wildlife is actually now rated fifth or sixth out of seven themes in 17 of 25 districts. Somewhere there is a disconnect. People are discouraged. How many times do they need to say the same thing over and over, attend another meeting in the midst of a busy summer? Now we’re told the Plan will not be directed by referendum or survey but by STAG experts and some electives. Why is our future being decided by input to which we are not privy? Where are the minutes from the STAG meetings? Who are these experts? We’re always told don’t worry, we’ve got it covered. We’ll have annual reviews. Reviews by who? Paid for how? How do you undo damage that’s already done? So, again, I feel it’s just mixed signals. It’s our Plan. Or is it not our Plan? Is wildlife first or is growth first? But I want to end on a positive note. I want to say I’m really, really proud to be a member of this community. I think people in this County are more intelligent, more engaged, more participatory and passionate than anywhere else. We realize this is the single most important thing that will determine our quality of life in the future and we’re not going to go away.
Date: 6/11/2009
Name: Kolsky, Eddie
Comment: My name is Eddie Kolsky. I’m currently an active resident of Teton County and basically almost every speaker has said what I feel, so I’m not going to say much new except that this is our Plan. It doesn’t feel like our Plan. It doesn’t reflect what our community has expressed or at least stated. I agree with Armond Acri, Gail Jensen, Elizabeth Kingwell, Nancy Hoffman, Nancy Taylor—very well stated, Nancy Taylor, by everybody—??, ??, Bob Morris, the woman from South Park, the second speaker, the fourth woman from Wilson, the fifth woman with respect to the ‘94 Plan, I think it was a draft or step backward with respect to development especially. I agree with her on having a cap on growth as well. Jean Ferguson, and after Jean Ferguson, Mike Cunningham speaking for the Aspens homeowners, Franz, Gail, and that’s about it. Thank you very much for all your work.

Date: 6/11/2009
Name: Jensen, Gail
Comment: Hello, Gail Jensen. I’ve lived here since 1980 and most recently we’re trying to get very involved in community affairs in my old age, over 50. I would first like to thank… I would like to first say thank you to all of the Town and County Planning Commissioners for holding this open public forum. I know that many share my frustrations with the Comp Plan process that has gotten us to the current draft Plan. At present this is not the people’s Plan. I have attended countless meetings on the Plan witnessing lobbying efforts to direct the Plan by special interests in one way or another. It is obvious that much of the lobbying efforts from some have quite an influence in the direction of this Plan. From the outset of this process some of the first comments from the Planning Staff were we are not and will not plan by public referendum. Listening to this repeated statement at numerous meetings has sent the wrong message to the citizens of our County. What we want does not matter and will not define the Plan. That is the take that I have from those numerous comments. I now ask that you please listen to what citizens say via surveys, letters, comments and follow the will of the people. Here are a few of my concerns. Protecting wildlife and open space should be the number one thing throughout the Town and County in every district. Limit growth to current built out with base zoning. What is the current built out of the County without zoning incentives? The current build-out number used in Appendix I has grown from the planner’s interpretation of build out, which is a non-consistent formula using a percentage of possible incentives that could be used developing or, excuse me, could be used, depending on the developer’s proposal. Because of this manipulated interpretation, the numbers as presented in January of 2008 have dramatically changed. The real number is very important to us. We have asked repeatedly, please give us and plan for the real accurate number. Numbers of people with all of our impasse, the buildings, roads and our community is what will shape Jackson Hole’s future. We need to plan for the real current build-out number and as it relates to that total population. Theme seven, provide quality community facility services and infrastructure, should be a sub-category of managed growth. Any growth whether entitled or not should not occur unless the infrastructure is in place. The notion of regionalization should be embraced, not avoided. We will never build enough workforce housing within our County to counter the proposed growth of the residential and commercial development even to meet the 65 percent with this Plan…Hi, Gail Jensen. I just have a couple more quick things that I didn’t have time to finish here. I really feel that there are huge tax increases necessary in most of this Plan. I am not supportive of this. Growth should pay its own way. I’m glad to see the monitoring requirements of this Plan; however, there are few if any current baseline numbers to measure performance. There are a few if any triggering solutions stated to implement if goals are not met. Where are these studies? The node concept has some promise but only at densities that still respect the number-one theme and as part of the overall theme of staying within the current build-out numbers. I hope to attend as many of the future meetings as possible so I can comment on more specific concerns. Thank you for the opportunity to share my thoughts.

Date: 6/11/2009
Name: Kingwill, Elizabeth
Comment: Hello, I’m Elizabeth Kingwill. I’ve lived here for about 30 years, lately in the County, having changed to Town, with residences at both. Planning the long history in this community and this day has been very short, too short in coming. This Plan is about build out, something that is pretty scary in my ??, in any ecological community, there are living factors and land ?? That real limit. We have come to that point in the County and Town where people in the natural world are ever clear of competition. And I do agree with Mr. Harrington. The real limiting factors here tonight in the foreseeable future must be you folks and the electives. There are hard choices coming for you all, for us all, from vulnerable populations, wildlife in the natural world, and young people and workers who make our Valley function. This Plan has evidences as build out, commerce and urbanization and I object to that. This Plan is misleading in the sense that more housing is a red herring. It will not be affordable for workers or families and it will be at the expense of wildlife, scenic values, and community character, whatever there is left of that. Thank you.
Hi, I’m Kathy Tompkins. I represent a group of concerned neighbors in Cottonwood, in West Jackson. I’d like to read a statement here. I believe the rewrite of the Comp Plan emphasizes too much residential and unmitigated commercial growth. Instead of solving and managing the consequences of past growth here in Jackson Hole, we need to solve these problems like protecting the wildlife we have left, exploiting our ?? To County, putting more sidewalks in, building more paths, putting in place a Plan to green up the homes that are already here, beef up the transit system, keep up the work on bringing up our public vehicles, educate people and incentivize zerscaping, water conservation, and eliminate contaminated runoff into the wetlands and waterways, and continue directing employee housing in Town and the Village where the largest number of jobs are generated. We cannot learn and be successful at doing these things I just mentioned until we get a handle on limiting growth. Solving these problems is a daunting job on its own. Major up zoning in South Park and the other nodes mentioned in the Comp Plan and the increased unmitigated commercial growth proposed will make it impossible to change attitudes and life styles for people already here. Let us limit growth and solve the problems we have and then we won’t have to rely on growth to solve the consequences of past growth. And I also have a local petition from the Cottonwood area that will be ongoing, but I’d like to submit the first part of it tonight. Thanks….Kathy Tompkins, Cottonwood. And I’d like to say I’ve lived here 10 years and I do, too, want to thank everybody for putting in their time and effort, and hopefully we can come out with something really good. And my invitation to all of you—I think I sent you all e-mails for coffee at my place and a little tour of Cottonwood—is still open. And I could show you the area and show you what a nice single-family neighborhood is and hopefully we can preserve the single-family neighborhood. And I think that is what really keeps this Town together. Okay, thank you.

For the record, number fifteen, Armond Acri, representing Save Historic Jackson Hole. I’m also a citizen of the Town of Jackson. I would like to start off by recognizing that the 1994 Plan was not perfect. It set some goals but it didn’t measure things and it wasn’t always clear. And I think there are some definite improvements in this Plan, one being the tend to use measurements. That is a big improvement. But we have a pretty big concern about that. A lot of the indicators, you know, some of them are set up to fail and that’s in my written comments, so I’m not going to bore you with doing that again. But we do need I think to take action not just to monitor them. A lot of these indicators there’s talk about, just monitoring but not necessarily taking action. And I think that really the time to talk about the action is now in the impartial, I mean, it’s emotional right now as we know from having gone through all these developments and proposals and things, that it’s even harder to have a coherent discussion. So, I really think that it is important because we would like to see this Plan succeed. We offer that as a strong suggestion. We do need to have that debate now. Also, we’d also like to point out that no reporting of the indicators that are promised us would be in our mind evidence that we are going too fast regardless of the growth rate. I think that’s an important concept, so I will repeat that even though that was in my written comments. We also believe that it’s important to look at not just growth rate and not just per capita, we think we have to look at both in concert with each other. We recognize the current process is inefficient and causes splits in the community as is mentioned. We definitely need a more predictable process and the time to do that is now. Again, the less charged environment of 30,000 ?? Rather than the immediate ?? Projects. As opposed to Steve Harrington, I just want to confirm…agree with him on defining visitors versus residents. That’s a really important concept here, is that we need to recognize what is our population. That’s one thing that’s not addressed here we think needs to be done. And again there’s no clear vision of what’s going to happen ten years out or at build out in terms of what’s going to be needed to support the amount of growth. We really feel that that’s something that needs to be done. Proposed NC changes in the targeted growth areas and it’s greatly changed, the fields, many of the neighborhoods they’re targeted for growth, we think there’s sufficient capacity in the Town of Jackson for this period. And lastly I think there’s a need for consensus on numbers and would suggest ?? Or someone else get together to validate and propose numbers that the community would then support and be able to evaluate the proposal. Thank you…. I just would like to add one more thought as we go through all this and that is to express at least a concern. I think the schedule that has been laid out is very commendable, it’s very ambitious, but I’m concerned not only for you guys’ well being but also for the public. I mean, if you guys have got to hold two meetings a month on top of all these other meetings, then certainly I think we can go forward and try this, but I hope you guys are at least agreeable to that. We don’t want you guys to burn out and we certainly don’t want the public do that. Somewhere we need to have some balance between getting the input and not being something that grinds everybody down, including you guys. So, I would ask you to consider that as you go forward.

<td>Donovan, Ted</td>
<td>Thank you. I’m Ted Donovan. I’ve lived in the Valley about 30 years. I’m not a newcomer, so I’ve seen an awful lot that’s happened here and many of you I know. I’m concerned about the economics as it affects the individual taxpayer. We saw what happened a few years ago. We’ve had to improve, expand, the County buildings. So, this Plan they’re planning now you’re going to have to tear those down and I don’t know where you’re going to put new buildings. You’re not going to be able to domicile what’s going to be needed. The cost to the taxpayer is going to go up exponentially. I mean thousands and thousands of dollars. Look at some of those communities out west that have gone up $25,000 for individuals homes. You know, it’s awfully nice to say we need more newer housing for workers but how many workers are we going to need? How many people can we accommodate? Do we want to accommodate? What kind of a community do we want in five years? I’ve seen what’s happened here in 30 years. It’s astounding. I hate to see the character change. I realize change is needed but how much do you need to change? I think you people got to seriously look at it. Thank you very much.</td>
</tr>
<tr>
<td>6/11/09</td>
<td>Berkstein, Todd</td>
<td>My name’s Todd Berkstein and I’m a resident of the Town. I won’t be redundant and repeat anything that other people have said, but first will appreciate and thank all of you, both Staff, paid and unpaid, for your efforts. You have a task that I wouldn’t want to endure. You asked for specifics at the beginning and this may be getting a little bit ahead of the game. But there are three things that have come up many times amongst many of us that have spoken that need to be addressed probably as part of the LDRs, so excuse me if this is too soon for it. But two things that need to stop and/or change. The ability for developers to come to Town or County and go on for one, two, three years continually coming back asking for variances. It’s got to stop. Many of the local working people feel that if you have enough money, you’re going to end up getting what you want in the end. Part of that also comes into play is height variances. It seems like more times than not heights are allowed to exceed what is already in code. Employee housing, it seems to be almost a joke for any new development, commercial development, when I read that they have to provide housing for 1.7 employees. Why isn’t this more along the lines of housing 25 percent, 50 percent of your employees, which will take away a lot of the need for further development that a lot of it needs to be employee housing? I think that’s really all. Thank you.</td>
</tr>
<tr>
<td>6/11/09</td>
<td>Hayse, Bruce</td>
<td>Yeah. I’m Bruce Hayse and I have the fortunate having Frank Ewing as my neighbor. I came in a little late so I couldn’t really hear what he was saying. But I can guarantee what he said is exactly the truth. [Laughter] I really don’t need to say a whole lot more except that what Frank said is absolutely correct. I’ve never heard a false word come out of his mouth. So, and I totally agree with what he says about this Plan, the potential for it to destroy the character of this Valley. I think it’s just abhorrent. And I say that even though I make my living from taking care of sick people, and it has been shown that the less contact people have with the natural world, the more sick they tend to become. [Laughter] So, obviously, it could be a boon to the medical profession. With this Plan in place, we’re all going to see a lot less of the natural world out here in Jackson Hole. And, nevertheless, I think that for all of those of us that came to this Valley because of what’s here, and honestly it reminds me of my childhood growing up in a place like this. It’s no longer a place like this anymore, even though it’s a small town in the west, it’s gone a different direction, Jackson Hole, and I don’t want to see Jackson Hole go in that direction. So, I think that we really need to just start over with a whole different type of approach. Thank you.</td>
</tr>

<td>Larsen, Mellissa</td>
<td>My name is Melissa Larson. I’ve lived here 15 years in the Town of Jackson. And I’m terrified of public speaking, so please...I filled out the first few rounds of internet surveys that came along. And I was a little frustrated because I felt like I was being asked to make a choice between open spaces and affordable housing, and I’m very much obviously I hope to live here the rest of my life, but I’m a bartender. I might always be a bartender and I don’t think I’ll ever be able to afford to buy property here and I don’t think that that is ever going to change. My only option to live here as I go forward is affordable housing. I’m not a nurse; I’m way down on the line. And I just want to make sure that in this whole fight for less growth that I represent a lot of people my age in this predicament that affordable housing doesn’t get compromised. At the same time I’d also like to say that watching my friends try and start businesses in this Town, the employee housing rule is often the difference between them being able to start a business or not start a business because it’s cost prohibitive for people who don’t come to this Town with a lot of money but are just trying to get a foothold because they want to live here. And that’s it.</td>

<td>Ewing, Frank</td>
<td>My name is Frank Ewing. I’ve lived in the County for 54 plus years and it’s been the most important aspect of my life actually, no disrespect to my friends, my wife, to any of you, but I cherish this Valley as I first knew it. I, for a long time, was reluctant to speak out about telling people what they should or shouldn’t, or could or couldn’t, do with their land, because I thought the people, particularly in multigenerational people who’ve lived here, parents and grandparents, in some cases their great-grandparents have lived here, I thought they should be allowed to capitalize to get some benefits out of their long time here. And by and large those people have been pretty responsible in what they were willing to have done with their land. Well, I think that time is up. I think there should be no more development. Responsible growth is an oxymoron. Growth is responsible but it’s responsible for all the problems we have. And I’m not denying the fact that I make a living off of visitors that come here, as many other people do. But this never-ending drive to develop, to subdivide, to turn the whole County into a urban or a suburban place, and I’m sorry if it’s…I don’t direct it at anyone in particular, but we are too greedy. No is the word. If there’s anything the Plan should address it’s some way of helping people who live here, who are part of the workforce that live here. But as far as more growth is concerned, I don’t care who you are and what you are, I don’t care whether you get rich or starve to death, and it starts with me. It should end here. And growth is not good for us. We’ll be just like everywhere else in the mountain west. Thank you.</td>
</tr>
<tr>
<td>6/11/2009</td>
<td>Moniker, Joe</td>
<td>My name’s Joe Moniker and thanks for having a public comment period. Largely I’ve seen public comment periods being sort of disregarded in the past. And so I don’t know how, you know, what your goal is, but if the proposed Plan, as I read it, is your Plan, then it doesn’t really make sense in the long run to add that sort of population density to the base of Teton Pass. If you look at the current infrastructure of Wilson, you’d have to make some serious changes to that to prevent a lot of backup on Highway 22 as currently, the population, or the density on that is pretty much maximum. So you’re talking about adding stop lights to the base of Highway 22, which is, I mean, it’s a safety issue primarily. And, you know, I saw a comment that said that we’d make Wilson a stronger community to go ahead and develop it further. And I really don’t think that that’s been quantified initially. I think that it’s…there’s going to be a lot of dollars necessary to upgrade ?? bypass. Schools, current schools are already at capacity. There is no library. There is no substation. There’s very little police presence that’s required now. That type of development would require a dramatic increase across the board in every area that I just mentioned. So, I think until you have the actual infrastructure in place to accommodate that sort of development, you really can’t responsibly go further. And lastly, from my perspective, what you’re talking about is financially motivated. And I think that, you know, in the long term that’s probably not going to be of benefit for anybody who comes into this community with an intent to stay for long. Thank you.</td>
</tr>
<tr>
<td>6/11/2009</td>
<td>O'Brien, Kristine</td>
<td>Due to a conflict, I will not be able to attend today’s meeting. My comments follow. Please maintain the commitment made in the current plan to conserve the scenic rural beauty and wildlife of South Park. Removal of this theme is arbitrary and unacceptable. Transferring development rights from rural areas (e.g. Buffalo Valley, Alta) where growth is not likely to occur to areas where growth is most likely to occur (South Park) does not conserve agricultural land. To the contrary, it makes development of such lands more likely. The community has expressed in several polls and in numerous public comments, it prefers slow, smart growth, that it does not want increased build-out. There are sufficient development rights to grow for many years. Up-zoning South Park would serve no community purpose. It would make a few individuals wealthy (or wealthier) and that’s about it. The cost of the proposed scale of growth in terms of infrastructure and run-down of our natural capital are high.</td>
</tr>
<tr>
<td>6/11/2009</td>
<td>Harger, Don</td>
<td>I’m Don Harger, excuse my voice, and ?? of Jackson Hole. And I’m not going to tell you anything new or do any repeating. My statement is the Plan ought to reflect the will of the people. Simple as that. I think we can discern what that is. It’s for wildlife and open spaces ?? And the way to discern that I think is you can go to two votes that have happened in the city or the Town. First was about the year 2000 and the Town Council voted and that’s all of South Park, you know, major development. In fact, the only Council member that voted against it...well, the public voted against it 67 percent as a result of a position in a referendum. ?? is the only one who stood up and said, we don’t need this, the will of the people. And a couple of years ago they had a community downtown redevelopment district, another petition, another referendum, 62 percent said we don’t want that. We have a large, large silent majority in the community that just don’t go to meetings, and I can’t tell you why. They...well, we can tell you why—they’re raising children, they’re creating jobs, they don’t like to go to meetings. But it’s easy to see why the majority of the community feels...as I talk to many of my friends in the County, I would say to each of the County &lt;&lt;inaudible&gt;&gt; in the County, you’d find 75, 80 percent said, let’s stop, keep the traffic down, respect the wildlife and the open spaces. I think it’s real easy to see and I think we need to reflect the will of the people. Thank you.</td>

<td>Ewing, Patty</td>
<td>I’m probably not going to say anything new, but my name is Pattie Ewing. Frank and I have been a part of this community since the early ‘60s. Frank’s been here since 1955. And so we have seen a lot of changes. And we’ve commented, come to the meetings, and we want to just reinforce that the draft Plan, which we thank the planners for putting in untold hours working on and you as members of the Planning Commissions, who are not paid, and I understand that very well, everything you’re doing is volunteered, we appreciate your time. But this draft Comprehensive Plan has numbers in it that I know are changing. You know, they’re not final for sure, but they are excessive. They are outrageous in terms of the amount of growth that could happen over a period of however many years. It doesn’t even make any difference; the end result is the same. Our view is that other communities would love to have the wildlife open space that we have. And once that asset of wildlife and open space is gone, we become like every other community. Once it’s gone, it’s gone. And we just want to reinforce how very important it is to retain that wildlife open space as a priority. And I’m about to the draft Plan, I have looked at the numbers. We’ve looked at the nodes. We’ve looked at the priorities. And we both feel, Frank and I both feel that unless you keep that priority of wildlife, Jackson Hole will no longer be the Jackson Hole we all came here for and millions of visitors come for. And we need to retain that. Thank you.</td>
</tr>
<tr>
<td>6/11/2009</td>
<td>Rosenberg, Vicki L.</td>
<td>I am Vickie Rosenberg and while I have only owned property in Teton County for not quite two years and have only lived here for a few months, I have visited the Valley several times over the past 27 years and have been stunned by the growth of Jackson Hole. I submitted a long comment stating the views my husband and I share regarding the Jackson Teton County Comprehensive Plan. I did not, however, delineate the suggested request which you guys have asked us to do. So I’m going to do that now. I’d like to reiterate my gratitude to the Comp Plan development group, who I think worked in good faith to craft a Plan that defines how our region needs to organize for the future. Build out, however, must be limited. Please consider renovation of existing or potential buildings that become vacant into affordable housing units. There are vacant buildings around here. They’re probably owned by somebody who doesn’t quite know what to do with them. I hope the Town or the County would consider buying those up and utilizing already-existing vacant space to create affordable housing. I do work for Teton County Public Health and I see an awful lot of people who could benefit from affordable housing. Also, instead of requiring any developer, any of the developers, commercial or otherwise, to provide housing for workers, require them to do so. That being said, I believe that a cap on growth is essential to the survival of living creatures in our region, including humans. This cap should not greatly exceed 1 percent per year and should be re-evaluated at least every decade. I think that’s all I have to say.</td>
</tr>
<tr>
<td>6/11/2009</td>
<td>Lasley, Louise</td>
<td>Whoops…I’m Louise Lasley. I have been a resident of Jackson Hole for 25 years, ten years on Aspen Street and 10 years in Cottonwood. When I signed up I wasn’t quite sure of what I wanted to say, but I knew I wanted to make my voice heard even though I have no comments. I definitely reflect a lot of the opinions that have been spoken here tonight, especially for wildlife. I think that does make our community unique and to not take that into account in every single district is a mistake. It’s when that’s gone, we are just like Aspen; we’re just like Vail, and we’re not. We have incredible resources those communities don’t. And to continue the growth development rate that we are seeing or proposed would be detrimental. We can’t support that with our workforce, which was 1.9 before this recession, and we can’t support it and continue to have community buy housing 65 percent of the people who work here. When I heard all that and realized everybody said the same thing that I wanted to say, what popped out in my head was an earlier comment after a meeting, I think it was the first meeting in this room, when it was later determined that this was not a good demographic. And it is basically the same demographic that was at that first polling meeting that you can’t discount us. The fact that we’ve lived here 30 or 40 years and that we’re between 55 and 80 or whatever, does not discount our opinions. It, in my opinion, reinforce them. We have made a commitment to be here through all sorts of ups and downs economically, housing wise, whatever. And I think we have a valid say. We also recognize the value of housing those other members of our community, and we think that should be a priority rather than having commercial development that would exceed our ability to ?? Thank you.</td>

Date | Name | Comment
--- | --- | ---
6/11/2009 | Durtschi, Grant Interested Public | Okay. My name is Grant Durtschi. I'm from Alta, Wyoming. I was born and raised in Alta. And I would just like to make a comment. I'm just listening. I've been over in Alta so I'm kind of the tail on the dog, but I'd like to comment to those that said humans and wildlife can't co-exist. I want to invite you over to my place in the evening and watch the deer show and ?? [Laughter] It seems like they like it. Anyhow, I'm a member of the Alta Advisory Board and my purpose today in speaking to you is to encourage limited commercial development in Alta. I was born in Alta, like I said, and we always did have commercial in Alta. And I make these comments. RPG Williams had an excavation business. We had a chiropractic business. There were lots of businesses. We were trying to make ends meet. Right now we're at 8 percent. We're in a recession over there. We don't have the tourism that you have in Jackson. Maybe that's good; maybe that's bad. But we're trying to make ends meet. And what I would like to encourage is that we pick a place in Alta and have it commercial and limit it to commercial. Okay? Instead of people showing up with a little business out back, and that's what they do, that's what they do and they don't. what do I say, <<inaudible>> because they don't have a commercial place to go in Alta. We used to say we don't need commercial in Alta, but five years ago, you know, we thought we'll never need commercial in Alta, Wyoming. We can always go to Drake's. And all of a sudden we had the opportunity to have a library and all of a sudden we were running for cover. Where can we put this library? Well, we're real grateful for the Episcopal Church. They gave us some space to put the library and we're going to have a library this fall. But we need a place. And what I'm encouraging and what I'm really wanting to encourage you to do is to give us a place for a small business, limit the size of the business and also limit the area it can go on. Have trees around it so people don't even know it's commercial and that people can go in and have their businesses in a local area and then come under the jurisdiction of the law. Thank you.

6/11/2009 | Virginsil, Juanita Interested Public | Juanita Virginsil. I’m from Wilson, resident, and I’m with a group of residents from Wilson who have expressed concerns. I personally am against the Plan and just would hope for natural growth and let things just evolve. I feel we’ve already lost character and sustainability in Jackson and now most of us being faced with that issue. I do not feel any need to fill in the 1 percent. Somebody said 96 percent is left of the 1 percent available. I do not feel we need to push it to that point. I don’t think that serves the Wilson people, or Jackson, the workers who cannot afford the affordable housing anyway, the taxpayers whose taxes are going to go up when they have a million-point-five house built next to theirs. And it doesn’t serve the residents. What concerns me most is that with this Plan, and there was a previous plan, as Bob mentioned, in ’94 that was supposed to be the Plan, and planning and zoning boards, or the drafters of the Plan, really may not be holding our interests, and if not our interests, then whose? Thank you.

6/11/2009 | Sobey, Pegi Conservation Alliance | Thank you...whoops, got it...yeah, I think that’s fine. Hi, I’m Peggy Sobey and I’m a Teton County resident. The number one guiding principle of the 1994 Plan called for protecting wildlife and scenic and natural resources. And I’m proud to say that this remains our community’s highest priority. And it must be, it must be our Plan’s central theme, because I’m disappointed that this priority has been downgraded in several of the themes as presented. All aspects of this draft must correlate to this priority. A truly Comprehensive Plan must establish an absolute cap on total residents. Tools to reach an agreed-upon goal must reflect what our Valley’s natural systems and wildlife populations will bear, it must preserve our community character, and it must be reasonable for the developer and the taxpayer for financing that will be required for any infrastructure. A truly Comprehensive Plan must limit the number of new commercial facilities to a reasonable annual rate of growth and an ultimate agreed-upon cap. Effective monitoring requires benchmarks and appropriate and timely recourse. I strongly urge our elected officials to direct Staff to stick to the original directive, which is to take our 1994 Plan, leave in the supportive parts of this draft, and go from there. Thank you for the opportunity to comment this evening.

6/11/2009 | Ferguson, Dick Interested Public | Hi, Richard Ferguson. We have the same properties, at least I did have. [Laughter] I have a question about the maps that are supposed to be the facts that inform us what will be built, where, over the next decade. I’ve tried to understand them. They remind me of the papers I receive from my students. The group of students that the finals smack up on. They grabbed any data, any facts, they tried to put it together, true or not, to meet the deadline. There was other students that didn’t understand the data and they wrote it as if it was what they wanted. The third group...actually it was a fourth group of really good students, but the third group were students who wanted me to believe what they wrote and they wrote intentionally confusing the facts with misleading codes, keys, words to get me to believe them. Give us the real data. If you don’t have it, get it. We’re making decisions that are extremely important and so are you. Thank you.
I'm Jean Ferguson. I live in the County and have property in the city. I agree with the comments about the growth rate and a cap on growth rate, and I believe it's the duty of the electives to manage this and monitor it and have benchmarks for monitoring it, not just trust us, we'll check it in two years or five years. I believe that we need to upgrade our data for wildlife and a Natural Resources Overlay. I understand from biologists that the Staff's is about 15 years old and this enormous growth of the '90s in our area has blocked wildlife and changed wildlife routes. And how can we make wildlife a priority without having the data to know where the wildlife are? And, of course, I'm reiterating that the number one priority is wildlife and it needs to be in all themes. Many of the public are not impressed by the shell game of moving wildlife ranges to Buffalo Valley, Alta and Hoback to increase density tremendously in the nodes, claiming that the total growth proposals are the same. We don't want urban sprawl but we also don't want to destroy neighborhoods, or Wilson, or Jackson itself. So, electives need to control this growth. And we suggest the revision of 1994 that was promised and not this whole new Plan. There have been two voting referendums against the Town Council views on growth. Again, people are feeling patronized, discounted and told to wait for the development regulations that will fix things. Trust us. These are just theoretical goals. Trust us. Put your opinions on little yellow stickies and trust us, and we'll monitor everything and it won't get out of control. We don't see an impact analysis planned to do that. In my business I have found that it is dangerous to reject emotional and logical input with patronizing statements and dismissive attitudes. It doesn't work in couples. It doesn't work in communities. People need to be heard and their many concerns need to be addressed. We can disagree, but let's listen so we know what we're disagreeing about. This is not an empty backlash. The most thoughtful community leaders have concerns and ideas that need to be addressed. So, slow down, listen, and address those needs. Thank you....I'm Jean Ferguson. And I just wanted to add that I was so intimidated by three minutes—I've never stopped at three minutes in my life—that I forgot to thank you folks for giving this time to do your job. It's just remarkable that you're willing to donate this. I also...one other point that I also forgot because of the three minutes and that was that I don't want in composing growth control, I do not want to limit or ignore small affordable housing projects that fit neighborhoods. And so as far as...I think our...your problem is going to be how do we control growth by what method do we do it? A percentage cap, or do we do what? And I think that maybe density bonuses for those small projects for affordable housing are worth it. I think density bonuses in general are not a good thing. Thank you.

Yes, I don't mind, Roy Jorgensen, and I hadn't intended to speak at all. And there's a couple of things that I wanted to point to in the way of procedures. Number one, you're setting a parameter of procedures that are not conducive to getting to the will of the people, in my opinion. You cannot exclude the emotion and the feelings that the people love in the love for this County by looking at this as a process whereby we're talking about simply rules, regulations and so on. If you ignore the passion that has come out of this community, and I don't mean this in anyway towards you, as public servants, but you do so...the County does so at its peril. I can remember when our first Plan, when we had backhoes and trucks and dump trucks and so on, going around and around the courthouse because there was some regulation. We've come almost full circle. You will now see...now they may be around and around in Prius's, nevertheless, there's a lot of passion in this community. And it doesn't mean that they're wrong. It doesn't mean shut the door so no one else can come in. We have got to talk about quality of life. We all live here because of the spiritual value that is attached to why we live here. If you take that away from us, what have we left? Now, I live in Town. Town is becoming miserable. And I've lived here, for the most part, over 30 years, all of it in Town. And it's becoming uninhabitable. You cannot continue to put things into every alley in Town. You can't continue to take every lot and build higher and put more traffic and so on and expect to take care of those intrusions on ordinary life by pathways and wider sidewalks. We want a community back. You are one of two safeguards that exist for the change in the paradigm that has brought us here today where we're doing it the same old way. We can call it different things; we can go at it a different way. And I tell ya, I've worked with these County Planners and the Town Planners. They're wonderful. They're capable and so on, but it starts at the top. And we need a new paradigm and that paradigm is think about the people. Think about our needs as human beings. Animals are important and all the wildlife and so on, but so are people. And 65 percent of affordable housing in Town, when I was a County Commissioner, I don't recall that ever being adopted as a matter of set policy. Thank you.

<td>6/11/2009</td>
<td>Hanlon, John Interested Public</td>
<td>John Hanlon, Teton County, 25 years here. Thank you, board members, for your work. As someone else said, I think it's far from over. I have long been an advocate of strong property rights here but that is changing. Our community is growing to the...it's busting at the seams. I've always held it analogous to somebody saying, well, I like the color of your wife's hair so she's got to keep it that way, or I don't like the color of her hair, so she's got to change it. I feel that telling somebody else what to do with their land has been wrong. But that's changing. And this community has changed, and we're busting at the seams and hair's falling out. I've got the proof. Our proposed Plan seems to lack balance. The growth in commercial can't be supported in housing and housing can't be supported with parking. And the added cars can't be moved on our crowded roads. Last night—not the peak of the tourist season, kind of, you know, we're rolling into it—I waited through eight traffic-light changes to get from the front of Virginian to clear Albertson's. That used to happen the first week in August. I don't know what it's going to be like the first week in August this year. Growth, if any, should be limited and in developed areas already. The Plan allows way too much growth. Our community is near its growth limits now. So, this isn't just the next Plan; this may really be the last Plan. So, let's get it right. Thank you.</td>

<td>Resor, Bill</td>
<td>Yeah, one thing that I think is a really important point that Steve brought up and Franz brought up is permeability in connecting different parts of open space in wildlife habitats. That's something that should be in the Plan, because if you start mapping now where you're trying to get significant wildlife crossings and plights, then you could start building ?? . Let's take Highway 390, which where moose getting hit is a significant problem. It's going to be hard to do overpasses/underpasses there, pretty much impossible, because there's no terrain. But what part of the goal is you should slow down traffic. You know, and part of... when WYDOT comes to redesign 390, we need to have you working with them for a number of years. In order to get more wildlife across there, the only thing we see is slowing it down. Work with them but state that in this Plan, that you need crossing on southern 390 for large ?? . The other one would be on highway, sorry, yeah, Highway 390, and Highway 22 really start planning now. Where do you want underpasses or overpasses? You could make the new Wilson Bridge and a replacement of the existing Wilson Bridge start them back a quarter of a mile farther on either side with a crossway. And so you are going over the river bottom instead of just filling it. And, you know, you, there's a lot of good examples of that around the country. And then the wildlife will go under that. You know, in other places there might be overpasses. But if you don't start...if the County doesn't lay this out ahead of time, you can't really blame WYDOT for not, you know, for having to be forced sort of to come in later. {Mr. McCarthy: So, a helpful thing in this process really, right now, identifying the hot spots or the best spots for some of the wildlife?} I think that really actually helps WYDOT. It forewarns them and gives them, you know, the ability to start thinking about it.</td>

Conservation Alliance

Well, potentially on West Broadway, we know it’s a hotspot for deer mortality, wildlife vehicle collisions, a pretty hot spot for the loss of deer there, and it’s a very dark little section of the highway. If there’s enhancements to provide a combination where people walk and ride their bikes there, including downcast lighting that’s appropriately scaled but that would provide vehicles a better visual clue that there’s deer jumping off the bank, I better start slowing down, instead of waiting till they’re right there on the hood. If you get a hundred feet of notice, you can stop. And that might be a way that, in that situation, there could be collaboration and could help pay for some of those improvements that would actually serve a couple of purposes. If I could build on that just briefly. That might be a perfect place to propose a speed reduction, which gets to Steve’s point that a little better lighting at nighttime, a speed reduction. Maybe the speed...I don’t know if it’s all day or if it’s at those critical hours, but if you combine better visibility with a lower speed, I think you could greatly improve that particular location, which we know is a problem.

6/23/2009 Kilpatrick, Steve
Wyoming Game and Fis

If I can...I don’t want to give the appearance of it turning into a debate here, but activity on Broadway is an obstacle and not just the fact that a deer gets hit by a car, but they get set back off the road a couple of times. There’s an energy drain every time an animal, particularly in winter, has to adjust its behavior, there is an energy drain. And for these animals that can be very serious. So, I would caution us to be putting more into traffic in that area and that starts with vehicles and ?, but it also starts and includes human traffic. That is not a good place if you want to maintain permeability, because the more people we have going through, whether they’re in cars, trucks, buses, bikes or on foot, they’re going to cause more impact to wildlife. I just want to throw that out.

6/23/2009 Kilpatrick, Steve
Wyoming Game and Fis

I don’t know how to monitor it to quantify whether we’re being successful or not. I’ve struggled hard with that for the last few months to figure out what type of monitoring protocol we say, okay, districts one, two and three want to see, you know, they want these species of wildlife there and some presence of them. Who the heck is going to monitor that? Well, that may be one tool and, you know, I’m just trying to think of...and I don’t think you need to decide that in this Plan. We’re getting the cart ahead of the horse here. I agree that the Environmental Commission can ponder on that. But in order to say whether you’re successful, you have to do some monitoring and you have to have some objectives that you’re either reaching, or quantifiable ones. <<inaudible>>.

6/23/2009 Camenzind, Franz
Conservation Alliance

I think one of the things that you could use to address this is again this Environmental Commission. Ask them, or the way that is put together, and I would certainly urge the representative of Game & Fish to be on that, have them work that out. I don’t think the details, you know, no offense meant, but I don’t think that’s where you folks need to go. But I think you do need to do some kind of parameter and maybe what Steve is recommending or suggesting is a way to go—certain districts, certain species. But on the viability thing, and Steve talked about that earlier, where he referred to my use cause I’ve had a hard time with that phrase, I would like to see not only the viability but more than that, as Steve explained it, somewhat the same kind of habitat use that’s going on now. In other words, the same kind of distribution that’s going on now. Because we could have even 12,000 elk, even if we paved over South Park probably. And none of us want to do that. So, I would not only like to see the numbers remain, you know, at Game & Fish type levels that they’re going to suggest, and I’d also like to see the distribution and part of that is permeability. And I think that’s a factor that has to be put in here.

6/23/2009 Walker, Christine
Teton County Housing

I’m guessing what you’re asking is how did we come up with the number of housing 65 percent of workforce locally? Is that....? I think it...there is probably an opportunity to quantify it more; however, I’m pretty comfortable with how that I guess rational nexus and legal nexus is what you’re looking for, more quantifiable. However, I guess we’ve looked at several other resort communities and that they have measured when, and we’re very fortunate in this community that we’re still housing more than 65 percent of our workforce. So we haven’t gotten to a tipping point where we lose that sense of community. So we’ve looked at other resort communities and have been able to analyze at what level, again, this is where it becomes a little more touchy/feely is that when they lost the sense of community, it was at about 60 percent. When they were housing 60 percent of their workforce, they started feeling that sense of community being lost. But there were some things that are quantifiable as far as local businesses started to disappear, so your local hardware store didn’t exist in the Town anymore. The theater, local theater, moved out. So there were some local businesses that left the community when less than 60 percent of the workforce was housed locally. So, coming up with the 65-percent number was kind of the tipping point, and it was very consistent in several resort communities, was that 60-percent number. And so being just above that seemed like a reasonable number that wasn’t too aggressive to keep a sense of community here. Is that what you’re asking, or...? [Mr. Wall: Well, it is except I was thinking that there might be some higher degree of definition for it, because it’s easy to measure, or not even that easy to measure the percentage of the workforce, but it must be really hard to measure sense of community on some sort of a, you know, scale. But it’s just...it’s a pretty subjective idea, isn’t it, to measure at what point you lose your sense of community?] Mmhm, kind of like community character. Same thing, subjective.

<td>Forest, Bill</td>
<td>Forest, I think that would be really valuable. It is quantifiable. And it’s also something that developers can mitigate. In other words, if you quantify the amount of aspen, cottonwood, then what are you losing? Well, what do you really need to replace? Instead of having a landscape, you know, just so many units, you can be saying in this area we want more cottonwoods, or in this area we want more willows. You can tailor it and that’s something that a developer can do relatively easily. So, I think that would be a much better goal. Personally, I mean, throw out the NRO; it does more harm than good. You know, it’s basically enshrining old out-of-date data. I would just require people to use the best up-to-date data that’s available and do good, specific site analysis that relates to an overall Plan. But there’s really no area in the County where wildlife is not an issue. You may not want to attract it somewhere but wildlife ranges are everywhere. So there should be an environmental...If there isn’t an environmental analysis in a project, all the NRO does is make false, you know, information on what is most important versus what isn’t. You know, it’s not the best data.</td>

<td>Walker, Christine</td>
<td>Chairman Hamilton, Commissioners, Christine Walker with the Teton County Housing Authority. I wanted to thank you for this opportunity and I’ve just been impressed with all the comments that have been made to this point, because I’m definitely hearing a lot of things that I haven’t heard in the past and learning a lot. And I’m sure you guys are taking all this into consideration. And I do want to thank the planning staffs of both the County and the Town for all the hard work that they’ve put into getting this Plan to the point where it is today. I know that there’s been a lot of criticism of this Plan; however, I think that the Planning Staff has done an amazing job of balancing a lot of the different goals within this community and giving us a real starting point to provide feedback and make comment and make this a better Plan for our community. My comments are based on a letter from our board to the Town board and to the Town Council, which I’m sure you all got a copy of, and it was based on meeting with about 30 different members of our community and gathering feedback on chapter, or theme four, which is the housing chapter, meeting with our board as a group, and then coming up with consolidated comments. And I’ll just briefly go over kind of the main topics of that. The first is is that our board fully supports the concept of setting a goal of housing 65 percent of our workforce locally. That allows us to be accountable as an organization and as a community, too, which I think Patti summed up perfectly, was creating a sustainable community and economy. That really is the basis of housing our workforce here locally. The second piece of it is through the principles and policies of really establishing a what we call a three-legged-stool approach to providing housing for our workforce. In the past, we’ve really relied heavily on the regulatory side and new development. And what we’re looking at here is a more balanced approach of regulations, incentives, and preserving existing housing stock. There is a strong recommendation on our board that currently a large portion of our housing stock serves as workforce housing. And we see that with the changing demographics in our community that a large portion of housing that...houses our workforce will be converted to either second homes or not available for our workforce. So we’re really emphasizing a program in order to use the existing housing stock to reach that goal of housing 65 percent of our workforce. The node concept is something that also is supported by our organization. We’re not going into details about what should be in the nodes, what should not be in the nodes, but identifying locations where it is appropriate to house our workforce really helps our organization but also I think provides predictability to the community. And I think Bill put it very good was the affordable housing PUD and the ?? development. I don’t think that would get a probably a C grade for location. However, it’s an amazing development and it does house a large portion of our workforce and the families are very happy to be there. But in the future we want to know where this community wants to house the workforce and we will work within those parameters. There are a couple of pieces that are missing in this current version of the Plan that we’re in the other Plan, and we want to make sure that those pieces aren’t lost. There’s two things. One is we’ve moved to a term of workforce and our board is very comfortable going in that direction. We think there needs to be a little bit more clarification on the definition. That’s the primary feedback that we’ve heard. And that we do not lose sight of the affordability aspect. And that that really is a key piece to having families be successful in this community is that their housing costs aren’t more than 30 percent of their income. So keeping that affordable aspect. The other is addressing inadequate housing in our community, which is completely lost in this new Plan and was a primary component of establishing a housing program in the previous Comprehensive Plan, in our current Comprehensive Plan. And then finally, so I’m not going on forever, is that we want to be cautious...there appears to be a shift to housing higher-income workers in our community. And we just want to make sure that we’re not getting away from the lower-income residents in our community, or workers in our community. And that really when we look at the demographics of the makeup of our workforce, it’s really heavily weighted towards the lower-income ranges. And we just want to make sure we’re not losing sight of that. But, again, I just want to thank you for this opportunity, and I want to thank the work of the Planning Staff. I know how difficult it is, and I don’t envy your position of weeding through all these comments and trying to make a better Plan for this community. Thank you.</td>

</table>
Forrest, thank you. And Mr. Chairman, Commissioners, I appreciate the opportunity to be here. I’m Tim Young, I’m the executive director of Friends of Pathways here in Jackson. I also serve on the board of the ??, America’s oldest and largest ?? . And I serve on the board of the Yellowstone Teton Clean Energy Coalition, which works on alternative, transportation and alternative fuels. I was on the Teton County Staff in 1994 when the Comp Plan was developed and was very involved through three years of development of Chapter 8, the transportation chapter. And that’s what I’m going to principally focus my comments on. And I would note I’m really pleased for the opportunity to be here, especially because there’s been such limited planning time and public discussion, from my perspective, on the transportation topic. Land-use conversations have dominated, and clearly land use is a crucial element. But the history of the Comp Plan shows there’s a direct relationship between land use and transportation. And solving transportation issues is then neither easy nor without controversy. So I think there’s some merit to taking some... adding some focus in your work as you move forward to make sure that that component along with land use is appropriately considered. I guess as I look through this, I would summarize my thoughts and my comments, which I’ve submitted at least round-one comments to you folks, as I go through this document, theme six principally, as it’s related to other chapters, I find it to be less specific, less measurable, less hopeful, missing some critical elements, and essentially taking some steps backwards in goals from what we previously set. And I’ll go through a couple of these topics, I guess, to kind of illustrate this a little bit. One would be in terms of the why is this ?? , and that’s a good reason. What’s the problem? If you’re going to come up with solutions, you know, let’s see what we’re addressing. I would say that theme six is missing some environmental effects of transportation and I would include climate change, air and water and noise pollution, wildlife vehicle collisions. Those are environmental effects of transportation that should be recognized. The energy issues are really quite under recognized. We should be a leader, as a community, in terms of alternative energy and conservation energy, including goals to reduce the use of fossil fuel and promoting alternative fuels would be appropriate in this Plan. Public health impacts on power-centric transportation are well documented. We see diabetes, cardiovascular disease are related to our autocentric development in America. And this Plan could chart a course for Jackson Hole that would benefit our entire community in public health improvements. And I think the economics impacts to Jackson Hole, the changing world, where the cost of oil will continue to rise, suggest that we should be looking at alternative transportation systems more wholeheartedly than this Plan currently takes on. For example, the ?? goals in this Plan, in my view, should be increased and yet this Plan actually decreases them. It says on page 59-60 that it would require an additional 10 percent of trips along the major corridors to shift out of single-occupancy vehicles into another travel mode. Well, the current Plan actually has 14 percent. So we’re taking our goal and knocking it down 4 percent. It has, you know, ride share, walking, bicycling, and transit and sets specific targets for those. And this has no specific targets. It’s really going to be a very difficult, too generic of a goal, and it’s been reduced from what we previously had in the current Chapter 8 of the Comprehensive Plan. There’s a list of things that need to be developed in a transportation element or transportation chapter. It’s not just a pathway system but it’s also pedestrian walkways and those are not just in the Town but in the nodes—Wilson, Teton Village, the Aspens, Hoback Junction. If we’re going to have nodes where people live and work, they’re also going to walk. And that’s a good thing. But we need to plan ahead if those are properly accommodated. Every street needs to be a complete street that serves all the users. We have complete streets in here, but in terms of really calling that policy out, this is not yet quite there. We need to greatly expand the STAR system, which it talks about but it could do more. It’s also missing—and I think some of the other panelists touched on this—the County doesn’t control the universe. We need to work very carefully with WYDOT, Greater Teton and Grand Teton National Park, in particular, three agencies that have jurisdictional authority over much of our transportation system. They’re also, fortunately for us, could provide some of the resources we need to better accomplish the goals that we should be citing for our community. So, working with them in setting up some parameters for how that might take place are really important I think. And I think alternative fuel technology and trying to minimize the carbon footprint in Jackson Hole is a forward-looking vision that needs to be more prominent in the document. I think that instead of shifting 10 percent, we should be talking about 50 percent of all our trips would be by some sort of alternative modes by 2030, or pick a date, if you want to look out, I’m just thinking, say, it takes you another year to get this done, look out 20 years from then to 2030. Why couldn’t we set a goal of 50 percent? It would be, say, 10 percent bike, 10 percent walk, 10 percent transit, 10 percent should be from just reducing like rideshare and transportation demand management programs. A very reasonable goal, let me say. And add those up and you get 50 percent. Now that’s the type of goal and more specific and more measurable that I think this Plan would benefit by tackling and including in this. The Plan talks about policy 6.1.c., research regional transportation authority by the ?? . That falls far short of what you need to be doing, in my opinion, in this Plan. There’s a tremendous effort underway right now in regional transportation planning. The Idaho Transportation Department over the hill is funded through the Americans Recovery and Reinvestment Act well over half a million dollars. The contract was just let for the very first time, hiring a full-time project manager, looking at a pilot study and developing regional transportation COLA, a new concept that’s gaining traction and has tremendous funding. And it isn’t Idaho is funding this, but it actually includes northwest Wyoming and the Greater Yellowstone Region. This document should consider that and I would suggest it’s appropriate for the Plan to embrace regional transportation planning, regional transit systems, and integrate them into a multimodal system. That’s where everybody that’s successful in our country and the world, other communities in other countries, are being successful. And we have...we’re
blessed with...we're in the right time and the right place to put this in here and actually get the financial assistance, work with our partners, and implement something that really could make a difference in terms of how people get around in our community, in our national parks and this great region we live in. There's some important elements that are in the current Chapter 8 that are just missing from this, and one is and the Town and County has substantially failed to follow through with this. It isn't that they've done a good job with it, <<inaudible>>. We've actually done a bad job as a community and now we're just kind of forgetting about it. And one of these is the development of a transportation improvement program. It's kind of a capital improvements list; it's common terminology in transportation planning and it needs to be ramped up. You should revisit what's in here and see how that could be fit into this new Comprehensive Plan. And I think it really needs to fess up and talk about the transportation network projects. What's in there now is really just a list of highway projects. If we're going to talk about alternative transportation and how important that is, we need to talk about a transit facility for START. That's really woefully under addressed in here. We need to talk about the highway down to Hoback Junction and maybe draw a line in the sand about how we're going to build highways and accommodate wildlife and scenic values, address our needs for mobility, and it doesn't do that yet. And there's other projects that are in my comments but I just want to point out that that is a woefully inadequate list of projects. This Chapter 8 has much more information. Maybe it's too specific, but I think there's value in tackling that in the Comprehensive Plan. How are we looking at these major, multimillion-dollar projects? What are the big ones that are important to us as a community? And those strategies in there again are less specific and potentially less hopeful than what we already have. We need to be able to measure the details and see if we're getting where we're going. We need to work better with WYDOT and federal agencies because in the transportation world, that's where the money flows from. And right now is a great opportunity. If we knew what we wanted, Congress is working on the next reauthorization of a big transportation funding bill, we could be written in. Senator ?? serves on the committee that's going to write the legislation. A very good time to know what we want and ask for it as a community. I think we would be rewarded if we did. That's really a brief summary of kind of my view of this. I'm not saying this is wrong, but I'm saying it's still less specific, less measurable and currently less helpful than what we have. So, I think the transportation element truly needs some work. And I appreciate the Planning Commission tackling that along with the land-use issues. I think they go hand in hand, and it would be helpful.
Okay, I’m Steve Kilpatrick. I’m with Wyoming Game & Fish Department and I am representing them, so the comments that I’ll paraphrase are being sent to you, and I’ll sort of adlib on a bit, are from Game & Fish, not anyone’s personal comments, so keep that in mind. And I’ve been here since 1985 personally. I’m a habitat biologist. And we had about six people collaborate on our comments. And we will give you a signed copy, probably not tonight because in redoing this, I found a couple of errors. So, we’ll correct the errors and get the correct signatures and get them to you within the next couple of days. Thanks again for the opportunity to be here. And I said that back in 1994 when I worked with that Plan, so I have a little bit of experience with that and I think it was a pretty good Plan. I think that this Plan does tear off a bit of it in a lot of respects. I’m going to paraphrase some of our comments so I’ll start with that. We do support the concept of moving toward a Plan that is more predictable in determining the extent and location of development with the County. We’re also excited that the Plan states and emphasizes that wildlife and natural resources are a priority. So, while we’re excited about that, that also probably puts us to work a little more than we expected. Some of our points that we made in our comments are...will be started with the Natural Resource Overlay. And we provided information a couple of years ago along with Teton County, the National Park, ?? Refuge, Teton Science School, Wildlife Conservation Society, Grand Teton National Park, BT Forest, and Jackson Hole Wildlife Foundation, for some updated overlays. And we know the County used them to some extent; however, we wish maybe they could have been appropriated a little bit more in this Plan. And the Plan is generally...we view it as a visionary guiding document but does propose specifics with respect to node location, design and development levels. And updating the NRO prior to providing such specifics will attempt to, even districts as well as nodes, may have more accurately identified and quantified wildlife impacts. And potentially offered some opportunities for improved design and mitigation measures. So that was kind of our main concern, the one that was bothering through most of all of us that read the Plan. We’re excited that the Plan still identifies species and special concerns and the Plan does mention expanding that. We’re very supportive of that, because we do have better conflict areas, we have sagebrush issues, we have nesting raptors, we have amphibians, we have wetlands and other areas of potential wildlife, important and concern areas. We think the addition of more species of concern is very important by updating the existing NRO and also provide a more accurate picture of important wildlife areas in the Town. The Plan mentions indicators and monitoring for eco system health. We do support that. This is a great strategy, and we’d like to help develop a list of wildlife species to be used as indicators and assist with the monitoring of the future. And maybe we can get a list of indicator species by district as all the districts can be and some are quite different than others. So just a blanket species list probably would not be appropriate. The old Plan included important habitat types, and we would like to see that continued. The new Plan mentions it. However, we have a Game & Fish Strategic Habitat Plan if you would like to utilize it in cooperation with the County to try to identify additional important habitat types, such as aspen, mixed mountain shrub, some sagebrush communities, ?? areas, and some wetland habitat. So, if we could expand...and that might also be woven into the NRO. The old NRO mentions species as kind of the driving factor behind the NRO boundaries. It does mention habitat but I couldn’t really find where habitat was actually woven into the fabric of the old NRO. We’d like to see that done in the new one. The new Plan mentions an Environmental Commission. We strongly support that and we’d like to be a player in that Environmental Commission. One thought that we had relative to high-density development areas that are being proposed and their close proximity to either the existing NRO or what we perceive to be the new NRO boundary. We’d like you to explore the concept of some type of a buffer zone to have a simply and infinitely small line in the sand, and on one side of it you have high density, high-rise development, whatever it may be, and the other side is the NRO. And having those adjacent to each other is definitely not the best idea for wildlife. The width of these buffer zones would be variable and depend on the primary species impacted and the habitat types that are there. Some habitat types, for example, might require additional screening while others may not. Some wildlife species may be very sensitive to human disturbance while others may not. So it’s a case-by-case situation. And we will certainly help out with that. One category we just called build out. We have concerns regarding the picture of how the community would really look at full build out or planning implementation. And that isn’t with respect to necessarily the new Plan but the build out expectations or allowances in the old Plan also apply. We just know as there are more people, there are more impacts to wildlife. In that category, we also threw in permeability as an issue. It’s critical in areas like the Aspens, the Aspen node, and along Highway 390 and the proposed Wilson node. And we need to allow for permeability; not just allowing wildlife to move through there. Careful planning will be needed to ensure that wildlife will be able to make daily as well as seasonal moves. And also identifying certain districts as where wildlife and open spaces are a high priority is important, but the districts where it’s not identified as a high priority may have some pretty important wildlife values, and we’d like to further discuss those. It’s kind of a minor thing, I know, to the average citizen, but the term viable populations. As biologists, we stumble over that. A viable population means just enough breathing individuals to keep the population alive. And, you know, that necessarily isn’t what we hope you folks mean as viable population. So, a viable population of elk might be 300 elk. And I hope we want more than that around. A viable population <<inaudible>>. So, we’d like to maybe have you change that terminology to collaborating with Game & Fish on our population objectives for various species. And we have various planning documents and ?? plans and so forth for an array of species, not quite all of them by any means, but we think they’ll be more appropriate. For example, the former Plan says we’ll work with Game & Fish to maintain current or proposed population objectives, instead of just viable populations. Viable populations is applicable to something that’s about extinct or threatened,
something like that. So, not a big deal but just to us cone-headed biologists, we appreciate your patience on that. [Laughter] Disperse recreation, we continually deal with that in cooperation with the federal land mandate and private land owners. But we don’t own much land in Teton County, that being Game & Fish doesn’t own much land, but we own the wildlife and we’re always working with individuals and entities to protect and maintain the integrity of wildlife habitat and not fragment it or minimize it anymore than possible. And so with increased human populations, we really hope you emphasize collaboration with the Forest, with us, with the Park, whomever it may be, to figure out where to funnel these people. There are some places that would be less of an impact to wildlife than others. I’d like to discuss those further. Just with increased population, as the old Plan and the new Plan proposes, we’re going to have more wildlife. The Jackson Wildlife Foundation cooperates with the Wyoming Public Transportation to document some of this. That’s been very helpful. From 1990 to ’96, for example, there were 159 documented road kills. We don’t know how many more get a broken leg and wondered off into the bushes and die or get ?? or whatever. It could be quite a bit more than that. So, basically, 160 from 1990 to ’96, and then from 2000 to 2006 basically killed 240, so it should be mentioned. We all know travel routes have increased vehicle traffic on them, you know, so from 1990 to 2000 it increased 129 percent. So, we’ll simply have more wildlife on our highways. Increasing lanes doesn’t seem to help. Slowing traffic does. That’s been proven through science over and over again. But adding more lanes means more to cross at the same 55 mile an hour, 45 mile an hour, whatever it may be. So, help us with that. Underpasses and overpasses, I think there are viable solutions to that. They’re very costly, but I hope we’re not so rich we can’t afford some things that are going to benefit wildlife. One thing that we’re chronically hit with are nuisance wildlife calls, and those numbers just continue to increase as the population of the County increases. And we don’t increase our Staff at the same level. We did add on one temporary position to deal with black bears and with bears, for example. And we’ve got a great bear-wise program going with Teton County and the Jackson Wildlife Foundation. That’s only one aspect of it. But we are currently understaffed for the level of nuisance calls we get now. We’ll undoubtedly get a lot more, which I’m not sure what we’re going to do at this point. And that’s about the summary of our comments. I’d just like to thank you for the opportunity to come and express some words for a constituency that seems to be the primary objective of the Plan in the community, so we asked our constituency, our free and feathered animals that don’t get to come here and speak their turn or pass their opinion. So, we try to articulate what we think they need, but we’re not always going to be exact. And our comments, please don’t take them out on us. We’re simply hired to articulate what we think those critters want. And it’s not necessarily what we want either. <<inaudible>>. So, thanks for the opportunity and we’ll get this signed and out to you shortly.
Hi, Amy Romaine, PAWS of Jackson Hole, and I’m here to specifically comment on theme one, policy 1.7.a, which is stewardship of wildlife and natural resources. There’s a section in there that says in order to avoid excessive pressure on nearby public lands, recreational opportunities such as dog parks, trails, parks and pathways will be provided and developed in developing areas. So I wanted to comment specifically on that. For many years, PAWS of Jackson Hole has worked with the Town and County in promoting an ethical responsible pet ownership, and we’ve been pretty successful in educating people on the importance of everything from spaying and neutering to picking up poop and maintaining control of your dog and training and all that kind of thing. Currently, Jackson is home to over 10,000 dogs, all of which require exercise and socialization. According to the Jackson Hole Chamber of Commerce yesterday, we get about two and a half million visitors per year on an average. Seventy to 80 percent of those come through in the summertime. So, we can say that we’re pretty much confident that a large percentage of those pets travel with pets. So, we’re seeing an extra few thousand dogs come through in summertime. So, that’s in addition to our 10,000 that are already residing here. The number one question PAWS of Jackson Hole gets from these visitors is is there a dog park and where can I exercise my dog. Although there are many public parks in Town, none allows dogs on the premises as it stands today. What we see happening is a huge population of people coming in here. The first thing they want to do is let their dog out of their car. And, as it stands today, we really don’t have a place for them to do that in an off-leash area. To make matters worse, if anyone is actually spotted allowing their dog to roam into one of our public parks, they could be faced with a citation by one of our animal control officers. This could be a simple warning. It could be a $50 citation. But for repeat offenders that could be $750. So, it really is frowned upon to let your dog roam onto one of our public parks. So we are thrilled to see that dog parks have been considered as part of this draft in the Comprehensive Plan. We do agree with its placement under stewardship of wildlife. Because none of the public parks allows dogs, most dog owners and visitors do take advantage of the fantastic trails and pathways that we do have. However, because of the sheer numbers of dogs out there, we’re seeing a lot of congestion and sometimes there is conflict with wildlife. So we do get complaints mostly in the winter when the wildlife is traveling through. We believe that a dog park would help alleviate some of this congestion that currently exists and it would help to reduce conflicts with wildlife to get these dogs off of the trails and pathways. That’s not the only benefit we see, however. We believe that the benefits to the community go much farther than protection of wildlife. As a resort or visitor-oriented community, in the planning process, we should consider both the full-time residents and our part-time residents and visitors. Having a dog park would bring Jackson Hole up to par with every other resort town in our vicinity. Towns like Park City, Vale, Breckenridge, Aspen, Sun Valley and Big Sky have all seen the benefits of dog parks. They’ve all installed at least one in their communities and they’ve all been proud to offer this recreational opportunity to their visitors. It is our belief that a dog park is part of a wide array of offerings that would contribute to the vitality of this growing community. Additionally, Jackson Hole has many workers that commute in from other communities. A lot of these people leave their dogs in their cars all day, which is not ideal for the dog. This would give them an opportunity to get their dog out during lunch and before and after work. And it would be in Town. Additionally, people who just come into Town for a few hours would have a place to take their dog and would not be hit with any kind of citation. Other benefits include the fact that dog parks do promote an ethical responsible pet ownership. They provide vital public spaces for people to socialize and form bonds of community and friendship. Dog parks offer designated off-leash spaces which reduce the amount of time that law enforcement has to spend enforcing the leash laws. They significantly reduce the amount of dog waste that is deposited on public and private land. And lastly a dog park would provide a centralized location for us to facilitate a dialog about responsible pet ownership. PAWS is well aware that having a community dog park is something that would require oversight and administration. We are prepared to take on that role. We would be willing to fund and facilitate property maintenance, fencing, water, sitting areas, governance of the park and any liability issues and insurance. We are also prepared to help finance the needs of the park well into the future. What we do need is for the Planning Commission to consider designating some space for this purpose. PAWS of Jackson Hole for many years has tried to get the approval to install a public dog park. Because land is so expensive, it is well beyond the scope of our budget. But we would ask that you would consider either changing the existing rules in one of the parks in Town, or consider designating some space for this purpose. Ideally, the space would be one acre or larger. In our research, we found that the average size of a U.S. dog park is an acre to an acre and a half. That’s fifty to 75,000 square feet. There are smaller dog parks in cities around the U.S., but those typically just service the neighborhood in which they’re located. They’re not meant to service a whole community. So we would be looking for approximately an acre to an acre and a half. That’s about it. Thank you for allowing us this opportunity to share our vision for a very small part of the future of this community. We believe that most people do consider Jackson to be dog friendly. A community dog park is the next logical extension of the notion that dogs are a vital part of the character of this community. And we believe that dogs bring people together and provide a social outlet for members of our community and for our visitors. So, please make every effort to include the needs of the dog-owning public in the next draft of the Plan. Thank you.

| 6/23/2009  | Wackerly, Michael| My name is Michael Wackerly and I’m director of START Bus. And I wanted to thank the Planning Commission for the opportunity to and for the willingness to hear the point of view of the START Bus and the START Bus board when they’re doing their deliberation on the Comp Plan. A couple of things I wanted to point out. In one of the earlier versions, we were gratified to see that 61 percent of the community prioritized increased transit service over building new roads. And we certainly agree with that position. Seventy-seven percent of the community agreed that the Town and County should promote walking by signaling transit and carpooling as alternative to widening roads. And, again, we agree with that wholeheartedly. The principal six states that the most viable way to achieve a significant shift in travel to alternative modes is an increase in transit mode share and also acknowledges the contribution of the other modes. We certainly feel that there’s a significant potential for cutting into a greater share of that travel in the community by public transit, if a much more expanded and comprehensive public transit service was provided. However, we recognize...and the other thing I’ll say, and again sort of echoing what Christine said, I worked pretty closely with the Town and County Planning Departments in reviewing this. And so I feel like a lot of our comments were already included. And the two big ones were the fact that we have to identify a funding source that until we do that, and it’s going to be in combination of some of the things that Tim mentioned, WYDOT and the federal funds and a larger local commitment of dedicated transit money. And until that happens, you’re really not going to provide the kind of system that is going to take a much larger share of the travel away from the private auto. And the other major factor, and I think it’s alluded to in the report, maybe could be strengthened but that the new facility...we’re, the START Bus, continues to operate out of the Public Works garage, storing the buses outside, maintaining the buses in that garage and sharing that maintenance space with all other Town and County fleets. And we don’t necessarily think that there should be a separate facility, maintenance facility. We think there is some economy of scale and some efficiency in maintaining all public fleets in the same facility, but the existing facility is woefully inadequate to do that. So before START can really consider any significant expansions, we have to address that new facility, how we’re going to fund it, where we’re going to put it, and get that project moving. I’ve been here almost seven years and I’ve been working on trying to get that project off the ground for a good, well, off and on for all those seven years and feel like we still are not that much further than we were seven years ago. So, we are working with the Town and County, and I think they recognize the priority of that and I think we are going to make some progress pretty quickly on that. But it definitely needs to be strongly emphasized in this Comprehensive Plan. The other thing I would mention, a couple of things I guess, the node and land-use pattern, we certainly support that. I think that would be a very...would allow you to provide efficient public transit if you could use the node. And again we’re not here to say where the node should be or what all should be included, but using the node pattern, concentrating developments in specific areas of land uses in specific areas, provides a little greater density which is much more easily served by public transit. And we would like to work with the Planning Departments with input from Pathways and other representatives of alternative modes to help plan the transportation in the nodes, both in the nodes and between the nodes. I mean, I could see within the node, you know, a really effective sidewalk system and pathway system and but maybe connecting the nodes would be the public transit’s role. So we would certainly support that. And the only other thing I’ll mention, as Steve, I’m sorry, as Tim mentioned, there is an effort going on for regional, looking at regional transportation and the coop program, and Tim and I are both on the task force that is working on that. So, I certainly agree with Tim’s sentiment that that should be something that is included in the Comprehensive Plan. That’s all I have. Thank you.
My name is Patti Ewing and, along with my husband, Frank, have been in business in Jackson Hole, in the river business in Jackson Hole, since 1962, so it’s quite a few years. But during that period of time, we’ve also been I think pretty involved in the community. And let me just briefly provide you some of those things. I taught school in the high school for 20 years and that was briefly interrupted by a 14-, 15-year hiatus of being alone up here; on the school board for 14 years. I was on the science school board from its inception from the time that ?? had the dream of the science school up until or through its first major fund raiser 20 years ago, and Bill Resor was a part of that. And I no longer fund raise, let me tell you that for sure. I’ve been on a number of other community boards, including the earth board, parks and rec board in its infancy. I was on the chamber of commerce board, probably not a very good member, but I was on the board. Because my love is for kids and I love horses, I helped to establish the Jackson Hole Pony Club, which my children were involved in, and then went on to help with the therapeutic riding. In brief, I guess most of my involvement has been with young people and, of course, rivers. Just as an aside, probably the most important thing Frank and I’ve done is raise our two daughters. Frank has also been involved in the community. Most recently, he was involved in helping establish the Snake River Fund. And he was a part of the Sea Fish, the organization which promoted the inclusion of the Snake River and its headwaters and wild and scenic system, which we believe has had and will have an enormous impact on the future of Jackson Hole. So I’m saying this just because we want you to see that we are committed to the community. We love this community and we have for a long time. Now then, most recently I’ve been active in organizing Miss Jackson, the neighborhood, so that’s my latest organizational kind of thing. And so through that I’ve been involved. We’ve attended all the meetings dealing with the Comp Plan since revisiting the Comp Plan has been done. Now, do you want me to go through the eight points directly that I think…is that all right? I won’t spend a lot of time on them. I’ll try and be brief and then if you have any other questions, I’ll try to answer them. First of all and first and foremost, I believe that the vision statement should be rewritten. It needs to restore the preservation of wildlife, open space and natural resources as the community’s number one priority in all districts in the Town and County. And you say why, what happens in…why all districts, including downtown? And I suggest that anything that happens anywhere in this County or Town affects the rest of the County. I think that the quote meeting human needs portion that we find in this vision statement should be eliminated and it should be removed and subjugated to the challenge of meeting human needs through themes two and seven, and if you prefer to name those eleven to thirteen, those themes are outlined. Two, I believe we ought to set the build-out maximum for residential units based upon underlining entitlements without any incentive bonuses. That is by right. And I’m not going to go through those numbers right now. I think, three, we need to eliminate incentive bonuses’ tools because they are not predictable. And as they are applied today, they have in fact increased our workforce housing burden. For example, since the inception of the Town’s PMG tool, the Town’s PMG tool has housed only 11 percent of the full-time employees those projects have created up through 2008. And that percentage, by the way, comes from the Town and Planning Department’s own numbers. Four, adopt a policy which states that the County will not export its housing needs to Town and the Town will not export its housing needs to the County. And I was concerned about the policy 2.5.d. on page 35 that states…talks about the annexation possibilities. Five, workforce housing is inadequately linked to growth in this Plan. And I’ve gone through Appendix I in the big fat book, and I think we should require the workforce housing demand for the 65 percent goal should be continuously assessed by our Housing Authority people. And that means an inventory of the housing units, what categories they are, who’s occupying them. And based on that, we set a mitigation rate and a linkage policy between commercial growth and housing. Six, the Plan should assess the consequences and cost of growth in terms of taxes and quality of life. And that elusive quality of life is a very real thing for all of us, because I think every one of us has come here to live because of the quality of life that we all enjoy. And I can go on with examples; practically, we all know what the problems are. The cost of the infrastructure, schools, crowded schools, needing more schools. What is that? I suggest it might be like a ponzi scheme. Well, maybe that’s not a good analysis. Seven, we want a sustainable community and economy, not as described in the Plan as sustainable development. I think chasing tax revenues through growth incentives doesn’t work. Growth is not green, I don’t think; it’s not really sustainable. And I suggest we work to improve the quality of life within a caring capacity of Jackson Hole. And all you have to do is look around the country and see all the problems in other communities, big and small, that are dealing with rampant population, cost of infrastructure, cost of providing those needs, the human needs. And eight, the community character, which Franz was talking about, needs to be stated very clearly and needs to be very high on priorities. And I suggest to you the 1994 Plan made a fairly good attempt at talking about community character. And it’s one of those nebulous things, but we all see something we like and we know that that is a part of Jackson Hole. And I know that downtown Jackson Hole sometimes is described as, well, that’s not really western, but it is in fact…creates an ambience which visitors like. And I submit to you that most of us are…this is a visitor-oriented community and I’m meaning to keep it that way because for obvious reasons. In closing, let me just say that we’ve had a lot of repeat clients over the years, many of whom are probably coming here to live, and I think we could all…we all know that, because it’s such a marvelous place to live. But people who come currently will look around Town and see what’s happened to Town, what’s happened to this wonderful place that we call Jackson Hole, the mountain resort, which used to be truly a mountain resort, is becoming more and more urbanized as is Town. And I suggest to you that we all came here for the very same reason. And that is our services are certainly based upon the appeal in the Town and the County of wildlife, open space and our natural resources. I think we all cherish those; let’s not lose them.
6/17/2009, STAG
Group discussed balance of additional local convenience commercial with need to complete Hwy 390 infrastructure improvements before additional development.

The group felt that a better definition of “local convenience commercial” was needed in light of possible Tribal Trails construction and desire not to attract trips to this area.

6/17/2009, STAG
The majority of the group felt that Wilson should remain a node because it has the components of a node today. However, a more realistic development potential should be developed based on Fish Creek, wetlands, existing CC&Rs, community character, and Highway 22. The Future Land Use Map should be revised to incorporate this additional level of detail.

6/17/2009, STAG
The group recommended that the Tribal Trails Connector be included in a more comprehensive traffic system study of all of West Jackson (Hwy 22, the “Y”, High School Rd. South Park Loop). General discussion occurred regarding the local vs. collector character of Tribal Trails and the original intent of the road.

6/17/2009, STAG
The group felt strongly that wildlife movement from East Gros Ventre Butte to Karns Meadow needs to be addressed immediately in this district through overpass, or funneling to a wildlife crossing, or other method.

6/17/2009, STAG
The group recommended a statement about connectivity of pathways and roadways to existing and future neighborhoods. Consensus was reached about highlighting future north-south and east-west thoroughfares in the north half of the district.

6/17/2009, STAG
The consensus of the group was that this was an appropriate place for expansion of the town development pattern, but was no consensus was reached on how much development should occur. Some in the group felt that the increase in density should be similar to the Cottonwood Park area. Some members of the group believed that the whole district should be planned comprehensively. Some believed the district should be broken into a node district (north) and a rural district (south).

6/17/2009, STAG
The majority of the group felt that Aspens should remain a node because it has the components of a node today. However, additional development potential should not be allowed until Hwy 390 is redesigned and the transportation impacts of additional development are understood. The Future Land Use Map should be revised to address this change.

6/17/2009, STAG
The group agreed that the Tribal Trail connector should not increase traffic congestion on High School Road. The group also discussed the appropriateness of traffic calming to reduce traffic impacts on local residents.

6/17/2009, STAG
The group recommended including a definition of Complete Streets that would consider sidewalks, traffic calming, reduce neighborhood speed limits and other applicable multi-modal encouragements.

6/17/2009, STAG
Another recommendation was that the Wildlife Theme should move up in the priority order since the district provides connectivity from Karns Meadow.

6/17/2009, STAG
The group suggested inserting a statement about redevelopment of the Public Works Facility if should be relocated in the future. The future land use should be designated as residential.

6/17/2009, STAG
The group recommended including a stronger statement about the importance of the hospital campus and accommodating future expansion of their facilities and supporting uses in the area. In addition Community Facilities due to the location of the hospital should be moved up the Theme prioritization due to health, safety, and general welfare concerns of the community.
Some of the group felt that wildlife permeability needed more emphasis in this district. Others stated that the wildlife access was strategically designed to discourage wildlife permeability in residential neighborhoods and to direct wildlife to around the built environment (i.e. Elk Refuge fencing).

The group agreed that workforce housing was not appropriate in the Town Square Overlay. Language should be revised to reflect this sentiment.

Parking should be provided as a public common amenity to give pedestrian orientation to the district.

Group discussed design standards versus guidelines trying to get to predictability, but understanding differences in style.

The group agreed that building height should be limited to two-stories as recommended in the plan.

The consensus of group was to modify the language in the Plan to be more positive by encouraging two to three story mixed use buildings rather than discouraging single story, single use buildings..

The group felt document was weak on details of "Y" intersection redesign especially the multi-modal issue and suggested pedestrian overpasses.

The group felt that Single Family Mixed north of Broadway should be changed to Single Family Low.

The group agreed that maintaining residential density allowances are important in rural areas to allow for the dedication of conservation easements.

The group agreed that maintaining residential density allowances are important in rural areas to allow for the dedication of conservation easements.

The group discussed the feasibility of lodging due to the two story limit, but didn't want to preclude lodging necessarily.

The 1994 Plan recognized the importance of agriculture in the community. This Theme should better acknowledge ag preservation and ag preservation should be enhanced as a strategy in this theme by promoting meaningful incentives for conservation easements.

The group was supportive of all proposed expansions to the lodging overlay.

The group recommended including language about bulk and scale for nonresidential buildings to maintain community character.

<td>The consensus of the group was to leave in incentives/density bonuses for open space and workforce housing where appropriate if they are directly tied to those community benefits; however, there was no agreement on who should pay for this.</td>
</tr>
<tr>
<td>6/17/2009</td>
<td>STAG</td>
<td>The group discussed the viability, practicality, and necessity of a growth rate cap or overall growth cap. Some members of the group felt the market will control the rate of growth and the current rate is manageable. Others felt that triggers, overall caps, 5 year caps, infrastructure triggers, or rate caps are necessary for managing growth. However concern regarding implementation and a lack of successful examples in other communities were identified in the discussion. The greater concern is the total number of persons that could be housed in the valley at the expense of diminishing the quality of life. Annual monitoring of the indicators does a good job of providing benchmarks for the community to evaluate.</td>

The group believes the Plan needs a better definition of the term "local convenience commercial." However, the group could not reach consensus on the traffic reduction achievable through implementation of the local convenience commercial concept.

6/11/2009, Burwen, David M
I am the owner of 2221 Weatgrass located in the Aspens. I think that it makes sense for the county to have development nodes to protect open spaces, so I am not against this proposal in principal. However, I am concerned that the recommended density of 350 condo units next to the Aspens is much too high. Since it is much higher than the current density of the Aspen, it will not look good and will have a negative effect on the wildlife corridor that is along the creek next to our Weatgrass unit. For example we often have Moose browsing along this creek. Given this situation, I am asking that the density of the proposed condo rezoning on the west side of the Moose Wilson Road be the same as the overall density of the Aspens, and that the area on the east side of the Moose Wilson Road road have higher density in order to provide the total number of additional units that the county is trying to create. This will provide a more attractive node when looking at the Wilson faces and the mountains (from the Moose Wilson Road), protect the wildlife corridor through the Aspen that is near the Moose Wilson Road, while providing the additional units required. Thank you for considering this suggestion.

6/11/2009, Klomparens, Julie
I feel strongly that the Comprehensive Plan does not reflect preservation of wildlife and open spaces as a top priority. I do not support a plan that doubles residential and commercial development.

6/11/2009, Interested Public
We the undersigned, as citizens of Teton County, expect that the Comprehensive Plan will be revised to reflect the following: Wildlife and open spaces, values this community has cherished for decades, will be reinstated as the community's top priority and become the organizing theme of the entire plan. To preserve these values and our small town character we will not support any plan which doubles residential and commercial development. Thomas A. Wiita Kathryn C. Wiita Kathryn M. Wiita Elizabeth G. Wiita Kathryn P. Carpenter H. Cotton Carpenter

| 6/11/09| O'Donoghue, Tim Chamber     | The Jackson Hole Chamber Commerce commends you for your extensive work developing the Jackson/Teton County comprehensive plan. Your commitment has greatly enhanced our community's ability to provide input and participate in the development of the comprehensive plan, thereby creating a greatly improved plan from 1994. We are pleased to submit our comments on the Comprehensive Plan as formal input and recommendations for strengthening the Comprehensive Plan. The attached comments are general to the plan and specific to the separate Themes. The Jackson Hole Chamber of Commerce supports a plan that is based on planning, not politics, spin or headlines. We encourage a dialogue that helps the public understand that this is a 60+ year vision. Furthermore, we encourage a dialogue that informs the public with the fact that each and every development proposal will be individually reviewed by multiple levels of analysis--planning staff review, planning commission review and recorded votes by elected officials accountable to the voters. In addition, the Comprehensive Plan will be reviewed on an annual basis based on "Indicators" to assess the performance of the plan's implementation and to assure that we are achieving our community vision and statements of ideals. It is important to understand that the comprehensive plan is a vision document, not an entitlement. The public should be informed that these are not exponential developments scheduled imminently for next year. The potential build out numbers are used as a tool for planning, not a recommendation for what development should occur in the next 10 years. As such, the Jackson Hole Chamber of Commerce encourages dialogue among advocacy groups that is responsible. We hope that more effort is made to restrict and reduce fear-based threats that potentially mislead or misinform the public and are counterproductive. The Jackson Hole Chamber of Commerce believes that planning cannot be based on arbitrary fear about the word "growth" any more than business can be based on unbridled commerce. The Jackson Hole Chamber of Commerce believes that 'growth' is not a bad word -- and that 'responsible growth' is a worthy, desired and needed community goal over the next 60+ years. The Comprehensive Plan is a tool to alleviate uncertainty at the policy level while providing guidance at the regulation level. The Future Land Use Plan, however controversial, has certainly provided greater predictability in response to the community's desire for such. The Jackson Hole Chamber of Commerce believes that we need to make sure that we plan to allow an economy that at least keeps up with the rate of inflation. We cannot codify the recession as part of the Comprehensive Plan with "no growth." The Comprehensive Plan must be able to counteract economic downturns that trigger significant unemployment and sales tax crises. (Not only to protect our quality of life, but to help control the potential need in the future to raise local taxes to make up-revenue shortfalls, or to limit local services.) The Jackson Hole Chamber of Commerce believes that the recovery period for this downturn is unknown, with some estimating up to 5 years for recovery to pre-downturn levels. If that is the case, 5 years would be half the life of the drafted Comprehensive Plan, meaning that vibrancy/responsible growth must be an active part of the planning. No growth during this recovery period would essentially prolong the downturn beyond projections. The Jackson Hole Chamber of Commerce takes no position on the projections of growth in one node versus another. But we do encourage a vision that includes open space for wildlife and signature scenic vistas, as well as people space for vibrancy and quality of life for the community residents as well as seasonal visitors. The Jackson Hole Chamber of Commerce wants our grown children to be able to live, work and raise their families locally. We need responsible growth to ensure that our future generations are able to remain in Jackson Hole. Thank you once again for your hard work developing a vision for our community's future. We are in support of the following: 1. Balanced Economic Development with Stewardship of Wildlife, Scenery, and Natural Resources. The strength and stability of our economy is dependent upon the health and diversity of our wildlife, scenery, and natural resources. According to tourism industry surveys, wildlife and scenery are consistently the top two reasons why visitors come to Jackson Hole. Our tourism economy has significantly contributed to our real estate and construction economies, as well as the supporting financial institutions. Any development policies must take this into account and strive towards...
a balance of development with stewardship of wildlife, scenery, and natural resources. These natural resources include but are not limited to protection of land along current scenic byways (Highway 26/89/191) and protection and improvement of (removal of power lines) potential scenic byways, such as highways 22 and 390.

2. A Strong Annual Review Mechanism. The annual performance reviews of the Comprehensive Plan should be based on rigorous, valid, and comprehensive criteria found in the Indicators section at the end of each thematic chapter. In order to provide flexibility in strengthening the Comprehensive Plan between the five- and ten-year reviews, the annual reviews should enable adjustments to the Comprehensive Plan in response to dynamic economic, social, and environmental circumstances. The Comprehensive Plan should provide an up front, sufficient explanation of the nature and process of the Comprehensive Plan; i.e., that the Comprehensive Plan is providing a future land use plan for the near and long-term future, not just the next 10 years but the next 60 years and longer.

3. Rate of Growth. Concerns for growth should address and focus upon rates of growth, not solely build out numbers.

4. County Development Nodes. The nodal development concept as laid out in the Comprehensive Plan centralizes development in specific County nodes while preserving open space. Greater specific definition of nodal boundaries would facilitate public discussion and understanding of the nodal development concept. The integrity of nodal boundaries and the rural characteristics of the land outside of nodal boundaries should be ensured.

