<td>Hankey, April</td>
<td>Thank you for your thoughtfulness during this process and for sensibly supporting the plan. If you do change something, I would like to see connectivity in South Park reinserted and if you really wanted to get feisty, adding density to the Aspens and Wilson would be lovely. But the most important thing is for you to PASS the plan, and begin to put an end to the stratification some in our community are carelessly, and maybe unknowingly, promoting. Thank you, again.</td>
</tr>
<tr>
<td>5/3/2012</td>
<td>Bullinger, Brooke</td>
<td>Before the last meeting on May 8th I would like to express my opinion that the 60/40 in the growth managmetn plan overreaches and will not work. Realistically it needs to be changed to 50/50. Also, I hope you incorproat the Statement of Intent into the plan. It succinctl summarizes the gist of the plan and would go a long way towards giving people some reassurances about the intent of the plan and unifing the public behind the plan while having no downsides. Thank you.</td>
</tr>
<tr>
<td>5/3/2012</td>
<td>Roscoe, William</td>
<td>I support this plan. While it may not be perfect and certainly does not incorporate a magic carpet between Wilson and Jackson, it does establish a plan that individuals and businesses can pivot off. Let's all get behind this vision!</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Think about all of the great public and social spaces and infrastructure in the world that would not be there if someone hadn't planned. Golden Gate Park in San Francisco, the MTA in New York, and Yellowstone in the Rockies are all examples of successful results of planning. Then think about the places that are the result of not planning and see where you'd rather live.</td>
</tr>

</table>
Thank you for your attention to these comments, and for your work throughout this planning process on behalf of the community. In advance of your May 8, 2012 hearing, we wanted to share our overall position on the adoption of the Comprehensive Plan as well as provide some recommendations for improvement to the documents and for next steps.

Overall Comments: Cautious Support with Outstanding Concerns and Recommendations

The Jackson Hole Conservation Alliance supports the vision of the Comprehensive Plan and the core values that it expresses. Those values include: the concept of concentrated development footprints; the goal of an economy not dependent on population growth; and the focus on sustainability, natural resource protection, and scenic vista preservation. Therefore, the Conservation Alliance cautiously supports the adoption of the 2012 Comprehensive Plan, while stressing the need to address the following public concerns in a timely manner.

1. The methods and tools for shifting development patterns in Teton County remain unknown.

This is one of the key concerns that the Conservation Alliance and community members have raised over the course of this process. The community needs to see immediate progress made towards figuring out how to shift development patterns, as well as towards the broader goal of conserving land in rural areas. A public discussion of next steps and research opportunities, including many options in addition to revising the PRD, is necessary to ensure that shifting development patterns, which is one of the central goals of the Plan, is both achievable and achieved. This is crucial for the success of the Comp Plan.

2. Up-to-date estimates for the amount of development that will be allowed in each character district have not been provided.

We expect to see estimates of the amount of residential and non-residential development that is anticipated in each character district calculated and released in the next phase, as part of the update to the LDRs and zoning maps. We are not requesting a change to a numbers-based plan. Rather, we are acknowledging that numbers are invaluable in planning for infrastructure, envisioning the future of the valley, and planning with an overall goal in mind. Checking in on the ability of the community to accomplish the goals of the plan (e.g. shifting development) is a critical role that these numbers must play.

3. Improvements and adherence to the Implementation Plan must be assured, which will require allocation of adequate funds.

We also hope to see a real commitment to the priorities set forth in the Implementation Plan in the form of significant budget allocations and commitment to meeting the relevant deadlines. (See below for more detailed comments on the Implementation Plan).

Statement of Intent

As you know, 360 town and county residents signed the Statement of Intent over a period of just over a week. The request was that a statement of intent be added to the Comp Plan to clarify the community vision and intent and help guide decision makers in the future. A primary focus of the Statement was preserving the small town character of Jackson, with the other components of the document highlighting specific ways to manage new growth and development in Teton County within our small town context. The Alliance was a partner in creating and advocating for this Statement of Intent, and we continue to believe that the points included therein are important.

We would like to see the elected officials discuss the components of the Statement of Intent and support and address each of the issues it highlights. We would also encourage the officials to consider including a statement of intent, as amended by your joint boards, into the Comp Plan.

Implementation Plan

The Conservation Alliance strongly supports the concept of an Implementation Plan as well as the budgeting of necessary resources to achieve the goals laid out within the plan. Because the Implementation Plan is an explanation of how the goals of the Plan will actually be achieved, committing the needed resources is paramount. The community has invested an enormous amount of time, energy and resources into this process to date, and we have the responsibility to follow through with the Implementation Plan.

While recognizing that it is a living document, elected officials should formally affirm their commitment to the Implementation Plan concurrently with the adoption of the Comp Plan.

Moving Forward: the LDR process

As the LDRs are crafted there will be room to interpret the policies in a variety of different ways. Certain policies conflict with one another, and must be appropriately balanced as regulations are written to avoid piecemeal or solely discretionary decisions in the future. We expect that the elected officials will take into account the intentions of the community, specifically the desire to not have additive growth and to preserve our natural resources and community character, and interpret the policies to reflect those values.

We also expect that many of the hard discussions that were postponed until after the Plan was completed will actually take place in the LDR process, including but not limited to: shifting development potential, appropriate locations for workforce housing, a comprehensive transportation plan, and a revamping of the NRO regulations. Reaching a community consensus via these discussions will be critical in determining the future of the valley.

<td>5/2/12</td>
<td>Hersberger, Bonny Interested Public</td>
<td>The current Plan document has been well crafted to balance a wide variety of viewpoints and interests, while maintaining core objectives for wildlife, transportation and worker housing, to name a few. It represents 4+ years of public hearings, meetings and public surveys and the participation and voice of over 1,000 people. It represents the MAJORITY voice, and it is a fair and balanced document. As such, I urge the electeds to ADOPT THE PLAN and move forward with the next phase of work, review and modification of the land development regulations, as soon as possible. I also urge you to NOT approve ANY language within a proposed statement of intent. This language CONTRADICTS provisions within the plan and in no way should be part of the Plan approval. I am extremely pleased that the JHconservation Alliance has taken a stand in support of the Plan adoption and believe it shows great strength to support what you believe is right regardless of how loudly the minority opposition may squack. Please also use whatever tools are available to you to approve the plan by a mechanism that protects the approval from referendum. Those who would try to derail the process will use whatever tactics they can, therefore our electeds must be equally (if not more) strategic to protect the approval.</td>
</tr>
<tr>
<td>5/1/12</td>
<td>O'Donoghue, Tim Chamber of Commerce</td>
<td>The Jackson Hole Chamber of Commerce appreciates the extensive time, dedication, and work of the public, planning, staffs, planning commissions, and you on the Jackson/Teton County Comprehensive Plan. We are aware that there has been significant community involvement and input in the successive drafts of the comprehensive plan over the course of five years, including from the Jackson Hole Chamber of Commerce. We believe that the comprehensive plan as it is currently presented does represent a consensus of the community. The comprehensive plan is a good foundation from which further determination of land development regulations can begin. We believe that the plan is ready for approval with whatever minor modifications from the planning staffs are necessary to make it ready for final approval. There needs to be predictability in governmental policy in order for business to effectively and successfully manage their businesses. Since the comprehensive planning process began five years ago, there has been uncertainty. Passage of this plan will provide greater predictability at a time when our economic recovery is improving but not assured. We recommend that you approve the plan in your May 8th adoption hearing and begin the time for our community to refocus its attention upon other important matters at hand.</td>
</tr>
</tbody>
</table>

This should not be a brief or hurried process. The expectation was established that the LDRs will be where “the rubber meets the road,” and the community and the elected officials have an obligation to ensure that the decisions are made responsibly. The Alliance will continue to work to ensure that the policies are interpreted in the best way possible for the creation of effective regulations.

Final Thoughts
The Jackson Hole Conservation Alliance has been engaged in this planning process since the beginning, submitting countless pages of comment on the policies and maps. Our comments centered on the themes of responsible planning, managed growth, natural resource stewardship and protection, affordable housing, community character, smart and proactive transportation planning, an economy not dependent on population growth, and many more. We were pleased to have been a productive collaborator in this process, and we are grateful to all of the volunteer planning commissioners, taskforce members, planning staff, elected officials and dedicated and passionate members of the public who helped to shape the process and the product.

The Conservation Alliance recognizes the social, economic, cultural, historical and environmental value of our incredible region, and appreciates planning that manages our resources in a responsible way. When the concerns outlined in this letter are addressed both prior to adoption and as the Land Development Regulations are crafted, we are optimistic that this new Comprehensive Plan will make significant strides towards achieving the community’s vision.

Thank you for your work and your attention to these comments.
5/1/2012 Bloom, Rich South Park Neighbors

As we head to the May 8 full comprehensive plan adoption meeting I wanted to restate and clarify my position.

The Themes and Policies and Character District Maps have responded to community feedback over the years and the plan is a great, and needed, improvement over the 1994 plan. These improvements have been forged out of vigorous and passionate debate. I fully support the themes, policy and maps produced to date but cannot support adoption.

In February I was asked by the chair of the County Commissioners, along with a diverse group of interested parties, to clarify what it would take to endorse the full plan at adoption. The thirty of us from all neighborhood groups, citizen planning leaders and valley advocacy groups forged a concise list of items to be addressed in the plan in order to gain our support at adoption. That document is known as the Statement of Intent.

The first two bullets in the statement asked for greater clarity in the plan – not the Land Development Regulations (LDRs) - on HOW the shifting of rural development potential would be achieved to permanently protect open space. The second bullet requested a range of build-out potential by district and in aggregate – to assure it reflected and adhered to the stated Vision in the Plan for density neutral solutions countywide. Neither of these primary requests has been dealt with in a meaningful way as we head to the adoption discussion next week.

I stand behind the requests in the Statement of Intent that nearly 400 valley residents signed. They are central to ensuring that the community's intent prevails when competing values create opportunities for differing interpretations by current and future decision makers as we move into the ongoing LDR phase that follows plan adoption.

I want to make absolutely clear that although I will not support the plan at adoption unless additional clarification is added I appreciate, and fully support, the work completed to date. It is a great improvement over the 1994 Plan.

I offer my sincere thanks for the efforts and countless hours spent by the Town and County Planning staffs, both Planning Commissions, the Board of County Commissioners, Mayor Barron, the Jackson Town Council, numerous county organizations and concerned citizens.
I would like to submit the following comments on the Comprehensive Plan, specifically on the Common Value 3 Community Character, Section 7. Multimodal Transportation from the most recent April 2012 version of the new Jackson/Teton Comprehensive Plan. Thank you for the opportunity to comment.

At the 30,000-foot level this plan has been designed at, I am generally supportive of the Principles and Policies in Section 7. However, I would like to request several changes that I think would improve and clarify these very general transportation concepts.

One of my principle concerns is the lack of any metric to measure success. How do we know when we get there? There is reference to “a year round mode shift” in Principle 7.1, but the plan lacks any specific target numbers. Several policies state there will be a “mode shift”, Principle 7.2 states it will “encourage mode shift”. But there is nothing that states how much per mode.

Policy 7.1.a states the next step is to develop a community integrated transportation plan, effectively pushing off meaningful transportation planning into the future, without setting any measureable goals now in the Comprehensive Plan to guide that important plan. This should be fixed as part of your final edits and adoption process.

Appendix B is referenced, but that provides extremely limited data (see B-22), some that is a decade old. This new Section 7 Multimodal Transportation does not have recent history or targets of any kind, and it’s not in the Appendix information either. For example, how have motor vehicle counts changed with the recent financial downturn? Perhaps counts are down on some corridors, but there is no data. START Bus data in Appendix B is five years old. There are no counts whatsoever for pathways, and no data of any kind on pedestrians.

I recommend the Town and County adopt forward-looking measureable goals for transportation mode shift in the final Comp Plan adopted. This is possible - Many progressive local governments in America are setting high goals and achieving significant mode shift changes. Jackson Hole’s Plan should as well. Goals such as the following should be considered:

Proposed 2030 Goals: Jackson Hole Mode Share goals for all transportation trips:

- 10% Walking
- 10% Bicycle
- 10% Transit
- 10% TDM Reduction of motor vehicle trips
- 10% Ride Share reduction of motor vehicle trips
- 50% Total Alternative Mode share of all Jackson Hole trips by 2030.

Another short-term way to address this would be to fix Appendix E, which unfortunately the current draft removed all the existing target goals, even while ironically it states (page E-3) “Each goal is supported by objectives, which are specific and measurable ends that can be achieved by implementing this chapter.” Unfortunately, that is not correct, since the objectives were in fact removed. The key ones should be put back.

Those existing goals from the 2000 Trans Plan, while in need of review, are certainly better than no goals. It would be a mistake to remove them entirely from the Appendix E as it sits now.

In summary on this point, I recommend that you either (preferably) add specific forward-looking goals like above, or at least make an amendment to the plan and reinsert these portions from the existing Chapter 8 back into the new Appendix E. (Blue text that follows)

Goals and Objectives
Goal No. 2: To decrease the rate of anticipated vehicular traffic growth in the community.
Objectives:
2.A. Decrease reliance by shifting resident travel mode shares as follows (percent of daily resident person trips in July):

<table>
<thead>
<tr>
<th>Year</th>
<th>Drive alone</th>
<th>Rideshare</th>
<th>Walk</th>
<th>Bicycle</th>
<th>Transit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1996</td>
<td>55%</td>
<td>29%</td>
<td>9%</td>
<td>6%</td>
<td>&lt;1%</td>
</tr>
<tr>
<td>2020</td>
<td>42%</td>
<td>30%</td>
<td>13%</td>
<td>10%</td>
<td>1%</td>
</tr>
</tbody>
</table>

Percent Change:
- Drive alone: 13%
- Rideshare: 1%
- Walk: 4%
- Bicycle: 4%
- Transit: 5%

2.B. Reduce projected year 2020 summer average daily traffic volumes by the amounts listed below by shifting the resident travel mode shares:

Roadway Segments in the County

Goal No. 3: To improve the safety and efficiency of the transportation system in Jackson and Teton County.

Objectives:
3.A. Maintain or reduce existing accident levels, and reduce accident severity by 10 percent.
3.B. Reduce pedestrian and non-motorized vehicle accidents by 10 percent while increasing the amount of pedestrian and non-motorized vehicle travel.
3.C. Provide a safe, convenient, appealing, and reliable transit system.
3.D. Design roadways and streets that ensure safe and efficient traffic flow while providing reasonable and adequate private accesses that minimize the deterioration of roadway capacity.

(End quote from Existing Transportation Chapter 8)

Comments on Strategies for Section 7 - Multimodal Transportation: [CV-3-24-25]

Another concern I have is the 7.2.S.1 strategy was changed from "Adopt" to "Consider adopting" in this April 2012 draft compared to what was adopted last June 2011. Please change it back to the more action-oriented word “Adopt”. There is no reason for this topic to be “considered” any more, it has been considered, and Complete Streets are agreed to be a key strategy in the Comp Plan for transportation. The Plan should be specific and clear on this point.

The general statement at the top of the Strategies page CV-3-24 is more than adequate to provide room for future decision makers, where is states...
“The community should undertake the following strategies in initial implementation of the policies of this Common Value. This list is only a starting point, and is not all inclusive.”

That is fine, but the word “consider” in 7.2.S.1 should go.

June 2011 version – please revert to this:
7.2.S.1: Adopt “complete streets” and/or “context sensitive” policies and updated road design standards for all roadways.

April 2012 version – please drop the word “consider”
7.2.S.1: Consider adopting “complete streets” and/or “context sensitive” policies and updated road design standards for all roadways.

I also recommend that one additional Complete Streets Strategy be added to Principle 7.2 to address the need to evaluate and enhance Town, County and WYDOT maintenance standards for local and state roads. This has been an overlooked but critical aspect of the transportation plans. Complete Streets concepts must extend beyond just the design and construction aspects to also include the maintenance components of the transportation system. A strategy such as the following would be very appropriate to include:

Proposed New 7.2.S.7: Reevaluate road and street maintenance standards including sweeping, road sealing, paint striping, crosswalks, and snow removal on all local and state highways in the context of complete streets, meeting the needs of all users including pedestrians, bicyclists, transit riders and motorists.

In closing I thank you for your consideration of these comments. Please contact me if you have questions or wish more information on any of the points and issues raised.

I wanted to write to support the Comprehensive Plan and thank you for all your efforts and leadership during this process. This has not been an easy exercise and there has been a great deal of public and political criticism of your work and the outcome. I feel that this is a solid plan and that it focuses development in the Town of Jackson and limits the sprawl of growth. It has been recognized by many organizations in town that you have designed an appropriate vision and balanced approach for growth, wildlife habitat concerns and affordable housing that will have a positive effect on our community.