5. Resident and Visitor Transit. Ensure that all workforce housing and nodes be part of an interconnected, community-wide and regional, multi-modal transportation system with an increase in public and visitor transit. These should include the encouragement of carpooling and vanpooling.

6. A More Sustainable Teton Village. Provide enough square footage of commercial space for Teton Village in order to create a node that can sustain workforce/family housing and local convenience commercial space to ensure a vibrant local community and reduce traffic on Highway 390. The additional commercial space needed should be based on an analysis performed with the support of Teton Village Association and in concert with a transportation impact analysis for Highway 390.

7. At Least 65% of the Workforce Living in Teton County, Wyoming. To remain a community first and resort second, we must strive to ensure that at least 65% of the community workforce lives in Teton County, Wyoming.

8. Incentives for Housing and Open Space. In addition to Town and County mandates for providing affordable housing, incentives should be provided for affordable housing in addition to that created by current mitigation percentages. Workforce housing definitions should include all forms of housing, including deed-restricted and free market, ownership and rental. In addition, incentives should be provided to landowners to keep their property as open space in order to help preserve the wildlife and scenic values of Jackson Hole for visitors and residents alike.

9. Workforce Rental Housing. The Comprehensive Plan needs to have very strong provisions for workforce rental housing. References to workforce housing should contain language promoting rental housing and an increase in rental housing.

10. Provisions for growth of current and new businesses. Our business community is dealing with a very dynamic economy as well as high cost of living. The Comprehensive Plan should contain provisions for maintenance and growth of a
healthy customer base and new local businesses.

II. Additional Analysis. Data and models should be developed to analyze and understand the impacts of commercial and residential development upon employment, workforce housing, transportation, and wildlife, scenic, and natural resources. Draft Input to Theme 4: Meet Our Community's Housing Needs

Statement of Ideal: Remain a community first and resort second by ensuring that at least 65% of the community workforce lives in Teton County, Wyoming.

Principles:

4.1 House a diverse population in a variety of housing types
4.2 Require that development and redevelopment mitigate the workforce housing impacts.
4.3 Prioritize the preservation of existing workforce housing stock.
4.4 Incentivize the creation of workforce housing.

Jackson Hole Chamber of Commerce Recommendations & Comments:

The JHCC strongly agrees with the goal of at least 65% of workforce housed locally. Please provide a definition of how much of workforce housing would be deedrestricted and how much is free marketing rental and ownership housing.

The Comp Plan provides the following definition for “Workforce Housing”: “all housing occupied by people working in the community regardless of whether the unit is deed restricted or not.” Please provide a definition of what working in the community means, e.g., number of hours (weekly and/or annually, period of employment including seasonal).

Place greater emphasis on maintaining workforce rental housing and creating additional workforce rental housing. The availability of sufficient rental housing is critical for persons entering the workforce in our community. To this end, we recommend that all definitions and discussions of workforce housing include emphasis on rental housing.

NEW POLICY= Policy 4.4.b (change the current 4.4.b to 4.4.c): Provide Incentives for existing businesses to create workforce rental housing. Existing businesses can be provided incentives by the Town and County to develop, redevelop, convert, and lease space to create workforce rental housing. This workforce housing can be deed-restricted and free market rentals.

Revisions to Indicators (on page 51 of the Comp Plan):

- For "Percentage of workforce housed locally", change the Review Period from every 5 years to every year. With such an ideal and critical goal as 65% of workforce housed locally, this should be monitored annually.
- For "Number of Rental Units", change the goal from "monitor" to "increase.

5: Provide for a Diverse and Balanced Economy

Statement of Ideal: The community will remain a community first and resort second by balancing its commercial, resort, and housing growth.

Principles:

5.1 Maintain a strong and diverse economy
5.2 Balance economic development with workforce housing and community character Policy 5.2.a Balance workforce housing, commercial development, resorts, and civic uses
Policy 5.2.b Limit commercial development consistent with the Future Land Use Plan
Policy 5.2.c Maintain a strong economic basis for a high level of services and amenities

Jackson Hole Chamber of Commerce Recommendations & Comments:
CHANGE PRINCIPLE 5.2 to 5.4 and associated policies from 5.2 to 5.4 also.
NEW PRINCIPLE = 5.2 Balance economic development with stewardship of wildlife and natural resources. The strength and stability of our economy is dependent upon the ----ialUland diversity of our wildlife and natural resources. According to tourism industry surveys, wildlife and scenery are consistently the top two reasons why visitors come here. Our tourism economy has been significant in the health of our real estate and construction economies as well as the financial institutions that work with these economies. Any development policies must take this into account and strive towards a balance of development with stewardship of wildlife and natural resources.
NEW PRINCIPLE = 5.3 Orient economic development towards community self-reliance
As the community strives towards energy efficiency, the Town of Jackson becoming a “Pioneer City” and other means of economic self-reliance, commercial development should encourage the recruitment, formation, and growth of businesses that support our goals of self-reliance. Such “green” businesses would be consistent with our community’s orientation towards balancing economic, social, and environmental interests and concerns and create “green collar” jobs for our community. Our community’s tourism economy would be strengthened by the attraction of discriminating travelers who select Jackson Hole as their destination of choice because of our community’s economic development orientation and progress towards energy efficiency and self-reliance.
- Policy 5.3.a Attract commercial development that supports community energy and sustainability goals and initiatives. Incentives should be provided to businesses that support community energy efficiency, recycling, and other sustainability goals and programs and demonstrate that their operations are consistent with these goals and programs. NEW POLICY= Policy 5.4.d Strengthen community orientation of tourism economy.
Jackson Hole and Teton County should appeal to a broad range economic demographic. A continued and new focus on middle class families should be integrated into our plan. Family visitation has been central to the success of our community’s tourism economy. Left unattended, current economics are driving new commercial development towards high-end business that is unaffordable for many families. In order to continue to attract families, commercial development policy will support affordability for visiting families. The policy and tourism goal of providing a high level of services and amenities is not limited to highend development and high priced services.
Revisions to indicators (page 57 of the Comp Plan):
- For "Percentage of workforce by industry type", change this to read "Percentage and number of workforce by industry type"
- For "Lodging occupancy rates", change this to read "Lodging occupancy rates by district."
- Add the following indicators:
  "Jackson Hole Airport enplanements" with "Maintain or increase" as the goal and a review period of 1 year.
  "Unemployment rate" with "Decrease" as the goal and a review period of 1 year.
  "Visitor Center visitation" with "Maintain or increase" as the goal and a review period of 1 year.
Comment

Thank you for the opportunity to provide comments on the Draft Jackson Teton County Comprehensive Plan (plan). Although the Plan does not directly pertain to the management and administration of Grand Teton National Park, indirectly some elements of the Plan have the potential to affect the resources and values for which the park was established. As a neighbor and adjacent landowner, our comments are offered in the spirit of partnership, and are intended to be constructive. Although we take great interest in all aspects of the Plan and applaud the hard work and effort that has gone into the current draft, our comments are limited to those elements that have the potential to affect park resources, visitors, and employees.

The Plan’s vision statement, "preserve and protect the area’s ecosystem and meet the community’s human needs in a sustainable and predictable manner," sets the framework for the entire effort, and seems to capture the sentiment of the community. We think it also reinforces the community’s context within the larger ecosystem, and specifically with Grand Teton National Park.

Of the seven themes identified in the Plan, we think that themes 1, 2, 4, and 6 are critical in terms of the potential to affect the park. Guidance provided by the Plan on the location and density of future development have the greatest potential to affect wildlife habitat connectivity, healthy vegetation communities, and scenic viewsheds.

The Natural Resource Overlay (NRO) is a valuable tool in managing development on lands that are particularly important as wildlife habitat or are otherwise important to the protection of the area’s natural resource values. Maintaining connectivity between park lands and others, both public and private, are often crucial to sustaining bird, wildlife, and plant populations and associated values. We note that portions of the NRO are located within the park, and include some lands that are in private ownership. Inclusion of these private lands within the NRO would allow for development, yet would also help to ensure the continued protection of park resources.

We would also offer our assistance should there be opportunities for collaboration regarding the identification and protection of additional focal species and habitats. We think that a broader spectrum of species and habitats should be included in a future refinement of the NRO so that all roles in the ecosystem are represented.

In light of the fact that development actions outside of the park may have the potential to affect resources and values within the park, we encourage the planners to carefully consider the potential effects of their actions on the park. The Future Land Use Plan (FLUP) is a key element in identifying how growth will occur throughout the area, and should be more clearly defined before the Comprehensive Plan is finalized. Accurate buildout forecasts are important to understanding future development impacts and are needed to ensure protection of wildlife, natural, and scenic resources.

Development on the west side of the Snake River along the Wyoming 390 corridor (Teton Village, Aspens, and Wilson development nodes) is of particular importance because of the potential to adversely affect a portion of the Moose-Wilson Road within the park as well as important wildlife habitat and movement corridors. The Moose-Wilson portion of the park contains some of the most rich and sensitive wildlife habitat within Grand Teton National Park, and is highly valued for its primitive values, opportunities for wildlife viewing, as well as access to the Laurance S. Rockefeller Preserve. The rustic, narrow, and winding character and slow travel speeds along the Moose-Wilson Road are key to enjoyment of this portion of the park, and because of its character, the road is eligible for listing on the National Register of Historic Places. Traffic volumes along Moose-Wilson Road within the park are approaching levels that could diminish the quality of visitors’ experience, and are likely not sustainable. Future growth on the Wyoming 390 corridor, as well as transportation-related actions, may significantly affect the
park and should be carefully considered. We respectfully request that transportation strategies and development decisions be sensitive to the needs of surrounding jurisdictions, including Grand Teton National Park. In light of the potential for increases in traffic volume on the Moose-Wilson Road, the town and county should coordinate with the National Park Service to ensure that, in addressing development and transportation issues on Wyoming 390, additional transportation-related and other impacts are not created within the park. Workforce housing is a central issue for all of us, and we encourage the planners to make every effort to meet the community's housing needs while upholding the other values expressed in the Plan. We are working diligently to address housing of the park's workforce within the park to the greatest extent possible in order to minimize impacts on the community. We welcome opportunities to work together collaboratively with the town, county, and other agencies. Thank you again for the opportunity to provide our input and comments on the Draft Jackson Teton County Comprehensive Plan. We look forward to continued dialogue on the issues and challenges that face our community and the amazing landscape in which we live. Should you have any questions on our comments, please contact Jennifer Carpenter, Park Planner, at 307-739-3465.

| 6/11/2009 | Wang, Louis          | I have 3-points to make.  
Number 1: The comp plan needs to reflect the public input. Public Service, in its many forms, is a very honorable profession. But you have to actually serve the public.  
Favoring the planning input of special interests or elected officials with their own agendas over the public input is hijacking of the public. And, of course, hijacking and serving are two very different things.  
The Town and County have held numerous public meetings to explain the plan and its benefits. The plan itself recounts its benefits. Sooner or later you must face the fact that the public doesn't want the plan you have compiled, and all the cajoling in the world isn't going to convince them.  
Will you please stop selling and defending the failed draft plan and start serving! That's the fundamental problem, the planning departments haven't been serving the public.  
Number 2:  
The plan calls for too much growth. The underlying mega-error in planning was made at the very start. Taking the 9-20-35 and 6-on-35 clustering out of the rural areas and redistributing the density in "nodes" is a ruse. Those clustering development options were adopted by a planning commission at the behest of a wealthy and very large land owing family. It was a bad idea. You should now simply remove the clustering options as if they had never existed.  
You need to work at decreasing the density at build out, not at redistributing the beans in the jar. You need a clean sheet of paper and a new start.  
A second ruse is that transportation deals almost exclusively with transportation alternates rather than vehicle traffic and roads. The lack of disclosure on roadways and congestion, issue that are at the top of the list for most residents, is deplorable. A planning document that hides such a major issue rather than addressing it is unfortunately lacking at best and shameful at worst.  
The plan envisions too much growth. The public wants the community they have now; they like the rural feel of what they've got. They want to preserve that kinda-funky not-too-polished "last of the old west" Jackson Hole they have now.  
Number 3:  
Commercial growth must be contained. It's the growth engine of Jackson Hole and it must be monitored, limited, and controlled. Excessive commercial growth is probably the major contributor to the large "phantom" commuter population we now have. It's destroying our community. Limit commercial growth to 1/2% per year as an interim measure until you can evaluate the situation and develop a comprehensive and workable mechanism to deal with this problem.  
Statements in the plan that we aren't growing too fast now so we don't need to do anything on growth-rate other than keep an eye on it are pure BS. Excessive growth, especially commercial growth, is at the heart of many community imbalances and you should stop pretending that it doesn't matter.  
2  
In conclusion:  
Serve the public! Take care of Number-1, then #2 and #3 will be much easier. Please see the attached News & Guide Guest Shot. If you ever want to sit down and talk about any of this, or if there is any way I can help you to better serve the public, please call me. {referenced newspaper article available in hard copy at the County Planning Department} |
| 6/11/2009 | Roush, Lou Anne    | As a resident of South Park I believe preservation of Wildlife and Natural Resources should be at the top of the list of priorities for our district not at the bottom. Also having students in the Middle and High School I am concerned about the amount of traffic already in this area. The increased amount of housing you propose next to the High School will only aggravate the problem and increase the potential for student related accidents. |
| 6/10/2009 | McIntosh, Doyen    | Hello, I strongly object to plans to develop Wilson. Who decided on 65% housing for working force? |
6/9/2009  Newcomb, Anne
Interested Public

Thanks for all your effort. How about this? Put in the basic plan right now, total protection (no development at all beyond maybe a trail) for all riparian areas. Enough room on either side of any water to allow wildlife to feel safe. (I don’t know. Maybe the length of a football field. Ask Game and Fish) Get as much info as possible on regular migration routes and often used trails and mitigate every way possible. (Underpasses, lights, speed restrictions) People say -well the wildlife have 97% of Teton County -and that's true. But we have the bottom land they need for winter use. And we fill up the back country with bikes and people and out of control dogs. Houses don’t kill wildlife -cars and dogs and fences and lack of food/ forage kill wildlife. So I’m all in favor of buildings several stories high. But in the urban/forest interface (eg. Wilson, Teton Village, Moran) there should be appropriate restrictions. Slow speed limits, strictly enforced; dogs on leash (and I’m a dog person); absolutely no fences except when necessary for horses or cows or other farm animals. No pesticides. Edible landscaping and no compensation when it gets eaten. Build the protections into the plan.

AND PLEASE legislate that developers must provide housing for any employees plus pay in advance for the costs they bring the community - like roads, schools, police, health care, etc.) Yes, that might inhibit development. That's the point. We really don't need any more development in order to be the richest county in the United States. Thanks for reading this. Best of luck to you.

6/8/2009  Prayzich, Elise
Interested Public

It should be clear to all by now, that those who have done a truly thorough analysis of the Draft Comprehensive Plan - mathematical and otherwise - have proved to all of us AND the Planning Commissions and Elected Officials, that this Draft Comprehensive Plan is definitely going to overload our Valley’s carrying capacity. We must not ruin this pristine Valley for future generations - sustainability dictates that we plan responsibly so future generations will come to live here and not feel pressed for space, crowded by too many people living in a finite area, or with just too much traffic to be able to enjoy the qualities only Our Valley now offers - open space and wildlife . Our top priorities for the future of this Valley. Doubling the population of this Valley will never preserve it .. increasing so much commercial space will not only offer undue competition to our present businesses, but ALSO cause the need for ever-increasing workforce housing - making obtaining such housing an ever-increasing gamble for the workers of this Valley who keep our Town and County running!! A vicious cycle! We urge you to listen to and consult with those who have done the most work on analyzing the Draft Comprehensive Plan since it’s release to the public - Rich Bloom of South Park Neighbors, Mike Whitcomb of East Jackson Neighbors, Armond Acri of Save Historic Jackson Hole and Krisy Bruner of the Jackson Hole Conservation Alliance. Their findings should be given attention one-on-one with the Planners and the Elected Officials - and not just at arms length in written reports, e-mailed letters or comments at public meetings. I strongly urge the Planners and Elected Officials to listen closely to the comments of the citizens of this Valley, and revise drastically the present Draft Comprehensive Plan before it becomes law. Permanently preserving wildlife, open space and small community character must be our vision and our guiding principal in ALL districts and Themes! And, we must bear in mind that which we’ve stated many times, we are a Town and County first, and a resort destination second.

6/8/2009  Ewing, Patty
Interested Public

During the past two years, after attending multiple meetings on all levels, participating in the “community process”, and now reviewing the draft comprehensive plan and its potential build-out numbers, we are even more convinced of the following: All development, be it in the county or town, should be governed by the clear and overwhelmingly expressed priority of maintaining wildlife and open space. This priority must be maintained in all districts, even in the so called “growth nodes.” While structures may be confined to growth nodes, people are not. All development, be it residential or commercial should incur and fully mitigate all projected infrastructure costs and impacts to the community: schools, roads, water, sewer, law enforcement, hospital, social services, and parks. Given the impact of the recession on this community, one can safely conclude that a “build today and pay for it tomorrow” does not work.
Dear Planning Officials,

Thank you for the opportunity to comment on the draft Comp Plan.

General Comments to Public Process. Your written comment period is too short in the context of such an aggressive, complex, and game changing Comp Plan. No public meeting was scheduled for the Aspens/Teton Pines area despite the huge proposed change to the character of this area. This oversight should be corrected by scheduling a local meeting with appropriate notice. I attended the Teton Village public hearing and was offended that staff prematurely cutoff public comment and failed to record any of the thoughtful comments.

General Comments Regarding Substance of Comp Plan. The Camp Plan attempts to do too much too fast. By "re zoning" the County in a single document, much is lost from the traditional scrutiny of specific site review. The "ivory tower/laboratory" approach to planning our community fails to square with the existing "on the ground" character and land use conditions, ignores the reasonable expectations of our residents, and destroys investments premised upon thirty (30) years of land use regulations. The textbook principles establishing unodes" based on location, services, and infrastructure ignore existing legal restrictions, including private covenants and State laws, fail to protect the character of existing neighborhoods, and promote chaos, uncertainty, and unpredictability for the areas targeted for huge growth and density such as Wilson and the Aspens. AspensRaintree Area. Pam and I have lived on the Village Road since we purchased our first home in Nethercott in 1977. We have resided in the Raintree subdivision since 1986 so we are significantly affected by the proposed transformation of our neighborhood to node. The Raintree subdivision is a low key subdivision inhabited by local working residents often outnumbered by wildlife. The thought of adding a hundred or more homes at thirty (30) times existing density to our neighborhood is unthinkable. The Aspens/Raintree neighborhood represents a diverse and vital neighborhood comprised of longtime residents, local workers, visitors and second home owners; it is not a blighted community in need of redevelopment. The Raintree subdivision is currently zoned NCSF in recognition of its long established single family three (3) acre neighborhood. Existing land development regulations promote the stability of existing land uses and insure the protection of desired community character of each zoning district. Private restrictions and State law also protect our neighborhood character and values.

The proposed Comp Plan targets the Raintree neighborhood for mixed use high density residential development which could increase housing density thirty (30) times. It is unclear whether these are open faced negotiating tactics hoping for some lesser density or an honest planning effort. The planners have no "skin in the game." None of the existing stakeholder owners in the neighborhood were contacted for their input prior to the release of the draft Comp-Plan. The proposed Aspens/Raintree rezoning destroys the reasonable expectations and investment of the neighborhood residents. It represents an overly intrusive impact to an existing single family neighborhood and ignores existing legal rights, restrictions, and covenants including an open space dedication, express deed restrictions, private covenants, and Wyoming law. Surgical site specific infill which encourages compatible growth in an existing neighborhood is the preferred course to broad brush rezoning with a blunt instrument such as proposed under the draft Comp Plan. Density for the Aspens/Raintree area should be reduced to mirror the existing platted single family neighborhood. Otherwise, our neighborhood character will be destroyed.

There is no need to throw out the 1994 plan. What happened to the idea to update it?

Thanks for your consideration.
In January 2004 I wrote this letter to the Teton Co. Commissioners:
As a native of Jackson Hole, I believe the Comprehensive Plan governing growth here has to be downsized. Many concerned citizens discussing growth at recent public meetings offered this conclusion: cut the amount of future growth allowed!
Current information indicates the for-sale housing and rental units are pretty well in balance with available jobs. A referendum last December overturned a re-development plan for larger structures in downtown Jackson. Last year a referendum overturned a development plan for the J.H. Hereford Ranch. I believe the current structure of downtown should be maintained. I also believe every effort should be made to preserve the current use of J.H. Hereford ranchland. Only 3% of Teton County is privately owned, and of this, approximately two-thirds has already been developed (there may be as many as 2,500 lots platted, but not yet developed). The current population of Teton County is 18,000, so putting a cap on the population somewhere near 25,000, while implementing smaller and less development of the one third undeveloped land available would be responsible planning.
Under the current plan the population could grow to (or exceed?) 40,000. This valley cannot sustain that level without sacrificing our most valuable assets. Downsizing requires the courage and conviction to oppose unnecessary developments that waste valuable land, and/or adversely affect natural resources (such as water and wildlife).
The impact overbuilding and overpopulation has on necessary services such as law enforcement, fire protection, health care, social services, schools, roads, water, sewer, etc. will be extreme! Jackson Hole is a most unique place. Our proximity to National Parks, National Forest, Wilderness areas, Federal Elk Refuge, State Refuges, and BLM land requires huge responsibility on our part to manage growth accordingly. This location is part of a large ecosystem that requires balance in order to survive. These natural resources are precious to residents, as well as to those who visit.
We each have choices and bear responsibility for what happens here. We can’t change the past, but we can change the future by making wiser choices now.
Sincerely,
Joanna Johnson

Now, in 2009, more excessive developments are proposed and again the majority of residents are saying no!
Recently I spoke with the Planners and was told that 70% of private land in Teton Co. has been developed; 30% undeveloped. Planners quoted me the same figures five years ago, yet major developments have taken place in wildlife corridors and along major waterways. The population of Teton Co. is not truly known, as a census has not been taken for nine years. Necessary services such as law enforcement, fire protection, health care, social services, water, sewer, etc. are stressed. We will soon need more schools. The roads are at full capacity. We are losing wildlife (example: moose population is down 44%). Ranching is disappearing and natural resources are being compromised. Mismanagement of our part of the large ecosystem we share affects the balance of the whole. Teton Co. has gone from a ranching and tourist economy to an economy based on consumption which is driven by greed. Those who benefit monetarily are willing to sacrifice our most valuable assets. Consumption can only last as long as there is something to consume! Then what?? Will there be anything left to base a sustainable economy on?
As a native resident I ask you again to please stop promoting the selling of Jackson Hole to the highest bidder and direct your efforts toward preserving what’s left, while seeking alternatives for the economy.

Appendix K: Transportation is outdated. A 1996 plan with some limited updating in 2001 is inadequate for the present Comp Plan. Too much growth has already happened, or has been approved and will in due course happen, for that old stuff to be relevant any more. I studied the "Transportation Analysis" presented by SRA's consultant prior to that project's approval extremely carefully. It was a cleverly constructed set of misrepresentations and deceptions which purported to "prove" that adding 525 living units at the end of what in the winter is a dead-end road does NOT increase the traffic on the Village Road. That's obvious nonsense. I concluded that either the Village Road has to become four lanes or a north crossing has to be built, if SRA were approved. It was approved and is starting to be built. No Transportation Chapter for the present Comp Plan makes sense if it doesn't address the effects of this and similar subsequent developments. Although SRA maintained that 390 needed no widening, when the new access road from the Village to 390 was built recently, they made it four lanes! What good would that possibly be if they didn't expect a similar widening of 390? In conclusion, the full adverse effects on our roads and on their traffic of the more recently approved growth as well as the further growth now outlined in the draft plan must be clearly shown in a revised/updated Transportation Appendix, to allow us all to make a fully informed judgment on the present Comp Plan revision.

<td>Stone, Cindy Hill</td>
<td>Pleeassee! Give me a break. Did you see the front page News and Guide article inspired by our learned planners (planners that you and I are taxed to pay)? It compared to their “neighborhood power point” meetings. It was smooth and creamy but they actually said nothing. They wouldn’t say sh-t if they had a mouth full; and they do. So look at this. The comp plan is on line. If you can’t bare that, go to Staples (I know I can’t bare that either). Do it for the greater good. Each theme of the comp plan has an indicator which will tell us if things are getting out of hand. That sounds like a good thing, but where is the control. This is all an experiment and they have no control data. So when the water in my well or the moose in my field or the oxygen in my air or the fish in Flat creek get to what point, who says it’s time to shut it down? Well, they do. The new comp plan indicators will tell you to check to see if there is consistency with the FLUP (Future Land Use Plan) and they, the planners, made that up. Yup, the FLUP is the planner’s baby, not the valley’s. This whole thing is a flup. On a lighter note, I signed the petition. I understood it, I was not under duress. There was a time in my life when I was picking up one kid from ski practice and dropping one off at drum lessons, trying to fit the grocery store in before I headed home to fix dinner, do the laundry and help with homework. A petition was an easy way for me to say, “Ya, I get it, but right now I have two kids that have a report due, and I still need to mow the lawn. I vote, therefore I assume that my elected officials will do the right thing.” I’m wiser now.</td>

<td>O’Brien, Paul F.</td>
<td>It is unacceptable that the need to protect the scenic and wildlife attributes of this area, made clear in the existing plan, have been arbitrarily dropped from the rewrite. Past events, such as the TMR disaster, have made it clear the public wants protection of this area in the plan.</td>
</tr>
<tr>
<td>6/3/2009</td>
<td>Peck, Chris</td>
<td>I am very much concerned with the new comp plan and the direction the planning process has taken. After attending numerous meetings and carefully listening to my friends and neighbors it is apparent that we had a goal of sustainable community through a controlled pattern of growth. The plan, and correct me if I am wrong, just about doubles the housing and commercial build out in Teton County. This is the “new bigger is better comp plan”. I swear the planners were not listening at those meetings, the large majority of people were not into the amount of growth shown in the new bigger comp plan. Crazy thing was, they would never really tell us a build out number for a long time. I guess I could write on and on, but the final line is the growth strategy of the plan is way out of control. Please support a reduced build out number, increasing mitigation rates on new residential and commercial development to directly offset the impacts of workforce housing.</td>
</tr>
<tr>
<td>6/3/2009</td>
<td>Tompkins, Kathy</td>
<td>I am writing to invite you to come to Cottonwood and go for a walk around the neighborhood to let you see what works and doesn't work here to keep our great little neighborhood viable. We are not opposed to extending our neighborhood South Of High School Road into South Park when the time comes. We welcome a new neighborhood when needed to compliment what's already here. We just ask that you have an open mind to our concerns about the proposed over development in the NW corner of South Park and the negative effects it will have on our diverse neighborhoods here in West Jackson. Our main concerns are the failure of High School Road being the only collector between Rte 89 and South Park Loop Road. There are no assurances in the comp plan to promise a parallel collector in South Park to alleviate the traffic on High School Road before this development occurs and the Tribal Trails Connector Road goes in. The second is the lack of open space and parks in the NW corner of South Park. If you do the numbers there is no room for these ammenities in NW South Park. The plan states that West Jackson infrastructure such as parks, roads and schools can serve the proposed 1500 units in the 400 acres in the NW corner. There are about 1500 all toll, homes from Cottonwood down to the tail end of of South Park. Can you imagine that many jammed into the small amount of land and the pressures that these units will put on the schools, parks and roads here in West Jackson. Give me a call and come on over for a cup of coffee and a walk around a great diverse neighborhood and help us think of ways to keep it going and make it better without abandoning it for newer pastures across the road.</td>
</tr>

</table>
Dear Town of Jackson and Teton County Officials,

On behalf of Friends of Pathways (FOP), I would like to submit the following comments on the spring 2009 Draft Jackson/Teton Comprehensive Plan (draft Plan).

Friends of Pathways is a private non-profit with 1,200 members serving Teton County, the Town of Jackson and the greater Teton region. Friends of Pathways advocates the funding, construction, maintenance, and use of pathways, trails, and complete streets through advocacy, educational outreach, and public/private partnerships. Thank you for the opportunity to comment.

In general, one FOP comment is there has been rather limited planning time and public meeting opportunities that have focused on the transportation topic. Land use discussions have been much more dominate. While certainly land use is important, the history of the Comp Plan shows there is a direct relationship between land use and transportation, and that solving transportation issues has been neither easy nor without controversy. There would be benefits to the community for the Town and County to devote more time and open up more community dialog on transportation issues as the Plan moves forward. Friends of Pathways comments start with the Community Vision on page 7, and then shift to the Transportation Theme 6 starting on page 59 (of the spring 2009 draft Plan). Quotes from the draft Plan are highlighted in italics with page numbers for reference.

Page 13. Community Vision, Strategy Theme 6, Transportation

“The most sustainable way to provide for the community mobility is through alternate modes of transportation such as transit, walking, carpooling, and bicycling. Part of enabling this change is by placing people in closer proximity to services and by providing travel choices—through a nodal development pattern and increased funding for transit and other travel modes. A larger part is changing way we think about transportation options.”

FOP generally supports this summary of the Theme 6 Multi-modal transportation. We recommend this section should be improved with adding that TDM, or Mobility Management, is another one of the list of key solutions, along with walking, bicycling, transit, and Ride Share (perhaps better term than carpooling). Also, the final sentence should simply state “…increased funding for the Active Transportation modes (or “alternative transportation modes”), not just “…for transit and other travel modes”, which could be interpreted to mean wider roads.

Page 59. Current Theme 6 - Statement of Ideal

“Reduce resident and visitor reliance on single occupancy vehicles while still allowing safe, efficient, and economic travel”

This statement could be one of several plan goals, but it is nowhere near inclusive or measurable enough for a Statement of Ideal for the entire transportation system. Friends of Pathways would like to suggest the following alternative statement. This is based on a significant effort by the Sustaining Jackson Hole project that worked on the transportation issue for 3 years. It incorporates the input and support of over a dozen transportation, planning, and energy professionals and experts familiar with our community and its challenges.

Statement of Ideal – Friends of Pathways - Suggested Alternative:

“Town of Jackson/Teton County residents and visitors will be able to safely, efficiently, and economically move into, within, and out of the county by a variety of transportation choices that comprise an interconnected, multi-modal system based on conservation of energy, enhancement of public health, and fuels that are clean and renewable. The transportation system will allow for viable populations of all native species, the preservation of natural scenic vistas, and the safe, unimpeded movement of wildlife.”

Comment Theme 6 - Why is this theme addressed: Include more key Issues

The opening section would be improved with a better statement of the problems, thus better providing the answer to the question, “Why is this theme addressed?” The draft Theme 6 primarily mentions the problem of roadway widening. There are significant additional reasons why this theme is addressed that should be developed in the Plan, these are:

- Environmental impacts of transportation (climate change, air/water/noise pollution)
- Energy issues, including goals to reduce use of fossil fuel and promoting alternative fuels
- Public health impacts of auto-centric transportation (obesity, diabetes, cardio vascular disease)
- Economic impacts to JH of a changing world, where the cost of oil will continue to rise.

Comment – Mode Shift goals should be increased, not decreased
On page 59-60, the draft Plan states a substantially reduced goal for shifting trips – Why? Draft Plan Page 59-60

“This will require that an additional 10% of all trips along these major corridors be shifted out of single occupancy vehicles into another travel mode. Transit offers the most viable alternative to vehicular travel, however, roadway designs that use the “complete streets” principle will help ensure that roads safely accommodate all modes of travel.” This is a significant reduction from the current Comprehensive Plan. Today’s Plan includes goals adopted by the Town of Jackson and Teton County in 2000 that are to increase “ride share 1%, walking 4%, bicycling 4%, and transit 5%”, which add up to a combined 14% mode shift goal by 2020 under current policy. [Page 8-22 of Chapter 8 – Transportation, Third Printing, October 2002] The draft Plan therefore represents nearly a one third reduction of the current community goal for mode shift!

Friends of Pathways does not support any reduction in the modal shift goals for the new Plan. It would be a step backwards from current policy, incompatible with the vision chapter of this draft Plan, and runs counter to the public opinion received in the Comprehensive Plan process. All Plan surveys clearly showed the public overwhelmingly supports multi-modal transportation, including pathways, bicycle, walking, and transit. Residents also support public investments to construct needed facilities and operate these alternative transportation systems safely and efficiently. In fact, public support for Pathways was typically higher than any other mode of travel in surveys as well as the recent SPET election. This Plan should deliver on the public’s will for a real multi-modal system that is among the best in the country. Such a system would go the farthest in minimizing environmental impacts of motor vehicle travel, and would overall be the best for wildlife and all natural resources. This means:

1. Completing the pathways system.
2. Greatly improving the pedestrian walkways in Jackson and all the mixed use villages
3. Making every street a complete street that serves all the users.
4. Expanding the START system, making it viable for more of the community and adding new routes to Wilson, the Airport, National Parks, and connecting to the region.
5. Working collaboratively on transportation projects with WYDOT, Bridger-Teton NF, and Grand Teton National Park.
6. Use the best of alternative fuel technology to minimize the carbon footprint of Jackson Hole’s transportation system...
7. Developing a high level of expertise in successful participation in federal funding for transportation projects - through the STIP and a wide range of federal grant opportunities in SAFETEA-LU the federal transportation bill, and other federal programs. It also means leadership-level participation in the regional transportation system now underway and being formed with support from the ARRA Stimulus funds, Idaho Transportation Department, and Yellowstone Business Partnership. START should and can be inter-connected with the entire regional transportation system now being developed. Imagine full access to our region including the parks with one simple ticket connecting us to our neighboring communities and beyond. This regional transit system is underway, and the Plan should specifically include recognition and policy support. FOP believes it is important to broaden the Plan’s view of our region to include mention of future transit connections the next step beyond Teton Valley and Alpine to connect Jackson to the main greater Yellowstone gateway cities like Idaho Falls, Bozeman and others. This is needed to support the future of travel in our region, including sustainable access for tourism, as gas prices will continue to climb over the next few decades.

Forward thinking goals should be a hallmark of this Plan, and taking steps backwards in mode shift would be the wrong way to go. Instead, the Plan should be revised to set higher goals and take much more advantage of the synergy of a comprehensive transportation strategy and action plan. This is possible - Many progressive local governments in America are achieving mode shift changes that exceed these levels, and most European nations are well above this - the
Netherlands has bike mode share of 30% nationwide. Jackson Hole must as well. Goals such as the following should be considered:

Mode Share of all transportation trips* - Proposed by Friends of Pathways:

• 10% Bicycle
• 10% Walking
• 10% Transit
• 10% TDM Reduction of motor vehicle trips
• 10% Ride Share reduction of motor vehicle trips
• 50% Total Alternative Mode share of all Jackson Hole trips by 2030.

*(Note “one trip” is travel of one block or more, for any purpose)

Comment: The Plan must rely on a combination of all active transportation solutions. One important example of how the draft Plan language could be significantly improved is this statement on page 60, which is repeated in the draft Plan in multiple locations: Page 60.

“Transit offers the most viable alternative to vehicular travel...”

This statement should be revised to more accurately reflect the reality that a combination of strategies will be required for Jackson’s transportation future. Each alternative transportation mode – Walk, Bike, Transit - has advantages, and works well in some, but typically not all, circumstances.

Therefore the statement should be expanded to properly support the key additional alternative modes and key programs. Modern transportation research is clear – successful communities are using a combined, multi-modal approach, which is what the draft Plan claims to embrace. Thus, the language changes proposed are consistent with the intent of the Plan.

For the new Plan to succeed it must proposed more specific, comprehensive, and integrated solutions. A proposed improved statement would be:

FOP Suggested change:

Transit, bicycle and pedestrian modes (including the pathways system) offer alternatives to private motor vehicle travel for many trips. These “Active Transportation” modes have the lowest environmental impacts and carbon footprint, and will be encouraged. (Note: there is a national shift in word usage to change from “alternative transportation” to “Active Transportation” and this Plan should consider changing to that newer term).

In addition to embracing all the “Active Transportation” modes of Walk/Bike/Transit, the Plan needs to include a more robust Mobility Management strategy (or Transportation Demand Management). This must also play a key role in shifting private motor vehicle trips to less impact modes and methods.

Each mode has its benefits and challenges, and the Plan needs to embrace all the alternative modes to fully develop a multi-modal system. Bicycle and walking are great for short to medium trip lengths, and since research shows 40% of all trips are 2 miles or less, there is substantial potential to increase these trips. Transit works well on fixed routes, including in-Town, Teton Village routes, and commuter routes from Teton Valley and Alpine. Today’s START system can be expanded in service frequency and with enhanced buses, which will increase use. The Plan should endorse potential transit extensions to the Airport and Grand Teton National Park, additional routes like Wilson and South Park, and better service to mixed use village nodes. Bike, walk modes can also be combined well with Transit, leveraging more use.

Page 61.

“Principles and Policies 6.1 - Increase the share of trips made by alternative modes, especially transit”

Same comment, this must be revised to be more inclusive. There is no magic bullet in transit,
which in fact it is very expensive and the Plan even acknowledges on p. 60 it does not serve all the dispersed sections of our community. The other modes frequently are more cost effective, serve most of Jackson Hole, are better for public health goals, and are the clear environmental winners. The best modes from an environmental sustainability standpoint are clearly the active modes of bicycling and walking – nothing else comes close. Transit is important and is more efficient that single passenger vehicles, FOP supports it, but Transit is only one of the viable options that should be prioritized.

Page 61.

“Policies 6.1.a: Establish a permanent funding source for transit”
Friends of Pathways strongly recommends this Permanent Funding Source policy be expanded to include pathway, pedestrian and bicycle systems needs in any new funding source. For example, pedestrian facilities are one of the most important and challenging areas that need investment. The Town of Jackson and all Teton County villages have seriously deficient walkway systems, long capital needs lists, and limited funding sources. Pathways maintenance is equally very important to preserve the investments, encourage use, and provide high quality service. But funds for pathway maintenance have been severely cut in 2009 and would also benefit from a permanent funding source.

Page 62.

“Policies 6.1.c: Research Regional Transportation Authority Viability” This Policy section should be expanded to reflect the significant Regional Transportation Planning that is currently underway in our Teton/Yellowstone Region. The Plan should reference the Regional Transportation Concept Plan recently completed by the Idaho Transportation Department and the Yellowstone Business Partnership, which has recommended a Transportation Co-Op be formed. The Co-Op concept has received over $535,000 in ARRA Transit Stimulus funding from ITD, in June 2009 next plans to hire a full time staff and launch a regional transit pilot program.

The Regional Transportation Concept Plan recognized START as the most successful Transit System in the region. This regional transit planning offers Jackson a tremendous opportunity to connect regionally. The opportunity to expand on the somewhat limited Regional Transportation language in the draft Plan is significant. The Plan should be revised to establish a local vision for how Jackson will fit into a future regional transportation network of not only transit, but also pathways and complete streets.

Leveraging the means and resources of our Greater Yellowstone region, including Idaho and Montana communities and the two National Parks is a significant opportunity. The Plan touches on the topic, but should be more specific, clear, measureable, and inclusive. Please revise the Plan to include policy support and commitment to participate in the regional transportation planning underway. This is important not only for our local transportation, but also to support the future of travel and tourism in the Greater Yellowstone. Simply relying on motor vehicles for regional access will not be adequate to achieve our goals in the future. For more information please see: http://yellowstonebusiness.org/transportation/

Page 62.

“Policies 6.1.d: Interconnect all modes…”
This 6.1.d is mostly a Transit statement; it should be expanded for all the modes.

Page 62.

“Policies 6.2 Reduce reliance on single occupancy vehicle travel”
The Principle 6.2 needs to be specific, “single occupancy [add] MOTOR vehicle travel”. One reason, a bicycle is defined as a vehicle by Wyoming statute. So the Plan should call out motor vehicle where that is intended.
Also, perhaps in this section, there should be a basic policy statement on the primary “active transportation” modes. Add a bicycle section, pedestrian section, pathway section, and transit. In addition, this may be the place to add significant policy statement on adding a “Mobility Management (or TDM)” section with measureable goals.

One of the world’s leading TDM experts Todd Litman has lectured in Jackson Hole on two recent occasions. Litman states that aggressive TDM programs can shift up to 20% of trips from high impact to lower impact via a mix of ride-share, employer, and neighborhood programs. See: http://www.vtpi.org/tdm/ Jackson could easily seek 10% TDM type motor vehicle reductions using off the shelf, proven programs.

Page 62.
“Policies 6.2.c Require Development to promote alternative modes…”
Should be expanded to require easements of developments to provide for sidewalk, pathways and transit needs. While a rational nexus must be met, that starts with good and specific policy support in comprehensive planning documents like this. Please add mention of this topic in the appropriate locations. This will help with future LDR revisions as well.
Page 62.
“Policies 6.2.d: Discourage single occupancy vehicles”
See comments above, this may be the place to add a “Mobility Management” or TDM policy.
Page 63.
“Principle 6.3—Maintain a safe, efficient, interconnected, multi-modal transportation system”
“Principle 6.3.b Coordinate network decisions…”
This should be substantially enhanced to spell out, in simple measureable ways, how all of Jackson’s Transportation Improvement Programs are developed, coordinated, and updated. State TIPs are federal requirements of States (STIP), and the current Comp Plan requires that an annual local TIP for Jackson Hole be developed.
The reality is, the Town and County have substantially failed to follow through with this critical aspect of transportation planning. There is no on-going TIP as required by the current Comp Plan, which states:
2002 Comp Plan Page 8-47: “The Town and County will develop a Transportation Improvement Program that represents a master summary of the transportation components of the improvement programs developed by each agency and department.
Principle 6.3.c Review land use proposals…
This should also mention the concept of requiring reasonable easements for pathways, sidewalks, and/or transit needs.
Page 64: Potential Transportation Network Projects:
This section of the draft Plan only contains highway projects, and thus is a highly limited list. A list of highway projects is appropriate in the Plan and should be included. However, it is equally critical a much broader list of improvements be included as well, and that the highway projects are being considered as meeting Complete Streets and Context Sensitive principles. The list should include all known major Transit, Bicycle, and Pedestrian projects. As a starting point, this would need to include: West Broadway S-Way Main Street Project: roads, sidewalks, bike lanes, a complete street project.
• WY-22 and West Broadway Pathway
• New START Transit Center
• Sidewalks in Town and mixed use villages
• Hoback-Jackson South Project (Complete Street - highway, pathway, wildlife mitigation, river recreation access, and transit needs)
Draft Plan Page 65 - Strategies:
In general, the Theme 6 Strategies section is less specific and potentially less helpful that the current Transportation Chapter 8. It lacks measurable details and guidance on what is recommended, what agency is responsible for what actions, and does not adequately discuss how this plan is to be integrated with the WYDOT and Federal agencies STIP (State/National level).

Strategy 6.1: Establish a dedicated funding source for alternate modes of travel
Dedicate a seventh cent sales tax, additional mil property tax, or other funding source to the provision of infrastructure for alternate transportation modes with transit as the priority.

Comment: Strike Transit as priority. Transit should be one priority, but sidewalks and pathways are equally important and must also be in the eligible list for funding.

Strategy 6.3: Create a behavioral shift program to increase travel by alternate modes

Educate the community on alternative mode travel options and benefits.

Pursue home mail delivery.

Encourage or require students in all grades to take alternate modes of transportation to school rather than driving or being driven.

Pursue transit service between Jackson and the airport.

Establish a trip reduction coordinator to work with employers to reduce trips and facilitate carpooling.

Comment: As noted above in the policy section, this strategy needs to be better called out in the policies. This strategy is a good start, but would benefit by selecting a name – is it to be a TDM or Mobility Management Program? Those seem more descriptive that “behavioral shift”.

Also, transit service to the Airport is a new transit route, not behavioral shift, this should be shifted to a revised Strategy 6.2 for a more comprehensive transit strategy section, which could also include Regional Transportation Co-OP and Regional Transportation Authority strategies.

Strategy 6.4: Update road design standards

Include “Complete Streets” and “Context Sensitive Solutions” policies in road design regulations.

Include wildlife crossing and other wildlife mitigation standards in road design regulations.

Comment: The new Plan should go farther and formally adopt a strong Policy Statement on Complete Streets. This strategy can then be expanded then to show how the policy will be implemented. It should be more specific that it will apply to Town, County, and WYDOT. FOP would like to note it is very likely the U.S. Congress will include a new federally required Complete Streets policy in the big Transportation Reauthorization bill currently underway and expected to be completed next year.

Strategy 6.5: Update land use review standards

Concurrently review development projects for transportation impacts that can be mitigated.

Track incremental impacts and periodically evaluate their cumulative effect.

Institute a countywide transportation demand management program.

Adopt design standards to promote alternate modes of travel.

Reevaluate parking standards and other regulations that may promote the single occupancy vehicle.

Comment: Here, this should discuss how land use review could help TDM goals. The program itself should be covered above under behavioral shift, or TDM section. Additional mention of the need to secure easements for sidewalks, pathways, and transit should be noted.
Comment

Strategy 6.6: Cooperatively create, maintain, fund, implement, and monitor a joint town/county Transportation Capital Improvement Plan
Prioritize projects within the plan across all modes to implement this theme.
Establish permanent traffic counters for all modes of travel on specific corridors in order to monitor the effectiveness of crucial segments of the transportation system.
Comment: Cooperative planning for the TIP is an important topic, but at stated this is substantially incomplete and hard to track progress. It should spell out who is responsible to do it, and should be expanded to include WYDOT and the federal agencies, BTNF, GRTE, YELL, NER. It is worth reviewing the current Chapter 8, which has a much more specific process.
The unfortunate reality is the Town and County have not followed the adopted policy in Chapter 8 in recent years. However, this is not a reason to take key details out of the plan; rather, this should be an opportunity to redouble efforts on critical components like the development of the multi-modal local TIP. This is crucial for the success of any multi-modal system.
Strategy 6.7: Research a Regional Transportation Authority
Discuss with neighboring jurisdictions and state and federal officials the costs and benefits of a Regional Transportation Authority.
Discuss with neighboring jurisdictions improvements that can be made to the regional transportation system.
See Earlier Comment: Teton County and Town should engage in the Regional Transportation Planning efforts underway, and should explore the potential benefits of joining the Pilot Transportation Co-Op being launched with ARRA Stimulus transit funding. RTAs are one possible option, and should be explored. However, there is substantial opportunity to fund much the START system’s needs through participation in the Regional System. This should be embraced fully in the Plan.

Page 66: Indicators:
The draft Plan Indicators are incomplete, far to general, and missing important items. The indicators should specifically set goals and track transit, bicycle and pedestrian mode share along with single and multi passenger motor vehicles. See FOP’s proposed Mode-Shift goals earlier in this comment letter. The current Plan has good, measureable and specific goals - those should be expanded on, not reduced.
The Plan should also require an update of the Teton/Jackson Travel Study. This key study should be updated every 5 years as is called for in the current plan. Travel Studies are considered essential tools by noted transportation experts such as Dr. John Pucher, and are frequently used in leading communities.

(see: http://www.tetonwyoo.org/plan/docs/SpecialReports/TetonCountyTravelStudy2001.pdf)
In conclusion: This is our first comment letter on the draft Plan. These comments will likely be added to as the discussion continues and revisions are made to the Plan. Please contact me if you have questions or wish more information on any of the points and issues raised.
On behalf of the Friends of Pathways Board of Trustees and our members we thank you again for your consideration of these comments.
Faraday,

I am taking the opportunity to comment on the current draft of the revised Comprehensive Plan. Like many others, I am very concerned that though protection of wildlife has been acknowledged as the community's primary focus there are few specific and stringent mechanisms to do so in this version. Following are some areas that I believe need more attention: "Promote Stewardship of Wildlife and Natural Resources (Theme 1)". Page 17, 3rd bullet: "A large majority of the community agrees with establishing a funding source to acquire open space." However, no where in the strategies section is such a program even mentioned, much less defined. Without this definition, it is not likely to happen; and, if it does, it will be well after the fact. Page 25, Strategy 1.1, 1st bullet: "The Environment Commission will be an appointed volunteer committee of scientists." This is too limiting. I would argue that there are many residents who are not degreed "scientists" who have important practical knowledge of and experience in Jackson Hole that must not be ignored. "Manage Growth Responsibly (Theme 2)". Policy 2.2.c: "Update the Future Use Plan every five years." I suggest that this is too long to wait, for a number of important reasons, including: 1) in 5 years, the variances granted by the wide authority of the LDR's will have become the new norm; the clock can never be rolled back. 2) even assuming that 5 years is appropriate, it will surely take a year or more to gather the information, then write and approve new rules. In effect, this will mean review only every 6 or seven years. In my view, this should be not less than every 3 years. I believe the cost to the community of waiting longer will be far greater than the $$$ cost of more aggressive review. I cite the current process and issues as witness. Policy 2.2.d: "...if monitoring indicates that growth rate management is needed." Growth Rate Management must be required from the outset! If it is not, who will decide if it is needed? And, when? And, of course, by then it will likely be too late. The only way to know if a plan is working is to monitor it at frequent intervals and measure its progress against specific goals. As a sidebar, below is the response I sent to Jonathan Schechter re his column of May 20: I am, for want of a better phrase, a "slow growther," for a couple of reasons: 1) Jackson Hole's economy is unusual (though not unique) in that it relies so heavily on a) tourism, and b) income earned outside the valley. For that reason, I cannot agree with your assessment that it's "grow or die." Jackson is a destination unto itself and if we can protect our most valuable assets – wildlife, natural resources for the enjoyment of all, etc. – I would argue that growth is the last thing we actually "need." 2) Reference No.1, above, our economy is almost entirely internal; i.e., it serves to support itself and produces little for consumption by the outside world. The tourists come to visit. Eventually, a few stay or return more permanently. But, they are here for our natural product. Our major export may in fact be t-shirts. Therefore, whom do we need to attract? Without a base of manufacturing, either physical or intellectual, we really need only to fulfill our own extant requirements. I would argue that, while we are not an island, we are an ecosystem (ecological and economic). Such systems grow organically and do not need outside stimuli if left to their own devices. Ergo, we should protect what we have, and not put in place government sponsored plans/LDRs that encourage growth for its own sake. That is not to say, "no growth." But, in my view, it does say, "severely restricted growth with strong measurement tools" to make sure the community is getting where it wants to go. As an aside, I've always struggled with the concept of grow or die. It seems to me that if the family is supported, the kids can go to college, vacations can be taken and retirement planned for, why do we always seem to need more. If we're happy with $X, why is it important to attain $Y? I think I understand the human drive to look over the next hill, etc. But, it strikes me that when that becomes the goal rather than the point of interest, we have lost something important: the enjoyment of the journey.
If we have identified living with wildlife as one of our highest values, we don’t want density shuffled around and increased. We want it restricted.

Wildlife corridors and natural resource overlays can be created but the fact is a vast majority of wildlife depend on the riparian lands along the river corridors which is exactly where our roads and highways are. You can’t fill the valley up with cars and then say you’re protecting wildlife. Fall Creek Road is a perfect example. As soon as the road was improved for cars the Great Horned Owl mortality rate from traffic collisions drastically increased.

My work for the last 2 years took me from Wilson to just this side of Hoback Junction. The roadkill was often horrific, especially on South Highway 89. A tractor trailer coming into town at 50 or 60 m.p.h. doesn’t even put on the brakes if there’s wildlife in the road, it just mows them down. Given the amount of wildlife in the valley we should be working with WyDOT to lower the speed limit 10 m.p.h. between dawn and dusk when 70% of road kill occurs. This master plan is a chance to step up to the challenge of protecting the valleys not only for ourselves but for the world’s heritage. I have lived in Alaska and have also spent a lot of time in British Columbia. Jackson Hole is truly unique. There is no other populated valley in North America with such diverse and abundant wildlife. If we put another 20-30,000 people in this valley plus the additional commuter traffic I would like to see a discussion of projected impacts this increase would in areas such as: 1: roads traffic and wildlife 2: air quality, light pollution 3: airport traffic 4: infra-structure needs a: schools b: landfill, garbage c:gravel extraction d: social services 5: local demands on public land a: river usage b: snowmobiling c: Teton pass d: park & forest service facilities 6: property taxes I know the planning department has worked hard and has come up with a good textbook plan. However, we need a unique plan that truly protects the valley’s heritage. Filling it up with people cars and pollution is not the answer.

I respectfully submit this letter to address my concerns about the proposed new comprehensive plan. I find it disturbingly more pro-growth than the plan in place now and I feel that the public has adequately spoken that they do not want such increased growth. Why not build out what is currently zoned for and see where we are—this would also serve to alleviate the that is sure to arise with the new plan as it is now written. Also, since there is no funding in place for any of the infrastructure that this growth would require and with the economy still in question it might be prudent not to push ahead with this. In addition, it is unfair to the old timers (illegible) of the backbone of our community who are not necessarily rich at all having bought their property a long time ago when prices were more reasonable to increase property taxes forcing some to move away—all this to pay for infrastructure for people not yet here. My main problem with the proposed nodes is that there seems to be some faulty logic at play. To say that the Aspens is a good place for a node because it has a START bus stop is purely rationalization. 1% of the population rides the bus and the ridership is flat, not growing. And yes there is a bike path that 5 or 6% of people use in the summer—forget recreation. None of the facilities that are now present at the Aspens are enough to service the additional trips to town that would be generated by a large increase in population. Teton Village and the Aspens are on a dead end road for 6 months of the year. Wilson, also because of its unique character and wildlife, whilst sitting at the bottom of a steep pass, is not a good place for a node. Further consider, the above 3 nodes have to use the Snake River bridge—which in view of any catastrophic event and a possible evacuation this has to be considered. Teton Village road is already overtrafficked. How you can think of adding thousands more car trips a day to the road when there are no plans to widen it until 2018 or later is, in my view, downright impossible. Finally, we are failing in our providing workforce housing—we need more class 1 and 2s, not 3,4 and 5s. We need to take care of those already here not those not yet here. We keep adding resorts and commercial developments that add to the problem and we will never catch up. I urge that this plan not be adopted as proposed without major changes more in line with the public’s directive. Most sincerely, Brooke Bullinger

While it is great that you acknowledge “this area is a primary migration corridor for mule deer and other animals traveling from the Saddle Butte southern hillsides to Karns Meadow” and that “specific roadway and site design features will need to be incorporated into future highway improvements to address wildlife concerns and crossings,” there are some things missing from the district description. First, Flat Creek must be identified as what it is - a hugely valuable asset to the community in terms of ecosystem health, downstream conditions, and connectivity for both aquatic and terrestrial species. Second, setbacks from the river MUST be established and respected. Third, animals continue on from Saddle Butte to Karns Meadow to the southern part of Snow King and beyond. They do not always stop in the meadow, so road improvements need to extend on both sides of Karns Meadow. Lastly, the highway improvements should be REQUIRED with any new developments/housing projects to go into the area, not only when the roads are improved on whatever time scale they are on. This needs to be addressed AS SOON AS the connectivity is threatened/limited.
Please consider the following points as you work to fix the second draft of the Comp Plan: • When this process started, the community was told it would be an update, not a rewrite, of the essentially sound 1994 Comp Plan. But the current draft has dropped critical language from the 1994 plan that specifically protected Jackson Hole’s rural character and scenic views. This language should be reinstated. The new Comp Plan is supposed to improve, not lessen, the protections of the 1994 plan. • The draft Comp Plan proposes too much growth overall in Jackson Hole – up to 9,880 new residential units and 8.8 million square feet of commercial development – and fails to evaluate what impacts that growth would have. According to the figures from Pages I-4 and I-5 of the current draft’s “Appendix I: Future Growth and Development,” the new draft plan would allow more than double the amount of development that Jackson Hole already has on the ground. Despite planners’ recent assertions to the contrary, community surveys conducted last year all showed strong support for limiting overall growth in the valley to protect the wildlife and other attributes that make this place unique. • The draft plan needs to take into account the drivers of demand for more growth. For example, it fails to acknowledge that the amount of commercial development it proposes will worsen, not relieve, Jackson Hole’s workforce housing shortage. Despite the plan’s stated aspirations, its likely effect will be an increased, not decreased, reliance on workers commuting from outside the valley. Here’s some simple math to illustrate the point: (9,880 additional housing units) x (between 1.74 and 2.37 people per unit*) = between 17,191 and 23,415 more residents than the 20,000-plus Teton County has now (8.807 million sq. ft. of new commercial) x (1 job per 240 sq. ft.**) = 36,695 jobs (36,695 jobs) ÷ (1.26 jobs per worker**) = demand for 29,123 more workers (29,123 workers) ÷ (between 1.74 and 2.37 people per housing unit*) = demand for anywhere between 16,737 and 12,288 more housing units Interestingly, according to the draft plan’s own multipliers, the amount of additional commercial development allowed by the draft plan will generate a demand for much more housing than what the plan proposes. (*2.37 is the standard multiplier; planners sometimes use 1.74 to adjust for part-time residents) (**Jobs per sq. ft. and jobs per worker estimates are from the current draft’s Appendix C, Page 16) • We don’t even know what effect Jackson Hole’s present development is already having on the valley’s irreplaceable wildlife and other natural resources, not to mention the quality of life and experience for everyone who lives, works and visits here. But only last week, the Wyoming Game and Fish Department released statistics showing that Wyoming’s moose populations are 44.3 percent under objective, and mule deer populations are 18.3 percent under objective. If we don’t have enough information about the impacts of growth to make informed decisions, we should err on the side of caution until we do get that information. Conservative buildout numbers and caps on Jackson Hole’s rate of growth would allow us to see what toll growth is taking before it’s too late. At the very least, overall buildout numbers should not exceed what’s allowed under current base zoning. • The new Comp Plan needs to include an empirical basis for evaluating the impacts of development on Jackson Hole’s wildlife, aquifers and open spaces, and on quality of life issues, such as taxes, traffic and school class sizes. Without data, any plan is just shooting craps with this valley’s future. • The new plan also needs to go back to the definition of “managing growth responsibly” that was included in Comp Plan revision handouts and survey materials from Fall of 2007 to Winter of 2008, such as: “Establish and define the ‘end state’ for development of the town and county and implement it through regulatory and programmatic approaches”; “Establish techniques and policies to maintain density neutrality as future changes are made”; and “Fully address the cost of growth... Future growth will pay for itself and avoid increasing the tax burden on the community.” Inexplicably, the new draft’s responsibility for development. Huh? • The draft plan focuses too much on just the location of future growth and not enough on the rate, scale and community costs of the growth it proposes. • Allowing more development potential in the Town of Jackson and in northern South Park, Teton Village, Wilson and the Aspens will not result in permanent protection in the rest of Teton County unless there is a specific mechanism (growth boundaries, transfers of development rights, strict zoning, etc.) in place to guarantee it. The draft plan fails to address this, apparently relying instead on wishful thinking. • The Jackson Hole community said – and the draft plan acknowledges – that protecting wildlife is its number one priority. Yet the draft plan ranks wildlife last or next to last as a priority in 12 of the 25 districts. Again, huh? • This quote from “Balancing Nature and Commerce in Gateway Communities” by Jim Howe, Ed McMahon and Luther Propst sums it up: “Gateway communities seeking to develop a vital local economy must ensure that growth and economic development don’t come at the expense of their unique identity, quality of life, economic diversity, and fiscal well-being.... Without well-designed and publicly supported strategies to preserve their character and surroundings, gateway communities risk undermining the very asset responsible for their economic vitality and future potential.” Thank you very much for your consideration of these comments.
I would like to comment on the part of the plan regarding the idea to continue "light industrial uses on the bench above Melody Ranch". Currently, those of us living below the bench are sleep deprived 3/4 of the year. Spring, summer and fall, Fish Creek Excavation starts up their equipment and operations early. The sound reverberates over the Melody Ranch neighborhood, due to it’s location. The Steak Pub/south side pizza pub, has a history of music (and is continuing it) on the back deck until late, then we are kept awake by the loud revelers still hanging out back there. The noise distributes so well, that entire conversations can be heard from our bedroom window, which is open due to the summer heat. Two summers ago I became very familiar with the night shift at the sheriff’s office due to all these late night antics. I would call them every night with noise complaints. The same sound problem emits from the apartments next to the Pub. For those of us that work odd hours (two to three jobs, 15 hour days, weekends) this is absolute torture. However, to continue living in my affordable home, this type of work schedule is necessary as services jobs are low paying. If you want to keep the working force here, you must consider this problem in future development of the Melody Ranch Bench. I strongly encourage you to consider "QUIET" type of industrial uses here.

Christopher, Frank

Interested Public

I am a resident of the City Of Jackson, as well as owning several other properties in the Valley and having spent time in Jackson since the early 70’s. We are blessed with a lot of intelligent people who live, work and play in our community. Many have made their voices heard, through public forums, and have articulated well intended positions concerning the intended direction of the new proposed General Plan. I would like to add my voice of support to those opponents of the plan who feel it assumes, and thereby condones a magnitude of growth which many of us are not comfortable with and do not feel is sustainable, if we are to keep the flavor of our community as it currently exist. One statement of truth my past residency has illustrated is, that if you have a desirable place to live people will come, and with it negative impact on quality of life issues. I am uniquely positioned to comment on this topic as I have formally lived in Pitkin County, City Of Aspen for over 11 years, during its struggles with these issues, and was an unsuccessful voice, as early as the late 70’s, for our city to address these issues. Subsequently, a decade later moving to Sun Valley and watching history repeat itself. Aspen learned the hard way that there are no simple answers, and a lot of hard choices need to be made that no one in government or in the general population was ready to make, at the time they needed to be made. The end result was a patchwork of remedies, which developed over time, as the issues forced government and the public to recognize the realities that faced them. These in turn forced difficult decisions to be made, in many instances after the fact. Sun Valley specifically paid and employed experts from Aspen to address their rapidly approaching problems, yet choose to ignore them for the most part, and did not make the hard choices necessary, resulting in a society and current condition which will take more than another decade to resolve if at all. As painful as it is for many long time locals, our community needs to embrace and fully get behind affordable housing. Many of us can agree this is a good idea but most say "not in my back yard". There are a host of ideas and ways to approach this issue, at this point all should be "on the table" and all ideas considered. One ideal of the new proposed General Plan that I believe is a fair and a balanced approach to growth, is having higher density "Pods" of development in (4) key areas of the Valley. This I my opinion makes good sense, and does not unfairly put the burden of any unintended consequences of growth on a particular area or population base within our community. What the proposed draft does not address, to the extent many of us think it should, is curbing growth in our community and the burden and responsibilities, especially commercial developments, put on all our services, roads and infrastructure. To that end, there can only be one answer, the needs of the few or the one can not out way the needs of the many or the community. To do so would leave us with most of the same issues now faced in the two towns I formally lived and conducted business in. The lack of finding solutions to these issues is what drove me, and many others, away from them in the first place. We have to make hard choices now, put the limits on growth in place today, so our future quality of life is not so adversely effected that we loose the qualities that attracted all of us to this special corner of our country in the fistics place. I am confident in the good intentions of our public leaders and our community activist, and we do have some blueprints to follow, so as not to let history repeat itself in Jackson. If we have to adopt quotes, as Aspen has, what is wrong with that. Sure some property owners will be effected and some money will be left on the table, but most of the same people this might effect are also part of our community, and have a vested interest in preserving what they value and drew them to Jackson in the first place. It has been said, "with great wealth comes great responsibility" one only has to look to one family, the Rockefeller, to realize this and understand that without their past philanthropy Jackson and the Teton Valley would not look as it does today. Rather than fostering an adversarial exchange, and maybe it is naive of me to think this, lets all come together from that place that recognizes none of the parties involved want to loose that most precious commodity, our quality of life and the very special place we have chosen to live in.
Commissioners, Thank you for your genuine concern & work for the good of Jackson Hole. I moved to JH in 1966 at ten years of age. I graduated from high school & have lived, worked & been a business owner in JH continuously since my arrival. I have always enjoyed working with people. That especially includes tourists. I derive pleasure & satisfaction from educating our visitors about the human & natural history of this special place. I will leave the technical discussion of our plan to those more knowledgeable than I. The main question is; How much are we WILLING to allow JH to grow? I'd love for many generations of people to come visit JH & marvel at its natural beauty. Then I want them to GO HOME! Further "economic development" will not enhance the tourist's visit nor the resident's life. The way we live in JH now is not sustainable, so why would more be better? I want a community that is diverse in its types of people, not in their economic status! Do the right thing; write & implement a plan which DISENGOURAGES growth! Put specific caps on all types of growth. Spell out specific ways in which commercial & residential growth will be managed. The character of JH and our life, as well as the integrity of our national parks, forests, and wildlife are at stake.

Dear Elected Officials,

• Telephone: 307-733-4392

The draft Comp Plan took an unfortunate turn in late 2008. Many in the community feel their input has been disregarded and are disappointed, some are angry. Lincoln, in his Gettysburg Address, noted the importance of "government of the people, by the people, for the people" The draft Plan falls short of Lincoln's vision, and the community requests you intercede on their behalf. The comments below are a partial synopsis of concerns. Thanks for listening.

Wildlife, though it's listed as "Theme 1" in the Plan, is actually treated as #1 in chronology only, not in importance. Combining it as "Wildlife and Natural Resources" further degrades its standing. Wildlife is the #1 most important value to residents and it should be treated that way.

Open Space. The 2nd most important value to residents is ignored. It needs to be addressed.

Entitlement of future development is the real focus of the Plan. The people of JH don't share the Plan's vision - they rejected the "node" approach in favor of a "Wildlife/Conservation" and limited growth focus! Alliance leader, 4/20/09.1 - The Plan is hostile to the residents who are paying for it.

Growth is treated superficially. We've been growing too fast, especially commercial growth that has spawned our large commuter 'shadow' population. We need to limit our growth rate to no more than the national average; we've been growing at a rate over twice that fast for too long. Town, with its huge addition of lodging and dense tall buildings, will become a resort in itself while residents are relegated to their nodes for shopping and services. This destruction of our community was rejected 2:1 in the DRO vote. Vibrant means healthy, not constant big growth.

Transportation focuses on alternates, ignoring the bigger issue. What about vehicle traffic; will congestion be relieved? Where are the roads; how big will they be; how bad are the traffic jams?

Measureable Indicators are cited throughout the Plan so we can grade how well it's working. But they are often misguided or superficial so they will simply give false indications of success.

Recession, the worst in 60-years, is ignored. Business failures, declining land values, foreclosures, etc. are ongoing. Unemployment is increasing; we haven't hit bottom. Until recovery is underway, we need a safety-net focus. Approval of a costly big-growth Plan now may be inappropriate.

Tax Increases will be needed; the new infrastructure will cost local residents $-millions. Voters just said 'no' to the $53-million-plus Justice Center and panned the $5-million Visitor Center.

We're in bad financial times and folks are hurting. We don't think voters will approve new taxes. Management of the Plan by special interests input and planners reporting to politicians has been a failure. Input by ordinary residents has been disregarded. We need a team of citizens that embody the values and concerns of the community to help guide and manage a new process and a new Plan.

<td>Zelazo, Barbara and Mi Interested Public</td>
<td>I am writing to express my thoughts about the current plan to dramatically expand housing in the Aspens and Wilson. I think the proposals offered are terrible ideas which will not help with work force housing. They will create more demand for services and they will increase traffic enormously on the Village Road. We want to reduce sprawl yes but the densities being proposed belong in town. This is where it belongs, this is where the community wants it. Everything about this plan seems too much too fast. Wilson is a small hamlet, you will overwhelm it with the growth being proposed. Some increased density there would be acceptable, but your plan goes to the extreme. The same can be said for the Aspens. Because some of us answered that density would be OK here, did not mean that doubling its size would be acceptable. The Cheney Lane area is also very low density and should stay that way. How this area could be designated for high density when it is by far over the ¼ mile necessary for walkable range from the Aspen’s minimal services is a mystery. It also presents a safety hazard if many folks start walking the village road in winter, as the pathway is only usable about 6 months per year. This seems to have been just included because the Housing Trust purchased land there, when they had no business doing so, and not because it is in the community’s best interest. Between Teton Village and its growth, the Aspens and Millward there is already heavy use on the Village Road. There are minimal services for these existing “nodes” and you cannot guarantee that appropriate services will follow. Groceries, gas, and basic needs will have to be gotten in Jackson or possibly Wilson and will more often than not require a car ride. These facts will require expanding the road sooner rather than later, and the community is strongly against that. Listen to all the citizens and you will hear overwhelming dismay at what is being proposed. Scale this back, put high density development in town, where the jobs, stores and services are already located. The village deli is not a supermarket where any of us buy the majority of our food. It’s great to have here but it’s where you go when you forgot something at Albertsons or Smith. Don’t pretend people are not going to go into town, we do now and we will continue to have to. The more people housed on the Village Road, the worse the traffic will get, the greater the impact on wildlife and the less desirable it will be for all of us.</td>

<td>Acri, Armond</td>
<td>Save Historic Jackson Hole submits the attached comments on the Transportation Theme of the Comprehensive Plan. They were performed by Robert Bernstein P.E., a traffic consultant hired by Save Historic Jackson Hole to evaluate the Comprehensive Plan. In his comments, Mr. Bernstein has 4 conclusions. We feel these conclusions must be addressed if the Revised Comprehensive Plan is to be successful. Mr. Bernstein is available to answer any questions on his comments. These comments have not been entered into the website. I have prepared an evaluation of the Draft Jackson-Teton County Comprehensive Plan, per your request. Primary conclusions of this evaluation are: • The Multimodal Strategy described in the Draft Comprehensive Plan (Theme 6) states goals and identifies principles, but omits analysis of conditions and specification of how its goals are to be met, and as a consequence, there is no way to determine whether or not the Comp Plan is reasonable and viable. • The Draft Comp Plan does not provide needed updates of the Functional Classification Plan, street design standards, Level of Service (LOS) definitions, and traffic volume standards. • The Draft Comp Plan does not provide necessary complete traffic forecasts and full traffic/transportation analysis of the Plan’s preferred land use scenario. • The Draft Comp Plan does not specify the new roadways and capacity improvements needed to meet the LOS and volume standards under the traffic loadings generated by the growth and development envisioned by the Plan. A complete set of conclusions and a discussion of those conclusions is attached. The conclusions are based on a review and evaluation of related background information (including the Draft Comprehensive Plan and its Appendices) and discussions with Town staff, County Planning and Public Works staff, the County’s transportation planning consultant, and Wyoming Department of Transportation (WYDOT) district staff and headquarters analysts. If you have any questions or if you need additional information, please contact me. (Full conclusions and discussions referenced in the above cover letter available in hard copy at the County Planning Department)</td>

I own a home at 45 Stormy Circle in East Jackson. I write to comment specifically on the comprehensive plan components relevant to our neighborhood. Here is some background: My property is adjacent to a lot that is in turn adjacent to East Broadway. In the last year, I have educated myself on details regarding the zoning of the property adjacent to ours to the north (between us and East Broadway). This adjacent property (550 East Broadway at the intersection of Stormy Circle and East Broadway) was recently sold. As part of this sale, it was originally offered up under the premise that the entire parcel was zoned Office Professional. This premise of zoning was not congruent with my understanding of the zoning of this parcel. Upon further investigation and communication with the Jackson Planning and Building Department, it was revealed that the map available on the Teton County website was not accurate, and in fact, the south half of 550 East Broadway is still zoned Neighborhood Conservation-Single Family (NC-SF). The sale of this property was completed under new terms given this zoning fact. This zoning status has been verified, in writing, from the Planning and Building Department. This fact has been a large, temporary, relief to me and my family, as we are VERY concerned about the quality of our home and neighborhood if the south half of 550 East Broadway would be rezoned into Office Professional. With this background in mind: I have reviewed the draft Comprehensive Plan for District 15: East Jackson, and see that the south portion of this parcel, 550 East Broadway, is intended to be zoned as “Mixed-Use Office Orientation”. I fear that this zoning change is premised upon the ownership boundaries of the parcels, rather than being congruent with a zoning delineation that is in line with your stated priority for East Jackson. If the zoning is changed on the south half of this parcel, this block of new zoning would be a peninsular intrusion into the single-family mixed-type zoning. The draft Comprehensive Plan states, “Redevelopment should generally be neutral and maintain and preserve existing character.” The existing character of our neighborhood will be directly compromised if the south half of the parcel at 550 East Broadway is rezoned to allow Office development. We already have significant parking congestion and busy traffic on our street. I am concerned about my children’s safety and the quality of the neighborhood if even more congestion and traffic is allowed under a new zoning configuration. I am very anxious over the following potential scenario. 1) The south half of 550 East Broadway becomes rezoned to become Mixed-Use Office Orientation. 2) The current owner of 550 East Broadway also owns the lot immediately adjacent lot to the west. I presume this owner will want to consolidate these parcels to achieve the minimum square foot lot size to qualify for a Planned Mixed-Use Development Bonus. (Even though the draft plan states that the ‘town strongly discourages consolidation of multiple lots to create longer home sites not consistent with community character’. I recommend this principle also be applied to consolidation of lots for office professional development, especially in areas that should be single family homes). Depending upon how the Planned Mixed-Use Development Tool is applied to “Mixed-Use office Orientation”, it is possible that the landscape surface ration for the combined lot would be reduced to only 5%. Also, and I admit I don’t quite understand how the PMD would be applied to the new Mixed-Use Office Orientation, it is possible that a height bonus would be granted to a developer. What this would result in is effectively an urban character, very little landscaping, higher volumes of street traffic, congestion, a multi-story mixed-use building overshadowing my home and blocking any sort of view, and a loss of what East Jackson is all about. This scenario, to me, is directly counter to maintaining the quality of our neighborhood. These multiple and domino-effect changes would effectively be the opposite of your goal of “maintaining and preserving existing character”. This scenario is not neutral, and the draft plan states that redevelopment should be neutral. Therefore, my strong request, recommendation, and comment is that you NOT rezone the south half of 550 East Broadway, but instead keep it the same zoning intended to maintain the character of an area intended for single family homes. Changing the zoning to Mixed-Use Office Orientation is a disservice to our neighborhood and, to me, would not be consistent with sound neighborhood stewardship.

I have commented earlier, specifically on the Aspens, section 10. After much more reading and discussion, I find that I must also add my thoughts on the entire plan, not specifically per section. I do not understand that if you went to the trouble of surveying the residents, why did you not incorporate their priorities in there order of importance in the plan? If this plan is supposed to be an update, why are you re-writing sections and changing goals? Also, why is this happening so quickly? Please take the time to do this right. The plan does not seem to represent the voice of the majority residents. Please take the time and get input to try to build consensus. This is a draft plan, please be open to modification.

<td>Dear Jackson &quot;Greater Yellowstone Ecosystem&quot; Representatives: Wildlife and Open Spaces, values this community has cherished for decades, should be reinstated as the Community’s top priority and become the organizing theme of the entire Plan. Do I need to say more than these simple words? There appears to be an “uprisal of the soul” in this community. We are ready for the change we are seeking. It’s the time and the place in history to reverse our worrisome path towards destroying the most valued wilderness in our country, and all the good that it shares with us. We must continue to protect this wild habitat and its wild creatures, and place this goal as a priority above our own agenda for individual profit. Let’s begin thinking about “restoring” our habitat, not chopping away at it. We Can Do It. Warm thanks for your effort to protect our human values to preserve all things wild. Please take time to read the following poem. WHY WE ARE HERE Because the world we had imagined, the one we had always counted on is disappearing. Because the sun has become cancerous and the planet is getting hotter. Because children are starving in the shadows of yachts and economic summits. Because there are already too many planes in the sky. This is the manufactured world you have come here to codify and expedit. We have come to tell you there is something else we want to buy. What we want, money no longer recognizes like the vitality of nature, the integrity of work. We don’t want cheaper wood, we want living trees. We don’t want engineered fruit, we want to see and smell the food growing in our own neighborhoods. We are here because a voice inside us, a memory in our blood, tells us you are not just a trade body, you are the blind tip of a dark wave which has forgotten its source. We are here to defend and honor what is real, natural, human and basic against this rising tide of greed. We are here by the insistence of spirit and by the authority of nature. If you doubt for one minute the power of truth or the primacy of nature try not breathing for that length of time. Now you know the pressure of our desire. We are not here to tinker with your laws. We are here to change you from the inside out. This is not a political protest. It is an upringal of the soul.- Robert Arthur Lewis for the World Trade Organization Ministerial Summit, Seattle 1999. Let us begin. Let us restore the Earth. Let the mountains talk, and the rivers run.&quot;David Brower Note: Please read David Brower’s book: Let the Mountains Talk, Let the Rivers Run,” and you will forever be changed........</td>

<td>Sibson, Barry</td>
<td>The allowable numbers of new housing units in northwest South Park are double what they should be. The balance of the area in South Park should be limited to 1 unit per 3 acres, but in clusters, so that 50% open space can be required of any development. That open space should provide for a contiguous north/south corridor of open space.</td>

<td>Ladd, Berthe K.</td>
<td>Having read a portion of the document, and many of the thoughtful comments in the JH News and Guide letters to the Editor, as well as the e-mail sent by the JH Conservation Alliance concerning the draft Comprehensive Plan, I would like to ask that the Teton County Planning Department listen to the citizens, ponder on the discrepancy between the understanding of the the citizenry going in to the process, and its understandstandings of the newly published draft Plan now, and rethink and redefine the processes and goals of the current draft Plan. There was obviously a misunderstanding between the citizens of Teton County and the staff of the Planning Department at the time that the work plan was undertaken. Further effort must be made to create a Plan that both the county and its communities can live with. I would like to underline my agreement with Walter Thulin’s letter to the Editors that makes the distinction between Teton County as one distinct place, and the virtual and more encompassing area that has become our larger community. The finite area of Teton County cannot fulfill all of the planning goals set out at the outset of the planning process. The priorities were quite clearly outlined by a majority of the participating citizenry and those priorities should be given priority planning status.</td>

<td>Bertincely, Juanita</td>
<td>I am against the Comprehensive Plan as designated. I believe we (as a resident of Wilson) are already at max with units of growth. The need for “work housing” is an erroneous concept, I feel being used as an excuse to develop. We are already at “balanced max” of environment and growth limits. We do not need 550 units to achieve balance.</td>
</tr>

Can the nodes proposed for the Aspens and Wilson, district 10 and 11 in the Comprehensive plan, work? For Teton County the answer is no.

Community planning that incorporates “sustainable” nodes along high speed transit routes can achieve a viable alternative to car use and promote walking communities. But the key to success relies completely on a fast efficient transit system that moves a high number of residents to one location for the majority of their work and entertainment. Since we do not have, and probably never will have, a transit system that does not rely on roads, the idea of setting up numerous nodes around the county only makes matters worse. People won’t leave their cars for something less fast and less convenient. The plan for nodes in Wilson and The Aspens does not create sustainable communities. It creates little “bedroom communities” with few jobs within the community itself, and little or no community amenities -- movies, music, live theater, libraries, restaurants, bars, drugstores or supermarkets. With the planned housing density, it will create thousands of car/truck trips to town where most of our amenities, already exist. Sure, some people will ride the bus, and some will bike to jobs when weather permits, but density in the nodes will only increase highway traffic. It is incredibly difficult to get people out of their cars. The Plan’s Vision Statement contains a commitment to preserving and protecting the area’s ecosystem and natural resources, as well as meeting the community’s human needs in a sustainable and predictable manner. Is there one bedroom community in our country where bus transportation has significantly reduced automobile traffic? It is impossible to see how these nodes advance the vision. Traffic will destroy the vision. There are only two sites in Teton county where a majority of residents work and play: the town of Jackson and Teton Village. Jackson is really the heart of our community, and the services most important to residents are found there. So, why not put the people where the services are and create a walking city? By creating housing in Jackson, residents, clustered there, can take public transportation to Teton Village for employment or walk to work in town. Take a look at Portland, Oregon, considered one of the best-managed cities in the nation. It is a walking city, with housing, services and entertainment, all accessible without a car. And it has public transportation to some outlying areas.
Dear Board of County Commissioners and Town Council,

On behalf of the Teton County Housing Authority Board of Directors, I am pleased to offer some comments on the 2009 Jackson/Teton County Comprehensive Plan. These comments are based on our mission to enable diverse opportunities for essential housing throughout the County. We have also met with several informal community leaders to hear their feedback on the plan and Theme 4 in particular. Overall, I am happy that the plan complements the Housing Authority’s mission to enable housing for our local workforce. The board recognizes the importance of how the 2009 comprehensive plan incorporates a goal to house 65 percent of the workforce locally. The vitality of the valley depends on a strong local workforce, and the 2007 Teton County Housing Needs Assessment reports that other mountain resorts have suffered when the workforce migrates away because there are fewer locals supporting the businesses, the level of service to guests diminishes, and they become less desirable places to visit and live. It also notes that most peer mountain resort communities find that when approximately 60 percent of the workforce commutes, the sense of community diminishes. While the 1994 comprehensive plan identified a clear need for affordable housing, it did not articulate a goal. The 65 percent goal gives our valley a concrete tool to gauge our progress and success and allows us to respond to growth, rather than drive growth.

The comprehensive plan also does a great job at outlining a diverse approach to creating workforce housing. Principles 4.2 through 4.4 explain how we will use requirements, existing homes, and incentives in a “three-legged stool” approach to house the workforce. Keeping the approach diverse will help us be successful in the long run. It may be helpful to be more explicit that those three principles are the ways in which we will accomplish our housing goal in a balanced manner. The land-use maps are great because they help the community identify where housing should be. Having housing in specific areas helps preserve our other community values of preserving wildlife and natural resources. It also responds to transportation goals and Town as Heart. We wanted to note that there is a major shift from the 1994 comprehensive plan in that the terminology affordable housing is now workforce housing. The Board likes this direction as it acknowledges that our workforce encompasses many economic sectors and lives in many types of homes, including market, affordable, employment-based, or rental housing. However, if we make the switch from affordable to workforce, we want to make sure that we don't abandon the affordability aspect. Affordability, where housing costs are no more than 30 percent of the occupants’ total monthly income, is what makes deed-restricted rental and ownership housing successful. For example, employment-based housing works because homes are generally priced to be affordable for families making just above median income. We should not lose sight of the goal to house families affordably. Our nationwide economy and housing market are in bad shape due to families having to buy more than they could afford when it came to housing, putting them at risk of foreclosure. We don't want to see that happening locally with the investment this community has made in housing our workforce. Another shift has to do with addressing inadequate housing. Because our County is one of the nation’s wealthiest, it is hard to understand the level of substandard housing that exists here today. There has been no economic incentive for rental property owners to keep their properties in good condition, as they have always been able to find tenants as rental supply has been low. The 1994 plan addressed substandard housing in Teton County, and the Housing Authority Board would like to see today’s comprehensive plan mention it as well. Adding more rental supply and incentivising redevelopment are both tools that help address this issue.

We have also noticed that this comprehensive plan targets upper-middle income earners instead of targeting middle income earners as the 1994 plan did. This shift is a national trend, as communities have been struggling to build housing for their workforce as land and construction costs have increased. The majority of our workforce is in the lower-middle income range, and we should provide a mix of ownership and rental products that target the make-up of our workforce.

Without a doubt, the affordable housing program is complex. We would like to see the 2009 comprehensive plan carry forward some definitions from the 1994 plan such as affordable, attainable, and employee housing to eliminate some confusion and to communicate effectively. This language should be consistent throughout the document. We may want to consider changing the word workforce to community, but with whatever term we choose, it should have a clear definition. I am attaching a list that defines the housing programs that are pertinent to the comprehensive plan, a worksheet that suggests some changes that will help clarify the intent of each principle and policy in Theme 4, and a redlined version of Theme 4.

Sincerely,
Diana Welch
Board President
Teton County Housing Authority

{reference Housing Programs table; available in hard copy in the County Planning...}
Theme 4 - Why is this theme addressed?
This chapter makes it sound like we’re starting from scratch when addressing our community’s housing needs when in fact we have a successful, well-established program with several successful providers. This introduction should recognize the programs that are in place today and the providers in the community that produce workforce housing. It should also be clearer about our approach going forward on how to house our workforce; specifically the balanced “three-legged stool” approach of requirements, incentives, and preserving existing housing stock. We would also like to see this section address the shift from affordable to workforce housing, convey where the 65 percent goal originated and include some language that ensures that affordability is still a goal. To be consistent with the 1994 comprehensive plan, we also request that it addresses inadequate/substandard housing. We have received feedback that it would be helpful to show where we are today with meeting our workforce housing goal. It may be helpful to replace the pie chart that shows the 65/35 split with a chart that shows how 33 percent of the workforce commutes, 67 percent lives locally, and of the 67 percent, x percent rents, y percent owns market housing, and z percent owns restricted product.

Principle 4.1
The text implies that we want to provide housing for everyone, including homeowners who earn their income outside of Teton County. Since the market already provides this ownership opportunity, the text should state that the focus should be to house a diverse workforce in a variety of housing types.

Policy 4.1.a.
We think that the intent of this policy is to express that we’re not going to target one industry; we want to house a comprehensive workforce across many industries. Also, we think it’s trying to say that we want to be socially responsible and house retirees and persons unable to work. (Those populations are not included in the 65 percent.)

Policy 4.1.b.
This policy makes it sound like we want to raise the target market. Rather, we recommend that we target housing to correspond with the make-up of our workforce. If families earn their income locally, then their housing options are limited. Our target should be consistent with the make-up of our workforce and address both higher-income earners and lower-income earners. Elected officials should make public policy decisions based on feedback from staff (Teton County Housing Authority) and public input (including the Jackson Hole Community Housing Trust, Habitat for Humanity, and the general public). We have also noticed that the words deed-restricted and restricted appear throughout the document, and it would be more consistent to choose a consistent term.

Policy 4.1.c.
Any place that market housing exists is an appropriate location for a restricted home to exist. However, density bonuses for workforce housing shall occur in nodes.

Policy 4.1.d.
In order to keep a diverse community, we need diverse housing options. Some families prefer to live in town in small units, others prefer to have units with large amounts of acreage. We want a variety of product types to give choices to our workforce, which encourages workers to remain in this community. This text includes a lot of assumptions about homeowners’ desires, and the Housing Authority has seen these desires evolve over time, dependent on market conditions. Printing these trends dates this document. Instead, this paragraph should define the various housing types (condos, apartments, single-family detached, town homes). This policy should also allow for multi-family zoning to provide rental opportunities for the public and private sector.

Policy 4.1.e.
By housing 65 percent of our workforce locally, we are still importing 35 percent of our workforce from neighboring communities. We should recognize that those that we’re importing will have needs for roads, buses, and daycare facilities. There will also be impacts on wildlife corridors and increased traffic from this policy, both within Teton County and in surrounding counties.

Principle 4.2
This method is one of three methods to provide housing in our community. It functions well, while principle 4.3 is not a well-established program and principle 4.4 is based on market conditions and landowner objectives, and outcomes are uncertain. Also, principle 4.2 allows us to keep up with new development. but it doesn’t help us catch up with our existing backlog of needed workforce housing, so there are unique characteristics of each of the principles. We would like to see a clearer introduction of these three principles, showing that together they’re a balanced approach (or three-legged
stool) to enable workforce housing. It may be difficult to work within the existing structure of the comprehensive plan, but it will be easier to follow if we can link these three principles more strongly. Some community members have interpreted this principle to mean that developers will be required to mitigate 100% of the housing for their workforce or at least 65 percent. However, we recognize that it cannot be the burden of new development to make up for existing needs in the community, so we recommend softening the language.

Policy 4.2.a.
The language in this policy is unclear. It reads as though we are moving away from inclusionary zoning for residential development and are going to transition to linkage requirements. If our perception is accurate, then elected officials should discuss this policy because it would be a major shift. We are comfortable with the direction, but it means that there would be a conflict between our current regulations and guiding documents. We recommend separating residential development and commercial development requirements into two policies to clarify the difference between them. Additionally, take out "and partners" since it's not clear who the partners are. It may also be beneficial to convey that to incentivize or dezentivize certain forms of development, there may be different mitigation rates in the Town and the County.

Policy 4.2.b.
The current version of this policy implies that redevelopment is a bad thing. In fact, redevelopment may help change some of the substandard living conditions in Jackson, fits in with comprehensive plan goals to have infill development and could provide more housing opportunities via incentives. The policy should reflect a balance of our goal to redevelop and our goal to preserve workforce housing. One way to minimize workforce housing loss through redevelopment is not counting existing workforce housing as a credit. It may make sense to split up the workforce housing loss through redevelopment and workforce housing loss through conversion into two separate policies.

Policy 4.2.e.
We also recommend adding a policy that encourages flexibility in meeting requirements. It could be:

Policy 4.2.e: Provide flexibility in meeting requirements
Allow rental units instead of ownership units to meet residential requirements in mixed-use developments.
Allow use of existing housing stock to meet residential and commercial requirements.

Principle 4.3
The Housing Authority Board is pleased to see this idea because it will help us preserve our community character, and the language in this principle gives us the directive to start this new program. We would like to include how preserving existing housing stock helps preserve community character. We would also like to soften the first sentence, because it puts pressure on Principle 4.2 to have high mitigation rates.

Policy 4.3.a.
Out of the three principles of obtaining workforce housing (requirements, incentives, and preserving existing housing stock), it appears by reading this policy that preserving existing housing stock is the preferred approach. In actuality, we are looking for a balanced approach. To date, development requirements have been the most successful tool in attaining workforce housing. They're institutionalized and developers are comfortable with them. At this time, we need to prioritize preserving existing housing stock as a method for providing workforce housing. We recommend the following language: "Establish a program to preserve existing housing stock." We would also like to acknowledge that while this program will help us meet environmental and sustainability goals, the subsidies per home may be expensive.

Policy 4.3.b.
This policy includes property tax relief, reverse mortgages, shared appreciation mortgages and other financial incentives to fund policy 4.3.a.

Principle 4.4
This section should clarify the intent of the incentives. Should they provide additional restricted housing or incentivize market housing? Base zoning should be low enough so that there is a real financial incentive to take advantage of a density bonus. We can incentivize, but can't make someone take advantage of an incentive. We recommend adding language that has staff working with developers to help them understand incentive tools for workforce housing and what it means to their long-term business success. We also recommend adding a policy that allows for incentives other than density bonuses to create deed-restricted workforce housing. Finally, we recommend separating Policy 4.4.b into two separate policies-one that addresses public/private partnerships; the other that addresses providing

<td>The April 3, 2009, draft of a new Comprehensive Plan (the &quot;Plan&quot;) is surely a disappointment to the majority of those who have made Teton County their permanent home. It lays out an elaborate scheme to manipulate and even promote development, but fails to limit growth or retard its pace. The proposed Plan's overarching commitment to ever more work force housing-and especially the ambitious quota of 65%--envisions an extensive period of boundless growth. This devotion to the construction of new work force housing overrides concerns for the preservation of wildlife, natural resources and community character. In this defining respect, the Plan contravenes the hopes and desires expressed by a substantial majority of the citizens of Teton County. In establishing the paramount priority of more work force housing, the Plan fails to distinguish among temporary, seasonal, resort workers and permanent, critical service personnel such as policemen, teachers, and medical staff. Even more subtle distinctions might have been considered-such as the differences between those who settle in the valley permanently, and those who intend to live here for a year or two and then move on. But the arbitrary 65% quota lumps all of these different needs together as the core of a single, compulsive imperative for more development of all kinds. The pernicious effect of the drive for more work force housing is most clearly demonstrated by the planned transformation of Wilson-to become a contemporary caricature of the company towns of a century ago. It is easy to see why the residents of the Wilson &quot;node&quot; seem so opposed to the Plan. In completing a new comprehensive plan for Teton County, its citizens, through their elected representatives, will make the inescapable choice between the preservation of wildlife and community values and the pursuit of excessive growth-including growth aggressively promoted for work force housing. Respectfully submitted,</td>

<td>Marsh, Susan</td>
<td>Wildlife habitat should be the primary concern in this area, as it is winter range for deer, elk, and moose. Working with WYDOT consider a 45-mph speed limit from Horse Creek bridge to where the 40 MPH begins near Hoback Jct. Recognize that the lower Hoback River and the Snake River south of Hoback Junction are now national Recreational Rivers with standards that apply to federal lands. Private land development in these areas should be compatible with the purposes for which the rivers were designated by Congress.</td>
</tr>
<tr>
<td>5/25/2009</td>
<td>Marsh, Susan</td>
<td>This area has much potential as a scenic and welcoming gateway. Enhancing the peedstrain environment should be a high priority; the recent sidewalk to the visitor center is a great improvement although traffic noise and volume remain an unavoidable impact. Contrasting high-density commercial/lodging on the west side of N Cache with the relative open/public space on the east could be further enhanced with more public oriented wildlife viewing, interpretive paths etc. on the east. Flat Creek/Cache Creek wetlands between the elk refuge and Kudars could be made more available to the public and would offer distance and relative quiet from the N Cache traffic. In order for this scheme to be effective strict oversight of architectural materials and designs would have to be in place. Most of the current newer structures, including the planned building at the home ranch, are not traditional JH 'old west' structures and look out of place in both design and size.</td>
</tr>
</tbody>
</table>
As a resident of this area, I have seen much change in the past 20+ years. What is planned for this area makes sense as presented, but zoning waivers granted in the past have reduced the ability of the area to meet the hoped-for character. Increased rentals and through-streets have created much more traffic that has not been mitigated. Speed bumps would be helpful. I would suggest the following to be included in the plan: 'Office overlay' should refer to allowing a homeowner to have a low-impact business in the existing building, such as those across Willow St from the county admin bldg -- not to purchase several lots, raze the houses, and construct a larger, more impactful business. Willow Street, as the primary access road, needs sidewalks on both sides all the way through to Snow King Ave. This has been on the plate for years but never completed. Sensitivity to partly-buried Cache Creek should be explained. In my mind this would include allowing Cache Creek to emerge into the light, where it would serve as a central focus and linear park for the area, though I am sure that's not quite what is envisioned due to cost. Finally, street lights. They are not consistent or where needed for pedestrians at night. Also, none are shaded, so the lights shine in people's houses, not onto the street/walk below. This would be an easy fix and should apply to all town streetlights to reduce unwanted light 'pollution' as well as to work better for their intended purpose.

Another item: as town builds out there is more need for some kind of noise abatement. We live close enough to the county admin building that the fans etc. on top make enough noise to prevent sleep in the summer when it would be nice to be able to have a window open. State of the art mechanical works and noise screening (as was done at the Senior Center) would be very helpful in reducing the ambient noise.

The theme and plan for this area makes sense. In order to achieve the goals stated, there needs to be some limit on rentals and the number of people per rental unit (already in the zoning but apparently not consistently enforced) and some teeth in the plan that would prevent more of the larger, out-of-scale structures that are popping up. East Hansen has become a speedway; perhaps removable (for snowplowing) speed bumps would help. Thank you.

Dear Planners, I am a Wilson homeowner, and am not in favor of what appears to be an increased density concentration proposed for Wilson. The statement, "The priority in Wilson is the provision of housing opportunities..." is questionable at the outset, considering the small number of jobs and low level of business and industry in Wilson, to begin with. Who would expanded Wilson housing be providing jobs for? For future (uncertain) expansion of businesses and services? Or for people who will live in Wilson and work elsewhere? I feel that, at the least, the timing for this "upzoning" (if it can be referred to that way) is off, considering the state of the economy. Fish Creek Interiors is now vacant, and it doesn't appear that other businesses here are enjoying a great degree of sales. Wouldn't it be prudent to wait and get a better feeling for how and when growth and development are going to naturally and economically expand, before offering concessions to levels of growth that there may not really be that much demand for?

After attending the meeting at the Center for the Arts, I have been mulling over the plan. My position now is to revisit the '94 plan for adjustments but to have the political will to enforce it. I am truly concerned the the growth the 'new' plan proposes will destroy the character of JH and push wildlife to the fringes of the valley.

Karen Langenberg wrote a letter to the JHN&G editor that appeared in today's paper (5/20, page 5A). I fully endorse her position. I don't know who Karen is, but she presents an intelligent and informed point of view. Perhaps she could be included in some future work?

Back in 1962, Stanley Resor said, "With future improvements Wilson would be the most beautiful little western town in the United States.” There are many of us today who feel that Wilson, Wyoming is just that. Unique. Special.

In July 1995 Wilson celebrated its 100th anniversary of its settlement. The Jackson Hole News wrote an editorial in commemoration. I’ve kept it displayed in my little log cabin. Here is the last paragraph. The piece was entitled “Thank God for a quirky small town” “Wilson is what Jackson Hole used to be – a low-key, funky community where you know your neighbors and help them out when times get tough. Tuesday's celebration at Own Burcher Park across from the old red schoolhouse showed that spirit is still alive. Thank God for Wilson -- and may it retain its independence and spunk for another century.” JHN 7/5/95

Drive around Wilson and see that it is truly a lovely little town.

Sure, it can grow. But – “density bonuses”, “mixed use redevelopment of the commercial core” and all the services required for another 500 or more homes! Spare us! Let us not become “Anywhere, USA”.

Surely the fault line which runs under Wilson must be shuddering at the image of fast food places, possible three or four-story magn-buildings, apartment houses and other possible terrors all crammed around our funky beautiful little town.
We have seen many upzoning proposals over the years, calling for even more development in various "nodes" - particularly the Town of Jackson, with the DRD and annexation proposals. These proposals were supposed to protect open space and wildlife elsewhere by clustering development in the Town "node". Yet to many of us, that was an empty promise. No protection of other areas was offered as part of those proposed upzonings. That is also a very fundamental flaw in the current Comprehensive Plan revisions proposed by the Planning Staff.

It may be that a Transferable Development Right (TDR) framework makes sense, where any commercial or residential density added to a "node" receiving zone must derive from permanent protection of acreage elsewhere - in critical open space habitat areas - through new protection by permanent dedicated conservation easements. That would be a fundamental requirement for any future residential or commercial upzonings in the nodes designated, other than carefully controlled affordable housing projects.

This mechanism could also benefit large landowners by creating a good mechanism for compensation where critical open space/habitat is permanently protected on their land.

Of course the potential additional upzoning density in receiving zones should be far less than the Staff proposal. As a matter of fairness. Otherwise some would complain about getting the shaft in lieu of distant gold. A very prudent, cautious approach to this TDR framework may make sense. I realize that we are very early on, with a process where the Jackson Hole community may be subjected to the throes of intense controversy for many months. There will always be disagreements on something as fundamentally important to our community: but I believe there are some very effective ways to reduce the controversy right up front.

a. Basic Approach. All of you have served this Jackson Hole community in different ways for many years. All of you know this community very well, not just through recent polls but as part of your own experience. All should know that the current proposals run counter to the most basic and nearly universal desires of this community - limiting the potential urbanization of Jackson Hole. Not just for people in the areas most directly impacted (Wilson, South Park, Aspens, etc.), but in all other areas as well.

Some people in good faith believe that we and our friends, our progeny, are all entitled to live in Jackson Hole. As a result, we would have to aggressively grow, grow, grow to meet that never-ending goal. That attitude could destroy everything we love about our community. These Staff proposals give little if any real protection for the wildlife and open space values cherished by this community. Indeed they encourage high density residential and commercial development which will have major long-term adverse impacts on those same values. Most important of all, to me, is the protection of the wonderful small town community character of Jackson Hole. These proposals place a large Bull's Eye on numerous areas, inviting developers to develop and to urbanize this Valley.

b. Suggestions. I am not criticizing the Planning Staff people who came up with these proposals. They have their own perspectives, which in some cases are very pro-development perspectives. But they are not elected officials directly accountable to our community. You are.

I would suggest that you either (a) hire an independent planner who really knows this community -- someone like Bill Collins or Dan Cowee, or (b) appoint a Blue Ribbon Panel to come up with basic suggestions as a starting point, with an emphasis on Panel members who have been great stewards of this Valley. You have many of them to chose from.

Some of you may want to set up a "good cop/bad cop" negotiation framework of sorts, starting with very bad initial proposals. But that approach does not serve our community well. The starting point should be something reasonable and in the middle, genuinely looking for our common ground. With this economy, growth pressures are vastly reduced, and we clearly have a "time out" of sorts with the ability to plan with real vision and protectiveness, not just responses to immediate pressing needs where long-term vision always suffers.
In spite of recent rapid growth, Jackson Hole has until now been spared the worst consequences of urbanization – congestion, pollution, traffic gridlock, and lives distanced from nature. The 2009 Comprehensive Plan, ignoring such undesirable consequences, promotes rather than limits greatly increased development. I oppose the plan as written. Substantial revisions need to be made to meet its own and community stated goals of preserving the character of Jackson Hole – its abundant wildlife, open spaces, rural quality, and scenic beauty – by limiting growth. The 2009 plan, will more than double potential residential and commercial build out. Impacts on schools and other infrastructure, property taxes, traffic flow, and wildlife must be carefully assessed and presented to the public for consideration. Policies which reduce or eliminate these impacts must be added to the plan.

Setting policies which will encourage workforce housing, increased population density, businesses and services to be located in the town of Jackson, and 4 other “nodes” must be accompanied by policies restricting development outside of these “nodes” in order to maintain open space and preserve wildlife habitat. Borders of these “nodes” must be clearly defined in the plan. Any future a nexionation of adjacent lands should be restricted to necessary services, and should not be a means to expand future residential or commercial development. Policies must be included to avoid encroachment upon wetlands, river corridors, and scenic vistas. While the goal of including as much workforce housing as possible is commendable, the proposition that 65% of the workforce be concentrated within Teton County is the biggest stumbling block to this Plan. The argument put forth that Teton County ought not to burden nearby communities in Idaho and Lincoln County by exporting overflow population is ill considered. Doing so could be a boon to these communities. A 30 minute to 1 hour commute is acceptable and common practice all over the U.S. Beyond Teton County, WY, there is not a commensurate need to protect wildlife habitat. Finally, it allows people a less expensive alternative which offers the advantage of freedom from restricted housing, as well as more space. I submit that efforts can and should be made to curb rampant and rapid development. We as residents of this valley need to realize that it is our special responsibility to preserve and protect the valuable assets of this unique and special place.

Add Policy 4.1.f: Promote energy efficiency in workforce housing - Community housing that is energy efficient passes those savings on to the homeowner and lowers the County’s per capita energy consumption. Energy efficiency should be increased in existing housing that is restricted to serve as workforce housing. The life-cycle cost associated with housing shall be considered, including analysis of the up-front cost associated with constructing more energy efficient housing, and the long term gains. Policy 4.3.a: add: All restricted existing housing should account for the deferred maintenance costs associated with older homes, so the burden of a roof replacement, cracked foundations, etc. is not placed on the homeowner.

Strategy 4.4: Add bullet: Require all affordable housing construction to be energy efficient.

I applaud your efforts to solve our affordable housing problems. However, I think it’s very important to do as much as can be done to reduce the pressure for more affordable housing by slowing the rate and the amount of growth down to a much lower level than proposed in this plan.

This section correctly takes note of the potential for sharply increased infrastructure costs. However, it seems to leave the solution possibilities far to vague with the only stated goal as monitoring...and only "will consider updating the system of fees and requirements". I believe the plan should state that "the system of fees and requirements WILL be updated to insure that developers pay their fair share. After all, they get the profits and usually the tax payers bear the lion's share of the costs. We need to make sure that isn’t the case here.

Policy 1.3.a: "requiring and funding the conservation of energy..."Policy 1.3.c: Add: The life-cycle cost associated with buildings shall be considered, including analysis of the up-front cost associated with constructing more energy efficient buildings, and the long term gains.Strategy 1.4 3rd bullet: "provide incentives, adopt mechanisms to provide appropriate funding, ..."Add # 9: Indicator- Energy consumption Goal- Decrease per capita energy consumption Review period-5 yr

Is there a way to help encourage a lower community carbon footprint by establishing an incentive to buy hybrid/electric/fuel cell vehicles? It would be terrific if you could come up with something along those lines. You do mention that increased traffic will inevitably cause an increased number of wildlife vehicle conflicts. Already the Teton Village Road has a very large number of such conflicts with the present level of traffic. The planned increase in development will obviously cause greatly increased traffic and thus, of course, game deaths. However, there is no specific strategy to decrease this eventuality. You do propose wildlife over pass on highway 22. You should also plan for some on Highway 390 in addition to whatever redesign is done. I maintain that the most important way to control highway game deaths would be to reduce the amount of development planned. After all the community did come out in favor of preservation of wildlife migration corridors over widening the roads.
5/19/2009  Lasley, Louise  
Interested Public  

I do not believe that we should be encouraging more commercial growth. Some growth is inevitable, but to base our vision for the community on increasing growth will destroy our community character, strain our housing needs, and severely impact wildlife and other resources in the valley.

5/19/2009  Johnson, Susan  
Energy Efficiency Advis  

Pg. 28 Add bullet: Reduction of energy consumption and reduction of the production of global climate change elements Principle 2.4: "...congestion, energy use, environmental degradation,..."Policy 2.4.b: "A hierarchy of protection shall be established preserving National Parks and Wildlife refuges first and foremost, followed by other appropriate Federal Lands, and State Wildlife areas and then neighboring private lands."Add # 5: Indicator - Rate of growth coupled with energy consumption Goal - Decrease per capita energy consumption Review Period - 5 yr

5/19/2009  Johnson, Susan  
Energy Efficiency Advis  

Policy 6.1.d: Add: In addition, to truly interconnect ALL modes of transportation providing public transit to the Jackson Hole Airport and Moose should be considered.

5/19/2009  Johnson, Susan  
Energy Efficiency Advis  

Pg. 8 Add checkmark: The energy being consumed locally has broader global impacts that extend beyond the greater Yellowstone Ecosystem. Or: Local land development activities and prosperity contribute disproportionately to global carbon emissions, which should encourage new sustainability initiatives that involve the development and funding of better energy efficiency standards.

The community has repeatedly said that we cannot sustain our wildlife and open spaces, and our quality of life with the densities and buildup being proposed in this plan. We compromise the present as well as the future if our buildout population is not less than the 1994 Comp Plan. Any development must be entirely predictable by identifying exactly what the community can expect on all properties. "Smart Growth" is an oxymoron, considering the impacts of growth on our quality of life. Growth results in higher taxes, the need for more schools, more roads, more utility needs such as sewer, water, electricity, more congestion. According to the Key Expectations published by the Town and County Staff last fall, the community said in its public comment over that past year that a "growth rate regulation should be implemented to slow the impacts of development to natural resources and community infrastructure." This theme does NOT reflect that input.

5/18/2009  Wauters, Carol  
Interested Public  

Principles and Policies Priniciple 1.1 Establishment of focal species and protecting and monitoring them is an excellent idea. Who decides on the focal species? You say that until these new protections are put in place crucial winter habitat for moose, deer, elk, etc. will continue to be protected. But there is crucial winter moose habitat in Wilson (as indicated by the most recent Game and Fish evaluation) that will not be protected if the density increase contemplated in this Plan is adopted. I ask that ALL winter habitat be protected until the new protections, based on updated NROs (and expanded to include the current notable gaps) are in place. Policy 1.1.b. and Policy 1.1.d. Here I feel that all development decisions should be based on solid science. In places where we do not yet have sufficient information, nothing should be developed. There are acknowledged notable gaps in the data that we do have. These gaps are in Wilson, Teton Village Road, Snake River area. Exactly where you have designated development nodes and sharp increases in density. Decisions on such density increases should wait till we have adequate science to guide us and assure us that we will not destroy or degrade crucial habitat. Policy 1.1.g. I feel that in all areas, INCLUDING the county nodes, development should be designed to accommodate wildlife movement and support wildlife migration. Principle 1.4. You state that development in floodplains and other hazardous areas should be minimal or avoided. The Aspens and Wilson are both in 100 year floodplains. Clearly, that makes them an inappropriate place to promote such a drastic increase in density. What are you thinking? Policy 1.5. Here the town and county should require compliance with dark skies policy for existing and new development rather than rely on incentivizing.

5/18/2009  Ewing, Patty  
Interested Public  

Commercial development drives job creation which in turn drives the need for workforce housing. Impacts will be felt on existing local businesses and residents.

5/18/2009  Ewing, Patty  
Interested Public  

Theme 1 is ignored, and devalued in most of the development nodes as well as most of the town districts. The impacts of development which disrupts migration patterns, destroys habitat in wetland and riparian zones, diminishes open space, causes an increase in roads, traffic, congestion, pollution, need for services, infrastructure, all have a negative impact on wildlife. Also extremely important is the negative impact on the quality of life for our community. The protect wildlife theme must be placed as the number one priority!

<td>There seems to be a basic premise here.....that growth is desirable. I seriously question that assumption. I would maintain that balance and equilibrium are what we should be striving for. You cited sustainability as a guiding concept but there is no definition of the term. We should have one. Also, the term &quot;human needs&quot; is repeatedly used, again, with no definition. A definition is needed. Actually the community should be involved in determining these human needs. Regarding growth: The community was never asked about a 'no growth' option. What we did say clearly is that we wanted a &quot;limited growth&quot; plan. This is NOT a limited growth plan. Basically, there is far too much growth, both residential and non-residential. However, I do believe that the nodal concept is a good one, IF handled with restraint. But the proposed level of growth is too extreme and will make it impossible to achieve our stated top priority, Theme I. In addition, to concentrate so much growth in the swath of Wilson, The Aspens and Teton Village also makes it impossible for this plan to succeed in its stated priority to &quot;promote stewardship of wildlife and natural resources in 10.06 District 6: Westbank.&quot; pg. 98 since these three nodes are in the middle of the Westbank District. To develop on the scale and in the manner proposed will result in permanent fragmentation of crucial (recent Game and Fish evaluation) winter moose habitat as well as the serious compromising of movement patterns. Permeability should be protected in the entire Westbank district. To double the size of the Aspens and quadruple the size of Wilson is far too much growth. The total amount of residential units proposed could result in a doubling of the current population. That is too much. I would like to see a total increase of not more than 25% of the present number of residences in the town and county. The proposed amount of non-residential or commercial, at 8.8 million sq. ft. seems beyond belief. Why would that amount ever be desirable or necessary? That level of increase would generate about 35,000 new jobs, about 27,000 new employees and thus a severe need for additional housing. We will only be digging the hole ever deeper if we expand the commercial any where near that amount. Let's cut that down to 25% of 8.8 or 2.2 million sq. ft. I am very concerned that there is NO attempt to determine the carrying capacity of the valley. It seems to be only common sense to do so before proposing any growth plan. I ask that this be done immediately, before continuing. That's all I'm able to comment on at present. I'll will follow up with further comments within the near future.</td>

| 5/18/2009 | Harvey Ann     | I am dismayed, to say the least, at the proposed new comprehensive plan. I know that, after the investment in expensive consultants and staff time spent producing this document, there will be considerable resistance to changing course--but PLEASE listen to the many, many citizens of Jackson Hole who care deeply about what makes this valley special. Please put the brakes on the rushed and confusing process we are now in, and reconsider what you are doing. This plan does NOT improve on the 1994 Comprehensive Plan; in fact it’s a giant step in the wrong direction, toward the destruction of the very qualities that make Jackson Hole such a remarkable place. It isn’t easy to figure out what exactly the plan proposes. Is this vagueness intentional? Why aren’t “buildout” numbers and other crucial information presented in the sections on each district? Citizens shouldn’t have to wade through voluminous appendices to figure out what’s proposed. For example, when I opened the Wilson chapter, I expected to find detailed numbers, maps, standards, descriptions--in other words, I expected to find out what, exactly, is planned for Wilson. Instead, I found one page of vague text, and one "conceptual" map with a disclaimer at the bottom saying that this is only to be used as a starting point for more specific future planning. In other words, after reading the Wilson section, I know essentially nothing, except that the planners have decided (over the strongly expressed objections of the Wilson community at several public meetings) that Wilson is an appropriate place for "town-level" densities, and that there will be "increased residential development potential above 2009 zoning levels." It was from the newspaper, not the plan’s chapter on Wilson, that I learned that 520 new units are proposed. Naturally when I discovered that Wilson is designated as a development node I wondered whether my home there is destined to be surrounded by duplexes, triplexes, four-plexes, multi-story apartment buildings? Will what are now single-family lots be designated as appropriate sites for density bonuses for workforce housing? What density will those bonuses allow? Will setbacks be decreased, will height limits change? The plan doesn’t say. Is it unreasonable to expect a comprehensive plan to lay out something more specific than "contextually-sensitive development that provides for community needs"? Anyway, in my opinion, adding 520 new units to a town of 170 units will destroy Wilson’s character and is not exactly “contextually sensitive development”! “Community needs” or “human needs,” something the plan repeatedly refers to, are undefinable and potentially infinite, and can be used to justify any amount of development. I think it’s unfair to ask citizens to give their support to vague conceptual maps, with assurances that more concrete planning for zoning and development in the nodes will come later. Separating approval for the concept of dense development from the process of defining development regulations makes it impossible for us to know what we’re actually approving. Objections we make now are countered with the statement that we shouldn’t worry because we’ll have a chance to influence regulations and zoning later. Later, when we’re presented with upzoning and dense development, we will be told that it’s too late to change because the comprehensive plan approved those concepts. In other words, this "plan", despite its stunning lack of concrete detail, will quite likely make sensible, fine-scale planning later difficult or impossible if it conflicts with the broad-brush “conceptual” maps we are now being asked to support. I don’t think it’s fair to the citizens first to ignore their input, and then to cloak the plan’s true impacts in vague verbiage. Phrases like "Increasing the vibrancy of Jackson Hole as a town-style node" are essentially meaningless. What is increased “vibrancy”—more traffic? More buildings? More commercial development? More noise? Less open space? Less wildlife? All of the above? "Managing growth responsibly" apparently means approving far more growth than the 1994 plan anticipated. While concentrating growth in the town of Jackson and immediate surroundings would make sense, this plan encourages much more growth in the "nodes" than ever before but seems to lack any real means of slowing or limiting growth in the County as a whole. Finally, some of the plan’s assumptions (e.g. “Ecosystem preservation does not preclude growth and development necessary to meet our community’s human needs”) are highly questionable or flat-out wrong. If we really care about ecosystem preservation, it will take more than lip service and wishful statements about how we can have it all. We cannot maintain the current abundance, diversity, and health of Jackson Hole’s wildlife species while steadily encroaching on their habitat--we just can’t. It will come down to a choice--more people, houses, cars, pets, roads, and all their associated impacts will fragment remaining habitat, stress wildlife on their winter ranges, disrupt their migration routes, and diminish their numbers. The existing comprehensive plan is at least based on an attempt to delineate important wildlife habitat and scenic resources and to direct development away from those areas. The new plan needs to focus on this as well, and build in some scientific reality. If you give your approval to this plan’s 9,880 new residential units and 8.8 million new square feet of commercial development, more than doubling the human footprint in this valley, there is no way we will have anything like the wildlife we have today. In short, I think this plan is deeply flawed, and I think it’s moving way too fast, with too little understanding of its impacts and too little acknowledgement of the expressed wishes of the community’s priorities. Please put on the brakes and reconsider what legacy you want to leave for future generations of wild and human occupants of Jackson Hole.
5/18/2009 Pratt, Holly Interested Public

The following statement in the transportation strategy chapter is COMPLETELY unsubstantiated, unfounded, and altogether incorrect. This statement should be removed. The other corridors were NOT analyzed as a part of this study. The plan currently stated: "Other projects were analyzed as well, but were determined to have minimal system benefit. A north crossing of the Snake River and the paving of Spring Gulch Road would decrease traffic at one congestion point, but increase traffic a similar amount at another congestion point. In the case of the north crossing, traffic would be decrease at the "Y" but increase at Town Square. Paving of Spring Gulch Road would decrease traffic in Townbut increase traffic at the "Y". Both of these projects have land use, wildlife, and natural and scenic resource impacts that are greater than the transportation benefits they provide. Neither is recommended at this time. "If these corridors were studied- I want to know when, where, and by whom? how were the corridors modeled? What were the daily and hourly volumes used? Or was this simply a discussion between the contributors? This is wrong to promote this statement in the way it is currently phrased. I think the plan should state the truth not something fabricated (intentionally or not). Transportation deserves more attention than a subchapter promoting transit, carpools and bike lanes. This is a planning document, and should be handled as such. There are corridors to study and they should be fully explored and analyzed for future development. I agree with the short term strategies (public transit, bikes, and carpools) however these are the no-brainers. The plan should study the impacts and promote a system that is well integrated and forward thinking. The statement from the plan (above) is short sighted and naive to the changes that we may witness in the lifetime of the plan. It’s a chicken and the egg thing.... which came first- appropriate land uses or logical transportation patterns? I am very displeased that Transportaiton is not being more fully addressed in this document. Separating the two issues diminishes the impact that one has on the other and the significance of their innate and intrinsic connection.

5/18/2009 Healey, Bill Interested Public

Please slow down, take a deep breath & realize how much negative effect this proposed plan will result in for the future of the County----Jackson is such a special place---in my opinion this plan needs a Major rewrite

5/18/2009 Crowley, James Interested Public

Tyler, Thank you for your time last week to discuss the potential impact of the proposed District 20, Future Land Use Map, on the Business Conservation (B.C.) zone. As a housekeeping matter, I would first of all suggest that the language in the paragraph describing the uses in the Multi-family classification which overlays the B.C. zone include a reference to Offices, since they are an existing and allowed use in the B.C. zone (albeit with some restrictions). Additionally, based on our conversation it seems that some qualifying language like that included in the District 24, Future Land Use Map, would be appropriate. I would propose something along the lines of: In all cases, it will remain important to balance the impacts of any proposed new higher density residential uses with the existing single-family and office uses in the area. Planning within the district will need to be cooperatively addressed by current and future property owners to ensure a desirable solution for all parties. In the interest of brevity I have left out an exhaustive recitation of the reasoning behind this proposal because we have already discussed it at length. Let it suffice to say that this addition to the District 20 language will serve as a placemark to allow us to address the unique challenges and opportunities that the B.C. zone presents, and is consistent with Themes 3, 4, and 5 of the proposed Comprehensive Plan.

5/18/2009 Wauters, Carol Interested Public

The concept of sustainability should be defined. I'd want to see this plan use the "carbon neutral concept" in determining how we grow. Requirements should be put in place to make sure all new construction is carbon neutral in regard to materials and processes used during building and energy consumed during the life of the building. We should certainly be aiming in this direction. I believe that preservation of wildlife, natural resources and our small town nature should be the top priority in ALL districts, including Teton Village, the Aspens, Wilson and South Park. These areas all have significant wildlife. Why should wildlife in some areas be more worthy of preservation than in others? You have acknowledged the community's wish to have preservation of wildlife and open space as the top priority by designating it as Theme I. However in several of the presentations, it has been given equal status with Theme II. The draft plan seems to assume that the community wants more growth and that growth is desirable.....both highly questionable assumptions. Although the plan states that the community recognizes that ecosystem protection does not preclude growth, I'm puzzled as to how that conclusion was arrived at. I participated in all three surveys and was never asked that question. I feel strongly that growth should be limited in order to protect wildlife and open spaces. I also feel that theme I should remain as THE top priority and not be demoted to equal status with Theme II.

5/18/2009 Ewing, Patty Interested Public

Where this theme fails is in the details. In town, for example, there is no link between the potential commercial development from 3,678,00-5420,00 sq ft, the potential creation of 9,193-13,550 new jobs and the proposed new residential units of 2,770-3790.
| Date   | Name               | Comment                                                                                                                                                                                                 |
The community response to the proposed Comprehensive Plan [CP] has been uniformly one of disbelief and outrage, reactions that are well grounded as the CP has not been advanced in good faith. What should be a document of transparent communication has become, instead, one of co-opted equivocation. Behind the verbiage that “We listened to you”, the reality of the draft CP is that it has become a case study in co-option by the undisclosed but indispensable parties of those who feed off the “growth for the sake of growth” machine and the mammonic power structure that finances them under the jurisprudential mandates of compounding usury. It has been deliberately formulated to ignore all the major concerns of the community such as minimizing future “growth”, development, and commercialization, preserving scenic vistas and the ecology, and protecting wildlife habitat and migration corridors. And development in “nodes” rather than in more “open spaces”, does not remedy these concerns, it exacerbates them. Furthermore, by advancing this agenda, the Planning Department [PD] that should provide a protective voice for the community has now become complicit in this co-option and a hostile witness. The relationship between the community, the PD, and the commissioners, is thus no longer communicative and responsive, but adversarial, and can only be remedied through the adoption of “Community Impact Analyses” [CIAs] as an integral part of both the CP and the Land Development Regulations [LDRs]. What is a CIA? It can best be viewed as a “Community ‘Bill of Rights’” against the conduct of vested interests and local government determined to advance development agendas that clearly contravene the community’s intent. A CIA provides the community a formal place at the table of development applications and the creation of development plans by requiring that: 1) An arm of the PD formally represents the community’s interests in one of the steps in the planning and application processes that currently focus only on the imperatives of the “growth machine.” 2) The PD’s representation includes, but is not limited to, the identification and quantification of all cost and other externalities associated with any development plan or application. 3) The PD ensures that those costs and other impacts are formally internalized and capitalized into development costs rather than being surreptitiously foisted onto the community as a whole through self-serving proposals, unchallenged analyses, and rising costs and taxes. 4) Public concerns and comments are made part of a written public record requiring formal response rather than just being an abbreviated audio recording that is boxed away and ignored.

In the same way that no legitimacy can attach to any adversarial legal proceeding that only recognizes the prosecution’s evidence and permits no formal defense, the absence of a CIA in the development application and comprehensive planning processes similarly deprives these procedures of legitimacy. The CP must thus be recognized for it is — a co-opted framework to advance the undisclosed agendas of the development machine and the dictates of mammon and compounding usury that impel them. The CP, for example, supposedly embraces the concept of “Accountability” which is covered by an “Annual Review” of the Plan to elected officials only and a “report directly to the public” only “every 5 years”. It does not even contemplate accountability for the impacts and externalities of individual applications on the community as a whole. On its face, therefore, the CP’s gesture of “accountability” is presumptively disingenuous as it implicitly speaks to an accountability to the “growth machine” itself rather than the extent to which the planning process has protected and advanced community interests and intent. And the same can be said of the CP’s equivocal use of the concept of sustainability” that needs to be supplanted with the idea of “regeneration”. In other words, the language in the CP has intentionally side-stepped the community’s protective intent in order to maintain the prerogatives for unbridled “growth”. The initial draft of the Comprehensive Plan has also embraced the notion of a “Statement of Ideal” to describe a particular planning Theme”. An “ideal”, however, connotes some aspiration that is both elevated and worthy, but that is typically unattainable. In other words, an “ideal” is not a yardstick amenable to accountability, a concept grounded in reality and subject to verification. Adopting “Statements of Ideal” thus only serves to attenuate any meaningful community accountability on the part of the PD and commissioners, to wit: 1) It provides no basis for verifying the PD’s and commissioners’ compliance with community intent; 2) It provides a cover for developers and others feeding off the “growth machine” against community criticism and accountability and serves to conceal the continuing advancement of undisclosed development and mammonic agendas.

3) And instead of requiring compliance with the CP, it uses equivocal language and contradictory assertions to allow the PD and elected officials to “Continuously improve upon the policies of the Comprehensive Plan” and thus effectively ignore the Plan at will. “Statements of Ideal” need to be replaced with “Statements of Community Accountability” that specifically delineate those elements and externalities of any theme, proposal or plan to which the community can hold the PD and commissioners accountable. In summary, as the CP recognizes, “it is essential that the community remains invested in the successful implementation of this Plan.” And to make this community investment possible, CIAs need to become integral parts of the planning and development processes and included in both the CP and in the LDRs.
After much public comment, oral, written, and surveys conducted, it's clear that the vast majority of residents want to emphasize the protection of our valley's most precious resource: rural scenery and viable wildlife corridors as our number one objective. Additionally: Clearly articulate the entire district as containing important wildlife, connectivity, and scenic values, using language similar to that in the current (1994) comp plan. Delete language that states South Park will be built out from 'north to south starting at High School Road.' Exhaust in-fill in town before considering any expansion into new County nodes (including NW South Park) or targeted Town growth areas. Drastically reduce the proposed NW South Park 400-acre, 1,500-unit housing node, both in footprint and number of units, consistent with a less-growth plan. Clearly state that any density incentives used for the reduced NW South Park node will be derived from permanent open space protection within the district only, not from Alta or Buffalo Valley. The reduced NW South Park node to have a 1/8 mile pull-back from both High School and South Park Loop Roads, to respect the educational nature of HS Road and the scenic value of South Park Loop. The design of any development in the reduced NW South Park node to allow wildlife movement permeability. The design of any East-West connector road to not encourage further sprawl towards Rafter J in the future. The design of the reduced NW node to not add traffic volumes onto High School Road. No annexation of the new reduced node until it is designed and approved under County LDR criteria. No annexation as a whole, to then fall into Town design standards. The Tribal Trails connector between South Park Loop Road and HWY 22 not even considered until all solutions for improving the 'Y' intersection are exhausted, and assurances made that no new traffic would be diverted onto High School Road.

Thank you for accepting my comments. I am a resident of Cottonwood Park Neighborhood. I came to Jackson from my home state of Colorado in 1977 with every intention of returning. I was on a summer climbing trip and had a job at a local summer camp. I ended up with a complete life here. I think the reason I stayed was people here had a sense of what was valuable, not in terms of dollars, but in quality of life. I hope that my suggestions are helpful. I know that I am part of Jackson's overall growth too. First of all, developing of land as an economy is flawed. Second, importing labor is a sign that business is flawed. Maintain an economy for the citizens. Jackson in the 1970's supported itself with a tourist based industry. Granted, there weren't huge profits but the community was very happy. Is there any chance we could return to just hosting visitors and showing off our beautiful county? The plan seems to be designed for expansion of town as if this type of growth is necessary for our survival. I think we're more unique. Specific to my comment: We work a huge amount of hours to come home and enjoy our nice, quiet neighborhood in Cottonwood Park. We are, for the third time, threatened with a super high density development right next door. This "node" has been kicked around the county and again landed on our doorstep. Nobody that I know wants the Porter Estate to be a city. I would welcome a mirrored image of Cottonwood Park in density (1/3 of proposed) and character to provide opportunity to our next generation of "in community" citizens on that land. Bear in mind that Cottonwood Park originally did not attract the buyer that would get a Sotheby's broker very excited but it did provide Jackson's current citizens a quality home. We have one of the most diverse neighborhoods in the County. We want to continue to maintain our "neighborhood character" as all of the other Town of Jackson subdivisions have claimed when a large development was proposed in their backyard. Please don't use the area for density trade, bonus, credit, whatever, for somebody's profit elsewhere. I suggest we take that off the table completely. Any trade for open space belongs in South Park. This property can be put on the market in a form attractive to the community, not to the outside opportunist. Also, it's not free enterprise if we pack it full of subsidized housing. Please adjust colors on the District 12 map to reflect the open space buffer zone along High School Road discussed with Cottonwood Park residents or schedule another meeting with the residents to confirm and clarify this proposed buffer zone. We would like to see this buffer zone be 1/4 of a mile (not 1 1/2 city blocks). If this buffer zone has been discarded please advise us. I think that an access corridor would be appropriate along Flat Creek, rather than allow it to be privately held. Maybe the District 12 map should suggest this, in color. Roads, in particular the "East-West connector", parks, water, sewer, should precede coloring of the map. Draw some lines and dimensions even if it's just preliminary, we'd get a better feel for what you are thinking. Wildlife, Scenery: Our moose and deer like the view of the Snake River Range as much as John Dodge moose enjoy the Teton Valley. Also note, and I'm sure you have, that quite a few old time citizens have moved to other areas e.g. Star Valley to have more space for horses, etc. and still work in Jackson. This is their choice and there is no reason to add more workers to replace them. They are still here, working.

Wildlife is our number one priority in TC, this includes South Park and other "nodes". South Park is an important rural area, it has fine scenic vistas and a slower pace. Next to the Snake, it is one of the most interesting areas for water fowl viewing and is critical for nesting. It is also our southern gate. I am very concerned about the odd, new, and vague language regarding protections in South Park. We do not want housing expansion, we seek to protect wildlife. Restore the language of the "94 Plan, eliminate the very strange wording that states South Park will be built out from 'north to south starting at High School Road.' Accidental? In-fill in town should be exhausted before considering expansion into outer areas. Do not use the NW South Park area as a dumping ground for problems generated by other areas of the county. Preserve the rural scenic nature of South Park Loop and High School Road. Any development in So. Park should allow wildlife permeability. No commercial development. No rediving.

<td>Baldwin, Huntley and Jo</td>
<td>It seems peculiar, if not suspicious, to invite public input on the creation of a comprehensive plan, set up community-agreed upon objectives, and then propose a plan that turns its back on them. What happened to the number one goal of protecting wildlife? What happened to the commitment to manage growth responsibly? What happened to the desire to preserve our open spaces and rural character? Nothing better illustrates the apparent disregard for community desires than the proposals for Wilson. There is no way that Wilson could support the 520 new homes the plan proposes without ruinous effect on wildlife, rural character and infrastructure. Obviously we can't hope to limit our population to that on Hungry Jack's nostalgic sign, but certainly we can do better than what is currently proposed. We urge you to take another hard look at the plan as it stands now, before we destroy the very aspects of the Valley that we all cherish.</td>

Here it is, the 11th hour, and I find myself wishing there was more time for comment. I appreciate the amount of effort that has gone into producing a plan that has made an attempt to address the diverse and complex needs of this incredible community that I live in. Unfortunately, I feel that in a number of areas, the plan has fallen short of what this community wants. Forgive me for rambling as I go along but at this point, it is the only way I will get my comments to you. For starters, I am baffled as to how the update of the 1994 plan can call for such an increase in growth. Who is asking for more growth, and not just some growth, but a massive increase in it over the next 1-20 years? Doubling the number of housing units?, more than doubling the amount of commercial space? I feel that the projected numbers or housing units and commercial space needs to be dramatically reduced.

In my mind, all of this growth creates a ripple affect through out the entire valley of Jackson Hole that moves away from the concepts of sustainability that are touted in this new draft. (Speaking of which- I don’t know who wrote the following: “the concept of sustainability within the context of the community’s vision delineates that ecosystem preservation does not preclude growth and development necessary to meet our community’s human needs.” but in my mind, this needs to be completely rewritten so that it makes sense to the lay person. Was someone trying to impress the masses with their mastery of the English language? Captain Bob was right when he said in so many words, “Keep it simple!” I find that loading up on density on the NW corner of the Porter Estate, especially at the density specified, will do nothing but create more problems as the infrastructure of that area, roads in particular, are not designed for that kind of density. I don’t know numbers but having 4 schools in close proximity to a massive density increase seems seriously flawed to me. And what about the wildlife? The movements of wildlife in the South Park area is increasingly diminished as more and more development occurs. Continuing to put density into South Park does not bode well for the wildlife. They don’t know boundaries. And what about when chronic wasting disease finally comes to Jackson Hole and works its way into the elk herds that winter on the feed grounds in South Park and elsewhere? Won’t that too interfere with their movement patterns and their behavioral histories? I would hope that in addressing any future issues on development in South Park, that this issue be looked at and that recommendations are in place from the Game and Fish and other wildlife authorities. Now that I’m on South Park, let me continue. This new plan eliminates any language calling for permanent open space protection of portions of South Park, and for protection of scenic and wildlife values in the South Park region. Why is it that South Park was eliminated from this draft plan when it was first on the list in the 1994 plan’s section “Promote Stewardship of Wildlife and Natural Resources”? Wildlife and natural resources should be the priority for South Park. Language that states that South Park will be built out from “north to south starting at High School Road” needs to be deleted. Any development that does happen in the NW corner of the Porter Estate should have at least 1/8 mile pull-back from both High School Road and South Park Loop Road. Good that Flat Creek will get protection but it can not be looked at independently. Animals move to and from Flat Creek. It is not enough to just protect it’s corridor. There needs to be inclusion in the plan for movement corridors for wildlife. A study should be done on animals other than large game using the agricultural meadows throughout Teton County (this includes the majority of South Park). The paradigm needs to change where value is giving to species other than those that draw income from hunting permits. The small rodents of this valley and the animals that subsist on them need to be recognized for the importance the play in the biodiversity of Jackson Hole and the GYE. I would like to see this addressed in this plan. Density incentives for NW South Park should be taken from permanent open space protection in South Park, not from elsewhere. Why not move the Rodeo Grounds to the NW portion of the Porter Estate and use that area for town infill? My feeling is that town infill should happen before any other areas are targeted, especially Wilson and South Park. (The increase in density in Wilson, both in residential units and commercial seems completely misguided. Yes, there is commercial, yes, there is housing but it is still only a 15 minute drive from the heart of town. Do you really think that people will do more of their shopping in Wilson if you increase the commercial there? The Center for the Arts is in town, Snow King Ice Arena is in town, Jackson Hole Youth Soccer is in town, all High School athletics are in town- the list goes on. How many trips are made a day from any one place in Teton County to get kids to some activity? Parents then do what they need to do when they get their kids into town. Spreading out density across the valley and increasing commercial in these “nodes” is not going to solve a whole lot of problems. Am I rambling, or what?

Density should be in town, first and foremost. There is does the least amount of damage to any other part of Jackson Hole, including its wildlife which if I remember correctly, was the #1 priority of this community. Oh yes, open space too. I can’t remember growth being a priority. Somehow, it became one in this draft. I sincerely hope that everyone is listening carefully to the people of this community and that you will consider serious rewrites of this draft plan. It still needs some work before it is a document that we can be proud of. I hope that you will extend the deadline for comments. I felt that it was entirely too short.
5/17/2009  Ambler, Emily and Jim Interested Public  
I couldn't say it any better than Joan and Huntley Baldwin so am forwarding their message. I am very concerned not only about the proposed size of growth throughout the country, the seemingly lack of concern for our wildlife and scenic places but also a total disregard for the character of Jackson and the Valley. Unlike the previous plan, this new Comp plan doesn't even address this. Some people involved with the Plan try to say they don't know what Character means......we all know what we are referring to. We all know what we don't want the Jackson area to become and we all know that we would be negatively effected by a loss of character and scenic wildlife area when tourism stops bringing in the money that seems to be behind all in interest in development. We can do better than this!

5/17/2009  McIntyre, Julie Interested Public  
Wilson teems with wildlife. Further development will be very harmful to migration and nesting/breeding.

5/17/2009  Harrington, Kathy Interested Public  
I was born in Teton County. I was fortunate enough to be of a family that arrived in the mid 50's and purchased over 300 acres in Wilson, not without looking from Astoria to Grand Teton National Park. I feel very strongly about this entire county, but due to the growth along with the popularity, I must choose an area that effects me most and that I have the energy to try to save. Teton County is my back yard, and I am getting exhausted and very frustrated. I have spent countless hours, and sent several comments to this planning commission, and I am speechless, I can hardly comment anymore, no one is listening. This is for many of us our second large battle against high density. I remember when the construction trades, real-estate agents and very large land owners were very in favor of the 94 plan. IS IT STILL ALL ABOUT THE DOLLAR?. I also distinctly and sadly remember the Hardeman expansion. We environmentalists after a long battle said, ok you want to put in 70 units ok, we don't like it, but ok, and than the county came back with 96, and the other 12 or whatever in Schwabacker property. My numbers are off, but the point is that the powers that be seem to want the biggest and most. Not everyone can live in Teton County and preserve what we barely have left. I never envisioned that you would come back to us with 100 times the density for the entire county. You can not fill this valley Butte to Butte. The 3 to 5% of vacant land is irreplaceable. I have never seen the elk migration march right up and down fish creek, due to no other avenues and stay as they have the past 3 years.. I live in the Wilson Node. The area that you want to add 520 units lies in direct conflict with migration of just about every wild animal that this area is famous for. Not to mention the disgusting amount of commercial space YOU THINK WE NEED. For the past two weeks, I have had every day, and I am not exaggerating moose, elk, balm eagles, osprey, fox's, deer, sand hill cranes, and coyotes IN MY BACK YARD. These animals pass thru my yard, which is at the south end of Ward Lane bordering the Rossiter property. These animals/birds do not abide by the fence or the road, they travel this area going in every direction to and from the Snake River, Fish Creek, Fall Creek. Please, Please Reconsider, update, and complete the NRO’s for all of Teton County, prior to signing this ludicrous amount of density. You are the very group of people that we have all taken the time to voice our concerns for the past two plus years, why have you given us a plan that is so far removed from so many comments opposed to so much density and outrageous commercial space. DON'T BE REMEMBERD AS THE STAFF THAT PLACED THE DEATH NAIL IN TETON COUNTY. YOU HAVE GREAT POWER TO DO SO MUCH BETTER. PLEASE, PLEASE LISTEN TO THE CITIZENS OF THIS INCREDIBLE VALLEY.

5/17/2009  King, Karin Interested Public  
Please, please do not consider the amount of growth in the new Comprehensive Plan. Jackson Hole needs to remain the wonderful place that it is now.

Wildlife and natural resources should be the priority of the valley - how wonderful it is now - don't ruin it. We don't need to double the population which only feeds the developers and the tax revenue. If we do have to have development, please keep it in the town area, not the rural areas. Some development is okay in South Park, but certainly not 1,500 units which would encroach on the wildlife corridor, increase traffic and impact the infrastructure. Just a few points - but please consider the results of the survey. We put a lot of thought into it and hoped it would guide you all.
Thanks you for providing lots of opportunity for the local community to learn about the current draft of the new comp plan. Unfortunately, the more I have learned the more frustrated I have become with how the planning staff and their consultants could come up with a plan that differs so much from the priorities that the electorate outlined in various surveys and public meetings. The community made it clear what it desires from the new comp plan: wildlife habitat, open space, limits on growth, preserved wildlife corridors, stronger standards to protect natural resources, less overall development, more concentrated development in the town of Jackson, and some affordable housing which is subsided by new developments. Given these priorities, it appears to me that the staff and their consultants decided to ignore the communities wishes and pursue their own progrowth agenda. This total lack of regard for clearly expressed community priorities makes me wonder how the draft could possibly have been written with the best interest of the community at heart. The Jackson Hole Community is well educated, vocal, politically active and will not standstill and let the biases of a few dictate what the community will become down the road. I urge everyone involved in drafting the plan to closely examine the drafting process, hiring of consultants, the process for collecting input from various sources, and the planning staffs personal beliefs to determine where the process broke down and we ended up with a plan that is so out of synch with the input the community provided. I would suggest a “do-over” and starting fresh with a new draft since the current draft was not drafted with the communities’ input and priorities as a top objective. Please carefully consider the implications of moving forward with the current draft, since it is so counter to the wishes of the electorate.

If the community is to accept the sacrifices that go along with growth, the Comprehensive Plan must be founded on rock-solid numbers rather than fuzzy math. Unfortunately, the numbers published in the draft Comp Plan are nowhere near as solid as they need to be. I’m writing to urge you to begin by subjecting the buildout numbers in the draft Comp Plan to peer review comparable to what would be required if the Comp Plan were going to be accepted for publication in a scientific journal. In my view, an independent review of the numbers must resolve and explain the obvious discrepancies in the numbers before any votes are taken on whether the Comp Plan draft should go forward. To wit: 1. There still remains a large unexplained gap between the numbers in appendix I of the Comp Plan draft and the “snapshot” numbers generated last year by Clarion, Collins, Fehr & Peers, a well-respected consulting firm that the county hired to compile baseline numbers for both existing county residential units and commercial square feet. As an illustration of how far the two sets of numbers diverge, Clarion’s 2008 report states (page 21): “Approximately 7,200 housing units . . . are in the unincorporated county today.” A footnote in the Clarion report said these figures are based on “Housing Needs Assessment 2007.” However, page I-4 of the Comp Plan draft states - without giving any sources or further explanation - that there are only 5,930 existing dwelling units in the unincorporated part of Teton County. This is an alarming discrepancy of 21 percent in the simplest category - counting the number of existing housing units. There are similar disturbing discrepancies in the number of square feet of commercial space and the number of housing units that are permitted under today’s existing zoning. As part of your efforts to gain public acceptance of the Comp Plan, I advise you to issue a peer-reviewed set of accurate numbers before the community can be expected to think about the pluses and minuses of the Comp Plan for the future. If we base the plan on Junk Numbers, there is no way the community can achieve consensus on where we should be going. 2. The column entitled “2009 LDR Potential Development” on page I-4 of the Comp Plan draft should be recalculated so that the Town and County figures are calculated on the same basis. As far as I can determine, the Town’s figures in that column are based on what landowners are entitled to under the current base zoning, whereas the County’s figures in the same column are not based on current base zoning. Rather, the county’s figures apparently contain an estimate of how much density bonus the landowners will get. It seems to me that a column should be inserted in the chart that shows “2009 LDR Potential Development” in both the Town and County under a common assumption -- and that assumption should be spelled out. 3. There seems to be an inconsistency in the way workforce units are treated in the same chart. The county figures seem to include a 25 percent increase in units for workforce mitigation, whereas the Town’s figures apparently don’t include any increase for employee housing units. This makes the Town’s figures seem too low. I realize the Town hasn’t given final approval to the 25 percent, but this seems very likely to happen. Thus a footnote would be appropriate explaining the divergence in methodology. 4. The Clarion “snapshot” numbers referred to in the first numbered paragraph above have been deleted without explanation from the internet version of his report that is now an appendix to the draft Comp Plan. At the least, the planners should put a note on the cover sheet of the Clarion report revealing that it is a revised document. In my opinion, you’d be better off to restore the deleted numbers so that the public could see the discrepancies in numbers cited above. Summing up: To gain the trust of the public, planners and elected officials need to make decisions that are based on the best available science.

<td>I know you have a lot of these to read, so I'll keep this short. Wildlife is the number one value expressed by residents throughout the plan's long process. Wilson has, even for this amazing valley, above-average wildlife and habitat, as updated NRO data will prove. It makes no sense for the plan to place wildlife in Wilson at #5 out of 7 values, when we all want it to be #1. Nor does it make sense to project additional housing units and population of three times as many as currently exist after Wilson's rapid growth of the past decade or so. The same reasoning applies to the Aspens. Eventual buildout of the valley has long been a concern of many residents, and the draft plan's projected possible doubling of the permanent population is disturbing. Such an increase in population would mean that the months we now think of as the shoulder seasons -- slow times with few tourists, when it's possible to find a parking place in town -- would be as crowded as the peak months of summer now are. Then, peak seasons, with the tourists and summer residents added back in, would put even more enormous pressure on everything -- roads, public lands, the liveability of the valley. Even though a certain amount of growth is available by right to current land owners (though I don't think you need to live in such fear of takings suits as you seem to), let's not leap to the assumption that that is a minimum for the future. Limit growth and make it smart, so that future by-right development is pretty close to a maximum. Once the unique features of this valley are exploited for development, there's no getting them back. Thanks for all your hard work, and please listen to the community.</td>
</tr>
<tr>
<td>5/17/2009</td>
<td>Interested Public</td>
<td>Why is this theme addressed? I feel the wording should be changed to reflect a limited buildout which is consistent with the public comment: This Plan recognizes that the amount of growth allowed in this Plan will be limited to no more than existing base entitlements supported by 2009 zoning. Theme 7 should be included in this theme. There is no responsible growth management if you do not consider Theme 7. There is no mention of relating the amount of commercial square footage currently entitled to the amount of workforce housing needed for the employees for the new business uses. Amounts of residential and non-residential development should be tied to each other. Page 28. The second to the last paragraph should be stricken as it represents the planners desires and not the community's public comment that insisted on buildout numbers and limited growth not to exceed what could be allowed in our current plan. This wording is not the community's plan. Who wrote this? What the community has said about this theme. Let us be clear what the community said: Public comment was clear that a maximum buildout be consistent or less than what could occur in our current plan without incentives. Who wrote this wording? Generally agree with Principle 2.1. Policy 2.1.a. This wording is confusing. The community is concerned with the overall buildout number for the entire county including Town. The charts shown in Appendix I do not support this statement. Yes if the incentive tools are eliminated then in the rural zones the rural buildout will be reduced. I am only aware of the Town of Jackson as &quot;incorporated&quot;. Policy 2.1.c. Doesn't the land owner in a node have the right to say no to higher densities? Policy 2.1.d. I agree with this concept but only at densities that are predetermined and do not increase the overall county planned buildout. Policy 2.1.e. This would be important but how will the affordable housing residents in the nodes be able to shop at local convenience stores that are historically very expensive. Few can afford to shop at the Westside Store for their groceries. Policy 2.3.b. Use of density bonus incentives should not increase the buildout maximum for town or a specific node. Policy 2.4.c. This whole idea is not based in reality. Commuting has been a viable option for many working in Jackson for many years. We should embrace and develop strategies instead of thinking we can be completely independent of our regional neighbors. Strategy 2.1 Update zoning maps and development right regulations to be consistent with the overall buildout number that reflects the 2009 base development right. Eliminate the incentive tools and instead specify maximum densities in all nodes, town and districts. Indicators - What level triggers what action? Why monitor if nothing happens?</td>

Generally: Numerous policies are stated that require some sort of measurement and monitoring yet no current studies exist that set baselines to allow a comparison. There is not enough mention of continued agricultural uses and not just as it relates to conservation easements. Protection of this long Wyoming industry and character enhancing value of Jackson is missing except for the mention in Principle 1.6. The 1994 Plan was much more supportive of ranching, 4H use, recreational horse ranches, etc.. The Plan should remove all development incentives in the NRO but should not limit the base entitlement rights of land owners. Numerous mention of incentives are mentioned - what kind of incentives? What are the costs of incentives and who pays?Page 16 Photo caption should be changed to indicate: Wildlife and natural resources protection is the priority theme of the Plan. Page 17 box. The first paragraph should state that most members of the community believe that wildlife and natural resource protection should be the organizing theme. Bullet 2 should not mention some believe workforce housing is equally important unless a percentage is stated and better yet eliminate this sentence. Bullet 3 should indicate the unwillingness or low level the community is supportive of funding. This bullet is misleading based on public comment. Policy 1.1.a. Is worded like there are not protections in place which is not the case. 1.1.d. Is this attempting to further limit the base entitlement rights in the rural zones? This is already very restrictive. Policy 1.1.e. What are programatic steps? Policy 1.1.g. This should not except development in the town or nodes. Agricultural use should be protected as in the 1994 Plan. Principle 1.4 and 1.5 make no mention of existing platted or approved development affected by new regulations. Strategy 1.2 last bullet should also set up approved sending areas for off sight vegetation mitigation. The indicator table on pg.26 shows timeframes that in most cases are too short to show any trend or come to a conclusion.

First and foremost I have attached an article that I think should be read by all of those playing a role in the Update to the Comprehensive Plan. It was written by a Professor at the University of Washington and discusses the concept of Sustainable Growth. It is very apropos to the challenges we face as a community. I sent this once before but after reviewing the updates to the Comprehensive Plan I am not so sure it was read. Secondly, I would like to express my dissatisfation with the direction of the update to the Comprehensive Plan. I have been to more than a couple meetings regarding the Comprehensive Plan and it was clear that the Community has ranked wildlife, scenic and natural resources, controlling growth and maintaining rural character as its highest priorities followed by preserving a diverse community. Again, I would strongly encourage you to read the attached article as it clearly demonstrates that sustainable growth is the path we should be following. I would request that all upzones be eliminated. [see comment for reference attachment]

<td>Jensen, Gail</td>
<td>Page 7. The first paragraph assumes that the vision of the plan should be to meet demands of the many people who want to live and visit here. This suggests a growth strategy and the use of the word sustainability as support for this growth. This Vision indicate a balanced/equal approach which is not what the public comment has chosen. Wildlife is number one priority and this is in contrast to a balance. The definition used for sustainability is not appropriate. This is one individuals definition. Please use the Websters version which is the most recognized and appropriate for this vision. If one substitutes the word &quot;maintaining or prolonging&quot; for sustainability in all references within this Plan the meaning is very different. It is very important to be clear in this plan. If you substitute maintaining or prolonging in the last Sentenence on pg. 7 this meaning is contrary to public comment. There is no debate on what the community at large has chosen - Theme One is above all and please keep it this way. It is not to be a balanced approach with growth - the teter totter concept and more balance as suggested in stag meetings is in direct contrast to public comment. The concept of regionalism and not exporting impacts to neighboring communities is overstated throughout the Vision. This plan assumes all want to live and work in Jackson Hole. This is not the case. The development of neighboring communities can be a positive for them. Non-residents have benefited from the available work opportunities non-existent at times in their own communities. The nodal development concept is good, however, it assumes that services for town densities already exists in these nodes. This is not true as in the Aspens and Teton Village the services are more tourist oriented. The Manage Growth responsibly Theme states that workforce housing is the most sustainable type of growth. This assumes that fulltime occupancy does not consume services, schools and impacts on infrastructure as much as second home ownership or tourist uses. Workforce housing creates a need for more housing. The net effects should be acknowledged and considered in this Plan. Theme 7 should be combined in Theme 2. One can not be separated from the other. Any growth contemplated must first consider Theme 7. Public comment has supported and acknowledged this. Theme 3 does not mention the presence of wildlife within town and its value. The picture used is actually a home that has an approximate value of 2 million dollars. Why not use a picture from one of the affordable developments? The workforce living in Jackson would be less likely to spend their dollars in Jackson as most if not all goods are more expensive in Jackson. Many travel to regional centers to shop where goods are less expensive or they shop on the internet. Theme 5. The picture caption is incomplete but appears that it is aiming at not prioritizing wildlife and natural resources as #1. The wording is indicating a balance no consistent with public comment. Theme 6 - How are wider roadways more dangerous for human traffic? This theme should state upfront that major highways will be widened and that if the community changes the way it travels that transportation infrastructure expansion may be limited. Transit should be the focussed strategy. Bicyling and walking will not have a significant impact on our transportation needs due to our climate. Theme 7. This should be combined into Theme 2. The relationship of the #1 Priority - Theme 1 or the #2 priority in the specific districts should not change the public comment does not indicate tradeoffs.</td>

<tr>
<td>5/17/2009</td>
<td>McIntosh, Beth</td>
<td>The current vision for Wilson as laid out in the Comprehensive Plan is unsustainable, unrealistic, and will prove devastating to any kind of life of value (or at all) in this magic valley. Please realize that there has to be a way to REPLACE SPRAWL with high-density nodes or the net effect of condensed living is worse than what we have now. We next phase of planetary adjustment to resources, we need to be radical leaders in how to live WITH a landscape Planning for conventional growth is not a way to do this. Smart decisions limiting car traffic, using local resources (and less of them), changing our habits to accommodate wild animals and paying attention to our health and education needs as a community are ways that we can improve this place and our lives. If we want to accommodate 3-4 times more people in Wilson, then we must hous them in square footage that has already been constructed, and create sensible commerce around existing infrastructure. The proposed density increase lies within the highest priority grizzly bear conflict zone. With the radical die-off of whitebark pine and the de-listing of the grizzly, it is highly possible that there will be no grizzly bears left in Yellowstone/Teton in the next few years, DUE TO CONFLICTS WITH HUMANS. Increasing density will increase conflicts, and create unmanageable stress levels for the bears. This is a time when we need to look very carefully at what we have left and what we want to do about it. Please LISTEN TO THIS COMMUNITY.</td>
</tr>
<tr>

<td>Jorgensen, Pete</td>
<td>Thanks for the opportunity to comment on the plan proposal before hearings begin. An incredible amount of study and work has gone into planning efforts in this community for years and this effort may present the opportunity to simplify the issue and resolve it. My interest in land use and the pace of development goes back over 40 years when I was one of three local families who developed the Skyline Ranch development in the 1960’s. This 600 acre development was accomplished on 200 of those acres with no bonus incentives. The remaining 400 acres constituted the first Wyoming Nature Conservancy easement, permanently protecting both the open meadow along Wyoming State Highway 22 and the entire riparian strip of land bordering the Snake River. Since that time I have served as an engineering, surveying and land planning consultant to other developments in the valley. In the early 1980’s I served as local coordinator for the RUDAT Land Use Planning study for South Park, copies of which I believe are still existent. That intense three day planning effort brought together national planning professionals and involved the entire community of interests. The conclusions of that study and all subsequent studies, surveys, and elections when planning was involved, have supported the desire of the Teton County populace to limit build out growth and focus on “Town as Heart”. With that in mind it seems the following scenario might satisfy Teton County’s citizens desires: Modify those portions of the current plan which authorize PUD’s, clusters, or higher densities beyond the base densities to restrict such additional density procedures throughout the county EXCEPT in new developments on lands adjacent to the existing Town of Jackson as that town boundary runs along High School Road from US Highway 89 westerly to the Spring Gulch Road. This would be a focused fix to the current plan while additional debate or study may continue. The southerly extent of that new development and affordable housing component within it could be worked out as a next step. This would have the immediate effect of removing higher densities from the majority of the county and concentrating it as a logical expansion, or node, within the Town of Jackson. Exactly what I understand “Town As Heart” to represent. This node would be within walking, biking and START system access to all necessary support services to such a density node. There does not seem to be any demonstrable need, except probably the inexorable development push, for any other such nodes in the county. The need for affordable housing seems to be a frequent justification for the proposed additional nodes throughout the county. The fact is that any affordable housing must be either privately or publically subsidized. The very granting of nodes away from the Town of Jackson places impact costs on Teton County ranging from transportation to schools and support businesses. If such additional subsidized housing is proposed, a funding estimate and source must be identified – otherwise the costs will by default fall to the citizens of Teton County in some way. The fact is that a quantity of affordable housing which may be desired beyond what could be accommodated in the area south of High School Road is clearly beyond the tolerance of the community for increased taxes, either directly or indirectly. The Housing Trust and Housing Authority have made and continue to make effective investments for some affordable housing and that should be encouraged. This unsatisfied demand, or need, will be satisfactorily addressed in our neighboring communities of Alpine, Star Valley, Victor and Driggs. This is more true this year than last with much more affordable land available within reasonable commuting distance of Jackson – all serviced by the START system and subsidized by the state and local governments. Not a bad arrangement. In the current economic downturn effecting the world, nation, state and local governments it is important for us in Northwest Wyoming to remember that tourism is the second largest industry in Wyoming. In consideration the state’s extractive energy revenues appearing to revert to year 2003 levels it is desirable that locally we assure that our tourism attractions – natural values such as wildlife, scenic vistas, clean water and low congestion – are protected. These values differentiate Northwest Wyoming attractions from nearly all other such resort towns in the United States. My experience over the last 7 years in the Wyoming Legislature has convinced me that only in Teton County is there the possibility of finding the political will on the part of the County Commissioners (the entity with land use authority in counties) to identify and establish the regulations to assure that Northwest Wyoming remains the community able to live with, and benefit from a healthy, a truly sustainable economy based on the values on public lands while at the same time being careful not to become a parasite on those values for individual economic gain at the expense of those values. I admit to not being well acquainted with the time lines in the Teton County planning process. How long would such the above modification of the existing Comprehensive Plan take to accomplish, assuming both the Planning Commission and the County Commissioners found it desirable? Just an estimate of the time required is all I’m looking for.</td>

<td>Faraday, Michael</td>
<td>Policy 2.2.c: “Update the Future Use Plan every five years” I suggest that this is too long to wait, for a number of important reasons, including: 1. in 5 years, the variances granted by the wide authority of the LDR’s will have become the new norm; the clock can never be rolled back. 2. even assuming that 5 years is appropriate, it will surely take a year or more to gather the information, the write and approve new rules. In effect, this will mean review only every 6 or seven years. In my view, this should be not less than every 3 years. I believe the cost to the community of waiting longer will be far greater than the $$$ cost of more aggressive review. Policy 2.2.d: “…if monitoring indicates that growth rate management is needed.” Growth Rate Management must be required from the outset! If it is not, who will decide that it is needed? And, when? And, of course, by then it will likely be too late. The only way to know if a plan is working is to monitor it regularly, which is being established in the Plan, and compare it to SPECIFIC CRITERIA.</td>
</tr>

<td>McIntyre, Julie</td>
<td>I am very disappointed in your conscious pro-growth stance. This is out of step with the core values of residents. It's been stated (Jeff Daugherty) that surveys are but one of many factors in deciding direction in the plan. Residents pay taxes and are most significant stakeholders. Why are they under-valued and under represented? It appears that pro-growth special interests are leading your charge.</td>
</tr>
<tr>
<td>5/16/2009</td>
<td>Jensen, Gail</td>
<td>The purpose of the plan, just being a 10-15 year plan, can not also mean that it can be sustainable. Sustainable is a longer range concept. There is a conflict here. The word sustainable is over used throughout the plan. Because it is so over used it becomes meaningless. Sustainable should only be used in the context of protecting Jackson Hole’s irreplaceable wildlife, scenery and community character.</td>
</tr>
<tr>

<td>Jordan, Carl</td>
<td>I apologize that my previous comment pertaining to Policy 1.5.d (&quot;Maintain dark night skies&quot;) ventured well beyond the “community-vision” objective of the Comprehensive Plan, and into the forbidden land of &quot;regulatory means.&quot; But to do otherwise is difficult when the best antidote to light pollution is simply less light - given that even reflected light from &quot;dark-sky&quot; compliant fixtures can contribute significantly. The Comprehensive Plan’s acknowledgement of &quot;dark and starry night skies&quot; as worth maintaining is very positive. As is the policy statement’s inclusion of limiting &quot;nonessential lighting.&quot; (a reference to the double whammy of natural-resource depletion). Missing, however, is explicit reference to qualitative attributes of outdoor lighting that clearly affect its value, without directly impacting dark skies and natural resources. That omission occurs because the Plan’s architecture fails to include a Community Value Theme that addresses the human interface of resource stewardship and responsible growth. Therefore, I suggest adding an additional Theme and thereby broadening the Plan’s conception of &quot;public goods,&quot; as follows: Theme: Provide for the community’s public safety and quality of life. Therein would be a venue for outdoor lighting as follows: Principle: Promote effective outdoor lighting. Policies: 1. Limit glare. Glare is what blinds the eye’s retina as it adapts to the brightest light source, meaning one’s surroundings become darker and less visible. Even worse, the effects of glare become more disabling with age, which is why the elderly often are unable to drive at night. Typically, a light that causes glare is psychologically associated with good lighting, whereas it is just the opposite-glare reduces visibility, visual comfort, and the usefulness of light. 2. Limit light intensity. The effects of excessive illumination are similar to glare: the retina is slow to adjust to a variety of light levels and, once adjusted, greater illumination levels may be no more enabling than lesser levels. And as illumination levels increase, adjacent areas appear darker and shadows more prominent, thereby impairing public safety. 3. Limit light trespass and light pollution. This relates to the intrusive and devaluing effects of unwanted light upon private property and common spaces, and the responsibility to avert uncontained light from spilling upwards or outward across property boundaries. Strategy: Amend lighting ordinances and development standards so as to achieve a timely implementation of policies.</td>

</table>
As I digest all that has been said by the community and in April's Comp Plan draft... it occurs to me that for now, we should stick with the 1994 Plan, which in many ways got it (and still gets it) right. It's instructive to revisit the plan update objectives (in their entirety), which don't seem to imply much more (http://jacksonetonplan.com/plan/plan-update-objectives/): ‘Plan Update Objectives The plan update will accomplish four main objectives: 1. Reconfirm/refine the 20-year vision for the valley that is realistic and achievable. 2. Bring directions and policies of the County and Town into alignment with each other and with those of other coordinating agencies. 3. Coordinate decision-making. 4. Provide a greater level of predictability to landowners, businesses, and residents.’ It's water under the bridge that so much time and money have been spent on what amounts to a plan REWRITE, not just an update. It obviously matters much more what happens to real life here in Jackson Hole. Let's maintain the community vision as captured and reflected in 1994. Keep that ironclad. At most, stick with the commercial and residential growth numbers as envisioned in 1994.

Now...with our 2009 sensibility, go to work on 1994's policies surgically (only): – Strengthen permanent protections for wildlife, open space, and community character (if new taxes are considered, designate these to help pay for such protections). – Think about reducing residential (and especially commercial) growth BELOW 1994 projected buildout, and CAPPING annual growth rates at 1-2% per year. – Incorporate specific policies that will increase housework housing in the mix (and place much greater emphasis on affordable rentals). Prioritize redevelopment, infill, mitigation, and exactions for this purpose. New ground-breaking should be the last option, and then only in or directly adjacent to Town (avoiding Jackson single family neighborhoods), and falling within the annual growth cap. While we’re on the subject of Town adjacency...wildlife doesn’t notice if the land is called ‘South Park’ or any other name. What’s special about this valley is what’s special about this valley – everywhere. Wildlife, scenery, and open space protections should have the same priority (first) - everywhere. In South Park, apply the same reduced, capped growth framework and the same permanent protections (wildlife permeability, open space) as elsewhere. Exhaust infill in Town before considering expansion into ANY County area – including the northwest corner of South Park. It's inspiring to revisit the words of the 1994 plan, with its inclusive view of County lands (Chapter 1, p 4): 'In Teton County, [the first area of concern] is “open space.” These are lands on which ranching should continue, wildlife habitat [is] preserved, and the visual qualities of scenic vistas protected. Examples include the hay meadows of South Park, the Spring Gulch scenic area, ranchlands along the Teton Village road, Buffalo Valley, and the western-most entrance to Teton County from Alta. These lands also include the Snake, Hoback, Gros Ventre, and Buffalo Fork river corridors and those hillsides and butte sides which are crucial winter range for ungulates. These areas should be kept free of development to the maximum extent possible to help preserve rural character, critical wildlife habitat and important image-setting scenic vistas and river corridors, and to encourage the continuation of ranching and other types of traditional agriculture as a vital part of the community's character.’

We need to keep all these things in. The 1994 plan got it right. The connectivity, scenic, and wildlife values are still there (including in South Park), and the community still cares about them in the same way. With all of these different (specific and clearly-stated) policies in place, we can then address the 2009 need for increased predictability, through their associated language in 2009-updated zoning regulations.

I live north of the Aspens off the Village Road. Other than during the “off season”, trying to make a right turn varies between being problematic to a nightmare; turning left, forget it. Permitting more growth at the Aspens and Teton Village will undermine quality of life, as reflected in only one measure—traffic—materially. I vote no.