I applaud you in your efforts and thank you.

I am writing to encourage you to approve the proposed County Comprehensive Plan. It is a good plan and it is good for our community. It builds on the principals of the 1994 Plan. In particular, the clustering provisions of the proposed plan are an important refinement of the 1994 Plan principals.

I strongly support the planning department’s effort to look to the future. I strongly believe in consolidating our growth to nodes.

I’ve seen this town change a lot. Change seems like an inevitable circumstance of living in a beautiful place. Despite all the change, Jackson still feels like Jackson to me. I think it is a no brainer that planning for the long term is an important step.

Pass the plan!
The Jackson Hole Conservation Alliance has established the following formal position on the adoption of the Comprehensive Plan:

“The Jackson Hole Conservation Alliance supports the vision of the Comprehensive Plan and the core values that it expresses. Those values include: the concept of concentrated development footprints; the goal of an economy not dependent on population growth; and the focus on sustainability, natural resource protection, and scenic vista preservation.

Therefore, the Conservation Alliance cautiously supports the adoption of the 2012 Comprehensive Plan, while stressing the need to address the following public concerns in a timely manner:

• The methods and tools for shifting development patterns in Teton County remain unknown.
• Up-to-date estimates for the amount of development that will be allowed in each character district have not been provided.
• Improvements and adherence to the Implementation Plan must be assured, which will require allocation of adequate funds.

When these concerns are addressed as the Land Development Regulations are crafted, we are optimistic that this new Comprehensive Plan will make significant strides towards achieving the community’s vision.”

Next week the Alliance will be sending more a more detailed explanation of our position, as well as some specific recommendations.

We greatly appreciate the effort that all of you have put into creating this Comprehensive Plan, and we commend the public for their commitment and insight during this long and important process.

As a taxpayer, homeowner, resident, stakeholder, professional engineer, and business owner I am writing to ask that you as an elected body, please vote to adopt the “approved” comprehensive plan on May 8.

Further debate and comment will only continue to delay the plan and will not add appreciable value. This comp plan has been in the process for 5 years. Please provide the leadership necessary to adopt the plan, and move the community forward by getting to the business of creating the land development regulations.

Thank you all for your efforts.

I’m writing to express my support for the proposed Comprehensive Plan. I believe the current document represents the best efforts of hundreds of people over an extended period of time -- and it’s time to approve it and take the next steps toward implementation.

I’m sure it’s an imperfect document and I also believe that local government is only one part of the community partnership needed to protect our beloved place. So this Plan is only one piece of a complex puzzle.

However, I’m deeply grateful to all of you for the enormous time, effort and care which you’ve dedicated to developing this Plan and hope you will approve it enthusiastically.

<td>Campbell, Tom</td>
<td>As we get closer to the official adoption of the revised Comprehensive Plan, I wanted to take the opportunity to offer you my accolades for the monumental task Teton County has undertaken and the tremendous job you, the Planning Commission, and your staff have performed in getting to this point. The entire Planning Department, especially Jeff Daugherty and Alex Norton, have in my opinion performed their responsibilities in the complex rewrite of the 1994 version with the utmost professionalism. The Planning Department has done a superb job of informing the public every step of the way and truly reached out to the public in a legitimate and repeated attempt to get their input by listening closely to what they had to say and taking these comments to heart. Now, in the face of loud opposition by a very vocal minority in our community, I encourage you to be strong, to recognize the good work Teton County has done, and to persevere in your efforts to adopt this important guiding document for our future in the valley, as written. Whether you adopt the comprehensive plan by resolution (preferable) or by ordinance (less preferable, if can the County even do this), let's just get this thing done and move on to the next important task, the rewrite of the Land Development Regulations.</td>
</tr>
<tr>

**Comment**

Someone just sent me the attached article on "smart growth" planning, and its impact in urbanizing small communities. I look at this as a local concern not a concern about the United Nations and conspiracies or left/right partisan politics. But the article is an interesting perspective, which describes the current local Jackson Hole planning effort.

A boon for urban developers and planners, but the resulting problems do unite many people across the political spectrum. Most Americans are unaware that one of the greatest threats to their freedom may be a United Nations program known as Agenda 21, The United Nations Department of Economic and Social Affairs, Division for Sustainable Development created Agenda 21 as a sustainability agenda which is arguably an amalgamation of socialism and extreme environmentalism brushed with anti-American, anti-capitalist overtones. A detailed history on sustainable development, definitions, and critical actions can be found here. Section III of the Agenda 21 Plan addresses local community sustainable development. The Preamble and Chapter 28 discuss how Agenda 21 should be implemented at a local level. The United Nations purposely recommends avoiding the term Agenda 21 and suggests a cleverly named alternative: "smart growth." The United Nations Millennium Papers - Issue 2 (page 5) says this of Agenda 21 and smart growth:

Participating in a UN-advocated planning process would very likely bring out many of the conspiracy-fixated groups and individuals in our society such as the National Rifle Association, citizen militias and some members of Congress. This segment of our society who fear 'one-world government' and a UN invasion of the United States through which our individual freedom would be stripped away would actively work to defeat any elected official who joined 'the conspiracy' by undertaking LA21. So, we call our process something else, such as comprehensive planning, growth management, or smart growth [emphasis added].

Undoubtedly, residents of any town, county, or city in the United States that treasure their freedom, liberty, and property rights couldn't care less whether it's called Agenda 21 or smart growth. A recent example of this can be found in Carroll County. Maryland, where a smart growth plan called Pathways was drafted by the County Planning Department. The plan, if enacted. Proposed a breathtaking reshuffling of land rights:

- Rezoning of thousands of acres of beautiful, low-density agricultural farmland and protected residential conservation land into office parks
- Downzoning of agriculture land to prevent future subdivision by farmers
- Up-zoning of low-density residential land around small towns into higher density zoning to permit construction of hundreds or possibly thousands of inclusive housing units, including apartments and condominiums
- Inclusive housing with placement of multi-family construction on in-fill lots within existing residential single family communities
- Endorsement of government-sponsored housing initiatives (subsidies) to ensure healthier, balanced neighborhoods

Carroll County, Maryland is one of 1,168 cities, towns, and counties worldwide that are members of the International Council for Local Environmental Initiatives (ICLEI) - Local Governments for Sustainability, which is an international association of local governments as well as national and regional local government organizations that have made a commitment to sustainable development. The ICLEI mission statement closely resembles that of Agenda 21. In fact, the ICLEI has Special Consultative Status with the UN Economic and Social Council and coordinates local government representation in the UN processes related to Agenda 21.

Community leaders working together in Carroll County recently defended their county against overreaching smart growth initiatives. Richard Rothschild, a candidate for Commissioner, emphatically remarks, "Smart growth is not science; it is political dogma combined with an insidious dose of social engineering. Smart growth is a wedding wherein zoning code is married with government-sponsored housing initiatives to accomplish government's goal of social re-engineering. It urbanizes rural towns with high-density development, and gerrymanders population centers through the use of housing initiatives that enable people with weak patterns of personal financial responsibility to acquire homes in higher-income areas. This has the effect of shifting the voting patterns of rural municipalities from Right to Left."

Smart growth plans usurp property rights and constitutional rights. Local officials, at the behest of State Government, revise zoning laws to fit into a "smart code" zoning template. A massive reshuffling of property rights ensues. Farmers may lose subdivision rights; conservation land adjacent to population centers may be rezoned into commercial employment centers; and low-density land in small towns is re-designated as growth area and rezoned to accommodate diverse housing including high-density apartments and condominiums.

Finally, a healthy dose of federal- or state-sponsored housing initiatives is embraced to ensure communities are properly balanced. The net effect of these plans is to create highly urbanized population centers throughout otherwise-rural counties, while simultaneously limiting the availability of land for suburban and estate subdivisions, as these are considered an unsustainable waste of land by Agenda 21 disciples.

Clearly, smart growth plans will impact Americans' future choices in where and how they live. Furthermore, the Environmental Protection Agency (EPA) and other federal and state agencies may attempt to deny grant funds to states and cities that do not adopt smart growth plans.

Most Americans will remain unaware of the implications of smart growth and Agenda 21 until after it is promulgated in their own backyards. Ironically, these plans are more insidious than the Eminent Domain ruling by the Supreme Court in the case of Kelso v City of New London. Under Eminent Domain...

<td>Moyer, Peter, F.</td>
<td>Before paying outside consultants over $330,000 more this year alone after Comp Plan adoption next month, coupled with an additional &quot;massive amount of staff time&quot; (see attached), it would make sense for the Town of Jackson to honor the referendum right set forth in our Wyoming Constitution and statutes -- in order to see if Town voters are on board with the new Comprehensive Plan scheduled for adoption by the electeds on May 8. See attached April 11 [JHNaG] article.</td>
</tr>
</tbody>
</table>
| 4/12/2012  | Moyer, Peter, F.     | I still have not heard from the Town Attorney, other than her comments in yesterday's newspaper article. The specific Wyoming Supreme Court case she cited--the local Town/ Brew Pub case--works strongly in our favor: a Town comprehensive plan is mandated under our statutes, zoning must be utilized in accordance with a comprehensive plan, and land use will be guided by the community plan. See attached.  
Hard to see the Wyoming Supreme Court defeating a public vote by calling the new Comprehensive Plan a "mostly ministerial" resolution! Obviously the Plan is extremely important as the necessary framework for Town zoning, and the referendum right applies. |
| 4/11/2012  | Moyer, Peter, F.     | Dear Kevin:  
I just read your page one article "Girding for Plan Fight", quoting me. You had called me yesterday afternoon, asking about the next step on the Town referendum issue. I said that the next step was for people to assess the Town's response on the referendum vote, to review the final Plan revisions when approved, and then (as a possible next step after that) to try to obtain signatures on a referendum petition.  
As noted in my letter and in our discussion--which at the go-off I said was "off the record" -- I was not some critic commenting on the merits of the proposed Town Plan, but I do believe that a democratic Town referendum vote would be legally proper on the very important Comprehensive Plan revisions. I believe that is required by our Wyoming Constitution and statutes, if a sufficient referendum petition is obtained.  
Moreover, to me every Town voter is a "stakeholder" who should have a say--not just the government planners, politicians, media, advocacy groups, those who have the time and inclination to go to meetings, people with vested interests, hired outside consultants, etc. Some local potentates seem to feel threatened by the local democratic process. Maybe they should be worried, but that should not stymie a referendum vote. Two extra months for a public Town vote on this important matter is not much of a delay, after 5 years of meetings. Whatever. For what it is worth. |

| 4/4/2012 | Wang, Louis           | Together with the Teton County Commissioners, you have been working on the Jackson/Teton County Comprehensive Plan for five years now. Much time and energy has gone into the plan including: meetings, professional survey, use of outside contractors, joint planning and zoning committee work, public comment, workshops, thousands of staff hours, etc. You would probably agree it has been the single most time consuming and important task that Jackson Hole government has tackled in the last five years. Yet, my understanding is you plan to use a ‘resolution’ for your final adoption of the plan. For what is probably your most important and impactful work product of the last decade, you plan to use a resolution for the final approval? This just doesn’t seem right. The Wyoming Supreme Court has ruled that “a resolution, generally speaking, is simply... ministerial in character and relating to the administrative business of the municipality.” The dictionary defines ministerial as “requiring the following of instructions, without power to exercise any personal discretion in doing so.” Plan approval will hardly be “ministerial.” On the contrary, it will be a hugely impactful act of personal discretion. After adoption, Land Development Regulations will flow from the new plan and each of the new/revised LDRs will be adopted by ordinance. Wouldn’t you want to adopt the plan by ordinance as well? Since it is the new plan that will trigger the rewriting of the LDRs throughout town, the plan appears to be more impactful than the LDRs.
For the reasons stated above and to avoid possible legal complications, we strongly urge you to adopt the new plan by ordinance. |
| 4/1/2012 | Stone, Cindy Hill     | This correspondence is in regard to guest and dude ranches hosting wedding receptions, dinners, and board meetings. Being a Wyoming woman, I know for a fact that important life events are celebrated and local, national and world decisions have been made at ranches in Wyoming.
My sister’s reception was at Goose Wing Ranch. Life long friends’ receptions and memorials were at Moosehead, Lost Creek, Heart Six and Red Rock and Turpin.
Believe it or not, ranching is hard. I know because my grand parents were ranchers in Idaho. My granny would tell me,” You really don’t have a working ranch unless it supports itself. If it doesn’t support itself you are just a large property owner.” Hence, the “Guest Ranch”. It works.
Five years ago my beautiful daughter thought a wedding in the shade of Tetons was the answer, so I looked into the Lazy Moose for a reception. I’ve been there for various non-profit occasions but never a wedding reception.
This isn’t a chuck wagon, although I love them. This is fine dining with fresh vegetables, grown in the green house and garden, served on granny’s china. This is linen and crystal that people like me only take out of my china cabinet to dust. This is fresh flowers grown in the green house, good whiskey and intelligent conversation.
Lazy Moose ranch is a wonderful small guest ranch, and former bed and breakfast, that has made its own nitch in the valley for 15 years. Let’s not fix something that is not broken. |
| 3/28/2012 | Carson, Nancy         | The Jackson Hole News and Guide is shining a bright light on the county’s misguided efforts to allow reception sites as a Conditional Use in the Rural Zoning District. Large acreage doesn’t insulate neighborhoods from the noise and traffic and other intrusions big parties create. The party site may be a mere few hundred feet from neighboring homes. Such misplaced commercial development is just plain wrong for homeowners (who are constrained from renting their “facilities”) and wildlife and peoples’ expectation of peace and quiet at home. Tell the commissioners, COMMISSIONERS@TETONWYO.ORG please shut it down before you create a monster. I could never vote for a commissioner who votes for this horrible idea. |
| 3/22/2012 | Moyer, Peter, F.      | Louis--
You hit the nail on the head in your recent letter to the electeds. Being human (as we all are!), some electeds may have invested too much in a fundamentally flawed Plan re-write. Maybe some as promoters. Maybe some looking to go-along-to-get-along. Most probably counting too much on the planning staff. And yes, it is very difficult when a lot of the more independent nonprofit public input comes at the tail end of a long process, even though that is when most of the public sees what is actually being proposed. Not many citizens can spend 5 years in meetings, so they have to wait and see what is the actual proposed “deal”.
But what matters for these public servants is the public interest, not personal ego. They should not be saying that the public is too late, so the flaws will prevail.
I don’t mind that you may personally favor transforming town; that’s your right. But you should have been up-front about it. That way we would have had a real dialogue. Disguising your initiative as a green proposal was tawdry, beneath you. You’re better than that.

Now you don’t want to be seen as having wasted 5-years. Worse things can happen. Do you really think spending the 4-extra years produced a better product? The fact that a 1-year job took 5-years is a sign of poor management and a questionable product.

The nation forgave Clinton, who lied under oath, when he came clean. They didn’t forgive Nixon, who was too proud to admit his error. You’ve been lead down the wrong path. Don’t keep going on the wrong path.

The community is justifiably upset. Simply say you’re uncomfortable with the lack of unity. Say we need a plan that brings us together. You will be heroes. Keep hunkered down, pushing blindly ahead, and you may end up zeroes.

Unfortunately, creating the plan yourselves turned you into ‘advocates’ and you lost your objectivity. It’s human nature. You love your baby. You can no longer function as “lady justice” holding the scales. Make the right choice for the community, not for your egos.

You have tough jobs. On a personal level, I wish you well.

While local officials advertise the wonders of their new comp plan, the truth is it’s a five-year central planning fiasco. The effort started out well enough with the hiring of an outside planning expert, Clarion Associates, to update the current plan. The work was to be completed in 2008. Clarion was fully paid, over $250,000, but an updated plan was never finalized. Our local electeds have never told us why.

Without explanation, they decided to do an entirely new plan and to lead the effort themselves. When politicians personally lead an effort for which they have little if any schooling, a politicized outcome is to be expected. Now, four years later, we have a proposed big growth plan that’s more egregious than the one voters already rejected. In a referendum vote, the town’s Downtown Redevelopment District plan was rejected two-to-one.

The new plan isn’t consistent with polling surveys. It’s not what people want. Maybe our electeds don’t believe in the democratic process? If truth be known, it took the extra four years to twist enough arms and create enough smokescreen to manipulate the outcome that the local oligarchy wanted all along — a town that will begin to look more like Aspen or Vail.

There are occupational hazards in every profession. In politics it’s arrogance and the conviction that you know more than those you serve. When politicians isolate themselves and hide what they’re doing from the public, it’s a sure sign they’re on the wrong path. The public has repeatedly asked for clarity and predictability: Tell us how much growth is in the new plan. Recently, the News&Guide reported our electeds felt “releasing specific estimates could throw residents into a panic.” Where, other than politics, is manipulation and deception so openly embraced? It’s a rerun of the movie “A Few Good Men” with Jack Nicholson, as the Marine colonel, shouting, “You can’t handle the truth!”