I WILL KEEP THIS SHORT. THIS ENTIRE PLAN FOR THE ENTIRE COUNTY SUCKS I AM VERY DISCOURAGES WITH THE FACT THAT THE PLANNERS HAVE NOT HEARD A WORD ON LOW DENSITRY REQUESTS. FROM THE PAST 2 YEARS OF CONCERNED CITIZENS. IF THIS GOES THRU AS WRITTEN YOU THE WRITERS, AND YOU THE PASSERS WILL HAVE TO LIVE THE REST OF YOUR LIFE KNOWING YOU PUT THE FINAL KNIFE IN THE HEART OF JACKSON HOLE. DO NOT PASS THIS PROPOSAL AS WRITTEN, AND LISTEN TO THOSE OF US WHO VOTED YOU IN

I have several concerns regarding the new draft of the Comprehensive Plan. The 1994 plan has a strong focus on stewardship of the land and protecting wildlife, & open space. This appears to be diluted in the new plan. Transportation will be a huge problem with the amount of additional residential & commercial development proposed by the new draft Comp Plan. Also, quality of life and neighborhoods, the reason we all live here, will be compromised by that large of an increase. We need to set growth boundaries and implement strict zoning. Keep Wilson as it was described, a rural community. The majority in Wilson have already voiced strongly their opposition to becoming an “urban” area. The reasons were stated in the original plan, proximity to important wildlife habitat, traffic, impacts on school and community character. workforce housing will be a greater problem with the increased allowable commercial development. This kind of development must be held more responsible for finding solutions to relieve our workforce housing shortage. Thank you for taking your time to plan and help keep this valley the place we all want to continue to call home.

5/16/2009 | Miller, Cate Interested Public | 1. Updating of NRO mapping should be done prior to adoption of the plan so that decisions are being made on the basis of information that is as up to date and complete as possible. 2. Permeability of development design for wildlife: current "wildlife friendly" fencing standards as currently written are very difficult to enforce as has been shown by numerous problem fences constructed in recent years. When the LDR’s are written to implement this goal, please consider having some permit process for construction of fencing or some way for the Town and County to know IN ADVANCE that a fence is going to be constructed so that "wildlife permeability" can be reviewed before construction. Trying to correct a problem after construction is not working well at all. Many of the new buck and rail fences that have been constructed around individual parcels are simple too high. The agricultural exemption is a serious problem and should be reviewed. For example: "The construction in 2008 of a very high (48"-52"+ top rail) buck and rail fence along Spring Gulch Road to replace the old and long established 36-38" wire fences has resulted in a barrier to wildlife movement. "A 52" fence (2007) on a 120 acre parcel in the Zenith area is causing considerable impediment to elk movement (especially for younger/old animals) during the migration in Spring and Fall. "A 52" fence built around a conservation easement property (Kings Highway area) is yet another impediment to the "permeability" concept. If this Plan is genuinely dedicated to stewardship of wildlife and all that this implies then fencing regulations must be improved AND ENFORCED. At present fencing contractors interpret the ag exemption to mean that "we can build anything we want" regardless of consequences to wildlife. The Town of Jackson should also consider the implications of fencing in known wildlife movement areas. Given the movement of deer across the corridor from the butte to the Karns Meadow area, the construction of the fence along the north side of the old Sagebrush motel Property on Broadway should have had to meet wildlife friendly standards.

5/15/2009 | Acri, Armond Save Historic JH | Density bonuses for Single Family Mixed is in conflict with statement that East Jackson is a Town Stable District

5/15/2009 | Acri, Armond Save Historic JH | The Lodging Overlay should not be expanded to the other side of Broadway along Flat Creek. A wall of hotels on both sides of Broadway is very undesirable. -Buildings should be limited to 2 stories.

5/15/2009 | Acri, Armond Save Historic JH | "Encourage upgrades to this gateway district" is not clear. What upgrades are desired?

5/15/2009 | Gill, Robert Interested Public | I have been reviewing the latest version on the Teton County Comp. Plan. I know that you are looking for some feedback, but all I have is questions. I see that the Jackson Hole Hereford Ranch is targeted to receive the most density. What I do not understand (and I am not alone) is how it receives this increase. After talking with Jeff Daugherty and Alex Norton it is confusing on how the commercial and higher density would be divided between the two owners of the Jackson Hole Hereford Ranch? There are so many questions that need answered for me to be able to make comments. What is the base density? What are the PRD multipliers? Are there going to be PRD’s? How do we get density from other property owners? Are the affordable housing and workforce housing purchased at a discount? With out these answers plus the LDR’s it is difficult to make constructive comments.

5/15/2009 | Acri, Armond Save Historic JH | Developing South Park from the North to the South is a logical pattern, but all of South Park should not be developed with a town development pattern. Appendix I shows that the 1500 units proposed for South Park are not needed to meet the community’s needs for the duration of the plan. Any development at town density should be to town standards for streets, lights, and sidewalks. There is no need for convenience commercial in northern South Park unless the downtown commercial is reduced by the same amount. Most convenience commercial will fail because residents will not pay more for inferior products. They will drive to Smiths for groceries, their favorite pub for a drink, or their favorite restaurant for a meal. It is an exercise in futility to attempt to control the free market. Do not add traffic to High School Road. East west connector must be complete before development begins. This should be clearly stated in the plan. Construction traffic on High School Road is unacceptable. -The view corridor on South Park Loop Road and High School Road must be protected with a minimum set back of ¼ mile. This should either be shown on the map or clearly stated in this section. Berms are not an appropriate way to preserve the view corridor.

5/15/2009 | Acri, Armond Save Historic JH | -Development in South Park must not create traffic problems for West Jackson. Access for new development should not connect to High School Road. -Any development in South Park should have a visual buffer from West Jackson.

</table>
The stated purpose of the proposed Draft Comp Plan of April 2009 is to "update" the 1994 Comp Plan so as to retain the values, intent, character and desires of the community. The community has spoken loud and clear in several surveys and in public meetings regarding desired values, priorities and outcomes. While the "proposed Draft Plan" speaks to the community desires, it falls far short of honoring what the community has said it wants in several aspects. The following issues and comments represent some of the more critical problems of this Plan:

1. WILDLIFE, which is the highest desired priority expressed by the community, is near the bottom of the priorities in 12 of the 25 districts. It should be #1 throughout the County. Wildlife influences our values, quality of life, and is an important economic driver. The proposed "Draft Plan" does not adequately consider Crucial Winter Habitations, riparian zones, connectivity and migration corridors. The proposed development in this "Draft Plan" could have serious negative impacts on critical species such as moose, elk, trumpeter swans, eagles, and, cutthroat trout, among others.

PROPOSAL: I believe that BEFORE any Draft Plan is accepted, Planners should prepare new up to date NRO maps and designations reflecting the best available science and mapping, as available from sources such as the Teton Science School, Wy Game and Fish, or other agencies. For example, Wy G & F in 2005, prepared mapping of Crucial Moose Winter Habitat south of Wilson village, which in the Draft Plan actually extends INTO the proposed high density development proposed for Wilson, south of Rt 22. Moose are at risk in our valley. Crucial habitat maps and other such data should be included in the NRO zone to receive the highest level of wildlife protection. (The proposed "Plan of April 2009, is based on 1994 NRO maps and as such are out dated and incomplete.) Up to date data and mapping should be used in preparing new NRO maps and zones which should be strictly applied to all planning decisions so as to protect wildlife.

2. GROWTH: All the surveys said overall growth should be limited. Yet, the proposed "Draft Plan" calls for doubling residential growth, up to 9,000 new houses and an additional 20,000 residents, on top of the existing 20,000. The proposed "Draft Plan" calls for up to an additional 8.8 million square feet of commercial space. This is equivalent to 175 new Albertsons. Where, what, who? How many employees will this generate? Some projected analysis say 20,000 to 30,000. Where will they live? We are currently meeting our objective of 65% worker housing. How will we sustain this? Who will pay for this? What are the impacts of growth on wildlife, natural resources, quality of life, highways, schools, infrastructure, taxes? How much is this going to cost and who is to pay for it? What do we want for our future, our legacy, and, the sustainability of our wildlife and natural resources?

PROPOSAL: I believe that BEFORE the proposed "Draft Plan" can be considered further, Planning needs to provide hard data as to outcomes, costs, and impacts, in all aspects. Now is the time to evaluate and plan, not after the fact of unintended consequences.

3. REGIONAL Planning: The presentations by the Planning Staff suggested that wildlife considerations should be viewed from a regional perspective.

PROPOSAL: I believe that planning should take a regional view in all aspects, including wildlife, housing, transportation, schools, etc. For example, consider supply and demand on housing. Jackson has a need for housing while west and south there is a very large supply. Wouldn't it make sense to see how we can work together? How about making it easier to commute with enhanced START bus service? Planning should evaluate this scenario from all aspects as part of a "comprehensive" plan. I will address other issues at another time, soon. Thank you for your considerations.

I would like to comment on changes to the comp plan that effect a particular section of East Jackson - Broadway between No Name and Stormy Circle.

I am a home owner that shares a boundary line with a large piece of property that has a zoning boundary in the middle of the parcel. The 92' south of Broadway is zoned OP and the 108' of property directly south of this is zoned NC-SF as stated in the 1994 comp plan. This is consistent with the southern extent of OP zoning along Broadway. In the new comp plan, it appears that this entire piece of property has been rezoned into a category that would allow a significant amount of Commercial development. The size of the parcel also allows it to be considered for a PMUD. This change is absolutely not taking into account the character of the neighborhood, but rather favoring the owner of this property by changing the potential development opportunities based on property ownership. This is not acceptable. The property directly west and north of me also shares a boundary with this particular property but it is not being considered for the same zoning change? Again, this shows that zoning changes are being made based on ownership - this is not how the Town of Jackson should be setting priorities. My strong suggestion is to keep the zoning boundary between OP and Single Family residential in the same location as was set in the 1994 comp plan. I look forward to hearing back from you with regard to how you have justified the proposed zoning change for this parcel. Thanks
Matthews, Heather
Interested Public

I am unable to make detailed comments on the Comp Plan on its website by the end of today, so I hope you will accept these summarized comments.

I have lived in Teton County since 1997. I have worked at a dude ranch, in a restaurant, at a vet clinic, for an artist, for a plumbing and building contractor, and for two non-profits in that time. I am very lucky to be a homeowner, to enjoy recreating in this amazing valley, and to be a part of this community. I have come to love and respect what makes Jackson Hole so special- its wildlife, amazing views, clean streams and clean air, and the people. Jackson is so special is because of the balance between all of these things. The Comp Plan, as written right now, does not hold up this balance, and it does not protect those natural resources mentioned, or the community’s character and values. This may be unintentional. I hope it is. But I have serious doubts because of a single phrase that I reread and reread in disbelief: “ecosystem preservation and protection does not preclude growth”. “Human needs” is mentioned as being the priority. The community spoke its mind in surveys: we want to protect the wildlife and natural resources, manage growth, and provide affordable housing- in that order. I would say that means the ecosystem comes before growth. The Plan would allow an enormous amount of commercial development that would demand a number of employees that we don’t have, and to get those employees we would need more affordable housing- I don’t see the link in this plan. I also don’t see the link of this need for employees to a projected population build-out to transportation needs for that amount of population growth or the affect that would all have on our natural resources. Why isn’t a carrying capacity of the ecosystem determined and planned from? Why aren’t there ways included in the plan to determine how development allowed by the plan would impact natural resources, housing needs, transportation, infrastructure, etc.? It seems that the Plan only allows for evaluation AFTER development has occurred. Why push the limits, which could cause irreversible damage, instead of erring on the side of caution? I don’t see in the Plan how open space will be permanently protected if/when development rights are transferred into nodes. I also see a lack of wildlife protection within nodes- the Plan seems to think wildlife and natural resource values can be dismissed in nodes. The local economy gets attention in the Plan, but not like it did in the 1994 Plan. The 94 Plan recognized that our natural resources, recreational opportunities and our western, small town character are the basis for our local economy. This plan seems to say that our economy is based on growth and development. The 94 Plan showed vision for a sustainable future- for its residents and the ecosystem. I would like to add two specific comments on the Plan here: Hoback Junction- the lack of potable water in the area is not mentioned as a limiting factor in regards to additional housing and commercial development. Please include that. On page 25 you mention in ways to decrease the impact on public lands that we need dog parks. I have worked with PAWS on and off for 10 years, trying to get a dog park in Jackson. So far, we have had no or little support from the town or county, or potential neighbors, to do so. This makes me think there is very little chance of a dog park existing in the valley. And I do see dogs (which will increase in numbers along with an increasing population) as a huge impact on public lands, and on neighbors. Thank you for your consideration, and all of your time that has been dedicated to drafting this plan, to meetings and hearing, and to reading comments. I hope that we can get this plan right for the ecosystem, instead of for developers.
I am writing in regard to the April 2009 draft of the Comprehensive Plan to urge you to go back to the drawing board and draft a plan that reflects the will of the people of Jackson Hole. There is a major disconnect between the language expressed in the introduction which pays lip service to wildlife values, sustainability, and ecosystem stewardship; and the current contents of the plan that outline a “growth oriented” scenario for the future of our valley. Because we sit at the gateway to two national parks, we are privileged to inhabit a very fragile ecosystem. This land and this community cannot be dealt with using traditional planning methods. We cannot simply take past growth patterns for both town and county and project them forward while calling this a planning exercise. What is lacking in this plan is a holistic vision of the future that takes into account the carrying capacity of both public and private land for the future protection and enhancement of the wildlife that we all love. The buildout figures for each “node” are beyond excessive. The figures do not limit growth as the public asked you to do, they do not link the numbers with the impacts to our already burdened infrastructure of highways, schools, water, and sewer coupled with the impacts of 3.5 million tourists. Sustainability is mentioned in the plan but if one were to take the buildout figures that you give us, it paints a picture that is truly unsustainable, from a wildlife standpoint, from an energy-use standpoint and from a quality of life standpoint that many of us know and treasure. 9,880 new housing units, increasing our population to roughly 40,000 people; 8,807 million possible new square feet of commercial space with its 29,000 new workers could push our population up to 70,000 people. This is insane. It is not what the community asked you to do and it does not serve or reflect the will of the people. We have been told that these “numbers” only reflect the “growth potential” for our valley and that the Land Development Regulations (LDRs) will limit what can happen.

But let’s be realistic, the LDRs will only be as strong as is mandated in the plan. Planning commissions are directed by the plan when they implement the LDRs and we have no way of knowing what kind of “teeth” you will put in the LDRs. Given what we have been handed as our new draft plan, I question the set of teeth the LDRs will have. It looks more like a bunch of cavities and sweets for the developers than a set of regulations that would truly support a sustainable community for future generations. It is mentioned in the plan that Jackson will be climate neutral by the Year 2030. This is an ambitious goal and if truly taken seriously will require the we slow growth down so that building regulations, transportation plans and the carrying capacity of the land can realistically adhere to this ambitious agenda while minimizing human impacts on this fragile environment. Please reconcile all aspects of the goals stated over and over again by the community with the numbers in this plan. There needs to be a reduction in numbers that reflects the community’s value of wildlife and open space; not just a “growth oriented trajectory” that favors a few at the expense of the whole community. I trust that we can house our workforce in green-affordable housing and still reduce your projected numbers. Once the wildlife is gone, it isn’t coming back and neither is the tourist-based economy that considers the Northwestern corner of Wyoming so special that they travel from all over the world to witness the last wild place in the lower ‘48. Pave it over and watch them run; no more elk, moose, bears and eagles means no more dollars that fuel the economy for those that live and work here. When planning is viewed holistically as an interrelated process, the development that threatens wildlife is linked to the economic costs to the community, not merely to the economic gains of those who stand to profit from unbridled development. We pay you, we elected you, please listen to the majority of those who have spoken and enter into a creative and future oriented dialogue that will preserve this place not ruin it! Please take the time to do natural resource overlay mapping that includes winter habitat, migration routes, animal fatality statistics and flood plains for all of the proposed growth areas. We can only make educated decisions once we have all of the information. Moose don’t show up at county commissioners meetings and talk about what it means to have your mother hit by a car when you are yearling twins. Give them a voice and give them a break in your next draft of the plan.

It seems a political nightmare has been created in the process of taking one step forward, and several steps back in the current planning process. The one step forward is the current Draft Comprehensive Plan; the first of ten steps back is the loss or removal of the basic tenets of a perfectly good plan from 1994. That plan clearly incorporated the wishes of the community in the details of the plan. Other steps back include an amazingly naive, simple projection of growth in an environment that geographically limits its growth by the nature of its surroundings and by its population of wild animals and concerned citizens. Also, there is a lack of clear and detailed provision for the animals whose homes we have chosen to disrupt, by use of nature-mapping overlays. The only overlay I perceive is that of planners with vested interests in growth and little apparent perception of why they have been retained by the citizenry. As far as the general populace is concerned, the draft plan does not represent its wishes, aspirations, or even intent. As far as any other constituencies are concerned, the suspicions and rumors are in full sway, and as politicians, you must make some hard decisions. Letters from concerned citizens have politely made the fundamental deficiencies of the draft plan abundantly clear. There is also no lack of detailed criticism on all aspects of the draft plan from numerous sources, if you will only entertain their input.
To begin I want to acknowledge what a laborious process drafting this plan must have been and give my thanks for the countless hours staff, stakeholders and the public have put in. We're close and with some refinement I think this can be a great tool. That said, I have some concern that the Comp plan as a whole seems to be promoting growth rather than planning for it. I'm a realist - heck I moved here from somewhere else too - so the last thing I am is anti-growth. However, the draft plan as it stands seems to be prioritizing build out. Will we get there some day? Most likely, but I don't think this community wants to race toward it. I also can't help but wonder about the way themes were prioritized throughout the districts in this document. Time and time again I heard that wildlife and scenic values were one of the top themes throughout the valley yet the plan as it stands does not reflect this sentiment. Sure, wildlife and scenic values can't be the top priority in all the districts but this discrepancy makes me wonder about the efficacy of gathering comments the way we did. Please know, I'm not insinuating that staff disregarded comment in any way or calling into question anyone's integrity but simply wondering whether something was lost in translation because of the methodology used. There must have been thousands of post-it notes from all the meetings and by and large the comments I saw and canvassed (which were many) don't add up to what I'm seeing in the prioritization of our community themes. We don't need growth for growth's sake and I think our community has spoken loud and clear on our priorities; smart - dare I say slow - growth and maintaining our wildlife and scenic values WHILE doing what we can to meet our human needs. A tough balance for sure but one that can be accomplished by not concentrating on final build out numbers but rather smart, focused planning. I don't know - maybe we need to be biting off smaller chunks? In short, and I understand that this is a forward thinking document, I'd urge the commissioners and our elected officials to proceed with a less is more mentality in regard to our comprehensive plan. Thanks for your time. I look forward to future discussion on the plan.

</table>
Greetings and thank you for taking my comments. In regard to district 12 I feel this plan misses the mark of what the community is looking for. I attended many more discussions along the way and heard that wildlife and scenic values are the core of what our community values most. I heard from planning staff in the last Rafter J informational meeting that wildlife and natural resources can't be the priority theme in every district and agree there is some merit in that statement. However to place those values second to last in south park is completely contrary to what I heard the public say. To manage growth responsibly is something that we should strive for and I think most of us agree that south park is a logical place for some growth. I also like starting at the north end (closest to town and public services) with the most density and moving south accordingly. That said, the plan as it stands calls for too much growth - it seems like we're actually striving for build out when we should be moving more slowly and more carefully. I also have some concern about some of the vague language in the plan. The difference between development a half mile from high school road, continuing south along South park loop and three-quarters of a mile from HS road moving south is enormous and that seemed to be brushed over in the Rafter J meeting. I'd suggest setting firm 1/2 mile parameters so there is no grey area - we'll inevitably be fighting over those questions in the future if we don't.

Hopefully if and when South Park does develop, that somehow preservation of the single family neighborhood is seriously enforced. What bothers me is the fact that 'growth' (theme #1) and workforce housing (theme #4) are higher priorities in West Jackson then (theme #7) "maintaining the existing residential neighborhoods as attractive places to live for our local workforce" which is last in the draft FLUP for West Jackson. West Jackson is already built out except for a few small lots and I don't think you can squeeze anymore workers in West Jackson except over stuffing single family home rentals with 5, 6 and 7 unrelated people. It's a catch 22 for working people here in West Jackson who keep this valley going for the large homeowners on the outskirts. They get the protection for wildlife and scenic vistas and we get the overcrowded neighborhoods and streets for trying to do the right thing for the valley. That's some trade off. What really upset a lot of people here in Cottonwood Park is that the planners couldn't even set up a presentation here for the draft plan. I was told it was a scheduling oversight because of Spring Break. I would think that since we are on the frontline of major up zoning and traffic impacts that a meeting here would have been obvious. Theme #5 'community facilities' states that we should 'continue the district's role as home for most of the school district and parks and recreation facilities'. With no promise of open space in NW South Park like a set back for a park (the depth of the high school property) on High School Road to South Park Loop Rd, West Jackson's neighborhood parks and open space will be overburdened. The plan does mention a 1/8 of a mile setback along South Park Loop Road across from Three Creek to preserve the scenic vistas of that area. That's another slap in the face to the hardworking people of West Jackson. What are we going to do when we want to walk down the South Park Loop path to see the vistas, use our periscopes to see over the ugly berms that will be on both sides of the road like a gigantic half pipe? Again it's scenic vistas for those who can afford it. We do have great parks here in Cottonwood Park but they will be maxed out especially since the Blair Apartments and the new affordable neighborhoods like Ellingwood have only the bare minimum of open space. Parking is already an issue here when families come from outside the neighborhood to use the Range View and Cottonwood Parks. How much more traffic can the "failed" High School Road take, especially if the Tribal Trains connector is built and the major up zoning of South Park occurs. Theme 3 'transportation' states that there needs to be a "balance of needs between the existing neighborhoods of District 12 and the entire community". Where's the balance when all you are doing is tipping the scale of traffic jams from the "y" to High School Road. The comp plan needs to promise that the East West collector road in Northern South Park has to be in place before any new development in South Park takes place and before the Tribal Trains connector is started. Any new neighborhood in South Park should empty on to the new East West collector and not High School Road. The scale of the NW build out should be drastically reduced also. The new draft plan is asking West Jackson to bear a lot of the burden for this plan. Maybe that is why the 'Balanced Community' Theme is dead last for West Jackson. You need to come to West Jackson and walk with us to find out what works and doesn't work here if you are going to use our West Jackson as a role model for "responsible growth". Christine Walker from the Housing Authority walked around the neighborhood with us to see and hear our concerns; perhaps officials and planners could take a field trip. I will supply the coffee and doughnuts. We have some great neighborhoods here in West Jackson and we deserve a lot better then what the present draft plan has to offer us which is basically zip right now.

<td>5/15/09</td>
<td>Barash, Jean</td>
<td>Repeatedly during the Comp Plan process the Community stated that its top priority was/is PROTECTING WILDLIFE. Those results were seen in the Keypad poll, the Online survey and the U. of Wyoming phone survey. The Comp Plan, as drafted, does not reflect the sentiment of the community. Growth: The draft Comp Plan proposes too much development - up to 9,800 new residential units and 8.8 million new square feet of commercial development. Such growth goes against the stated desires of the Community. Additionally, the draft fails to analyze the implications and consequences of such massive development. Such massive commercial development can only make our workforce housing shortage worse. Nodes: The draft contends that allowing significantly increased development in designated nodes will result in more open space protection, without harming wildlife. As a resident of Wilson, I strongly disagree with that blanket statement. The proposed draft would allow up to 520 new homes in Wilson - 400 above the 120 currently allowed. As shown on Page 109 of the new draft, downtown Wilson could grow from a village of 170 units to almost 700. Fish Creek flows through the heart of Wilson. Wilson’s riparian areas are home to moose, elk, fox, cutthroat trout, ducks, osprey, eagles, deer, otter, bears and an occasional mountain lion. The area immediately south of Highway 22, where we live, provides safe calving grounds for moose as well as crucial moose winter habitat. It is a complete contradiction of priorities for the Plan to say that the area’s natural resources are its top priority when promoting density changes that would irrevocably degrade wildlife habitat in Wilson. Even more distressing than the proposal for such density nodes, is the fact that these nodes were designated using 15 year old Natural Resource Overlay mapping. To designate nodes, without using the newest maps - most of which have been available for over a year - is PUTTING THE CART BEFORE THE HORSE. It is also very unscientific. DATA: This draft does not give us enough specific information about the impacts of this Plan on our infrastructure - the impact of 20,000 more people on our schools, roads, taxes, water, recreational areas, our way of life. SUGGESTIONS: I urge the Planners, as well as our town and county elected officials, to keep zoning as it is under the 1994 Comp Plan. I urge our elected officials to immediately update the Natural Resource Overlay maps, using the most current scientific information - including data gathered by the Teton Science School, Wyoming Game and Fish and other sources. Would any of us rely on 15 year old information when buying a car, pricing a house, or choosing the best surgeon to do a knee replacement? I don’t think so. In conclusion, I urge all involved to remember what the community has said it wants - in the order in which they said it. 1. Protect wildlife and open space. 2. Manage growth responsibly. Limit growth, if necessary to protect the above. 3. Provide affordable housing opportunities for most of our workforce - keeping in mind that we are currently at that 65% rate.</td>

I respect the work you have put into this Draft Plan. I truly want to comment and question from perhaps a bit of a higher level (we've got more time down the road for details). 1) My most pressing question is where is the groundswell of support for the huge increase in nodal densities, overall density, and de-emphasis of wildlife, natural resources and limited growth? Where and from whom did the imperative for this radical departure from previous plans come from? I understand the desire for affordable housing. And this is not about NIMBY. But I don't think there is any dispute about what makes our community and valley unique: wildlife, natural resources & beauty, and rural feel/character. In my opinion, this plan emphasizes growth over those factors, and I believe the people of this county deserve to know - specifically - who pushed the change in emphasis. As the 1994 Plan stated, we can develop a sustainable economy that is not predicated on growth that alters the bedrock foundation of why we are here. We all know the free market has passed "affordable housing" by here in Jackson Hole. The only two ways to achieve true affordable housing are via government subsidy or increased density. We should strive to use those tools in a reasonable manner to keep our community vibrant and as diverse as possible WITHOUT DEPENDING ON GROWTH OR RUINING OUR VALLEY. As difficult as it may sound, no one (including myself or my children) has a "right" to live in Jackson Hole. We simply cannot accommodate everyone. However, if we think regionally, there are communities close by (Teton Valley and Alpine) with HUGE inventory (literally thousands) of affordable lots. Why not work with them to achieve our goals in a manner that improves their economy and sustains ours. Generally speaking, it has been proven that growth does not pay for itself. Putting town densities in places like Wilson and The Aspens, eventually doubling the permanent population of Jackson Hole and allowing for the eventual increase of the workforce by nearly 30,000 workers, frankly, is flat out crazy. To close, I want to repeat my main question and then make a suggestion. Question: Where is the groundswell of support for this Plan, and who specifically drove its precepts? My suggestion is simple: now that the Plan is out and has been publicized, how about another statistically valid poll/survey to determine public sentiments towards this Draft. The money will be money well spent, the feedback would serve as the basis for future decisions. There is no rush to get this right. I'd rather do nothing than make changes that can't be undone. Jeff Daugherty was quoted in the paper as saying, "The [community] surveys are not what the Comp Plan is based on...[They] were an important element but not the only element." We deserve to know who/what the other elements were, and the community deserves to be heard AND actually LISTENED TO.
5/15/2009  Fustos, Gail A Interested Public

This is a growth-based plan. That is not acceptable. There are two primary barometers that I think should be used to figure out the best direction for Teton County: 1) protection of wildlife and 2) using local traffic to measure the quality of life as stewards in a small Wyoming mountain-town within an enormous area of natural and spectacular public lands. Based on your 2008 surveys and my conversations with others, protection of this territories wildlife is the number one priority and the reason most of us live here. According to regional statistics, wildlife road kill is increasing dramatically (as the local human population grows). More and more local people means bigger roads, more roads and more wildlife corridors being compromised or eliminated, resulting in the destruction of wildlife and their habitat. As stewards of this incredible area, it’s criminal to allow this to continue. It reminds me of the history of the white man invading American Indian territories. Quality of life in Jackson in the last ten years has seen major deterioration. You may not know this unless you get out of your single-occupied motor vehicles and walk though town for about an hour on a regular basis. The metal containers most of us drive really do seal us from much of the noise and toxic fumes in town and on the county and state roads. If you have come here after living in or near a metropolitan area in the last ten years you may need to compare your walk through Jackson today with a present day hike up the Sleeping Indian to understand how loud, stinky, dirty and busy this town has become. Solution, if you want to live and/or work here you would need to present, for approval, a travel plan for you and your family that clearly shows you will only be contributing minimally (10%-20% of your local travels) to the Jackson area’s traffic fiasco. Obviously, the plan would need to be monitored and enforced. My credentials on the subject of Jackson area traffic comes from twenty-two years of traveling to work and errands by walking, bicycling, carpooling and/or using Start Bus in and around Jackson and driving solo only as a LAST resort. You can see, feel and/or hear a lot more when you are outside the protection of a metal and glass container or are a passenger in a vehicle. From these many years of observing my fellow Jackson dweller/worker, I don’t see most people being willing to make a sacrifice, for this special needs place, and not contribute to it ugliness (the single-occupant, multi-passenger motor vehicle traffic) most of their commutes. Consequently, with regard to a transportation strategy of simply encouraging alternative transportation it isn’t going to work. Even with the huge influx of new residence to this area in the last decade, I see very few new faces on the streets commuting to their destinations using alternative transportation such as a bicycle or carpooling. Most Americans are addicted to using their vehicles and flitting around (alone) without a thought to any of the negative consequences. Solution some method of a $3 gallon gasoline tax on regional gasoline consumers. I would bet that there would be a big change in some ecologically incompatible behaviors. Some people might decide to leave the area. Okay. It may attract a few people to move here. Okay, as well. Other suggestions to add for a sound, comprehensive town/county plan: a) Require residence and businesses to recycle everything recyclable in this area. b) Enforce littering laws and create and/or enforce fines for overfilling garbage containers. c) NO MORE idling vehicles allowed - high cost fines. Five weeks was not nearly enough time to read, research and write our opinions regarding this massive, complicated draft comprehensive plan.

5/15/2009  Ambler, Emily Interested Public

Given the short time to respond, I want to mention a few key things. 1) There is no mention or concern for the “Community Character/County” or the quality of life. 2) The rate and size of planned growth seems very excessive which can lead to Sprawl in the County and over crowding and loss of character is Jackson. 3) Growth must be managed responsibly to include limiting growth so that there will be no harm to our wildlife and scenic places. Jackson Hole is dependent on tourism for it’s economy more than future growth and development. If we destroy all that has made Jackson the place it is, we will be killing the goose that laid the golden egg so to speak. It saddens me to see some of the new development in the area of Miller Park.....we are beginning to look like Park City, UT which used to be a town of charm and character. Let’s go really slow and keep Jackson the type of place we all will love and care for. Thank you for your consideration.

5/15/2009  Ream, Dick Interested Public

Please add my voice as a 30 year resident of Teton county and Wilson as opposing the newest version of the comp plan. It sucks on many levels. they call it a vision but it is truly a nightmare. It should not be adopted.
On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Given the limited timeframe of the first phase of the public comment period, and the extent to which the April 2009 draft represents a rewrite, rather than an update to our community’s current 1994 plan, this initial correspondence will only include a brief, broad summary of our preliminary analysis. Prior to the beginning of planning commission hearings, the Conservation Alliance will submit additional, detailed comments specific to each chapter, theme, and future land use plan. The Conservation Alliance has major concerns with the draft released in April 2009 and believes that the draft, as currently written, is fundamentally off-track. Not only does the draft not represent the vision of the community in fundamental ways, but it also omits a number of important principles and policies that could positively direct long-term, strategic planning in Jackson Hole. In general, the plan has a number of vague and contradictory policies that raise more questions than they answer. There are also significant discrepancies between policy themes and the draft’s planning tool – the “future land use plan” – particularly in light of the amount of development the maps propose and where. Our community has a long history of dedication and commitment to protecting the values of Jackson Hole that make it world renowned – its wildlife, open spaces, scenery, recreational opportunities and small mountain town character. Our community has long recognized that in order to protect these values we must take a unique approach to planning for development and conservation. As a result, a core objective of our current 1994 Plan is to protect rural character (low-density characteristics) throughout the valley. The 1994 Plan also emphasizes the importance of permanent protection of open space as development occurs. The new draft steps away from this underlying, basic foundation. The new draft identifies permanent protection of open space as a potential step, but doesn’t provide substantial enough language to require it. Also, unlike the current plan, the new draft fails to address the range of community benefits that result from permanent protection, such as the elimination of anticipated transportation demand. If we move forward with the adoption of the draft that was put forward in April 2009, we could take a major step backwards in terms of promoting long-term stewardship of the rare assets that define Jackson Hole. While the plan includes some positive elements, including some of its concepts outlined in the vision chapter, the bulk of the document, including the future land use plans, falls short. For example, we appreciate the new draft’s intentions to shift development patterns into increasingly confined footprints. However, it misses the mark on other important aspects of planning and wildlife protection – such as the intensity, rate, and type of overall growth regardless of where it occurs. Overall growth potential in this plan should be reduced. The new draft lacks a systematic framework through which land use decisions can be approached in an integrated way. The original objective to increase cohesion among different themes was not achieved. Also, the new draft appears to lack a science-based understanding of the different community issues it seeks to address, ranging from habitat conservation to workforce housing. At a basic level, planning is a form of problem solving. Unfortunately, the draft doesn’t bring forward comprehensive solution-oriented policies to address some of our community’s most challenging and pressing issues. As an example, our community will not lessen our workforce housing shortage if we continue to facilitate the extent of commercial development called for and deemed reasonable in the new draft. These contradictory elements are unacceptable, particularly given the incredible extent to which the public will be called to support the achievement of other workforce housing policy objectives. As we move forward, we recognize the Comp Plan is an initial step in what will likely be a much longer process – the revision of our land development regulations. We recognize that the land development regulations will enable a more detailed discussion on some of the issues. However, given the role of the Comp Plan as a guiding vision document for the drafting of land development regulations, getting this first step right is critical. We have major concerns with the disconnect between the degree of geographic specificity (and development characterizations) outlined in the future land use plans and a lack of analysis of what is proposed. It is troubling that the new draft maps send the message that certain levels of development are appropriate without any accompanying analysis of impacts. In general, the manner in which the future land use plans are organized is not user-friendly or clear, leaving the door open to unpredictable future land use planning. Overall, this new draft does not simply encompass a “big picture” community vision and therefore should not be reviewed as such.

We question the approach to prioritize themes in individual, isolated land use planning districts. This type of approach could lend to planning and decision-making that underemphasizes the importance of cumulative, valley-wide impacts. The new plan should include a more comprehensive framework to evaluate all land-use decisions. In July 2008, the Conservation Alliance submitted extensive comments outlining our concerns and recommended strategies for how the “updated” comp plan could be reworked to better uphold the will of the community. Many of these concerns and recommendations we brought forward still hold, and we will reiterate them again in future comments. And, as we have stated before, based on the community’s consistently voiced top priority, theme one should be the foundation of this plan, rather than an isolated theme. In Teton County, strategic conservation of the county’s unparalleled wildlife, open spaces, and scenery needs to be the organizing theme of land-use planning decisions. In closing, we will continue to voice, on behalf of documented community will and our irreplaceable wildlife, the new draft must be fundamentally changed so that it will effectively be able to protect the larger role that Jackson Hole plays in this ecosystem and for many around the world. The Greater Yellowstone Ecosystem, and our community, which places stewardship of the ecosystem as its top priority, deserves no less.

<td>The ceiling number of units currently proposed for the Aspens and downtown Wilson is far in excess of what these areas can absorb. The Wilson discussions since 2001 have been heavily weighed toward minimal increase in residential and commercial capacity. The latest Wilson Mixed Use numbers for residential were a +98 units and now we’re looking at 500+! Regardless of the fact Wilson has already absorbed a lopsided (high) percentage of workforce housing, I know it’s the wrong geographic location in our valley to put more density. Downtown Wilson is split in 1/2 by a major 2 lane road and WYDOT does not have current plans to improve and/or widen this stretch of hwy 22. They do not have it on their calendar. I know the density (population increase) won’t happen over night or even next year, but I know it’s the wrong decision to deem this high number a maximum cap. Other than major traffic to and from Teton Valley, Wilson has little traffic and impact, and that’s why the wildlife frequent the area. There’s NFS access and lots of water and this won’t change. The wildlife will suffer with more congestion over the years and this wildlife concern is the community’s #1 concern. Human Needs are also important and should be on an equal basis with wildlife, but Wilson is not the smart location for massive additional population. The character of the street-scape is vital to those who live and use Wilson as their ‘home’ and this should not change b/c special interest groups feel this geographic location needs to have a higher percentage of workforce housing. For those who know me, I’m an advocate of workforce housing, but Wilson proper is not the right place. The Aspens, west side of Hwy 390, would appear to be more appropriate, but still not the best choice. Additional workforce housing belongs near major grocery stores, the bulk of employment and four lane highways - Keep Town as Heart b/c this makes the retailer’s businesses prosper. Packing in housing b/c a fifteen year old plan defined Wilson as a ‘node’ is ridiculous. Please listen to those who live and breath her now.</td>

<td>Jorgensen Associates, P Interested Public</td>
<td>We are writing to express our strong support of the overall vision and goals set in the April 3, 2009 draft revision of the Jackson-Teton County Comprehensive Plan. We applaud your efforts to bring the Comprehensive Plan into conformance with the current state of the community it serves. We support the vision that recognizes the need for balance between environmental and wildlife protection and smart, responsible growth that is essential to maintaining a vibrant, sustainable community. While there are elements of the plan that need refinement, the basic concepts it puts forth are on target. Its adoption will put in place tools that will enhance predictability of future development. The definition of specific dense development nodes in both the town and county will protect natural resources and wildlife habitat, and provide the opportunity for much needed housing for the work force that is the foundation and soul of our community. The potential for change always elicits a strong emotional response from those who perceive that it may negatively impact them. It is important to be mindful that some interests that are in a position to spend significant resources (including time) on critiquing planning efforts do not necessarily represent the viewpoint of the community at large. We believe that the changes for which this plan will serve as guide will result in a healthier, stronger community, and are long overdue.</td>
</tr>

This plan will guide the Valley’s planning and development for the next 10-20 years. In the next step, it will guide us in amending land development regulations. Stakes are high, and outcomes permanent. We have to get this right.

What follows is a summary assessment provided to my neighbors – major issues and changes needed. The current draft is not the community’s plan – far from it. Yet! Thanks go to a number of South Park Neighbor economists, planning experts, developers, rural land owners, biologists, workforce homeowners, affordable homeowners, builders, educators and others that helped shape this assessment. We trust this collaborative work will assist you in reviewing the issues and addressing needed solutions.

Comprehensive Plan Priorities – Major Issues, Changes Needed

Overall: Community Vision vs. the New Plan Draft

• Our plan, our responsibility, our legacy, is to guarantee that this valley, its wildlife, its vistas, its uniqueness, are preserved for all time. There are no bailouts if we fail.
• We expect the plan to work to protect Jackson Hole’s cherished wildlife and open spaces, while also addressing workforce housing needs in a measured way.
• The new plan draft lacks the policy direction needed to accomplish these goals.
• Although there are good things in the plan that respond to the community’s desires (such as creation of an appointed, volunteer Environment Commission concerned with wildlife issues and human-caused impacts, or heightened emphasis on workforce housing), the foundation of the plan rests on a false assumption - that the community wants more growth.

The existing (1994) plan says our community’s vision is to ‘promote economic sustenance that does not depend on population growth.’ (p 5)
The new (2009) plan says ‘the concept of sustainability within the context of the community’s vision delineates that...ecosystem preservation does not preclude growth and development necessary to meet our community's human needs.’ (p 8)

Huh?

• The draft also fails the community’s mandate to consider the implications of build-out, and evaluate the consequences of overall growth in the valley.
• By heading for a potentially larger build-out, not having clear prioritized open space incentives (especially in greater South Park, where density incentives will be directed 100% to workforce housing, not at all to open space preservation), and recommending almost 9 million square feet of new job-creating commercial space, we assure that workforce housing shortages will only get worse, open space likely will not be protected, quality of life will diminish, and most importantly wildlife and natural resources will erode further. All in a failed attempt to focus the plan solely on pattern of growth – and not respond to the public’s desire for a less-growth strategy.

• ‘We cannot grow our way out of growth-related problems.’ – Kristy Bruner, Jackson Hole Conservation Alliance
• People and wildlife both lose in this plan.
• The plan fails on all important points – quality of life, workforce housing, taxes, wildlife, open space, rural land owners.

Wildlife, Natural Resources, Open Space

• Wildlife and natural resources should be the top priority in all districts, without compromise
• Draft Plan Principle 1.1: ‘Maintain viable populations of all native species’

Policy 1.1 g: Permeability of development for wildlife: ‘In all areas, except those designated for mixed use or more intense development in the Town of Jackson or County nodes, development will be designed to accommodate wildlife movement.’

We believe, to achieve Draft Plan Principle 1.1, the design of development in ALL nodes identified for growth must allow for wildlife movement permeability.

• The existing (1994) plan includes an entire chapter on natural and scenic resources, defining them as distinct key assets of the community. The new draft de-emphasizes the importance of scenic resources. This is particularly evident for South Park.

The existing (1994) plan (Chapter 1, p 4) identifies South Park as a key area for scenic resource protection. The Scenic Resources Overlay covers major sections of this district, including open space where 1) ranching should continue, 2) wildlife habitat should be preserved, and 3) the visual qualities of scenic vistas should be protected.

The 1994 plan specifically identifies the hay meadows of South Park, the Spring Gulch scenic area, ranchlands along Teton Village Road, and Buffalo Valley as areas to be kept free of development to the maximum extent possible, to help preserve rural character, critical wildlife habitat, and important image-setting scenic vistas and river corridors, as well as to encourage the continuation of ranching and other types of traditional agriculture as a vital part of community character.

The 1994 plan adds: ‘where possible, the County should be flexible with its development regulations as an encouragement to land owners to permanently protect these wildlife, scenic, and agricultural areas’ (p 5)
• The new draft plan does not contain a mechanism to permanently protect rural open space. Moreover, it specifically removes South Park from areas now recommended for preservation. (Policy 1.6a)

Growth
• Growth will occur. Current entitlements are huge (with much of it ‘shovel-ready’ but currently on hold, due to financing and/or feasibility issues): over 6,000 new homes and over 4M sq ft of additional commercial space. These entitlements include platted but unbuilt lots, base property rights, and significant remaining resort development, which together will take our community from a current population of 20,000 to over 30,000.
• At stake in current plan discussions is growth beyond existing entitlements - ‘upzones.’ Upzones will potentially add 2,100 more homes and 4.8M more commercial sq ft than where we were already headed (Appendix I).
• So it is not growth vs. no growth – it is how much additional growth.
• The draft plan foresees future growth as follows:
  [see comment for reference tabular data]
  • The number of housing units would more than double, from almost 10,000 existing right now to a total buildout of almost 20,000. Assuming approximately 2 residents per housing unit (Planner range is 1.74 -2.37), the housed population in Jackson and Teton County would also more than double, to almost 40,000 residents.
  • Commercial space would more than double. Assuming approximately 4 new jobs created per thousand sq ft of commercial space (Planners estimate 1 job/240 sq ft, Appendix C, p 16), that means over 35,000 directly-created new jobs and (see above) an even greater housing deficit than we have today – far greater.
  • All of these new residents and workers would create demands for additional workers in the form of new needed teachers, nurses, police, plow drivers, etc., further compounding the valley’s already escalating housing shortage.
  • About 20,000 people currently live in Jackson Hole, others commute here to work, and at peak times of the year, about 20,000 more tourists are visiting daily. With the tremendous demand for new workers, the increase in new residents, increasing tourist visitation, and even more commuting workers, the plan leads to a deeper workforce housing shortage, tremendous increase in commuters, and doubling of the resident population. Just to illustrate, today’s peak summer driving and parking conditions become the everyday norm – or worse.
  • ‘Responsible Growth’ should be deleted as a priority in the Comprehensive Plan. It isn’t one (even if responsible).
• Overall buildout should be reduced
• Maximum build-out should be specifically defined, capped and permanent, with a slow, sustainable rate of growth over an extended time
• Job-creating commercial should be constrained.
• If a growth theme needs to be articulated in the plan, call it Reduced Build-Out/Growth Rate. Then consider ‘managing the pattern of growth’ as a critical sub-goal.

Workforce Housing / Community Diversity
• Workforce housing inducers need to be addressed as much as solutions.
• Non-growth solutions should be prioritized
• The community wants less growth while addressing workforce housing. This could be accomplished with minimal growth by:
  Identifying a permanent funding source to purchase and redevelop existing housing.
Increasing housing mitigation rates on new residential and commercial development
• The plan will worsen workforce housing. Commercial and homes create new demands. Example: Rocky Mountain Bank, recently approved on Broadway, will create 65 jobs. Mitigation is set to provide just over 1 (one) workforce housing unit.
• The plan recommends new job-creating commercial that would require almost 12 projects of the size currently proposed for the NW corner of South Park, just to house all of the new workers (assuming 2 workers per home). Even with foreseen growth there won’t be room for this many new residents, as the housing expansion won’t keep up.
• Reduce the job-creating commercial in the plan, and require all development to fully offset direct impacts on workforce housing and infrastructure demands. Achieve this through adequate housing mitigation rates (requirements for developers to provide housing for most of their workers) and exactions (fees to cover impacts to parks, roads, sewer, and water).
• In-fill in town should be the first priority before considering expansion into targeted County nodes (including NW South Park) or Town “growth areas”
• The plan prioritizes needs of humans who may live here in the future over the needs of current residents. The needs of current residents should take priority.

Outcomes & Impacts
• The final plan must have clear and specific data to show outcomes and impacts on wildlife, traffic, roads, schools, environmental, taxes, and other
quality of life issues. • Costs of growth: Taxes will go up. Social services will get worse, not better, as demand increases and funding falls behind. Crime and traffic will go up. This is not wildlife vs. the people. All lose. In fact, people lose the most.
• Who benefits from growth? A few landowners will, while the majority of rural land owners will lose opportunities for economic return, even while they continue to support open space and wildlife.
• When clarifying outcomes and impacts, the plan should also look at documented motorist conflict zones, and require wildlife-friendly solutions

Plan Language
• New (2009) plan’s vision statement: ‘Preserve and protect the area’s ecosystem and natural resources and meet the community’s human needs in a sustainable and predictable manner.’ (p 7)
• The plan needs to clearly define ‘Human Needs’. These should be tied back to other priorities, recognizing that human needs will be best met when they do not depend on continued growth in a hopeful attempt to grow ourselves out of a growth-caused situation.
• The terms ‘Human Needs’ and ‘Community Benefit’ are dangerously vague, taking us back to setting policy with three votes on Town Council or County Commission.
• ‘Sustainability’ is a plan priority, yet growth limits are not defined, determined, or set in the plan.
• Sustainable development ties together concern for the carrying capacity of natural systems with the social challenges facing humanity. As early as the 1970s, ‘sustainability’ was used to describe an economy ‘in equilibrium with basic ecological support systems.’ Ecologists have pointed to the ‘limits of growth’ and presented the alternative of a ‘steady state economy’ in order to address environmental concerns.*
• In the new plan draft, sustainability is selectively defined so as to support growth. ‘The concept of sustainability within the context of the community’s vision delineates that ...ecosystem preservation does not preclude growth and development necessary to meet our community’s human needs.’ (p 8)
• Can we really have our cake and eat it too? Others say no, not really. ‘The idea of sustainable development is sometimes viewed as an oxymoron because development inevitably depletes and degrades the environment.’ **
• We should replace the definition of ‘sustainability’ in the draft plan with the language of our current (1994) plan, where the overarching goal is to break our dependence on continued growth in order to achieve human needs. We want ‘an economy not dependent on growth.’

South Park – Poster Child for Growth
Question: does South Park have any wildlife values or open space worth preserving? The following picture and caption ran in the Jackson Hole Daily May 1:
[see comment for referenced picture]
A bald eagle perches on a fence post while looking for a meal in a field Wednesday morning in South Park. Bradly J. Boner / JACKSON HOLE DAILY
In the new draft plan, language states or implies a future for South Park that qualitatively could also happen to other valley ‘nodes’ targeted for growth.
• Unwinding of protections for open space, and scenic and wildlife values (Policy 1.6a; Policy 2.3b)
• Dramatic upzoning, commercial and residential footholds established, without protection from future expansion (Appendix I, p 4; South Park District description p110; Policy 2.5b)
• Density incentives directed to workforce housing only (and not to open space protection) (Policy 2.3b)
• Removal of wildlife connectivity values (no requirement for wildlife permeability in development design standards) (Principle 1.1, p19)

Example:
The plan proposes eliminating all language calling for permanent open space protection for portions of South Park, and for protection of scenic and wildlife values in the South Park region: 2009 Plan, Policy 1.6a: ‘Conserve agricultural lands and agriculture throughout Teton County: The County will support efforts of landowners and land trusts to permanently conserve large intact parcels of land and to continue farming in Alta, Buffalo Valley, the Gros Ventre area, Spring Gulch, and south Fall Creek Road.’
South Park was first on the list in this section of the 1994 Plan. The new language strips South Park of such protection, implying that the entirety of the South Park district does not deserve conservation and directly unwinding the protection in our existing plan. (1994 Comprehensive Plan, Promote Stewardship of Wildlife and Natural Resources (Theme 1) - pg. 24).
For South Park, the following 2009 Plan adjustments are in order:

<td>Goralski, Jim and Linda</td>
<td>We just want to join the many other comments that you have already heard, seen and read concerning displeasure, dismay, and disappointment regarding the direction of the 'new' Comp plan. We feel the new plan does not convey the spirit of the existing plan, nor represent the will or wishes of the current residents of Teton county. Given the loud, negative reactions by upset residents (and voters), you must realize that we look to you, the elected officials of Teton County, to do the right thing and reject this 'plan as is currently proposed'. We have been at many meetings, written letters, and talked with our neighbors across this community and honestly do not know anyone who feels this plan represents them, or the values expressed by other residents of Teton County. It appears that 'future' potential residents are being given priority over the residents that already work here, pay taxes and are 'the community'. Unfortunately, the plan seems to focus first on growth (not a community priority) and then tries to force this growth into unrealistic, high-density 'nodes' in communities that have rejected the very idea of the 'node' concept. Aggressive commercial growth is being planned that will, realistically, provide low-paying service jobs for people that can't afford to live here, thereby exasperating the current issues of housing, service provision, transportation, etc. The Planners appear to have their own agenda regarding growth and don't listen to their ultimate employers, the taxpayers of Teton County. We're expecting more from all of you and will certainly look to your actions on this issue as a guide to ours in the voting booth.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>Hazen, Diane</td>
<td>The only additional issue that will need to be addressed as part of the Tribal Trails connector is its impact on South Park Loop--which potentially could destroy what makes the loop interesting--all the alder and cottonwood trees. Achieving this themes goal will be the most difficult task at hand.</td>

<td>What will we look like in 15 years? What changes will be needed in our road system. How many new START buses will be needed? What new facilities will be needed for the buses? What new schools will be needed? When do we anticipate a need to expand the Town sewer treatment facility?</td>
</tr>
</tbody>
</table>
RE: Waldron Property and Wilson Mixed Use Boundary

The 15 acre Waldron Property and the properties located south on Fall Creek Road do not belong within the Wilson Mixed Use Boundary. The Planners inclusion of this piece within the boundary is arbitrary and is not consistent with public comment received in the Mixed Use Village Planning process or the current Comprehensive plan update. During the Wilson Mixed Use Village Planning process the citizens of Wilson made it abundantly clear that Wilson should only grow to the size currently allowed under today's zoning. Please reference Planner’s notes from the October 4, 2007 Open House "All were opposed to additional density on the Waldron property." Throughout the Mixed Use Planning process the Waldron Property was shown in yellow or "single family low". Myself and many other citizens were upset when between open houses the 15 acre property changed from Yellow NC-SF which is the current zoning to MU-R or Mixed Use Residential. We were concerned that by including the Waldron Property within the boundary would increase the likelihood that property could be slated for High Density Development. Repeatedly Alex Norton claimed that this was not the case. We realized our fears were well justified when the Comprehensive Plan Revision was released allowing for High Density Development on the Waldron Property. Furthermore the maps provided to the residents of Teton County by the planning staff during the during the Comprehensive Plan Update showed "South on Fall Creek Road" as a distinct area and the "Town of Wilson" as another. The demarcation point was Highway 22. The feedback that the residents of Teton County provided for "South on Fall Creek Road" was to preserve the rural character and not to allow any additional density. This only makes sense as the lots that are located south on Fall Creek Road are larger and adjacent to large conservation properties including the Rosseter property and the Fish Creek Ranch. The planners only justification for the inclusion of the Waldron property being located within the boundary was "walkability,Äü while ignoring the many reasons why this special property is not the appropriate place to have high density housing. The Waldron Property is considered Critical Moose Habitat by Fish & Game. It is vital wildlife corridor for a host of animals and is adjacent to hundreds of acres under conservation easement. The property primarily consists of pristine wetlands which according to the Wilson Charette/Mixed Use Village meetings were to be preserved and enhanced. The views as you enter Wilson and look south down Fall Creek road are spectacular. The views are just one of the many special aspects of the "character" of Wilson. The citizens of Teton County have stated that wildlife is their number one priority. The possibility of high density housing on the Waldron Property flies in the face of the expressed vision of the citizens of Wilson and Teton County. Please remove the Waldron property from the boundary and extend the same protections that are provided in the plan for all the properties located south on Fall Creek Road.

My appreciation to community members for asking that this theme be included in the Plan.

We also need a comprehensive study to determine how the road system in Jackson will be negatively affected by a considerable increase in additional traffic. Given the proposed substantial increase in population, it is inevitable that roads will need to be widened since Jackson has a built-in bottleneck at the town square. If roads are not widened, we will be facing a major problem with gridlock.

All development costs the community money. Finding a better balance to have ANY development, whether residential, commercial, industrial or otherwise, contribute it's fair share to community costs is essential. The exaction's now are insufficient to offset costs to the community.

Longmont CO "One percent of Capital Improvement Projects of more than $50,000 is allocated for the Art in Public Places" This is an example of one of 300+ public art ordinances across the US, allocating public funds for Capital Improvement Projects for public art. The first $1% for Art program began in 1959, and has inspired countless others. Principle 7.3: The Town of Jackson and Teton County must consider a '1% for Art' program to deliver quality public art experiences within the town and county nodes. Public art generates community spirit and enhances the quality of life for everyone.

While looking at the community infrastructure, I would recommend the county consider imposing a fee for new commercial developers to fund public art to be placed at the gateways to our community. Many times, the first thing people see when arriving to our valley is industrial/commercial development. To beautify the landscape and to compliment our natural beauty, it would be nice to see an icon such as the elk antler arches in the town square for people to remember and mentally refer to Jackson Hole.

Please add language to the Comprehensive Plan that endorses the arts in Jackson Hole. Supporting and funding the arts and local artists is vital to our community. Public art invigorates residential and commercial zones, developing new places of beauty and interest. It provides an intangible but real extra dimension to daily life. Public art has the capacity to reveal insights about our natural surroundings, cultural history and community connections. It can encourage private investment in civic space. thank you
5/15/2009  Acri, Armond  Save Historic JH
To discourage vehicle use, Level D will be an acceptable LOS. This has not worked in any other community. Why do we think it will work here? -Other communities have struggled to reduce single vehicle trips by 1-2 percent. Why is our Plan based on reducing trips by 10 percent? -Policy 6.3.e seems to be in conflict with 6.2.d. Maximizing interconnection and redundancy will not discourage single vehicle use. -In complete agreement with 6.3.d. We need to provide wildlife crossings. The first step is to identify key areas and start evaluating options. -If we cannot reach transportation goals, development should be slowed down until we reach them. Our current traffic growth rate of 2% is unacceptable. -Per capita miles traveled are not a good metric. Better to examine total vehicle miles driven, since it is the driver for wider roads and the need for redundant roads.

5/15/2009  Steinberg, Ethan  Interested Public
i've been a resident of Wilson for about 10 years. i feel strongly that the planned/zoned growth for Wilson should be much less than what the plan looks like. i recognize there are many interests at work here but believe the vision of a majority people is not consistent with the plan. As planners/public servants i feel you're accomodating developers and people who 'have yet to move to Wilson' with this plan. That is not your constituency and come election time i expect to work hard to make sure my representation better reflects what i and what i believe the community actually wants. please don't increase the potential density in Wilson anywhere near the degree as is proposed right now. Thanks for your hard work.

5/15/2009  Jerger, Karen  Interested Public
I'm very enthusiastic about some of the proposals in this section, probably because they seem like tangible solutions that can have a measurable impact, and they require not only creativity, planning and coordination by agencies, but a demonstrated commitment on the part of all residents.

5/15/2009  Hawley, James  Interested Public
Predictability is a term that was brought up repeatedly in the Comp. Plan presentation, but it is absent from the written plan even though it is a significant part of any future plan. In order to establish predictability, the Comp Plan needs to demand uniformity in zoning to ensure predictability of how neighborhoods will be developed. We need to eliminate spot zoning so that all parcels on the same street in the same area have the same zoning. We also need to eliminate rezoning developments so that we avoid unacceptable density levels in subdivisions and in town such as the Teton Meadows' project that requested a variance in zoning so they could build 500 houses/condos on a property zoned for 50. Such an increase in density should be prohibited, so it isn't even considered by the Town Council or the County Commissioners.

5/15/2009  Frisbie, Becky  Interested Public
The transportation section is so idealistic and absolutely impossible to achieve. We live in a rural area which is 6 months under snow. I think the bike paths are a wonderful addition to our community but certainly not an option or alternative to car transportation. If any future development is planned and achieved in the "nodes", the development should not be approved until the road system can handle the additional number of people using that road. To consider allowing dense development without having a reasonable road plan involved is very irresponsible planning.

5/15/2009  Tillson, Becky  Interested Public
It is great to acknowledge that road widening is not what the community wants, and not what is the best for the wildlife and natural resources. But, the solutions that are offered are essentially to keep the LOS on roads low, increase bus rider ship from the nodes (yet there is no analysis of realistic rider ship expectations), and get people onto their bikes and into their walking shoes. Changing the habits of valley residents is a lofty yet honorable goal, but cannot be the only thing that is relied upon to reduce traffic and limit the need for road expansions. In January, when you live in the Aspens and need something from the hardware store, or to pick up your mail, or to go to work, your first thought would be to get into your car and drive to town. Right now, there are busses from the Aspens to Town. If you add any number of people to that Aspens community, perhaps your bus rider ship will increase (due to the net increase of people living there), but so will the number of people getting into their cars. The only way to reduce congestion on the roads is to reduce the number of people living out there that need to use the roads. This sort of analysis of the impacts of the amount and rate growth in the nodes on all of the themes/chapters is critically important, and noticeably absent. An example of the interconnectedness that the Plan needs to acknowledge: Busses, on cold winter nights, idle all night, outside. Building a START bus storage facility, as is one of the strategies in this chapter, would also help to alleviate our resource use and fossil fuel emissions, as per Theme 1, particularly if the START system is slated to expand. This connection needs to be acknowledged.
Tourism is outlined in the plan as a "non-consumptive" industry. "Take only pictures, leave only footprints" is not just some cute saying. People fly in here, yes, or drive their RVs across the country to see Yellowstone. They eat food when they are here, they stay in hotels that require water to wash the sheets. But they are not taking a piece of this community with them. They are not extracting oil, or burning down forests, or necessarily detracting from the experiences of concurrent and future visitors. It is important to realize that language such as "non-consumptive" is critical to maintain in this Plan even if the activities in question are not entirely without consumption. Relatively speaking, tourism is less consumptive than many other industries. And, it is nice to have goals out there to strive toward. "A large majority of the community agrees with putting a cap on resort development," - and then the Plan goes on to say that exceptions to this growth cap are allowed, and also to identify Teton Village as a node, and say that the County Commissioners will accommodate changes to the Village Master Plan. Where did that come from?

Resorts should be maintained at current levels. Any work force housing and convenience retail should come out of the current approved development. They were given tremendous upzones as part of their Resort Master Plans. -Skiier days are not a good metric for community first unless you separate locals and tourists in the data. A better metric would be to maintain the ratio of full time residents to tourist by comparing dwelling units to APO. - Lodging occupancy as an indicator can be misleading. As we build more lodging the average occupancy will go down unless we increase the number of tourists. Increasing the number of tourists is not sustainable. This metric will also be confused by the trend to high end lodging which focuses on fewer guests who spend more.

Policy 5.1.d I think is very important to see expanded. This community is filled with creative forward thinking people, entrepreneurs. We want them to stay here and open businesses, but right now it costs so much to open and run a business that it seems like we might only be able to afford bigger chain stores. Affordable leases, live/work spaces will support and encourage a locally-oriented, strong and diverse economy.

This section emphasizes resort-related, and construction-related businesses, with no mention of a growing "telecommuting" workforce. I honestly don't know how significant it is, but I'm aware of many "new" residents engaged in work that is not located in, or directly connected to, this area. What impacts do those businesses have on the economy of this community?

What is described in this section sounds reasonable—until you look at the projected non-residential growth in the appendix. Those projections seem at odds with this theme. Finding some way to support local businesses in the central part of Jackson will do more to maintain character than encouraging out-of-town businesses. Stabilizing rents is critical. The tourist economy of Jackson is truly only about 5 months—being able to survive the rest of the year is very tricky. When property values jump excessively, causing rents to rise, local businesses have a really tough time.

This theme should be made number two behind wildlife. A government's prime responsibility is the health, safety and welfare of its citizens. See my initial comments.

Policy 6.2.d: This I feel is a totally unacceptable policy. As I have previously said, we are dependent on a resort economy and we must provide class A services for our visitors or they will simply choose somewhere else to go and we will have managed wound our economic driver. Our infrastructure is most important and should be considered before all other development occurs.

Prin. 6.2:While terrific in lofty concept, we live in a rural community. In order to use the Start Bus, I would drive 8 miles to Stilson; wait for a bus to town; wait for a transfer bus in town, possibly; wait for a second or third transfer bus for additional errands requiring greater storage than a bike could handle, or assuming bad weather; reverse the process to go home. CRAZY! In a CITY, buses run every 10 minutes and have a web of patterns to choose from. We are not there. We are too rural. The only way to reduce single car use will be increased fuel prices. The county currently only provides two parking areas for car drops/start pick ups. Where are the rest going to be put? Potential Projects: Yes to Tribal Trails Connection. Should have been done 15 years ago. Yes to upgrading Snow King Av. Yes to a redesign of Hwy 390, and at the least an additional stop light between the Westside Store and the Village to create a traffic flow. Yes to transit between Jackson and the Airport, with service using a town parking drop off.
Since the first studies were done in the 1980s the area of the Porter ranch in South Park has been identified as the most appropriate area for high density development. Here planners have the opportunity to work with a clean slate in their efforts to create new housing opportunities. This is very different from the Aspens and the Town of Wilson. Here you have existing communities who have over the years built and enjoyed small subcommunities. It is very unsavory to have a group of planners descend on these communities and propose a significant change in the character of these communities. I believe that the Aspens and the Town of Wilson should be entirely removed from the consideration as nodes for increased development. 390 and 22 are already approaching capacity for comfortable and safe travel. With the additions to Teton Village and the increased density there, travel particularly on 390 is going to become unbearable. Those housing units slated for these two areas should simply disappear or be reallocated to the other nodes. Given wildlife, economic and infrastructure considerations they really should just disappear.

My comments on the Proposed Comp Plan for Teton County/Jackson regarding development in Wilson are: We, as residents of Wilson/Westbank are being pushed and cajoled into something that a “developer” wants when he/she wants to maximize the density. Ninety plus new units in Wilson is TOO MUCH for the VILLAGE of Wilson. Too much commercial is also included in the plan. The existing commercial seems to be very adequate. Adding a cleaners and/or a pharmacy will not keep people from going to Jackson. Most people will be working in Jackson anyway and will make at least five round trips a week. Increased traffic trying to get on Route 22, (in either direction) is not very smart. It’s dangerous, particularly right at the bottom of Teton Pass. There is currently un-rented office space in Wilson as well as bank and/or retail space. Regarding residential development - an additional 90 units is TOO MUCH. We cherish the wildlife and 90 new dogs will eliminate the wildlife. The habitat will be diminished by more houses. I feel that 20 to 30 residential units might be acceptable. A good design with open space would still allow for some habitat and feeling of being in the country instead of in a city. The development is slated for a dangerous place with regard to entering the highway at the bottom of the Pass. I thought it was known as “Tommy’s Truck Stop” for a reason. I believe that the back of the property contains a lot of wetlands. The bottom line is the proposed plan provides for too much density. Please consider keeping wildlife and reducing, not increasing traffic. Please remember this is the VILLAGE of Wilson, not a NODE.

Please reconsider the plan adding over 500 homes to the wilson area the town can not take that increse. HWY22 crossing will not be safe, school will not be able to handle the increse #’s character of the town will be changed for ever and wildlife impact will be too large. Thank you,

Wilson is NOT a "node" that should have additional subsidized housing and 100,000 sq of commercial space.....there are plenty of houses available right now.....there is plenty of commercial space available...walking town....where Hwy 22 .....give me a break.....We voted you into office and we can vote you out....just remember you work for the tax payer and from the looks of it from the attendance at Wilson Elementary last week.....NO ONE SINGLE PERSON was in favor of this proposal. It is appalling that this meeting was not on the public record....shame shame shame

Is anyone listening? How many more meetings do we have to attend? How many more letters do we have to write? How many more emails do we have to send? Wilson does not like or want the Comp Plan as written. Eighty or more houses plus at least eighty dogs plus one hundred and 50 or more cars on the pasture land on South Fall Creek Road in Wilson equals Night Light Pollution, Noise Pollution and NO Wildlife. As to the redevelopment of downtown Wilson.- We already have a Hardware store, Catering service, 2 Restaurants, a Bagel shop, a Bank, a Ski and Bike shop, a Barber shop, a Post Office, a Medical facility, an Elementary school, a Community Center and Hungry Jack’s for everything else. People will always drive to the ski area parking lot, the golf course, the Snake River, Teton Park and Jackson no matter how many so called amenities are added to Wilson. Bus service is not an adequate option when you have jobs, errands appointments etc. both North and South of the Y. Do we really want Wilson to become "Every Town USA"?

Friday, May 04, 2012
This is a plan for the destruction of Wilson, and for Jackson Hole. Why did you hold all the public meetings if the wishes of the community were going to be absolutely disregarded? What a sham of a public process. I attended several of the meetings, and the residents of Wilson were very clear that we do not want our community destroyed by making it a focus for high-density development. The planners assured us that we had made our wishes clear and they understood that we do not want increased density in Wilson. I am horrified by what this new "plan" proposes for Wilson and for the rest of Jackson Hole. How many jobs does Wilson provide? The vast majority of people living in Wilson have to commute elsewhere to work. That won't change by adding hundreds of new units. What will we have is hundreds more cars on the road every day as the new residents commute to work. You also can't make a case that Wilson has little value as wildlife habitat and therefore is suitable for intensive human development. I have moose in my yard every winter, coyotes and foxes roaming around, trumpeter swans and geese and ducks on Fish Creek, elk in my yard this past winter, river otters using Fish Creek, and many other species of mammals and birds in all seasons. How many of them will persist with the intensity of development you are proposing? I am also dismayed at the lack of detail and vagueness of the "Plan". How is anyone supposed to be able to tell what's actually proposed? We need much more concrete detail in order to comment intelligently. Just saying things like "duplexes, triplexes, and four-plexes are appropriate" tells us nothing--where will they be? What areas will be upzoned? What amount of "worker housing" will entitle a landowner to upzoning? Which areas will be off-limits to increased density in order to protect wildlife? We need more time, we need more detail and less fluff. I, like many people I've talked to, am appalled by this pseudo-plan.

Last line of the test states "The Town of Jackson will remain the resort, retail, professional, and civic center of the region." Why is the Town the Resort center of the Region? This furthers the battle between Town and Teton Village for tourists.

I studied planning in graduate school and the presentation I saw at Teton Village was a textbook planning presentation. Jackson Hole is not a "textbook community". Our community is an extraordinarily unique place and requires an unconventional approach in order to protect its special features. I am outraged that this high density node concept is even being entertained. I am also outraged that certain developers appear to have had privileged access to this concept. Finally, I am extremely angered over the timing of this concept and the limited time for public comment. It could not have been planned more perfectly in order to minimize home owner opposition. Nobody is here now and you know that.

General Comments to Public Process:The Comment period is too short for adequate representation. Many of the owners of properties in the Aspens and surrounding areas are seasonal residents and will not have had the opportunity to even know of the potential changes you are suggesting for their residence areas. They do not receive the local newspapers at their other residence and there have been no mailings or emails sent to inform them of this planning process. No public meeting has been scheduled for the Aspens/Teton Pines areas despite the fact that the proposed housing increase here is 20% greater than proposed for Teton Village, which generates most of the traffic flowing from Jackson, Wilson areas to the Teton Village, not Aspens/Teton Pines. Specific Comments regarding the Aspens/Teton Pines Planning Comp Plan: The two lots identified in the Aspens "Future Single Family Mixed - Type" plan, i.e., dense housing category, have Deed Recorded zoning restrictions on them that prohibit such development. These restrictions PROHIBIT the single family residential subdivision PROPOSED IN THE COUNTY PLAN. These restrictions are State protected and zoning cannot override private restrictions. SHOULD SUCH A PRECEDENT BE SET THAT SUCH DEED RESTRICTIONS CAN BE OVERRIDDEN, THEN INDEED, ALL EASEMENT RESTRICTIONS AND DEED RESTRICTIONS THAT ARE THE BASIS OF JACKSON HOLE LAND PROTECTION EASEMENTS ARE AT RISK. THIS IS WHAT YOUR PLAN FOR THE ASPENS/TETON PINES PROPOSES. IN ADDITION, AT THIS SITE, IT PROPOSES OVER 300 DENSE HOUSING UNITS ADJACENT TO A HIGHWAY WHICH WILL ONLY INCREASE IN TRAFFIC. CONVERSELY, THE AREA OF TETON VILLAGE, WHICH NUMBER OF EMPLOYMENT FOR ITS ACTIVITIES, IS ONLY SLATED FOR SOME 200+ HOUSING UNITS. TETON VILLAGE INDEED IS THE AREA WHICH WILL GENERATE THE GREATEST GROWTH OF THE TWO AREAS. Might I also ask the obvious but highly unpopular question: Why have we not looked into a low rise building in Teton Village, which would be somewhat invisible against the mountain background and also consider the much needed bridge across the Snake River near the Teton Village location. Both of these suggestions, would provide significant changes to the thinking process to date. Thank you for your consideration.

Aspens' growth: The density suggested for the Aspens is wrong. There is not the infrastructure in the commercial area to support more people, except as a commuter society. No post office; no gas station; limited banking facilities; limited food marketing; limited food choices in a range of price levels; limited space at the elementary school and all older students would be part of the mass transport problem. There are not enough jobs to support the workforce, so they will all be community to their employment. This flies in the face of everything you are preaching about limiting road use and creating 'Nodes' of communities. No more growth at the ASPENS!
5/15/2009  Heileson, Marv and Julie Interested Public
We strongly object to the density proposed for South Park. The community clearly expressed its opposition to such density during the Teton Meadows application, and also the Comprehensive Plan public input process. South Park has never been a "node"; it is a semi-rural suburban outskirt area of Jackson, with open space, water meadows, and wildlife dependent on those resources. The effect of designating it a node, and allowing higher densities, will be to severely impact one of the Valley’s key wildlife corridors. Moreover, it would simply move Jackson outward, creating both the need and the excuse for more high density further south.

5/15/2009  Webb, Deborah Interested Public
I am very opposed to the plan for both the Aspens and Wilson. My primary reason is that both of the "pods" on the Westbank are home to year round wildlife. Of course our biggest wildlife population concern in this valley is the decrease numbers of moose. This is not due to predation in this part of Jackson Hole, but due to human development and loss of habitat. Are you all familiar with Dr. Joel Berger’s extensive study of our valley’s moose population? Teton Village Road is has the highest moose mortality rate in Jackson Hole according to his study. Those of us who live along 390 and 22 are sick of seeing the moose carcasses along the side of those roads. And increase in traffic that has been profound and detrimental. I do see some good ideas and positive aspects to the proposed plan, but the overall number of humans proposed in these two nodes is excessive and the resulting stress on the highways and further degradation of the wildlife habitat is unacceptable. I also own property in Teton Village and vehemently opposed the scale of development that was approved there. Further development on highway 390 in light of what has already been approved is ludicrous. I don’t support the high amount of growth set forward on the westbank in this plan draft. I believe we need to grow, modestly, first by redeveloping areas near elementary, middle, high schools as well as jobs in and near the existing "Heart of Jackson Hole". Just looking at the Gregory Lane region, many of those lots could be smartly redeveloped (and using green techniques) where children and adults can easily bus, walk and ride to their destinations. I fully support exploring the ‘Hostel’ housing idea for our many seasonal employees and would like to see the planners address this low cost alternative immediately. Thank you for your time. I expect to see large changes made to this first proposal. I believe this valley was never meant to house ‘everyone’ that might want to live here and this plan does not address smart, slow growth or our precious resources.

5/15/2009  Hazen, Diane Interested Public
The Buildout Calculations (Part 3) are the most confusing part of this document especially when combined with App. 1. The ranges create some unacceptable numbers—specifically the non-residential new floor area. Doubling the non-residential square foot imprint on this valley will create an unacceptable number of new employees—and the housing numbers do not reflect (as far as I can see) taking care of the employees and their families. Again—this issue seems to be driving the plan rather than balancing our future by paying attention to what the valley can support while saving habitat for wildlife—particularly winter habitat and migration routes. Coming to grips with a balance on growth potential will require a look at optimal numbers and not just "more of the same" as this plan proposes. If we don’t start addressing this issue now we will certainly irreparably harm this valley’s future. What happened to your ad: "Growth Rate regulation should be implemented to slow the impacts to development natural resources and community infrastructure." I don’t see this as part of the plan. Putting in place a serious and on-going way of monitoring buildout as well as analyzing impacts—the fact—is equally important. This plan doesn’t accomplish this. Wildlife is a fragile part of the picture and the most vulnerable. Too many people will cause irreparable harm to this valley—we already have negatively impacted many habitats. Continuing to "mess with Mother Nature" without resigning ourselves in will destroy what we have. This plan should take these potential impacts into more serious consideration. Saying that growth will continue at its current rate and suggesting that slowing that growth into a few nodes will solve the problem is very short sighted. We can do better. Where is the discussion to trade more intense development in town and nodes for maintaining less density in the county. It appears that the increase in development allowed in some locations is just an "add-on"—there are no resulting reductions somewhere else. Table 10-1 Land Use Classifications are confusing in that there is no reference to the existing zones that these will be replacing—particularly in town. Also, to find out what is going on in each of the Districts, you have to go back and forth to this table to figure out what applies. This information should be included where it applies in each district. The Mixed-Use visitor orientation classification includes existing resort districts AND other non-resort areas—will defacto resort district opportunities be available to these areas—as an example "Old West Cabins" Kelly is included in the Single Family Low classification which says that is should be served by sewer and water, but no mention of this is made in the Kelly District description. If sewer is added to Kelly this could have huge impacts—it could turn Kelly into another "node."

5/15/2009  Acri, Armond Save Historic JH
There should be no additional Resort Development beyond what is in the approved Resort Master Plan. Teton Village should take workforce housing out of approved development. Additional commercial in Teton Village is in conflict with Town as Heart. Past experience has shown the public is not willing to pay higher costs for lower quality goods as a convenience.

5/15/2009  Acri, Armond Save Historic JH
SR Sporting Club should take workforce housing out of approved development. There should be no expansion of the Resort or its uses. Additional restricted workforce housing is not appropriate at Snake River Sporting Club.