There’s a reason why congressional approval ratings are at an all time low of just 10 percent. When politicians deceive to accomplish hidden agendas, people lose faith.

The new plan claims to save the rural areas by transferring development to the nodes, now relabeled as Complete Neighborhoods. It’s simply not true. There is no guarantee of permanently protected open space in the plan. The best way to limit rural growth is for our county commissioners to stop encouraging it — stop granting development plusups. Density transfer is a ruse.

So what’s really going on with the new plan? In ancient Rome, they had a way to cut through political intrigue. They asked a simple question: “Qui Bono?” For whose benefit? Who will gain?

Politicians have been trying to remake Jackson into an urbanized high-end resort for years, and they’ve mostly failed. Voila, the new plan remakes town with huge new density — so much they’re afraid to tell us how much. If you’re afraid to have people know what you’re doing, you probably shouldn’t be doing it.

So who will gain? The property owners that flip their parcels to developers and the well-connected few will gain financially at the expense of the community at large. The price is our small-town way of life.

To bring in the new development, you need to tilt the playing field so it’s attractive to the outside big money that will own those glitzy four-story hotels. They’ll need lots of cheap labor for those low-paying hotel service jobs, so low-cost housing and transportation will be an enticement. And guess what? The new plan requires 65 percent of the workforce to be housed locally, and politicians now propose a new $40 million bus barn. Get ready for higher taxes and more publicly subsidized affordable housing.

It’s one thing to house the workforce we have now, but it’s quite another to subsidize the outside developers that will destroy our small town way of life.

Lastly, the new comprehensive plan isn’t comprehensive. The whole reason to do a comp plan is to uncover the hidden impacts of what may otherwise seem like good ideas. But this plan ignores those impacts. It’s a shallow and deceptive plan.

Traffic and roadways are essentially ignored in the new plan. It’s already tough to drive through town in the summer. How will we do it if traffic doubles? A genuine plan needs to address the real issues. How many guests will there be? How many cars and buses? How wide do the roads need to
be? How many new employees, kids, schools, AH units, grocery stores? Does the valley have the carrying capacity? A real comp plan addresses these and other pertinent issues.

Well, if it’s not a real comp plan, what is it? It’s an enabling document to grow the town. It’s a commercial initiative disguised as a green proposal. The details aren’t provided because if they were, the public wouldn’t stand for it. The new plan is not on the up-and-up.

To the politicians who initiated and promoted this deception: You should be ashamed. And to the majority of our electeds who simply went along: Stop going along. A “no” vote on the new plan acknowledges the truth — it’s a misguided embarrassment.

</tbody>
</table>
| 3/19/2012 | Bloom, Rich                 | Rich Bloom, thank you for your comment. On the motion that got amended multiple times with Commissioner Phibbs, I just want to reflect back what I heard and I’ll just start with that, and there’s two sections it’ll be in—via pathways and potentially via roadway—and what I heard was connections between existing neighborhoods based on proposals from affected neighborhoods. Okay, so I just wanted to have Staff hear...

Of connections between existing neighborhoods based on proposals from affected neighborhoods. Very good ?? and I thank you for that. Two things, especially for Commissioner Schwartz, just a reminder on the Area 10.2, which is Northern South Park and that kind of the north road, it’s in the preservation goal, and I think the main language in there talks about wildlife movement throughout that area and agricultural viability, and so a north connector, I never envisioned as being current in that; I don’t think it’s in the language. And the Seherr-Thoss, via 10.1, that’s in a conservation ??, which is two major goals in open space and then clustering adjacent to transition areas. So it also mentions wildlife movement and permeability, so when we talk about this north/south connector, it starts becoming in conflict with the goals we’re setting aside for those areas. So that’s just a ??.

Thank you.                                                                                                                                                                                                                                                                 |
<p>| 3/19/2012 | Jensen, Gail                | Gail Jensen, thank you very much for the changes in 12.2; that really helps with...and I really agree that the changes, it recognizes extreme differences in that subarea, which are extreme. Thank you.                                                                                                                                         |
| 3/19/2012 | Acri, Armond                | Mr. Chairman, Mr. Mayor, members of the Commission, just two quick things. One is actually to reconsider the issue of having three floors in 3.4. It’s unfortunate that Planning Commissioner Allen was not present...or, well, she was present but didn’t talk about it. I think she gave the most eloquent argument for that, and I think the issue really came down to, as I think Councilman Miles pointed out, there are three-story buildings there, but the question is what is your vision for that? Do you want that whole thing as three stories, which perhaps will overwhelm some of the two stories there, or do you want to keep it and say what’s there is there as three stories? And I’m probably not doing as good a job as she did on that. She, being a resident in that area, I think she did a good job. And ask, since it was late, you were tired, I think that didn’t get as good a discussion on that, maybe to talk about it one more time, if you have a little bit of time today. And the other one is also the issue of increase in intensity in 13.1 and 13.2, in the Village. I think that’s also important. The committee has been pretty I think consistent in their statements of desire, and you’ve captured part of it with locking the footprint, but I think allowing an increase in intensity there is not a direction that most people wanted and perhaps you could spend a couple of minutes to talk again to make sure...you were tired the other night...if that really is truly what you wanted to do. And thanks for what you’ve done so far. |</p>

<td>In advance of your continued meeting on the Comprehensive Plan this afternoon, I wanted to let you know that as of this morning, additional names are still be added to the Statement of Intent. This collaborative effort on the parts of many community members yielded nearly 360 names in only 10 days, and names continue to come in. Thank you for taking the time to discuss the Statement of Intent today, and for all of your work on this Comprehensive Plan.</td>
</tr>
<tr>
<td>3/19/2012</td>
<td>Stevenson, Trevor</td>
<td>Trevor Stevenson, speaking on behalf of the Conservation Alliance. First I wanted to thank you for agreeing to a workshop discussion format for these larger issues. I think that’ll be a great way to address it. Secondly, with regard to specific maps...sorry, with regard to specific maps that you’re working on at the moment, there was a recommendation that came out of the Wildlife Assessment around stormwater that you all decided not to include as a text change within the maps, and I understand your reasons for that and I think that’s fine. When we looked back through the Wildlife Assessment, one of the things that it’s very clear on is that although the policies today talk a lot about stormwater treatment, making sure that we’re adequately dealing with the stormwater that we generate, they actually don’t do a particularly good job of talking about stormwater reduction, how do we reduce the amount of stormwater in the first place. This is something that is a rapidly growing field ?? I suspect. A lot of these folks don’t hear much about it. You may want to sort of keep that on your radar, now that it’s not a text change in the maps, as a possible addition or clarification in the policies when you get back to that. I think in general that Wildlife Assessment has some limited applicability to what you’re doing on the maps at the moment but will be more useful in probably issuing the zoning as well as in the future. Thank you.</td>
</tr>
<tr>
<td>3/19/2012</td>
<td>Hawtin, Bruce</td>
<td>When I ask my friends about the Comprehensive Planning Process, and I do ask them on a regular bases, I can collectively share with you this common response, “I know this process is important but frankly, I don’t understand planning in general. I read an article and it just goes beyond my comprehension and the terms are a bit foreign. I am concerned about open space and wildlife protection, and I want everyone’s property rights protected. But, I have a great deal of confidence in the County commissioner and the Mayor and the City Council to what is in my and the whole community’s best interest. What do you think Bruce?” Funny they should ask! All of our closest friends own property in Jackson Hole, they have raised families here and all their kids have graduated from Jackson Hole High School, and most have had or still have employees. They have a big stake in Jackson Hole and they are very concerned about it’s future. These folks represent the huge, and I mean huge, silent majority that support you and what you are doing. On the other hand, the opposition wants no growth, and it is all about them. We all have been a part of, or read about those small groups of people who make a big difference one way or another, but this well organized, well funded, visible and verable group wants this county to head in the wrong direction. Can you possibly imagine living in a community with no growth? That is unimaginative, boring, and gives us nothing to look forward to! I look forward to a well managed, controlled and sustainable growth. I know each of you support that. The current plan before you does all of those things and much more. I don’t need numbers. That is a scare tactic. The numbers will unfold as we move forward. There are safeguards and a review process in the plan to monitor numbers. I am not fearful that our growth will ever get out of hand. Please pass the plan before you. Then I recommend taking a deep breath, go on spring break, and then lets get started on the LDRs. After all, those are really the meat and potatoes of what this is all about. I promise, for better or worst, to be fully engaged in the LDR process. Again, thank you for what you do for this community.</td>
</tr>

**Comment**

I had the pleasure of meeting with Paul Vogelheim last week to learn more about the new Comprehensive Plan.

It was great to learn that the PUD provisions of the old plan have been repealed and won't be included in land development regulations under the new plan. If I understood Paul correctly, that means that private land in most of the County (other than in town, resort districts and the area by High School Road) can no longer be subdivided into parcels smaller than 35 acres. I think this is a major achievement that the BOC should bring to the public's attention! Congratulations on the big step forward in terms of protecting rural areas of the County.

However, it would be great to see this more clearly spelled out in the new plan language: “there will not be any subdivisions permitted in the county which results in any lot sizes that are less than 35 acres in size” so there is no room for misinterpretation. In addition, this change should be made permanent because the plan is increasing density in some areas in exchange for this. Once the density is increased in certain areas there is no chance of “the increased density areas” being down zoned to lower density in the future. This makes it critical that there is a mechanism in place that permanently protects the rural areas of the county and permanently restricts them to no more density than one parcel per 35 acres. Without this, there is nothing to stop future elected officials from undoing what we are all trying to accomplish now for wildlife, conservation, rural character and open space. The Conservation Alliance language and concept makes sense on this point: the community deserves legally binding permanent protection of open space in rural areas in exchange for increasing density in other areas. Please try to make this happen.

Despite the PUD accomplishment that Paul pointed out to me, I still have major concerns about the lack of clarity in the plan and the wording in the document. The summary sheet Paul provided me with which compares the Conservation Alliance Statement with the Comprehensive Plan Language worries me because the language in the Approved Comprehensive Plan is so ambiguous that it permits future elected officials, planners, conservation groups, developers and attorneys, to interpret the language differently based on conflicting interests and objectives. Lawyers are the only ones that benefit from this lack of clarity.

The language in the summary sheet is ambiguous because it specifically says “it is designed to be a living plan. Able to proactively adapt to changing conditions and community needs” and then it goes on to say “As we identify our successes and failures in achieving our vision we will adapt our policies and implementation-continuously progressing through the cycle”. To me this says that future developers and their attorneys, elected officials, planning staff and conservation groups can all try to change the plan and interpret the plan in the way they see most fit to achieve their objectives. This means there will be no certainty and that politics as usual will determine how decisions are made in the future.

The comprehensive plan should increase certainty whereby homeowners, developers, neighborhood groups and elected officials should know exactly what is permitted in an area. If the plan is continuously “living”, “adapting” and “changing”, there won’t be any certainty. Please try to incorporate language that eliminated this uncertainty. Please make it your goal to make the plan a binding contract for the community with as much clarity as possible so everyone knows what to expect in the future with the highest degree of certainty possible.

Thanks again for your time, commitment to our spectacular valley and insights.

---

**Comment**

I am a frequent visitor to the Jackson Hole area and am currently considering purchasing a property there as a second home. Jackson Hole as you know is a very special place for all of us including the wildlife. We need to continue to protect the open space. Please resist the urge of some planners to transition this valley into a more urban community. PLEASE protect this beautiful gift of the earth. PLEASE don't allow greed to get in the way. We'll not be able to undo the resulting damage it will cause.

<td>Salter, Andy</td>
<td>I have previously written you as a citizen of South Park and as a member of the Board of Directors of the Melody Ranch Homeowners Association to express my strong opposition to the inclusion of any language in the Comp Plan update that supports &quot;road connectivity&quot; in the South Park Character District. I see that the latest Staff Report includes such language. Should you decide that this reference should remain, I ask that you also consider including the following sentence: ‘Roadway connectivity will be pursued only based upon demonstrable need and overwhelming support from affected neighborhoods.’ This would be more reflective of public testimony and written input, more respectful of potentially impacted citizens, and entirely consistent with the intent of the document. Thank you for considering my request and for your considerable efforts on this planning tool.</td>

<td>Stoltz, Keith</td>
<td>I am writing out of concern for certain language regarding the Character Districts in the Comprehensive Plan Illustration of Our Vision. The Crescent H Ranch appears to be in District 8.2 and District 11.4 with some of the mountain properties outside of the designated Character Districts, and I am alarmed with the language that seems to allow for future changes to our existing development regulations. Addressing Character District 8.2, Page IV-51 states: “Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented.” It further states that “Redevelopment efforts will be focused on reducing the amount and impact of development.” Page IV-53 states: “Non-development conservation is the preferred land use in this area.” “Development potential in this area should be directed into Complete Neighborhoods or clustered...” “Development that does occur will include small structures and limited disturbance...” How these efforts could or would be applied to Crescent H Ranch or to other existing properties in Character District 8 is at best unclear and potentially very troubling. While I wholeheartedly support the preservation of our county’s wildlife, our wildlife habitat and our open spaces, at Crescent H Ranch our development is managed to promote those initiatives. I also understand the need to preserve and conserve the yet to be developed open spaces and rural areas- areas that are not currently platted or planned for development. However, any effort to re-regulate, re-configure or re-develop existing, permitted and platted properties will be very strongly opposed. In summary, I am very concerned that the Character District plan is unclear in its intent and can easily be interpreted to be an overreaching approach by the county to control the nature of development in the valley through future regulatory changes affecting both undeveloped areas and areas that are currently platted and developed as subdivisions or single private properties.</td>

<td>Thank you for your discussions on the Comp Plan at last night’s hearing, and your willingness to continue debates on some of the big topics facing our community right now, including the Implementation Plan, the numbers and the Statement of Intent. Attached is an electronic version of the Wildlife Assessment, prepared independently for the Alliance by Alder Environmental, which I passed out to you last night. This version has one small correction, changing the reference to Highway 390 in Alta to Ski Hill Road. The rest is the same. As I mentioned in public comment last night, the Alliance believes that it is important to analyze whether or not our vision and policies, as illustrated in the character district maps, can and will uphold community priorities, specifically the protection of wildlife and natural resources. In contracting with Alder Environmental, we were able to look at the maps and the natural resources and provide a check-in to see if the desired future condition of the community, specifically the transitional subareas, will result in any direct or indirect negative impacts to ecological resources. I will highlight one of our key policy recommendations, informed by the Wildlife Assessment, which is to amend Principle 1.2 to reflect the goal to reduce, as well as treat and divert, stormwater through encouragement of building practices that reduce impervious surfaces. Prior to adoption, we hope that you will add some language to address this. Thank you again for your attention to this study and the recommendations contained therein. Please let us know if you have any additional questions.</td>

<td>I am writing out of concern for certain language regarding the Character Districts in the Comprehensive Plan Illustration of Our Vision. The Crescent H Ranch appears to be in District 8.2 and District 11.4 with some of the mountain properties outside of the designated Character Districts, and I am alarmed with the language that seems to allow for future changes to our existing development regulations. Addressing Character District 8.2, Page IV-51 states: “Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented.” It further states that “Redevelopment efforts will be focused on reducing the amount and impact of development.” Page IV-53 states: “Non-development conservation is the preferred land use in this area.” “Development potential in this area should be directed into Complete Neighborhoods or clustered...” “Development that does occur will include small structures and limited disturbance...” How these efforts could or would be applied to Crescent H Ranch or to other existing properties in Character District 8 is at best unclear and potentially very troubling. While I wholeheartedly support the preservation of our county’s wildlife, our wildlife habitat and our open spaces, at Crescent H Ranch our development is managed to promote those initiatives. I also understand the need to preserve and conserve the yet to be developed open spaces and rural areas- areas that are not currently platted or planned for development. However, any effort to re-regulate, re-configure or re-develop existing, permitted and platted properties will be very strongly opposed. In summary, I am very concerned that the Character District plan is unclear in its intent and can easily be interpreted to be an overreaching approach by the county to control the nature of development in the valley through future regulatory changes affecting both undeveloped areas and areas that are currently platted and developed as subdivisions or single private properties.</td>

I believe that without civil discourse we as a species would have become extinct a long time ago. There is, however, a difference between civil discourse, and yelling. Adults are expected engage in the former, small children the latter.

When I read certain ads in the newspaper that are attacking the credibility of the comprehensive plan I have a visceral reaction to the methods being employed and the amount of influence certain groups have had over the comp plan process. Purposefully propagating misinformation, falsely characterizing your tactic (ie – a statement which seeks to fundamentally change the comp plan document), as a compromise is not only offensive, it’s also audaciously arrogant. Leave those tactics to the national parties; they’re pretty good at them.