</tr>
<tr>
<td>5/15/2009</td>
<td>Frisbie, Becky</td>
<td>I do not think the current development guidelines for the Aspens and Wilson should be changed. The Aspens is currently a resort district and adding the possibility of 300 + dwellings in a very small area will change the complexion and intent of this development. Currently, the commercial area benefits both visitors as well as full time residents and it accomplishes the goal set forth with the Aspens and Teton Pines developments. To state that any further commercial development has to be for the work force and not for the visitors is an unfair change to the current zoning. Wilson has always been a small village with some commercial development. Current density should stay in place.</td>

<td>I was raised here in Alta and my siblings (Dick, Dorothy, Ralph, Mark, Jim, Heidi, Mike, and Roger) and my mother, Marian Butler, all own property here. All through the years, there have been businesses in Alta. Farming, in many cases wasn't sufficient to sustain our families. For example, Arnold Grossnickle has a chiropractor clinic, Ralph Linseman had an excavation business. Fritz Kaufman had a lumber and fence business, Mark Wilson had quite a few ideas, one of which was building furniture, Rex Christensen had a door and cabinet business and the list goes on. This was part of the Alta culture. It allowed economic diversity, which in my opinion was an asset to the entire community. Now Teton Valley is experiencing challenging times. People are leaving the area because there are no opportunities for employment. Our area is focused on real estate and associated services. Now that real estate is suffering, the entire area is suffering. It appears that this recession in the valley could last a long time. If our community had some small technology, manufacturing and associated businesses, that would soften the recession issues. There is the feeling that these businesses should be in Idaho. Teton County, Idaho is also having difficulties. From personal experience, finding a location to operate a business in Teton Valley, Idaho, has been difficult. Rent prices are high, locations to build are extremely hard to find and expensive. I note that since the recession, commercial property is easier to find. I am recommending an allowance for some limited commercial zoning. I am totally opposed to commercial activity like Walmart or Target. I would like to see a small commercial area where small businesses could be located. For example, an accounting office 1400 square feet or less, a hair salon, a marketing center 1400 square feet or less, a computer technology assembly plant of 2500 square feet, a light manufacturing facility 3000 square feet or less, etc. All commercial activity would be located in a commercial area off the main road with a tree buffer. In this manner, the commercial area would not be seen from the road and therefore quality of life in the area would not be diminished. Land in the area could also be donated to the County for future County facilities such as a post office or recreational facility. Three years ago, it was never dreamed that Alta would need land for a library. The community is fortunate that the local church made land available for sale. In summary, a commercial area in Alta prevents commercial sprawl in the community, creates economic diversity, gives the community a place for future growth, and makes a space for current commercial to become &quot;conforming&quot;. Thank you for giving me the opportunity to comment on the draft comprehensive plan.</td>
</tr>
</tbody>
</table>
I understand from reading the plan about Alta that you propose the vision to be our community as solely agricultural and residential. I find this very surprising since this doesn’t reflect our current community and seems to put an unfair burden on our farmers. I’m surprised that this became “our” Alta vision since both my husband and myself were at the original input meeting and this doesn’t represent our vision. Like most people, I love the scenery associated with farming but I can’t fairly say that I expect our local farmers to provide this for me. In fact, Alta has no full-time farmers in our entire community. All the farmers/ranchers I know have other means to support themselves. Here is what I know about our local Alta farmers. Warren Kaufman has a Polaris shop, Liza Wilson has a kitchen cabinet business, Jim Wilson has a library database business, Leland and Anita Christiansen have other jobs. Steve Green works at Stock Lumber. Marian Butler is a retired nurse practitioner. Janice Wilson is a retired school paraprofessional. Rex and Marie Christiansen have other jobs. Jim Christensen is a retired college professor. Meredith Wilson has a bug-spraying business. Would it really be fair to continue to zone all their property as agricultural and expect them to continue to provide all the scenic, natural, and wildlife resources on their property? I don’t think so. Adopting this plan that identifies this community as agricultural and residential leaves out much of the current community which surprises and disappoints me. In fact, it makes me completely opposed to this part of the comprehensive plan, the Alta portion. One of the themes of the proposed Teton County comprehensive plan which is in direct conflict with the Alta portion is “Theme 5: A diverse and balanced economy. Maintaining local ownership of businesses is a key element of sustaining a community.” No kidding, you can’t sustain Alta on only farming and residential. That would be forcing many people to move their livelihood to Driggs. We wouldn’t dream of asking the farmers to do such. There is a lot of commercial activity in our community, that is, locally owned businesses. I’m afraid this new plan gives specific permission to pinch out these activities over time based on the sentence that says, “in non-agricultural areas, existing non-residential non-institutional uses should be redeveloped as residential.” I know that you create regulations based on the comprehensive plan. I object most to this part of the plan. I don’t believe it is realistic or sustainable. Your proposed plan must address the existing business operators. Your vague language puts their operations at risk. Let me describe our commercial activity in Alta. We have a 9 hole golf course. We have a restaurant, “Lost Horizons” My brother-in-law, Dick Durtschi, had a welding shop on Stateline Rd for 30 years. My husband, Grant, now occupies that spot with his construction business. We have local lodging and a restaurant at “The Teepee”. Reed Dayton has a construction business based out of his home. Mel Hammond has a landscaping and building business based out of his home. Dave Green has a wood-working business based out of his home. There are other home businesses such as Wade Treasure’s and even have a local farmer, Warren Kaufman who owns a snowmachine shop and works on snowmobiles in Alta. Janice Wilson has a bed and breakfast inn, Alta Lodging is also a bed and breakfast inn. I’m sure there are many others that I am not aware of. It isn’t my vision to expect Alta to be a bedroom community for all except for a handful of part-time farmers. This isn’t the current culture of Alta and I don’t believe should be the long-term vision. Everyone else has to make a living elsewhere or only in a non-visible home office? The fact of the matter is that our community is composed of resourceful, motivated, and hard-working members that should be allowed to pursue their commercial activities in Alta. It actually feels quite discriminatory to limit commercial activity to farming only and forcing others to move their shops, restaurants, equipment, and lodging to Driggs. Likewise, it would be ridiculous to ask the farmers to move their equipment and non-residential activities to Driggs. And of course, we have Grand Targhee Resort, a major commercial activity that earns forgiveness in the new comprehensive plan. Of course, no one dares suggest we get rid of that commercial activity. But it is quite absurd to suggest that this ski resort is not part of our community and that we should as a matter of practice pretend it isn’t there as we go about our agricultural and residential activities. I would like to talk a moment about our future Alta library which should be open for business this year. Your proposed plan stated that people did not want a heart of community. In fact, the proposed plan suggested having a “heart of community” is our very last priority. This library came about because people were indeed interested in some kind of heart of the community contrary to what your proposed comprehensive plan states. Your plan states that community facilities should come from Idaho and that there should be no development for the heart of our community. I believe that the process of creating our library from our community input goes directly against what you mistakenly perceived as our community desires. This alone should give you the idea that unfortunately your planning process didn’t adequately represent the current culture of Alta or its proposed vision. I must state what I believe the vision and community character of Alta is. Our community is a combination of legacy farming, resort vacation living, legacy commercial, and bedroom community. We have legacy agricultural because no commercial farmer could move here, buy farm land and go into business. Land isn’t available and if it were, it would be too expensive to make agricultural viable. Why make zoning and the comprehensive plan regulate economics? Let’s change the plan to include everyone. My vision of Alta is indeed not limited to agricultural and residential. Heck, I live in a big non-modest house on a golf course, 7 miles from a ski resort. Making this community agricultural is something like trying to create Nebraska in the middle of Las Vegas. It isn’t realistic or sustainable. Your plan states that homes in Alta should be limited to modest, rural character homes. That is insulting to many people in our community who have created comfortable, large homes in our resort like area. In fact, some of these people provide employment to hundreds of local citizens. So, I propose you drop the priority of agricultural and residential and let the culture and community develop based on current community input and desire. Isn’t that democratic? Isn’t that how we made a library happen in our neighborhood contrary to your proposed plan? This can be created through the Alta

<td>Hobbins, Richard</td>
<td>The plan in general is well conceived and meets the principal concerns of the people in Teton County. The one problem I have is that the build out numbers are too high. Certainly, in Wilson, the method by which the upper bound of 520 additional homes was reached (assuming the density of West Street for all of Wilson) is unacceptable. I believe the build out numbers should be no greater than that which is possible under existing regulations.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>McCandless, Lyndsay</td>
<td>While meeting housing needs, I think it is important to also address affordable commercial spaces. Locals find it very difficult to open a business due to the outrageous costs involved. If this is not addressed, soon we will find that it is only out-of-town, chain stores that could afford to come in. Affordable live/work spaces maybe. It is also difficult for business owners to pay their local staff enough money to afford to get into the housing market. More affordable commercial spaces might allow that money to be diverted to employees. I am surprised at some of the nodes that don't seem to have caps on increased density that are appropriate to their rural character...wilson, teton village, aspens.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>Cottingham, Helen</td>
<td>I have been a resident of the Aspens for over 26 years. The wildlife, the neighborhood, the community atmosphere, to mention a few, have kept us here. This &quot;node&quot; idea is one of the most ill-planned, ill-conceived ideas I've ever encountered. Jackson Hole is not a &quot;textbook&quot; community. It is unique in every way and has unique needs. The guise of protecting wildlife by forming these &quot;nodes&quot; is ridiculous. They are already very stressed. This density would kill them. By the way, there are already &quot;vultures&quot; out here meeting with businesses to capitalize on this plan. The young work force does not want to live here. They want to be in town, where the action is. This whole plan needs revamping. It's Jackson Hole.</td>
</tr>

<td>Gunther, Linda</td>
<td>WAY WAY WAY too much density! How did the Total Buildout jump so from prior plan and drafts?? Please PLEASE do not approve this plan as written, but allow additional time to get it right. I know we're all exhausted and rather fed-up with this whole process, BUT it matters enormously so don't give up and approve just to have it over with. Allow public input to mean more than that of the 'experts'; we, after all, should be the ones to decide where we want our elected officials to take us. PLEASE VOTE NO AND REWORK THE PLAN. Thank you.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>Resor, Avery</td>
<td>The draft of the 'Comprehensive Plan' comes very close to addressing the importance of public art in our community. I would like to suggest that the plan explicitly state that public art is an intrinsic aspect of the Jackson Hole region. The iconic arches of the Town Square, appreciated by locals and tourists alike, exemplify the role of art in Jackson. The plan should help to encourage development of new public art thus complementing the values of wilderness, scenery, and community embodied by the 'Comprehensive Plan'.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>Acri, Armond</td>
<td>1)The Plan acknowledges that citizens consider wildlife and open space the most important priority overall, but none of the strategies or indicators deal with wildlife. The citizens of Teton County desire strong protection for wildlife and open spaces. Even within sub-areas that do not have a high priority for wildlife, there will be smaller areas that have high value for wildlife. They should be given a high priority. Deer habitat on both sides of Broadway near Karns Meadows is an example. 2)To effectively manage growth we need a rate of growth mechanism established now. This is supported by the keypad and UW surveys. We can adjust the target rate as we go. Failure to report responsible growth indicators to the community as detailed in the plan is evidence the growth rate is too high and must be addressed immediately. 3)Any plan to reduce density in rural areas and increase density in identified nodes must provide permanent protection.4)Resorts should be limited to their current plans. Any adjustment to provide workforce housing and convenience commercial should come out of existing approvals.5)PMD and PUD should not be amended. They should be eliminated. Residents strongly oppose 4 story buildings and many are opposed to 3 story buildings. This is supported by the keypad and UW surveys.</td>
</tr>

</table>
Planning begets planning begets bureaucracy begets multiple layers of regulations begets more bureaucracy begets failure of bureaucrats to enforce the regulations on the books Complexity begets concessions to one, then another, so that the whole planning process becomes hobbled together by miscues and mists, all taken with perhaps the most noble intentions.I don’t think there is anything wrong with the Plan and the zoning we have right now IF it would be adhered to by officials and not constantly bent to provide comfort from pressure. Citizens provide the only enforcement currently for many, many of the regulations not enforced. It is only through citizens’ constant complaint of violations that the enforcement is sometimes provided. With greater regulations come greater ignorance and avoidance of the regs. Then it necessitates a citizen vigilante force to see that they are upheld. Let’s not break what is not broken. Let’s mend and enforce what we have.

My comments here are only in response to the Executive Summary. I intend to read the other sections as soon as possible, and respond further by the May 29 deadline. I apologize if some concerns listed below are already addressed in other places in the document. The Vision Statement is positive and to the point. I also liked the mention in the Ex. Summary of a commitment to NOT EXPORTING the impacts of our decisions, growth, (and I might include “lifestyles”) to surrounding communities. The themes seem sound to me. I have few specific comments:

1. The commitment to environmental stewardship is a profound responsibility. I sincerely hope that we have the collective wisdom, integrity and discipline to live up to our own goals in this regard.

2. As a sort of catchphrase, ”Responsible Growth Management” sounds good. However I suspect that many of us might interpret that goal in different ways. For some it will mean “manage the location of inevitable growth”. For others it will mean “limit growth as much as possible”. I look forward to reading further details in that section of the Plan.

3. I support the idea of the town of Jackson being a central commercial and cultural hub, but it still needs to be a liveable environment. I am concerned that the proposed focus on infill and redevelopment doesn’t adequately consider the importance of building and maintaining actual “neighborhoods” in town.

4. Worker housing is an important issue. However the focus seems to be on providing more worker housing, without also addressing the possibility of limiting the commercial activities that create the need for more housing.

5. I agree with the general theme that we should focus on “community first, resort second”. But how do the sizeable number of second home-owners and part-time residents fit into those definitions? We are not only a community of full-time residents, nor a seasonal resort community. What does it mean to promote businesses that “serve local needs”? How do we decide what are truly ”community needs”, as opposed to the desires and expectations of a growing population of absentee homeowners.

6. Transportation is a key issue. I can certainly understand the benefits of nodal development in planning and executing public transit.

7. Health, safety and welfare are important duties of all communities, and I am generally proud of the way Jackson and Teton County meet these obligations. Again, I wonder how we will ever get a handle on what ”appropriate” means for our community when we have socio-economic groups with very different (and changing) needs and expectations. I really don’t understand the final sentence in the paragraph that says ”Appropriate service levels will help the community better understand...” It’s almost as if a word or phrase is missing. Perhaps ”Defining...appropriate service levels.”

Though Appendix I states that ”Buildout is not projected growth,” the comprehensive plan projects a significant increase (doubling) the population in fifty to sixty years. What is missing from the Comprehensive Plan is a formal environmental impact study to determine how sewage treatment, the aquifer and power, and refuse disposal would be negatively affected. The Plan identifies what some of the usages are, but it does not provide research to determine what the potential negative effects or costs could be. WATER The Plan states the Town of Jackson currently uses 7.3mg/d and has permitted water rights of 9.5 mg/d, but there has been no environmental impacts study to determine how much of the aquifer will be depleted as consumption increases. There is also no research to establish how this may affect ranches and farms that also rely on the aquifer. SEWAGE The plan states that the Town of Jackson currently uses 2.5mg/d peak of its capacity of 5 mg/d, which could be increased by 1 mg/d. We need a research study to evaluate what the negative environmental impact will be with the increasing processing of sewage. POWER There is no analysis of Lower Valley’s capacity to meet an increasing use of power or how the increase in usage will affect the cost to customers. Increasing demand usually results in increased cost. There is also no research to determine how this increase will add to the “carbon footprint” of the county. REFUSE DISPOSAL There is no data on the capacity of Teton County Transfer Station, or its ability to meet the demands of an increasing population will necessitate an increase in trash disposal. SCHOOLSThe Comp Plan provides an analysis of the current enrollment 2,320 Students, it gives an overview of the School District’s Enrollment Trends for 2000-2008, but it gives no projection of how an increasing population will necessitate the building and staffing of new schools or what the cost will be to the residents of Teton County. FIRE STATIONSThere is no analysis of how Fire and EMT services will need to be increased with the increasing population.

<td>Hazen, Diane</td>
<td>The themes are well described as far as they go. Unfortunately the whole Scenic Resources element which is very important is totally lacking in this version of the plan. Who decided to leave it out and why? The beginning of this document describes how important wildlife values are, but it doesn't seem to be stressed or dealt with adequately in the actual District descriptions. Lacking also is any real vision of what is “sustainability”—what are the impacts of “growth as usual” which seems to be the direction of this “plan.” The community meetings agreed that some growth will come, but at some point the island that is Jackson Hole and what makes it unique (it’s wildlife and scenic values) will hit a tipping point. It was hoped that this plan would take a hard look at where this balance point might occur—BEFORE the habitat is destroyed, migration corridors cut-off, winter habitat filled in, views blocked. The compounding of too many people and all that we demand—roads, services, housing, cars needs to be addressed thoughtfully and limits placed so that we can PLAN for this and not destroy the goose that laid the golden egg. Saying we will have growth “as usual” is NO PLAN at all. (reference 10 Future Land Use Plan pg 75 Part 3 Buildout Calculations).</td>

<td>Miller, Cate</td>
<td>I attended the recent comp plan meeting in Wilson and was dismayed to hear the obvious disconnect between the stated emphasis on Theme 1 - Promote Stewardship of Wildlife and Natural Resources - and the direction of the plan towards the growth scenarios described. I wish to state in the strongest terms possible that the draft plan is going in the wrong direction, a direction which does not support the top priority of community values, the stewardship of wildlife and natural resources. It seems as though lip service is being paid to theme one but that the actual foundation assumptions are based on continued growth to a degree that is not supported by the residents of the community. You state that “This Plan balances and prioritizes the community’s values using the concept of sustainability” I respectfully disagree: it simple pays lip service to the balance and prioritization. Furthermore, the definition of “sustainability” does not clearly include the top priority of the community values, rather it is focused on the “human needs”. At times during the meeting, I actually felt as though it was an Alice in Wonderland experience in that what was being said about the priorities and values was simply not being supported in the document. This revision of the comp plan was initiated in a very different economic environment, I would like to suggest that there needs to be a “time out” for reflection given the current economic realities and the fact that things have changed quite drastically in a very short period of time. To continue on this path without consideration of the new realities is very short sighted. Jonathan Schechter recently suggested that Jackson Hole develop a vision to become a model green community. This is definitely worthy of community consideration. At its core, the current draft plan is out of synch with this concept. It is possible that development of such a vision to incorporate into the comprehensive plan could be the key to balancing and prioritizing the community’s values and giving true priority to the most important and widely supported theme: Stewardship of Wildlife and Natural Resources.</td>

The overall concern seems to be the stewardship of wildlife and natural resources and 2. manage growth responsibly. These are laudable goals to achieve, but I do not believe that the plan then goes on to accurately address these goals. With regard to managing growth responsibly, it is my feeling that there are two important factors that are not given the consideration that is necessary. First priority would be the responsibility of the government to provide for the health, safety and welfare of the citizens. This means that water, roads, police, medical and schools should be the prime elements that would drive this plan. The second element that goes hand and glove with this goal would be the maintenance of a vibrant economy that recognizes that we are inextricably tied to the resort/tourist industry. It is the economy that allows us to live and enjoy this valley. When this plan talks about responsible growth it seems that the driving force is to ensure that we put an additional 27,000 people in this community without regard to the heath safety and welfare of the citizens and the resort industry which drives this vibrant economy. It is impossible for me to imagine that a population of 50,000 people in this valley is not going to have a crushingly negative impact on the welfare of its citizens and their economy. The plan's answer to this seems to be to let every road in the county deteriorate to d class service so that its citizens will be force in total frustration to ride the buses. Is this planning? It seems to me that a more balanced approach would be to look at our infrastructure and determine what level of housing units we can accommodate without overburdening our infrastructure and our economy which will hopefully generate the tax revenues that will be necessary to pay for all of the wants of our citizens. There is going to be a point where our visitors are not going to be comfortable sitting in a four hour traffic jam getting through town. Remember residents of cities have no choice but to sit in traffic jams. Our visitors do have a choice. They can elect to avoid us. I believe that there has to be a concerted effort to change the driving force of this plan which is housing under the guise of sustainability to one that emphasizes the economy and the associated infrastructure. Under the subtitle "This plan balances and prioritizes community values..." In this section is found the issues of regionalization i.e. not exporting our growth problems to other communities but taking them all on here. While this again is an interesting concept I do not believe that this what the community said. A far better way to approach to this would be to acknowledge that there are going to be people who want for any number of reasons to live in our outlying communities and to establish a means of dealing with that situation. Not to say that they all will be housed in Teton County. Once again the plan is being driven from a housing standpoint without regard to the real world of infrastructure and impacts on our economy. Finally, with regard to wildlife, it is very difficult for me to understand how the promotion of 9000 more housing units in Teton County is by any stretch of the imagination going to be promoting good stewardship of wildlife and natural resources. I just can't make those goals jibe.

This is a great vision statement, but it is important to remember that these sentiments need to be carried over into the rest of the document, as a guiding principle, not merely mentioned and then forgotten about. This ties into an analysis of the impacts of growth and development on all aspects of our community and ecosystem. Sustainability and sustainable development are also great goals to strive for. We need to understand that even if we are not growing all of our own food and generating all of our own electricity, there are productive steps that we can take in the right direction, and we should not write off "sustainability" as a goal for our community. With the geographic ranking (district by district), does priority #1 actually take precedence over the other stated top priorities? How can we be sure that it is actually a guiding principle for the entire plan?

RE: Policy 1.5.d: Maintain dark night skies. This element is of critical importance to natural-resource protection as it impacts tourism, disturbs natural habitats and circadian rhythms, and devalues the dark sky as a source of human discovery and inspiration. The objective must be effective lighting without undue glare, trespass, or light pollution. Currently Jackson and Teton Cy have similar ordinances with good provisions for glare (90-degree cutoff with limited pole heights) and trespass (shielded from direct view at the perimeter). The maximum permitted illumination levels are reasonable, but should be restated in lumens/sq.ft., as incorporated in the current draft model-ordinance proposed by International Dark Sky Association and Illuminating Engineering Society; and these levels should be kept low due to substantial light reflected off winter snow-cover. But if the intent of Policy 1.5.d is only to maintain current ambient light levels, that is not good enough. The night sky around Jackson Hole is already light-polluted, and therefore must get darker in order to protect its values. And references to generalized national standards (e.g. IESNA) are likely to be too lenient to meet our demanding environmental objectives and winter-snow conditions. Therefore, further strengthening of local ordinances should include the following provisions: 1. Given the substantial light-pollution impact of outdoor lighting on tourism, habitat, and the adjacent National Parks, an amortization period for noncompliant fixtures is justified (as in Victor and Ketchum), at which time all grandfathered fixtures must comply. Meanwhile, hinged, adjustable floodlights should be re-directed downward (below 30-degrees above nadir) and away from roadways, and all outdoor lighting be brought into compliance as a supplement to redevelopment or change of use.2. Natural resources can be conserved and night-skies darkened by extinguishing nonresidential uses one hour after the close of business, except for demonstrated security needs.3. Signs should also be regulated by requiring downward-directed sign lighting, and internally-lit signs (except for trademarked material) should be composed with dark backgrounds.4. Given the extreme sensitivity of Jackson Hole to light pollution, I do not believe that upward (vertical) architectural lighting should be permitted, no matter how tightly it might be regulated.

<td>How on earth could you publish this theme without a revised NRO map????? You've had the information for almost a year and there is no way you can gauge the impacts of the wildlife issues for the various districts without a revised map. This is the most inane thing that has happened with this plan. Wildlife is a driving force with this revision and not having the revised information as a part of the document is ridiculous. What is described as being important considerations in this theme are appropriate. Taking them seriously in the LDR's is yet to be seen.</td>

</table>
My comments focus on the proposed changes in the draft comprehensive plan to the Aspens and Teton Village areas. Dramatic changes are projected for these areas in the future. Virtually all of the projected growth in the Teton Village area appears to have been planned and approved whereas the projected, proposed growth in the Aspens "node" is presumably subject to discussion and changes. I have resided in the Aspens since 1995. The general character of this area has changed little since I moved here. Some growth has occurred in the residential and commercial sectors. A bicycle path has been built. Wildlife abounds in the Aspens. Moose and deer are prevalent. A variety of smaller mammals are frequently observed. It is, today, a pleasant place to live. Unfortunately, traffic on Highway 390 has increased to the point where entry into, and exit from, the Aspens has become more difficult. Summertime, ski season, and "rush hour" are the most difficult times. As Teton Village grows, more traffic on Highway 390 can be expected. It is widely acknowledged today that traffic on highways 22 and 390 can be a problem. Wildlife collisions on Highway 390 are already a problem. Signs urging drivers to be cautious are present today. While I support the themes outlined in the draft comprehensive plan, I cannot support the proposed significant increase in commercial and residential units in the Aspens "node." Creating "town centers," or "nodes" in Wilson, Teton Village, or the Aspens seems to go against the theme of designating the town of Jackson as the heart of Jackson Hole. The present character of Wilson and the Aspens should be preserved. Public polling and my personal conversations with neighbors have not shown me support for the proposed growth in the Aspens "node." Teton Village has long been recognized as a village, or node, where high density development can be anticipated. That development alone will have serious consequences for the West Bank Traffic on Highway 390 can only increase. Pressures on nearby Grand Teton National Park and the Moose-Wilson road will increase. Increased landscaping and sewage loads will likely increase contamination of the near-surface aquifer and likely increase nutrient loads to nearby Fish Creek. (Treated effluent from Teton Village is presently injected into the ground.) Wildlife on the West Bank will be affected through increased development of their habitat, increased collisions with motorists on the roads, and the increased population of dogs and cats that accompanies the increased human population. While I support efforts to increase "multi-modal" transportation in the valley to reduce traffic on our roads, I am not optimistic that increased growth and density on the West Bank can be mitigated by increased "multi-modal" transportation alternatives. It has been shown, time and again, that people are wed to their cars. If "multi-modal" transportation can be shown to be timely and cost-effective, more people will use it. However, as vehicular traffic on roadways is reduced by multi-model transportation, more people are likely to resort to using their vehicles. In short, the increased development of commercial and residential properties on the West Bank will increase traffic on an already strained roadway. My recommendation would be to not advocate this comprehensive plan the increased growth and densities projected for Wilson and the Aspens. Let us see what results with the already approved expansion of Teton Village and try to mitigate the impacts of that expansion. In particular, any projected growth in the Wilson and Aspens areas should be predicated on the ability of the existing transportation system and roadways to handle that growth. Present traffic on highways 22 and 390 would justify a go slow approach in increasing population and densities in the West Bank nodes. Furthermore, efforts should be made to protect the existing wildlife on the Westbank because it is noteworthy and significant. The draft comprehensive plan is flawed in reasoning that the core theme of protecting wildlife in Jackson Hole can best be met by directing more growth and density to areas like Wilson and the Aspens where, some might reason, there is relatively little wildlife and wildlife habitat. While I support the concept of providing services and work near where people live, there is no guarantee that people will follow the pattern. For example, a commercial establishment in the Aspens, such as a laundromat, may not be useful to Aspen residents because most of the residences and condominiums already possess washers and dryers. The hypothetical laundromat may be more useful to residents of Teton Village and thus encourage more vehicular traffic on highway 390 for those who simply wish to do laundry. Furthermore, workers who reside in Teton Village may initially work in Teton Village, but may later change jobs to work elsewhere in the valley. I applaud the concept in the draft of having regular reviews of how the comprehensive plan is working, but I have to say again that I think the magnitude of the changes being proposed for areas such as Wilson and the Aspens are too big for starters. The comprehensive plan is supposed to be a long range plan. I am afraid that once the significant, proposed changes in the West Bank nodes are approved, it will be difficult to reverse those changes if the impacts of that growth are more significant than projected. The current economic climate will have long-lasting effects, and these impacts on the residential and commercial sectors of Jackson Hole should not be ignored. I am not convinced that, in the long run, the core values of Jackson Hole will be preserved with this draft comprehensive plan. This comprehensive plan envisions a more urbanized valley with not just one town center, i.e., the town of Jackson, but town centers at Wilson, the Aspens, Teton Village, and South Park. A key component of this comprehensive plan is expansion of the existing commercial sector. For each new hotel and motel room and for every increase in commercial space there will be an increase in workers. With people arguing that we do not have enough worker and affordable housing to meet our present needs, are we going to get ahead of the curve by advocating further, dramatic increases in the commercial sector? And what kind of establishments are we talking about? Reducing growth in the commercial sector would be good, in my opinion. Incentives could be provided in reducing already permitted growth in the commercial sector by allowing certain growth in specific areas that might not be permitted Jackson Hole has changed since I moved here, and it will continue to change. The town of Jackson has always been, in my mind, the heart of the area. Wildlife is an

Thank you for all of your efforts and thoughtfulness you have put into the planning process and presenting something you believed met the needs and the wants of the community. Jackson and Teton County residents have varied and strong opinions so getting a consensus is a very difficult thing. My personal feedback is that we need a plan for manageable growth, there will be people coming to Jackson and property owners have rights, all of which need to be considered. No growth is not realistic or consistent with what many of us believe is reasonable. Your efforts to be far reaching and look beyond the next ten years may have been overly ambitious. As a result that may have added confusion for some people who react quickly. I have had more people wanting to "bend my ear" on the proposal and meetings than any other subject for quite a while. The Wilson and Aspens plan (nodes) may be the ones raising the most passion, the residents I have heard from are troubled. The nodes themselves may be too specific. Although the intent of focusing growth is logical, it has resulted in people focusing on "their node" rather than thinking or considering the entire plan. There will be growth and large property owners deserve the right to consider options and have them evaluated in a fair and open manner. I suggest that openmindedness be maintained and the focus be on getting the plan about right but not hung up on getting every detail of everyone's priorities covered...if so, we will never get out of the planning stage (getting the last apple off the top of the tree is hard to do and sometimes even dangerous!). Getting a plan forward will require flexibility on everyone's part but we do need to move forward. Thanks again for all of your hard work thus far and thanks for allowing the public to provide input and feedback.

There is much in this draft of the Comp Plan that I can support. However, I do also have major concerns. There is so much that has been over looked, omitted, ignored or avoided, that I believe it would be best to start over again. Perhaps take the 1994 Plan and revise it rather than scraping it and writing a new plan. The major difficulty is that this proposal does not follow the repeatedly expressed community support for the permanent preservation of wildlife and open space as our top priority. To effectively protect and maintain our wildlife, we need to have solid, scientific information so that we can be assured that we will not destroy or degrade crucial habitat. We do not have current information ... The NRO's are seriously out-dated and there are some notable gaps where we have very little solid science to guide us. Those gaps are the Snake River corridor and the Teton Village Rd. These are the very places where the draft proposes to increase density drastically. I feel strongly that we should not proceed with approving any increased density until we have the science to inform us as to exactly what the consequences, short and long term, will be. There is way too much growth, both residential and non-resedntial, allowed for and the rate of growth is not meaningfully dealt with. Rather only monitored... to be dealt with apparently once there is a problem. And the stated goal is to be our historical rate of growth which if it is the last ten years would be too rapid a pace.

5/15/2009 Wauters, Carol
Interested Public

At the two presentations of this plan that I went to, the impression was given that the two stated themes, I and II have been given equal status. That is not what this community has said it wants. Apparently, other sources were considered. The public should know who or what these source are. The oft repeated assurance that many concerns will be taken care of in the LDRs rings hollow considering the history of so many variances given, seemingly for the asking. More of the limits should be outlined in this Comp Plan so we will know what we will actually get. I would like to address some of the details in various parts of the plan and I will do so at a later date, but very soon.
Neighbors in the Cottonwood Park Subdivisions are concerned with some of the language written to describe our district and our neighborhoods. We find it surprising that of the seven individual themes identified through the process, four of them for district 13 have been defined almost identically. Although we feel strongly that "supporting the existing neighborhood" should be a priority, more weight should be placed on how each theme relates back to its original ideal, principles and how those work within the districts.

The use of Neighborhood as singular in the themes of this district is not really what is going on and does not represent this district or others effectively. Each district is made up of varying neighborhoods of sizes, types and uses. The clustering, feathering and linking of neighborhoods makes them relate to each other and causes a district to be unified.

We love our neighborhood and how it, with the other neighborhoods in our district, make them a great place to live. The individual designs, community services and circulation create a diverse yet whole district. The high density does leave something to be desired. Less density in our neighborhoods is important; please listen to the concerns and needs of many (older) citizen's, some of whom were born and raised in this valley, (scenic, wildlife, open space/migrant corridors; less crime, infrastructure needs, on and on!)

When reading the written text published in the draft plan we have the following comments:

1) Responsible Growth: We hope that the comp plan is using our districts neighborhoods as role models for future developments since we are almost built out. And since we are almost built out, responsible growth should not be District 13’s first priority. The only future growth that may take place in our district is School growth which when designed needs to look further into its impact on the existing neighborhoods of our district. The huge Growth proposed in the neighboring District 12 in the NW corner of South Park is unnecessary and detrimental to district 13. The impact on the schools, roads, parks, scenic and natural resources of district 12 is immeasurable. This proposed growth should be scaled back tremendously. Utilizing open, available lots within the town makes more sense.

2) Town as Heart: Continuing to “support” the mixed-use neighborhood is top priority for District 13. The proposed growth of neighboring districts as well as the school district and the impact of the possible Tribal Connector will all affect pro & con, our district’s character and attraction for the working families that we are designed for. Proposing more density in the NW corner of district 12 before infilling the town proper does not support this theme. Twisting the theme to state “develop adjacent” causes more infrastructures to be built instead of using the city roads and utilities already installed.

3) Transportation: Balancing the needs of the community and constructing the Tribal connector detract from our district. Protection of these impacts needs to be first and foremost. In addition, the traffic impact of the High School as well as 5 other schools that are currently serviced through our district and the proposed growth in the NW corner of South Park need to be equally listed. Prior to any new development, the existing problems have to be addressed. The school district needs to be engaged further to reduce the impact students are having on the neighborhood. The missed opportunity of reducing single car use and increase alternate modes of transportation needs further consideration & forethought. Also the lack of small parking areas where county residents can access the amenities and bus stops provided in this district cause damage to personal property.

4) Workforce Housing: District 13 is mainly work force housing already. We are mostly built out and therefore this theme is the least priority. However adding the proposed 1500 units of Work Force housing to the neighboring district 12 creates a concentration of this demographic in one area in the county. Designing pockets of work force housing in other locations in the county is more desirable and creates a more diverse community over all. Any density bonuses should only be granted if, in fact, the work force housing developed by the bonus benefits directly from it.

5) Community Facilities: Future growth of the schools in this area will impact the district as it relates to traffic congestion, parking locations, impervious parking lots, and light pollution in the evenings and on weekends. Teton County Schools need to be looked at as a developer and held to the same standards of protecting existing neighborhoods as part of their future growth. In addition first responders of Fire & EMT should be considered as needing to have a home somewhere in our district especially when considering any future housing to be located in the NW corner of South Park. And finally new developments need to be required to create new parks within their neighborhoods and not tax the existing one found in District 13’s. The proposed work on the high school “stadium” is a bit much in dollars and “improvements”.

6) Wildlife Natural Resources: More and more wildlife is being directed into district 13 due to the growth and fencing/berming along South Park Loop Road which also detracts from our scenic vistas. The potential loss of a scenic corridor to the south due to future development and the blocking of the scenic view to the west is a great deterrent to all who live and travel through this district. Again the people who live and work here should be taken care of before future residents. District 13 should not have to sacrifice (“allowable trade offs for District 13” are the words from the planners) scenic views and wildlife to accommodate future workforce to the South.

7) Balanced Community & Economy: To maintain the existing residential neighborhoods as attractive places to live we should not and need not allow convenience commercial into the proposed housing directly to the south of us in the NW corner of South Park. The Smith’s plaza is physically close enough, for both District 13 as well as the NW corner of South Park and it does not make sense economically to compete with a national chain for fuel and groceries.
Mary asked me to send you some info regarding the airport EIS and our thoughts on the Comp Plan.
Regarding the comp plan, I had asked Alex Norton several months ago to include some specific language regarding Moose - Wilson Road. Although I am not finished reviewing the current draft, I have not seen the language in the sections where it would make the most sense for it to be. We will be making the same request in our written comments that are due on May 15. The language I suggested is as follows:
Transportation strategies will be sensitive to the needs of surrounding jurisdictions, including Grand Teton National Park. In light of the sensitivity of the Moose - Wilson Road to increases in traffic volume, the Town and County will coordinate with the National Park service to ensure that in addressing transportation issues on Wyoming 390, additional transportation-related impacts are not created within the national park.
Thank you for providing the opportunity to comment on the draft of the Jackson Teton County Comprehensive Plan. We commend our elected officials and the Planning staff for recognizing the need for this Plan update and for creating many opportunities for public input.

While our comments are on Theme 4: Meet Our Community's Housing Needs, we recognize and appreciate the interdependency of the themes and appreciate the inclusion of housing in many areas of the Plan. Although Habitat for Humanity's mission is clearly centered on housing, we look to carry out our work in a way that is consistent with community values. We recognize that providing workforce housing is one of several priorities in our community and we appreciate the current effort to find a sustainable balance among the priorities.

Summary

The key points of this letter are as follows:

• We support Theme 4's Statement of Ideal
• We support the concept of housing a diverse population of our workforce and the decision to not export our affordable housing and workforce to neighboring counties
• We would like acknowledgment that the greatest need for housing exists at the lower income levels
• The housing categories and criteria should be set by the Housing Authority
• We would like acknowledgement of the existence of substandard housing in our community
• We would like to see emphasized the importance of continuing to provide homeownership options (as opposed to solely rental) to Category 1 and 2 residents
• Residential mitigation and incentives should continue to be focused on Categories 1 through 3
• We support the strategies in Theme 4 and would like the following included:
  o Include "private housing agencies" as part of the solution (Strategy 4.2)
  o Include language that affordable housing will continue to be provided for people below median income

Statement of Ideal

We strongly support the Theme 4's Statement of Ideal, "Remain a community first and a resort second by ensuring that at least 650/0 of the community workforce lives in Teton County, Wyoming." This provides the housing programs with a publicly recognized goal to work towards and a way for the community to measure the success of the results. As 650/0 of a workforce living locally has often been referred to as the "tipping point" in other communities, the inclusion of the words"at least" establishes that 650/0 is the minimum target and an increase in that number, if achieved in balance with other community goals, is encouraged.

Principle 4.1 We support the general concept of Principle 4.1, "House a diverse population in a variety of housing types," and specifically Policy 4.1.a, "House all members of the community." This formal recognition of the value of economic diversity among residents provides guidance to housing organizations and updates to the Land Development Regulations. In addition, we are strongly in favor of Policy 4.1.e.'s statement, "Exporting our affordable housing and workforce to neighboring counties is not the community's solution for addressing our housing affordability issues." While it is important to identify solutions to our housing issues, it is equally important to identify which solutions we will not pursue.

We suggest two changes to Policy 4.1.b:

1. While the need for affordable housing spans a wide range of incomes, it is important to recognize that 660/0 of our households fall into Categories 1 and 2 according to the 2007 Teton County Housing Needs Assessment. Policy 4.1.b currently reads, "As the value of land in the county has continued to rise, it is no longer just the lower-middle income segments of our workforce that cannot afford housing. With the median house price at 1,800,000 the median income, even the upper-middle income segment is unable to afford housing..." That is a powerful statement that we support. However, on its own it could be interpreted that our focus should be shifting towards higher categories of housing at the expense of lower categories. As the Comprehensive Plan is intended to inform the Land Development Regulations, it is important to identify that the greatest need is still at the lower income levels and to state that our housing programs should be designed to serve the needs proportionality.

2. We believe the housing categories and criteria should be established only by representatives of the public interest, namely the Housing Authority. However, should private entities be included in the category and criteria setting, we respectfully request that as a housing organization, Habitat for Humanity be granted a formal role in providing input on such decisions.

General Issues to Address in Theme 4

In Theme 4 we would like to see acknowledgement of the substandard housing that many of our residents live in, possibly in the "Why is this theme addressed?" section. Through our family selection process, which includes visits to the homes of applicants, we are regular witnesses to homes with no heat, electrical problems, mold issues and lack of sufficient insulation. As a result of high rent prices for even these substandard units, overcrowding is also a widespread issue. Our experience is that many residents are unaware that these conditions exist in our community. By recognizing this fact in
the Comprehensive Plan, it creates an opportunity to prioritize the needs of those living in substandard housing.

In addition, we feel it is imperative to recognize in this section the importance of continuing to provide homeownership options to the lower category households. Due to the high subsidy required to make units affordable at that level, there is temptation to direct our efforts towards creating affordable rental units for Categories 1 and 2 and to serve only the higher level categories with ownership units. While we believe that our community is in need of decent, affordable rentals for our workforce, we know that communities with high homeownership rates flourish for a number of reasons. If we do not provide material homeownership options at the Category 1 and 2 levels, we will continue to experience high turnover in jobs and reinforce the trend of exporting our workforce to neighboring communities that we are explicitly trying to change. Policy 4.4.a specifically calls out “incentives for the construction of rental units instead of ownership units.” We feel strongly that both rental and ownership should be encouraged and incentives should be provided for both.

While we understand that the distinction of categories will be addressed in the Land Development Regulations, we request that language be included in the Comp Plan that would inform those LDRs that relate to residential mitigation and affordable housing incentives to prioritize Categories 1 through 3. We would also like to see the split between categories be reflective of the current needs of the community.

**Strategies**

- **Strategy 4.1:** Establish a dedicated funding source for workforce housing preservation and production. We appreciate the recognition of the need for a dedicated funding source for housing. Without such, fulfilling the Statement of Ideal will become increasingly challenging.

- **Strategy 4.2:** Establish a workforce housing action plan. We request that “private housing agencies” be added to the third bullet that currently reads, “Seek opportunities to work cooperatively with governmental and quasi-governmental agencies, employers and developers to provide restricted workforce housing.” Private housing agencies such as Habitat for Humanity provide viable solutions and have successfully partnered with the Housing Authority, employers and developers in the past. Ideally, the housing agencies would work together to establish a workforce housing action plan.

- **Strategy 4.3:** Update Land Development Regulations and the zoning maps. We would like the third bullet, “Incentivize the preservation and creation of rental housing” to be modified to include homeownership housing. We would like to see the second bullet, which indicates that the limit for affordable housing will be increased to 200%, to include language that affordable housing will continue to be provided for people below median income in Teton County.

- **Strategy 4.4:** Increase outreach and educational opportunities. We feel encouraging partnerships and improving public perception are important tactics to increase the supply of workforce housing. Updating this Plan and consolidating and incorporating public input is clearly an enormous job. We appreciate the thorough effort that has gone into this update thus far and look forward to reviewing the next iteration of the Plan.

5/15/2009 Dakis, Jamie

Ms Dakis has asked me to convey the following message on her behalf.

The following are direct quotes from her:

The reason I am submitting this information is because there are over 30 Americans in Teton County with disabilities at present either unaware or unable to comment on the Comprehensive Plan. I come to represent their empty chairs.

These documents have been submitted by Jamie Dakis who is a Board Member of the Wyoming Self Advocacy Advisory Group representing herself with her personal comments with regard to the Comprehensive Plan and other Disabled Americans in Teton County.

Page one: This document represents a meeting that Jamie will attend this coming week with regard to what their needs are.

Page two: This document represents the only mission in town and the rising need of services 2009 Housing Survey: Self explanatory
Thank you for the opportunity to review and comment on the proposed Jackson/Teton County Comprehensive Plan. Our comments will focus on the wildlife/natural resources recommendations and the recommendations for growth management.

**Resource Protection**

We applaud the draft Plan’s recognition that conservation of important wildlife and related ‘habitat is this community’s number one priority. Although the Plan mentions that about 20,000 acres of private land have been permanently protected (by conservation easements), it is amazing to us that no mention is made of conservation easements as an important strategy for future habitat or migration corridor protection. In the long run we know of no more effective way to accomplish this goal than the use of conservation easements. The permanency provided by conservation easements, as opposed to zoning, is key to permanent protection of habitat and migration corridors. We offer the following recommendation with respect to habitat and migration corridor protection:

Creation of a permanent funding mechanism, such as is proposed for affordable housing and transportation (both important but neither at the top of the list of goals for either the Plan or the community) for the purchase of conservation easements over Critical Wildlife habitat and migration corridors. The price of protecting such habitat has become prohibitive for private funding alone and contributions of conservation easements cannot be relied upon to protect critical properties. We believe that as the Plan’s and the community's number one priority, meaningful funding of the protection of critical habitat is called for and should be a top priority.

**Growth Management**

The draft Plan calls for a substantial shift in residential density from the rural areas to the Town and County “nodes.” However, the Plan does not specify exactly how this shift in potential development will be accomplished.

We have two concerns with this aspect of the draft Plan. First, the proposed reduction in development potential in the rural areas may undermine the incentive for future contribution of conservation easements. Second, we are not convinced that density reduction through zoning alone is likely to accomplish the long-term protection of rural land.

We know from experience that existing rural development potential is a major factor in the willingness of landowners to donate conservation easements. This development potential represents a value that many landowners do not choose to realize through development, but will extinguish permanently through the contribution of conservation easements. Since 1994, when the County adopted the Planned Residential Development (PRD), over 10,000 acres of land have been protected by conservation easements held by the Jackson Hole Land Trust, compared with 5,000 acres during all the years prior to that.

‘As opposed to down-zoning, the reduction in density resulting from conservation easements is permanent; therefore, elimination of development potential in rural areas through a zoning change that may reduce incentives for the contribution of conservation easements may be counterproductive to the protection of rural land.

While we support the Plan’s goal of protecting rural land, we are skeptical that in the long run mere zoning changes can accomplish more than a temporary deferral of rural development. Without the use of conservation easements, either through the current clustering provision or the non-contiguous transfer of density units, we fear that the Plan’s goals for the rural areas of the County will fail and, worse than that, lay the foundation for increased density in the future.

In light of these concerns we offer two recommendations:

1. That rural development potential not be reduced. If it is, this will seriously undermine the existing incentives for the contribution of conservation easements.

2. That provisions for clustering and/or transfer of units be retained in the plan. These tools should be simple and easy to use. If open space and wildlife habitat ‘are to be enhanced through conservation easements, it should not be discretionary and subject to political whims.

Please let us know how we might assist you in your consideration of these recommendations.

Don't make room for 1000's of more houses in the valley to solve your housing problem. That's really what this whole thing is about. You'll destroy the valley in the making. Regulate rent prices. Don't take the easy way out of the mess by just making room for more headaches. Regulate rent prices, FIRST ....please. Once you start your invasion of the South, things will only get worse ... forever ... and forever is a long time. And we'll have you to thank for it ... and Jackson Hole will be just another growing city with its growing list of problems.I don't have to spell the problems out. You have been told by hundreds of people. Sad thing is, why do hundreds of people have to tell you. Kinda scary ...

Policy 3.6.a I am concerned that great mischief is going to be created by this.
Tillson, Becky

5/15/2009

The Plan again mentions theme 1 and 2 as if the were on equal footing. Prioritize the community's top priority! "County Nodes are appropriate for some levels of development to serve community needs" but elsewhere you say that County Nodes are appropriate for town-level density. Which is it? In the Land Use Classifications Table (10.1), single family mixed type cold be manifested as single family home, duplex, tri-plex, or four-plex buildings. Even though the maps are not regulatory, what is to stop a developer from covering their land with four-plexes, even with some "community benefit" provided? What ground do elected officials have to stand on to say "no," to such developments? Under "Buildout calculations:" "The county rural districts contain almost all of the mapped critical wildlife habitat" There is an important distinction between "all" and "all mapped" critical habitats. Because it is impossible to make decisions based on data when the data does not exist, it is critically important to collect that data. We cannot contend that there are no wildlife values in particular areas in the valley when we KNOW that there are significant data gaps in terms of critical wildlife habitat. There are provisions in Theme 1 that suggest collecting more data, and updating old data. The Plan needs to consistently acknowledge this data gap and actively strive towards filling it, and not making decisions about location and amount of growth until we have a better sense of the impacts.

Jerger, Karen

5/15/2009

Sounds very ambitious, but important.

Hazen, Diane

5/15/2009

This theme is well written and supports many important issues. BUT, without some idea of what population growth is expected or planned for, it is almost impossible to determine what the 65% represents. Particularly stressful is the amount of new commercial projected in the plan and what this might represent in terms of workforce. The commerical projections--in MILLIONS of additional square feet (app. 1-3) has become the tail wagging the dog.

Hoke, Bland, Jr.

5/15/2009

The figure of 65% workforce housing has been thrown around in this chapter without much regard to the eventual consequences of this idea. Once again much mischief is possible with this concept. If i as a worker choose to retire and am no longer a member of the workforce, am i going to have to vacate my home for a worker or possibly make available another residence to keep the status quo of workforce housing. I realize this is an extreme thought the authorities could use this concept for rather bizarre outcomes.I believe this entire chapter needs to be reworked to protect the citizens from over reaching regulations

Acri, Armond

5/15/2009

Save Historic JH

Where is the data to support the claim that the community agrees that the Y is an appropriate location for dense development, or that 3 stories is the desired limit along major corridors? -The Lodging Overlay should not be adjusted. -Do not amend PMUD and PMD, eliminate them. They reduce predictability. -Proportion of population in town to the county and nodes might be a meaningful indicator for measuring "Town as Heart." Dwelling units and nonresidential square footage by district are not. If the Town is to be the retail center of the county, then measuring retail sales in Town vs. County is more appropriate.

McCandless, Lyndsay

5/15/2009

Interested Public

As a social and cultural hub, the plan for Jackson to support public and local art should be stronger, more clearly defined and committed to. We need a diverse creative culture to attract tourism and retain locals. Retail and commercial development should also be geared to supporting our local community. What sorts of businesses do we want and need? How can we support local entrepreneurs to start small businesses and contribute to a diverse and thriving local economy.

Hoke, Liza

5/15/2009

Interested Public

Prin. Prin. 3.2: Paramount to Jackson maintaining its retail hub is the ability to distinguish itself as a unique "Place". The town square overlay is absolutely key to this sense of place. Requiring a two-story height restriction will be one way to accomplish this. Another way to accomplish this is to ELIMINATE THE PMUD regulations that allow development bonuses and waivers from other requirements. Prin. 3.5: I think it is critical that Prin. 3.5 recognizes the function and important of public art to enhance community character and enhance pedestrian walkways, as well as provide a stronger sense of cultural community amenities. A funding mechanism for public art would be to allow developers the option of using public art and/or landscaping to achieve the "landscape" requirements. Landscape required is often only "pretty" for a few months out of the year. Public Art could be a 12-month draw and amenity. There would need to be a different criteria established to measure the requirement, so that people would just place "big" sculpture to equal 20SF of landscape - big doesn't always mean better in public art.
I would like to see more public art in the valley. I would like to see a mural (or two) on the new parking garage! I would like to be involved in that project. I would like to see creative arts being offered to children with disabilities in a sustainable manner (I work with special populations). I would like our community to look out for what the people that live here want & need, not what developers and 2nd home owners want & need. I do not want our town to become a city. Let’s be more creative together. Let’s listen to what people are saying. We need a small but robust future encompassing all things (including art) that uplift the human experience.

Generally sounds good, though it is hard to have specific suggestions without referencing the Future Land Use Plan.

Page 17. I would point out that the second bullet point under 2008 polling. says that a MAJORITY of the community supports preserving wildlife over more deed restricted housing. I think this has been totally ignored. I know the answer to that is that with the nodes there will be less impact; but with this plan there are still going to be 50,000 people in this valley and that cannot help but negatively impact our wildlife.

The Comprehensive Plan should overtly acknowledge the economic and social benefits provided by public art and our cultural organizations. The Plan should acknowledge that it would be both desirable and beneficial to establish a fund to support art and arts events in public spaces. Arts and culture organizations in Teton County have a significant positive impact on our community. According to the Americans for the Arts 2005 survey of "The Economic Impact of Nonprofit Arts and Culture Organizations and Their Audiences" the economic impact of "Organizations and Audiences" in Teton County exceeded 2.5 million dollars in revenue for local government and over 3 million generated for state government. Arts and Culture events generate dollars and keep them circulating in our community. Art in public spaces expresses the values and character of a community and provides economic benefits. There are several places in the Comprehensive Plan where Public Art should be included in the visionary document, I have included just a couple instances below. Principle 3.5: Recognize the importance of civic spaces and social functions as a part of maintaining a sense of community. Public Art completes public spaces, makes gateways memorable, enhances pedestrian experiences, and should be incorporated into parks, signage and amenities like walkways and waters fountains. Public spaces without Public Art are not complete. Artists should be given the opportunity to participate in the design of public spaces. Public art should be considered as an alternative to landscaping requirements in downtown areas or heavily built environments where landscaping is not feasible. Policy 3.5.b: Make public investments in strategic locations. The community will continue to invest in public facilities including art in public spaces. The revised Comprehensive Plan should include language that supports (but is not limited to) the following strategies to develop a public art program: Public art provides social and economic benefits and is appropriate and congruous with the goals and ideals of the Comp Plan. The plan should acknowledge the substantial value that our arts and culture organizations add to the community. It should be stated that amending Land Development Regulations (LDRs) to include 1% of new commercial and municipal developments budgets to support a public art fund is desirable. A Cultural Steering Committee comprised of volunteers who represent the interests of Teton County’s arts and culture stakeholders should be established to create a cultural plan that includes administering the public art fund.

The Housing Trust should not be responsible for setting categories and criteria that will encompass the majority if workforce housing. As an independent non-profit they are not responsible to the community. Policy should be set by elected officials who answer to the public. - Incentives besides density bonuses should be considered to encourage work force housing. - Indicator 4 should change from "Number of houses" to "Number of units" to reflect the definition of workforce housing. - Measuring most indicators on a yearly basis will give misleading data because of the small number of projects that happen sporadically. Measuring a 3-5 year rolling average would result in better data. - Measuring the percentage of new units that are restricted ignores the impact of rental units. It will also set the plan up to fail in the long run since this number cannot increase forever.

I am totally supportive of the concept of Town as heart. I think there should be a statement that says that redevelopment of commercial projects should be given regulatory relief in regards to impact fees and other considerations. The redevelopment of outdated and worn out structures would help to keep Jackson from looking old and worn and would improve the tax base. However height and FAR should be kept at a reasonable amount and not used as a trade off for housing. Two story structures should be mandatory in the Town square overlay. Where possible public art should be encouraged possibly as a trade off for landscaping requirements. Redevelopment should be encouraged in residential areas with economic (regulatory) relief where there is not an impact on established functioning neighborhoods.

<td>Hoke, Bland, III</td>
<td>I am writing to support the inclusion of public art in Theme 3 of the Comprehensive Plan, along with a strategy to implement a public art program. Public art can serve as an iconic and memorable feature of the valley. This is evident in the popularity and enduring quality of the Elk Antler Arches, which have delighted visitors of Jackson for over 50 years. Growth in Jackson must embrace public art as an asset, which creates value for developers, enhances the quality of life for residents and promotes Jackson as a cultural destination for tourists. Policy 3.1.b: &quot;...future development should reinforce and create new vital neighborhoods within the town.&quot; Establishing a '1% for Art' funding mechanism that allocates a percentage of new development costs for public art will add value to new developments, while also creating distinct character and identity for new communities. Principle 3.2: Public art, as seen in the Elk Antler Arches, enhances the aesthetic appeal of the Town Square. Future development within the Town Square should consider the long-lasting impact of unique public art enhancements that will create new cultural artifacts for future generations to enjoy. Public art will also contribute to the emotional appeal of the Town as Heart concept, contributing to the economic viability of local businesses. Policy 3.5.a: Public art will create interesting, attractive and memorable public spaces. A '1% for Art' funding mechanism, which allocates a percentage of new developments to improve public spaces with public art, is a model embraced by 300+ cities and towns across the U.S. Policy 3.5.b: Public art is a strategic investment in cultural tourism, which should be noted as an important aspect of Jackson; home to 40+ art galleries, a National Museum, a 4 acre Center for the Arts, the Grand Teton Music Festival, and a myriad of other cultural activities and assets. Public art promotes the cultural status of a town with an outward embrace of creativity. Policy 3.5.c: Public art will provide the millions of guests that visit the Town of Jackson every year an interesting, memorable entrance to Jackson through creative and thoughtful gateways. Strategy: Develop a public art plan consisting of; a public art ordinance, administrative body, and potential sites and future developments to integrate public art.</td>

<td>Mortensen, Sue</td>
<td>I hope you will vote against the density proposed by the new plan. Density of this proportion undermines the kind of natural habitat that is necessary to support the amazing variety of wildlife that we enjoy living with. We live in a truly unique place. Please, support the open space that makes this uniqueness possible. We have more species sharing this ecosystem than anywhere in the lower 48. Please stand up for wildlife. It's what the majority wants. If we need affordable housing, then let's find a way to build that without extreme density. We should not be controlled by the greed of developers.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>Acri, Armond</td>
<td>If no reporting is done on the promised data, it is evidence that growth is out of control and must be brought under control regardless of the actual rate. I am not convinced that plan reduces overall build out in the unincorporated county. Plan does not implement a rate of growth mechanism until a problem is identified. It will be too late then. We need mechanism now and adjust threshold as we go. People were not happy with the growth rate of the 90s. We should keep below that rate. Need to monitor what has been built, what is approved but not built, and 'budget or estimated under current zoning.' This should be done for dwelling units, commercial square footage and APO. A simple LOS to monitor is the time to process building permits for citizens and average time for completion after a building permit is issued. When they start to go up, we are growing too fast. The number of FLUP amendments is not meaningful data. A useful metric for measuring and managing growth is comparing new work force dwelling units created to new jobs created. Jobs created could be estimated yearly from new commercial sq ft and adjusted with census data as it becomes available.</td>
</tr>
<tr>

<td>I agree with the idea of clustered residential development within the county, including the possibility of &quot;local convenience&quot; businesses. However I do not agree that the county nodes need to be developed to the same density standards as the town of Jackson.</td>
</tr>
<tr>
<td>5/15/2009</td>
<td>Hazen, Diane</td>
<td>We can manage growth responsibly only when we have an idea of what goal we are managing. This theme just talks about accommodating growth and monitoring growth—and when it's too much figure out what to do. I think the community felt in the meetings that WHAT is too much would be identified. It is not....and the ranges in appendix 1 are so confusing and flawed that it is impossible to figure out what is proposed. Some of the districts now have new names (particularly in town) so it is confusing to figure out what will actually be happening. It is a great idea to monitor growth—but that was supposed to happen with the 94 plan and it fell through the cracks. With budget crunches and staff shortages, it will be the first thing thing to be dropped UNLESS it is a required finding for the staff with EVERY application for development. But, this too has to be measured against some numerical goal and that is what is lacking in this whole theme.</td>

<td>New regulations will protect a group of focal species, but they are not yet identified. There should be a target date for establishing the focal species. Evaluation of focal species should be done on a running 3 year average, not on a year to year basis. Strongly disagree with policy 1.1g that Town development and county nodes will not be wildlife permeable. There is a need to provide safe passage for deer on West Broadway. That area needs to be developed with permeability or safe passage routes in mind. The same applies to South Park. This theme promotes renewable resources and a reduction in greenhouse gases but ignores the obvious. Build less. If we build smaller buildings we have a reduced impact. A big house with LEED gold certification in the wrong location can use more energy and have a bigger impact on wildlife than a smaller house in the right location. Policy 1.5.d has a goal to maintain views of vistas from public roads and parks, but does not mention from town. Citizens do not favor 4 story buildings. They block our view. We need to eliminate them. Living in town does not have to mean giving up a view. Environmental Commission needs private citizens, not just scientists. The Commission should include at least 2 citizens who are concerned about wildlife. Indicators do not mention wildlife. This is very discouraging for a theme that is supposed to be about wildlife. We need to define a LOS for people who value wildlife in Teton Co. If I have to drive to see animals I used to see in my neighborhood, my LOS has declined. Conservation easements will taper off with time, using that an indicator of success will cause failure over time. Indicator 4 should be monitored yearly to avoid the temptation to make Indicator 3 look good by dumping directly into Flat Creek to reduce the sediment in storm water treatment units. Indicator 5, ratio of habitat mitigation to habitat disturbance is not meaningful. Need to quantify the value of the mitigation and disturbance, not just the measure the area affected. In sub-areas that have a lower priority for wildlife, it is important to recognize that there may be areas within the sub-area where wildlife should be given higher priority. The best example is deer crossing West Broadway to reach Karns Meadow. Protecting a crossing through that spot is very important to keeping Snow King and the south facing slopes above Broadway connected. These areas should be identified in the Plan.</td>

<tr>
<td>5/15/09</td>
<td>Liebenthal, John L</td>
<td>Because of the placement of this issue, it is focused on night skies, which is excellent and a valuable part of the Plan. Another aspect of outdoor lighting should also be addressed in the plan - the effect of glare and light trespass on residents and visitors. These effects do affect the ability of residents and visitors to enjoy the night skies. They also affect the ambiance of the area, and they represent a health safety issue in two respects. First, evidence is accumulating that light-at-night (LAN) suppresses melatonin production, disrupting sleep and contributing to cancer risk. Second, glare makes driving and navigating at night more difficult and can be a contributor to accidents. This other aspect of outdoor lighting effects should be addressed at an appropriate place in the Plan.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Moberg, Jill</td>
<td>With your ambitious plans for excessive growth in Teton County, you have completely ignored the public's comments about the importance of preserving wildlife and natural resources.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Hazen, Diane</td>
<td>This theme is described well, but in practice, this is not what has been happening. For some reason the visual (character) aspects of Jackson are beginning to look like every other mountain resort. Just preserving the few historic structures and sites that are left are not enough. Redevelopment adjacent to these sites have a huge impact - the historic sites are dwarfed and no care is taken for the transition between these elements. This will become even more critical as redevelopment moves away from the town square. Neighborhoods need to be maintained as described. This &quot;heart&quot; is critical to the well-being of Jackson.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Acri, Armond</td>
<td>The proposed hi potential density for Wilson is 2.4x what is currently allowed and is 4x what is currently built. It would make Wilson significantly more dense than what the Town of Jackson is now and would be within the proposed density ranges for Town increasing the vibrancy of Wilson will not reduce traffic. It is in conflict with the Town as Heart and will change the character of Wilson. People chose to live There for its limited retail.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Jerger, Karen</td>
<td>I agree that the No. part of South Park is a logical place for residential growth outside the town of Jackson. I am encouraged by the possibility that such growth will include attention to Safe Streets designs, and effective public transit. I am relieved to see the map include a mix of density types suggested for the South Park area. I really cannot picture what the proposed buildout might actually look like on the ground. It all sounds like A LOT.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Rohrstaff, Kate</td>
<td>I think the conceptual land use is acceptable. I live in Rafter J and believe that building between High School Road and Melody is a good option. Not only will adding homes in this area give people who work in Jackson places to live, but it will also provide jobs to all of the people who will be needed to build the homes.</td>
</tr>
</tbody>
</table>
The northwest end of South Park is a logical extension of town densities. This should be done by annexing in phases as development warrants. However, the text and the map have contradictions. The rest of South Park is very confusing. On the map, the area suggested for development seems to grow with each version of the map, the remainder being shown as Agriculture/Rural. But, while wildlife is significant during several times of year (particularly winter), Wildlife & Natural Resources are shown as next to last in terms of importance. Also, South Park is inexplicitly excluded from the list (Policy 1.6a) where conservation easements would be appropriate. Even though the importance of the Flat Creek corridor and view sheds are noted--there is no protection mechanism for these areas--much less wildlife migration/winter habitat protection. Density bonuses in the "node" of South Park are not clear--this node should be more of a transitional node to lower density housing. There needs to be more recognition of the importance of protected open space in South Park. It is not clear whether this node will be expanding dramatically in the future. On page 110 of the plan, in the first paragraph development of 1/4 to 1/2 mile in the NW part is described, then in the second paragraph "The northern 3/4 miles of South Park is appropriate for town-style development..." Is this all the way to Hwy 89 including the corner of High School Road? The language and the map related to South Park appear to be contradictory. Even 6 Pronghorns spent the summer in South Park as recently as 2006--to ignore wildlife in South Park is untenable. It is rich with birds and mammals.

Wilson, precariously situated at the base of Teton Pass, is not only presently strained with it's own local traffic but also with the traffic traveling to and from Idaho. To increase the residential units and extensive commercial space in Wilson so greatly is not responsible management, will be a hazard, and should not be recommended by the Comprehensive Plan. Living in Wilson, I drive, daily, on Highway #22, passing the Stagecoach, Fall Creek Road, West Street, Hungry Jacks & the Post Office, Nora's Fish Creek Inn, Ida Ward Lane, and Second Street. Between the Stagecoach, going east to Second Street there are 8 or more access roads or driveways onto Highway #22. Fall Creek Road on the south is the only access for all the residents off Fall Creek Road to Highway #22. West Street and Second Street are the two primary access roads for the residents from the north to Highway #22, from the town of Wilson and from along Fish Creek Road. Having a vision in the Comprehensive Plan of the possibility of increasing by up to 520 new residential units within a quarter mile of the existing commercial core is excessive and would be a danger, particularly to the area between Fall Creek Road and Second Street. Presently the traffic is often a problem. There are many cars and trucks, as well as pedestrians, bike riders, and even some horseback riders. The vision for additional residential and commercial units should be far less than presently proposed in the effort to honor the stated "Priority: Manage Growth Responsibility". I agree with the statement that "While Wilson is designated as a node to accommodate some community needs, such as housing, the Town of Jackson should remain the lodging, retail, professional, and civic center of the region." Because Jackson is intended to remain the "center" of the region, I believe that Jackson should have more of the commercial and residential units that are now envisioned for Wilson.

As a resident of Wilson, I have seen many changes with the development of the area. Everytime a large area of land is dug up (SRA for an example) the animals of the area are misplaced. Once the ground was broken at SRA the coyotes moved south and started dining on many of the wilson residents pets since their prey moved upward on the mountains. A friend down the street came outside due to a ruckus by her door to find several coyotes ripping apart her small dog. Moose that frequented our street are found dead on the highway as their habitat continues to be consumed and many more vehicles are travelling on Teton Village Road. Travel surveys for Teton Village show almost a hundred vehicles entering the Village per half hour during the various seasons throughout the day and thats just entering not departing. Enough is enough, a ten percent growth each year will compound these problems with the New comprehensive plan. Less is more. Ten percent more people, ten percent more cars, ten percent more wildlife becoming carcage to selfish people rushing to their destination. How many more moose or other animals have to die on the Village road before anyone cares about the traffic. In the last three days I have seen three moose crossing Teton Village Road during the day between 11am and 3pm. It currently takes almost ten minutes for me to get out onto the Village road from my street due to the present traffic flow. How can ten percent growth each year sustain what we already have, once it is gone its gone. The current comprehensive plan screams sustainability for real estate companies and construction companies not wildlife or community.
As a Wilson resident I am very concerned with the large development densities being planned for this node. I attended multiple meetings last year with concerned citizens and I do not see where the planners incorporated any of our feedback and viewpoints into this new plan. This plan looks like or is even worse than the Option B that everyone was so against from the start of this process. Were these meetings just an exercise in futility? A necessary hurdle towards getting what our county planners envision rather than what actual residents envision? I feel wronged that our voice was not listened too. Wilson has already gone through a massive amount of new development in the last ten years with Wilson Meadows, HHR, and Stilson.

Let's think smart growth. Giving bonus development densities only begets more growth and creates more systemic housing problems. If the goal is to create more affordable housing than make sure that any density bonuses are zoned as "affordable housing" and not as standard residential development. Any new marketable lots/buildings created in such a desirable area like Wilson will not be affordable to the working class. The affordable housing problem is due to commercial developers not having to provide enough affordable housing. Why does the comp plan have to allow our community to double in the next twenty five years? Quality of life and protection of wildlife soley comes from keeping our population at a sustainable threshold. The first goal in this plan should be a census on what maximum population numbers we can sustain without damaging our values.

Our family became members of the Wilson community following the last Comprehensive Plan, and while we certainly had some notion of what we were joining, it has turned out to be so much more than any of us expected. We are in awe and humbled by what we have become a part of, and a few of the many lessons we have learned in the process (and this includes our 14 and 10 year old children) are (1) respect for the physical, wildlife and human elements of the entire community, (2) recognition of our role as temporary inhabitants and in that role stewardship for generations to come, and (3) acknowledgment of the vast reservoirs of wisdom that we can tap into by listening to both the vocal and more silent members (including our local wildlife) of the community. As background, we chose our location for many reasons - including the unique mix of connectedness and openness. We are a quarter mile from the commercial district on Hwy 22 and yet the orientation of our modest home on a little over an acre is toward Munger Mountain, with wide vistas provided by the adjacent combined 80 acres of conservation easement property. We take advantage of the proximity to walk or bike to the commercial district for much of our shopping and in so doing we have the privilege of sharing part of the commute with moose, fox and elk who either inhabit portions of our and adjacent lots, or who use them as part of their migratory pattern. It is just this ability to (1) connect to both the town of Wilson and the wildlife whose land we have taken over, at the same time as the ability to (2) immerse ourselves in the openness of physical beauty of all that touches and surrounds Wilson that inspires the strength of the emotional tie to the community that we love and imparts those life lessons. While on one level as a recent member of the Wilson community I applaud the overall vision and themes and their county-wide priority, at the same time I am deeply concerned about how that vision and those themes have been applied to Wilson. Moreover, my concern is even greater due to the apparent lack of adherence to my lesson #3 - this effort does not evidence the willingness to listen to the voices previously communicated based on the earlier proposals for Wilson. I strongly urge that the application of the plan to Wilson more closely reflect both the priorities of stewardship of wildlife and responsible growth management without abandoning the effort to include Wilson as one of the county nodes for further development. Allowing for housing growth in areas such as the area bounded by Fall Creek Road, Highway 22 and Fish Creek based on the single family mixed use zoning ignores the impact on wildlife that is a significant element of that part of town. From my perspective the plan is doomed if it is not at least more internally consistent in prioritizing the themes. How can one be "contextually-sensitive" in addressing development without taking into context the adverse impact on the wildlife that such a change to that area would cause? While I did not participate in the earlier town meetings addressing the proposals for mixed use development in Wilson, I understood that similar views were effectively communicated. Also, it appears that my reaction and approach is consistent with the survey results. Thank you for the opportunity to comment and I will provide more detailed suggestions in a future communication.

"While Wilson is designated as a node to accommodate some community needs such as housing, the Town of Jackson should remain the lodging, retail, professional, and civic center of the region." comp plan Again, you are zoning for growth in areas that do not have adequate infrastructure to accommodate density. There is no mention of impact on the school system (already at maximum), just mention of more parks. What about more grocery stores? Places to eat? This will just be another population pimple that feeds off the Town, which means additional traffic. Too much density/Limit Growth across the board. That is what the community is saying.

<td>Harmon, Scott</td>
<td>I would like the following comments regarding the new proposed comprehensive plan made official. It is against my better judgement wasting more of our time concerning uncontrolled development in Wilson, Wyoming. The county never listens anyway proof from the latest comprehensive plan that is completely contradictory against what the people living in Wilson stated they wanted to see for our community 6 months ago at a work shop meeting. This new plan could triple the size of Wilson! When is it going to end? Wilson grew at a rate of tenfold with the Hardeman development, doubled again with the old school house development and is currently being hit with more development. Enough is enough! Forget the discussions of road safety, wildlife, and community character. Those comments have always fallen on deaf ears. I have lived in Wilson for over 30 years and paid property taxes helping to support goverment officials. It is past time the county respects our wishes for controlled development regardless for thier whishes for continued affordable housing. Especially when this so called affordable housing invites developers into the project and the county offers them density bonuses as well. Those of us living here for so long need to also be considered into the equation. We have paid to live here and our opinion must be seriously considered. I was at that town meeting and I heard 95% of the comments opposed to continued mass development and this is exactly what the new comprehensive plan calls for; 500 homes??? Give me a break, 100 homes is too much in downtown Wilson. Have you driven through town lately? Tried to cross highway 22 with all the speeding traffic? Mass development belongs south of Jackson where we have the infrastructure to support it. Wilson has already been hit with too much density and taken more than it’s fair share. Few of us in Wilson want this plan and will fight to keep controlled development. One day I can only hope the county listens to the peoples voice and reconsiders the monetary side versus the human side and shows more respect to the long term citizens of this valley.</td>

<td>Walles, Mackenzie WY</td>
<td>I am writing as a resident of Wilson to tell you how disappointed I am with the Draft of the Comprehensive Plan revision. I have lived in Teton County, WY since October of 2000 and have been a resident of Wilson since January of 2007. We purchased a home in Wilson so that we could be a part of the character that makes Wilson such a special place to live. We wanted to live in an area of the County where we would be close to town, but far enough away so that we would be close to the wildlife that makes our valley so special. We became very involved in the Mixed Use Village planning process once we moved to Wilson. We joined with our neighbors to help shape what the future of Wilson. After countless hours of meetings, emails and phone calls, the planners provided Wilson residents with two options to be presented to the Planning Commission. Option A (density neutral) and Option B (increased density zoning.) Wilson chose Option A. We obviously made the wrong choice in the eyes of the Planning staff, because this was never presented to the Planning Commission. Option B was an increase of 98 units and now the planning staff is trying to increase our density by up to 400 additional units. Why did no one listen to Wilson? Why did we spend so much time planning in Wilson to have all of that work for nothing? How did we go from them recommending an additional 98 units to an additional 520? What happened to wildlife and preservation of wetlands being the #1 priority????As was stated by the great majority of attendees of the Wilson Mixed use village meetings, the Waldron 15 acre property in Wilson should be removed from the boundary that the Planners dreamed up. The Waldron property is NOT an appropriate place for increased density. The property is currently deeded for up to 5 residences and that is how it should remain. The Waldron property is a migration corridor for the wildlife that is so important in Wilson. It is adjacent to the Rossetter land which is adjacent to Fish Creek Ranch. Our property is adjacent to the Waldron property and we have wildlife viewings multiple times each week. The property seems to have a resident immature moose who lost his mother and twin brother due to traffic on our highways. The Waldron property is South on Fall Creek Road and should be put in the same zoning category as the rest of the properties South on Fall Creek. My husband and I attended all of the Comprehensive Plan meetings. It is very clear that our community said that protecting wildlife was the number one priority. It was not my intent nor do I believe it was the intent of the majority in attendance, that in order to protect wildlife in the county that the plan would cram high density in the places that most of us live! The Node concept is flawed!!! I think that the node concept should be removed entirely from the plan. Wilson is not a pedestrian friendly town, it is at the base a steep mountain pass! The plan does not take into account the infrastructure and services that will be necessary for all of the additional people it is planning for. Where will all of the children go to school? The Wilson elementary is already close to capacity. More vehicle trips will be created into town. We do not have an Albertsons and never will! I realize that the plan is planning for the future, but I do not believe that the planners planned for the future that the residents of Teton County envision. These are only a few of the issues I have with the draft plan and will continue to comment throughout this process. I hope that the Planning Commissioners will listen to the residents of our community and help create a plan that does reflect our vision.</td>

<td>We strongly urge you to scale back your density plans for Wilson. With the proposed density in the new plan, the character of Wilson will drastically change. Fragmenting Jackson Hole's population further by increasing the density of Wilson instead of within the city of Jackson, where it should be, is irresponsible planning - and certainly not &quot;green&quot;. There is no reason other than to satisfy the greed of developers, to increase density in Wilson - and particularly NOT down Fall Creek road. What has happened to the vision to be a green community - to concentrate population around diverse commercial centers, reduce driving distances to community services and offer alternative transportation to the car? Increasing population density in Wilson only creates more long distance traffic; less efficient traveling for shopping and everyday life. Schools and other infrastructure will be impacted enormously necessitating further development. Teton County today does not offer adequately paying jobs to support a mortgage for many. Density with lower income housing in the mix, does not ultimately relieve the issue. Two years ago Teton County had too many jobs and not enough employees. This year we have too many employees and not enough jobs. Past and present residents of Wilson moved to Wilson for its unique and SMALL town character. At the very least IMPROVE Wilson’s walk ability and community character. Do not screw it up. Uphold the design that the residents of Wilson spent hours compiling in the public charrettes. It does not resemble your proposal. You have an opportunity to preserve a wonderful community and area for wildlife. Please do it.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Tompkins, Kathy</td>
<td>For South Park, the following 2009 Plan adjustments are in order: -Wildlife and Natural Resources should be first priority for the South Park district -Clearly articulate the entire district as containing important wildlife, connectivity, and scenic values, using language similar to that in the current (1994) comp plan.-Delete language that states South Park will be built out from 'North to South starting at High School Road.'-Exhaust in-fill in town before considering any expansion into new County nodes, including NW South Park.-Drastically reduce the proposed NW South Park 400-acre, 1,500-unit housing node, both in footprint and number of units, consistent with a less-growth plan.-Clearly state that any density incentives used for the reduced NW South Park node will be derived from permanent open space protection within the district only, not from Alta or Buffalo Valley.-At least 50% of any density incentive in any County node or targeted Town growth area to be derived from permanent open space incentives (not solely from workforce housing), still leaving 50% available to incentivize additional deed-restricted workforce housing.-The reduced NW South Park node to have a pull-back from both High School (for a park) and South Park Loop Roads, to respect the educational nature of HS Road and the scenic value of South Park Loop.-The design of any development in the reduced NW South Park node to allow wildlife movement permeability.-The placement of an East-West connector road in South Park should precede any new development in the Northwest corner of South Park and placed close enough behind the high school to alleviate traffic on High School Rd.-The design of the reduced Northwest corner of South Park should not be connected directly to High School Road but to the new East-West connector road. -No annexation of the new reduced Northwest corner of South Park until it is designed and approved under County LDR criteria. No annexation as a whole, to then fall into Town design standards.-The Tribal Trails connector between South Park Loop Road and HWY 22 not even considered until all solutions for improving the &quot;Y&quot; intersection are exhausted, and assurances made that no new traffic would be diverted onto High School Road.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Moberg, Jill</td>
<td>You have slated far too much growth and development for the South Park area. We don't need that much housing in this areas. High School Road cannot support that degree of development. Wildlife migration will also be unforgivably adversely affected. The current economic situation has resulted in less demand for new housing in Teton County. You should re-evaluate all plans for growth, in all areas of the County, at this time, since your data and comments from the public advocating more housing are now outdated.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Pilafian, Peter</td>
<td>Please REMOVE Wilson from the list of &quot;Nodes.&quot; The level and density of growth that you are describing is completely inappropriate, and would be the Kiss of Death for Wilson as we know it. Your 'Plan' seeks to turn Wilson into a bedroom community to support Jackson businesses, and to supply convenient workforce housing for other employers all around the county. Your plan for Wilson is inappropriate and unacceptable, and ignores the wishes of local residents. To the extent within which Wilson might possibly be called a Node, it is entirely built out now, and does not need any significant additional density. You do not even realistically (or imaginatively) address the problem of Highway 22, around which the whole Wilson question revolves. As you know, the charrette cross-section was a serious compromise, and has already been violated by WYDOT. Nobody is in favor of your Wilson plan, except those that stand to profit from it, or those that don't live here. Wilson should be changed to 'Rural' designation. Wildlife, ranchlands, scenic vistas, riparian lands - this is the character of Wilson. Please -- remove Wilson from the list of 'Nodes' before this plan is submitted to the county. Do it Now!</td>

<td>Bigler, Greg</td>
<td>While I can not claim residence in the valley for a long time (6yrs), I can add some thoughts on what I hope occurs to my home current and future in Cottonwood Park. My thoughts: 1. Keep growth rural in South Park 2. Open space along the High School Rd. 3. New development south of HS road, will need another east/west rd, and keep commercial nil or minimal as there is enough traffic and light pollution as it is. 4. NO upzoning in town kill pmd’s, and strict adherence to the plan/zoning that is/will be in place 5. Keep the plan and just as important, future legislation and or zoning and property development decisions, in line with what the survey states 6. I understand that this area makes sense for some town like density, but lets not dump everything here. All of the county areas need to be part of the solution. Including the west bank and east Jackson, my self just like me owners in those areas do not want their vision of Jackson to be overrun by growth and development. 7. Do not over grow the valley. Just because it can be bigger does not mean better.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Baldauf, Jill</td>
<td>Thank you for all the hard work you have done to complete the Comp Plan for the County. I am sure it is difficult to distill everything you hear into one clear, concise and strategic plan. I am afraid perhaps, you didn’t clearly hear the residents of Wilson, Wyoming when the shared their concern for low/lower growth and protection of the wildlife. The ideas you have proposed are directly contrary to the voices of Wilson residents. We are in a wildlife migration pattern and we love it. Everyday we see moose, elk, fox, deer wandering through our backyards. They come down the hill above Fall Creek Road, cross the road and head toward the Snake River. The retaining walls on Fall Creek have already forced them into a narrow path. Adding homes to the Waldron property would end the pattern. Adding home to the Waldron property would also endanger human beings. Visibility is terrible around the curve for the houses that already exist there. To add additional traffic would be extremely dangerous. Just the thought of children walking along the road to Nora's or Hungry Jack's is terrifying. We can’t handle more traffic on Fall Creek. And speaking of traffic, have you notice we don’t have a traffic light in Wilson and we like it that way. If you really plan to sextuple the population, you will have to add in a myriad of traffic mitigation features that we certainly don’t want. Can you please try to listen just a little harder, read just a little more carefully and really understand how we Wilson residents feel. Our quality of life and that of the wildlife that we care for is in your hands. Please be kind to all of us.</td>
</tr>
<tr>
<td>5/15/09</td>
<td>Dean, Gregg</td>
<td>I really don’t want to see 500 more houses in Wilson. It is too much growth too fast. There is not the job growth in Jackson Hole to support a doubling or tripling of the number of houses in Wilson. Not to mention that it will significantly impact the small town feel of Wilson. Please slow down with this planned growth business.</td>
</tr>
<tr>
<td>5/14/09</td>
<td>Lasley, Louise</td>
<td>I do not believe that this area should contain high density development. Use of the park area would be damaging if the west end of the area had large numbers of houses/families, dogs. The area should be reserved for needs that will not negatively impact the current status of the meadow as the last large remaining wildlife friendly part of town and a means of crossing town for wildlife. The site of the current RV park would work for multifamily housing, the remaining area identified for that use should be more of a buffer or be for uses that do not bring large numbers of people into that area.</td>
</tr>
<tr>
<td>5/14/09</td>
<td>Chamberland, Betty</td>
<td>Under the new plan, developers would have ask for an amendment to the comprehensive if they want a property's zoning to change. To secure the amendment, an applicant would have to garner the votes of at least three of five county commissioners. Only after the reclassification is approved could a development be proposed. I read this in the may 13th guide interview with Alex Norton my problem with this is what's different we have the same situation now stay with the old plan is what i think ales either misspoke to me or the paper got it wrong he told me after the village meeting that to change the approved new plan, if approved, it would require the town and county approval i felt that it was a better solution but now find there are a lot of same old politics going on and we are being told and not listened to sorry to say i find it disheartening</td>
</tr>
<tr>
<td>5/14/09</td>
<td>Kehr, Cathy</td>
<td>Hwy 390: the draft plan contemplates the redesign of Hwy 390. At our neighborhood meeting on May 5th, Jeff Daugherty suggested that new development along 390 would have to be found to have a neutral impact on 390. This needs to be stated specifically within the comp plan. There is no guidance on how traffic impacts on congested roads are to be measured or judged, especially if such roads are slated for &quot;redesign&quot;. When would the &quot;redesign&quot; be contemplated in a development approval, and when would it not? We need a Start Bus system that is free. It could be paid for via a gas tax in Teton County. We need free or low cost Start Bus access from the airport to town and to Teton Village. Most advanced societies in the rest of the world have attractive public transportation from city centres to their airports. The cost of cab fare for a family from the airport to Teton Village virtually guarantees they will rent a car. The experience of being a passenger in a local cab ensures that a family will rent a car on their next trip. This is no safe way to walk in many parts of our community during the winter. If a friend or neighbor sees you attempting to walk in many parts of the community in the winter, they are likely to think you are crazy and offer a ride. We need sidewalks/bikepaths that are clear of snow for pedestrian access throughout our community.</td>
</tr>
</tbody>
</table>
5/14/2009  Kehr, Cathy  Interested Public

The biggest incremental impact in this plan is on the Aspens where there is currently little to no allowable incremental residential development under current zoning, and where the new draft comp plan anticipates the potential for an aggregate 85% increase in residential units. When did the Aspens become designated as a node for increased density? There is no mention of the Aspens as a node for increased density in the prior Comprehensive Plan. The 1994 Comprehensive Plan only cites limited commercial growth potential at the Aspens. As discussed in Appendix B - 1994 Plan Analysis, "the 390 corridor is not called out in the 1994 Plan as a location for Affordable Housing." The community survey used to compile the current plan asked participants a rather innocuous question of whether there should be "additional residential development within 1/4 mile of the Aspens." While the results were not overwhelmingly positive, I doubt the community response would have been positive in the least to a question of doubling the size of the Aspens - as has been proposed in the draft plan. This is such a meaningful break with the past contract with the community, it should not take place. Defining Cheney Lane as part of the "Aspens Node": According to the document, development of this node should be within 1/4 of a mile of the Aspens. (The industry standard for walkability is 1/4 mile). The start of Cheney Lane is 1/3 of a mile from the Westside Store. It is 3/4 of a mile from the end of Cheney Lane to the Westside Store. There is no place to safely walk on or near Hwy 390 in the wintertime. In fact it is downright dangerous. There is no way that the comp plan can mandate that private property owners provide access to others across their land to mitigate access to the commercial areas of the Aspens. To quote the draft comprehensive plan on page 74 - Incremental, site-specific decisions, which are emotionally, politically, and largely tied to a particular application, are not an effective way to implement this plan. Following on - If the Housing Authority didn't own the two parcels at the end of Cheney Lane, would this section be included in the "Aspens Node" at all? Cheney Lane has no place for inclusion in the Aspens node as defined.

5/14/2009  Nabors, Libby  Interested Public

Re' Reprehensible Plan! I have finished reading the draft of the Comprehensive Plan. It appears on the surface to be a good plan, but once I looked deeper, I found that it doesn't have any real teeth. Coming from a family that has lived here a very long time, I can tell you my grandmother and my father would strongly oppose this plan, were they still on this earth, because it does little to protect the wonder and beauty of Jackson's Hole.

5/14/2009  Ednie, Marilyn  Interested Public

I am a resident in Cottonwood-Rangefield. I have lived in my home for 18 years and I have seen a lot of changes to the area. I know it is inevitable that the Porter Estate is to be developed. What I would like to be better informed on is the "planned" traffic routes (High School Road, South Park Loop & Hwy). I would like to be assured that in the plans; the "planned" routes will not encourage traffic to come though the Cottonwood-Rangefield streets during traffic jams. I know that I would hop skip through this area if I was delay in traffic, so what's in the plans?