You as elected officials were chosen by popular vote to represent your community. I urge you to avoid pandering to special interest groups who continue to try to hijack this process. Please don’t abdicate your responsibility to the people who have the most time to show up at meetings. Please don’t disenfranchise all the people who participated in design workshops this past fall. I’ve seen the data; the loud minority at the comp plan meetings does not fully represent the community’s will, despite what they may say.

You were chosen and are paid to represent the entire community and most of us don’t have time to spend at public meetings, or educating ourselves about every nuance of this vision plan. The community voted you into office for a reason, and, quite frankly, did not vote others into office because their viewpoint was not representative of the majority (see: 2010, 2008 local election results).

Do I agree with everything in the Plan? Absolutely not. I want there to be more development in the Aspens and in Wilson, for example. What I do believe is that the process by which we came to this plan has been solid and open and it’s now up to you to see it through it’s last phase. Support the plan!

Thank you for your time and your thoughtfulness on this.
Jern, Sherrie

3/15/2012 A few concerns:

Ben, you did an excellent job last night, both with the public comment period and also the period following when the electeds were to discuss the input from the public in regards to the character districts. However, it was obvious to the public that by the time the discussion had reached the bottom 5th of the first sheet of notes, that no one was really engaged and extremely fatigued. The level of non-discussion was startling following 5 years of hard work on everyone’s part.

The discussion on the second page was almost absent. One commissioner even mentioned that he had not even paid attention to one entire item. And when you discussed Teton Village, I really do not believe that it registered that there are some 600 units to yet be developed under the existing plan. Please reread the letter from Grand Teton National Park dated June 11, 2009 to refresh your memory on the Park’s view on increased density in the Village in regards to the jewel of Grand Teton Park, the Moose-Wilson Road.

I would like to recommend that at minimum that the last page be revisited. I expected much more vigorous and dynamic discussion about such important issues. And we need specific numbers and clarity of design.

Also, not one letter from the public was included in the discussion. Not everyone can attend the meetings and letters to the Board is the only way to communicate. I believe that the public had written in regards to 8.1.

(reference letter dated February 29, 2012 from Bland Hoke, Jr.)

I believe that staff brought up early in the meeting that there was great confusion regarding the "Rains Property". Why is it called the Rains Property, is it also owned by the County? The public and residents of the area call it the Raintree Developement.

The confusion is that Kennel Lane is the natural division between the Aspens and the Raintree Developement...not the buckrail fence through the middle of the Developement. One part of Raintree is in Section 9, the other in Section 12-2. All of Raintree should be in section 9. Historically, visually and as it is now populated, it fits section 9.

Thank you for your time and your service.

Knopp, Jia

3/14/2012 I am writing to thank the people that have devoted their time to the comprehensive plan. As a long-term and potentially permanent Jackson employee and resident, I appreciate any efforts that would make home ownership a viable option. I love this town, but have long considered that I would be unable to settle here as I begin the family stage in my life, as a standard professional salary is insufficient to fund home ownership on the open market. I applaud your efforts to house 65% of the workforce locally. I forsee the comp plan making a huge difference in the quality of both residents and employees that Jackson can maintain.
Thank you, Mr. Chairman, Mayor and Council members, Commissioners, thank you very much. I appreciate the focus that I just now received on character districts and transitional, or transects and transitional zones. <<inaudible>>, but it sounds like you’re open to comment on those areas at a later time, if you do not do it tonight. It showed on one of the slides 7 percent of private land is in the transition or stable situation. Where’s all the rest of it? I guess that’s my question. And what that leads to is where is this going? And I think I’m competent to understand this, but I don’t understand it and I think that’s for lack of the kind of specificity that Tyler spoke to on that one area. We’ve had a lot of work on the Comprehensive Plan. Actually, the planning efforts have gone back some 50 years by my recollection. You have a very educated constituency and that’s good and bad. It’s good on one hand; on the other hand, they’re interested in everything you do regardless of the fact that you put in incredible numbers of hours, as do the Commissioners and Staff. I think you owe it to your constituents to make this so that they understand it in as briefly a fashion as possible. Nobody likes to come up here and wonder if this is the last chance to talk or when the final decision is going to be made, so the more you can do to tighten this up and stick to timelines, I would appreciate ?. Specifically, character district maps, I’m glad to see the maps got developed. I think they’d be much more meaningful with numbers on them. And you can develop numbers fairly easily with GIS systems and the types of multipliers or bonuses you would like to include. You could develop a series of options with graphics like you do in each of several scenarios. I think that would be very meaningful, particularly in the County. I don’t mean to slight the Town, but I think, from what I’ve heard, there are no nodes, no economically sustainable complete community nodes, whatever the term is, in the County, except in the Town and perhaps Teton Village. If I’m wrong, I think a lot of people share that misunderstanding. But, if that’s the case, kind of specific things that were talked about in the Town, is just the numbers of stories in which you can develop population numbers, I think that would be very helpful in the County. It certainly would be helpful to me and I think to you. But the main point is that the impacts that we’re uncomfortable with in this community, whether it’s the width of the highways, the number of vehicle trips, the need for hospital expansion, or jail expansion, or more rapid transportation on certain streets—those are all proportioned to population. I don’t know what the equation is but there is a mathematical relationship, and I think attempting to hone in on that a little bit would help us all. I recently have been made a Commissioner on the Wyoming Schools Facility Commission and I’ve become aware of the fact that, as the population increases, the state is mandated to consider capacity and build new schools where there’s capacity need. Now, when you build a new school, you need land and you need ?? and you need transportation. And part of the long-term Plan, based on the buildout number of population, would be how many schools are you going to need. I understand it’s a guess but make an educated guess. Or make two guesses if you have educated. And that’s something meaningful to work with. I think the community understands that LDRs are really important, but some guidance, some sideboards, if you will, as well as <<inaudible>>. In Town, I think at some point in this process…I appreciate everything you’ve done…at some point you’re going to have to ?? the process, take it back to Town and County. I think the County is easier to deal with. I would hate to be in the Town’s position because, I’m not sure to what extent, but density, some folks feel they have a right to, if it’s extinguished or not recognized as a legal property right in the County, it’s going to be hopeful it can be accommodated in the Town. I think part of that accommodation is what do you do in the north end of South Park. I think that property is the only contiguous piece of the Jackson that is ideal for annexation and development <<inaudible>>. It has all the qualifications. But I believe the County, in your Plan—I’m assuming you’ll get something done first—that you’ll designate that that’s an area for further annexation by the Town when desired by the landowner. I know it gets more complicated as landowners get more numerous, but I think the sooner the better. Thank you very much.
Rich Bloom and I will speak to the maps, but I have some other thoughts here initially. I’ve given a lot of thought to what I wanted to say to you tonight. It was with us last night and I’m reminded again of the serenity prayer: Grant me the serenity to accept the things I cannot change, the courage to change the things I can, and wisdom to know the difference. Knowing the difference is always a challenge, as I’ve had a lot of faith in our system of government, but often I’ve been disappointed in how it plays out. Frankly, my faith in a fair process, even at our local level, has been an issue over the past several years during this process. That is not because of the quantity or quality of public participation, but instead because of some of the insincere response on some of the electeds to points of view on our position that differ from their own personal world view. The public participated at an overwhelming level with diligence, dedication and understanding. The Plan has moved significantly to better reflect the common vision for the Valley and has many times balanced appropriately to ???. But on many key issues, such as limiting buildout, defining the amount and type of growth in ranges by district, or committing any shifting development potential, to working with rural landowner stewards to find equitable and clear pathways to permanent open space, many of you have been intransient and worse a few have crossed the line by denigrating the very citizens that pay your salaries and have faithfully participated in the public process. So tonight I want to speak to the overwhelming public that has participated in this planning process over the last four and a half years. I want to ask you to respect the public and not dismiss or denigrate them. I have so often invited the public to participate in this process, assuring them it would be fair and transparent. I must admit that it has been severely undermined by a few of the electeds at various times. That is not meant to be a global condemnation of either the Plan, or the process, or each of you, so please keep my comments in context. We can argue the facts and have intellectual arguments on shifting densities and defining future growth potential, but tonight be careful not to insult the public by saying they do not understand, or they have been mislead, or their opinion is a minority opinion. That is inaccurate and disrespects your fellow residents and taxpayers. I reviewed all the public comment over the last four years plus this last week. The public has been consistently and overwhelmingly commenting about the same issues time and again, and to say that the recent Statement of Intent approach is a minority perspective of this community is simply not truthful. To say that of the public who has followed this process intensely, participated in comment, as over 90 percent of those 360 citizens on the petitions have, is disrespectful and irresponsible for any elected official, so please do not go there. Debate the issues, but please do not question the public’s integrity. We are very close as a community having a vision in the Comp Plan that can be accepted, at least by most of the community. The Statement of Intent is an effort to clarify and re-emphasize some of the community’s primary values in an effort to clarify the Plan to the max. Please leave the language as slightly amended by the Joint Planning Commissions for Subarea 5.6, Northwest South Park, as it is presented to you. I think it fairly accommodates the public’s vision and comment while also respecting the dual desires of Town to have a growth trigger so it does not compete with Town Core and reinvest in revitalization, while acknowledging the rural property owners with estate planning timelines to help them come forward with their own plan to resolve their land deals and clustering options, so please don’t change 5.6. Think where they are to be a compromise. In District 10, the language is much improved and now represents a balanced vision of the public’s input. I would ask that one last time for you to add a qualifier or pathway to the interconnectivity goal on the maps in this district. I will not repeat the comments you already have from our two homeowner associations—Rafter J and Melody Ranch, representing some 900 homeowners—but please take road connectivity off the table for the next 10 to 15 years and focus on pathways. Transit is simply not an issue, as we have functioning and efficient school bus routes in both Rafter J and Melody Ranch that operate twice daily. START can simply map those routes tomorrow. Building on the connector pathway section for Melody Ranch, or Three Creeks Ranch, and South Park Loop Road, along with creating the extensive existing pathway system in Melody Ranch are large enough initiatives for a viable Plan, so please enter that thought. Thank you for considering my thoughts and my requests.

<td>3/14/2012</td>
<td>Wallace, Jim</td>
<td>My name is Jim Wallace. Commissioners, Mr. Mayor, all Commissioners and Councilmen, I thank you for this opportunity, and first I would like to commend Jeff and Tyler. They were always professional, always courteous, and always had an ear. I’d like to talk about the Willow Street corridor, which is District 2, Subarea 2.7. I believe that the vision is accurately illustrated. It is…I’ve lived there…September will be 30 years. I know that area very well and I’ve seen the transition and I believe to have that corridor with...now in...the vehicle traffic is minimum 2000 upwards of 3000. It is no longer…it’s a hike, it’s a hike, and so either it brings us to the discussion of do we want that as a residential area, or do we want that as a highway? I think that the dye has been cast. It is and it probably will continue to be a major north/south connector. I live right on the street. It is what it is. I understand ??; it is what it is. The vision now to have that corridor where it can offer neighborhood services and to build on the property line as a fencing then for the residential in the rear, so both east and west is most prudent. I think with that and with sidewalks to provide for safety, and then my wife, Lenore, who came up always with innovative thoughts, is that maybe one day it could be a one-way street—maybe Cache going one way, Willow Street the other way—which would permit for smooth traffic flows and give you the parking, perhaps diagonal, that would be necessary for all of the activities that happen here, at Snow King, the events constantly, plus that wonderful, I think attractive, walkway from downtown to Snow King, which all of us use, it’s wonderful. And then also the opportunity to have some economy there, to have small offices, and persons could live above, their families could live there, and the protected backyards would be shielded from all of the traffic. So, thank you.</td>
</tr>
<tr>
<td>3/14/2012</td>
<td>Resor, Bill</td>
<td>Mr. Mayor, Council members and Commissioners, thank you. My name is Bill Resor. I live on my family’s ranch south of Teton Village. I’ve lived here over 35 years and I was on the Planning Commission for the County for nine years. At the end of that period, I helped draft the 1994 Plan, and the first thing I’d like to say is you guys have done a better job than we did. I think it’s been a better process; I think it’s been more locally controlled and outside consultants were helpful but not driving it, and I think that’s been a very positive difference. So, congratulations to you and to the Planning Commissions and to your Staff for very good work. In particular, I’d like to say the Planning Commission changes they made in the last round, I think were all very positive and moved, you know, really got the Plan tightened up a lot. And without going through those, I think they did a very good job. I’d like to make four comments—I was going to make three, but I’m adding one back in, even though Ben was telling me not to. [Laughter] You know, there’s a well-meaning effort to try to add a Statement of Intent to the Plan, but I don’t think it’s needed. You approved the executive summary last summer. You’ve got character districts, you’ve got other pieces, you have Regulations that come out of this, and I think you’ve got a good solid structure. I don’t think you need that additional level. As a former Planning Commissioner, I think it would be confusing, it wouldn’t be helpful. It’s better to have a Plan with this kind of structure that you can really use as a Planning Commission effort to look back to and if that helps you give, you know, set the vision for the community. The other general comment I’d like to make is on the tone of the Plan in the character districts. Please direct your Staff to, wherever possible, try to make the Plan really aspirational and positive. The Plan is what we want to be. It isn’t…we’re not going to get everything in the Plan done, but that’s more useful to Planning Commission members. The Regulations specify what is and what is not allowed. But the Plan should be, as much as possible, a positive statement of what we want for our community. Also, those positive views are quite helpful when you’re trying to get funding or other ways of protecting open space, so having a positive statement of what you would like there, I think is very beneficial. My last two comments relate to specific districts in the County. District 8, the River Bottom, Commissioner Phibbs has proposed a rewrite of Section 8.1 that I’ve seen, and that covers John Dodge and similar areas. I think that’s a significant improvement over the existing language, and one reason, it is a much more positive statement and also accurate statement of what’s going on in that…this is an area that’s mostly built out. I remember the Dodge place when it was one large pasture that we used to lease. I didn’t like seeing it developed but it was done very well. Wildlife deluge are as good or better in what used to be the, you know, what is now John Dodge and Wilderness Ranches than they were 55 years ago—that’s for elk, mule deer and moose. I don’t want to go into details of why that is, but it’s definitely true. A lot of it has to do with good covenants, and I think we should look at that and use…really study that, look at everything from ?? from 1970 until now, look at what’s changed there and why did that, you know, why is there more wildlife there than there used to be. And there’s roughly one house for six acres and one for ten, so it’s a good model. My last comment is on District 9, the County Valley, and it also applies a little bit to District 15. This is…it’s good, it’s well written but it needs a little more clarity. I suggested specific edits, sent it to your Staff and also specifics on a few other areas. The most important thing about this district is a lot of it is still in ranching and you need to emphasize protection of scenic vistas and agriculture. It’s in there but it’s not weighted out in front as it should be. Locals and visitors alike enjoy seeing open, working ranchland. These vistas are hard to preserve. In some ways, they’re harder to preserve than wildlife areas. So, in District 9, the priority should be to maintain scenic vistas and agricultural viability. Parts of District 15, I think you could have that same emphasis, you know, for the parts of it that are in ranching or dude ranching. Thank you very much for your work, and good luck.</td>
</tr>
</tbody>
</table>
Thank you. I also happen to be in District 9 and I echo that last comment. Oh, my name is William Smith. As I read, you know, the description and that kind of thing, ultimately, I or any property owner is going to read the Plan in terms of what can I or can I not do on my property, what freedom do I have to choose things, and right now the way the character district is described, it doesn’t tell me very much about that, so it’s hard for me to say, well, this is a good step in the Plan, or it’s not a good step in the Plan. It’s almost like I don’t have enough information. I don’t know what’s coming in a sense. Therefore, I see, as a worried citizen, just a bit, every one of these planning type of exercises ultimately results in and culminates in regulations and ordinances and codes and things like that. I’m going to say that Teton County right now has one of the most bizarrely restrictive energy conservation codes that exist outside of anywhere but the People’s Republic of Boulder Colorado. And I thought if I designed and built a house here 15 years ago, it’d cost me about four hundred bucks to get a building permit. That same building permit, according to the code that exists today, would cost me over a hundred thousand dollars. Now, that hundred thousand dollars of course is paid to Teton County. Do any of us believe that that is going to stop global warming or anything like that? Of course not, it’s not. It’s nothing but an extortion from the citizen and a limitation on that citizen’s choice about what they want to do with their property. Now, as I read the documents, there was mention of private property rights way back in one of the earlier phases of the Plan, and I can’t do a word search easily on the documents as they exist on the website, but there were two mentions of private property rights in one of the early vision documents. After that, I can’t find it mentioned anywhere. So, all I’m saying is it feels to me like the whole idea of private property rights and the freedom of citizens to make decisions about the property for which they have worked and paid over a very long time, in most cases, is not obvious. In fact, it is noticeably absent from the planning documents as they exist right now. Of course, I realize that it’s difficult to introduce another party into a planning function, such as we have now, but I guess I’m suggesting would it be useful to have a person along the planning or involved in the planning who is there as nothing more than a property owner, and as each of these things, as the numbers do take shape and as we do take these inevitable steps toward codes and ordinances and that kind of thing, have that person there to offer the perspective of, gee, I’m a property owner, am I willing to give up what they’re about to take away from me here. I think that would be very, very useful. Finally, again the progress of a planning exercise like this...and, by the way, I’m a fan of Planning. I compliment you and Tyler and Jeff and the planning groups, so I think it’s been done rigorously and I think it’s been done competently, with the exceptions that I’ve so noted. But as we move toward these more...I’ve never seen a planning exercise result in less ordinance, or less code, or less regulation. It always tightens those bolts even tighter. And if I look again at this UN-drafted International Energy Conservation Code that is operative right now, implemented in our County, Teton County Wyoming, I would say how much worse can this get? Where is this all headed if that’s our present code and the whole aim of this is to tighten the bolts even further? I want to live in the People’s Republic of Jackson, folks. Thank you.

Friday, May 04, 2012  
Page 24 of 974
Good evening, my name is Trevor Stevenson, speaking on behalf of the Jackson Hole Conservation Alliance this evening. First I wanted to say that I really appreciate the many years of hard work that all of our elected officials have dedicated to create a Comprehensive Plan that should better achieve the goals of this community. I do believe that your goals, as elected officials, largely reflect the goals of the public, and I know that it is frustrating to find that many members of the public do not yet fully support the work that you’ve done on the Comprehensive Plan. The Alliance is a public interest organization and we strive to bring good information to you from a wide range of perspectives, to better inform your decision-making about the Comprehensive Plan and other critical issues. In the last year, we have brought you presentations and reports that have included one of the authors of the 1994 Comprehensive Plan, a leading expert on tools to achieve the shift in development patterns that you all are looking for. We’ve recently had a presentation by a local expert on the market forces that are driving development in Jackson Hole, and tonight we’ll also be presenting you with an independent study that was done by a pool of experts on the expected wildlife impacts associated with the character district maps. In addition, we provided you with timely recommendations at each step of the process and we’ve worked to get as much public involvement as possible, especially in the recent design of the character district maps, so we try to come at this from as many angles as possible. Most recently, the Alliance has supported the recommendation for a Statement of Intent, and we recognize that this highlights a voice that perhaps is the one you want to hear the least. This is the voice of people who are not yet convinced that this Plan is on the right track and people who are seeking some additional assurances and clarifications before you adopt the Plan. We at the Alliance do feel it is important to try to clarify those concerns, bring them to you in a succinct and understandable manner, in addition to bringing you a wide range of other perspectives. The Statement of Intent is a very short list of concerns that are shared by a broad range of residents, and I know the request was to not speak to this this evening but, as I’ve mentioned to you before, without some clarity about the public process from here to adoption, I have no choice but to use this as potentially the last opportunity to address this. Please note that the many signatories who have asked to be listed publicly in support of this Statement of Intent include many of the people who have been closely following this issue for years and years. Their opinions should matter to you. We believe it is important for you to address their concerns and we hope that you can do this in a way that builds broader community support for this Plan. For the most part, the Statement of Intent is a request that you clarify and re-emphasize some of your core objectives that may not yet be sufficiently clear to the public. This would serve as a safeguard against future misinterpretation until you complete the new Land Development Regulations. There are at least two requests in the proposed Statement of Intent that may be different from your actual intentions at this point. We recognize this and I want to highlight those briefly. First is the question about when you will define the desired amount of growth in each district. Last spring, you all decided, as a joint board, that the desired amount of growth would be addressed when numbers would fall out of the maps. This was your approach to it, that numbers would fall out of the maps and the character district process understanding was we would be sort of answering this question. And so we all thought that was the plan up until recently. If you’re not planning to address the amount of growth within the character district process, which seems likely at this point, I would ask that you please clearly explain why and when you plan to address the desired amount of growth and how you plan to address that. So far, we’ve mostly heard that you don’t trust the public to understand the numbers, and we don’t think that’s a good rationale, especially when you haven’t really explained how and when you will be addressing this. Second, within the Statement of Intent is the concept of linking any increases in development to decreases elsewhere. We’re aware that there is a lot of debate, and legitimately so, about what sort of regulations you think would be able to achieve this and even the degree to which this objective of linkage is possible. We expect that all of this will get worked out when you get into the LDRs. What is lacking so far is a clear negotiation and an agreement between the Town and the County that your objectives generally to achieve some balance between increased development and decreased development and that you will seek to promote as much permanent conservation as possible when you get to these LDRs. I hope that you can reach a clear agreement on this in writing before adopting the Plan, because I think it’s fundamental to a joint Plan is to have that agreement about balance and the role that each of you as Town and County officials play. I do recognize that the Alliance’s support for this Statement of Intent has not been popular with some of you. I know that you would like to have the full support of the community and you’d like to have the support of the Alliance, and you may think that the Plan already deserves that support. I hope that having a succinct list of major concerns is nonetheless helpful to you. I don’t expect you to adopt the proposed language verbatim, but I do trust that you will find a way to address these concerns as much as possible. Thank you for continuing your work for a Comp Plan that should not only be stronger than the 1994 Comp Plan but should also be understood and supported by as much of this community as possible. Becky Tillson will be presenting you later this evening with the independent study we’ve done on wildlife impacts and with the Alliance’s specific recommendations on the character districts. Thank you.
I’m Cindy Stone. I’m concerned about all of <inaudible>>. What I just handed out to you is a copy of the Statement of Intent and I’m wondering which parts you don’t agree with. And so I’ve given you all a highlighter and you can highlight on that sheet I gave you what parts you don’t think should pertain to this Comprehensive Plan. So, be sure to put your name at the top so the whole Valley will know what you think. And then we want to know is it the part that says we are to permanently protect wildlife habitat, scenic and agricultural land? Is that not your intent? Or is it the part that says the amount of growth will be predictable and calculate? Now, I’m pretty good at math. I know that the sum of two unknowns is unknown and that 5 percent of an unknown is unknown. And so I think you need to start tallying into that and come up with some hardcore numbers. Now, this is the fourth time I’ve stood up here and said, boys and girls, we need to come up with some numbers here. I’m still on that track. Do you think developers should pay the cost of development, or do you think we the people should? Now this next one is hard for me because I believe subsidized housing should only go to first responders and teachers, but this next part isn’t about affordable housing. It is if commercial development comes in and let’s say brings 2000, 4000 or more workers than we have in the Valley, they shouldn’t be able to come in unless they can provide housing to their employees. And last, do you think we should have an implementation plan, or do you think we should just trust all you guys to do what’s ever right? <<inaudible>>.

Yes, sir...Gail Jensen and I know you don’t want to hear this presentation, but this is what...I’m a messenger from a very large group of people, so bear with me and then I’ll have one other more specific comment, specific to one of the character districts. Chairman Ellis, Mayor Barron, Commissioners, Town Council, I represent all individuals with regards to this Statement of Intent. We currently have 390 signatures and the numbers of supporters are growing daily. This was a collaborative community process which reached out to all areas of Teton County. Residents from all backgrounds took part. It is a compelling list, which includes past electeds, appointed officials, past Town and County employees, conservation leaders, biologists, small business owners, regular citizens, second homeowners, builders, real estate agents, ski legends, you name it. This demonstrates the broad community support for the Statement of Intent. The News and Guide editorial said it best last Wednesday on the Statement of Intent and its need. The Statement will clarify ambiguous language that could be interpreted incorrectly by developers and decision-makers in the years to come. The Statement underscores the community’s top priority, permanently protecting wildlife habitat, and recognizes that adding development potential to one area must be offset by permanent conservation elsewhere. It asks for a simple accounting of how much development will be allowed in specific areas, a critical omission in the Plan so far. The Statement of Intent also recognizes the cost of development and asks that residents not be made to subsidize it. Local governments also need to explain the amount of commercial development that would take place under the proposed changes, something that also has not been done. That accounting would show whether the goal of housing 65 percent of the County’s workforce here is realistic, or whether commercial allocations should be reduced. Finally, the Statement calls for an implementation schedule that sets priorities. Town and County officials have heard these requests time and again but have opted not to include them. Instead the response has been trust us in an arena that demands predictability and certainty. Elected officials have given lip service to the Statement’s principal points, which a broad spectrum of residents support despite a weary, complex and long ordeal. Adopting the Statement would do nothing but strengthen the Plan. Now I have one more comment and it has to do with a specific character district, and that’s 12.4, 390 Residential South. It has to do with clarify that the stable character is that of one acre or greater lot size. I’m having a problem with this added language, because the very southern part of this 2.4 [sic] is very high density, much higher density than one acre. It starts at the two restaurants and then it goes towards the affordable housing, which is close to nine units per acre, and then the campground, which is now about ten units per acre, and then it backs up to one-half-acre and one-acre lots. So, there’s no fettering there whatsoever in that, and I feel that throughout the Plan there has to be fettering between really high density and not as high density, and there’s nothing there that works that way. So, I hope you can consider that.
Did they combine the 12.4?
Well, anyway, I’m talking about the very southern end there in that, so.
Thank you very much for listening to my comments.
The time I spent growing up in Jackson has led me to appreciate the unique balance that exists in the valley. The endless offering of exhilarating activities combined with the peace and tranquility derived from communing with nature and wildlife sets Jackson apart from other ski communities. I fear, however, that the proposed changes to the comprehensive plan will alter this balance irreparably. Though I recognize that the valley has changed significantly from the early days of my childhood, I believe that further development and increased population density along the village road would ultimately harm the valley much more than it would help. As a young person hoping to continue to live in Jackson, I understand the desire to develop areas that would provide affordable housing. However, the proposed plan would alter the character and authenticity of the valley to such a point that it would no longer be the place I grew up loving and one day hope to raise a family. The very plans meant to enable young people like myself to settle in Jackson would instead detract from the areas appeal and prompt me to look elsewhere. Finally, Jackson, as a largely tourism based economy, relies on the continued desire of outsiders to experience all of the wonder and beauty the valley has to offer. The undeveloped, small town feel of Jackson is what sets it apart from resort towns such as Park City or Aspen. I believe the proposed changes to the Comprehensive Plan would detract from the many aspects of the valley that appeal to tourists, leaving the newly constructed hotels in Teton Village largely unoccupied.

Again, I am reminded of the careful balance that we, as residents of the valley, must seek to maintain.

The Comprehensive Plan, which has been in effect for 18 years, has worked very well and most people are pleased with it. Actually, most people are unhappy that something so successful is being reworked on so many levels. When one reads the public input on the Comp Plan website almost all of the comments are against increasing the density in existing neighborhoods. Please consider not doing any major revisions to support the temporary agendas of a few groups.

As an individual who was born and raised in this valley and has recently moved back after graduating from college, I am very disturbed to hear of the proposed changes to the County’s zoning plans. I see the proposal of additional nodes as being absolutely detrimental to the character and charm of this town I have called and hope to continue to call my home. Please do NOT allow these changes to the current Comprehensive Plan to go forward.

Dear Commissioners...It has come to my attention that language in the comp plan is ambiguous and confusing in different sections. After reviewing it, I agree, and I would like to hear more about the specific language in regards to the areas where development is earmarked to understand exactly what I’m signing up for.

I live on the Village Rd. and had a dead Moose at the end of my street last month; it brought tears to my eyes. Now we have 5 or more wood statues of Moose scarcing pedestrian drivers into slowing down, how many Moose will be dead on the side of the road with more clustering of houses on the Village Rd? I’m an advocate for smart growth and development in the nodes of town that can support them, but I’m also a huge proponent of the natural wildlife corridors that have less density in order to preserve our open spaces of Jackson Hole.

I would like to see growth in the northerly S. Park area where we currently have clusters of apartments and affordable housing, and which has been reviewed as an area interest. I would also like to see development at Snow King, there’re many private acres of land that can be pursued, it’s close to town, and there’s a great commercial area that can support more community interests. Why not develop Snow King like Teton Village, where there could be a new pipe and park snowboard training facilities with the JH SKI Club. There could be a summer training facility for our future snowboard and Alpine Olympians; I know several of these snowboard and Alpine racers that have moved to Park City to train. Why don’t we have a summer concert series like, Telluride, Park City, Aspen etc. where housing and jobs can support the new residents to town. Lastly, I would like to see Teton Village grow more into a community with shops, stores and housing that’s a sustainable community.

Please reconsider the 390 corridor as a rural area of town that should NOT lose its current rural characteristics with increased housing density. And finally, I lived on the Westbank for 15 out of 16 years since I moved here, and I’ve NEVER seen a dead Moose in town, in the north area of S. Park, or in town by Snow King, but I’ve seen many at the end of my street on the Village Road.

Thanks kindly for your time!
3/14/2012  Wolf, Jim  Interested Public

Hi, I’m Jim Wolf. I haven’t been before you since about 1999 trying to get more investment in the residential areas in northern Jackson. The Comp Plan is about… and I’m not talking much about older residential areas. I’m basically talking from Willow to the Fairgrounds, from Simpson down to Snow King. And when I look at what’s happening is the Comp Plan, as it’s now written, puts this area in play. It’s the downhill area. It’s where everybody wants the density. It’s everybody’s got plans, and they forget that this is an area of active homeowners, it’s an area that has been slowly re-establishing itself over the years in spite of the regulatory trends and up zonings and everything else that scavenge into that area. The Comp Plan is a problem right now in that it doesn’t…it allows lot aggregation without being very specific about where you can take aggregated lots in there—two, three, what is a large parcel lot? That needs to be defined. It does not talk about abutting the commercial interest. How far can the commercial interest abut into existing neighborhoods and existing lots? What happens at the abutment between a commercial structure and say along the Cache somewhere and the adjoining residents? How are the residents protected? As it’s now structured, ask yourselves the question, who is going to invest new money into the residential structures in this area? Very critical question, because this is an area that has not had a lot of new investment over the last couple of years. Right now, who will build a new single-family home there with the uncertainty that you’ve got and with the regulatory ?? that you’ve got even in the Plan? My worry is that you’re going to get another, almost a Gregory Lane, kind of density slowly over the next 20 years enveloping that area. Is that what you really want? Or do you want a mixed balance of slowly growing accessory units, single-family homes, multi-families? I mean, because your Plan right now is not going to take us in that direction. Thank you.

3/14/2012  Jern, Ken  Interested Public

I am writing this letter as a land owner and member of this community for the last 36 years. I came here to climb in the Tetons back in 1968. The Tetons have been my play ground: hiking, climbing, skiing and working as a professional mountain guide, sharing these scenic treasures with many others. I have worked as a builder here in this valley. I have seen very few changes looking up into the mountains from the valley, but have seen lots of changes to the valley. Living in and near the Aspens, I have seen a decrease in wildlife and an increase in traffic and congestion.

You as elected officials have spent many hours reading and listening to our concerns as community members. The new Comprehensive Plan does not represent the desires of our community as shown by much public comment. We need a plan that gives us real numbers and actual types of development set forth on character district maps and we need transparency of actions that create open space protection.

We as a community need a plan that is understandable, predictable and that we can be assured that elected officials and developers will not exploit this valley in the future. I have many friends and employees who either drive over the pass, up the canyon or rent here in the valley; they do not feel they are entitled to disrupt the character of existing neighborhoods with increased density.

Now is the time for you, as our elected officials representing us as a community to listen and to act upon our wishes to “protect our environment and wildlife”. You have a responsibility of stewardship of this valley for now and for future generations! Thanks for all you time and energy.

3/14/2012  Harrington, Kathy  Interested Public

Please give consideration to tabling "The Plan". What is wrong with the existing plan? Who wants this new plan? With the recession why do you need to hire someone else to work on the plan if it is near completion? How can you all live with the amount of negative feedback that you have and continue to receive? Don’t you feel like you owe the very people you work for some answers? I have been asking for 4 years who the “WE” is that wants all this change. Bigger is not better. As a citizen that is experiencing a change in zoning in my back yard, from what I originally thought would stay relatively the same, I find it appalling that you want to do that all over Teton County. I can tell you it is very unfair to treat the people of Teton County in the fashion you do with such disregard to peoples love of this valley. How would any of you like it if a subdivision popped up next to your home?