5/14/2009  Cook, John and Cynthia  Interested Public

My husband and I bought a tiny place here in 1979. The whole reason for buying was the beauty, peace, quiet, wildlife and low population. We were able to move here permanently a little over three and a half years ago. We were shocked at the extra development, but you expect some changes in such a time. However, your plan will ruin everything we moved here for: the beauty, peace, quiet, wildlife and low population. You will destroy everything nearly everyone here cherishes. The whole Hole will be destroyed. Please change the plan. Wilson too will be utterly ruined and lose its charming character. With the long winter here the planned extra growth will put too much strain on everything: traffic, air quality, quietness, wildlife, low crime, and on and on. It will become an ugly Piccadilly Circus. Yes, I am an ex-Londoner so I treasure this place more than people from the country. I can't imagine either how all of us will pay for all of the changes.
In general, the draft plan takes too much of a growth approach. The plan itself could be paraphrased as "let's just double". Our community can choose to give much less. Many of the parameters in the document are overly general and would be subject to moving targets. What does it specifically mean to manage growth in a responsible and sustainable manner? My biggest issue with the draft plan is the nodal development thesis.

While the nodal plan makes sense in spirit, it is not consistent with reality. If the intention is to increase density at the "nodes," beyond current zoning levels for "workforce" housing, the thesis of a node falls apart. It would be in the economic interest of all of those living in workforce housing to travel to town for literally every gallon of milk they purchase. The potential inhabitants of the workforce housing in the Aspens are not likely to go to dinner at Mizu Sushi, pay $3.00 for a latte, golf at the Pines, or buy their groceries at the Westside Store. They are also not going to pay bus fare to town to buy groceries and carry them back on the bus. The Comprehensive Plan cannot mandate how much is charged for commercial rents nor dictate commercial tenants or their pricing. The same analogy could be made for Teton Village, the Aspens and Wilson. What was the data used to develop the "nodal strategy"? Did anyone interview the residents at Millward or Wilson Meadows to determine where they purchase their goods and services? WYDOT's traffic demand model was used, although the veracity of WYDOT's model was not questioned nor supported with data. The workforce in Teton County is much more likely to use public transportation to commute to and from work than they are to use public transportation for their personal needs. If we are going to change the current agreement with the community for zoning densities, it should be done in a least impactful way for the environment and the entire community. The community would be far better off locating "workforce housing" closer to "workforce shopping" and "workforce activities". 11% of the new residential buildout is proposed for highly dense nodes on the Westbank, where there are no appreciable community services for our "workforce". The result will be impermeable barriers for wildlife on both Hwy 390 and Hwy 22. The planning staff report for the Osprey Creek development proposal on Hwy 390, suggested that each dwelling would make 11 vehicular trips/day. It is fairly likely that each incremental dwelling at each of the new designated rural nodes is likely to make a similar number of trips, largely to town and back. The community was asked innocuous questions in the survey of whether it would support "additional development" in certain areas. If the question had been whether the community would support doubling or tripling the current densities in what are now proposed to be "nodes," I doubt the response to the question would have been favorable. The draft plan stuffs 30-50 years of forecasted residential development and density bonuses in areas that are newly deemed to be nodes in this plan. Why should the community be giving 30-50 years of density bonuses at once - especially when we don't even know if the "nodal concept" is a valid one? The only way to effectively mitigate impacts on our transportation system and the environmental is to shift more development toward town. The nodal system sounds wonderful in spirit, but is likely to compound our challenges in practice.

In my opinion, one of the biggest flaws of the failed attempt to develop the Porter Estate was the commercial development slated for the frontage of High School Road. That plan was noxious in terms of density, undue increased traffic on High School Road, and the significant loss of green space to predictably intrusive commercial buildings. At our neighborhood meeting at the Cottonwood Park community center early this winter (prior to the May meeting), we discussed these concerns with the planners, with an emphasis on the imperative of open space on High School Road. The planners indicated their understanding and agreement of the usefulness of this point. This new plan has no green space on High School Road, nor do I see any green space down toward Rafter J except for what I assume is the Lockhart property. I would like to see a significant buffer of green space, the same depth as the high school property, running all the way from the high school to South Park Road. Why does the plan specify the preservation of the scenic character of South Park Rd. but not High School Road? I agree it is a beautiful road to drive or bike down. However, the mostly part-time residents of Three Creek can't see the road over the berms, while Cottonwood residents enjoy the scenic vista of the Porter Estate from High School Road and the view is of enormous value. Better yet why not extend the green space to protect the scenic value of South Park Rd as well and simply centralize the development and extend it south to make up for lost space? The other imperative is for one (or two) new east/west road(s) connecting the proposed mixed use parcel to Hwy 89 and preferably no entrance or exit on High School Road at all. If and when Hwy 22 is connected to South Park Rd. there should also be appropriate redirection of traffic flow to mitigate new traffic on High School Road coming from Hwy 22. The plan indicates the east/west road would be created as development occurs, but I think it should come first. If not, there is no way to avoid the huge trucks and other new construction traffic on High School Rd. during the lengthy development phase. Thank you for your consideration of my concerns.

Mange growth responsibly does not equate with encourage growth. The plan allows for growth that is detrimental to the existing community and our resources. We should acknowledge that this area can not sustain a growing population without sacrificing our wildlife. While focusing development in Jackson and the nodes is better than growth throughout the county, the amount of growth this plan proposes is too much. There needs to be much better cooperation and coordination between the town and county on all the themes in this document.

<td>Carlson, Benjamin</td>
<td>As I read Policy 3.5a: Maintain and improve public spaces, I couldn't help but think of Memorial work done by Maya Lin, the Vietnam Memorial and the Civil Rights memorial that she did. These kinds of public art memorials for instance achieve the goals of this policy. They are interesting memorable and I would add educational fixtures. In adding the words &quot;public art&quot; to this policy, I believe that the town has great potential to use art to continue to activate public spaces and strengthen our community, via education and intrigue. By giving local artists or nationally or internationally recognized artists space and resources to construct art we can create truly unique spaces to engage the community and attract people from all over the world. Works could include for instance an outdoor amphitheater for outdoor plays and music, or educational installations or gateways teaching people about our flora and fauna, or even an interesting sculpture for a diversity of people to come together and play on and around. These kinds of projects have great potential to be created via collaborations between artists and architects artists and biologists artists and local historians etc. I believe artists have a special way to activate our culture and community and therefore I would love to see the words &quot;public art&quot; written into this or another appropriate policy. Thank you for your encouraging locals to share their ideas.</td>

<td>French, Peter</td>
<td>Our family lives in Wilson, inside the single family area of &quot;District 11&quot;. Our primary concern with this plan is that the Mixed Use Orientation will allow dense redevelopment of the commercial core of our town, destroying the character of this small town gem. We absolutely oppose 3 story structures in the core and are much more comfortable with the scale of the PS Bagel/ Wilson Backcountry building. Please take into consideration the character issue. It cannot be recreated and even in the long term our county does not need an abundance of 2 and 3 story condo projects. Finally there seems to be an argument that adding rooftops will lead to more retail which will reduce traffic. I fundamentally disagree. More people=more traffic. Thank you for your consideration of residents!</td>

<td>I am a property owner in both district 15 and 19. I support your plans throughout those districts. As you finalize the plan and begin to work on the LDR's I would encourage you to allow lot splits/PUD's on single parcels in the appropriately dense areas. The current 3 parcel minimum discourages redevelopment to denser uses. The 6,000+ square foot lot certainly can support 2 or more very attractive units which would be more affordable for sale products. It would be more fair to the small property owners who are the majority of owners in those areas. Thank you for your consideration of this comment</td>

<td>This appears to be &quot;deja vu all over again.&quot; There is no way to maintain wildlife and community character while allowing for growth. These things are mutually exclusive. Coupled with the fact that growth never pays it's way, this is a very depressing conclusion to have come to (again!). I've watched these plans since the first attempt at a Comp plan decades ago. These plans end up being driven by the &quot;players.&quot; Who are the players? The entities that are at every meeting and are paid (either directly or indirectly) to be there. Those are almost entirely development interests. They are NOT the general, working public who largely make up this community and cannot be at all the meetings. These are the folks that frustrate planners and commissioners time and again because they aren't up to speed and end up wasting time at meetings going over already covered ground and making unspecific comments about wildlife values and small town character. But this is what the majority of residents want. The specifics have to relate back to these general principles. The public has always wanted these concepts to guide the plan. The future is going to be a very different place from the past. The economy won't be so consumer oriented. Old modes of doing business (including planning) will prove to be devastating both financially and ecologically. We need to find sustainable ways to maintain this community as a viable place and I would argue that that means contraction as opposed to growth. I say no more commercial space, or reconfigure what is already allowed. The scale of everything will be smaller and more localized in the future. It will have to be.</td>

5/14/2009 | Green, Clint Interested Public | As a community member and an individual interested the arts i believe it is imperative that principles concerning the inclusion of public art be placed under the theme "Heart of the Region"! I have served many roles over the last 5 years of my residency in Jackson Hole and all have brought me into direct contact with locals and visitors alike. A common ground is the amazing scenery that surrounds our town. When individuals speak about our town they many times mention interesting land marks that make Jackson unique in character. Interestingly these are most often man made creations concerning a certain element of artistic design, the most notable being our "antler arches" or "neon cowboy". With so many new projects being discussed it seems a disservice to not include some stipulation to include a designated amount for the inclusion of public art. Both permanent and temporary installation would encourage discussion and enhance the experience of our visitors. It is amazing to me that such a rich and diverse arts community currently exists in Jackson. Being so removed from any major metropolitan area artists are able to draw positive energies from our surroundings to create amazing art both representational and abstract in content. I have had the pleasure of working with both local and visiting artists on large scale installations. Patrons where continually drawn to the work site and often would play some role in the creative process. I am an artist and as i am an every man. Traveling has given me the opportunity to experience our country's communities at face value. The memories that stand out the most involve some form of visual interactions with my surroundings. It is for that reason and those listed above that i strongly advocate for our town to continue support to make Jackson a cultural destination as it is a scenic one. Please designate some Principle to civic funding and support of public art. Thank you for your time.

5/14/2009 | Kehr, Cathy Interested Public | The Rodeo Grounds: The current zoning and planned furute zoning all fit the existing neigborhood. However, the actual Rodeo Arena should not be moved or relocated. This property serves the town very well, as a venue for a multitude of events. It's location within the town makes it unique and brings helps to keep our downtown vibrant. Additionally, the Rodeo ground serves as significant open space, if rezone to multi-housing, this open space will be significantly dimished.

5/14/2009 | Propst, Bonnie B. Interested Public | While there is mention of the importance of wildlife corridors, there is no attempt to define wildlife corridors, nor is there any guidance on how important wildlife corridors would be identified. Once we make a mistake and allow development impacts in critical wildlife corridors, it will be too late. As stewardship of wildlife and natural resources is the most important theme of the community, this appears to be a critical omission. While there are general steps to protect wildlife, the plan does not permanently protect wildlife in any way. What are the specific litmus tests? Environmental commission: While the concept of an environmental commission is an admirable one, there is no mention of how the commission would be chosen by elected officials. As real estate development and tourism are key elements of our local economy, we need more specificity on the avoidance of conflicts of interest and the depth of qualifications expected for such a commission. How will the commission measure impacts? When is an impact deemed great enough for action?

5/14/2009 | , Interested Public | I have family living in Jackson and have been following the new comprehensive plan. I have found the land use map to be shocking. Everything seems to be geared toward growth and development at the expense of the wildlife and uniqueness of the area. I hope that this is just a poorly misguided preliminary plan and that the end plan will reflect a drastic reduction in the density numbers. As it now reads, it seems to be a mockery of the public meetings and comments that were to direct this plan. Thank you for taking these comments into consideration.
When I went to one of the meeting about the plan, my first question was why do we think they will listen to us now? Obviously, they didn’t pay attention to the survey results. I was assured everyone involved is trying to do a good job and was listening. Please don’t let the community down. I think there already too many people in this valley. We should not be making grandiose plans for growth. Growth will occur naturally and is already planned in lots of areas. We need to protect wildlife and their habitat HERE, not just over in Alta or miles away from town. Many of these areas are restricted or on private access that would not be of any benefit to me. The reason people want to come as tourists is the wildlife and the scenery. If we continue to grow, take away wildlife habitat, and obstruct the view, there won’t be a reason for growth, there won’t be any tourists. Any plan for expansion should first consider and have in place, streets, parks, open areas, and necessary services. To plan 1500 homes on 450 acres means less than a quarter acre per home without taking out land for those necessities. That is too congested for the area. There are no plans to allow traffic access to highways. Poor High School Road will not be able to handle it. There are already too many stop gap, band aid measures because of poor planning. This valley cannot afford to grow itself right out of its livelihood. In the part of the plan about West Jackson it says that area will not be affected by this plan. In the part about South Park there are many plans and changes. How can Cottonwood be a part of both areas? And would the area be affected or not affected? We need permanently restricted areas for wildlife and their corridors of migration. These should not be an afterthought. We need to know how this plan will play out year to year. It would also be wise to look at the previous plan and see how it worked out year by year. Was this aspect monitored? Did the previous plan apply, was it implemented? When I moved here four years ago I thought this was an environmentally concerned area. Now I’m afraid it’s being run by an obsession for money. Soon there won’t be a scenic corridor of entry because our motto will be "Pave Paradise and Put in a Parking Lot".

I write to share my feedback and raise concerns about the recently released draft of the proposed update to the Town of Jackson/Teton Comprehensive Plan. The draft plan fails to properly protect Jackson’s unique wildlife, open spaces, and community character. Once you have allowed growth to occur in an irresponsible manner (as proposed in this draft plan), it will not be possible to ever recreate the beauty of this valley or bring back wildlife destroyed by this proposed growth. I do not understand the reason why you have ignored what the public has asked for and diluted the clear, strong language of the 1994 Plan that supports the stewardship of the ecosystem. The public clearly stated it did not want more growth but rather appropriate limitation of growth. The public also shared through community surveys that it wanted to preserve open spaces, such as South Park, and to protect Jackson Hole’s wildlife and natural resources as the number one priority. The new draft proposes significant growth that is not desired by the public and then allows for a substantial increase in the number of buildings and private developments. I cannot tell whose voices were heard and addressed. The draft plan reads as if you listened to the voice of developers rather than the rest of the public. I remain opposed to a number of aspects of the draft plan. It improperly de-emphasizes the importance of scenic resources and does not contain a mechanism to permanently protect rural open space areas. It contemplates more than doubling the number of residences and commercial space. Rather than directly address and reduce the severe shortfall in affordable workforce housing, this draft plan worsens the problem. New workers will create additional demands for affordable housing, and compound the existing shortage. In my view, the draft plan should make infill in the town the first priority before considering expansion into other nodes in the County. Please reduce the recommended overall build-out of the town and county and define maximum build-out so that only a slow sustainable rate of growth will be encouraged. I live in South Park and remain seriously concerned that the Plan proposes elimination of language from the prior Plan that called for permanent open space protections of South Park and for protecting the scenic and wildlife values in South Park. I have looked out of my window and seen red fox and moose living in and crossing this part of the valley. Eagles regularly rest on nearby trees. This area contains irreplaceable wildlife and, if you do not protect it, that wildlife will be lost forever. Please revise the comprehensive plan to accurately reflect the will of the community and its residents and fulfill your responsibility to preserve this spectacular place we live in.

The increased pressure on our wildlife and natural resources from development will only get worse and needs to be addressed in a more proactive way. Research by WGF and others is limited and should be a driver for what needs to be done. If there is no data in an area, either there should be an effort to obtain that information or any decisions for that area should be made with the knowledge that each remaining acre in Teton County is becoming more and more critical for habitat. To assume that no data means that everything is OK is irresponsible. There is a great need to look at cumulative impacts we are having on the land and resources. We may be beyond the tipping point for being able to maintain our wildlife. Unfortunately, the identified nodes are also wildlife habitat and the plan should address development that impacts those species. Additional species should be included in your focal group such as bears, birds of prey, pronghorn, and others as determined by WGF and other researchers. The "crucial" and "migration" corridor definitions should be refined or eliminated from the LDRs. We should declare that all wildlife use of lands in Teton County are essential to the viability of these animals.
5/14/2009 Lasley, Louise Interested Public

There has been talk over the years of moving the rodeo grounds south of town. If we are in fact wanting to address town as heart and transportation issues, we should keep the facility where it is. The location actually helps maintain the character of town that we endorse...the wild west.

5/14/2009 Ferguson, Jean and Dick Interested Public

We are very concerned about the new Comprehensive Plan, which we feel is seriously flawed. It needs complete revision. 1. Its growth rates are excessive and omit the costs of and solutions to expanded schools, utilities, fire and police protection, streets, and highways, etc. etc. We need a plan for slow growth by implementing caps, restrictions and other possibilities. 2. It includes no plans to preserve the unique character of Wilson and Jackson while promoting massive growth and massive urban style. Just limiting growth around the Square does not preserve the character the citizens desire. 3. Wildlife, the number 1 value to the people, was totally devalued by this plan. Wildlife corridors, winter range, prime habitat, wetlands, and scenery decisions from the 1994 plan were omitted and current science based data is needed to protect wildlife. 4. Questions to be answered: Why won't the planners release the data with which they are supposedly making decisions. Isn't it public information? Who is pushing our employees in the planning department to propose such an extreme pro-growth plan? Or are the planners just totally out of touch with Jackson. 5. What possible “human needs” could drive 9 million square feet more of commercial growth? Growth has been shown to cost more than it generates; it is a vicious cycle. Affordable housing should not be an excuse for growth. 6. The 2 story limit around the Square is a very good idea. Besides allowing views of scenery, it will help the sun keep the winter ice on the streets to a minimum. In fact it is a good idea for all of Jackson and Wilson. 7. Greed locally and nationally has hurt so many people and continues to displace values in its rush for money. To purposely degrade the wildlife and the western character & hospitality of Jackson Hole for financial self-interest by developers, realtors and other groups surprises us. Some of them understand that preserving the Hole’s uniqueness will make them more money in the long run and their life living here more enjoyable. 8. The planners seem to think limits on growth in one area must be provided somewhere else. It doesn’t. Unlimited growth is not inevitable. It should be obvious to the electeds that the people want limited slow growth. And the electeds should instruct the planners to provide such a plan.

5/14/2009 Kehr, Cathy Interested Public

Modeling and conclusions based upon the past 10 years of real estate demand, growth, and prices are flawed. The past decade of real estate activity was fueled by leverage in our financial system that will not be replicated again in our lifetimes. As the recent dramatic increase in available rental housing shows, this is not the crisis that some would have us believe. There is also an explicit assumption in the draft plan that housing prices will only increase. As shown more rapidly in other areas of the country, housing prices driven by speculative activity can be highly volatile. The assumption that the "development potential" captured in this draft plan will be used up in 30-50 years may easily be too aggressive. Why are we potentially making allowances for massive zoning density changes for growth that is likely to be decades in the future? Aren't we putting the cart way ahead of the horse? What is the purpose of conferring 30-50 years worth of density bonuses in one fell swoop? As the growth rate of real estate development slows down, especially large resort development, we are also likely to find that the size of the workforce needed in Jackson shrinks dramatically.

There is a very loose definition of "workforce housing" in the draft plan. Workforce housing is defined as "all housing occupied by people working in the community regardless of whether the unit is deed restricted or not." This would suggest that anyone other than a second homeowner is part of the "workforce." This would also suggest that development bonuses would be available for any project aimed for full time residents. How does "workforce housing" relate to deed-restricted housing? How can the comp plan mandate that a unit cannot be owned by a second homeowner? These are critical omissions and assumptions. This loose definition for workforce housing has the potential to allow density bonuses for all types of housing. Given the very loose definition of the workforce, it is also likely that the community already houses far more than 65% of its "workforce" deemed desirable in the document. Workers who choose to commute:If workers in the community choose to buy a larger house elsewhere and commute, this is their choice and not one that can be changed by decree. The best the community can do is to provide an attractive public transportation alternative.

5/14/2009 Kehr, Cathy Interested Public

The projected growth rates on page 86 are again based off of recent growth rates, which are likely to prove extremely aggressive. Growth rates over the past decade were fueled by leverage that will not be replicated again in our lifetimes. Use of the historic non-residential growth rate from 2000 to 2008 is extremely erroneous as it would include the 4 Seasons hotel, which was completed in 2005. While it might make some sense to plan ahead for excessive growth, it also puts pressure on the community to make decisions in a hasty fashion that might otherwise be made more thoughtfully over time.

<td>Administration: More detail needs to be provided on the frequency of amendments. The public cannot keep up with amendments that occur on a haphazard basis. Amendments should be reviewed on an annual basis. To repair the problem of haphazard and discretionary review of projects and amendments in the past, amendments should require a 4/5 vote of the appropriate jurisdictional body. This would keep amendments from eating a hole in the document. There should be a provision for public comment on amendments to occur at a time that is regular, convenient for the public, and disclosed to the public suitably in advance.</td>
</tr>
<tr>
<td>5/14/09</td>
<td>Whitcomb, Michael</td>
<td>1) Human needs must be removed from the new vision statement. By including human needs you are re-writing the 1994 Comp Plan, not updating it as you claim. For decades this community has been consistent about its desire to preserve what makes this valley so precious. Your new vision statement opens the door to priority conflicts in which wildlife and open spaces and our sense of community must compete with opportunistic definitions of human need. Our primary mission, and therefore our vision, is to preserve what makes this community and valley special. Your new vision statement will fail to do so. 2) Theme 1 must be our number one priority in ALL areas of the county. Remember, it is our prime directive to protect why we live here. In all districts regardless of whether they are a growth node or stable. Why do you think Wilson is fighting more development even thought they have been designated a density node? A good example is the Karns meadow district in town. Wildlife and open spaces is number four, behind town as heart etc. This is flat wrong. Karns is a precious open space in town which provides wildlife habitat and migration. Deer-auto impacts on Broadway near Karns are all to common. While we do need to consider more development in the Karns district, it must be guided by our number one priority: Theme 1. Not by our desire to keep town competitive with Teton Village. One more point. Just because you confine building density to nodes does not mean those people stay in the nodes. Far from it, they spread out into the boundary areas and to impact our wildlife, our quality of life. 3) The connection between Theme 4 and Theme 2 with regard to job creation and workforce housing is too weak. Theme 4 will fail unless commercial growth (driving job creation) has a hard policy connection with residential development (quantity, type and location). Without that link, this is not a plan. 4) You have avoided the inherent conflict between discretionary density tools and predictability. Your claims of improving predictability with this plan have no substance as long as huge density bonuses are on the table. You need stronger language specific to PMD/PUD and the limits imposed on their use. 5) The fundamental structure of this plan fails to reflect community sentiment. The plan does not use buildout numbers to establish outcomes or guide policy development. That is what the public asked for and you chose to ignore that guidance. This is a fundamental failure of the draft which needs to be rectified. Is this the community's plan or your plan? 6) Entitled by-right residential buildout has been calculated differently between town and county (Appendix I). The 2009 potential numbers need to be restated for the county rural areas without guessing the extent of PRD use. The public should be given actual minimum buy right numbers as a baseline from which we can discuss the need for density bonuses. 7) Expanding the lodging overlay along Broadway to Flat Creek will erode services available to residents near the downtown area. The justification given, a gateway into downtown, fails to outweigh the value of retail services which would be lost to lodging re-development. Whose idea was this anyway? Was it in the public surveys? 8) Downtown re-development needs stronger guidelines to assure that a sense of community is restored for residents. We should zone for workforce housing (not relying on weak linkage/mitigation rates) with a goal to house downtown workers in the same district. Provide them with necessary amenities so they do not have to go to the &quot;Y&quot; for services. Make downtown a place where people live, not just visit for work or a quick meal.</td>
</tr>

<td>5/14/09</td>
<td>Greger, Art</td>
<td>I am writing to express my opposition to and disapproval of the Comprehensive Plan as it is being presented. To say that public input has been ignored or misrepresented is obvious. Having attended some of the planning meetings, one fact seemed clear to me, and that is that a low-growth formula was seen by almost all participants as the preferred alternative to achieve the outcomes desired, be it wildlife preservation or maintaining the character of Jackson. In the first round of discussions, compact centers and housing received the lowest favorability rating. How did this now become the plans centerpiece? All meetings I attended mirrored this response. If the sticky notes pasted at the meetings have not been filed in the trashcan, please review them. Ask yourself if the Plan as written takes into account the public wishes. The recent outcry over growth in Wilson should help answer this question. If the answer is still not clear, review the annexation vote of the Porter estate from years ago. If you think things have changed since then, please learn from the publics outcry over the Teton Meadows proposal. The changes I would like to see are as follows: 1) Reduce growth drastically. 2) Reduce commercial growth even more drastically. 3) Protect South Park. It is one of the most beautiful parts of the county. 4) Put desired (by the community) growth in town, preferably as redevelopment, consistent with the desires of town residents. Thank you,</td>

<td>I am a resident of Rafter J subdivision.1. We must have green space from Cottonwood Park extending fro the Highschool Rd. to South Park Rd, extending 1000 ft. to the south. This can be used as a park of future school property. The 2 parks in Cottonwood are used by everyone in the area and overused.2. NO commercial use. The Smith's plaza is enough. More light pollution is not needed.3. Future development must have at least one east-west connection to Hwy 89. Highschool Rd. MUST NOT be used as a main artery. IT SHOULD REMAIN A SCHOOL ROAD ONLY. 4. GROWTH RATE OF 1.5% per year.5. Planners are not following the survey. You have altered the results. a. Wildlife: #1 NOT 6b. Growth: #2 not 1c. Town as heart: #3 not 7d. Housing needs: #4 not 2e. Economy: #5 not 3f. Services: #7 not 5</td>
</tr>
<tr>
<td>5/14/09</td>
<td>Mattson, Ann</td>
<td>I am a resident of Cottonwood Park. We moved to Jackson 6 1/2 years ago from Salt Lake City, UT to enjoy the open space, wildlife, and small mountain town atmosphere. The proposed comprehensive plan would destroy many of the values that we hold dear. Growing up, I lived in Durango, CO. I watched minimally-regulated growth completely change the character of that town over the course of 30 years. Also, as a resident of Salt Lake City, I watched as rampant growth took over the Park City valley. What was once a mountain town became overrun by dense housing developments. To preserve Jackson, we must learn from the demise of other mountain communities. Please listen to the results of the public survey, and consider the consequences of the current proposal. 1. Residents ranked what they saw as the valley’s priorities. The planners are not using those findings as a guideline. a. Wildlife #1 b. Growth #2 c. Town as Heart #3 d. Housing needs #4 e. Economy #5 f. Transportation #6 g. Services #72. Open space must be preserved along the western portion of High School Road, south of the artery! With the current housing, schools and light industry in the area, the road cannot handle more traffic and the area needs more park space. 3. NO commercial or light industry use. The eastern end of High School Road is densely developed, and additional light pollution would further deteriorate our night skies. 4. Future development south of High School Road MUST have at least one east-west connector to Highway 89/189/191. High School Road is for SCHOOL traffic only and is already very congested. 5. The valley growth rate must be limited to 1.5% per year. Even at these levels the town will grow quickly! Please review these comments and consider them in the course of developing a new comprehensive plan! This plan will guide our communities development for many years to come, and we need to take action now to avoid the pitfalls of other mountain communities.</td>
</tr>
<tr>
<td>5/14/09</td>
<td></td>
<td>Do you really think swapping the development rights for land that is practically unbuildable because it’s so steep with grades that require variances is an ethical way to “protect” the valley’s natural resources? The county already makes it difficult to build on these sites. Swapping development rights should be limited to land that is able to be easily built upon. I oppose the current draft of the comprehensive plan. It doesn’t protect our land from overdevelopment and it doesn’t protect our natural resources, which are the reason this valley is so loved and treasured. Don’t kill the golden goose. Change the plan to protect natural resources and securely limit growth.</td>
</tr>
<tr>
<td>5/14/09</td>
<td>Karns, Pete</td>
<td>For many years there has not been any apartments built in Jackson Hole. The only apartments that have been built were ones that were built first as apartments but to later be converted to condominiums. The reason that no true apartments have been built is that the Plan doesn’t contain a zone where apartments can be built without having to compete against condos for the same land. The only zones that allow high density residential development allows both apartments and condos. Apartments and condos are lumped together and compete for the same land. The economical reality is that condos will be built every time because the land under a condo is worth considerably more than the land under an apartment. The solution is to create a new zone in the plan that would be exclusively for apartments or rental housing. The rules in this zone are fairly straight forward: 1. It must allow for high density multifamily housing, 20-30 units per acre or even higher would make this workable. 2. It can never be subdivided. This is necessary to prevent conversion later to condominiums. If this type of housing were built, I would predict that nearly all of it would be occupied by people who are in the workforce in Jackson Hole. This would be far better than the 15-25 percent workforce housing that is the current goal. The idea would be to create a new zone in the Plan that would become a tool for creating future workforce housing. It could be called Rental or Workforce Housing Zone. For example, if the north end of Southpark gets developed, a portion of that project could be zoned for Rental Housing. Do not make the mistake of downzoning land within the town of Jackson to force the building on apartments. This will not work. It can only work where land is upzoned (e.g. Rural Zone to Apartment Zone). Land within the town of Jackson that is currently zoned AR can be subdivided now and can provide ownership opportunities for workforce housing. This is an important part of the housing mix. To take away the opportunity to subdivide in AR would probably result in less workforce housing, not more. In addition, taking away the right to subdivide in AR would cause a huge devaluation of the land. That would be unfair to the landowner. Rental housing is an important part of Jackson Hole’s future. It can be achieved if the correct tools are in the Plan. My suggestion is to create a new zoning tool that will be there when new development proposals are brought before Jackson Hole for consideration.</td>
</tr>
</tbody>
</table>
I have recently reviewed the 2009 Plan. This plan is way off the mark in its growth components and will hopefully will be significantly modified by the planning commissioners before being submitted to the Town and County Commissions. My concern is why such an aggressive growth plan is submitted in the first place, given all the surveys and public upset over the recent Teton Meadows Ranch scheme. It is not remotely realistic that the Teton residents would approve this plan. Jeff Daugherty’s and Alex Norton’s comments in the April 29th JHN&G suggests that special interests are at work here and hopefully they are not elected. Since the County Commissioners hire these men, the taxpayers are paying their salaries and the cost of this plan, I am asking each of you what is going here. Maybe we have the wrong planners working for us. Thank you for considering my comments.

I have written a comment in the comment area for South Park, but I have a general and longer comment I would like to make. I do experience Jackson as a community (or communities) and in looking over the planning “themes,” I do not see maintenance of “community” and human resources addressed in comprehensive and specific ways. Perhaps “community” does not get addressed at this level of plan, but I do think it is an overarching concern of any community. I live in Indian Trails and would not like to see Boyle’s Hill Rd. and Rt.22 connected. But I know that this is a concern that I have a vested interest in and is essentially a selfish concern. If there is no other option for a connector road, I can accept it in my neighborhood. My worry is that many Jackson people have only essentially selfish concerns and not community-minded ones. And people here complain about and object to anything that means change, without fully realizing that things are changing anyway and local character can become caricature. I am a proponent of community, as it is and as it can develop. Everyone is the recipient of the “goodies” of living in a functioning community, whether they realize it or not. What’s not to love about living with wildlife? But is wildlife really more important than people? People take for granted their services infrastructure, e.g. Police, etc., etc. and don’t even consider the community aspects of Jackson, which keep all of us relatively safe and happy, e.g. people watch out for each other and are generally considerate of each other. The residential nodes sound great but I think that places for people to meet (on foot or on bike) which are integral to them is what helps build and maintain community-- such as playgrounds, corner stores, cafes, pubs, post offices, benches, sledding hills, warming huts, groomed paths and trails. I’m sure there are many more in the research. Anything that can be developed anywhere in Jackson or the county, where people can met on foot or bike is good for the community, especially the old and the young. What about a Green House Project elder house built as a part of a planful residential node. Jackson has a diverse community and ways to help everyone integrate are important now that it has grown and diversified. I think people are generally kind of selfish but they also want to do what’s good and right. Local government and planning can foster and support community members thinking beyond themselves and being more altruistic. I think that this could be named and addressed more specifically (and not just economically) than it now is. Well, I could go on but I’m sure we all have other things we need to do. My best and thanks for all the good and hard work you do for our community.
I'd like to comment on the new Draft of the 2009 Comprehensive Plan. It has been a long time (almost one year) since we saw the first draft and there are far too many substantive changes to expect the public to have such a tiny window to comment. This is far too important a Plan to rush through. Please extend the comment period. My greatest concerns are listed below:

The Community has placed the protection of wildlife and open space as our highest priority yet this plan does not protect Jackson Hole's irreplaceable wildlife and scenery. There are no tools in place to measure the impacts of the huge potential developments. We need planning tools to ensure that protecting wildlife is the highest priority.

What happened to protecting our “Community Character?” As anyone involved in the 1994 plan knows, the community character was paramount in the Plan yet it has been omitted from this Draft. Please include verbiage from the 1994 plan regarding the protection of our rural character.

The "Single Family Mixed-Type” classification is too vague. I'm told the need for the new plan is to provide “accountability, predictability, and measurability.” The Single Family Mixed Type would allow single family, duplexes, tri-plexs, four-plexs and "convenience retail." What is predictable about a neighborhood with this classification? Sounds like anything goes in a neighborhood With this designation.

In east Jackson the 1994 plan would allow an additional 140 new dwellings and the new draft will allow 270 new places including "convenience retail." With a total of less that 1000 existing dwellings in East Jackson now, this is an increase of over 25%, yet the plan calls east Jackson "Town Stable." What does stable mean? It is clearly misleading.

The new Draft could more than double the residential and commercial development in the Valley. This would only exacerbate the need for workforce housing. The infrastructure costs are lacking in this Plan.

Nodes will drive commercial growth and increase urban sprawl. Zoning should remain as is on the entire West Bank. Animals will not realistically adhere to our zoning boundaries; we are witnessing this with many species such as the bland and grizzly bears.

Whose plan is this? I'm told this plan is a synthesis of all the public's input but I have yet to talk to anyone in favor of this plan or find evidence of its support. Realtors, general contractors, students, business owners, etc. are in opposition to the Plan. There are clearly some who will benefit financially from this kind of growth but not many of us. I ask you to slow down, read all the fine print and please listen to the people who care so passionately about this wonderful Valley.

I do not believe this draft version of the Comprehensive Plan reflects the desires of the people who live in this community. We spoke when we filled out your survey and our concerns are not adequately addressed. This plan belongs to the community and not to any other interests. Please amend the plan to control and limit growth in a way that is tangible and detailed. Allow values identified as most important to people who live here to prevail over those slated as less important. Most important value: Protect wildlife and our outdoor natural open spaces. It’s the reason tourists visit here and the reason most of us continue to live here. It’s the reason this valley has weathered our worldwide economic collapse as well as it has, so far. If this plan weakens our wildlife values, it will weaken our economy. If nothing else persuades you, I hope this reasoning does.

I live in Indian Trails and have a vested interest in maintaining our quiet, low-keyed neighborhood. I would not like to see Tribal Trail and Rt. 22 connected. The Conservation Easement on the land between Boyle's Hill Rd. and Rt. 22 is a particularly beautiful part of the Hole with the Tetons viewed to the west, encompassing Boyle’s Hill and bordered by High School Butte and a small ranch to they east. It includes a wetland being rehabilitated, a horse farm, cattle (in the past) It is a small wonderland, filled with birds and mammals, appreciated by many, not only the residents but also users of the bike path as a flat, natural area, from which to view spectacular scenery. Indian Trails is an area filled with families with young children. If there is another route which a connector road to take, it would save this little jewel in its beautiful setting.
The Cultural Council of Jackson Hole is a 501(c)(3) non-profit corporation registered in the State of Wyoming and was formed to serve as a "clearing house" of applications for funding directed towards both the Town of Jackson and Teton County. The targeted applications are those submitted by organizations and individuals in regards to cultural and artistic endeavors. The Cultural Council has established a fair and impartial process by which all applications are considered and appropriately funded utilizing, in large part, Town and County subsidy.

It is in this role that the board members and various committee personnel of the Cultural Council have had the better part of 15 years to become intimately familiar with the artistic and cultural activities throughout our community. We have observed strengths and volatility, trends and growth; we've seen children graduate in to leaders and local grass roots arts organizations that initiate global impact. We've seen international dignitaries from dance companies, prominent authors and musicians, to the Secretary General of the United Nations take part in seminars and deliver keynote addresses, all as a result of the resourcefulness of the cultural arts organizations in Jackson Hole.

To say that the arts are thriving here and to derive that Jackson Hole has become, and will continue to grow as an "Arts and Cultural Destination" is clearly evident. In a community with less than 20,000 residents there is an 80,000 square foot Center For The Arts with more than a dozen full time organizations complete with staff and outreach programming. The Grand Teton Music Festival attracts artists worldwide and enjoys global recognition with significant local impact. Another crown jewel is our local art museum, to which the Federal Government has granted the official and elite designation as "National Museum of Wildlife Art of the United States." With these examples, and dozens more, there are abundant and inspiring opportunities for visitors and residents to both experience and contribute to the arts that celebrate our culture. The economic impact of the local arts industry is substantial with recurring evidence of positive net returns and continual reinvestment. Our figures, along with other estimates show more than 50,000 individuals are affected annually by cultural and arts spending in Teton County.

With the utmost respect, The Cultural Council of Jackson Hole, as appointed arbiter and eyewitness to the cultural and artistic phenomena of the region, recommends in the strongest possible manner that the joint Town and County Comprehensive Plan include language encouraging continued support and growth of the Arts in Jackson Hole, in addition to the concept of Jackson Hole as an "Arts and Cultural Destination." In doing so, those authorities having jurisdiction will see clearly the hearts, desires and intent among those framing the culture of our community.

Signed on this day, May 14, 2009 by those board members as noted below and submitted to the Jackson Hole Comprehensive Plan process.

Comments on the draft of the County Comprehensive PlanMy intention had been to comment on the various sections of the draft but the more I think about the whole process the more I feel that the timing for this planning effort is just plain wrong:As the economic base of this community is tourism and real estate, and there is huge economic uncertainty at all levels, local, state, national and international, no one knows what impact this uncertain climate will have on this community, and for what period of time. Also, the town and county are making the push to "Go Green" and to become leaders in this movement, to set examples for other communities on how to lower carbon footprints. Isn't it backward to adopt the Comprehensive Plan before having the Green initiatives in place? Although I support efforts to "protect wildlife and open spaces, manage growth responsibly, and provide workforce housing," I feel that the numbers proposed for the "nodes" are excessive. I know that currently there is frequent "gridlock," on the roads (knowing how long it sometimes takes me to get out of my subdivision, Skyline Ranch, onto Highway 22). The idea of adding those hundreds more cars sounds like a recipe for disaster, and certainly doesn't fit with reducing the carbon footprint. I am aware that this draft of the Comprehensive Plan fails to evaluate the impacts this amount of development will have on many parts of the community. As a former Teton County School Board member, it makes me shudder to think of the numbers of new schools that would have to be built, not to mention all of the other requirements for human services, law enforcement, and so on, that would be needed should the numbers suggested materialize. This at a time when cutbacks are being required in these areas due to loss of revenue in the state. What happened to "Community Character," that has been so important to the people of this valley for so long? I could go on, but I know that you're hearing from plenty of people who are alarmed at the potential for the destruction of what most hold dear about this place. Be careful. There is a real potential for "Killing the Goose that Laid the Golden Egg."

<td>Your plan in Wilson is out of control. You should rethink the number of houses you want to approve and cut it to zero. No growth in Wilson, and I don't even live there!</td>
</tr>
<tr>
<td>5/14/2009</td>
<td>Kehr, Cathy</td>
<td>I commend the effort that went into the draft of the Comprehensive Plan. It is always easier to find the flaws in a piece of work than it is to actually sit down and draft such a large and comprehensive body of work. I largely agree with it in spirit. I especially support the strategic desire to increase predictability and reduce discretionary review. The move away from a focus on resort activities towards the community is to be applauded. We need to stop being a community where the profits are privatized and the costs are borne by the community. In this spirit, the gross community impacts of the potential commercial development proposed by this plan should be analyzed in advance of completion of the plan. It is only by doing such an analysis that we will know whether the assumptions proposed by this draft plan are reasonable or not. In the same vein, the draft plan should address the potential impact of the residential buildout on public facilities. The plan simply contemplates that the quality of services should remain the same. Where are the impacts contemplated to be the greatest? I believe there are additional meaningful flaws and omissions in the plan, which are worthy of consideration. In general, there is a lack of specificity to the plan in several areas.</td>

<td>Lasley, Louise</td>
<td>I agree with the seven themes and the ranking you have given them, but do not agree that the stewardship of wildlife and natural resources will automatically occur without active management. The balancing of human and resource needs requires five additional components for the human side of the equation, but assumes that wildlife will do just fine without more specific actions.</td>

<td>Field, Wendell</td>
<td>I would like to see affordable land in the heart of town available to low income members of the community. In addition to this I would like &quot;alternative&quot; structures allowed, mainly yurts. I am a low income resident of Jackson. My income comes to me as an artist a teacher and worker in the nonprofit sector. My work is important in many ways to our community. I have lived in an visited many yurts. They are a durable, affordable, and charming structure to live in. They can have plumbing available and be easily off the grid. This would serve to inspire simple living to the world outside of Jackson Hole and provide a balance to much of what Jackson Hole has become, a very unsustainable way of living by many of the large, second homes owners in Teton county, as well as provide housing to a sector of our community in need. I would also like to see public art projects expand. Art in public places is what gives a town it's soul. Murals and sculptures around town would be an addition that would benefit Jackson culturally and in term economically for many years to come. During time in Santa Fe I often hear how Jackson is becoming more and more an arts destination. Public art would solidify that notion and add much to our town. Thanks for your good work and consideration of my comments.</td>

<td>Richman, Gordy</td>
<td>Cottonwood park was the first neighborhood development for the &quot;service industry&quot; and working class of Jackson. For over twenty years our community has been trying to catch up to the housing demands. I realize development will happen. District 12 has dover apartment, Blair place, and 3 creek employee units. Flat creek business center, gregory lane industrial park, and smiths plaza. 1) prior to any future development. please give us &quot;open/green space&quot; on the south side of cottonwood park. the &quot;hole&quot; strip from middle school road to southpark loop. it should extend far enough south to maintain the visual astetics of munger mountain region, green knoll, and mesquito creek. minimum of 2500 ft. 2) The proximity(sp) of professional services and retail to our district is the highest per capita of all the districts in teton county. the is no need for future commercial growth. This proposal has negative effects for the goal of town (lets start saying community at heart, how about region at heart). You asked our opinion. your plan DOES NOT SUCCEED IN ACCOMPLISHING ANY OF THE SURVEY RESULTS. TO ACHIEVE REGION AT HEART WE MUST WORK TOGETHER. YOUR ACTIONS DO NOT REPRESENT ANY OF THE HEART. The high school has all windows on the north side. the shop is on the creek and visible from the gateway(poor water quality/ visually bad). the year round soccer field where designed to have people kicking balls at cars not nets. these are just a few example of poor planning in our district. You dont need a phd to design an industrial park the can handle semi's. &quot;s&quot; turns on gregory lane?????????p.s. build out should not block lines of sight of pedestrians or vehicails.less angst + more trust + town/county/region at heart.I may not type well, or spell well. please dont make obvious mistakes. slow down.</td>

<td>Adams, Justin</td>
<td>Three times now, I have typed a lengthy letter and lost it because of my unfamiliarity with a Spanish keyboard. So this is very short. The Comprehensive Master Plan revision is a disaster and ignores so many representations made to the community on the front end of this project. You are trying to develop your way out of a development problem. Are you playing the same game that your wealthy developer friends play so well in your public forum, ask for the moon, make concessions and claim that you have listened to the public.... Sewer pipe, Wilson, Teton Village, traffic study, buildout population, all early representations have fallen by the wayside. Time to start over.</td>
</tr>
<tr>
<td>5/13/09</td>
<td>,</td>
<td>I strongly disagree with the direction of the proposed comp. plan. I have lived in Wilson for 19 years and previously lived in California. To see the result of rampant growth which destroys a place, one only needs to go to Southern California. Our assets here are the open spaces, wildlife and clean air. Read the guest shot in last weeks paper by Kristine&amp;Paul O'Brien and then re-read it. Protecting our “environmental capital” is the only way to ensure that Jackson doesn’t become just another ruined destination. Where is it written that everyone who wants to live here,should live here? Why do we need a total build-out? Let’s rethink the idea of living within our means-what our environment can sustain.</td>
</tr>
<tr>
<td>5/13/09</td>
<td>Poole, Steven</td>
<td>Density as proposed is far to high. Limit any growth to Wilson workforce only. Do not increase commuter traffic by promoting people who work in other areas to live in Wilson. This plan is not about its stated goals, appears to be a rubber stamp for unrespected growth that is not benefit to anyone but developers. Waldron property off Fall creek rd should receive highest protection as wildlife corridor not as increased housing. Animals coming off pass are forced into narrow hillside area by Fall creek retaining walls and a high fencd pasture at base of Heck of a Hill. This corridor is used daily by multiple animal species. Property provides key link to Rossitter open space, Fish creek waterway and protected Hardeman lands beyond. Plan must address current highway 22 traffic and speeding issues before any other growth priority. Include all comment recieved at recent Wilson charettes in planning documents. Listen to community before planners and developers.</td>
</tr>
<tr>
<td>5/13/09</td>
<td>Hocking, Scott</td>
<td>What is the number of residents going to be in this comp plan?When I moved here,and invested in this county,theproposed build out was 20,000.Let all know what the new number will be-don’t hide that number.Please do not punish the residents of Wilson with the increased housing that we all know should be built at Teton Village.</td>
</tr>
<tr>
<td>5/13/09</td>
<td>Pilafian, Peter</td>
<td>Planning is almost always a good thing. And the current version of our comp plan revision is a lovely piece of work, written in a very literary way with lots of nice graphics. The long hours and hard work on this project are greatly appreciated. However, it is not only off the mark, it is full of contradictions as well. In seeking to provide answers, what it primarily does is raise more questions. A big one that comes to mind is: what happens after the much-touted “Build-out limit” is reached? Does everything come to a ceeching halt? I don’t think so. That’s not human nature. So ‘buildout’ is just a conceptual smokescreen. And what really is a “Node?” When you describe Wilson as a designated ‘node’ of the future, you are not only giving today’s Wilson the kiss of death, you are contradicting the concept when you say it will be used for housing development only, thereby maintaining ‘town as heart’ (i.e. keep the retail business in Jackson). In other words, you want Wilson to become a Bedroom community, with triple or quadruple the population! Shame on you, planners! A comprehensive plan should get specific about recommended new platting for public spaces like parks and pedestrian areas, and new layouts for community-oriented street and transportation systems. This one does not. And why do WE NOT see the phrase ‘Community Character’ peppered throughout the document? Well, apparently it is because the planners in their infinite wisdom decided that Community Character could not be given a precise, black and white definition, so they would just leave it out! Go figure! The authors show a further lack of connection with this community when they say that the existing Wilson services, school and small businesses need “increased viability and sustainability” (their words.) Ridiculous! Every service and business in Wilson is the very Definition of Sustainability! And in fact, they are pretty much running at desired capacity most of the time. The big exception, of course, is that brand new two-story office building which sits empty on highway 22, but we tried to tell the developer it was not needed before it even got built. And now your plan talks about putting more “offices” in Wilson. I have one specific request: please take Wilson off of the list of “Nodes.” Wilson can grown slowly, in its own “Rural” way. And maybe we can do without your “daytime vibrancy” – whatever that means.</td>

5/13/2009 Wadda ya mean, "There goes the rope"?: Sometimes, even the best laid plans go awry
[published pamphlet, see actual pamphlet for content, headings below]
Please help, It takes a community to find community solutions
What's a Comp Plan? And why should you care?
Take a second look: Analysis of the new draft Comp Plan reveals major flaws.
Community's top priority: protecting wildlife.
Whose plan is this, anyhow? Why are so many of the things people asked for missing from the new draft?
What does "managing growth responsibly" mean? Depends on when you asked.
One step forward, two steps back? New draft loses key protections of the plan it was meant to improve.
Numbers Matter.
Will "future land use plan" maps will get us where we want to go? Not if Wilson's any example...
Iffy foundation?
Now, how can we fix it? Solutions won't happen without your help.
What can you do? Help create a plan that works.
Make your comments count.

5/13/2009 Smith, Barbara Interested Public
I have lived in East Jackson for nearly 37 years. Already when I walk past the recently built tall buildings I can't see the familiar landscape and they are built right to the side walk. I feel like I'm walking down a city street anywhere. I don't recognize where I am. I agree that density belongs in already developed areas. Let's do it consciously and not build to capacities just because we can. Thank you for the enormous amount of time and energy that has been put forth by the elected stewards of our community thus far. I support redirection of the comprehensive plan regarding these points:1) Town has 4,251,000 square feet (sf) of existing commercial floor area. The Draft forecasts an increase of 3,678,000 to 5,420,000 sf, depending upon incentives. Up to 3,466,000 sf of this growth will occur within the Downtown and Snow King districts. These two districts alone will employ 8,665 new workers (using a very conservative 2.5 jobs/1000sf). Total employment growth for Town would be 13,550. This represents a level of urbanization for our town that could destroy it's character and quality of life for those already living here.a) Where will these workers be housed? How many deed restricted or rental units will be needed and what is the funding plan? What policies link the creation of new jobs to housing supply? Under the Draft, there are only a few Town districts where increased residential density is planned. Do these districts have the capacity to house 13,550 workers and their families? b) Is this Plan affordable? What increases in taxes and fees are planned to fund the required schools, justice center, roads, bus system, parking structures, etc.? Schools are roughly $25 million each, how many are needed to support the growth allowed under this Plan? The financial burden of higher taxes will fall hardest on the very people our affordable housing programs are designed to help. Is this Plan sustainable?
2) Downtown Jackson = growing resort district. The Lodging Overlay is to be expanded west to Flat Creek. Important community retail services (ex. Staples, Hoback Sports, Ace Hardware, Bubba's) could be replaced by hotels. Why doesn't the Draft seek to restore a sense of Community in this district? Rather than more hotels, let's zone for more workforce housing and amenities which will attract residents.2. East Jackson, "District 15" The East Jackson portion of the Draft hints at the possibility of important policy shifts. EJ is designated as a "stable" district where development is "neutral and preserves existing character." Development is expected to be sensitive to wildlife permeability, especially in areas bordering open space. While these are encouraging words, there is one change which must become codified in the LDRs if these words are to affect what happens on the ground:

***** PLEASE Restrict affordable housing density bonuses under the Planned Unit Development tool (PUD) to lots already zoned for higher density (AR/NC-2). We must ensure that this restriction becomes part of our land use regulations, significantly improving land use predictability while providing proper EJ locations for workforce housing.
In light of a tight deadline for comment by Friday the 15th I will address my overall reaction to the plan as explained and set forth at the Wilson School meeting last Friday. First, thanks for all of your hard work. Second, I don't think this draft plan focuses on the feedback and desires of the majority of residents in Teton County. My overall reaction to the proposed buildout numbers is shock and disgust. I agree with the majority of residents that the first priority should be the preservation of open space and wildlife. This plan needs to nurture a sustainable community. By doubling our valley's current size we will outgrow all of our current infrastructure (schools, hospital etc), create an ugly mess of traffic, grow government which will lead to spiraling tax increases, etc. Enough is enough. I would support a plan that allows future growth only on those lots already platted and vested with development rights. Beyond this, the only new growth I support is to address the needs of employee housing of critical county and town employees. All new employee and deed restricted housing should be built either in Teton Village, to fulfill the needs of employers IN Teton Village, or in Town, where current commercial and commuter infrastructure exists to accommodate their needs. The concept of tripling the size of Wilson is absurd. Most of Wilson lies in the wetland corridor of Fish Creek, (and several feet below the level of the Snake River). It is surrounded by land under easement with the Land Trust. The only housing needs I would support in Wilson are for teacher housing for the Wilson School, or for affordable housing for businesses that currently exist, or could be built under existing development rights. Regarding the "node" in the Aspens; again, the only housing I would support there would be for employees of businesses located at or near the Aspens/Pines/Westside store. I would support deed restricted housing for critical workers in Teton County; ie; teachers, emergency workers, health care providers, firemen, police) near the new High School, along the High School road, near commercial centers and public transportation. We do not need to double the size of Jackson Hole. We have no obligation to feed the lion of progress. Many other civilized cities and towns throughout the world thrive without rampant growth. They remain sustainable, desireable, and liveable. Let's not hang ourselves on the cross of affordable housing, nor the misguided concept that we can create affordability through more density. I appreciate your efforts and I look forward to the recrafting of the draft comp plan.

1. Page 8 states " the concept of sustainability within the context of the community's vision delineates that...ecosystem preservation does not preclude growth and development necessary to meet our community's human needs." I completely disagree with this statement and believe that in all the meetings and polls everyone or the majority of voters stated that the Plan was to protect and preserve our cherished wildlife and open spaces despite growth and human needs!! 2. Wildlife and natural resources must be the top priority in all districts WITHOUT compromise. I want to see permanently protect rural open space within the plan and not specifically removing South Park from areas now recommended for preservation. 3. Growth will occur. What I don't agree with is the growth beyond existing entitlements & upzones. (see appendix 1) The new plan doesn't address the growth problems today and just adds additional growth and future problems. So a.) Overall buildout should be reduced b.) Job creating commercial should be constrained c.) Maximum build out should be specifically defined, capped and permanent, with a slow sustainable rate of growth over an extended time. 4. Increase housing mitigation rates on new residential and commercial development. Reduce the job creating commercial in the plan and require all development to fully offset direct impacts on workforce housing and infrastructure demands. 5. The needs of current residents should take priority over future residents. We want to live equally with wildlife and our natural resources! The plan must have clear and specific data to show outcomes and impacts on wildlife, traffic, roads, schools, environment, taxes, and other quality of life issues. 6. Vision Statement: "Preserve and protect the area's ecosystem and natural resources and meet the community's human needs in a sustainable and predictable manner." a.) you must define "human needs" b.)These terms of human needs and community benefit are way to vague, policy should not be set by 3 votes on Town Council or County Commission. c.) Sustainability is a plan priority, yet growth limits are not defined, determined, or set in the plan. 7. I want a community and economy that is NOT DEPENDENT on growth. 8. 2009 Plan, Policy 1.6a. Make sure South Park is included in this section. thank you for all of your work Please consider each and every comment submitted and be fearless in changing your opinion and listen to the residents of Jackson!!!

Further comment: I am and have been a supporter of the JH Historical Society, so my comments are not intended negatively towards their good work; I just want to see some balance that includes the broader arts and cultural activity that is prominent in the town.

I am struck that historic preservation gets prominent attention in this draft, including mention by name of the JH Historical Society, but that the arts, including the Center for the Arts, gets short shrift, even though there are significant economic generators associated with art galleries and performances and the Town of Jackson has invested directly in some of these in the past. If the vision of the town hews so closely to historical/western themes and ignores the dynamic and changing face of the arts in the town and county, what are the implications for future development (both public and retail) and the potential of the arts to become a destination-generating activity and source of good for the community?

<td>Mortensen, John and P</td>
<td>We wish to express our observations on the proposed plan for Wilson. • Although protection of wildlife is expressed as the number one consideration for the county, it is only number five for Wilson. Wildlife populations in Wilson are already challenged. Moose populations in Teton County are down over 50% from ten years ago, attributed to loss of habitat. Are we willing to forsake these precious resources for yet to be identified new residents. • Growth and workforce housing are the driving elements of the plan, when Wilson already a higher percentage of subsidized affordable housing and homes for “workforce” residents than any other sector in Teton County. • And, it’s hard to say who is the real beneficiary of subsidized affordable housing. Is it the occupant? Is it their employer who can continue to pay a less than adequate amount for employees to afford home ownership? Is it not contributing to otherwise un-sustainable commercial development? What is the real benefit to the community? • Recent re-development of West Street has been sited as a model for this plan. Yet few “workforce” residents could afford the resultant new homes, all exceeding $1,500,000 in value. This re-development has resulted in property tax increases in our case of over 60% and even higher for others. Continued development of this kind could well drive current working residents to leave their homes in Wilson, no longer being able to afford increased costs of living. • While stating future development will be designed to protect Fish Creek, simply enforcing the current 50 foot set back will go a long way in achieving this goal without any changes or unclear plans. • There is not sufficient infrastructure to accommodate such dramatic growth in Wilson. Not the schools, roads, sewer capacity, water resources or commercial development. Why are planners so willing to forsake our present rural character for, future unknown residents? Wilson more than doubled its size with the development of Wilson Meadows just over a decade ago. Wilson and Jackson have always been very special parts of the west, created by rugged individuals. If this plan is so beneficial for all of us tripling Wilson’s current population, why stop there. Maybe ten or twenty times would better serve the needs of our future unknown populations. It is apparently not for long time residents to say, having consistently expressed our views of slow, low density growth.</td>
</tr>
<tr>
<td>5/13/2009</td>
<td>Cadenhead, Sophie</td>
<td>My name is Sophie Cadenhead, and I am an 8th grade student at Jackson Hole Middle school. I ride horses, play volleyball, show dogs, and play guitar. I love living in Jackson Hole because of its smallness and beautiful mountains. It wouldn’t be the same here if there weren’t wide-open fields that frame the surrounding mountains. It makes Jackson special there is a good amount of houses spread throughout the valley. My biggest concern is that my unique town is going to be eaten up by houses in the huge fields that make up Jackson. As of right now I can look out my back door and see at least three miles of open field with cattle and horses grazing. It is the best feeling to know I don’t live in the city, and that I’m lucky enough to live in a small town, but if we let the land go how will this affect us? Letting our land become nothing more than a place to put houses will in my opinion change Jackson. The land value will go down while energy bills will go up. The sights will change in contrast to the houses affecting tourism, and that is how Jackson makes all its money. I know I wouldn’t stay here if that happened I would probably move. Also, with all these new houses how will that affect the animals, or the environment? Really do the benefits of these houses over rule the down side? I don’t think so. What do you think?</td>

<td>I agree with town as heart and don’t mind the rodeo grounds being in town but the grounds need a serious facelift. This area, along with the public works area and START bus parking are a true eyesore. I loved the addition of trees on SK Ave. but much more needs to be done to make this a useable and visually appealing space.</td>
</tr>
<tr>
<td>5/12/2009</td>
<td>McGee, Robin</td>
<td>I think we should focus on re-developing existing structures for housing needs before new units are met. I like the idea of attempting to house 65% or more of our workforce in the valley and I am not opposed to dorm or hostel-like housing for seasonal employees as long as it is done thoughtfully and with character. For example, the Blair apartments serve a great need but they could have been done in a much more appealing way.</td>

<td>Caldwell, Cat</td>
<td>We are at an important junction in our developmental history. The public art possibilities are endless and must be presented to the community as viable. This should be done in a sustainable and eco-friendly manner using recycled goods and volunteers. After this evening's conversations, I think that entering the conversation at the developer's drawing table is probably the best option. However, artists (and locals who may not yet be comfortable defining themselves as artists) ought to be encouraged and invited to the table for entertaining ideas. At present, it is unclear whether or not the town/county has recognized the potential for incorporating public art in a more official manner. Please consider clarifying how &quot;the lofty ideas of the community&quot; ought to be presented to the government/developers in a way that the public may become aware. One thing that I do not feel has been considered is public performance and performance art. Jackson Hole is home to a variety of talented outdoors and adventuring enthusiasts who could authentically share their stories, songs, rants and raves in a professional manner that would entertain the tourists and provide a creative outlet for the locals. (If you are curious about my ideas of being a local, then see who buys groceries:) Housing seems to be our number one thing, after conservation and, again, coming up with a way for the community to artistically express their joys and frustrations of living here would be an exceptional use of addressing public art. Finally, the thing about art in public is not only unexpected appreciation, but also communal participation in ways that make history! Just a thought at this &quot;Public Art Meeting&quot; of the virtual minds. Thank you for providing a space to share our thoughts, feelings and finds:)</td>

<td>A diverse and balanced economy is essential. Local business owners need to feel supported and not pushed out. It is important that we do not allow Jackson to become Anytown, USA.</td>
</tr>
<tr>
<td>5/12/09</td>
<td>G., Matthew</td>
<td>Utilizing Public Art would be an excellent way to enhance civic spaces and could also be a way to visually document Jackson's history. Artists could be commissioned to create a visual narrative that accentuates historic spaces and highlight local traditions in our town. Investment in Public Art is an investment in the future of our community.</td>
</tr>
<tr>
<td>5/12/09</td>
<td>Leslie, Craig</td>
<td>I have further studied the Draft Comprehensive Plan, and want to strongly voice my concerns as follows; 1) I do not believe it reflects the overwhelming desire of our community to protect wildlife and the environment. It talks about &quot;responsible growth&quot;, but does not assess the impact of so many extra people, houses and motor vehicles. 2) It seeks to &quot;sacrifice&quot; Wilson &amp; South Park, against the wishes of these communities. Why do we need commercial growth, which will then require new workers and new housing? Vicious cycle. 3) Jeff Daugherty is not acting in the interests of the community and the values they cherish; we want land protection, and not deed restricted housing that is only required if we build additional commercial space.</td>
</tr>
<tr>
<td>5/12/09</td>
<td>McGee, Robin</td>
<td>I am a fan of this concept but I don't want to see town &quot;overdeveloped&quot;. The amount of dwellings and residents in town must be sustainable for town and the surrounding national forest and national parks. Any development must also be offset by open and green spaces and parks within town for all to enjoy. It would be soooooooo nice if we encouraged a small grocery store to be located within 2-4 blocks of the town square. Without being able to buy basic needs close to town, everyone will continue to drive to one of the grocery stores often, no matter what alternative transportation options we offer them.</td>
</tr>
<tr>
<td>5/12/09</td>
<td>Miller, Abbie</td>
<td>The need for public art to address social, environmental, and local issues in Jackson and abroad are imminent. Public Art has the ability to instigate a community dialogue that can enhance and expand our visual and imaginative perceptions. Public art is on par with the visual considerations designers take with architecture, landscaping, and the preservation of our beautiful surroundings in Teton County, but can provide beauty and reflection that surpasses our urban layout. It is incredibly important that we as a community support the efforts of our local artists to engage the beauty and political climate we live in ways that expand our current visual landscape. Public art brings people into specific places and environments and asks them to consider and reflect on their surroundings. Such projects can also provide places of peace and democracy, and give access to art for all people.</td>

I have the following concerns about the South Park Development: 1.) 1/8 of a mile (660 ft.) set-backs from South Park Loop Rd. is inadequate. There should be set-backs of at least 1/4 mile from both this road and the High School Road. The only ditch that conveys water from the Leek Ditch over to the Dairy Subdivision (where there are water rights, appears to be the one along the South side of High School Road). Further, why do we care more about keeping this “gateway” (East of Flat Creek) open from development, while congesting the NW side of Flat Creek. Seems that we are giving preference to tourists visiting Jackson Hole at the expense of the folks that live and work here. Why not actually maintain open spaces and “scenic vistas” rather than giving that impression to passing travelers, who would find something very different if they drove just a mile to the West. 2.) What about infrastructure? Will connector roads (East/West) and other roads be in place before they determine how many units will be packed in to this area. What about open space? Rangeview seems to be very well planned and laid out, almost too well, as we get a lot of traffic from folks visiting Rangeview Park from all over town (but especially Blair Place and Ellingwood). As I understand it, the open space in Rangeview was determined by the # of residents (when you add all of the additional use and potentially even more from the other side of High School Road, this makes me feel like I live in the center of a housing project). I’m concerned that there will be a toilet bowl effect, with Rangeview Park at the center (especially when the Tribal Trails connector goes through). Thank you for your time and consideration.

We are writing as residents of the West Bank area of Teton County to express our concerns about the basic premise and specific content of the Teton County Comprehensive Plan update which proposes to embody a 10 to 15-year vision for our community’s future. We respectfully believe the plan in its present form is seriously flawed in the following areas: The high density “nodes” proposed for the West Bank (Teton Pines) and Wilson communities will significantly compromise the quality of life for both human and wildlife inhabitants of those neighborhoods by greatly increasing traffic volumes on highways 390 and 22. The plan should not in any case be offered for adoption until an updated natural resources overlay can be applied to those areas. Otherwise it will fail to take into account wildlife corridors and wildlife winter range locations and will increase the probability of failing to provide for the use of existing and proven methods of facilitating the free movement of wildlife and reducing the levels of road kill on highways 390 and 22. The proposed system of “nodes” will contribute to an imposed and unrealistic separation of human and wildlife inhabitants as opposed to the encouragement and facilitation of the co-existence of those populations which is the basis for Jackson Hole’s unique character and quality of life. To be truly wildlife-driven, our vision should be one of creating a porous environment in which wildlife can move about with relative safety and freedom both in and through populated and open space areas. Otherwise, the open areas become little more than viewing zoos and our communities become sterile segregated zones that are not as wildlife friendly as we want them to be. The plan as drafted does not seem to recognize that wildlife habitat is and should be everywhere and not just in so-called outlying areas. That is what differentiates the unique area of Jackson Hole from a Vail, Colorado, or Sun Valley, Idaho. There is no evidence that the planning authorities have asked themselves why Wilson and Teton Pines are already successful as wildlife-friendly communities with a high quality of life and then looked at how those characteristics can be maintained and improved upon, not how they can be changed into something it was never meant to be and that the existing population would abhor and reject. Communities can and do change, but they should be encouraged to change for the best, not the worst. The idea of becoming a “node” to accommodate some planner’s idea of growth and progress does not have much appeal to us or to our neighbors. In conclusion, we believe that the comprehensive plan should be wildlife-driven, not growth-driven and that the entire process should be slowed down until these important questions can be more carefully addressed and understood.

McGee, Robin

<td>diGrappa, Emy</td>
<td>I am involved in the arts on many levels: board member for the JH Cultural Council, dance teacher of Dancers Workshop, and Marketing Consultant for Off Square Theatre Company - the arts impacts my life. It is important for the &quot;heart&quot; of the region to have a &quot;soul&quot; - arts and culture is the soul of the community. It is the pulse of the people on many different issues political, social, and personal self expression. People's throughout history have always expressed themselves through the arts - that is the reason it has a distinct heritage and legacy - as stated in Theme 3: Jackson as &quot;Heart of the Region&quot;. For this reason, it is imperative that the arts play an important role in a comprehensive plan for the Teton County Community Vision. Each of the following areas in the plan should address the arts: &quot;Heart of the Region&quot; - the arts create the community character and play a vital role in preserving the heritage, legacy and character of Jackson Hole. Policy 3.5 - arts and cultural facilities - not just facilities but programming in those facilities makes the cultural hub. A building is a building with no life in it, i.e: the arts programs in the Center for the Arts, for example make the CA an art facility not the sign outside that says &quot;Center for the Arts&quot;. I respectfully submit my support for the consideration of arts as part of the comprehensive plan.</td>

<td>White, Marylee</td>
<td>I support policy 3.5.b: Make public investments in strategic locations. As the community continues to invest in public facilities, including arts and cultural facilities, it would be good for the community to consider a mechanism for the creation of public art; a fund that could support public art and a review committee that ensures that permanent installations fulfill the vision of the comprehensive plan.</td>
</tr>
<tr>
<td>5/12/2009</td>
<td>Springer, James</td>
<td>The increase in the number of nits in the Pines area seems extreme. Highway 390 is already under stress in volume and yet the increased amount of traffic will only increase the problem. Although there are commercial businesses in the area none of them satisfy the day to day needs of residents in the area. The market is great for emergencies like running out of eggs but I have never seen anyone there with a more that a few convenience items in their basket. It is time to quit stating in planning documents that the proximity of a convenience store will reduce traffic to Jackson. Another point in the plan promotes the increased population as it will help justify more off season START bus service. Again and again the bus service is used to justify development. I live next to the Calico and no matter how much the START bus stop is heralded as a solution to traffic volume, the ridership is still very small. Increased density in the area benefits neither the wildlife nor already critical traffic problems. I would like to see the justification based on something other than the fact that there is already density in the area and more empty busses will be made available. Thank You</td>

</tr>
<tr>
<td>5/12/2009</td>
<td></td>
<td>Protecting and enhancing the character and charm of Jackson during periods of development requires enabling and supporting a proportional increase visible culture. While simply improving public space by conventional means is vital, attention should be payed to the relevance of these improvements to the character and culture of our town. By integrating relevant public works of art into both improvements and new development, we would be going directly to the source of this culture to amplify the character and charm of the valley.</td>
</tr>
</tbody>
</table>
I think promoting stewardship of wildlife is paramount. Development must be limited in many respects in order to achieve this goal. I don't believe that tripling the size of Wilson and allowing for 1000 more units in South Park are in harmony with this goal, nor is overdeveloping the Town of Jackson. I like the idea of town as heart and support more development in town but not to the extent that the number of people in the valley has a negative impact on wildlife and natural resources. A much larger population in town would surely compromise the integrity of recreation areas such as Cache Creek and Snow King. The amount of allowable development must be in harmony with our environment.

Too many units are allowed in this area. It would cause great damage to the region and major traffic issues that are not addressed.

The following are specific comments to the overall plan: 1) Village concept, i.e., Jackson, Wilson, etc., defining specific boundaries, preserving open space and transportation "spokes" between. Each village will provide necessary services; housing for all persons providing services, including: sewer, security, water, power, trash collection, health care, groceries, gas, etc. 2) Define residency: Use Wyoming Game & Fish Dept. "Residency Requirements", as published. 3) Variance Requests: Must prove five or more years of "Residency", as defined above [#2], as a primary requirement before such request is submitted/considered. Persons with proof of "residency" of more than twenty years and, age sixty years or greater, requesting any reasonable variance to their primary residence/property, which they occupied for same period, with consideration of all zoning during same occupancy period, will be granted. All variance requests to be weighed by years of residency as follows: Five years = 10%; Ten years = 50%; Twenty years = 100%. 4) Weight housing needs for "senior citizens" as equal or greater than "employee and affordable" housing needs. 5) Vehicle, pedestrian and cyclist safety: Discourage the planting of conifer trees on the south side of east-west streets, and encourage removal of same to reduce icing and promote traffic safety. Remove all trees and shrubbery from intersections which prevent fields of vision necessary for safe travel. Consider "Four-Way" Stop Signs & controls at all intersections in residential zones. 6) Use clear and concise language in all writings. Say what you mean; mean what you say. Thank you for this opportunity to comment.

I think it is important to have more public art to inspire this community. People through history have accomplished this very goal. Look at Florence, Italy... Well maybe we don't have to build an entire city but we can sure help inspiration along.

It is really important that within Theme 3 "Heart of the Region" that we recognize how allocations for public art could make this idea of heart even stronger. Keeping our community alive, engaged, diverse, and colorful through cultural happenings is necessary in order to maintain our wonderful way of life. Creating Jackson as an arts destination not only benefits people who live here, but all of the visitors who frequent the valley. Public art is not simply sculpture or even visual art; it incorporates the performing arts, music, the written word, and any other form of creativity. Having copy within the Comprehensive Plan that dictates the need for public art in all forms will allow us to move forward in how to execute that need. Please consider adding the need for Public Art in the Comprehensive Plan. Thank you!

I feel Theme 3 sounds good except for the lack of public art in it’s verbiage. I feel that public art should be included in "cultural activities" and feel that a cultural hub cannot exist without it. Art is also an obvious component of "balanced mixed use". It will also enhance the town's gateways and should be an investment that is supported by public and private investment.

I look forward to Wilson being better connected to Jackson with pathways and public transportation. Wilson is a node and always has been. I support that concept. Concentrating new development is good for shared transportation, good for wildlife and will improve diversity in Wilson.

Parks and sidewalks withing neighborhoods create more cohesive communities and must be included. Public gathering spaces and community centers are also very important.

When enhancing Jackson gateways, do not limit the vision to signage and landscaping. Public works of art can be very effective in establishing a tone and atmosphere for our community.

<tr>
<td>5/12/09</td>
<td>Dakis, Jamie</td>
<td>I am a constituent of Teton County and would hope that you will address the issue of growth that is all inclusive of all walks of life. I have been here three years and have noticed an increase of homelessness of male caucasians between the age of 28-52, and females to a smaller percentage. There is one domestic violence housing for women and children, however they must have been beaten or abused to be allowed housing. Additionally, there is only one mission in town which is extremely secular. Responsible growth to me means that this issue needs to be addressed by making sure that along side of this growth, we as a humanitarian community build additional homeless facilities that would be more helpful to the present economic situation that only promises to beget more homelessness.</td>
</tr>
<tr>
<td>5/12/09</td>
<td>Schwender, Craig</td>
<td>The people have said repeatedly that they want slow growth (or no growth-- to the extent it can be minimized) in the valley. These planners have proposed a plan with huge growth that will be devastating to the character of this special place. If the commissioners allow such in the face of public opinion, they are ending their political years. In fact a good case can be made for a requirement that all new growth must occur only within a half mile of the homes of our present commissioners.</td>
</tr>
<tr>
<td>5/12/09</td>
<td>Wakeman, Polly</td>
<td>I am distraught at the growth proposed in the comprehensive plan. I am concerned with your plans to double the population of Teton County, and specifically, as a resident of the town of Wilson, with your proposal to triple the number of homes in our village. Why is such drastic growth necessary? Can you prove that there are so called “human needs” sufficient to justify this enormous growth? Why do we need to succumb to the sprawl that has ruined other once charming mountain towns? Why do we need another 9 million square feet of commercial space? I agree we need more affordable housing, but not at the price of such character altering growth. For those of us living on the west bank, we have chosen to live in Wilson because we prefer to be away from the hustle and bustle of Jackson. If you were to proceed with your projected growth from 170 to nearly 700 homes in downtown Wilson - our one horse town will become just like its east bank neighbor. The quiet, charming Wilson we love would be changed for the worse. Traffic would triple; and where would all the new children go to school? The &quot;new&quot; Wilson School is already at capacity, so a significant school expansion would be necessary and with it probably a traffic light where HHR road intersects Highway 22 to deal with all the increased school traffic. Who is it exactly that wants to triple the size of Wilson, besides the developers, and the planners who do not live there? If you were to take a vote of Wilson residents, I am sure they would vote such a proposal down. And what about the wildlife that we profess to care about protecting? With the documented decrease in moose population over the past 20 years, it is unethical to further deplete their crucial habitat, thus continuing their decline until we no longer get to enjoy their presence on the west bank. The proposed density of 9 units/acre in critical moose winter range ignores your responsibility for protecting one of the things which makes Jackson Hole such a special place. Please don't ruin our village of Wilson or Teton County by moving ahead with a comprehensive plan which lacks proof of the necessity for such significant and rapid development, as well as the backing of its residents. It would be a tragedy to move so quickly and permanently damage the nature of the community of people and wildlife we love. Please slow down, we don't want such growth!</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Rambo, Jeff</td>
<td>This is not a must do project in Wilson, there is no need for this many homes. This is just developers being developers. There are no jobs or businesses or buildings to put a business in Wilson and it will not change any time soon. The jobs are at the ski hill or in town so built there when it is necessary, we have enough traffic from Victor and Driggs every morning. This town has very low density and that is the attraction. This project is not needed in Jackson at this time, maybe once things turn around and then a project in the town of Jackson makes more sense.</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Zellmer, Theresa</td>
<td>In regard to the Wilson Plan, I cannot support the housing density and feel the numbers are too high. I'm also concerned about wildlife conflict that high density housing may create, coupled with high traffic converging at the bottom of Teton Pass. Thank you,</td>
</tr>
</tbody>
</table>
I am submitting a full comment on the Jackson/Teton County Comprehensive Plan in this District 11 (Wilson) section of the Feedback portion of this website. I am also submitting portions of my comment in other sections. It does not appear that any comments have been submitted as yet, which I find worrisome. My husband and I attended the community meeting on May 6, 2009 at the Wilson School. It would be extremely disappointing if the important questions raised and the many impassioned comments made at that meeting were not appropriately recorded.

Although new Jackson-area residents, we’ve been coming to the region for winter vacations for more than 25 years. In fact, my first glimpse of the Rockies was looking at the Tetons as my plane landed in Jackson Hole in 1982. Every time we returned to the region, the build-up was shocking. Two years ago, we finally decided to buy, fearing that we would never be able to find a permanent home here if we waited any longer. Fate was with us when we made that decision, since my husband found a position here and we were able to move much sooner than expected.

It was the character of the region that drew us here: the sheer, naked beauty of the mountains and the valley; the friendliness of the residents; the hominess of the town; the ubiquitous commitment of all who lived here to protecting the character of this unique region. We moved here to be a part of this community that so closely aligns with our own personal character. We live in Wilson; our home is less than ten miles from Hoback Junction.

We are concerned about the inclusion of Wilson as one of the nodes slated for expansion by the Comprehensive Plan. According to the Plan, Wilson already has mixed-use facilities that have locally oriented non-residential uses, which provide local residents with basic services. The Plan states that the intensity of any development would be higher in town where the locally oriented uses serve the entire community and limit dependence on trips into town. In terms of building form and orientation, further development would include two- and three-storey buildings located fronting the street with mixed uses that provide for morning-through-evening vibrancy and where pedestrian corridors could be utilized while accommodating automobile transport. The Plan calls for the development of mixed-type residences that include single family, duplex, triplex, and fourplex construction, along with limited retail facilities in appropriate locations. According to the Plan, the building form and orientation of such structures will be compatible with neighborhood character. We respectfully ask where tri- and fourplex housing is compatible with the character of Wilson, or where additional retail facilities would be appropriate? Even though the Plan states that single family mixed development is only appropriate to provide workforce housing, we are puzzled as to where such structures would fit in with Wilson as it has evolved over the past 150 years.

According to the Plan’s discussion of managing growth responsibly in District 11 (Wilson), the Wilson node comprises an area within ~1/4 mile of the Wilson commercial core that is deemed appropriate for town-level densities. The buildout calculations call for increasing nonresidential existing floor area from 51,000 to as much as 171,000 or greater. Buildout numbers also call for increasing residential development from 170 dwelling units to as many as 520 dwelling units, which would increase residential density from 0.94 to as much 3.08. Essentially, the Plan suggests that Wilson expand at least three-fold. How can such expansion possibly preserve the character of Wilson?

The Comprehensive Plan states that "the priority in Wilson is the provision of housing opportunities to benefit the community. This is meant to benefit the Wilson community or the Jackson/Teton County community? Expansion of Wilson to provide for the housing needs of the broader community would exploit the educational, commercial, sewer, emergency, recreational, and transportation services of the immediate community. While it would appear on paper that the vibrancy and sustainability of Wilson would be enhanced, a three-fold residential expansion would certainly strain existing services beyond the breaking point. Furthermore, the Plan states that "all development in Wilson should be designed to protect riparian corridors." Any expansion within ~1/4 mile of the Wilson commercial core would involve riparian habitats.

We are impressed with the detailed breadth and depth of the Comprehensive Plan. Certainly, the developers of the Plan have exercised due diligence in bringing to the community such a well-structured design for growth, development, and conservation within the region. Of grave concern to us, however, is that the Plan states that this design will be used to inform future zoning and land development. We understand that community members called for buildout projections and some means of gauging the process of growth. The Plan reports that the community supports more population in the Town of Jackson in order to preserve the agricultural and natural resources in the county. It also states that "a large majority of the community agrees to limit development in rural parts of Teton County while allowing more development and population growth in certain county nodes such as Aspen/Pines, Teton Village, Wilson, South Park, and Hoback." Nowhere in the plan does it explain how or why these areas were selected for expansion. Time and again, spokespersons for the Comprehensive Plan have emphasized that the Plan is only a plan, and does not define zoning maps or land development regulations. Yet, a strategy referred to repeatedly within the chapters of the Plan states that zoning maps and base development right regulations should be updated and amended to be consistent with the 10 Future Land Use Plan. The 10 Future Land Use Plan, or "FLUP," is an integral part of the Comprehensive Plan. The plans for residential and unit developments, for affordable housing developments, and for mixed use developments appear to already be in place under the guise of "just a plan."

If adopted, will the Comprehensive Plan adhere to its stated principle that new development regulations will protect existing character and promote sustainability? Will it truly consider "how well a proposed development fits' into the setting in which it is to be located?" When it states that "incentives that promote desired conservation and development are also needed" does it mean that administrators of the Plan will pay off residents
within county nodes and the Town of Jackson to expand housing and local convenience commercial? The Plan also states that annexations will be used for town expansion, and that criteria will be adopted to guide such seizure appropriately. We wholly support the promotion of the Town of Jackson as the “heart” of the region. From a sustainable perspective, it is certainly desirable for at least 65% of the Town’s workforce to reside in the immediate vicinity. The vast majority of workers are unable to afford a home valued at $2 million, the current average. Perhaps employers should, indeed, take on a larger responsibility for housing their workers. Perhaps it will be necessary to develop multi-family housing. We agree with the majority of community members that the need for local workforce housing conflicts with other community values such as preservation of wildlife habitat and natural resources, reductions in traffic, and preferred development patterns. We believe that provision of deed restricted workforce housing should take priority over additional commercial or resort development make room for the workforce before developing businesses that require more workers. This would uphold Theme 5, which calls for the community to remain a community first, and a resort second; to maintain a vibrant economy while preserving wildlife, natural resources, and community character. As the Plan reports, the community expressed concern that growth primarily oriented to serving visitors, has little community benefit and may compromise community character. Theme 6 of the Comprehensive Plan addresses the transportation issue in Teton County, stating that ideally, any strategy adopted would reduce resident and visitor reliance on single-occupancy vehicles while still allowing safe, efficient, and economic travel.Repeatedly, the notion of bicycle and transit use in the Town of Jackson and in and between county nodes is suggested as a means to alleviate local traffic. We certainly agree that mass transit is desirable, but dependence on bicycle use anywhere outside of the Town itself is unrealistic. More importantly, we believe that Teton County planners should develop a working relationship with WYDOT to increase the viability of alternate modes of transportation within the Town of Jackson as well as in/among other county locales, not simply investigating internodal transit. As new, but passionately involved members of the Wilson and Jackson/Teton County communities we wish to express our hope that planners, administrators, and elected officials read closely the Comprehensive Plan before adopting it as the absolute paradigm for future development in this region. The Plan is a work of art and its intricate detail is staggering. Unfortunately, it appears that a number of the Plan’s expectations have not yet been met: updated mapping of wildlife habitats and migration corridors; updated zoning maps and amended base development right regulations; coordination between Jackson/Teton County planners and WYDOT; determination of congruence between stated plans and local character. Surging forward to adopt this Jackson/Teton County Comprehensive Plan without careful consideration of these and other issues significant to the residents of the varied parts of this community can only be detrimental to all concerned in the long run.