TABLE THE PLAN
I am writing to you concerning the petition being circulated for consideration and for inclusion into the Comprehensive Plan. I not only think that the proposal is unnecessary but sincerely believe that it will hinder any future planning efforts in the Town of Jackson and Teton County. We have elected officials in the Town and County government by popular vote and de facto bestowed our trust in their ability and judgment to lead our county and town. These officials have employed capable employees and consultants and have drafted a plan that has painstakingly taken every comment and suggestion (despite its relevancy) into account to develop the final comprehensive plan. Adding another advisory group as this petition suggests, is nothing short of ludicrous. We all know that governing by committee has never worked, and won’t work in this scenario either. Only 350 of our more than 20,000 citizens (less than 2%) have signed this petition. The vocal minority should not be allowed to subvert the comprehensive plan at this stage. More than ample opportunity was provided for comment – let’s be done with this and move on. Contrary to everyone’s belief, the comprehensive plan is merely a tool and is NOT a fit-all, fix-all solution.

Therefore, I reiterate that we should keep our trust with our elected officials and town/county staff to implement the new plan and help protect our valuable resources as well as our individual and property rights. I do not think it is appropriate for any “citizen’s committee” to have a say on their neighbor’s property rights merely based on their personal and financial beliefs.

I will not be able to attend tonight’s meeting, but would appreciate it if you would pass my comments on to the other elected officials.

Please include copies of attached letters (dated December 3, 2011) with additional signatures, all property owners in the Cache Creek and Upper Cache Creek and Snow King Estate area. The original letter was submitted to be a part of the public comment for the Comprehensive Plan on December 3rd. Between the initial submission of this letter and this meeting, we have continued to obtain supporting signatures, and submit additional letters with those signatures. This letter supports the Future Desired Characteristics of District #6, as published by the Town and County Planners on December 7th. We appreciate the recognition by the planners of the importance to retain a part of the Town of Jackson as only single family units with larger lots, and the recognition of the importance of wildlife permeability.

Many thanks to the planning staffs, the planning commissions, and you, the electeds for the countless hours of work on the plan.

Soon you will be making a decision which will impact the population growth and density in Teton County. My parents moved to Teton Village Road 36 years ago and I was lucky enough to spend my childhood there watching the Moose crunch the snow as I made my way to the bus during my school years. After marrying a pilot in the United States Air Force, my home was made away from the valley for the last 17 years. But, my husband and I have always planned and been patiently waiting for his retirement from the Air Force so that we may finally return to our real home in Teton County. We have continued to vote in Teton County and remained residents of Wyoming for these many years. Now, life outside the Air Force is less than two years away and yet we fear the decisions you are about to make will drastically change and effectively destroy that which we have so patiently waited to return. Our life in the military has allowed us to live in Asia, parts of the Middle East, several areas of Europe and in many “planned” communities in the United States. Those experiences have firmly taught us that nothing destroys the local character of neighborhoods and towns than planned nodes and instantly created communities. It is the corridor of natural wildlife and landscape along with lack of population density and planned neighborhoods that make the Teton Village Road community so unique. Increasing the population in this area will massively disrupt if not destroy the wildlife corridor. The comprehensive plan that has been in place for many, many years has served the valley well and will continue to do so. Please do not alter that plan and take irrevocable steps to manufacture communities and population increases which will turn our wonderful valley into just another planned and replicated place thereby losing its rugged and wild Wyoming character.
Hi, I'm Becky Frisbie, and I had written a letter earlier, which I think the Commissioners got. My one question has to do with workforce housing. I think that no one wants to get rid of workforce housing, but the main point is, what is workforce housing? I think a definition is something that would be very helpful. When we talk about having 65 percent of the workforce housing here, the important thing is to know what that number is, 65 percent of what? I think workforce housing is multi-layered, starting with apartments, which over the years we've gotten rid of, converted them to condominiums. I think that could have been a tragic error. So, we've got apartments, we have affordable housing, we have free-market housing, which is more affordable because the lots are perhaps smaller. So I think just a good definition would be helpful, because it's a term used throughout the Plan in all the character districts. The second thing that I wanted to talk about was Character District 8, which is the John Dodge that has been referred to in the past. I think there was just a lot of ambiguous verbiage there, leaving things open to somebody's decision and not just spelled out completely. And I think I'd like to see what Hank's written, because apparently that's been worked through a little bit better. And the third thing is the Aspens up zoning again. I think the stable, the stability should stay there, that the Commissioners or the Planning Staff did recommend, or the Planning Commission recommended. Thank you.
At Plan JH, in the Blog for March 14, 2012, Bill Collins asks, “So what is the problem”...with the plan? There are many, and we detail some below in our comments to the Commissioners. We are writing with serious concerns about your District 8 comp plan (12-17_comp_plan_district_8-5). After reading this plan, and carefully looking at the language, it is clear that wildlife takes precedence over human life, and that humans may in fact have to give up their current homes to make more room for wildlife.

That is clearly what the language says, or at the least, how it could arbitrarily be interpreted in the future by a handful of officials who should never be allowed to exercise that sort of power. So our question is, is this really your intention? If it is not your intention, then you need to make significant revisions to language like: Development potential will be directed out of this district (8 River Bottom) and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented. Redevelopment efforts will be focused on reducing the amount of impact of development. This language says that planners intend to change existing rules, take away current rights of home owners and land owners. That is not acceptable.

The entire language of Section 8.2 is demeaning, regressive, vague and ambiguous and needs complete revision. Planners must specifically define which complete neighborhoods they are talking about. Define exactly what they mean by “improves the function of habitat and habitat connections”, and give specific ways that they will measure this. Specifically define “small structure”, with specific sizing and requirements. Specifically define “limited disturbance and be located to protect the function of the overall network of habitat through the community.” This is vague to the point of being meaningless, so if not specifically defined this language should be removed. Specifically define “Habitat will continue to be protected and restored.” What do the planners mean by “restored”? Restored how, where, at what cost, and how is this determined. Restored as it is used in 8.2 sounds like the planners intend to take away the rights of current home owners and land owners, therefore this language is unacceptable as written.

Further, one of the most troubling words used throughout the document is “responsible”. Who gets to decide what is responsible, and what is not? Certainly, no public official should be allowed to arbitrarily decide this. Therefore the word “responsible” needs to be replaced with much more specific language.

Examples: Promote responsible use of Public Lands.
“Responsible public use of eco-tourism that maintain or enhance the wildlife viability could also be future characteristics of this District.”
“The levee system along the Snake River provides an opportunity for residents and tourists to appreciate the ecosystem and engage in stewardship. Public and commercial access will be pursued responsibly with emphasis on conservation of wildlife habitat and movement.” Once again this language illustrates the planners desire to place more “emphasis” (read importance), on wildlife as opposed to human life.

Other ambiguous language that must be changed or removed: “Less impactful to wildlife.” Seriously? Whoever wrote that line should be removed from the committee writing this document as they clearly have no idea what happens day to day in District 8. We live in one of the areas designated 8.2. Elk, deer, moose, and a myriad of other smaller animals, eagles, ospreys, birds, regularly use our yard, and the yards of neighbors as if it were their own. This “wildlife” lives in harmony with us in every way. They are used to us and we are used to them. Less impactful? That language is not only useless and regressive, but it is an insult to all of us who live in these areas, and who respect wildlife voluntarily.

Other language to remove or clearly define: “Incentives to reduce density and human impacts...” Once again the planners seek to take away rights we have now? We request that each commissioner and planner specifically answer this and say one or the other: Yes, I think the role of government is to change laws in order to take away people’s rights, or, No, I do not believe the role of government is to change laws in order to take away people’s rights.

We are aware of other comments to the commissioners and would like to comment ourselves on a letter from G. Bland Hoke, Jr., to the commissioners, dated February 29, 2012.

Mr. Hoke writes regarding the District 8 language: Regarding Protection: “I am not sure I fully understand what the planners have in mind. In studying
this language it would appear that they envision adopting new regulations that would change these neighborhoods in ways that no one, except the planners, has ever contemplated. What they clearly imply is that for any land use application in District 8, they will insist that homes be downsized, clustered or, in the worst case, removed – all in the name of protecting wildlife. This is just ridiculous and frightening.” We agree, and have sited our own examples above.

Conclusion: “I respectfully request that the current language be replaced with language that states that existing neighborhoods within District 8 will be considered “stable” areas.” While we agree that this would be a good start, we request even more specific definitions as described above.

“Finally, clarify the intent of the wording in Section 8.1. As it now stands it is vague, contradictory and ambiguous at best. At worst, it leaves the door wide open for homeowner uncertainty and bureaucratic mischief.” We agree with this, and request that the same be applied to Section 8.2 as we have stressed above, and really to all of Section 8. Further, Mr. Hoke is being diplomatic in using the term “bureaucratic mischief”. We do not feel so diplomatic toward officials and planners who would even consider presenting the current language in Section 8. To us, people who would believe that such language could work in a productive way for Jackson Hole, are people not to be trusted, and that is why we have asked each planner and commissioner to clearly state their intentions.

Our own conclusion is that the existing Comprehensive Plan has worked very well and wildlife has been more than adequately protected. Why fix something that is not broken, especially when it will clearly come at a cost of humans giving up rights and lifestyle in the “name” of enhancing wildlife movement and habitat. And if you really believe in this movement to enhance wildlife, we invite you to visit us at our home in Section 8.2 to see for yourself that everything is working just fine now; for wildlife and for us humans too.

3/14/2012 Huff, Mercedes
Interested Public

Hi, Mercedes Huff and I just have one comment that is the biggest concern to me, and I think Becky Frisbee addressed it a little earlier—it’s the definition of workforce housing. And I’m very, very concerned that it’s part of that with the 65/35 split. I’m not sure you can really bracket these people. You know, as I’ve asked before, my part of workforce housing, I think mistakenly it often, when it’s used in all these chapters of character districts, it’s really saying affordable housing, and I think that’s a big mistake because are we saying we need to put 65 percent of affordable housing here? But it needs to be clarified. It really needs to be clarified. The other...when I say I don’t think you can bracket people, the other 35 percent supposedly of people who are not part of the workforce, you know, I’ve heard that one of the most important things about having labor force or workforce here is the volunteer aspect that it gives to the community. I personally feel and know, first-hand knowledge, that many of these people who would be considered to be in the 35 percent are some of our biggest contributors, by hours, volunteers, nonprofits. So I think we’re sort of going down a dangerous road when we start saying we need 65 percent of these people and 35 percent of those people. I think they’re too many overlapping things without clear definition. Thank you very much.
My name is Eddie Kolsky. Firstly, I signed the Statement of Intent. I’ve lived in this beautiful Valley for 35 years and it is truly difficult for me to express the words that I feel about this place I love so much. I realize that a certain amount of growth must occur, but I also realize that we as stewards of this incredible landscape must have keen foresight and enormous sensitivity as to how that growth occurs. To urbanize Jackson would be a tragedy, nothing less. After all, we live here. And people come here primarily for the wildlife resources, the beauty, the open space, and the small-town rural character. This is what Jackson’s about. This is what is important. Above all, those are the things that must be preserved, above all. There is an area in Provence in southern France called the Luberon Valley. I spent one month there last April. I bicycled through there ten years ago but wanted to return because it was so beautiful, undeveloped, tranquil and pristine. The Valley is made up of beautiful farm houses and vineyards, fields of poppies, groves of olive and cherry trees, and numerous medieval hilltop villages that attract many tourists. There are outdoor markets every day of the week in a different small town or village. There are no massive housing developments. There are no golf course developments. There are no big highways. And you know what? Ten years later it’s essentially the same. The industry that keeps Luberon going is tourism. That is its golden egg. It is alive and well there and I’m going back. My question is, do we have the foresight, sensitivity and imagination to do whatever it takes to retain the remarkable character of this Valley like the powers that be in the Luberon Valley in France have done? My answer is, we must. It is absolutely imperative. Do we have the will to restrain from trying to squeeze every possible dollar out of this Valley? Does the Town of Jackson really have to have such an aggressive commercial growth agenda that will greatly increase the need for employee housing? Do we really need that much growth? Does it have to be about dollars? When is enough enough? In the end, isn’t it really about the wildlife, the beauty, the small-town character? Most of us here know the real answer. That is why we live here. That is why people come here. I think that ?? in the 1994 Plan are a mistake. Although there are several aspects of the currently proposed Plan that I would like to address that I do not support, I am narrowing the rest of my comments to the effects of the large up zoning proposed for the land adjacent to the Aspens on the Teton Village Road, and I realize the Planning Commission has made recommendations but I realize the County Commission has not founded those recommendations. If the land adjacent to the Aspens is up zoned, it will mostly likely doom the Village Road to widening similar to a rural interstate, four or five lanes. Can you imagine that? Consider the negative effects on wildlife populations. Say goodbye to beautiful golden cottonwoods in the fall. Think about the effects of increased noise on local residents and their property values. Imagine traffic volume and the poor air quality as a result. If the elected officials are truly there for the goals and desires the community has overwhelmingly and repeatedly expressed, then the proposed Aspens up zoning should be off the table for good. Please listen to the community with respect to wildlife preservation and open space as its top priorities. Please listen to Mary Gibson Scott’s concerns regarding the Village Road and its potential effects on the Park. If the degradation of quality of life is the direction we are going, then we are going in the wrong direction. Please do what you need to do to keep the character of this Valley in tact. Thank you.

Thank you, Council, Commission, Mayor and Chairman. My comments go to all character districts. Oh, I’m sorry, John Hanlon. There are more than a few amenities in our community and I ??, everybody has their viewpoints and you can’t satisfy all of them. But there is one thing that many would like in their backyard and that is to be able to have a guesthouse or auxiliary unit, however you want to describe it. And many of our workforce rent, some because they don’t have a down payment for a house, some because they prefer that. We’re seeing our entire nation change from fewer owners to more renters. We’re going to have a lot of people who lost their homes and won’t be able to buy a home for several more years, so renting will be for some people their only option. An auxiliary unit, it provides a little income to the homeowner who owns that auxiliary unit. It takes some pressure off them in their mortgage payments. This is an expensive town and it’d be nice to have a little bit of help. It helps to avoid the building of unattractive, large-scale projects and it distributes the workforce population in developed areas, which speaks to the nodes. If somebody on Simpson Avenue puts a guest unit in the back and is allowed to rent it, you don’t have to go develop a new part of the County. And its single landlord/tenant relationships, I think are just healthier. They tend to suppress...if I have a renter in a guesthouse in my backyard, he’s not going to have a caterer, he’s not going to have a huge party. It’s going to be a...it’s a healthier relationship. And that concludes my comments. Thank you.

<td>Harrington, Steve</td>
<td>I’ll be very brief...Steve Harrington. I would also like to address the numbers fight and I know exactly why nine out of ten of you voted not to have numbers. The number is scary. If one comes up with a number, it would be like an earthquake, because some of these posted on the board, whatever that number is and everybody can take shots at it for one reason or another. However, the other side of that is, you, as all public officials and subsequent public officials to come, could benefit from that number because you are always looking for how do we...do we have a capital facilities plan? The number allows you to have a capital facilities plan because suddenly you know what that number...what you need to accomplish that number. And I would suggest also when you...if you did, and I hope you do, come up with that number, that you add to the what we might call the permanent residential number, you add to that the transient population, which is what we have in our condos and hotel rooms and motel rooms, because those folks obviously affect transportation, sewer, water and other, you know, Fire Department, Police, whatever. So, you have a combination of transient and permanent and those two numbers are...who knows what the difference is—it could be quite considerable—but I think that number would allow you to think of it, as most people could easily do, back off from that number, back out from that number, anything that you would like to come up with, because once you have the top number, you can figure out anything from there. So I would encourage you to take a look at that number and don’t be afraid of it. I mean, it is what it is because eventually it’s going to happen, you can’t hide it, you have to...it has to come out, and that makes life a lot easier for everybody. Thank you.</td>
</tr>
<tr>
<td>3/14/2012</td>
<td>Griffith, Gregory</td>
<td>Gregory Griffith, West Bank. A specific...the only general comment I’ll make is permanent protection permeate all three common values. Specific to the Village, just because I don’t know what you guys are going to discuss tonight, don’t open up that Pandora’s box, please leave that development potential as is. Wilson should be confined to the Wilson Commercial District as is. Northwest South Park should be confined to existing clustering available incentives as is. And if you’re going to foist the Aspens up zone in 12.1, on that area, at least give it the same right as the Wilsonites had to form their own commercial district the way the ?? program. There was a demand in the...simply the demand isn’t there, the road capacity and all these other issues. I’m going to take my best shot at trying to tie all these disconnected decisions that we’ve made throughout this process together. You’ve answered a lot of questions, and I know that’s arrogant but ??, but I invite anybody to improve upon it and hope that somebody does. I think initially the Town should receive a measured and deliberate upfront allocation of units to seed the program and prime the pump, so to speak. Thereafter, Town receives an annual approval allocation of units commensurate with third-party-certified unit extinguishment to conform to that permanent protection clause, which would become an annual indicator for Staff to simply present that indicator at the annual meeting. This extinguishment could occur by any means available. If the Mayor and Town Council worry about that upfront allocation, which would take care of the numbers argument, it would take care of the permanent protections argument, we have 330 units available for extinguishment when the Park...or the state school section is transferred to the Park potential. We have the same potential with the aggressive program, the great program of the Land Trust, a ten-year program with 1500 acres of acquisition over in Alta. We could use some more foundation. We could use the Rendezvous Conservancy extinguishment, we could use ??, we could use it by whatever means necessary, tax and grant. This would make an absolute tie, satisfy the community’s request for permanent extinguishment to occur prior, with the exception of that free allocation of units to Town. Again, if you can come up for a better way to do this, I’d love to hear it. Town would then use these units as currency to stimulate or to incentivize the government exactly where we want to see it. So, in essence, what would we be doing? We wouldn’t negotiate this; this will be implied upfront. Town would have locational flexibility, whereas the community would benefit from the numerical predictability component. This would satisfy...once again, the two words that are hanging people up on this wonderful Statement of Intent the community came up with, which are linkage, or nexus, in bullet number one and predictability in bullet number two. It will also satisfy the numbers request and make the numbers calculations very easy. Who benefits from this? There’s a market response in this component to this, an elasticity almost, that allows the units to be available because they’re approved at the exact time when the market demand is there. That would be an attractive...the Mayor and Town Council also could acknowledge that one of their goals in this process is to reduce the increasing disparity of sales-tax revenue allocation. Every additive unit that gets built in the County, there’s two units Town has to build based on the current potentialization to try to reverse that disparity. It also would avoid fighting battles that we don’t need to fight. The public has been satisfied with permanent protection and a logical, doable way to achieve that, plus the predictability component. The County Commissioners don’t have to fight that PRD battle, which will be brutal. A down zone proposal would have...politics make strange bedfellows. It’ll be...so that’s a battle we don’t need to fight. We don’t have to fight all the nodal battle and we don’t have to fight all the externalized cost from Town to County. And Staff should love this program because it would create essentially the nation’s first realistic TDR, this TDR program. We don’t need to fight off the TDR complexity and contemplation of battle. (Okay, okay then.) The...and again I challenge the community. It’s a hopeful challenge; this isn’t an arrogant challenge. Please, somebody come up with a better way to tie this thing together, to try to do more with less. Thank you.</td>

3/14/2012  Pierson, Scott
Interested Public

Good evening, I’m Scott Pierson. I thought this was about the pathway ??, [Laughter] A couple of quick comments, specific. I’m a little concerned about the Periphery zone, that some of these smaller parcels, like Pacific Creek, Camp Creek, Ditch Creek, ?? Creek, and ?? neighborhood up there, that are actually included in the large parcels in the Periphery, that they don’t fit that equation, and if there was something added to address those. It doesn’t have to be much because there isn’t much there, but I’m afraid they’re going to large parcels, ranch-size parcels, like the Pinto Ranch, up in that area. So, I’m a little bit concerned. There should be some kind of ?? in those parcels up through there. Also, in the District 9—that was District 15, this is District 9—it says at one point no additional nonresidential development, and I know that the Stillson Parking Lot is in that district and so is the new Rendezvous Conservancy Park, and if they’re considered nonresidential, I’d hate to see both of those get too constrained because I know there’s some ideas in both of those places. And also the Jackson Hole Golf and Tennis Club is in there. So, some of those broad goals in that County Valley District 9 I think are a little misstated. They’re restated later under the 9.2s and 9.3s, but the beginning part might misrepresent that. And the maps, I hope the resolution to those are a little bit better when they do come out because the legend that 8½ by 11 is hard to determine what you’re trying to get at and the visual card or arrows are very confusing. Thank you.

3/14/2012  Stennis, John
Interested Public

I’m John Stennis. Good evening, Mayor, and Town Council and Commissioners. I support the Comprehensive Plan, because when my grandparents moved here in 1970, they moved here because they liked our beautiful scenery, our open spaces, and our rich and vibrant community that we have. And, as a young person, I spent a lot of time with my grandparents here; I’ve worked all of my summer jobs here; and after graduating college, I moved here to work in the architectural profession to help shape this community into something that I feel like we can all be proud of. And I support this Comprehensive Plan because I think it rights a lot of the wrongs that perhaps were implemented in the ’94 Plan, because I think we look back on maybe we’re not terribly pleased with some of the results. I think the ’94 Plan did a lot of good things, preserved a lot of open space, but I think what we have here in this new Plan is going to do a lot for our community. In the five years that this has been going on, we’ve been pretty stalematesed waiting for this Comprehensive Plan to move forward, and I feel like we’re finally there and very close and I encourage you to pass ??, Thank you.

3/14/2012  Acri, Armond
Save Historic JH

Thank you, Mr. Chairman, Mr. Mayor, and members of the Commission and members of the Town Council, Armond Acri, representing Save Historic Jackson Hole. I have a couple of things here, some of them are because I think this is our last chance to talk. One is I would urge you to reconsider the goal of the 60/40 split. Very quickly, one of the things that that means is, if you actually think about it, from an historical perspective, you’re going to have to increase the Town development by 50 percent of historical average and decrease the County at the same time by 50 percent to get that 60/40 split. That’s a...I don’t think that’s realistic. It drives a lot of bad things, it causes a lot of problems, which is where a lot of the mistrust comes from. Your own facilitator recommended a 50/50 split, and I urge you at some point before you’re done to reconsider that. Also reconsider the 5-percent trigger. I think at the current rates, we believe that may be too high. People would be more comfortable we believe with a re-evaluation every two to three years, perhaps going with a fixed time, rather than with this percentage, and then we can extend it later as we have more confidence in the system, you know, it’ll just come to that. And then also I want to talk then about the character district maps. It was asked by someone to estimate what was possible in a specific character district, and I think it illustrates what is still a major flaw in what has been done so far. In the one district, it clearly defines what heights, stories, but there’s no real definition of intensity or coverage. So, if we assume the same FAR is there, then that means that we’re going to go higher, we’re going to squeeze it down so that there’s no net increase in square footage, which I don’t think is what you’re intending to do. So, there is some mention in the...I can’t remember the name now for the little map that goes...but it’s not very good at describing what is...now we can look at stable and transition and get some ideas in terms of it, but it’s really hard to convey then to this person, well, is it going to look like it is now, if we go look at this thing that’s maybe built under the current FAR, or built out, is it going to look like that, or what is it going to look like? So, that’s...one solution to that would be—I hate to say it—but it would be to provide numbers. Unfortunately, nine of you have decided that we can’t be trusted with numbers. I know I personally am a little confused on that because society as a whole trusts me to handle guns, alcohol, and cars, but I’m not allowed to be trusted with numbers. [Laughter] And I don’t mean that as a joke; I’m trying to make a point, that numbers are important. And, you know, one of the...as we squeeze into the next point, which is that while the Plan has sort of a pseudo promise to try and stay under rough doubling, that only applies to dwelling units; it doesn’t apply to commercial. And that flaw becomes obvious when we talk about this previous example. As you start going around in an area, it’s easier to envision what’s going to happen with residential, but with commercial, it’s not. So, we hope that you will consider trying to address what I see as some of...or we see as some of these flaws before you go through to the final adoption. Thank you.
Good evening, Robert Biolchini, Jr. I want to thank everybody for all the hard hours you guys have put in. I don’t want to make you feel as though I don’t acknowledge all the hard work from all of you guys with regard to this Plan. I want to start off with something that somebody said to me the other day—what’s the difference between a conservationist and a developer? And the answer is a conservationist has their cabin in the woods and the developer wants one. And so as we move forward and try to balance all of this stuff out, we do have the push and pull with regard to growth of our community and those that don’t want to see it grow. And the interesting thing that I’ve noticed about this whole process—and I can definitely be corrected if I’m wrong here—I think a lot of the public input so far has been about 1 percent in terms of moving through this visioning statement, to mean I don’t know that we’re necessarily hearing from the entire public at large, mostly because of confusion or misunderstanding of what this Plan really represents. So, I was thinking last night, character districts, what the heck are character districts? And I thought, who cares, maybe this is just a fairytale notion. And what do I mean by that? Well, I don’t know how a character district is going to directly affect me, in my neighborhood, what’s going on, specifically. So, as this process moves forward, it’s tough to really get a hold of where we’re going. And again I don’t want to say that all this hard work goes without merit. We’ve been working through this consensus process. It’s been very, very slow, four years in the making. The goal I thought was originally the 1994 Comprehensive Plan, making it less restrictive and easier to understand along the way. I feel as though this kind of builds on Mr. ??’s comment that this is becoming…the new Plan is more restrictive, more complicated, and more bureaucratic than the regulations you put down on the books, the more people you’re going to have to staff to go out and make sure that everybody is staying within the confines of what those regulations are. I know you guys are voting tonight on the character districts to move forward, and this is the part that really bothers me. In this process, I guess, this is what’s bothering me. Once you guys vote, apparently we can’t go back to it. We can’t go back into the Plan and say, well, we’ve already considered so that we can no longer look at that. And I think that that, over time, is not a good idea. And I’d like to use just a car analogy. So far, as I can tell, you all have created the body of a car and it’s restricted in size and scope, yet we don’t know the size of the motor, the transmission, the electronics, the suspension, and so we’re going to take all of this and we’re going to try to jam it in this little body. ?? Body, we don’t know yet, because as this process moves forward, we’re just trying…we the people are trying to garner a better understanding of how this is specifically going to affect each and every one of us. So, what I came to was recommending or asking you all if you would move forward quickly, very quickly to get all these maps defined. Define them so we know what we’re up against. And I’m talking about neighborhood by neighborhood and street by street and all of those aspects so that we have a better understanding of exactly how this will impact. The second part of it…and the reason that I say map it out neighborhood by neighborhood is we’re going to see this discriminatory process move forward. We’ve heard language tonight of people saying the nodes are too thick in the Aspens. Or other language of 3000 home sites are going to come from Teton County into the Town of Jackson. Without our knowing what this really is, it makes it very difficult for us to get on board with the Plan and understand what the Plan really is. And I know that you’re all working towards that goal; I do realize that. The other thing that I have is constitutional responsibility. And… I will, thank you very much…constitutional responsibility, I’ve asked for you all to consider a schedule of values, something, anything we can grab, and I guarantee we’re going to make mistakes, you’re going to make mistakes, we’ve got to hash this stuff out. Because when you go in and you’re going to cut private property with nodes or open space or whatever those things might be, and putting them into, for lack of a better term, socialist collective, what about the private property owner? What about the individual and what kind of compensation they get from that, along with where does that source of compensation come from? And the last thing I would ask for you to please consider…
Okay. My final point would be to please take this, the Comp Plan, to a referendum for us to vote on after you get the maps done before this November election. The reason is so that we have a better understanding of how quickly we can get this process done so that we can see exactly what’s going on. And one last comment, with all due respect, clapping in a public forum is our First-Amendment right.

County Commissioners, Council members and community, members of this community, this fine community, we all have a vested interest here. I’ve lived in this Valley for 36 years in the Raintree Subdivision adjacent…
Ah, Ken Jern, excuse me. And to elaborate on…living in and around the Aspens for 36 years, I’ve seen wildlife come and go and lately they’re ??, and traffic and congestion has increased hugely. Myself and my neighbors have invested in the Raintree Subdivision under the assumption that it was one house per three acres. Well, the County and the Housing Authority have bought five acres for well above the market value and that five acres I do not think is going to be one house per three acres. We don’t know the numbers. It could be like the Millward Subdivision. And the Aspens right now is very congested. Getting in and out of there as a pedestrian, as a bike rider, in a vehicle, is hugely…it’s a giant hazard, it’s a safety issue. And when you put another big development in there, it’s going to impact the Village Road, and trafficwise it’s going to change this character, the Aspens character district. So please think about what you do today. Thanks a lot.

<td>3/14/2012</td>
<td>Tillson, Becky</td>
<td>Becky Tillson, Jackson Hole Conservation Alliance &lt;&lt;inaudible&gt;&gt;. Thank you for the opportunity to comment tonight and for your years of dedicated work on this Comprehensive Plan. Thanks to the Staff as well and the community for showing up tonight and over the course of the last five years. The first thing… I have two things to cover tonight, but the first I want to cover is the implementation plan. You guys have received comments from us about that and we look forward to engaging more with you and the Planning Staff and the community as this is developed. Tonight I have a couple of requests for you. I guess the first is to clarify your intentions with regard to this implementation plan in terms of what it’s going to address and how deeply it will delve into these issues and to which issues it’s going to cover, just clarify that, as well as commit to having it available for the public review as soon as possible. I also ask that you commit to approve the implementation plan when you adopt the rest of the document. If it is approved at the same time, at adoption, it will be able to serve as a roadmap for the next few years of LDR updates and planning work and will allow the community, all of us, to hold our local officials accountable for the implementation of our goals as presented and spelled out in the Comprehensive Plan. The second thing I wanted to raise as well, and that’s something that I just passed out to all of you and we’ll make it available for ?? as well, and that was prepared by Alder Environmental for the Conservation Alliance. We at the Alliance believe that it’s important to analyze whether or not our vision and policies, as illustrated in the character district maps, can and will uphold community priorities, specifically the protection of wildlife and natural resources. So, we contracted with Alder Environmental to take a look at the maps and the resources, the natural resources, and provide a sort of check-in to see if the community, specifically in the transitional areas, is built out to the desired future condition, then what would the potential direct and indirect negative impacts to ecological resources be. I hope that you’ll all have a chance to look at and read this document over the next couple of weeks. For now, I guess I’ll highlight quickly the three primary recommendations from the report that we think you guys could take action on tonight included in the character district maps. First of all, references to Policy 1.2 should be included in the Town districts, as well as in West Jackson and Teton Village, and that’s air and water quality. Specifically, those districts should mention minimizing impacts on water quality through reductions in impervious surfaces, encouraging or requiring design practices, such as vegetated roofs or rainwater tanks, and then also continue to practice stormwater practices, which are excellent and just build on them in the future. The second recommendation is the boundary of District 6 point…or, excuse me, 5.6 should be moved off of Flat Creek a little bit to provide a meaningful buffer between the riparian area and potential future development in that district. A good example of the functionality of that sort of buffer is the 150-foot buffer in Rafter J— that was an example stated in the report. The third recommendation would be for the Town districts, as well as West Jackson and also in Teton Village. These districts could benefit from additional language regarding the importance of wildlife permeability. Many areas in our community are within or adjacent to wildlife habitat and public lands, even if they are on private lands themselves. The use of riparian areas and more broadly open spaces and natural areas provide important wildlife habitat and corridors. Development that occurs in or near these amenities must account for wildlife movement and permeability. We look forward to seeing how these changes are incorporated this evening. And I’d like to thank everybody again, all you guys, for your years and years of service and your work on this Plan for the future.</td>