In the Introduction to the Comprehensive Plan we read about the community vision adopted in 1994 and confirmed in 2008. We agree with every one of the points made: protection of scenic vistas and wildlife habitat for generations to come; maintenance and enhancement of environmental quality; promotion of and support for a diverse social and economic population, including provisions for a resident work force; preservation of the traditions and character of the Rocky Mountain West and Wyoming; and assurance that development on private lands in Teton County was compatible with surrounding public land values and uses. We also understood that the community recognized that a new plan should map areas appropriate for certain land uses in order to give landowners, developers, neighbors, and elected officials a measure of predictability regarding land use decisions and actions, so that priorities of and relationship between community values would be addressed. We particularly appreciate that measurable indicators would be developed with any new plan that would hold everyone involved accountable for the cumulative impacts of decisions made. We understand that the development of a new Comprehensive Plan particularly addresses the issue of sustainability within our region, so that development meets the needs of the present community without compromising the ability of communities that evolve in the future to meet their own needs. It is notable that the proposed Comprehensive Plan guarantees that decisions about development extend to the preservation and protection of the Greater Yellowstone Ecosystem. Specifically, the Plan states that, while recognizing that growth and development are necessary to meet the human needs of the community, the impact of local decisions must be understood in a regional context because of the ecological significance of our surroundings. To this end, two foremost priorities were developed that drive the focal community themes around which the Comprehensive Plan was formulated: 1) promotion of wildlife and natural resources stewardship, and 2) responsible management of growth. In terms of the first priority, the Plan seeks to maintain viable populations of all native species and to preserve the natural, scenic, and agricultural resources that define Teton County’s character. There’s that term "character" again. In the chapter detailing this first community theme, the Plan once again addresses the need for updated mapping before any decisions about development or community change can be made. Many residents of Teton County are seriously concerned about the disruption of wildlife migration corridors, should any regional development plan be adopted before mapping is updated. Community residents apparently agreed with the limitation of development and population growth to county nodes, the “Y” and downtown Jackson. In no part of the Comprehensive Plan or its appendices is it recorded that community residents agreed where those county nodes would be located.

The second priority of the Plan details how growth in this region will be managed responsibly. We agree with the Plan’s statement that future

</tr>
<tr>
<td>5/11/2009</td>
<td>Schwartz, Bill &amp; Cheryl</td>
<td>As I have discussed with Jeff, my wife (Cheryl) and I own 10 and 20 East Simpson (Lots 1 and 2 of Block 7 of the Cache 2nd Addition). Our property is directly across the street from the Center for the Art's theatre. It appears from the map that only Lot 1 is currently included in the proposed mixed-use designation area. Jeff indicated that he thought that was an oversight, but suggested that I submit a comment as a reminder to fix it. Thus, for the record: Both Lots 1 &amp; 2 should be included in any mixed use area. As you know, it could be difficult to accomplish any mixed-use development on only one lot. Further, it appears that the mixed-use area extends at least two lots east of Cache Street in all other locations on the South Cache corridor. There is no reason to discriminate against our property; in fact, given its proximity to the Center for the Arts, one could argue that our two lots are more suitable for the mixed-use designation than are any of the other properties located to the south of us on Cache Street. Additionally, it is unclear how many of Mr. Varley's lots across the street from us on Simpson are included in the proposed mixed-use area. (It appears that at least two and perhaps more are included.) I would think that properties across the street from each other in this area should be zoned in the same way. Thus, if the thought is that two lots east of Cache are appropriate for the mixed-use zone, then only 2 of Mr. Varley's lots should be included in the mixed-use zone. Otherwise, the Town would be potentially discriminating against the Hoffmans, who own the two lots east of us. As we consider it, we are not sure whether it is such a good idea to have the entire length of South Cache &quot;upzoned&quot; in this fashion. If the intent is to provide increased services for the Center, those services should be provided in very close proximity to the Center; it would not seem necessary to provide those services several blocks to the south of the Center. Thank you for your consideration of our comments.</td>

<td>Parker, Jon</td>
<td>I do not know why you bother to take public comments on a comprehensive plan for Teton County. The public has repeatedly said that their priorities are for wildlife preservation, open space, and affordable housing. Yet your actions seem directed at development to the detriment of all of these three factors. Perhaps, it lets you feel better to believe that you have taken public comments, but public desires have had no impact. In addition, the expense of a master plan seems to be wasted. Even with the prior comprehensive plan, it seems to have had no impact on your approval of developments. The plan called for 35 acre lots in rural overlays. However, if 350 acres were to be developed, first it was increased from 10 lots to 25 as bonus density for clustering and leaving open space. Then, it was increased to 50 if affordable housing was included. Finally, &quot;we don't want affordable housing in our upscale project&quot; so the dense housing was put in South Park. The final result was a project that instead of having 10 millionaire homes, we get 50 millionaire homes that probably put more strain on services and affordable housing than was solved. Either quit the charade or truly listen to the public. South Park is a major wildlife corridor, and currently has a rural character. We don't want it to become a solid, high density housing development.</td>

<td>Stone, Cindy Hill</td>
<td>Let's not take time to smell the roses. We don't have that luxury. What we have is a team of educated planners (they might be eastern educated), a consulting group that wants to get their final installment, and a valley that is back to work come Memorial Day. We make hay when the sun shines. It really doesn't matter what your job is, during the summer months, life is busier. When I'm sitting on top of &quot;Cream Puff&quot; it is hard for me to fathom that we would destroy anything as beautiful as this valley. Teton Village is a place I hardly recognize. (The village was my mother's babysitter) I don't think there is anything we can do to save it. They have a tremendous amount of commercial space that has already been approved, just waiting for the money man to give the nod. This is commercial space that will create jobs that we don't have people for. If we would add up all of the jobs created by Teton Village (I don't have my tallyer on me) I wonder if Teton Village houses 65% of its employees.-- Of course not, I'd bet 10% and that's an uneducated guess.. Now hold that thought and move the housing to the Aspens and Wilson. Bingo Bongo. Do you see what I see? Whoa, Mr. Green Jeans we have made a discovery. It doesn't take redneck genius here or a Bolshevik mentality to get the just of things. Money is money no matter how you fold it. If you don't know what in the hell I am talking about, call me or stop me on the street. After Memorial Day you might have to catch me on the trail. Don't let down your guard. Leave a message or send an e-mail to our government. We're about to get screwed in a big way. And they want us to smile about it.</td>

<td>Schwender, Craig</td>
<td>In the surveys taken last year, this was more than a theme-- it was a priority. When it conflicted with growth and development, this was to take “priority”-- that's what it means. The planners seem to have forgotten that, or as one said when denigrating the surveys, &quot;we don't plan by referendum.&quot; The people will not put up with being insulted by the planners and those encouraging them. Start over and do this right, it's just too important.</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Schwender, Craig</td>
<td>Nodes? These are expensive housing for developers in town and Teton Village. No justification has been presented to justify shifting the burden of development from those doing the building to us out in your new &quot;nodes&quot;. We did not vote to become nodes. We bought in the Aspens (or in Wilson) because we chose not to buy in town. So the smart guys brought in for this bring the town to us. GREAT! Fire 'em.</td>
</tr>

<td>Dann, Erin</td>
<td>With great respect for the work done to move the community forward with a land use plan to guide us into the future I'd like to share a few comments and concerns: Where is the pressure coming from to grow to the degree this plan proposes when the predetermined priority for it was preservation of wildlife and conservation? - The Resor property development was a concern because our roads and transportation alternatives are so limited. Safety in the event of a natural disaster is compromised by the infrastructure of Westbank roads and the aging Snake River bridge. We know how slowly WYDOT works and adding enormous traffic loads to already busy highways seems irresponsible. Not to mention the impact on wildlife...the top priority of the new plan. - The risk of looking like “anywhere resort USA.” Just because some of our resort counterparts have overdeveloped with limited road accessibility doesn't make it right. i.e. Sun Valley - Reconsider the importance of a &quot;node.&quot; They are not equal, as presented in the plan, and shouldn't be treated as such. Stop and go, bumper to bumper traffic on Hwy 22 during July and August are a reality we already live with. Let's not make it worse, please.</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Becker, John</td>
<td>Thank you all for the presentation in Wilson. I now understand how you've reached your numbers. The numbers for Wilson are staggering to me. The conflict with the wildlife vision is the main stumbling block for me, combine that with the teton pass factor, traffic and doggies etc., I can't support the numbers the plan proposes. One thing that wasn't discussed at the meeting is Wilson's close proximity to some of the most important scenic easements. The Ordway Fish Creek Ranch, the Rossetter easement, the Wilson Wetland Trail and both Hardeman meadows. I worked on four of these projects with the JH Land Trust and realize how incompatible the proposed density is. I was amazed to find out that the current zoning allows for 120 new units. That number also seems too high to me. Thanks to you all for the opportunity to comment.</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Schwender, Craig</td>
<td>Let's see-- you want us to absorb a 30 fold increase in density over what is now allowed. Why? to help out those developers who are building in Teton Village and in town. Can't see a good reason to do that for them. These hot shot planners said they wanted to bring predictability to the process. What kind of predictability did they bring us? For the last 30 years the area near the Aspens was to be built one per 35 acres. Then in one quick thrust while everybody is out of town, surprise-- not 10 units, but 310 units. That's predictability!!!</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Dahl, Charles I</td>
<td>I am opposed to the draft comprehensive plan. This plan should be more appropriately called the Real Estate Agents, Developers and Contractors Guaranteed Pension Plan. Only lip service has been given to the county's first two themes (Promote wildlife stewardship and natural resources and Manage growth responsibly). I would like to see limited and more closely managed growth not the drive to maximum &quot;build out&quot; that seems to be projected. Projected raises in sales tax to seven and eight cents, massive increases in property taxes and a real estate transfer tax to support needed projects are not acceptable. We cannot grow our way out of growth related problems.</td>
</tr>
<tr>
<td>5/11/09</td>
<td>Fuchs, Junie</td>
<td>Teton County Staff and Commissioners have obviously put a lot of time and effort into this plan and it shows. I believe it is a good basis for a plan and supports the communities interests as a whole. The idea of nodes which can contain the needs of certain parts of the valley shows some great vision. I would like to see more study and research in Teton Village to be sure it can support the 6000 to 8000 people that visit, live and work on any given day in the winter. I am not sure there is enough diversity or quantity in the commercial area to support the guests, workers and residents. Jackson as heart is a good theme as long as we don't create this MECCA that sends everyone in the valley on our roads to MECCA and contradicting Theme #1 our Natural Resources. There needs to be a good balance between having enough support in the nodes and not truly competing with Jackson as Heart. Thank You</td>
</tr>

</table>
Having attended the County Neighborhood meeting in Wilson on May 7th, it sounded as though the majority there were in agreement with the Theme One of the Community Vision which states: Promote Stewardship of Wildlife and Natural Resources. However at the meeting people seemed betrayed by the Plan's prioritization for Wilson of 1: Responsible Growth and 2; Workforce Housing, with 5; Wildlife and Natural Resources much lower on the priority list. Is this really the priority for Wilson given the input people gave in the pre-draft comment period? The people in attendance seemed further horrified at the suggested build-out numbers, allowing up to 520 new homes in this node. Basing build-out numbers on the density of West Street and allowing that density on all areas of the single family mixed type areas on the map for Wilson seems too dense. The recent economic downturn will likely diminish the growth rate, and therefore I would suggest a re-evaluation of build-out numbers be contemplated. A diminished build-out number would perhaps accommodate people's wish to protect wildlife and natural resource, while still allowing the increases in density currently permitted under the existing zoning regulations. In general Wilson residents are not opposed to some growth, but fear that density allowances will damage the character of the town. Specifically, classification of the properties south of Highway 22 and east of Fall Creek Road for town-level densities, allowing up to 9 units per acre of single family mixed type development seems inappropriate. Given the wildlife corridor there from hillside to Fish Creek and surrounding wetlands, it would be better to transition from town to rural and conservation lands with much lower density there. Thank you for all the work you have put in on the draft comp. plan, and for the opportunity to have input at this stage.

I was born and raised in Jackson and have since moved to San Diego in the last couple of years. While living in San Diego I have noticed the city's commitment to public art. I think the public art really adds to the city's culture and benefits both the locals and people visiting. Over the last couple of years when I have come back to Jackson, I've noticed an increase in public art which I fully support. In the future I hope to continue seeing more public art. It will make visitors' experiences more memorable and add to the unique scenery that already naturally occurs in Jackson.

I am in full support of the proposed growth plan in Wilson. I have always felt Wilson to be too exclusive & under utilized as an area for the future growth of Jackson. If development is executed with intention & a focus on maintaining the strong sense of community that exists in Wilson I strongly agree with the proposed growth projection. Thank You.

Increasing housing in Wilson will only increase traffic on Hwy 22 to and from Jackson. As stated in the plan (increasing housing in Wilson will decrease the need to drive into town for errands etc.) where do these numbers come from?? I would like to see a valid assessment. If my assumption is correct, a large portion of workers live in the town of Jackson, not Wilson, therefore wouldn't it be a better option towards creating workforce housing where a majority of residents work? This would be a more sustainable option. Not built below one of the most dangerous mountain passes in the U.S. Can anyone say "Tommy's Truck Stop" again?? And more importantly, why has the largest proportion of workforce housing been developed in Wilson? Tripling or even doubling housing in Wilson will only destroy the character and sustainability of the town. Places like Hungary Jacks or Westside Groceries will not be able to keep up with the demand. Will a new post office need to be created to supply mailboxes to new residents? Will a new school need to be built?? Where? How? What is the plan for an increase in traffic on Hwy 22?? I believe in "no growth" We should work with what we have. I would saw half of all the condos in the Aspens are empty during the year. There are places for people to live here in Jackson. I think the solution would be to place a Cap on rental fees etc. to make it affordable. Building more is not the answer.

Increased density in Wilson and Aspens will create need for wider roads to accommodate for more vehicle traffic, further impacting already heavily affected wildlife. Any further density should be developed near services and jobs in TOJ. We should maintain the westbank as a more rural area of the county as currently zoned. We oppose the nodal concept as proposed in the draft plan.

We are opposed to the plan. We feel it doesn't have enough protection in it to maintain the current atmosphere/environment in the Aspens and Wilson. We oppose anything that would bring or encourage more traffic to the area.
I own the 5 acres between Hardeman’s Barn and Fish Creek. My house is virtually on the creek and is built up so I have an incredible view up and down the creek and across the meadows. I see swans and geese and ducks and teal, eagles osprey and countless song birds. There’s a herd of 15-20 elk that move from just upstream of me all the way down the creek. Moose rub against my house at night and feed on the willow and in the creek - and get killed on the highway. This spring there are actually two fox families raising their families around the Hardeman buildings; about 13 kits. Some of them will perish on the highway also. Otters are making a comeback and so are beavers. I have endless wonderful wild life stories seen right from my kitchen window. But the creek is already being degraded by the unnaturally high water that continues so much of the year; the baetis hatch is nearly gone and the caddis hatch is sparse. The amount of growth proposed by the plan can only speed and increase the degradation of the whole area. Our natural treasures need more protection - as our Wilson community keeps telling you- than is proposed in the plan. Please be more sensitive to what the community is saying.

According to the results from the community survey, it does not appear that the connection road from hwy 89 is a desired thing. If fact, it seems like the road is completely unwanted.

I have lived in the Aspens subdivision since 1975. In 1976 I purchased a condo, in 1979 I built my first home here, and in 1988 I built my present home. The Aspens was designed and is still today a resort development with seasonal occupants in the units. This has allowed the subdivision to have a minimum impact on the environment and wildlife with very little full time use. The actual number of single family residencies is quite small with most lots well over 1/2 and acre or larger. The clusters of multi-family units have limited parking with no garages, vacation type aminities and lots of open space for tourist to enjoy. Your idea to impact this area with full time densely populated full time residence will have a serious negative impact on the full time residents and more importantly, the wild life in the area. (a natural corridor between Fish Creek and the Snake River for the majority of wildlife in the Jackson area). We addressed this concern in detail with the Osprey Subdivision which fortunately was prevented from development. Now it appears you want to create a similar problem to the north in and around the Aspens. Your proposal to develop 50 by 150 size lots for single family homes is completely out of character with the current size homes and acreage in the area. There are no 50 by 150 lots in this area because of wild life concerns when the first comprehensive plan was developed and implemented. It limited growth in this area to protect wild life and the character of the current road. When Teton Pines Resort was developed, it was made quite clear under comprehensive plan that any development would be limited. At that time, the county commissioner even rejected a plan to hook the sewer from the Aspens and Teton Pines into a single line to town (which we agreed to pay for as well as a deposit to the town of $1,500,000.00 for future development of the town sewer system) because the commissioner did not want dense development on Teton Village Road. Under the comprehensive plan, having a sewer line down the village road would lead to increased density and development. We put in our own system as a result. Years later, the county put in the very line down the village road that we had proposed. The commissioners were right to reject the proposed line because the very concern they address is being proposed today. Teton Village Road is a very unique corridor along the Tetons. Don’t ruin it forever with the dense over developed plan that you now are proposing.

I have actively followed this comp plan since the beginning, attending meetings, and being hopeful of an outcome that protects wildlife and the people who have lived in this valley for years. The people have spoken in loud terms...WILDLIFE, WILDLIFE WILDLIFE...have you not heard it? Both Teton Meadows and Osprey Creek (huge density developments) cause an outcry among everyone who loves this valley...we do not want this kind of density. The village road has too much character to be lost with the numbers in which this plan proposes. This plan is out of character, much too dense, and the people of this valley do not want it.
I don’t envy the task ahead of you, but you’ve just got to get this one right. No mulligans, no second chances, no Federal bailouts. The recently released draft for the new Comp Plan seems distinctly out of synch with the overwhelming sentiment in our community. First of all, further growth may be inevitable but full build-out need not be. Preservation of wildlife and scenic open spaces will, above all else, insure high quality of life for our citizens and highly valued experiences for our visitors. South Park serves as the southern gateway to Jackson Hole and simply must be put back at the top of the list of protected areas, as was so clearly stated in the 1994 plan that has served us well up to now. To refuse to restore this irreplaceable resource as a protected legacy would be incomprehensible. On the matter of work-force housing, I’m reminded of the adage about finding oneself in a deep hole and recognizing that the shovel in your hand is helping to dig it. STOP DIGGING! Let’s take care of the people who already live and work here through innovative solutions that don’t depend on increasing the development footprint that already scars so much of our precious land. Incentives for purchase and re-development or rehabilitation of existing neighborhoods, particularly those close to town with existing infrastructure and services, simply seems to be the obvious direction to take. Adding more commercial space and de novo projects is the equivalent of digging our collective hole even deeper. Forget about contrived growth strategies and focus solely on these two issues: Natural resources (wildlife, open space) and Work-force housing (existing families employed by existing businesses). Doing so will greatly improve the chances that the final outcome yielded by your actions will be one we can be proud of leaving for the next generation and beyond. If those two priorities drive all your decisions, our growth will take its proper course into the future. Do the right thing for all the right reasons that drew all of us to call this special place our home. Get this one right.

Planning I live in Cottonwood and the proposed 1500 homes is way to dense. 1) Need a road first that parallel High School Road. 2) Need another play ground for all the children that are in the Blair apartments as well as for dogs and people whom attend our cottonwood park. 3) Need a large setback like they have in front of the high school. 4) Need to develop the infrastructure first prior to the home plans. 5) Do Not dump anymore traffic on High School Road it is dangerous enough.

Our greatest asset in Teton County is not tourism, second homes or the construction industry, but the natural environment, wildlife and gorgeous geography. People come to Teton County because it is unique and one of the last frontiers remaining in our country. Our land use planning should first and foremost be designed to continue to protect and enhance these special assets. Adding additional growth potential to the current plan already allows for 20,000+ additional people is premature and ill-conceived. The commercial square footage proposed will continue to fuel a much greater deficit of workforce. Our basic premise for planning must be to DO NO HARM to what we have. Any increased development should enhance these precious values and not despoil them. I respectfully submit how I see our 2009 rewritten Comprehensive Plan should proceed. Much of what I am addressing is not being considered and in my opinion, as well as many others in the community, should be. a. The current draft must allow existing density (and remove the bonuses) for already platted residential and commercial zones to infill before adding more potential, worse case scenario density to the valley. There have been way too many conditional uses and bonuses given. These incentives to encourage developers are unnecessary. The market will take care of itself. b. Node boundaries must be mapped and fixed with remaining open space carefully assessed as to additional impacts the development will cause even if it means no further development there at all. Consider transfer of development rights to move to more suitable land especially if the areas are wetlands, or are in wildlife summer or winter range, i.e. Also Wilson and the Aspens should not be considered “nodes” c. The NRO and other natural resource mapping must dictate where any new development should not go and not be just a reference point as one of the many planning considerations. Wildlife corridors, winter and summer range, etc. must be respected and no development should occupy these areas without a complete assessment of the wildlife impacts new development will cause. This important tool does not appear to be taken at all seriously. Specialists such as Game and Fish, wildlife biologists etc. should determine these impacts based on currently accepted scientific practices. They should comment on any new or redevelopment. d. New development should also consider the quality of life of its future occupants with special attention to adjacent parks, bike paths, public services, schools and churches, clean water and air, setbacks allowing for landscaping and planting more trees, lighting impacts on the citizens as well as being able to see the night sky. e. The cost of growth determination is seriously missing in this draft plan. It must be the responsibility of the public officials to consider their constituencies and the future tax burden that will be placed upon them. Growth has never paid for itself. It is irresponsible to not understand what any growth will cost and make the information public and part of the discussion and analysis. f. Finally, all public and private input to the public officials should be made public to truly determine if the community wishes are being heard. Thank you for your consideration.

<td>Cushman, Verena R</td>
<td>We live in the Aspens since 1989. What attracted us to this valley was the fact that there are still more animals around than human beings. Your comprehensive plan is pushing numbers and development, which are in no way an enhancement to the delicate balance of Wildlife / Natural Resources and human interaction. I don't need to tell you that Jackson Hole is an environmentally marginal area that does NOT support a growth explosion as your plan is laying the groundwork for. Unless you want to destroy it all, we need to stress a low impact policy. We like your nodes/cluster approach, surrounded by open spaces / green belts, and we support healthy growth to benefit ALL, and not a few selected - as your proposal favors. Your plan proposes numbers that can not possibly be absorbed by the existing INFRA STRUCTURE. The &quot;Aspens Node&quot; is a necessary convenience center for the entire Westbank. We have plenty of workforce people renting timeshare condos, in fact we are a mixed community as it is, with visitors, short- and long-term tenants walking the neighborhood; allow this growth to flourish in moderation, but don't choke it with too much of one kind. It was dirty business when the Lake Creek Condominiums were built in -what we were told- were dedicated wetlands. The 100yr flood plain line was arbitrarily drawn and altered to allow business to happen! Your Plan is opening flood gates to the-like business allowing densities that will move new people in affordable units in and others out!</td>

<td>5/9/2009</td>
<td>Chamberland, Ray</td>
<td>Comp rewrite? By who? Who are these planners? Have they done a full comprehensive plan before or is this on the job training that the county will be stuck with? Triple build out and no mention of improved roads and bridges to handle traffic! What's the point of a rewrite when 5 people - county commissioners can amend it, when pressured by special interest groups. Point Teton Science School, built in middle of elk and deer migration route. This school was given over 100 variances! also Jackson Hole Golf and Tennis, over turned by 3 people and was taken from the original comp plan and changed to a resort status this whole re-write is an exercise in B.S.</td>

<td>5/9/2009</td>
<td>Phillips, Theresa Dowlin</td>
<td>For the past 1 1/2 years, many locals have been participating in what the Planning Dept. called the &quot;People's Plan.&quot; We spent countless hours attending meetings and readjusting our time to be in the valley for what we considered to be critical decision times. We believe that our input was forming the new Comp Plan. Now that the plan has been revealed, it is not what anybody asked for at all. The new Teton County Comprehensive Plan is a huge disappointment with tragic consequences. Comments will be directed to Wilson and the Waldron property. Too much growth Wilson - Not a &quot;walkable&quot; community Waldron property - &quot;South on Fall Creek&quot; boundary Moose habitat being ignored! In October 2007, the people clearly chose &quot;Option A&quot; with neutral density. Teton County's published hand-out called Mixed Use Village Sub-Area Plan WILSON DENSITY stated &quot;Based on the public input received at the October 4, 2007 Open House, the vast majority of Wilson residents support Option A (density neutral) and are opposed to Option B (increased density).&quot; Wilson has already doubled in size in the past decade with the addition of the Wilson Meadows sub-division. Most importantly, Wilson is not an appropriate place for high-density housing. Wilson is not the cute little isolated mountain town that the County tries to portray it to be! It is a town that was built at the base of a steep mountain pass, 10% grade, which serves as a major commuter highway for multiple communities in Idaho going to and from Jackson and Teton Village. WYDOT considers it to be one of the busiest and most dangerous highways in all of Wyoming. Traffic count figures for July and August 2008 average around 12,500 cars per day traveling through Wilson. Yet the County seems to believe that this is a great place for high-density housing! To propose a significant increase in high-density housing immediately at the base of this dangerous run-out is not only irresponsible but grossly negligent. In addition there has already been two affordable housing projects built with the additional project at the old Wilson School underway. The Waldron property should remain in the &quot;South on Fall Creek&quot; boundary which is rural in character. Alex Norton, on April 20, 2009, explained that high-density was going to be put where high-density already exists. This is not true for &quot;South on Fall Creek&quot; and the Waldron property, which has been platted for five parcels on 15 acres for decades. In addition, Teton County's &quot;Comments from Wilson Mixed Use Village Sub-Area Plan Meeting--10/4/2007&quot; states on the 3rd bullet point &quot;Waldron Property - ALL were opposed to seeing increased density there.&quot;Critical moose habitat is being ignored. The Waldron property provides substantial wetlands for moose habitat and provides the necessary wildlife corridor to the Rossetter Land Trust and the Snake River. Please refer to the article in the Jackson Hole News &amp; Guide dated March 25, 2009 - &quot;Moose on the decline in Jackson Hole area.&quot;In conclusion, to propose high-density at the Waldron parcel, with deadly access at the base of Teton Pass, is not responsible planning.</td>

<td>Doyle, Elizabeth</td>
<td>I attended the meeting at the Wilson School on May 7th. There was obvious emotion and opposition to the proposed plan. The plan, in my opinion does not focus enough on the impact the increased traffic will cave on these &quot;nodes&quot; but especially on Wilson. I feel that the three identified &quot;Nodes&quot; on the westbank are unfairly matched. Teton Village was solely developed to support the resort. The Aspens was developed for residential housing. Wilson is not and never has been a &quot;development&quot;. Wilson is a town with a grocery store, bar, restaurant, park, community center &amp; school. It is also the only &quot;node&quot; with a highway that splits the town in half. Increased traffic on Hwy22 would only divide our town in half even more and destroy the already threatened wildlife population. I have three children we live down Fish Creek rd. We ride our bikes to Hungry Jacks everyday in the summer and it is already scary enough to ride my kids down Main St. &amp; West St. The thought of potentially doubling the amount of vehicle traffic on those, already narrow, roads if frightening. My children are unable to cross Hwy22 by themselves because it is too dangerous. I am not opposed to growth. I want my children to be raised in a community that provides for them. However; the current proposed plan is not smart growth. I would strongly suggest that the commissioners treat Wilson very differently than the rest of the proposed &quot;Nodes&quot; because it is not at all a fair comparison. Thanks for your consideration of this matter,</td>
</tr>

<td>Kummer, Larry</td>
<td>In reviewing the draft of the new Comp Plan it is obvious that its authors have caved in to the interests of those who stand to profit most, economically, by the continued growth and sell-off of Jackson Hole. This document fails to retard the same development path we have experienced the last few decades. Multiple surveys and neighborhood meetings notwithstanding, the concerned citizen with little or nothing to gain monetarily cannot begin to compete with the desires of those who control the land in Teton County – whether it be by inheritance, purchase or option. Landowners have effectively partnered with our real estate agencies, to advertise and invite the world to own a piece of our valley. As a result, tourism has been replaced by growth and development as the primary economic engine of the valley. Real estate, finance, (often our own banks), architects, attorneys, right down to our planning departments, planning commissions and often our elected representatives have been complicit. None of these interests enjoy the words &quot;low growth&quot; or &quot;no growth&quot; in their vocabularies. What started out as an effort to limit our growth in favor of wildlife and open space has failed. I was foolish to think I could help make some difference.</td>
</tr>
</tbody>
</table>
My name is Richard Anderson. For 12 or more years I have been a close and interested observer of the arts community in Jackson Hole, mostly as a writer and editor for all of our various weekly newspapers, and, for the past 18 months, as marketing director for the Center for the Arts. I would like to comment on public art and the arts in general as they relate to the community of Jackson Hole and the Teton County Comprehensive Plan. As should be obvious to us all, our resources have limits. We do not have boundless land to develop; we do not have a bottomless labor pool nor an endless supply of housing; even the natural resources upon which our prosperity has depended for virtually all of modern Jackson Hole's history are not infinite. Social and economic conditions have changed and continue to stress these resources, and while it often appears to me that we have not yet fully accepted the reality of these limited resources, conditions are bound to rub our faces in it sooner or later. There is one resource at our disposal, however, that I believe is unlimited: There is no end to our creativity and our imagination. I don't think Jackson Hole's citizenry is unique in that, but for various reasons - the inspiration of the natural world, the nurturing and tolerant attitude of a mountain town that has long thrived on individual gumption and initiative, contemporary liberal arts education - many people in Jackson Hole have embraced the creative life and some have even profited financially from it. I have no hard data with which to back this up, but my observations over the past dozen years suggest that more and more of our neighbors have taken the plunge and are making a part or all of their living off of artistic endeavors. I recall a conversation I had a decade or so ago with a musician friend of mine in which he said it was virtually impossible to make a living off of music in the Tetons, and yet today I personally know dozens of people who not only make ends meet but have been able to purchase homes with income from performing and teaching music. Certainly there are more art galleries in Jackson Hole today than there were in 1997. I can't even begin to count the number of published writers and professional photographers who live and work in our valley. And I'd warrant that there are many, many other talented and residents who for whatever reasons have not yet dared to take this supreme but rewarding challenge of living off the fruits of their creativity. This sector of our economy is by and large clean. It is compatible with many other uses, including residential. It dovetails with our tourism-based economy in that many visitors enjoy seek out something indigenous to the valley to take home as a souvenir of their vacation, and it has the potential to continue to boom, to be a true growth industry, without (as far as I can tell) causing any significant harm or stress to our overtaxed resources. There are other advantages to nurturing our creative resources. Creative people are known for thinking about problems and solving them in sometimes counter-intuitive ways. Their art often demands this of them. While no one can make any promises, I can easily imagine a community of artists and art appreciators that, having embraced and encouraged its native talent, engages in creative problem solving to address issues. At the risk of getting lost in some sort of utopian fantasy, I'd propose that such a community at the very least would produce interested and able students, would create artful and attractive streetscapes, and might even elevate the level of civic discourse. The Center for the Arts, of which, as I've already stated, I am a proud and honored employee, stands as a testament to our citizens' commitment to the arts. It could not have been built without the assistance and blessings of our Town and County, which says to me that our local elected officials already have a good, baseline understanding for the importance of the arts and the value of their contribution. Explicit recognition of this in our Comprehensive Plan would demonstrate a continued commitment, as would a clear and executable plan for the creation and installation of public art throughout the county. Like the Center for the Arts, public art would serve as a real and tangible sign of the entire valley's commitment to the arts, as well as a fun and interesting way to enhance our streets and parks, and to express our public personality. Also, perhaps it would be possible to encourage and reward the creation of artist-friendly development - affordable studio space, for example - in some appropriate downtown development soon to be entering the pipeline. Thanks for your time and attention, and thanks for including the arts in this discussion.

Theme 2 "Manage Growth Responsibly" should be revised to say "Limit Growth Responsibly". Revise the Theme 2 statement to define "responsibly" as growth that will be centered around workforce housing and social service needs. New commercial or free market residential upzones is not responsible. This is justifiable because the current base buildout provides plenty of new commercial and free market residential units. The community does not need more commercial buildings and more jobs that come along with it. I believe an increase in commercial development will only export our impacts to adjacent communities. The community needs should be listed and defined in this section.

<td>Wang, Louis</td>
<td>Two weeks ago I hand delivered a letter asking for access to &quot;all of the input&quot; to the Comp Plan Update. It was an &quot;official request made in the spirit of openness and full disclosure.&quot; So far there has been no response from either of you. This is disappointing as there is apparently much information available. Jeff was quoted in the April 29 News &amp; Guide as saying &quot;information gathered by the planning team... was received from a variety of sources&quot; and that &quot;it was important for us to talk to other experts.&quot; Fair enough, what was said and who said it? Because the draft Plan differs so drastically from the public surveys and comment, folks want to know, if you didn't follow the public's input then whose input did you follow? This letter is a renewal of our &quot;official request&quot; made two weeks ago. We are simply asking for access we are entitled to under the Wyoming Public Records Act. We look forward to regaining the transparency now missing form the Comp Plan Update process.</td>

<td>5/8/2009</td>
<td>Christel, Tammy</td>
<td>Public art encourages environmental stewardship through curiosity and creating a sense of ownership, and by enhancing public space. It is a significant community tool that promotes tourism and regional appreciation. Public art is great marketing. We imagine myriad public art installations in and around the Town of Jackson. I take this opportunity to call upon our Town and County officials to spearhead a public arts installation program. In most urban areas, the quest to design for relevant public art is old hat. Public art installations define cities, and we are a small city. Our planning process needs to include space for public plazas, parks and sculpture. Seattle's Olympic Sculpture Park combines places to eat, shop and walk with nine acres overlooking Puget Sound. The project brings together the best of (the) city: art and recreation, sculptures take center stage, representing such artists as Louise Bourgeois, Alexander Calder, Richard Serra, and Ellsworth Kelly. Contemporary Seattle mixes traditional Inuit art with contemporary masters. Walkways and &quot;paths&quot; of connected galleries connect sites. We can conjure a similar urban art potion. I envision growth, but growth that incorporates landscaping, parks, arts, or &quot;grace of space.&quot; Let's create space both sacred and fundamental. Without these provocative elements, we forfeit a higher level of urban vibrancy. Define the Town of Jackson as a business, educational, and cultural center. We are a great case study, and this is our opportunity. Public art and placemaking are, as I and others in the arts community have been saying, inextricable from contemporary, smart, even green, urban growth. Quality urban growth must include public urban spaces and public art. Preserving environment and quality of place, managing growth, and creating a viable, broad-based economy are Jackson's great challenges. Most crucial is ensuring we promote and protect our wildlife, its habitat and other environmentally sensitive areas. In our region, the arts are a keystone in preserving place. Although our Town Square's monument, various land art and myriad creative educational projects provide continual reminders of our inherent love for the arts, we've so far not included researching and moving towards making the arts a part of our &quot;constitution,&quot; as it were. We can remind ourselves, and all visitors, of this history by including beautiful and lasting public place making in our Comprehensive Plan. Such planning aids in building tourism and strong market values. Think logo. Art captures the essence of the places dear to our hearts. Successful public art resonates on a national level. Our traditional themes may be translated traditionally; they may also be translated using contemporary aesthetics and materials. We must not only include the words. We must decide upon a logical process of implementation. Without implementation any plan is simply an exercise.</td>

<td>Policy 1.1.b: Monitor cumulative human impacts. Data already exists that supports human impacts have had a negative effect on native species. We need to start this Policy by compiling and analyzing existing data. Policy 1.1.c: Conserve large, contiguous, and connected open spaces. Yes! This is a policy that could be the most effective in sustaining our wildlife populations, scenic values and tourist based economy. Policy 1.1.g: Permeability of development design for wildlife strongly disagree with the statement that the Town and community nodes will not be included in this. Please change this statement to include all development. For example, Flat Creek running through Town provides for a tremendous amount of fish and wildlife movement. Policy 1.2.b: Require filtration of urban runoff. This policy should include onsite and off sites detention and ideally, retention (through infiltration) of stormwater. Low IMPact Development practices should be implemented by new development including municipal sidewalks and other projects. Indicators Add - Percent of surface water runoff being detained and infiltrated/treated before reaching our waterbodies.</td>

I am a property owner living in the Raintree Development for the past 21 years; adjacent to property that may be rezoned from one home per 3 acres to a much higher density. I was previously a 12 year homeowner in the Aspens. Today I observed a deer, a fox, and a cow and calf moose; this is why I came to this valley 40 years ago. Have the designers of this Comprehensive Plan come out and made observations of the wild life or have they hired professionals to do a scientific count of the wildlife and their habits? Have the drafters counted the number of people who now live within walking distance to the West Side Market, a small local convenience grocery, who still drive to get their gallon of milk as compared to the people using no motorized means of travel? Can this small grocery even handle an increase in customers? Or will they need to expand, hire more workers, thus increasing the need for more housing to accommodate increased growth? Have you tried to turn left out of the Aspens during peak travel times? Why is the priority changed for the Aspens area? I think the Aspens area is just as important to the wild life and its scenic value as any other location in this valley. Maybe the Planners should get feedback from the moose. This new Comprehensive Plan isn’t smart growth; there is no balance of wildlife and scenic values to human sustainability. The projected expansion of human growth will drastically decrease the wildlife numbers, that’s science. The more dwellings created will not enhance the scenic character of his valley. More people, more crime, more traffic, isn’t going to lead to a better quality of life. I am against this new plan!

5/8/2009  Remlinger, Wendy
Interested Public

Consistently considering Green alternatives to traditional methods of generating power, encouraging community gardens and compost, protecting large trees and planting new ones. Recognizing the amazing close proximity to wildlife and educating the community on existing together.

5/8/2009  Remlinger, Brian
Interested Public

Again, this needs to read "Limit Growth Responsibly". Growth will happen, let’s slow it down and limit it as much as we can. The use of "Town Level Development" should be eliminated completely. This is a vague term that could potentially be detrimental to the nodes. Town development almost crept in to northern SOuth Park. Please redefine and rename. POSSibly call it "Community Needs Level Development."

5/8/2009  Remlinger, Brian
Interested Public

If the Rodeo Grounds is built as single family, the Town will need to find a new location for snow storage in Town. I would completely eliminate the language stating conversion to single family. Please consult the Town on the logistics and cost of hauling snow to a less central location.

5/8/2009  von Hagke, Thekla
Interested Public

I think this plan is far too vague and open to special interest interpretation. I think the plan should err on the side of restriction, not leniency. I am dismayed that there wasn’t even an attempt at citing build out numbers. If this is difficult to determine from land use, the road use should be a viable and reliable guide. Go to Sun Valley or Aspen and drive the routes commutes and stop and think if this is really the Jackson Hole you want for the future. By the nature of our valley’s protected land, we will some day have to say no more. Discriminating as that may be, it is an inevitability. The only thing we have control over is what the valley will look like when that happens, and what quality of life it will afford. Is it possible to act with foresight and try to not repeat the mistakes of our peers? My personal feeling is that we need a steering board for this plan made up of octogenarians who have each lived in this valley for at least 40 years, a council of elders with the wisdom of perspective. Growth is not what our valley needs. Many of us moved here because of the lack of growth and development. Someday we will have to keep our economy going without construction revenues. Why not sooner with a high quality of life instead of too late later.

5/8/2009  Epstein, Steven
Interested Public

In light of the current economic situation it seems to me that it would make much more sense to concentrate as much growth as possible to the greater Jackson area and the Teton Village area. This would eliminate the need for many of the services that will probably need to be added to the so called node areas, ie schools, transportation, law enforcement, fire safety etc. Since the plan seems flexible as conditions improve other areas could be added.

5/8/2009  Banks, Patrice
Interested Public

I live in Cottonwood Park and am very concerned about adding more traffic to an already busy High School Road. We have 6 schools that create a lot of traffic (both auto and pedestrian). Cottonwood Park, Rangeview and Blair Apartments are very dense and adding 1000 or more homes would inundate High School Road. I firmly believe that there MUST be an East-West road connecting all these new homes/businesses to Route 89 as well as South Park Loop. I feel that this connector road should be worked out before any development whatsoever is started. Another concern is open space. With Blair Apartments having no playground of their own, they all come to the Rangeview Park. Please consider adding playground equipment/parks and more than 1/8 mile (660 ft) setback of open space. People love living in Cottonwood & Rangeview. It seems emulating our developments instead of cramming lots of homes in would make sense. Please help us keep High School Road safe and Cottonwood Park a great place to live. Thank you for your consideration.

<td>Davis, Eric</td>
<td>I would like to comment briefly on the proposed Wilson expansion. Overall, I think the plan is very well thought out and a benefit for Wilson and west bank residents. My wife and I have lived on the west bank off and on over the past 8 years and have grown to love the area. One of the difficult things, especially during the summer, is making the trip into town for shopping and errands. In our opinion, Wilson and the west bank could use such a commercial expansion as you propose. Yes, we, like many residents love the quiet and peaceful aspect of the west bank. Growth and change can be scary, as I’m sure many have indicated to you. However, its contradictory for us to totally oppose growth, especially responsible growth as your plan proposes. We all contribute to the population here and therefore need to embrace responsible growth. Though many will likely fear this plan, I am confident that, if and when it is executed according to your responsible measures, residents will be surprised how well it works and subsequently embrace it. Growth and change are inevitable. They are a normal and positive part of life and community. One question I have for the planning committee is this: Does or will the committee include a lot-designation for the possibility of a future church in Wilson? This would add diversity and a positive community aspect to such growth for Wilson. Thank you for taking the time to read this. We heartily support the plan to responsibly add the several hundred home sites and commercial property as you propose. Thank you for all your hard work. Keep up the good work.</td>
</tr>
<tr>
<td>5/8/2009</td>
<td>Remlinger, Brian</td>
<td>Change the priority to “Limit Growth Responsibly” A main theme priority in South Park should be preservation of scenic vistas and open space. May tourists drive into town and stop to take pictures of the area from the highway. This open space and scenic vista will contribute to sustaining our economy. The other theme should be limit all growth to the northwest corner adjacent to high school road. Delete all references and statements about developing from north to south. This is a dangerous topic and gives a green light for extensive development in South Park rather than preservation of open space. The use of the term “town development pattern” does not fall under the definition of responsible. Please change this to “Community Needs Development Pattern”. I do not know of a single person who would like to see Town Development in South Park. The addition of a priority to create very large areas of infiltration wetlands (could be stormwater treatment wetlands for Town runoff) to lands that are converted from flood irrigation practices in South Park. This will ultimately provide groundwater recharge that Spring Creek (near 3 Creek Ranch) and other South Park wetlands need to be sustained. For example, portions of the Rafter J ponds stay ice free in the winter and provide crucial winter habitat for Trumpeter swans. Flat Creek needs a minimum 150’ buffer from development. Development of South Park with town level development from north to south will completely degrade this waterbody. This should be seriously stated in this section.</td>
</tr>
<tr>
<td>5/8/2009</td>
<td>Spitzer, Horton</td>
<td>The Wilson school was filled with concerned neighbors to hear the planners tell us what may be in store for our special community. The universal sentiment was that the unique character of Wilson will be destroyed forever by the concepts as presented, particularly the tripling of the population. No mention was made of preserving the CHARACTER and VIEWSHEDS we all hold as reasons to live here. These features were given emphasis in the previous plan. Why have they been totally eliminated in this new proposal for the entire valley? These words seem to have been buried by academic planning definitions. Also the proposed method of planning accountability with an annual review of decisions made by government officials during that year by the same officials who made the decisions is ludicrous. Such a review should include nongovernmental personnel, not those who instituted the decisions. Lastly, why weren’t the many thoughtful Comments made by Wilsonites recorded and made a part of the public record. The rules not to record public comment were made by our government officials who work for us. We should require them to change this policy in the future. I feel insulted to have taken the time to participate in a public meeting and not have comments recorded. Is this an exercise in appeasing the public with little consideration to its input. More work and changes need to be done to address the heartfelt concerns of our community before the Plan, as proposed, can be considered acceptable.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Danford, Susan</td>
<td>As a north of town resident I am happy with the plan for this area. I would like to see the adition of a pathway to Kelly and arround antelope flats as very many people both local and visiter bike this route and it is hazardous. Human powered travel could reduce car traffic which would be good for people and animals. I would also like the plan to specify no speed route from the airport to the village as there is too much wildlife habitat that would be destoryed. What is not mentioned in the plan can be interpreted as allowed.</td>
</tr>
</tbody>
</table>
The recently released draft of the proposed update to the Town of Jackson /Teton Comprehensive Plan fails to reflect the interests and concerns of the majority of the residents of our Town and County. The draft plan is based upon the false assumption that the community favors growth, and regretfully ignores the considerable public input you received identifying preservation of wildlife and open spaces, and favoring slow and controlled growth. I share these views; growth in our Town and County should proceed only slowly and carefully. Preservation of our open spaces and our wildlife should be highest priorities.

Our County officials and our Town officials are responsible for protecting this valley, its wildlife, its scenic vistas, and its uniqueness for all time. The draft Plan speaks to encouraging growth and development necessary to meet our community’s human needs but there has been no demonstrated need for growth in our community. The public has told you just the opposite. Public input should provide the foundation and direction of the new Comprehensive Plan and should not be ignored, as you appear to have done.

I am absolutely opposed to a number of aspects of the draft Plan. It de-emphasizes the importance of scenic resources and does not contain a mechanism to permanently protect rural open space areas. The draft plan contemplates more than doubling the housing population in Jackson and Teton County, and more than doubling commercial space. Rather than responsibly attempting to address and reduce the severe shortfall of workforce housing in the area, these proposals will make this serious problem far worse. New residents and new workers will create additional demands for affordable housing, further compounding the existing shortage.

Infill within the Town should be the first priority before considering expansion into other nodes within the County. I strongly encourage you to reduce the recommended overall build-out of the Town and County and specifically define maximum build-out, so that only a slow, sustainable rate of growth would be encouraged.

As a resident of South Park, I am extremely concerned that the Plan proposes eliminating language from the previous Comprehensive Plan that called for permanent open space protection for portions of South Park and for protecting the scenic and wildlife values in the South Park area. Wildlife and natural resources have been and should remain a first priority in South Park. Sou8th Park contains important and irreplaceable wildlife, connectivity, and scenic values. If we do not protect them, they will be gone forever.

Residents of the Town and County dutifully attended you many meetings of residents and community groups and voiced a preference for slow growth. I am deeply troubled by the suggestion that input from individuals and interests you now refuse to publicly identify led to a conclusion that he public’s mandate was for more growth.

Please revise the Comprehensive Plan to accurately reflect the will of the community and its residents and to property plan to preserve this spectacular place in which we live.

Thank you for your consideration of these comments.

After attending the May 5, 2009 meeting at Nick Wilson’s Cafe in Teton Village, I have the following comments. I am strongly opposed to the massive projected planning and development plan which was presented. It did not go unnoticed that some of the committee advisers are developers! Our wildlife migration corridors, infrastructure and ecosystem are demonstrating stress at the present level of expansion, and are in need of updating to sustain our current population. We desperately need a second bridge access to the West Bank. The current bridge is in dire need of repair and at our current population density is overstressed daily. Also, it is a safety issue in the event of a natural disaster. The majority of constituents want "limited" managed growth...the proposed plan being totally opposite to the community’s preference and preservation. Affordable housing should be centered as much as possible in town which avoids further increasing congestion on road corridors in and out of Town; and insures easy accessibility to community facilities and services. If, Teton Village requires additional employee housing, it is their development and their responsibility; not the Town’s, The Aspens, Wilson, South Park, etc. The ongoing development in Teton Village is "over the top". It has ruined the unique quaint quality it used to have. I would hope, when and if, future affordable housing is constructed that it blend in with the style of the area, rather than the "eye sore" units we are presently stuck with.

<td>McClelland, Porgy</td>
<td>What have you done to get us all so stirred up? The planning department seems to have a radically different view of what this place should look like in the future. While attending planning meetings, we have heard that protecting wildlife, and preserving community character play the leading roles in plan development. We have also been told repeatedly that community input will be incorporated into the plan. I have never heard anybody beg the county for tripling the size of Wilson, and the draft plan County wide seems to have hit us with shock and awe when the cumulative impacts are pondered. Simply put, there is too much growth allowed to preserve what we have asked you to protect. The county Commissioners and others have stated that we have a crisis due to the lack of affordable housing and the planning department seems to have to let this be their guiding light in drafting this plan. In 1979, I sold a small house and lot to Clarene Law who contacted me within hours of the for sale add appearing in the paper. On closing the deal, I asked Clarene why she was interested in this sort of property and her response was, &quot;I can see a day when my help won't be able to find a place to live&quot;. My point: Clarene is a very smart woman who was able to address her business needs. When the next Sooting Star arrives, I doubt the developers would have the insight that Clarene did, but the county should be able to predict the number of slaves required and enforce the developers to build the required housing. The businesses that take care of their employees will flourish, and those businesses that rely on someone else to provide housing for their workers will have a harder time-just like in the free market. I am sure that the planning department cannot address affordable housing through the creation of nodes as increasing the supply side will only work in the short term and with much sacrifice to the values we cherish. I know the tremendous amount of time and energy that has gone into the plan to date and realize your desire to get it right. I hope you take the time to measure the impacts on &quot;wildlife and character&quot; before you allow densities that will destroy both.</td>

<td>Smith, Patricia</td>
<td>I am writing to oppose any more affordable housing being built in Jackson. Affordable housing destroys the real estate open market for everyone involved. The houses look cheap and are made cheaply. It's unfortunately, because what makes Jackson a special place is not everyone can live here. By making it easier for people to buy a home here, it automatically makes Jackson a less desirable place. And guess what? Life isn't fair! Not everyone can live here. So stop accommodating the poor and taking from the rich. This might as well be Communist Russia. If affordable housing was not in place, the real estate market would be a better place. With the large number of affordable housing, you have created an environment for the super wealthy and lower class. That leaves the hard working people who have saved money too wealthy for affordable housing but can only afford the bottom of the barrel in the open market. It is infuriating that a SKI-BUM is encouraged to buy into affordable housing, where a hard working middle-income person like myself has too much money for an affordable HOME and can only afford a 1 bedroom APARTMENT on the open market. Please stop affordable housing!</td>
</tr>

<td>Miller, Teresa</td>
<td>Sounds like the Jackson Hole Community is speaking out against your growth plan. Are you listening? Kristne &amp; Paul O'Brien say it best in their &quot;Guest Shot&quot; article in the weekly JHN&amp;G (May6), bottom line is sustainable--continued with minimal long-term effect on the environment. The key word is &quot;minimal&quot;, not massive. Please don't ruin the community we love with this plan. Please don't ruin Wilson. I do not like this plan.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Ballard, Ken</td>
<td>VERY BAD IDEA! The impact of The Plan will drastically impact the wildlife, natural, and scenic resources. In the long run, Jackson will become just another resort. That is not why people buy in The Aspens or the Jackson/Wilson area. The community is unique and totally in tune with the wildlife and natural resources. I want moose and elk walking by my home and the tress and open spaces for birds and other wildlife to inhabit. The growth plan for The Aspens and the Jackson/Wilson areas in general jeopardize the integrity of the community, in spite of The Plan's claims to &quot;mitigate impacts to wildlife and should allow for wildlife movements and crossings,Äü. LOL what a bunch of bull!!! To mitigate, means to cause to be less harsh or hostile. So who's going to determine what is less harsh or hostile? What is the metric? Anything less than the status quo is not acceptable! If The Plan cannot guarantee that future development will have &quot;NO IMPACT&quot; on the wildlife and natural resources, then it should have never been considered in the first place. WHAT ARE YOU THINKING??</td>

<td>5/7/2009</td>
<td>Pardo, Hernando</td>
<td>I am writing to voice my opinion on the planned development of Wilson, WY. As a long time resident of Jackson (30 plus years) I am opposed to the high density planned for the town of Wilson. It will negatively affect many aspects of the small town. Wildlife will suffer, traffic will be too much for it as is and would need further development of reads and highways, which again, I oppose. DO NOT CHANGE WILSON TO A HIGHER DENSITY AREA.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Vaughan, R H</td>
<td>As a 17 year resident of Wilson I am totally opposed to proposed plan for the future development of Wilson as set forth in the May 6th edition of the JH News &amp; Guide. The statement by Mr. Daugherty that Wilson’s character &quot;COULD&quot; change by virtue of the plan is disingenuous at best. If that reflects his judgement he should seek a new line of work and try to sell bridges in New York.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Harris, Suzanne</td>
<td>I strongly oppose the addition of 500 possible new homes in the Wilson &quot;node.&quot; Wilson and the Aspens should not be &quot;nodes,&quot; as the additional traffic caused by so many new housing units would kill animals and make our roads and schools overcrowded. The residents of Wilson came out this evening in strong and emotional opposition to so much growth. It would ruin the good conditions which attract people to live here.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Rizzotti, Ken</td>
<td>Please listen to the citizens who attended the Draft Comp Plan Presentaton in Wilson on 5/07/09. The citizens desire no change to the already outstanding character which exists in Wilson. We are at a tipping point, where additional population and their associated impacts will adversely affect wildlife and scenery. Consider the fact that Hwy 22 runs through the center of Wilson, which is a dangerous mountain pass. Focus on making the community better for the citizens who live here. Where did all the results from the past charrettes go. Density neutral was the consensus. This &quot;node&quot; is a beautiful place, and like many others in this community, I fear that the &quot;density bonuses&quot; and &quot;affordable housing&quot; are more important than the wildlife who has resided here longer than us. There is to much focus on balancing wildlife with growth. Soon enough, there wont be any wildlife, and we will be like any other western resort town. It is time where the County officials actually listen to the citizens that pay the taxes that make their paychecks. Manage growth so it is acceptable to the citizens of Wilson, meaning growth neutral. Work with WYDOT to improve Hwy 22 running through Wilson. Don't get caught up in the self perpetuating philosophy that we need to continue to grow to fuel the affordable housing programs. Wilson is a special place which can not sustain any more development without sacrificing the real character of this community.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Day, Clint</td>
<td>I realize the commercial zoning has been on the Hwy 22 corridor for awhile (I've been in town 19 years and it's been the same I believe). I understand and respect that any landowner has the right to maximize their property's potential, especially commercial, within the bounds of the law. I do wonder what other services a town like Wilson requires though. We have a gas station, P.O., awesome general store, hardware store, bar, bank, welding shop, Dr's offices, contractor, bike/ ski shop. To me the town is extremely viable and already meets you requirements allowing residents to avoid trips to town. For years, I've been able to NEVER cross the Snake to fulfill daily needs and then some. In fact, there have been months where I never had to leave &quot;the Loop&quot; (except to see friends) in order to be completely sufficient in today's world. I think a satellite Sheriff's office is just plain dumb. Enough said. It also seems from the orange area on the map that most of the property for future home development is currently held in private hands. I could be way off-base on this. So, in some ways, the future of Wilson's development potential lies in the hands of current owners not giving in to an upzone of their property and early retirement if they sold out. Our 2+ acres on the loop can be taken out of your calculations. Thanks.</td>
</tr>
<tr>
<td>5/7/2009</td>
<td>Bar-or, Gal</td>
<td>Simply stating over and over that you are attempting to “manage growth responsibly” does not make it so. The residents of Wilson, by which I mean the downtown Wilson area as well as the area in the Aspens, DO NOT WANT THE GROWTH YOU ARE PROPOSING FOR OUR COMMUNITY. You are proposing to change the character, the tone, the living quality and the structure of life in our town, and we feel you are doing so against our vehemently stated wishes. Finally, the &quot;nodal&quot; concept is flawed fundamentally, does not take any real efforts to directly address infrastructure (saying the developers will deal with it is NOT acceptable) and seems to be a rationalization for dumping development in our laps, again, against the wishes of the members of the community you are planning to ruin.</td>
</tr>
</tbody>
</table>
It's dusk, I'm looking at a group of 4 mule deer plus a set of twins bedded down in the wildlife corridor tangent to my Aspens condo. Out my back door today, I viewed a cow moose and her yearling calf grazing on the shrubs, territorial red squirrels, pairs of chipmunks, and the lone female 2 yr. old moose wandered by her mother was the one killed on the Village Rd. last Jan.'08 by a snowplow during the blizzard...She keeps close to home here since her mother showed her all the great spots to browse here in the Aspens. A fox has been seen here of late, making his early dawn and dusk rounds, keeping the rodent population in check. These are just some of the wildlife that I experience daily from my condo here at #2111 Windflower, one of two condos that are west of the proposed future bldg. site of residential/commercial growth slated for the east side of the Aspens. It is my understanding that the private land owned by certain valley realtors along our buck rail fence line (our backyard) is scheduled to be developed into perhaps a police station, laundromat, shops, etc. If you head down Kennel Lane on your immediate left all the way down to the split in the road, there is a known wildlife corridor, (mentioned above), that shelters and is habitat to maybe 20-40 different species of wildlife at any given time year-round. Last nite I heard a Great Gray Owl calling. The stately Lodgepole Pine forest is home to a myriad number of bird and waterfowl species in the surrounding wetlands further along the creek there. Now, I ask you, Is this PROMOTING STEWARDSHIP OF WILDLIFE AND NATURAL RESOURCES as your proposed ideal THEME #1 states in The Comp. Plan?? Please, I invite you to come sit on my back deck, or take a walk along Kennel lane and just keep your eyes and ears open and take in all that will disappear if you consider high density commercial/residential growth here.

I reside in Cottonwood Park. The following are some of my concerns regarding the proposed development in South Park.1. It is unclear whether all of District 12 will be developed (under this Plan) - from north to south - or if only the areas indicated on the map (400 acres in the northwest corner, Rafter J, Melody, and the industrial area east of Melody) - will have development beyond the rural classification. State specifically what areas will be other than rural. State that the areas shown as rural will be developed based on that designation and will NOT be developed to a greater density. What is meant by developing “north to south”? Either describe what is meant by that or delete it. 2. 400 acres and 1500 residential units seems excessive. How about stating that development would be staged as demand supports, with an ultimate buildout not to exceed 400 acres and 1500 residential units? This way appropriate density can be achieved and services provided to a discrete area - not to all of the 400 acres immediately, i.e. avoid scattered development. 3. In-fill should be stressed in Jackson (town as heart theme) prior to going wild with development in South Park. 4. We had moose and deer moving through Cottonwood this winter. They will be back. Wildlife will be present in any South Park development. This has to be recognized. Wildlife corridors have to be designated and provided. 5. Provide at least a 1,000 foot scenic buffer along the east side of South Park road. Do not allow anything other than access roads (perpendicular to South Park only - minimize road length in the buffer, also minimize the number of access roads crossing the buffer) in the buffer. Do not allow noise/view berms to be constructed in the buffer. 6. Provide at least a 1,000 foot buffer along the south side of High School Road. 7. Perhaps the buffer area along High School Road could be developed as a town park - both for students and for the residents of the new development. Note that Range View Park gets lots of use by people outside of Range View and Cottonwood, since their developments do not have public parks (e.g. Indian Trails, Rafter J). Alternatively, require a public park to be included somewhere in the area to be developed in the northwest corner of South Park - and require it to be done at the start of development, not sometime in the dim future. 7. Do not add any additional traffic capacity to High School Road. Keep it with a speed limit of 25 mph. Perhaps add a bike path/sidewalk south of and separated from the road (similar to that on the west side of South Park Road). 8. Cottonwood Park has only one exit from the subdivision and that is onto High School Road. That exit is too close to the Middle School Road intersection to allow a stop sign on High School Road for the Cottonwood intersection. High School Road (per its name) has several schools and lots of children walking along the road. No increase in traffic should be allowed on High School Road - both for safety and maintaining existing quality of life for existing residents. Traffic from the proposed development in northwest South Park should be directed onto the new connector from 89 to South Park Road. Require the construction of that connector before ANY development is allowed in northwest South Park. Note that the connector will have to cross Flat Creek in an environmentally responsible manner - which means it will be expensive. Require the development in the northwest corner of South Park to pay for this. 8. The development in the northwest corner of South Park should be required to pay for the expansion of town services (e.g. sewer and water) required for their development. 9. Establish a buffer Flat Creek - especially the west side (if it is not already set). Show the buffer on the map. 10. In general - stress the themes in the order of importance determined from public comment, i.e., wildlife protection is important, development is not. Development seems to be given more importance than wildlife. Thank-you for the opportunity to comment

<td>Shore, Kenneth</td>
<td>My comments begin generally on the draft Comprehensive Plan -- and perhaps with a comment that you really do not hear much, certainly as often as you should. Thank you. The staff and elected officials worked hard, and community-wide we should give it our general support. As with any comprehensive document, it is a work in progress and the feedback is very important -- but please don't let those loud voices who oppose this or that particular provision drown out the larger message that generally this is a positive and important document. You are headed in the right direction and have presented and good balance between protecting both our community of great people and this special place with wildlife. Your plan shows an increased protection of wildlife, reduction in development in rural areas and an emphasis on workforce housing. The nodes are smart planning. And it will be a given that they won't please everyone. But we all have to live as a larger community and accept front and backyards alike. It was interesting to hear the public presentations that indeed we are talking about a very, very, very small section overall of private land as a base. One tenth of 1 percent indeed is a small place for people habitat. I'm grateful for the recognition of the economy in this plan. Responsible growth is important. In fact, if you didn't include responsible growth -- as some of the opponents are asking -- it would be highly irresponsible of you as elected officials! This community is suffering with the rest of the nation from the downturn economically. I hope you remember this: The fact is the majority of our community goes to work every day. Payrolls and paychecks are the majority of us -- and some are too busy working to earn a living to comment or get involved in this. More than ever, we need to emphasize our economic health here in Teton County. Specifically in Teton Village, workforce housing is welcome, but I too hope you work with us in a positive dialogue to create the best Teton Village mix and plans. Only workforce housing -- without accompanying planning for interesting commercial and diversity -- will risk a man-camp in Teton Village. If only workforce housing allowed, you will drive up car trips in record numbers as people will need to travel to get economically better priced daily living services. The workforce is a vital and active part of our community. To deny the kinds of commercial interests that appeal to workers and visitors -- with pedestrian qualities -- is poor planning for Teton Village. The Village needs vibrancy. For quality of life, for good business and for positive tax revenues flowing to County and Town. Furthermore, keep in mind, Teton Village as an economic engine of the County is a green one. Recreation and fun. That should be encouraged via smart planning. In general, Teton Village must be a well-planned, positive place that is aesthetically pleasing with many options and choices for everyone. We look forward to an active dialogue with the County in the future to achieve that goal. But again, generally many of us give you our support of this draft plan overall.</td>

<td>Sundgren, Shelley</td>
<td>I have not seen anything discussing how the rate of growth will be monitored. How about adding something that indicates when approximately X% (e.g., 20%) of the planned development has occurred (preferably on a district by district basis), that the plan will be reviewed to see if it needs to be revised due to too rapid development. Remember that development was determined to NOT be a priority of the citizens. The plan needs to include a way to make sure that the development occurring under it is in line with what the citizens want.</td>
</tr>
<tr>
<td>5/6/2009</td>
<td>,</td>
<td>The comprehensive plan for 10.11 District 11: Wilson, does not represent the cultural beliefs of the residents of Wilson. The plan states the increase in housing and commercial building will reduce the need for Wilson residents to take trips to Jackson, thus reducing traffic. This statement is false and cannot possibly hold true. The majority of Wilson residents work in Jackson and many use the Stillson parking lot to reduce traffic. Increasing housing by almost 3 times will only increase traffic, period! And ten years from now a new comprehensive plan will need to be created to try and figure out how to decrease traffic by expanding highway 22. Growth is not in the best interest of Wilson residents, we live in Wilson because we wish to get away from the chaos. I have lived in Wilson for over 25 years, born and raised and to be honest, I avoid Jackson like the plague and I do not need to go to Jackson because Wilson has a grocery store, a hardware store, post office, coffee shop, gear store, doctors, and two restaurants and a bar, plus all the close wonderful restaurants in the Aspens and the Village. So the statement that increasing housing to reduce traffic and trips to Jackson is absolutely ludacris and a statement that is attempting to justify building MORE AND MORE AND MORE. Please stop.</td>

<td>Farrell, Nadia and Bob</td>
<td>We have reviewed the April 3, 2009 Draft Jackson/Teton County Comprehensive Plan. Our main interest and concern with the draft plan are focused on District 19: Rodeo Grounds. Concern 1: Inaccurate description of the area shown as Single Family Mixed-Type. In the Draft Plan this area is described as follows: &quot;The area classified as Single Family Mixed-Type currently consists of single family homes with accessory residential units and multifamily residential structures located at the periphery. The land use pattern in this area will continue to be dominated by single family residences (with and without accessory units) with some multi-family projects at the edge of the area.&quot; This description implies that all residences include accessory residential units. In fact only a small percentage of homes in the proposed Single Family Mixed-Type area have accessory residential units. We believe there are less than six accessory residential units and of those only one is a stand-alone building (a partially converted detached garage). The reference to the multifamily residential structures would be correct and more informative by stating that a few multifamily residential structures are located at one corner of the area. As currently written, this description creates a false image of the make-up and character of this neighborhood. This false image seems to provide the basis for the proposed classification of this area as Single Family Mixed-Type. An area consisting of two residential units on each lot and with Multifamily units on the edges of the area could logically be classified as Multifamily with little or no change to the area. This is not the make-up of the proposed Single Family Mixed-Type area in District 19: Rodeo Grounds. Following is a suggested rewrite of the description of this area. &quot;The area classified as Single Family Low Mixed Type currently consists primarily of single family homes, a few of which have with accessory residential units. and there are a limited number of multifamily residential structures located at one corner of the area the periphery. The land use pattern in this area will continue to be dominated by single family residences (some with and without previously developed accessory units) with some multi-family projects at one corner the edge of the area.&quot; Concern 2: The classification of the Single Family area as Single Family Mixed-Type rather than Single Family Low. We agree that the Multi-Family classification for a portion of this District is appropriate considering its current uses, the District's status as a Town Targeted Growth District and the priority to Manage Growth Responsibly in this District. However, it does not seem appropriate to classify the Single Family area as Single Family Mixed-Type instead of Single Family Low. This neighborhood is primarily single family residences without accessory residential units (See Concern 1 above) and under the 1994 plan was identified as Neighborhood Conservation - Single Family. This neighborhood has been a stable and positive addition to the Town of Jackson for over 40 years. If all or most of the homes had accessory residential units, the properties were falling into disrepair or the neighborhood was in need of redevelopment we would be in favor of a classification of Single Family Mixed-Type. Perhaps in 10 or 15 years during a five year Plan review a finding for the need for redevelopment might occur. At that time an amendment to the Plan could classify the area as Single Family Mixed-Type. However, at the present time, our neighborhood is strong, viable, stable and at least equivalent in size, quality, viability and stability to neighborhoods classified as Single Family Low in other Town Targeted Growth Districts - for example, the proposed Single Family Low residential area at Scott Lane and Snow King Avenue in District 17: The &quot;Y&quot;. That neighborhood, like ours, is relatively small (~37 lots vs. ~47 lots) and is adjacent to areas classified as Multifamily. Based on the above facts, we believe the Single Family area in District 19: Rodeo Grounds could and should be classified as Single Family Low. By doing so, the plan would preserve a viable, stable neighborhood while providing for additional managed growth in the larger Multifamily portion of the District. We appreciate your consideration of our comments and look forward to the finalization of the Plan and the development of Zoning and Land Development Regulations needed to implement the Plan.</td>
</tr>
<tr>
<td>5/6/2009</td>
<td>Sundgren, Shelley</td>
<td>I have concerns regarding the proposed Tribal Road connection. Minimal effort should be put into planning that connection until AFTER all possible improvements have been made to the Y and the traffic has shown that it is required. Do NOT plan (or build) the Tribal Road connection until the traffic actually exists that requires it. Do NOT build it based on estimated (modeled, hypothetical) traffic. The construction of the Tribal Road connection would have negative impacts on the local communities along the currently dead end road, wildlife, and on the residents of Blair and Cottonwood Park. It would increase traffic on local roads - a decrease in the quality of life of the residents. It would increase traffic on High School Road, Middle School Road, as well as South Park Road - a big safety issue with all the students who walk to school.</td>

<td>While the overall concept of updating the plan is laudable it lacks at least 2 major things that I see. 1. it doesn’t really listen to the will and needs of the population. 2. It doesn’t listen to itself in a cohesive manner. For example, if we have 5 million sq. feet of new commercial built, do we have enough space to house the workers? No. And why are we expanding the lodging overlay? No one has complained publicly about a lack of hotels here and we haven’t filled the space in the current overlay. Did someone get a favor? Scrap it and start over. Thanks for listening.</td>

<td>Foyster, Pam</td>
<td>As part of the Transportation plan, there has been significant work done to promote safe, accessible, interconnected system. However, the community at large continues to stymie the plan’s progress, and this will negatively impact any comprehensive plan. If the plan is to succeed in Teton County, one of the three options MUST be adopted: 1. Widen Hwy 3902. Build the north loop road to create alternative road access across the Snake River. This is important for safety as well as vehicle congestion in and through Jackson. 3. Following the example of Sun Valley and Steamboat, create a free bus system for all riders. These progressive communities reached over 1 million riders 10 years ago, and are still going strong! Thank you.</td>
</tr>
<tr>
<td>5/5/2009</td>
<td>Foyster, Pam</td>
<td>Thank you for the extensive report and information. I would like to correct one element of your Conceptual Future Land Use Map - the Aspens subdivision is mostly owner occupied, rented as long term workforce housing, or as second-home for owners. The Aspens is a very good model of what can be done as a focused area of development. However I hope you do not intend that this area should be increased in density to town-levels. The Town-As-Heart concept should be maintained, and not allowed to spread along highway corridors (ala Steamboat Springs). Thank you.</td>
</tr>
<tr>
<td>5/4/2009</td>
<td>Colglazier, Carol</td>
<td>The draft Comprehensive Master Plan does not reflect community input. It calls for too much growth and will cost too much to implement. We don’t want our taxes going up. We need a sustainable community that’s not dependent on growth. To do that we must: • Manage our population growth rate to no more than the national average • Limit commercial growth. It’s the major JH growth-engine and it causes our housing shortage. Focus the Plan on the values that are near and dear to all of us: • Protection of wildlife and preservation of wildlife habitat • Open space that preserves our scenic views throughout JH, not just in select locations • Preservation of our rural way of life. I respect property rights and by-right zoning, but not the &quot;density bonus options&quot; that were rejected in the community surveys. That extra density adds too much traffic, congestion, and sprawl. I support an affordable housing program that is both sustainable and fully mitigates the entire development impact of each project within that project. Please do not approve any more 3 story buildings right downtown, within 3 blocks of the square. It is beginning to make us feel like we are living in a CITY instead of a town. Tourists come here because they like the small town atmosphere.</td>

<td>Campbell, Leon G.</td>
<td>I am a part-time resident of Jackson Hole living in the South Park area of town. I have read with interest the document referred to above and would like to offer my comments. The 1994 Comprehensive Plan was designed to guide community planning in such a way as to &quot;promote economic sustenance that does not depend on population growth.&quot; While this was a worthy objective, that Plan did little to deter population growth due largely to Jackson's intrinsic qualities of scenic beauty and abundant wildlife, coupled with the proximity of skiing, hiking and outdoor activities, making it one of if not the most desirable small communities in the country. The current draft Plan seems unlikely to protect and preserve the qualities that make the Jackson Valley unique. Nowhere does the draft Plan recognize the kind of qualities that caused the Rockefeller family to aggregate land and place it in trust as parklands. The central premise of the draft Plan should recognize above all that the rate of growth the Valley has experienced over the past several decades cannot be sustained if we are to sustain the quality of life that Jackson residents and tourists alike cherish. Specifically, the draft Plan allows for population growth from the current 20,000 to around 40,000 and for designated housing units to increase from the current 10,000 to 20,000. Specific areas, such as South Park, allow large buildouts with density incentives to permit workforce housing, while the commercial buildout infrers some nine million square feet of proposed commercial space. To call the draft Plan &quot;responsible&quot; growth is irresponsible and erroneous. It presumes the sort of upzoning that has ruined other communities seeking additional sources of income at the expense of the qualities that led to demand in the first place. Responsible growth would instead emphasize the upgrading and infilling of existing growths in areas that are already served by current infrastructure and services. Commercial projects should likewise largely be restricted to replacing and making more sustainable older projects rather than projects that extend workplace housing further from town since such housing will ultimately require additional infrastructure and services that constitute additional expenses for the host community. The draft Plan shows little in the way of acknowledgement that the Jackson valley has a carrying capacity that planners exceed at their peril. Simply referring to &quot;human needs&quot; and &quot;community benefits&quot; does little to help evaluate the merits of proposed projects. Instead, planners need to work with wildlife biologists and other experts to produce indicators that portend which are desirable and which will produce harm to these natural systems. I gather that the Jackson community have emphasized this vision of Jackson but their comments have largely gone unheard at staff levels. I am writing elected officials in the hopes that you recognize the the structural changes that have and are taking place in the economy that not only have fundamentally changed the way we do business but the danger of adopting a draft Plan based on future growth. The current recession has brought about a shift towards sustainability and yearning for ways of life that are not predicated on untrammeled growth. Where growth occurs it should be incremental and respectful. For Jackson to adhere to a growth model betrays a fundamental misunderstanding of the evolving socioeconomic realities around us. Indeed, the fragility of the Jackson economy and the current recession offer planners and citizens a rare opportunity to plan for the future without the attendant pressures of earlier years. Attention to the replacement and modernization of existing infrastructure (Jackson Airport, the Y Intersection etc.) should be prioritized. Projects like the limited expansion and upgrading of Teton Village are good examples of responsible growth as it directly impacts the tourist economy. I am a real estate developer in California and can attest to the fact that recreational and resort developments are labor intensive and must be judged within the local economy on a long-term basis. To conclude, I am writing elected officials in Jackson to encourage you to use the &quot;breathing room&quot; that the current recession affords you to revise the draft Plan in ways that will insite Jackson's future as a &quot;last great place.&quot; Failure to produce an appropriate Comprehensive Plan this time around, unlike 1994, will have dire and perhaps irreversible consequences. A Comprehensive Plan is a visionary document. Please demonstrate to current residents and future generations that you are indeed men and women who can match your wonderful mountains.</td>

<td>Walker, Darrick</td>
<td>As a local resident in Wilson I am concerned about adding higher densities in an area that serves as a natural wildlife corridor. The impact of more homes, business and more roadways scan and will impair the natural movements of the wild animals. However an even bigger issue will be done during the construction period which could permanently change their natural habitat. From cement mixers, loud noise, diesel and gas emissions, carbon dioxide, dust, trash debris, paint fumes etc, these aforementioned pollutants have no place in Wilson or in Jackson Hole.</td>
</tr>
<tr>

The vision of the community is not accurate according to all the public input. The public has expressed quite clearly that we want limits on growth as a primary and necessary basic goal, in order to enable the publics commitment to protect our wildlife, scenery and small town way of life. Limited growth should be explicitly stated as a primary goal in itself, against which all other goals must be measured. All other wishes, such as employee housing, are only acceptable so far as they support limited growth. They must not be excuses for variances that undercut the PRIMARY GOAL OF LIMITED GROWTH. We don’t have a shot in h-- of protecting our valley, our wildlife, our small town life if growth is merely moved around, moved into taller buildings, etc.

5/2/2009  Balogh, Holly

I have significant concerns about the way that this plan addresses protection of wildlife. This is one of the most important places in the country and the main reason we moved here. I am very disappointed that the plan does not limit growth nor consider current wildlife migration and sensitive areas when it identified up-zone areas. Allowing for more development in these areas DOES NOT PROTECT OUR WILDLIFE. Just drive down HWY 89 any morning in the winter and you can see for yourself what development in Melody, Rafter J and the construction of a 5 lane highway has done for our wildlife. The amount of dead carcasses on the road is unbelievable. I would appreciate your consideration on this subject - the number one subject identified by our valley residence - and re-work this plan so that it gives our much deserved wildlife a needed break.

I have owned a condo in the Aspens since 2000 and recently bought another for my children. I bought here because it is so serene and shows to full advantage the Wyoming I have grown to love—living with nature with wonderful wild views and sightings of wildlife. I DO NOT wish to look at further commercial property or other homes in this wonderful wild area. Please do not make the Aspens like residential city blocks in Jackson. I bought here because of what it is like NOW and not to become a little city. Please note that I am adamantly opposed to additional building in this area.

5/1/2009  Zvegintzov, A. A.

I don’t think the planned Wilson node reflects what the locals have been saying. The plan includes too much growth. Our wonderful wildlife natural resource is not being adequately protected. And on and on. Keep it simple. Keep it small.

5/1/2009  Kroposki, Michael
Interested Public

The Conceptual Land Use Map for Teton Village, Page 105 show green bands along Michael Drive and Rachel Way. The legend indicates these are “open space/parks”. This designation makes no sense. The existing use is multifamily residence buildings. There is almost no open space. Most of the area not covered by buildings is paved parking lots. This needs correction or explanation.

5/1/2009  Ambler, Emily
Interested Public

The Y is a congested area. We do not think there should be any high density construction approved, similar to what was recently discussed. In general the Comp Plan should assert that if an area is upgraded another area should be downgraded in regard to building/density. Without corresponding protection for scenic and wildlife habitat we will all too quickly lose what we value most in the area. We could end up with both sprawl in the county and congestion in town.

I have talked to people living on Gregory Lane....they call themselves the “forgotten ones” as the live on Gregory Lane and winter like summer there is heavy traffic on this little curvy road. A lot of times you have heavy trucks rolling down that road. No sidewalk or bike paths on Gregory Lane so people have to walk on the road with their kids...I heard it is especially dangerous in the winter with the high snow banks. People living there (hispanics, european students and many more) are our workforce... So how can there be a consideration of building 1500 homes in the South Park node....a lot of people use Gregory Lane...(which is totally unsafe) to go to the ballpark and the commercial stores and offices... more houses would mean more traffic...we have reached already our traffic capacity.... and more traffic means building new roads, widening them etc... all affects wildlife corridors and outbuild of town...of areas where is no space to ad on.... We have exiting buildings which are not occupied or could be rebuilt to more efficient housing...why not start there before adding on houses which may end up empty in this economy but looking at history of town affordable housing ended always up as not affordable (Rafter J, Melody Ranch) Thank you for all your hard work...this is such an extensive plan and really hard to understand everything, so I can only put down my thoughts and experiences I get with talking friends and coworkers.

Comment:  
Please Forgive me for typographical errors as I am not the most accurate typist in the world. I have made specific comments separately within the plan by use stickies and high lighting in the Adobe Acrobat document that I downloaded from the Jackson/County web site. The following is a summary document with an outline with the following headings: Summary of the Land Use Plan, Summary of the Comprehensive Plan followed by Introduction, Jackson/Teton County Community Vision, headings for each of the seven Themes and General Comments.

Summary of the Land Use Plan
The numerical results of residential units and commercial sq. ft. is the most revealing part of the information provided for reviewing the proposed plan. I have therefore presented my comments on the Future Land Use Plan first.

I have reviewed the Land Use Plan but plan to make only a few, but important, comments at this time. If the themes, policies and strategies change as a result of comments regarding the draft plan then the land use boundaries and other data will change substantially. In looking at the tables in Appendix I: page 1-2 and 1-3 the following growth is planned in residential areas and commercial areas:
[see comment for referenced tabular data]
The upper range of Future Maximums from the Appendix I, Tables have been used in the above Tables A and B. If there is a range in numbers for growth and development, experience shows, it will be the maximum number that will be used.

Using the numbers from the Tables in Appendix I, indicates the Residential Units and Commercial Sq. Ft. will more Than double in 8 years for residential and 5 years for commercial. This probably means the population will also more than double in 8 years.

What is the next step if this rate of growth does happen? I assume it would be time for another Comp. Plan to accommodate more residential and commercial growth by allowing more growth to Jackson, the nodes and the rural areas. Oh well, so what if we eliminate more wildlife habitat and open spaces that are now zoned rural. But wait, I thought preservation of wildlife and open space is supposed to be the number one goal for the proposed plan. The growth resulting from this plan seems to be paving the way “for the death of Jackson Hole by density.”

It has taken from 1889 the year of the first family settlers to Jackson Hole to now for the population to reach 20,000 + or -. Data in Tables A and B above would indicate that the population could double in about 8 years to about 40,000 + or - if the current version of the Comprehensive Plan is approved.

Summary of the Comprehensive Plan:
I have summarized my comments on the proposed Comp. Plan and they will follow. I do not want this summary, that was requested by the planning department, to preempt my specific comments that are included within the Introduction, Jackson/County Community Vision and Themes 1 through 7 of the Plan.

The latest version of the Jackson/Teton County Comprehensive Plan took a long time to produce. It was released to the advisory groups on about April 3 and the public on April 13. I am diligently reviewing the plan but it has been difficult to meet the time table set out in an email that I received as a member of the Stakeholder Advisory Group. The time schedule is April 24 for comments and May 7 for Stakeholder recommendations. I think the public and other advisory groups should have the same amount of time to read, digest and make comments on current version draft plan that was taken to produce it. If more time is not allowed the public comment and other advisory group comments will have been set aside.

I hope that Planners, Commissioners, Mayor and Councilors involved in this important document will give the advisory groups and the public more time to review, comment and make recommendations.

Following is a summary of my comments:
Introduction
My comments are included within the draft version the proposed Comprehensive Plan and will not be included in this summary.
Jackson/Teton County Community Vision
1. My only comment here is that it is a tall order to preserve the ecosystem and natural resources and meet human needs. Refer to my comments within the draft plan to see my specific comments and suggestions.

Theme 1 Promote Stewardship of Wildlife and Natural Resources
2. The Plan lacks adequate protection for wildlife (WL), natural resources (NS) and open spaces (OS).
3. Rural areas seem to be an inventory of land area reserved for the next planning process to happen in 5 to 15 Years, but not necessarily to accomplish this theme. Probably more like five years to an update or new plan with the extreme growth orientation of the current proposed plan.
4. No private land areas are set aside permanently for WL, NR and OS. The exception would be those private lands protected from development under conservation easements.

Theme 2 Manage Growth Responsibly
1. The Plan is growth oriented. There needs to be a slow rate of growth for commercial sq. ft. and for residential units.
2. Commercial land use should be reduced and the Lodging Overlay should be reduced rather than expanded. These reductions should be for land area and building ht.
3. The plan provides for the use of numerous density bonuses by PUD’s, PRD’s, the PMUD, AHPUD and other methods that simply mean more density. Density bonuses should not be allowed.
Theme 3 Uphold Jackson as “Heart of the Region”
1. A heart can only take so much overuse and it dies. I do agree with Jackson being the primary commercial use area, but the plan is allowing for too much density both in land area and building ht.
2. The idea sounds good but as planned it is not what the people who live in Jackson have clearly said they want.
Theme 4 Meet Our Community’s Housing Needs
1. The Plan is driven by affordable/workforce housing at public expense.
2. What we really need is affordable housing for people such as; school teachers, fire men and women, police, and other first responders. These people will continue to move to Lincoln County or Idaho unless the affordable housing in Jackson Hole meets the same living conditions they can get in these two areas. What they want is space, with a decent sized lot and a typical medium sized 3 bedroom single family house.
3. Workforce housing should all be rentals. People that are part of the workforce are generally seasonal and many will not remain in Jackson for the long term. Development of rentals would mean not dividing all buildings into condominiums.
4. Development of affordable and workforce housing should only be developed within new subdivisions with no density bonuses.
Theme 5 Provide a Diverse and Balanced Economy
1. It is important to identify the purely economic uses that create growth in Jackson Hole. Some of them are:
   • The plan is silent pertaining to the airport in terms of economic development and transportation needs. The airport is a factor in the development and use of large vacation homes. There is a sea of rental cars at the airport that generate much traffic.
   • Lodging and short term rentals allows more people to stay in Jackson Hole. Lodging is not much different from other residential use except rooms are used by different people each night or for a series of nights and days and they usually eat in restaurants. Lodging and restaurants create a need for affordable housing, workforce housing, create much air and ground traffic.
   • Area allowed for lodging need to be small in both land area and building ht.
   • Commercial development creates a need for more housing of all types, more schools, more medical facilities, more utilities, more roads and increases traffic.
   • Real estate subdivision and development in most cases is done for only economic interests and not for community need or with consideration for wildlife. The high end development of real estate requires intense and broad advertising to sell the product. This also creates growth of traffic and the need for workforce housing. The saying “build it and they will come” certainly applies to real estate development when sole purpose is for economic gain and not for actual housing needed for the community. The real estate market in Jackson Hole is at least nationwide or perhaps worldwide, but the bulk of development and marketing is not for local people.
   • National Parks and National Forests create lots of visitors and traffic. Probably not much we can do about this, since they are public land.
2. Balancing the economy with wildlife, natural resources, open space and local community character is very important. The force of economic growth and the money it produces is more powerful than preserving wildlife, and local community character. Economic growth therefore, needs the most stringent regulations to keep it balanced with wildlife and community character.
Theme 6 Develop a Multi-Modal Transportation Strategy
1. I fully agree with an efficient system of mass transit. In order to have people to not use cars the mass transit system must be efficient and fast to move people from place to place. Providing for other types of transportation would have to be suppressed.
2. The Plan provides for simultaneous road expansion and mass transit. These are diametrically opposed components of a transportation strategy. If new roads are continually constructed and existing roads expanded people will probably continue to use cars instead of mass transit. We are a time oriented society and will use the fastest and most convenient way of moving around in Jackson Hole. If roads are allowed to become crowded and slower to get from place to place then mass transit then and only then will people choose mass transit.
3. The Plan is silent on a very big and significant part of transportation, which is the airport. There should be a separate policy and strategy to constrain airport expansion.
Theme 7 Provide Quality Community Facilities, Services, and Infrastructure
1. My comments and suggestions are minimal for this theme. The Statement of Ideal is covered in the policies and strategies.
2. One comment that is not in the plan but pertains to the proposed sewer line from Grand Teton Park to the Jackson sewage disposal plant. Increased density and growth follows sewer lines.
3. Extension of sewer lines allow for higher densities for Jackson and the County. The first treatment plant for Jackson was at the Northwest corner of the Karns Hillside Subdivision, for service to East Jackson. The next extension was to a site near the intersection of Gregory Lane and High School Road to provide for more density and growth for West Jackson, along Highway 89 and Gregory Lane. The third sewage disposal site is the current site at the South end of South Park which allowed more dense development and growth in Rafter J, Melody Ranch, Cottonwood Park, Spring Creek Ranch, and to accommodate more growth and higher densities on the Wet side of the Snake River.

4. Higher densities and growth follows sewer lines therefore, one way to limit growth is not to allow more extensions.

General Comments
1. The plan is long and cumbersome to read. It is broad non-specific and loaded with weasel words. It should be more concise, more specific and allow no weasel-words. The plan is full of non specific words and phrases that leaves it open to many different interpretations
2. The outline of the plan is satisfactory, but I urge the Jackson and Teton County officials to give the public and the advisory groups more time and then amend the plan to match more closely to what the public wants.
3. The boundaries of the nodes; Jackson, Teton Village, Aspens/Teton Pines, and Wilson should not be allowed to expand in land area. Building heights should remain at no more than two stories and floor area ratios should be no more than 1.00.
4. I submitted detailed comments on the Jackson Land Use Plan several months ago. I have high expectations that you will thoroughly review and consider my comments on the Jackson Land Use Plan.
5. We now have paid advocates to develop and present real estate development proposals to both Jackson and/or County Officials including Planning Offices, Planning Commissions, Councilors, and Commissioners.
   • Paid advocates are usually called lobbyists. These lobbyists start the process of seeking approval well in advance, perhaps even multiple years, of a proposal reaches public awareness. During this period when the lobbyists are free of public reaction and comment there are, in all probability, commitments made by the Jackson and County Officials. This is probably the group outside of the public that is influencing this plan. If so they seem to be getting more attention than the public at large

4/30/2009 Sharkey, Steve Interested Public

The draft Comprehensive Master Plan does not reflect community input. It calls for too much growth and will cost too much to implement. We don't want our taxes going up. We need a sustainable community that's not dependant on growth. To do that we must: • Manage our population growth rate to no more than the national average • Limit commercial growth. It's the major JH growth-engine and it causes our housing shortage. Focus the Plan on the values that are near and dear to all of us: • Protection of wildlife and preservation of wildlife habitat • Open space that preserves our scenic views throughout JH, not just in select locations • Preservation of our rural way of life. I respect property rights and by-right zoning, but not the "density bonus options" that were rejected in the community surveys. That extra density adds too much traffic, congestion, and sprawl. I support an affordable housing program that is both sustainable and fully mitigates the entire development impact of each project within that project. My biggest concern is with respect to the growth permitted in the "growth areas" in town and the four growth "nodes" in the county. I think the monitoring component of the plan is a big improvement from the previous plan. If you reduced the potential build-out in the "nodes" by 60% (e.g. the NW corner of South Park is reduced from a max of 1,500 to a max of 600), I would support the proposed plan.

4/30/2009 Hoyt, Clay Interested Public

People. When we left the meetings last year I was under the impression that most everybody was in agreement that we donot want growth and the growth we will get here will be slow growth. now I hear we get 500 new houses in Wilson, did nobody hear what the people of Wilson said

4/30/2009 Boehne, Sonja Interested Public

<td>Tompkins, Kathy</td>
<td>I just think that unless you solve the problems we have right now and use the laws we have on the books to reign in the renting of single family homes to 4, 5 and 6 people by landlords in supposedly single family neighborhoods, this trend will just spread South to any new neighborhood and history then repeats itself. People are going to find a way to cram as many into a house to save on rent. All at the expense of the live in owners who are trying to make ends meet and make their home a home not just a frat house. There is no regard for the speed limit and safety of the children playing. These single family homes are suppose to have no more then 3 unrelated people in them. I just went around the corner of my place to a house and asked them to get the cars off the lawn (what was left of it!) clean up the trash and the empty beer bottles. At that time I think they had 5 kids living in the house. They had a bar set up at the end of the garage and fire wood and skis here and there. Not pleasant to look at. Plan all you want but it will be for nothing if you can’t preserve the single family neighborhood. It is indeed an admirable proposal to try to persuade people to use alternate modes of transportation such as biking, taking the bus, car pooling and last but not least your feet. The Teton County, Town of Jackson Comprehension Draft Plan is trying to do just that, with an overall reduction of single occupied vehicles (SOV’s). The plans’ success relies on the good graces and athletic capabilities of our future residents that would live in the proposed new South Park town hub. A reality check is needed when we grow bigger instead of better. Before I get to the reality check I just want to say I love the proposed programs about home mail delivery, encouraging and or requiring students to take the bus, walk or bike (don’t forget skateboarding) to school and employee carpooling incentives. We should back them 100%. Although I think we should forget about encouraging students not to drive to school. Bribing works best with teenagers. Now, fantasy verses reality. Do you really think people in the future South Park town hub, living that far away from their jobs and services in Teton Village, Wilson and town are going to give up their car to take the bus, walk or bike? The only South Park residents that will possibly walk or take the bus are the employees at the South Park convenience stores selling four dollar a gallon not so fresh milk, overpriced beer and cigarettes. Now suppose they do hop on their bikes or walk to the stores or work. Don’t you think they’ll have trouble getting through those unplowed pathways in the winter? I know several people including a lot of kids that have that problem right now. There is also that highly visible but nobody wants to do anything about it problem of overcrowded non family occupied rental homes with five and six cars in the driveways, on the lawns and on the streets (snow plow drivers love the last one). I don’t think that a new South Park town hub is going to solve it. The rent is not going to be any cheaper and if tenants can save a lot of money and landlords look the other way; South Park is going to end up having the same problems other single family neighborhoods are having right now. That brings me to the calculations on the build out number of up to 1500 units for South Park over the next 10 to 15 years. I know, I’m not supposed to worry, it’s just a number. Instead of 3,000 more cars coming out of South Park it will probably be more like 4000 cars when the above rental trend spreads there. I keep hearing the plan is just guidelines. Well, let’s guide it a little more. Why don’t we just take a breather, listen to the majority of the constituents who want “limited” managed growth and scale this plan back. What’s the rush? The economy is not heading anywhere fast, anytime soon. In the mean time we can work on solving the problems we have by building more affordable Category 1, 2 and 3 homes in town, closer to work and services so our future residents don’t wear out so many shoes and bicycle tires. Clear the most used pathways in the winter or groom them all and break out the cross country skis! Give single families back their neighborhoods by creating on work site employee housing like seasonal hostels with a few more creature comforts for the singles that just need someplace to sleep, store their skis, bikes and kayaks. Nothing fancy they’re up all night and day anyway either working or playing. That’s why they came to Jackson Hole. Improve the bus system we have by doing two way loops so you don’t have to go all the way around town to get to Smith’s from Cottonwood! I like sightseeing but we should leave that for the tourists.</td>

In brief, below are some of the key, broad issues that the Jackson Hole Conservation Alliance believes are important to address in the upcoming meeting. The Jackson Hole Conservation Alliance will be submitting line-by-line, detailed comments on the new draft prior to the planning commission hearings. During future comments, we will provide detailed recommendations for changes in policy language and the structure of the plan. The current approach and key elements of the plan do not reflect the will of the community.

On October 15, 2008, the Planning Team placed an ad to confirm recognition of top community concerns voiced during public comment. Unfortunately, the new draft falls short in addressing them. See ad text below:

"The Comprehensive Plan Will Be Responding to Public Comment: What you said:

• Wildlife and open space protection is the most important value in the community.
• Buildout should be clearly identified and provide guidance in policy creation.
• Growth rate regulation should be implemented to slow the impacts of development to natural resources and community infrastructure.
• Workforce housing should be provided in greater proportion by commercial development and include a mix of rental and ownership options.
• Commercial development potential should be limited with sensitivity to building design, community character, and not exacerbate the workforce housing shortage.
• South Park should only develop at town level density in the northern portion in order to address the workforce housing needs of the community.
• Plan format should be more clear, concise, and user friendly.

The current draft doesn’t give appropriate attention to all factors (direct, indirect and cumulative impacts) that affect our ability to protect wildlife; buildout was not clearly identified and did not provide guidance in policy creation; growth rate regulation is identified as a step to take only if future monitoring indicates the need to do so; weaker language (than in the ’94 Plan) is used to describe the relationships among different community issues/themes, particularly commercial development and workforce housing shortages; strong policies to limit commercial development are absent; proposed ranges for development in South Park far exceed the geographic scope presented in surveys and policies indicate sprawling development (north to south) for future planning in this district; and the plan format is not clear or user friendly given the map layouts and a number of vague and contradictory policies.

Other Key Issues:

• Amount of proposed development potential- residential and commercial- should be reduced.
• The impacts of commercial development are inadequately addressed in theme chapters. Drivers of growth-related impacts are underemphasized and inadequately described.
• Theme chapters, and the structure of the Future Land Use Plans inadequately address that our community must face, and answer, tough questions about carrying capacity (amount of overall development). As we increase the potential for direct, indirect and cumulative effects associated with human-related development impacts, there is a strong potential for crossing thresholds (in terms of survival of local wildlife populations).
• The meaning of Theme 2 "Managing Growth Responsibly" has changed significantly through this process.
• Geographic prioritizations (and district boundaries) in many node districts are highly debatable.
• The draft does not cohesively link different themes and policies. The Future Land Use Plans, as currently drafted, would not uphold the policies outlined in the draft.
• The draft rests on a number of assumptions that are not backed up with analyses. The draft suggests that the extent of development proposed within the nodes would have minimal ecological impact; however, we disagree, particularly given indirect and cumulative impacts.
• Permanent Conservation is a top priority of this community. We need to make sure that policies are in place to encourage permanent protection.
• There are MAJOR policy shifts from the ’94 Plan to this new draft. The new draft reflects much more than an "update" of the ’94 Plan. Key issues include: the lowered emphasis on scenic resources and rural character (in the county and town), transportation policies, and fundamental assumptions on the need for continued growth.
• Indicators need to be refined in all theme chapters.

I own a unit in the Aspens. What is the meaning of the Statement on Page 80, in the description of "Single Family Mixed-Type" that states "In the county, single family mixed development is only appropriate to provide workforce housing." For example, does it only allow workforce housing? Or does it allow/require a mixture of workforce and full-price housing? Besides answering my specific question, Please clarify this critical definition in the final document. Thanks

Interested Public

Thank you for the meeting in Alta. I came in late so I don’t know who did the presentation, but the presentation was excellent, as was the speaker. As co-owner of Targhee Village Golf Course, my primary concern for our property would be to ensure that a future owner would be allowed to expand the golf course to 18 holes on either adjoining or neighboring property so that it can realize its potential. Our current 91 acres isn’t enough land and I would hope the Mixed-Use Visitor Orientation land use classification would carry over to additional property, as opposed to perhaps being limited to our current acreage. Thank you very much!

4/29/2009  Magin, Barbara

Thank you for reading and considering the following letter. Most residents in Jackson feel the true values we have expressed were not prioritized in the Comp Plan. I look forward to discussions over the next few months. JACKSON’S HOLE Let’s face it, if it were not for the unparalleled beauty of our Tetons, the abundance of open space, and the incredible wildlife outside our backdoors, how many of us would choose to move to Jackson? Without those qualities, this isolated town might as well be just a Hole. According to the most recent Comp Plan, we are about to lose two of those three qualities in the next several years, should this plan go unchallenged. With maximum growth as the Plan’s priority, open space will be the exception and wildlife will be forced to retreat even further from our view. The South Park Neighborhoods are being targeted with attention to maximum build-out with minimal regard for our wildlife and scenic values. We, as a community, must be aware that this undeveloped area of town is our last chance to ensure that the qualities we value about Jackson will remain for future generations. There can be an incredible opportunity to create a better, ‘green’ community South of town, not just bigger, with careful planning. It is clear, the message our Planning Department has sent in favor of big development, is that Jackson Hole should be just a Hole. Survey after survey has shown overwhelming support for least or no growth options, protecting our wildlife, increasing transit over building new roads, and scenic values as the priorities for Jackson Hole residents. Our Comp Plan should not focus on build-out, but focus on build-in! Now is the time our Comp Plan should focus to improve our infrastructure: maintain least growth patterns though out Jackson, mandate all future construction be 50% green building materials, expand public transportation routes, redesign the Y intersection as a roundabout (solves traffic delays, saves fuel, reduces pollution), expand recycling methods with curb pick up, require any new development must meet 1:1 minimum open space ratios, and promote and maintain all wildlife habitat/migration routes. Let us look for solutions to make our town better, not bigger. Build-in strategies will keep us stronger for future generations, not weaken us through big build-out. Let’s keep the name Jackson Hole much more than just a Hole.

<td>O'Brien, Kristine</td>
<td>Rightfully, sustainability is a key element of this Theme. However, I am concerned that the policies described to achieve this goal are either absent or in direct contradiction to it. An economy cannot be sustainable unless we ensure that all economic activity pays its own way, both socially and environmentally. A business that relies on the community to house its workers or widen roads for its customers is not paying its own way socially. A resort development that pollutes a river with fertilizers or chokes off a migration corridor is not paying its own way environmentally. A town that obliges its teachers, emergency response personnel and public service workers to live far away, or does not provide alternative methods of transportation, is not paying its own social or environmental costs. Fostering local business may at first glance appear helpful. However, consider that in so doing you are inviting other businesses to locate here- and if those businesses are not sustainable it will be at the cost of not attracting truly sustainable businesses. Using growth to solve social problems might seem like an easy fix because nobody pays, but that’s only if the true cost of development (pollution, congestion, the need for more development, the need for more public service workers, crime ...) are not counted. If this growth occurs through a density bonus, it is even worse because there is the added cost of encouraging the construction and building industry- an industry, which clearly is not sustainable. As public officials, you can take the lead in changing our County’s outdated philosophy towards development. The world has grown past the point where environmentalists should be considered a detriment to economic advancement; they should be an integral and influential part of economic policy decisions. This is particularly relevant in Teton County where our Natural Capital is our biggest asset. If we ignore or hide costs because it’s easier not to look, we will decrease our own wealth. Furthermore, we will exacerbate the problems associated with growth, selfishly passing them down the line to future generations. A more positive way to view this is, that as the world grows, develops and pollutes at an increasingly greater pace, genuine environmental capital will becomes more and more valuable. Nurturing our environmental capital is an excellent investment opportunity.</td>

<td>Boehne, Sonja</td>
<td>After being on a lot of meetings regarding the comprehensive plan...I have a question regarding public transport. Living in South Park I have always wondered why is there no START buses coming down to Rafter J and Melody Ranch. I have lived here since 1998 and haven’t seen any changes in this. Our traffic issues are growing and I am sure you are spending quite some time on this issue... I made a call to START bus a couple of weeks ago and asked if there is any talk about public transportation to South Park. They said no and it is not even on their agenda in near future? How can that be...!!!! They have done a great job on the transportation to Star Valley and over to Idaho ...and it works great... Everyday I drive my car from South Park to the hospital, were I work. 70% of the drivers drive way to fast into town and follow each other to close...and so on and on....most are probably running late and are not concentration on the traffic.... So why cant we get more people of the road.?...for this little town we have reached our traffic capacity already a while ago. I would love to drive the bus to work..save gas., less.stress...and less cars on the road.... I think enough people live in South Park (incl. Rafter J and Cottonwood) to make this service available. So the comp. plan talks about it but I don’t see or hear any really solution about traffic. It is all nicely printed but in reality we are going another way.. We also need more walk and bike paths/walkways in town. I rode my bike for two years in the summer to work and know how you go from bike path to road a lot of times in town...that should be priority and not the bike path in Teton National Park for recreation. Priorities!!!! On the comp. plan meeting in South Park , Jeff Daugherty said we owe our workforce to be housed in Jackson....So the 1.500 homes , which could be build in the South Park node should solve our workforce housing problem... Hey in a lot of cities you have to commute to work...we cant build up town just because it is so great here and everyone wants to live here (at a point there is just so much you can build and accommodate) Again it comes back to traffic congestion, more services build out..... These are just some thoughts which I have been discussing with my friends...and even they don't always show up at the comprehensive plan meetings , they are also very concerned and hope that our county commissioners will represent the people of Jackson.... Thank you for your attention</td>

<td>Moyer, Robin</td>
<td>I am writing to oppose the whole notion of having a massive upzone of the acreage around the Aspens . Furthermore, I can't believe we pay you planners to come up with such ludicrous ideas. 310 additional units? Do you honestly think it makes sense to burden the Teton Village Road with more traffic? Where are all the supposed workers going to work? In the town most likely, which will just create more congestion on the TV road and the SR bridge. I live off of Cheney Lane and have moose,fox, raccoons and sometimes elk reside on our property all winter long. Adding more traffic will surely jeopardize their survival, especially the moose where it has been shown that they are already hard hit by traffic accidents. I thought the community's goals were to preserve wildlife and open space in balancing future growth. You apparently didn't listen.</td>

---|---|---
4/27/2009 | Boehne, Sonja | why build all homes...just it makes more money for the developer... build some appartments in the south park node... use less open space to develop for 1500 homes a lot of people dont need houses and are perfect in appartments/condos...people move in and out of town a lot... how are 1500 homes justified... It all comes down again, to maybe think about a population cap in this town. There are already high density neighbourhoods in South Park...and they were inteded to create workforce housing...what happened there and then. Its all in a dream/vision on paper but reality (money) brings it all down to...where quick big bucks can be made...wildlife, town of heart doesnt matter......anymore.
4/27/2009 | Stevens, Sally | For the past 1 1/2 years, many locals have been participating in what the Planning Dept. called the "People's Plan." We spent countless hours attending meetings and redrafting our time to be in the valley for what we considered to be critical decision times. We were lead to believe that our input was forming the new Comp Plan. Now that the plan has been revealed, it is not what anybody asked for at all. The new Teton County Comprehensive Plan is a huge disappointment with tragic consequences. My comments will be directed to Wilson and the Waldron property. Too much growth Wilson - Not a "walkable" community Waldron property - "South on Fall Creek" boundary Moose habitat being ignored In October 2007, the people clearly chose "Option A" with neutral density. Teton County's published handout called Mixed Use Village Sub-Area Plan WILSON DENSITY stated "Based on the public input received at the October 4, 2007 Open House, the vast majority of Wilson residents support Option A (density neutral) and are opposed to Option B (increased density)." Wilson has already doubled in size in the past decade with the addition of the Wilson Meadows sub-division. Most importantly, Wilson is not an appropriate place for high-density housing. Wilson is not the cute little isolated mountain town that the County tries to portray it to be! It is a town that was built at the base of a steep mountain pass, 10% grade, which serves as a major commuter highway for multiple communities in Idaho going to and from Jackson and Teton Village. WYDOT considers it to be one of the busiest and most dangerous highways in all of Wyoming. Traffic count figures for July and August 2008 average around 12,500 cars per day traveling through Wilson. Yet the County seems to believe that this is a great place for high-density housing! To propose a significant increase in high-density housing immediately at the base of this dangerous run-out is not only irresponsible but grossly negligent. The Waldron property should remain in the "South on Fall Creek" boundary which is rural in character. Alex Norton, on April 20, 2009, explained that high-density was going to be put where high-density already exists. This is not true for "South on Fall Creek" and the Waldron property, which has been platted for five parcels on 15 acres for decades. In addition, Teton County's "Comments from Wilson Mixed Use Village Sub-Area Plan Meeting--10/4/2007" states on the 3rd bullet point "Waldron Property - ALL were opposed to seeing increased density there." Critical moose habitat is being ignored. The Waldron property provides substantial wetlands for moose habitat and provides the necessary wildlife corridor to the Rosseter Land Trust and the Snake River. Please refer to the article in the Jackson Hole News & Guide dated March 25, 2009 - "Moose on the decline in Jackson Hole area." In conclusion, to propose high-density at the Waldron parcel, with deadly access at the base of Teton Pass, is not responsible planning.
4/27/2009 | Boehne, Sonja | Read through the principles....I called Start Bus a couple of weeks ago and asked if the is in the near future a plan to get public buses to Rafter J and Melody Ranch to help decrease traffic coming into town...START officials said there is not even talk about this in the near future...How can this get implemented into the comp plan:we need to have public bus service to south of town asap...with the wording right now...everything seems like open and they probably wont be much done...Guess this is a comment for the county commissioners...Would just be nice to have the comp plan more direct in their language...direct solutions named...

<td>Duke, Marva</td>
<td>I have been reviewing the Comprehensive Plan with particular regards to Wilson as that has been my hometown for the last 33 years. I have learned that the property of most interest for development is the Waldron property located at the corner of Teton Pass and Fall Creek Road. I have major concerns if development is to occur on this property. I have seen many accidents involving semi trucks coming off Teton Pass in the years that I have lived just off the Pass road. One truck in particular hit a shed on the Waldron property (known as Tommy’s Truck Stop for many years after the accident and the newly constructed building is Bill and Tom’s New Truck Stop). God forbid that any person, least of all a child should be struck by a run-away truck while crossing Highway 22 to get to the Wilson School which is located on the north side of the road. There are hundreds of cars that use Teton Pass Road on a daily basis. I have waited at the head of my road for many minutes to get onto Teton Pass during the busy rush hour early in the morning and have worried about being rear-ended coming home at night and turning off of Teton Pass because of the traffic. In my opinion, putting dense development at the base of a very steep mountain pass road is a very poor idea and does not show responsible planning. Will there be a traffic light at the base of the pass so that those people living in that high-density area could get out of that development? Can you imagine how far up the pass cars would be backed up if that were the case? Putting more traffic onto a currently highly used road would only compound the problem. Another major concern of mine is for the wildlife that uses the Waldron property and adjacent properties to access Fish Creek. We have many moose on our land, especially during the winter. One very distinctive moose, plagued by ticks and mostly hairless from scratching himself, used that corridor this winter. He spent many afternoons in our yard, but then I would see him the next day down on the Waldron land. In the winter the animal tracks are numerous and obvious as the animals go from the bench above the Fall Creek Road down to the valley below. I would appreciate your consideration of my concerns as a local who has witnessed the activities and environment of this area over the last few decades!</td>

<tr>
<td>4/27/09</td>
<td>Boehne, Sonja</td>
<td>We have a lot of protected lands…but to build out the last 3% to the total extend is not in the interest of many people living in Jackson. To be a responsible Steward for Wildlife and the Yellowstone greater area we probably should have a greater vision. Just looking into the next 10 years is maybe not extensive enough...maybe a look further than 10 yrs. into the future would be more responsible....Jackson, is a “small node” and cant be another Idaho Falls, Casper, etc...We dont have to accomodate everyone who would like to live here because it is so beautiful.......I see almost on a daily basis people who have come here to Jackson for work (summer or winter) and love to kajak, bike, hike..you can do it all here...but are really not interest in Stewardship for the wildlife...it is nice to see a moose and an elk but hey..I cant slow down because of them because I have places to go and need to be there &quot;right now&quot;... So there more population we have here in Jackson (densed in) the more conflicts there will be between wildlife and people. So I guess even in that little 3% node we need enough space for the wildlife to migrate through....open spaces... So please consider the open spaces in town and south and north of town......the wildlife needs them, we need them..too.</td>
</tr>

During the long, drawn out public comment period, Mr. Daugherty repeatedly stated one would have to “swerve to miss” participating in the Comp Plan process and letting the department know what the community envisioned for its future. It is clear Mr. Daugherty has “swerved to miss” the community’s stated objection to growing our way out of growth-related problems; we know that will only fail. Our responsibility and legacy, is to guarantee that the attributes of this valley - its wildlife, its vistas, its people, its uniqueness - are preserved for all time. Residents have repeatedly identified wildlife and natural resources throughout the valley as their top priority, not shifting dubious, shadow growth that may never occur in outlying areas to nodes where constrained growth was favored - not dumping in the “excess” transferred from other areas. The final plan should acknowledge wildlife and natural resource attributes of ALL areas of the county and focus on least growth solutions to our varied community challenges, including workforce housing. Buildout must be reduced; job creating commercial growth needs to be significantly constrained. If we fail at this critical juncture, a decade from now we will have more traffic, more pollution, less wildlife and a larger workforce housing gap. It is folly to argue more growth will solve growth-related problems. Nothing will tie the hands of future leaders more than a comprehensive plan that does not curtail growth-related problems NOW. The draft plan includes no empirical basis for evaluating the impact of proposed, nodal development. A “comprehensive” plan should include clear and specific data outlining the outcomes and impacts on wildlife, traffic, roads, schools, workforce housing, taxes and other quality of life issues. Without it, it is nothing more than a “trust us” stab in the dark. Are the impacts and trade-offs of such a plan in line with the community’s vision? How can this be evaluated without knowing what the projected impacts and consequences are in real terms? Intuitively, the draft falls far short of what we, as a community, seek. There are no bailouts if we fail. We have a lot of work to do. I remain committed to participating in now amending the plan, within the public process, so it can become the “Community’s Plan”. Many in the community have told me they are disillusioned and frankly burnt out on the process. Many others have told me the current draft should be rejected. This is far from being a done deal. The public needs to know that the plan is not in the control of the planning department anymore - it has moved on to the joint planning commissions and elected officials. That does not mean we should not continue to hold the process accountable — in fact it is more important then ever that we persevere. Hang in there and contact your County Commissioners, Town Council and joint planning commissions with your concerns. They ARE listening, open, and committed to maintaining the public’s trust.

The amount and location of development allowed by the new Comp Plan is not aligned with our priority to promote stewardship of wildlife and natural resources. We must recognize the long-term value of open space in the valley floor, especially for wintering wildlife. We must ask ourselves the question, why do we need to develop more open space? We will never be able to meet the housing demands of all of the people that want to live here. We should focus on managing what we have better, the existing developed area in town and our affordable housing. If the existing affordable housing was managed properly, we would already have housing for the teachers, emergency personnel, and law enforcement that need it. Instead, I pass by affordable housing and I see expensive cars in the driveway and people with jobs that are not essential to the community in many cases. Of course more people want to live here now, and we will never build our way out of it, instead we will just destroy what makes the valley unique.

It has been interesting reading the new Comprehensive Plan, and following the debate over it, from out here in Abu Dhabi. I’ve been struck by a link between the economies here and in Teton County: Both are dependent on a natural resource, and successful management of that resource is essential for good economic performance. But there also is an important difference. Once a barrel of oil is sold and shipped from here it’s gone forever, and the oil supply eventually will run out. Teton County has a great advantage over this region; its natural resources can be enjoyed without depletion, and with proper care can last for, and benefit, many generations. That is why I am puzzled by why the Plan doesn’t make a stronger effort to understand the scope and vulnerabilities of the Valley’s natural capital. Preserving the natural environment is an important theme of the Plan, of course, but this is not accompanied by any serious attempt to measure the impact of development on the environmental capital of the valley, or to balance costs against benefits. That gap, in my opinion, undermines much of that the Plan wants to accomplish. You have a Plan that assumes growth will happen, and tries to channel it to where that growth will do the least damage. It takes a short-term view when it treats building homes and commercial space that will last for decades. This is not responsible stewardship of a unique, irreplaceable resource. The planning process made a strong effort to understand what the community wants. It did not make the same effort to take an inventory of our environment, and determine how to preserve it. That’s a gap that can be fixed. The problems of our economy and financial system have just put a long moratorium on major development activity. There is no obstacle to extending the planning process to make a quantitative assessment of our natural capital, and how much development it can sustain. Your leadership can make a difference. Support the goals of the Plan, but instruct the planning staff to come up with real answers to hard questions: What is our environmental capital worth, in terms of jobs created and recreational benefits enjoyed? What further buildout is consistent with maintaining current environmental quality? Where do we want the population and development footprint in the Valley to be in 50 years or 100 years? There is time to ask these questions now, and if we miss this chance we may not have another one.

<td>Stone, Cindy Hill</td>
<td>Let’s talk sustainable. What do you want to be sustainable in your lifetime? I’m a grandmother. I might not be around to fight the next fight. The last comprehensive plan in 1994 I was at my parent’s house on the Village road watching my mother die and trying to help my father cope. My mother was 57. There are some things in life that when you let go you can’t get them back. The entire community said that wildlife in our backyards, in our meadows, on our hillsides, drinking from our ponds, creeks and river banks was our most important community value. And in this new comprehensive plan draft (let’s hope it’s only a draft) the planners are flipping us off. Once we’ve been taken advantage of they’ll keep coming back for more. I made my husband go to the South Park planner’s meeting. My neighbors wouldn’t go because, well, you know the saying “Fool me Once”. What I heard at my Planner’s neighbor meeting was, “Cindy we are going to take your most important community value and transfer it to Alta, Buffalo Valley, Hog Island, and Kelly. Not to worry. The wildlife in your neighborhood will learn to use the cross walks and read the signs. If they do make it to Alta, Buffalo Valley, Hog Island, or Kelly there will be “Affordable Wildlife Housing” to meet their needs.” In exchange we will take the development rights from Alta, Buffalo Valley, Hog Island and Kelly and move it to replace your wildlife’s habitat. If the planners heard the valley say, “slow the impacts of development” (News and Guide Oct 15, 08), by regulating growth”, what dictionary are they using? In my dictionary, Daniel tells me that slow means to proceed at less than the usual speed. (It also means stupid or sluggish which is another can of worms.) Jeff Daugherty our county planning director and Alex Norton a county planner explained that this comprehensive plan would be a road map for citizens and elected officials as far as where development should be in the county and town. --------Who told Jeff and Alex? Who and where did their comprehensive plan data come from? It didn’t come from “We the People”. The Planner’s power point slide show is just as smooth and creamy as your granny’s fudge. But they don’t say anything about where they bought the ingredients or what this comprehensive plan is going to do to our girlish figure.</td>
</tr>
<tr>
<td>4/26/09</td>
<td>Rossetter, Birdie</td>
<td>I always thought that I lived in the Village of Wilson. Do I now have to refer to it as the Node of Wilson or Wilson Node? I live on 38 acres 2/10 of a mile south of Wilson with both Fish Creek and Spring Creek running thru it. The first thing Tom and I did when we bought the property 20 years ago was to put a Conservation Easement on it. Almost every wild animal (including baby cougars last winter) and wild bird in this Valley either live on our Property or migrate thru it. Moose twins have been born on our land almost every year. Two years ago Moose twins were born on the Waldron Property. The proposed Comprehensive plan for high density development of lands south of Wilson-land immediately adjacent to my property, would seriously impact moose habitat and migration. Moose move back and forth from the Wilson bench to my land. They feed on my willows. They calve in the oxbow of Fish Creek which is also my land. I am sure other people will speak about the nightmare of having 100s of cars trying to get onto Rt. 22 at the base of a steep mountain pass. Several years ago Tom and I were having a conversation with Luna Leopold (Aldo’s son) about rivers. In his wonderful deep voice he said &quot;The best thing you can do for a river is &quot;Leave it alone.&quot; The best thing you can do for Wilson is &quot;LEAVE IT ALONE.</td>

</table>
I'm writing to you with my comments on the Teton County Wyoming Draft Comprehensive Plan, specifically for Alta, Wyoming. My main concerns are with the Transportation section. With your recent approval of the Grand Targhee Resort expansion, traffic through Alta has the potential to increase dramatically, so more mitigation of the traffic increase should be put in place. Pathways / Pedestrian / Cycling

There are no pathways or bike lanes in Alta. People who want to go for a walk or run, especially in the winter and spring, have to do so on the roads. I often see people walking their dogs, parents pushing strollers, runners and cyclists mixing with the traffic on Ski Hill Road. Combine that with the tendency for skiers to speed through Alta to and from Targhee with sporadic law enforcement and you have a potentially dangerous situation. The road through Alta is wide enough to re-stripe it with narrower travel lanes and provide bike lanes on the side. Reducing the travel lanes to 10' would have a traffic calming effect plus additional traffic calming methods should be considered. There are bike lanes on the Idaho side of Ski Hill Road, but they stop at the State Line Road junction. Even the current shoulders in Alta are rarely swept which means that cyclists who don't want flat tires are riding in the traffic lanes - annual sweeping should be done. That said, there is probably enough right-of-way along the road to place a separated pathway through Alta. That should be pursued as the long term choice but as a temporary measure, simple re-stripping and signage for bike lanes would be easy and inexpensive to implement. Another road that has had increased traffic is Alta North Road. It's a narrow 20' wide road with no shoulders and short sight distances due to the frequent hills. Combine that with the fact that many people drive considerably faster than the posted 35mph and you have another potentially dangerous situation. This is a favorite place for people to walk their dogs, push strollers, run & cycle - school children often ride their bikes on it to the Alta school. It would probably too expensive & impractical to widen the road so a separated pathway along Alta North Road should be pursued. Chip Sealing Policy / Designate Ski Hill Road as a Shared Use Road

Ski Hill road from Alta to Grand Targhee currently gets high use by cyclists, runners, walkers and roller skiers during the dry months - that type of use will only increase as the population grows. The county commissioners approved a policy of not chip sealing mixed-use roads, but apparently it needs to be enforced, as since that approval, several roads in Jackson were indeed chip sealed. Protecting the road with a smooth treatment option, not chip seal, will allow these important non-motorized uses to continue on the road from Alta to Grand Targhee. The Ski Hill Road from Alta to Targhee should be designated and signed as a mixed use road. Paved Roads

There are several gravel roads in Alta with considerable traffic that are currently being graded and treated with dust guard. While the treatment does make the roads better in the summer, they quickly fall apart during the mud seasons and when it rains. The treatment used for dust guard is magnesium chloride - a highly corrosive salt - it's even etched holes into my concrete parking apron as the muck drips from my car. While mechanics may love magnesium chloride as it causes premature replacement of under carriage parts, car owners don't - the county should consider stopping the use of magnesium chloride on county roads. A goal of gradually paving as many roads as possible over a period of time would eliminate much use of magnesium chloride. While a considerable amount of money has been spent on Alta roads over the past 5 years, almost all of that was spent to upgrade the section of State Line Road that Wyoming is responsible for - North of Ski Hill Road. This upgrade has cost about a million dollars and primarily is used by Idaho residents. I don't know who made that decision, but that amount of money could have instead been used to pave most of the Alta roads where Teton County Wyoming taxpayers actually live. Interestingly, Idaho has done almost nothing to upgrade the section they're responsible for. There has been considerable debate about finishing the upgrade of State Line Road all the way to South Leigh canyon. There are about a dozen vocal Teton County Wyoming residents who live up there and have been trying to get that road completed. I think completing that road would be a mistake and not the best appropriation of our tax dollars. It would require condemning property and paying for easements, constructing an expensive bridge, and building about a mile of new road - if it were built, on a benefit per tax payer basis, that could end up being the most expensive road in Teton County. Plus, there are more residents on the Idaho side of South & North Leigh canyons so again this would primarily serve Idaho residents. We need to have Alta road money spent where it's going to serve the most tax-paying Alta residents. There are two roads in Alta that are good candidates for pavement - Alta North Road and Targhee Towne. Alta North Road needs only 3/4 of a mile of pavement and would serve over three dozen homes housing over 50 residents. At least one subdivision at the end of that section would like to pave their subdivision road, but doing so makes little sense until that section of Alta North Road is paved. The road in Targhee Towne is longer but the density is even higher. These are the roads the county should prioritize for spending money on and paving in Alta, not the road that primarily serves Idaho. Teton County Wyoming offers its' residents many good and valuable amenities but for some reason, it seems that it has never prioritized its' roads, or at least not the somewhat rural roads. To me, the road infrastructure is part of basic services that should have a higher priority in the county. I've been told by county engineers that after the initial cost of paving, maintenance costs for pavement are about the same as those of gravel roads since the resurfacing of paved roads only gets done about 5-7 years. If the county were to gradually pave more roads each year, the number of miles of paved roads will increase, but maintenance costs would not - it just takes that initial investment. I've lived and paid taxes in Alta for over 20 years, have had no kids in the school system and rarely get over to Jackson to take advantage of county services where most of them are. I realize that the county has spent money recently in Alta for the new Library and the waste of money spent on upgrading State Line Road. But as the tax base has increased with recent construction of a number of multi-million dollar homes in Alta, I feel that services, namely good roads, should be increased as well. I've received few direct benefits for the tens of thousands of dollars...

<td>4/25/2009</td>
<td>Williams, Jodi</td>
<td>I am a nurse and a longtime westbank resident. I was unhappy to hear that the aspens area was being considered as part of the future development plan. Firstly, the aspens is already congested if you ask any year round resident. People who choose to live on the westbank, choose NOT to have TOWN the heart of the area... Thats not what attracted me to jackson wyoming in the first place. The pace at which this town is expanding is very sad. Yes we need workforce housing, but not at the rate proposed nor in the locations suggested. Why not take over more old buildings that are tear downs etc.. Secondly workforce housing should be in town.. not in the aspens. What percentage of jackson residents work in teton village year round.. less than 3 percent?? I work at the hospital and even the hospital doesn't want to develop much out there because their employees want to be close to the hospital. The westbank store and surrounding shopping area is a danger to drive into during the summer due to increase in traffic. The condos areas practically face each other and I do not look forward to the increase in noise and traffic. The construction and cookie cutter housing would provide a decrease in the charm and serenity of the westbank. I already have replaced two windshields last summer due to the debris dropping off of trucks that were on their way to Shooting star ranch. In addition, shooting star has already mapped out affordable housing in that project which I feel in addition to the downtown Wilson development and the one by calico.. we have enough affordable housing. Not to mention the decrease in open land in the residential neighborhoods you are proposing. This is the reason people choose to live on the westbank and you are taking that away from people. I have already seen a dramatic decrease in wildlife since I have lived on the westbank. Basically I strongly oppose and will fight til the bitter end. thank you.</td>
</tr>

<td>Koster, Ken</td>
<td>This was addressed by the TAAF group several years ago over here in Pierre's Hole. Lofty ideals, but not practactical with sparse population. I personally believe the automobile as a primary means of transportation will be with us for some time to come. Public transportation will work in densely populated areas, but not in the foreseeable future outside of Jackson. Thus roads will unfortunately be a major problem for years to come. Tourist travel to and from Jackson mostly by automobile as many have itenaries to include other attractions such as the Black Hills, Big Horns, Glacier, etc. Aviation is already discouraged by policies of the Jackson Hole Airport Board by the utilitization of noise restrictions, curfew, and landing fees exorbitant fuel prices, all of which tend to discourage use by many aviation families. Thus the rapid growth of the Driggs Airport. Again a lofty idea but not practicable in general with present cultural changes of an automobile reliant society.</td>

<td>Wang, Louis</td>
<td>There is a marked difference between the draft Comp Plan now under review by the community and the data collected from the community over a prolonged period. It’s perplexing; how did we get from a wildlife and open space focus to a thrust for growth and expansion? What changed? This Comp Plan Update effort has always been billed as an open process. The community input is readily available with the various surveys and much documented public comment. Where is the other input? Who was it collected? Who provided it? The community deserves to know what planners considered in creating the Plan. Please assemble all the input so it can be independently reviewed. This is an official request made in the spirit of openness and full disclosure. The Plan is so very different from the public input it reminds one of the Wizard of Oz - ‘‘Toto, I've a feeling were not in Kansas anymore.’’ We need and deserve process transparency.</td>
</tr>
<tr>
<td>4/24/2009</td>
<td>Morris, Bob</td>
<td>I agree fervently with all that I’ve read in the new Plan. But it’s written in bureaucratese. On page 3, column 1.9 -- that is, nine-tenths of the way down column 1 -- it says that cars with no passengers produce more traffic, more pulltion, and wider highways, dangerous for people and animals alike. But the actual words are: “Reliance on transportation by single occupancy vehicle results in negative ecological impacts of higher traffic volumes, increased carbon emissions, and wider roadways that are more dangerous for wildlife and human traffic.” I had the pleasure of meeting with the nice young writer: he has lots of brains, but admitted that prose composition is not his forte. I pray that Planning Commissions and Joint Powers reject his draft and ask that a new draft be written by someone with a gift for sentences that are clear, simple, straight-forward, lively, and conversational in style. If she has no Planning background, the more likely that she’ll avoid jargon and make the Plan clear to the rest of us. Ideally, she’ll sit down with the Planners, listen to them, ask questions, show them her work, and make revisions to their satisfaction in her own hand. If the Plan is forward-looking, it’ll last for decades, during which it’ll be read by hundreds of officials, staffers, candidates, developers, and journalists. The briefer and more readable, the more thoroughly it’ll be read, and the better understood. Self-evident thoughts should be omitted. For example, page 1 begins with the sentence, “Jackson/Teton County is a unique and special place.” It’s followed by fourteen self-evident lines. The draft is more than 1.5 inches thick! Readership dwindles.</td>

<td>Koster, Ken</td>
<td>Lofty goal but should not be the first priority. It should be strongly considered with such items as #7. Quality community facilities, services and INFRASTRUCTURE are the real NEEDS of residents in your “satellite” communities. Jackson as the “Hub of The Universe” needs to recognize that it is not all that great in its attitude to those of us in the outlying areas. Jackson has all the amenities. Recreational facilities, fire, police, schools, library, are all in place which those of us living in the County pay for but do not have the ability to access them without an hour’s travel. See #6</td>

<td>Walles, Brooke</td>
<td>Are you aware that no meeting has been scheduled for Wilson or the West Bank until May 5th at the Village? That leaves only 10 days left in the comment period. How could they not have a meeting scheduled in the areas that will be the most negatively impacted by the plan? Thus far the planners have ignored and disregarded the feedback provided by the citizens of Wilson and the citizens of Teton County during the mixed use village meetings/comp plan revision update. This is yet another example of the planners trying to shape the feedback and response to the plan. Their job is not to sell us their vision but to come up with a plan that enacts the vision of the citizens of Teton County. Please have them schedule a meeting at the Wilson school as soon as possible so that the citizens of Wilson will have a chance to be informed and comment on the plan before the deadline. Thanks for your attention to this matter.</td>
</tr>
<tr>
<td>4/23/2009</td>
<td>Nigro, Bob</td>
<td>A north bridge is required and should be part of the plan. Jorgensen Engineering did a traffic study about 15 years ago and it was determined a north bridge was required. I dispute the finding that a north bridge will increase traffic on the town square. With all of the development north of town, approved development at Teton Village and the airport being where it is extremely difficult to see traffic being increased on the town square. Providing for additional growth and hoping enough people walk, bike, take the bus and carpool is irresponsible. Traffic is bad enough today, what about 20 years from now?</td>
</tr>
</tbody>
</table>
Preserving open space is extremely important. I could not find a clear definition of open space in the plan. I looked for this because I understand that the Melody Ranch gravel pit is classified as "open space" and recall that Shooting Star proposed about 100,000 sf of development in "open space" several years ago. To me, open space should be defined as "undisturbed land or new park land". The community wants to preserve open space and there should be more restrictions on what can be done within an open space boundary.

My recommendation applies to the residential low classification wherever, not just to East Jackson. I recommend that all lots be restricted to no more than 15% of the lot surface area for building construction. Furthermore, I recommend that no more than 2 buildings be permitted for each lot of 50 ft. by 150 ft. in size. My rational is this. These restrictions would allow for 85% of the lot to be in open space for a yard where children could safely play and not be forced to play in the adjacent street.

I have been reading the Comp Plan and would like you to consider some of the following things. 1) Separate Wilson Meeting: As Wilson has been slated as one of the key "nodes" I think that it is very important that Wilson has its own meeting for a presentation and discussion of the plan IN THE TOWN OF WILSON. The Elementary School would be a good place. It would be great to have the meeting as soon as possible so Wilson residents would have time to respond before the plan goes into effect. (2) WILDLIFE PROTECTION SOUTH OF HIGHWAY 22, WILSON VILLAGE: I am very concerned with the proposed high density zoning that borders my immediate north boundary up to Hwy 22 and Wilson Village. High density development, as proposed, would potentially provide for hundreds of new housing units with impacts from humans, pets, cars, lighting, pollution and noise. These impacts could have serious negative consequences on the quality and health of the wildlife habitat and populations on my land. The Waldron Property that abuts my western boundary is also slated for high density development. That development would seriously effect the ability for moose to migrate from the Wilson bench eastward onto my land and their habitat area. The Waldron land is in crucial Moose Winter habitat as defined by WY Game and Fish and deserves protection. As you know, Tom and I put conservation easements on our 38 acre property thru The Jackson Hole Land Trust because of its very important and unique year round wildlife habitat, especially for moose and Elk. Our land includes wetlands, willows, spring creeks, riparian zones, and extensive Fish Creek frontage (including a large oxbow). It is designated prime Crucial Winter Moose Habitat as mapped by Game and Fish. The last couple of years we have had twin moose born here. We also have deer, eagles, osprey, foxes, trumpet swans, otters, cutthroat trout and an occasional bear. A small Elk herd winters here and last winter we even had two mountain lion cubs. Hank, I would love to show you this land so you can understand and appreciate its unique wildlife value. Would it be possible for you to come over some time soon for a short walkabout? I can’t tell you how much I appreciate what you do and are doing for our community and valley! It’s a tough job!!

I first move to Jackson Hole in 1978 and each year I have witness the degradation of our community. Negative to zero growth from our past comprehensive plan is required for a sustainable community. We have not adequately dealt with the current traffic and affordable housing problems. More growth will make these problems worse not sustainable. Employers should provide 75% of their employee housing needs. It should not be the responsibility of the community to subsidize a local workforce for private businesses. The remaining 25% for employee housing should come exclusively from a lodging tax. The only affordable housing the community should provide would be for public servants, hospital and school workers, town and county employees, police and firefighters. These people are the backbone of our community. We need to get our heads above water before additional growth is approved. We can not grow our way out of our current growth related problems.

I am writing to request that a County Neighborhood meeting be scheduled immediately in the Town of Wilson. The citizens of Wilson should have the opportunity to meet with the planning staff and hopefully planning commissioners and County Commissioners to discuss the new draft of the Comp Plan. I am requesting that a meeting be scheduled at the Wilson school. The planning department has completely ignored the feedback they received during the many meetings held in Wilson regarding density and the “Mixed Use Village” concept. Just because it now has a different name, “county node” does not change the feelings of the citizens of Wilson. I request that this meeting be schedule before the end of April so that the citizens of Wilson have time to actually provide feedback before this short comment period expires.

I am in agreement with the guidelines listed for district 4. This is an important wildlife area that requires high priority protection. The continuation of the bike path from Moose to the southern end of Grand Teton Park or to town would be deserving of consideration. Also, worthy of consideration is the establishment of minimal flow standards for the main channel of the Gros Ventre River to prevent diversion from "drying up" the river each summer and thus damaging the fish population.
I believe in the market and not social engineering. I do not support deed restricted housing. I object to my tax dollars subsidising the destruction of our environment.

I am opposed to your proposals for South Park. You have NOT listened to South Park residents. I do not want "managed growth". I want the jewel that is Jackson hole protected. I do not want green fields turned into housing. I support a moratorium on new development, and only new building on sites that are already developed with existing structures. I do not see the growth envisaged as responsible; more houses= more people = more cars= less wildlife and a damaged ecosystem.

I am going to be very dissapointed if this passes. Everyone convinced me that town and county electeds like Andy were not only "pro growth". Apparently I was duped

Traffic is a real issue. What about a bus that services Teton National Park with stops along the route within the park? They have this in the Grand Canyon and it is great. People could also use this for a loop backpack trip instead of taking 2 cars or hitching a ride.

I applaud the goals for the Town Square. But the tricky part will be implementation; we'll need tough standards that are mule strong, horse high and not subject to compromise. Witness the new building now being completed on the north end of Centre Street - a tall, red brick and glass monstrosity that blends in with the Town Square area about as well as a buffalo turd in a punchbowl. Our elected officials will need to learn to say no to developers if exacting standards for the Town Square are not fulfilled. They should practice in front of a mirror: "no, hell no, and by God we mean it". And let us forever strike from our lexicon the phrase "parking meters".
Dear Planning Team,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to provide comments regarding the Comp Plan Update. We appreciate your continued efforts on what is inevitably a very complex planning exercise for our community. At a future date, we will provide comments specific to the new draft released on April 13. However, this correspondence directly addresses the planning team’s repeated assertions that our community did not voice support for a “no growth scenario”. The team’s conclusion is particularly concerning given that it appears to be used as such a strong basis for the direction of the new draft.

The Conservation Alliance respectfully disagrees with this analysis of public comment regarding preferred overall development potential for Teton County and the Town of Jackson. Below are comments to clarify our position.

1. “No Growth” Scenario versus “Least Growth” Scenario
First, based on our review, the public has never been asked questions regarding a “no growth” scenario during this public process. The title of the (assumed) scenario was “Scenario D: Least Growth Focus,” and questions regarding a rating of preferences for different scenarios (A-D), to our knowledge, were asked only at one public meeting (January 2008). Also, since “no growth” and “least growth” have different meanings and consequences, it is important to distinguish between the two concepts.

2. Polling indicates strong community support for the “Least Growth” Scenario & Limiting Growth
Inaccuracies in scenario wording aside, polling did not indicate “a lack of community support” for this scenario as has been described in community presentations. Our review of the different sources of public input data indicates strong community support for limiting overall growth.

Following are some examples of data and resources that have led us to this conclusion.

A. Public Meeting – St. John’s Episcopal Church, January 2008: Scenario Preferences
At the conclusion of the community presentation in January 2008, attendees were asked to rate their preferences for four scenarios.

<table>
<thead>
<tr>
<th>Scenario</th>

<tr>
<td>Jackson “Town as Heart” Least Growth</td>
<td>Strongly dislike 6 30 2 19</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Several conclusions can be drawn from this polling, particularly when looking at the assumptions of the various scenarios. However, in order to focus on the specific issue of this correspondence, the majority of the respondents (53%) either strongly liked or liked the “Least Growth” scenario. This is hardly “no support.” And, given a substantial level of neutrality, only 36% of the public disliked this scenario. (In fact, a higher percentage of the
public (49%) disliked the “Compact Centers & Housing” scenario, which interestingly most strongly resembles the preferred land use pattern of the new draft.) Notably, the “Wildlife/Conservation” scenario, which was either strongly liked or liked by 82% of respondents, was described as follows: “This scenario would result in lower potential growth in Teton County, with limited or no expansion of county nodes... No additional development would occur in the South Park area, beyond that allowable under current zoning.” While we recognize that a preferred scenario of the new draft may include different elements of various scenario descriptions, it appears misleading to imply that the public has voiced support for additional growth, rather than reduced or density-neutral land-use planning valley-wide. In general, to be successful, wildlife protection and habitat conservation would require “lower growth levels” as indicated in the “Wildlife/Conservation” scenario description. B. Public Surveys – Public meeting, online, phone Below are questions and responses from community polling that most specifically regard growth potentials. • Which goal do you think is higher priority for Jackson and Teton County? % online public meeting phone Limit overall growth in the valley 48.6 56.3 53.2 Build more deed restricted workforce/affordable housing 33.9 23.2 36.5 equally important 15.1 20 10.3 The highest percentage of respondents, in all cases, supports limiting overall growth as the higher priority. • Limit growth and development in the county overall, even if it reduces the ability to provide deed restricted workforce/affordable housing in the Valley. % online public meeting phone Strongly agree 27.3 40.7 20.4 agree 19.4 21.7 30.6 neutral 9.6 5.2 10.7 disagree 23.7 15.5 26.2 Strongly disagree 19.4 16.0 12.0 Across all surveys, more people agree with this concept than disagree. • Make zoning changes to eliminate all density bonus options (i.e., PUDs, ARUs,) to protect natural resources and rural character. % online public meeting phone Strongly agree 23.5 54.4 n/a agree 21.3 15.4 neutral 16.7 7.1 disagree 18.3 11.5 Strongly disagree
11.0 8.8
Don’t know 9.2 2.8
A higher percentage of respondents support lowered development potential through the elimination of density bonus options.
  • The county’s total buildout should be increased (e.g., allow more development overall) as an affordable housing strategy.

% online Public meeting phone
Strongly agree 10.9 8.7 13.9
agree 15.5 10.3 37.2
neutral 11.4 6.0 12.8
disagree 22.2 21.2 23.8

Strongly disagree
37.3 50.5 12.3
Don’t know 2.8 3.3

Few respondents agree with this statement in two surveys and 51% of respondents agree in the phone survey. Notably, only 8.7 – 13.9% of respondents “strongly agree”.
  • Set a restriction on the amount of annual growth allowed (e.g., 1 or 2% increase per year).

% online public meeting phone
Strongly agree 26.1 35.2 16.5
agree 27.9 23.3 31.5
neutral 16.4 3.8 13.3
disagree 16.9 18.9 28.7

Strongly disagree
8.4 17.6 10.0
Don’t know 4.4 1.3

Across all surveys, more respondents agree with this strategy than those that disagree.
  • Limit development overall in rural parts of Teton County and limit redevelopment of Jackson.

% online Public meeting phone
Strongly agree 20.3 32.0 19.9
agree 20.8 21.7 40.9
neutral 11.6 4.6 9.6
disagree 28.9 21.7 20.2

Strongly disagree
16.2 18.6 9.4
Don’t know 2.7 1.6

A significantly larger average of respondents support this concept (51.9 versus 38.3) across three surveys. Specifically, 41.1, 53.7, 60.8% agree and 45.1, 40.3, 29.6% disagree. In all cases, more respondents “strongly agree” than “strongly disagree”.

  • Increase the provision of deed-restricted workforce/affordable housing as a priority over additional commercial or resort development.

% online Public meeting phone
Strongly agree 41.3 50.8 33.4
agree 31.5 26.4 37.6
Specific to commercial development potential, this polling suggests very low community support for additional commercial development (particularly within the context of workforce/affordable housing shortages).

C. Other Community Polling
A number of recent written comments and a recent community survey suggest similar findings to those in the Comp Plan Update polling. Below are a couple of examples:

• Summary of Public Comment Received Outside of Formalized Comment Processes
  According to agenda documentation prepared for the September 2008 JIM meeting, which included a “summary of comments received outside of formalized comment processes”, buildout was a top category in terms of frequency of submission. This frequency suggests a strong public concern about growth potentials. Recognition of the importance of this topic was confirmed in the planning team’s October 2008 newspaper ad summarizing public comment. The ad stated, in the second bullet point, that “buildout should be clearly identified and provide guidance in policy creation.”

• Teton County Citizen Survey – October 2006 – National Research Center
  The survey included the following relevant finding:
  The rate of population growth in Teton County was viewed as “too fast” by 73% of respondents, while 2% thought it was “too slow.”

In summary, based on our review, a sampling of which we have presented in this memo, we question the planning team’s implication that citizens have voiced support for a new “growthbased” Comprehensive Plan. It appears that there is strong public support for limiting or reducing development potential; this support should be reflected in the foundation, direction, and language of the plan. If there is other data available, please let us know.

Many in our community strongly believe that the sustainability of Jackson Hole does not depend on continued expansion of development potential. As we have stated, and will continue to clarify in our future comments on the new draft, our community’s top priority, to protect wildlife, will not be achieved through a focus on development pattern alone. We must be willing to address, in a meaningful way, how the amount of development (residential and commercial) will affect our ability to uphold community priorities.

Ultimately, we cannot grow our way out of growth-related problems.

Please contact us with any questions, and thank you again for your efforts.

Sincerely,
Franz Camenzind Kristy Bruner
Executive Director Community Planning Director
On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to provide comments regarding the Comp Plan Update. We appreciate your continued efforts on what is inevitably a very complex planning exercise for our community. At a future date, we will provide comments specific to the new draft released on April 13. However, this correspondence directly addresses the planning team’s repeated assertions that our community did not voice support for a “no growth scenario”. The team’s conclusion is particularly concerning given that it appears to be used as such a strong basis for the direction of the new draft.

The Conservation Alliance respectfully disagrees with this analysis of public comment regarding preferred overall development potential for Teton County and the Town of Jackson. Below are comments to clarify our position.

1. “No Growth” Scenario versus “Least Growth” Scenario

First, based on our review, the public has never been asked questions regarding a “no growth” scenario during this public process. The title of the (assumed) scenario was “Scenario D: Least Growth Focus,” and questions regarding a rating of preferences for different scenarios (A-D), to our knowledge, were asked only at one public meeting (January 2008). Also, since “no growth” and “least growth” have different meanings and consequences, it is important to distinguish between the two concepts.

2. Polling indicates strong community support for the “Least Growth” Scenario & Limiting Growth

Inaccuracies in scenario wording aside, polling did not indicate “a lack of community support” for this scenario as has been described in community presentations. Our review of the different sources of public input data indicates strong community support for limiting overall growth.

Following are some examples of data and resources that have led us to this conclusion.

A. Public Meeting – St. John’s Episcopal Church, January 2008: Scenario Preferences At the conclusion of the community presentation in January 2008, attendees were asked to rate their preferences for four scenarios.

[see comment for tabular data]

Several conclusions can be drawn from this polling, particularly when looking at the assumptions of the various scenarios. However, in order to focus on the specific issue of this correspondence, the majority of the respondents (53%) either strongly liked or liked the “Least Growth” scenario. This is hardly “no support.” And, given a substantial level of neutrality, only 36% of the public disliked this scenario. (In fact, a higher percentage of the public (49%) disliked the “Compact Centers & Housing” scenario, which interestingly most strongly resembles the preferred land use pattern of the new draft.)

Notably, the “Wildlife/Conservation” scenario, which was either strongly liked or liked by 82% of respondents, was described as follows: “This scenario would result in lower potential growth in Teton County, with limited or no expansion of county nodes... No additional development would occur in the South Park area, beyond that allowable under current zoning.” While we recognize that a preferred scenario of the new draft may include different elements of various scenario descriptions, it appears misleading to imply that the public has voiced support for additional growth, rather than reduced density-neutral land-use planning valley-wide. In general, to be successful, wildlife protection and habitat conservation would require “lower growth levels” as indicated in the “Wildlife/Conservation” scenario description.

B. Public Surveys – Public meeting, online, phone

Below are questions and responses from community polling that most specifically regard growth potentials.

• Which goal do you think is higher priority for Jackson and Teton County?

[see comment for tabular data]

The highest percentage of respondents, in all cases, supports limiting overall growth as the higher priority.

• Limit growth and development in the county overall, even if it reduces the ability to provide deed restricted workforce/affordable housing in the Valley.

[see comment for tabular data]

Across all surveys, more people agree with this concept than disagree.

• Make zoning changes to eliminate all density bonus options (i.e., PUDs, ARUs,) to protect natural resources and rural character.

[see comment for tabular data]

A higher percentage of respondents support lowered development potential through the elimination of density bonus options.

• The county’s total buildout should be increased [e.g., allow more development overall] as an affordable housing strategy.

[see comment for tabular data]

Few respondents agree with this statement in two surveys and 51% of respondents agree in the phone survey. Notably, only 8.7 – 13.9% of respondents “strongly agree”.

• Set a restriction on the amount of annual growth allowed [e.g., 1 or 2% increase per year].
Across all surveys, more respondents agree with this strategy than those that disagree.

• Limit development overall in rural parts of Teton County and limit redevelopment of Jackson.

A significantly larger average of respondents support this concept (51.9 versus 38.3) across three surveys. Specifically, 41.1, 53.7, 60.8% agree and 45.1, 40.3, 29.6% disagree. In all cases, more respondents “strongly agree” than “strongly disagree”.

• Increase the provision of deed-restricted workforce/affordable housing as a priority over additional commercial or resort development.

Specific to commercial development potential, this polling suggests very low community support for additional commercial development (particularly within the context of workforce/affordable housing shortages).

C. Other Community Polling

A number of recent written comments and a recent community survey suggest similar findings to those in the Comp Plan Update polling. Below are a couple of examples:

• Summary of Public Comment Received Outside of Formalized Comment Processes According to agenda documentation prepared for the September 2008 JIM meeting, which included a “summary of comments received outside of formalized comment processes”, buildout was a top category in terms of frequency of submission. This frequency suggests a strong public concern about growth potentials. Recognition of the importance of this topic was confirmed in the planning team’s October 2008 newspaper ad summarizing public comment. The ad stated, in the second bullet point, that “buildout should be clearly identified and provide guidance in policy creation.”

• Teton County Citizen Survey – October 2006 – National Research Center The survey included the following relevant finding: The rate of population growth in Teton County was viewed as “too fast” by 73% of respondents, while 2% thought it was “too slow.”

In summary, based on our review, a sampling of which we have presented in this memo, we question the planning team’s implication that citizens have voiced support for a new “growthbased” Comprehensive Plan. It appears that there is strong public support for limiting or reducing development potential; this support should be reflected in the foundation, direction, and language of the plan. If there is other data available, please let us know.

Many in our community strongly believe that the sustainability of Jackson Hole does not depend on continued expansion of development potential. As we have stated, and will continue to clarify in our future comments on the new draft, our community’s top priority, to protect wildlife, will not be achieved through a focus on development pattern alone. We must be willing to address, in a meaningful way, how the amount of development (residential and commercial) will affect our ability to uphold community priorities. Ultimately, we cannot grow our way out of growth-related problems. Please contact us with any questions, and thank you again for your efforts.

4/19/2009 Hunt, Lorelle

Interested Public

I reside at 700 Lois Lane off Stateline Road on the Wyoming side, just south of where 500 N Road intersects Stateline. I am one of four lots in the Kiln Creek Subdivision. I have concerns about the status of my address - am I in Alta, WY? Silverstar Communications says I am not - that I am in Leigh Canyon. Leigh Canyon is not a real address - there is no zip code for it and even Silverstar in their published telephone book gives the (307) 576 prefix as 83452 zip code - which is actually the zip code for Teton, Idaho. It makes it extremely complicated to get deliveries - and companies are always calling to confirm my address because my telephone number tells them I am in Leigh Canyon. My main concern, though, is emergency services finding us and my neighbors on Lois Lane if they think we are up in Leigh Canyon - and we are not! You cannot get from Leigh Canyon or vice versa to Lois Lane directly on Stateline road. Stateline Road does not go through to Leigh Canyon because there is a creek that cuts off the road. Emergency services - if they head for Leigh Canyon thinking that is where we are - will have gone eight to 10 miles out of their way to Leigh Canyon and then will have to double back to Highway 33 going south and then east on 500 N Road to Stateline and then south to Lois Lane to find us. I would like to know how I can get us listed with the County of Teton, Wyoming and consequently with the telephone company as residing in Alta. I've talked with representatives at Silverstar and they said that Teton County, WY determined on a map that we were in the Leigh Canyon area. I don't know if this is the proper forum for addressing this issue. Any response or information would be appreciated.

I feel affirmed in my conviction that special pieces need to be maintained. I am enlightened to see the vision for JH being maintained by the visionaries that govern it. I am behind you totally for God's gift to us that surrounds you everyday. Continue to be good stewards of this beautiful & pristine valley.
The Plan states redesign of Hwy 22 and working to bury the power lines to enhance the scenic beauty. I am in favor of both but I strongly support moving the power lines to below ground. The route proceeding northward on Hwy 22 toward the Tetons provide spectacular views of the mountains and are downright breathtaking as evidenced by the many motorists that pull onto the hwy shoulder, leave their cars, and take photographs. Often motorists will walk to the fence east of the hwy to obtain a view free of the power poles. Often too, motorists will turn onto Pratt Road to obtain a vantage point. Commercial photographers are occasionally seen taking photos of the Tetons from Pratt Road. It would really be nice if a turnout(s) could be included in the redesign of Hwy 22, if only in apron size, to provide a stationary view of the mountains and valley.
I’d like to comment on a statement made by Planning Director Jeff Daugherty at the Comprehensive Plan release Monday, April 13: “We also heard that a no-growth plan was not a direction that the community wanted to go.”

I am very familiar with the public comment provided over the summer, as well as the 3 survey results (conducted around the time of Teton Meadows’ consideration).

Together, these inputs do not support Jeff Daugherty’s claim, one I have heard him make several times in public forums. On the contrary, during the live sessions held over the summer, as well as in written form (as above), there has been substantial community feedback favoring reduced growth.

As one example, when Planning staff presented four alternate scenarios to the public Jan 30, 2008, stating the purpose, to ‘help you prioritize values’ and ‘lead to [a] preferred plan’, the 182 diverse community members present answered a number of questions. This included their overall assessment of the four scenarios:

[see email for tabular reference]

Planning staff described the scenarios with the following key differences (listed in order of community preference):

#1. Wildlife/conservation (82% favorable)
Maximize wildlife habitat & resource protection above all other values
Reduce growth in county

#2 Jackson ‘Town as Heart’ (73% favorable)
Increase overall redevelopment and infill in town
Less growth in county centers

Concentrate affordable housing in town

#3 Least Growth (53% favorable)
Least amount of new growth overall in both town & county
Eliminate zoning options, purchase development rights

Develop in town at base levels only, less emphasis on affordable housing

#4 Compact centers & housing (42% favorable)
Emphasize locally-based ‘centers’ around the county and in town
Emphasize workforce housing in centers

Highest amount of residential growth in the county and overall

Although the scenarios were intended to prompt thinking and discussion more than anything, it seems to me the least favored scenario (#4) is the one closest to Monday’s Comprehensive Plan release. Even the least-growth scenario (#3) - the one Planning says we don’t want – was preferred by us over scenario #4.

Subsequent surveys never asked the ‘overall assessment’ question, so we don’t have these responses from the other surveys. However, community feedback has been consistent on the subject of growth across many inputs: it’s not what we want. Growth is acceptable only if we HAVE to grow (to get affordable housing, or respect property rights). We don’t WANT growth per se (even if it is responsible).

Don’t we all have a responsibility to call the Planners on this?

Consequences

We have reached the point where the community should be presented with concrete tradeoffs. For example, if wildlife and natural resources are our top priority, then how much degradation of these values are we willing to accept, in favor of others? What will be the consequences of growth decisions?

Prioritizing the ‘themes’, as in the new release, is a start (although the priorities appear to be applied selectively). Transparency and directness are still lacking. We know it’s hard to be specific. ‘What-ifs’ are still abundant. However, professional planners should be capable of spelling out the consequences of their own plan.

Let me take a stab (this is my hypothetical example – we can argue the specifics, but the point is we should have a reasonable picture of what we are agreeing to):

...If we accept 30% growth (residential & commercial) in 10 years, are we OK with 50% more vehicles on the road, 10
minutes’ wait time at the Y, construction of the Hwy 22-89 connector & another road through South Park to Hwy 89, at least 2 more lights on Hwy 89 and at least one more on Hwy 22, that road widened through Wilson, the Teton Village road widened to 4 lanes, even more pressure on workforce housing due to the job-creating commercial growth (a big one), more residents recreating up Cache Creek, heading to the Pass and Village on powder days, and as for wildlife & natural resources, severely reduced migratory activity and loss of habitat in South Park (as well as other targeted areas), loss of open space for agricultural uses and views (reducing our Western character), no more trumpeter swans in the valley, 50% reduction of elk & moose numbers, bald eagle nest reduction, escalating water & energy costs, and more? Or...if we make choices that limit growth, are there still ways to improve on two other important values: housing affordability and a balanced community/economy? Yes, there are. First, limited growth will over time reduce our continued workforce housing deficit (that arises from growth). There is community support for a permanent funding source, to address past housing shortfalls through purchase and preservation of existing housing. Despite how it may seem, we do not need to accept partnerships with private, for-profit interests, enticing them by increasing density beyond community standards (an approach that makes the problem worse, not better). The question then is: where will the money come from and who will provide it? My questions to you as elected officials are:

Where do you stand on the issue of growth? Will you hold Planners accountable for telling the truth and spelling out consequences? Will you require the Comprehensive Plan to reflect the public’s clearly stated desires, and prioritize reducing development potential (for less growth, not more)? Will you work directly to solve our pressing concerns (affordable housing, balanced community/economy), by identifying methods and funding sources that do not bring on the host of collateral impacts that growth does, and nobody wants?

Recommendations:

Let’s be vivid. Let’s know what we are agreeing to. Let’s not misconstrue what the community wants. Delete ‘Responsible Growth’ as a priority in the Comprehensive Plan. It isn’t one. Our priorities are:

- Wildfire, Natural Resources, Open Space
- Workforce Housing
- Balanced Community/Economy

Achieve the above objectives while reducing build-out potential (both residential and commercial) and other forms of community growth. Call it:

3

- Reduced Build-Out/Growth Rate
(And prioritize it 2nd after Wildlife, Natural Resources, Open Space)

The rest of the named themes in the plan are strategies (possible ways to get there), so include Town as Heart, Community Facilities, and Transportation not as themes but as discussed options to help us achieve our top priorities as a community.

Some of the area identified as MultiUse Visitor Orientation should perhaps instead be classified as MultiUse Local Orientation, since portions of this area consist of single family homes occupied year-round by local residents.

Regarding the future development of the Aspens on the Village Road (390): Is the expansion being planned for after the North Bridge on highway 390 is constructed or after the road has been expanded to 5 lanes with a half dozen traffic lights? We already have seen a significant increase in traffic volume with the Shooting Star area and the Millward affordable project having been added with no change in the road. Not to mention all the development in John Dodge, Teton Pines, and Teton which have all occurred without any change to the road system. The road is already considered over burdened and unsafe by current standards. Will the necessity of creating adequate infrastructure be realized before allowing further development? Is the governing body proactive or reactive? There may be sewer and water but there is certainly not an adequate road system. It will be interesting to see how traffic flows when WYDOT repairs the Snake River Bridge this summer.

<td>Irwin, Chuck</td>
<td>I will be unable to attend the meeting in Alta (April 21) on the comprehensive plan update. I hope nothing new has been added to the draft that would restrict the &quot;BC&quot; designation for the 3.5 acres I own at the entrance of Teton Canyon which encompasses the Lost Horizon Restaurant. The District Boundary Amendment for commercial use was approved on 5 January 1984 (&quot;VC&quot; - visitor commercial). The attached letter of 20 July 2005 still reflects our thoughts on this matter. [see email for referenced attachment]</td>

<td>4/14/09</td>
<td>Koster, Ken</td>
<td>My name is Ken Koster. I reside in a small subdivision in Wyoming accessed from South Leigh Creek Road. Over the years, I have spoken with various County representatives, including Jan Friedlund, Craig Jackson, Don Varney, Bill Paddleford, Jim Darwich along with others, from Teton County Wyoming concerning the completion of the State Line Road project. This project goes back to the agreement between Idaho and Wyoming as to the responsibility of the road improvement and maintenance north and south of Ski Hill Road. At one of the Alta Community meetings circa 1997-98 a commitment was made by the then Teton County representatives at that meeting stating that funds had been committed to improving State Line Road over a five (5) year period. The &quot;plan/commitment&quot; was to improve sections of State Line Road moving from Ski Hill Road northward up to and including the section to cross over South Leigh Creek and to complete State Line Road tying into 600 North. I suspect Dick Steiger would have notes to this effect as he was conducting the Alta Community meeting. In addition, I have contacted Jay Pence of the Forest Service and a meeting was held in his offices with County representatives mentioned above, including myself as a representative of our homeowners association, to reach agreement on South Leigh Road improvement and maintenance. At that time, agreement was verbally made that maintenance would be completed up to the Forest Service Boundary when such time as State Line Road was completed. When maintenance was to be done, such as grading and dust control, on State Line, continuation would be then made on up South Leigh Road to the Forest Service parking lot at the boundary. Now, we find ourselves with newly elected Commissioners /representatives, new County Engineer, and still no completion of State Line Road to which prior commitments had been made. It would appear that these commitments made by predecessors are not valid when a change in governance is made. I find this very discouraging as a tax paying resident of Teton County Wyoming. Why should I/we have to continually &quot;prodd&quot; every year to remind our County government to complete their commitment? A deal is a deal in my book. It appears it is not so with the present County Commissioners. Am I wrong? I hope not. The condition of South Leigh Road is deplorable and even to the state that an ambulance or other emergency equipment would have difficulty during certain periods of the year. The mention of sheriff services is a myth. These services are a part of what I would think could be expected in return for our tax dollars Meanwhile, contact has been made with various Teton County Idaho officials to encourage completion to State Line Road as a part of Emergency Services needs including, but not limited to water access from South Leigh Creek for fire suppression, ambulance access to residents and so on. The School District may at some time in the near future, have need to provide school transportation services. At present, a bus routing could require travel from south of South Leigh Creek down to Highway 33, travel north, then back east up to State Line Road and South Leigh Creek Road which with present road conditions could again be difficult. At present, the residents here now have to travel to State Highway 33 to have any access to the Alta community, schools and proposed library. State Line Road must be completed as the increased growth will need this necessary infrastructure for the services already addressed. Thank you for your anticipated cooperation.</td>

<td>Cedarholm, Todd</td>
<td>I believe that you should include the area north of Kelly Ave, south of Simpson Ave, east of Glenwood and west of Millward in the multi-use district. That neighborhood (my neighborhood) has always been sandwiched between commercial and public/commercial areas, most of the visitors and parked cars belong to people at the Brew Pub or the Center for the Arts. It is not a quiet place. Since we are surrounded by commercial it would make sense to allow light commercial such as office and not restrict it to residential. Also, the lots on the south side of Hansen are only 110' long making redevelopment difficult under the current development regs. Any redevelopment would require some accomadation to the smaller lot size to avoid the variance mess.</td>

<td>Hoff, JoAnn</td>
<td>I think the east end of Aspen drive should not be included in the multi-family zoning. The east end of Aspen drive should be included in the 'Southern Hillside' district as that is what it is most compatible with. As homeowner and resident of Aspen drive I can state that this street cannot possible handle any more traffic and growth. Most of the east end of Aspen is condominium or townhome development which is unlikely to change. There are several parcels in the middle (between Cache and Millward) that could be developed under this zoning. I urge you to consider maintaining the NC-2 or something similar in this area rather than multi-family. All of Aspen drive is currently zoned NC-2 and should stay that way. This would be an ideal place for affordable single-family housing. Please consider maintaining the same zoning as the rest of Aspen drive. Thank you.</td>

looks like no changes for kelly, gros ventre area, which seems both appropriate and lucky for us residents. my only other comment is to question if there is any way to have antelope flats road plowed during the winter. this would reduce the number of miles driven for anyone from kelly, gros ventre road, or science school going to the park and other points north. it would also reduce traffic at gros ventre junction, which is a somewhat dangerous intersection. i suppose that is in the hands of gtnp.

Phase: Surveying

Lake Research Partners conducted a survey of Teton County voters on behalf of Save Historic Jackson Hole in November 2007. This survey measured public opinion toward local growth and development issues in Teton County. LRP designed and administered this survey that was conducted by phone using professional interviewers. The survey reached 400 registered voters 18 years and older in Teton County, WY. The survey was conducted between November 15th and 19th, 2007. Telephone numbers for the sample were drawn randomly from a voter file in Teton County, WY. Data were weighted slightly by gender, party identification, age, education and region to reflect the attributes of the actual population of registered voters. The margin of error is +/- 4.9%. The survey questions were designed to accurately measure public opinion in Teton County. Our firm is known for conducting high-quality and unbiased research. Our surveys are conducted to the highest industry standards and we make every attempt possible to ensure that each survey we conduct is representative, unbiased, accurate, and straightforward. Lake Research Partners is a leading national public opinion and political strategy research firm. Our principals are leading political strategists, serving as tacticians and senior advisors to a wide range of advocacy groups, non-profits, and foundations. Our clients include: the Henry J. Kaiser Family Foundation, the Afterschool Alliance, the Sierra Club, the California Breast Cancer Fund, American Lung Association, Public Education Network, Planned Parenthood, the AFL-CIO, the White House Project, and many others. Additionally, we have worked for a large number of political candidates where accurate and precise data is critically important. For further information on LRP or the methodology of this survey, please contact me at 202-776-9066.

Sincerely,
Alysia Snell
Partner [results of survey referenced in this letter are available in the County Planning Office]