<td>Ross, Ty</td>
<td>Hello, my name is Ty Ross. I represent the Ross family. We all do live in District 7.2, often known as Hog Island. Our family owns significant sites, parcels of land located in this district. I also represent the Robertson family and the Evans family, both of whom also own large tracts of developable land within that district. I believe the representatives of each of these families have been outspoken and active throughout the current planning process. And based on our review of the vision statement for District 7.2, it seems much of our input was either not received or poorly translated in the Plan document. However, in recent discussions with County officials, it’s apparent that significant alteration of the version that was certified by the Planning Commission is highly unlikely. With that said, I would like to at least propose some minor modifications to the language within the vision statement for District 7.2. We first direct your attention to the statement that development should be pushed toward Munger Mountain. Since protection of wildlife is a primary common value, above all others, addressed in the planning process, and since the primary ?? migration corridors skirts the base of Munger in this area, it stands to reason that development near the corridor should not be encouraged. Therefore, we propose the language pushed toward Munger Mountain be stricken and other language be added, encouraging concentration of development elsewhere. Secondly, we would like to address the scenic nature along Highway 89 and changes to 7.2. Anyone can drive this segment as it currently exists and comment on the natural scenic value of existing development adjacent to the highway. For the most part, it’s absent. While we would prefer removal of the entire sentence referring to the gateway to Jackson, we realize that that’s likely not an option. Therefore, we would propose adding language to the statement qualifying you require screening of future development to be similar to existing uses. And lastly, we would like one other sentence different from the vision summary for Hog Island. The statement that multiple residential units per lot, industrial, office, retail or community convenience uses are not being envisioned in the future character of this district. It seems to leave little room for imagination of what might actually be allowed. When development actually occurs, the developer generally weighs all available options. The current vision for District 7.2 severely limits those options, in fact reducing them all to a single alternative of live/work. If the Plan is approved as currently written, the County may well miss out…or may well miss more environmentally friendly and aesthetically pleasing development opportunities that might otherwise be proposed, primarily as a result of the limitations imposed by that single sentence. In closing, I’d like to say this vision statement is the first building block in the final design and ?? government all development on Hog Island for the next 15 to 20 years. As primary landowners in District 7.2, we implore you to implement it properly and wisely. Thank you.</td>
</tr>
<tr>
<td>3/14/12</td>
<td>O'Brien, Kristine</td>
<td>I’m Kristine O’Brien. I too would like to see some numbers along with the maps. If you don’t have the numbers, how do you know what you’re approving? How do you know if it’s feasible or consistent with the vision? So, I realize there are variables and so you can do ranges to take account of the variables. And then I wanted to say that, as far as the clustering on 35 acres for the transect, I think that’s a good change and I would like to see that stay so that we can use the PRD tool. For Section 5.6, I like those changes as well. Ensuring that any development there is consistent with the adjacent neighborhood I think is a good idea. For Section 10, the interconnectivity of existing subdivisions, I’d like to see that changed to pathway connectivity, because if you make it vehicular connectivity, it would involve the taking of private property, and I think that’s indicative of a top-down, heavy-handed Plan. It’s not economically or legally feasible, so I’d like to see that pathway connectivity. That’s all my comments. Thank you. Oh, I did want to say, sorry, I also signed the Statement of Intent and I share those concerns.</td>
</tr>
<tr>
<td>3/14/12</td>
<td>Ewing, Patty</td>
<td>My name is Patty Ewing and I’ll be very brief. I’m just resubmitting a letter which we started in December, actually December 3rd is when the original letter was dated, and this deals with character district, the Town Periphery, Character District #6. And basically the Planners…and many thanks to the Planners for the importance for having one section of the Town of Jackson that has a little larger lots and is permeable to wildlife, and that pretty much is covered in the character district there that’s now described, and I just want to thank you and I’ll just submit these to you. They’re more signatures. You already have a number of letters with signatures on them; it’s the same letter. Thank you very much.</td>
</tr>
</tbody>
</table>
Hi, good evening, Anne Cresswell, speaking on behalf of the Jackson Hole Community Housing Trust. Thanks to everyone on the Staff, Commissioners, Councilors, for all the work you’ve put into this. I started this process many moons ago, it feels like now, as a member of the Stakeholder Advisory Committee. And one concept that we discussed in depth in this committee and one that I’ve spent considerable additional time looking into and researching is the TDR concept. Affordable housing is often and quickly pitted against wildlife and because of this the TDR concept looked incredibly attractive because it suggests that you can have a win-win where everyone is satisfied. And right there I should have known better. Unfortunately, right now, TDRs do not have a good track record and the economics appear to be unworkable, especially in a community with extreme values that we have in Jackson. The failure of TDRs to deliver certainty should not, however, be ?? to our community to stop moving forward. The interesting relationship that I’ve come to appreciate over the years between affordable housing and wildlife is that affordable housing allows us to be a community first and a resort second. It ensures that in the face of rising values that we have a whole complement of dedicated, committed, permanent residents. These are residents that pull miles of unfriendly fencing, they teach our children about ecology, they are the reporters that update us regularly about the meanderings of the wolves, and they populate…they’re the biologists who make all this possible to populate the Forest Service, the Park Service, Game & Fish and the Elk Refuge. You have a Plan before you that tons of people have put huge amounts of time into. I’m not going to tell you it’s a perfect Plan, but I do believe it’s a Plan that balances wildlife with the social and economic needs of our community. We hope you will adopt this Plan, the character districts, so that we can get to the real work that is yet before us. Thanks.

I’m Ed Cheremy. Mr. Mayor, Commissioners, and Councilors and other Commissioners, I have two comments. One, when the Staff gave their presentation, Tyler mentioned that there were four key principles in the 1994 Plan; three of those were carried forward, one was not. The one that wasn’t carried forward was flexibility and discretion. And my view is that’s wrong. I believe that you, as a group, should retain flexibility and discretion and that should be written into the Plan. To eliminate it, ties our hands, ties your hands, and just puts too much in the hands of a document that can get stale over the, you know, 10, 15, 20 years that it’s in existence. My second comment deals with private property rights, and that is when Commissioners Phibbs and Perry made a presentation last week to the Chamber board of business over breakfast, they talked about property rights being a key to their belief in this Plan. And I would add it to the Plan. And, specifically, again Tyler mentioned there were three common values outlined in the Plan—ecosystem stewardship, managed growth and community character. I would add a fourth to that and say respect for private property rights. That’s the place to put it and I think it would be clear then to all of us who have those concerns that that’s one of the core values that’s shared by our entire community. Thank you.

Hi, Dave Coon. I sent you a letter this morning <<inaudible>>, but what I want to focus on as it relates to character districts, all character districts. So, in reviewing the character districts, I went through the growth management plan and I see ambiguous language that has key policies in there. The macro policies of 9.1 versus the micromanagement policies of 9.2. I think you really need to be careful how you set these triggers and monitor your growth. I think you could end up with an overmanaged policy that isn’t allowed to run its course. And that goes to all character districts, too, especially the ones that have nodes or County up-zone growth areas. I think that’s a big concern and you really need to look at the language and how possible up zoning occurs. Ultimately, ?? in the room here tonight, as you’ve been through five years with the character-based plan, let’s do some numbers. This can’t go on without numbers. Numbers are important. They are the accountability and measurability part of the growth plan that will eventually involve all these character districts, everything that goes on here. And it’s not just the numbers of growth but its, you know, its ??, it’s everything. Yeah, I think you guys know that. I think you know some numbers are out there and I think it is definitely time to take a look at them. There’s a lot of good stuff in the Plan. It is good. It’s just there…it isn’t as well defined, it’s a little ambiguous. I think there’s ways around things and you need to look at that. Let’s see, there’s just so much to say, but I do have concerns on the growth management, and I’d like you to take a look at what I’ve written and if you have questions, call me; I’d be happy to talk about it. As a citizen, I spend every day dealing with numbers. I wake up at a time, I know I can make this much money that day, I can spend that much money, I need that much money to retire. Our lives are based around money and numbers, and to have a Plan with no numbers, what’s it going to cost? I think Mayor Barron was quite aware of that, that this thing has exponential costs associated with it. You just eventually have to put numbers in there and start talking about this stuff. I know it’s not popular but it is important. Thanks.

<td>Woods, Becky</td>
<td>Good evening. I again, like everyone else, acknowledge all the work and time you put into this document, both you and your Staff. I can assure you an equal amount of hours have gone into it at our home as well. My name is Becky Woods. I haven’t prepared any formal comment so forgive me if this is just a little bit rough. But once you guys release numbers for different character districts, which I assume you are going to do, I would like to see a follow-up modeling document as to what those numbers mean in terms of schools, jails, hospital, roads, who’s going to pay for it, and where it’s all going to go. And the reason I want to see such a modeling is that the Plan is the guiding document for the next step in this process, which is the LDRs, and if you’re going in unarmed with accurate information as to what you’re looking at with these numbers, the Plan is essentially useless. So, I hope to see the numbers; I hope to see the modeling as to what those numbers mean. Thank you very much for your time.</td>
</tr>
<tr>
<td>3/13/2012</td>
<td>Rauch, Susie</td>
<td>I bought property in Jackson Hole in 1987 in search of peace and community and to enjoy the outdoors and the simpler, healthier life style that was not available in more urban places and other ski towns such as Aspen. Since then, the character of the Valley has changed tremendously, and I fear that what you are considering for the new Comprehensive Plan will only make it worse. Please do not pass these measures that will encourage growth and trigger more traffic, noise and loss of wildlife. I appreciate the amount of time and effort that have gone into developing this plan over the last four years, but am convinced that other approaches can be found for dealing appropriately with housing for teachers, nurses and the younger generation that will not destroy what has made this Valley so special in the past. The idea of more development in a node at the Aspens makes me heartsick. Over the last 20 years, the Village Road has become dangerous for humans and wildlife. And I would sympathize with residents elsewhere in the Valley who do not want to see such development in their backyards.</td>
</tr>
<tr>
<td>3/13/2012</td>
<td>Spence, Kent</td>
<td>The Comprehensive Plan needs to work in a way that fits with Jackson Hole’s character. It should serve to guide development in a direction that leaves the character for which we are known. The proposed changes in the plan do just the opposite. I am strongly against moving the density from the rural areas into three or four nodes in the valley. This will do harm to the wonderful feel of Jackson Hole. Planned neighborhoods will ruin the open, natural feel of this valley. The Comprehensive Plan has always done its job well, leaving most people happy with the way it has worked for many years. It appears from my observations and reading that the majority of folks in the valley would rather the plan stay the same. Why fix it if its not broken? For example, the comments on the Comp Plan website are generally against increasing the density in existing neighborhoods. This has never been the way this valley has developed and the best plan is the way it presently exists. Why change it to fit with the minority of people who do support increased density? If the zoning is changed it will forever change the way things develop. This will attract developers to maximize these areas of increased density and they will be the major beneficiaries of such a change. Thank you for considering my opinions on this important matter.</td>

<td>Huff, Mercedes</td>
<td>As we near the end of this process which you have been so actively involved in for over four years, we urge you to be ever mindful of three guiding principles for our Valley: stewardship, stability, and predictability. Perhaps the most crucial thing before voting to increase or subtract density from any areas is to define the term workforce housing. That term seems to be very loosely used, yet it is called out in every single chapter of the Character Districts. Does it include every person who works in Teton County regardless of where they live and how much money they earn? Or is it a narrower definition, restricted to people who might live in affordable housing, or just want to rent for two years? Whatever the definition, it has to be transparent and able to be substituted in any sentence where workforce housing is used. As the Plan is written right now, that’s not the case. It’s critical that our neighborhoods be kept as low impact areas and not changed into “character villages” with a very disingenuous and phony feeling. Trying to move most of the density from the rural areas into three or four nodes is something that will spoil the natural and authentic feeling that people love about this valley. Thank goodness we don’t have planned neighborhood upon planned neighborhood the way Park City and Vail do. To do that would be ruinous. The Comprehensive Plan, which has been in effect for 18 years, has worked very well and most people are pleased with it. Actually, most people are unhappy that something so successful is being reworked on so many levels. When one reads the public input on the Comp Plan website almost all of the comments are against increasing the density in existing neighborhoods. Please consider not doing any major revisions to support the temporary agendas of a few groups – your decisions are irreversible when it comes to the growth and development of this valley. Once something gets up zoned, there’s no turning back – the developers will arrive and the small town character of those areas will be gone forever. One final thought is that Teton Village should be a pedestrian village where visitors will want to stay and “hang out” after a day of skiing. If it’s just hotels and ski shops, they will lose interest very quickly. This would also help reduce traffic on Highway 390 because tourists would be spending their après ski time in Teton Village. I’ll make this short because you have heard form me in the past. My concerns have never varied. In a nutshell-please be respectful of existing neighborhoods, keep them stable; please don’t add higher density to these areas. The impact would be substantial and negative. The idea of transferring development rights to these areas in exchange to keep other areas less dense is simply wrong. Provide viable mitigation options for wildlife in areas with human congestion/traffic. Nothing has been put on the table so far. Is the tail wagging the dog here regarding affordable workforce housing. It appears that way. Also, I don’t ever recall SPET monies being allowed for land banking/speculation, especially without oversight. Is this even legal? This department should not function on its own without county oversight.</td>

Interested Public  

Firstly, I have signed the “Statement of Intent.”  
I have lived in this beautiful valley for 35 years. It is truly difficult for me to express in words how I feel about this place that I love so much. I realize that a certain amount of growth must occur, but I also realize that we, as stewards of this incredible landscape, must have keen foresight and enormous sensitivity as to how that growth comes about. To urbanize Jackson Hole would be a tragedy – nothing less. After all, we live here and people come here primarily for the wildlife resources, the beauty, the open space, and the small town rural character. This is what Jackson is about. This is what is important. Above all, those are the things that must be preserved – ABOVE ALL.  
There is an area in Provence in southern France called the Luberon Valley. I spent one month there last April. I bicycled through there ten years ago but wanted to return because it was so beautiful, undeveloped, tranquil, and pristine. The valley is made up of beautiful farmhouses and vineyards, fields of poppies, groves of olive and cherry trees, and numerous medieval hill top villages that attract many tourists. There are outdoor markets everyday of the week at a different small town or village. There are no massive housing developments. There are no golf course developments. There are no big highways. And you know what, ten years later it is essentially the same. The industry that keeps the Luberon going is tourism. That is it’s “Golden egg.” It is alive and well there and I am going back.  
My question is, “Do we have the foresight, sensitivity, and imagination to do whatever it takes to retain the remarkable character of this valley like the powers that be in the Luberon Valley in France have done?” My answer is, we must. It is absolutely imperative. Do we have the will to refrain from trying to squeeze every possible dollar out of this valley. Does the town of Jackson really have to have such an aggressive commercial growth agenda that will greatly increase the need for more employee housing? Do we really need that much growth? Does it have to be about dollars? When is enough enough? In the end, isn’t it really about the wildlife, the beauty, the small town character? Most of us here know the real answer. That is why we live here. That is why people come here.  
I think that major revisions to the 1994 plan are a mistake. Although there are several aspects of the currently proposed Plan that I would like to address that I do not support, I am narrowing the rest of my comments to the effects of the large up-zoning proposed for the land adjacent to the Aspens on the Teton Village road.  
If the land adjacent to the Aspens is up-zoned it will most likely doom the Village Road to widening similar to a rural interstate (four or five lanes). Can you imagine that? Consider the negative effects on wildlife populations (Cars killing moose is already horrific). Picture for a moment how that will make that beautiful corridor look for residents and tourists. Say good-bye to beautiful golden cottonwoods in the fall. Think about the effects of increased noise on local residents and their property values. Imagine the traffic volume and the poorer air quality as a result. If the elected officials are truly adhering to the goals and desires that the community has overwhelmingly and repeatedly expressed, then the proposed Aspen up-zoning should be off the table for good.  
Please listen to the community with respect to wildlife preservation and open space as its top priorities. Please listen to Mary Gibson Scott’s concerns regarding the Village road and it’s potential effects on the Park. If the degradation of quality of life is the direction we are going, then we are going in the wrong direction. Please do what you need to do to keep the character of this valley intact.

3/13/2012  Gronberg, Don and Sue  
Interested Public

As 38 year residents of Teton County we are concerned that as we near the end of the process of working on the Comprehensive Plan that what has been effective in the current plan will be thrown out with the bath water. Please act responsibly. Do not yield to the desires of the few and set us up with a future for the valley that we all will regret with no way to turn back.  
It’s crucial that our neighborhoods be kept as low impact areas and not changed into “character villages” with a very disingenuous and phony feeling. Trying to move most of the density from the rural areas into three or four nodes is something that will spoil the natural and authentic feeling that people love about this valley. Thank goodness we don’t have planned neighborhood upon planned neighborhood the way Park City and Vail do. To do that would be ruinous.  
The Comprehensive Plan, which has been in effect for 18 years, has worked very well and most people are pleased with it. Actually, most people are unhappy that something so successful is being reworked on so many levels. When one reads the public input on the Comp Plan website almost all of the comments are against increasing the density in existing neighborhoods. Please consider not doing any major revisions to support the temporary agendas of a few groups – your decisions are irreversible when it comes to the growth and development of this valley. Once something gets up zoned, there’s no turning back – the developers will arrive and the small town character of those areas will be gone forever.  
Thank you for your consideration.

<td>Robinson, Steven</td>
<td>I know a great deal of time and effort has been put into development of a completely new comprehensive plan. Although this was done with the best of intentions, I join a large number of concerned citizens that feel it does not represent the basic principles continually expressed by everyone again and again. “Protect wildlife, maintain our friendly small town values, and control growth with mechanisms and incentives for development with permanent open space”. Having lived in the valley since 1975, I thought the old comprehensive plan was doing a pretty good job of representing those basic principles. It was my understanding that the new plan would further define those guidelines in a reader friendly, understandable format. It does not! When the idea of “nodes” made the headlines, my neighbors were “up in arms” over the idea of increasing the density of our small town neighborhood. The impacts on Teton Village Road, the wildlife on the West Bank, and potential infrastructure demands would be tremendous. A quick reversal was articulated by the planners. However, as it turns out, the actual change was only in the wording of “nodes” and not in limiting “density up zoning” which is what the new plan continues to recommend. We live in a unique valley in this great country. What makes it so special are the people and the unspoiled beauty. Even before I arrived so many years ago, the community was concerned about protecting the valley for future generations. The community developed the original comprehensive plan to protect this valley. The revised comprehensive plan should further strengthen that plan, not change it to a plan that will have a permanent negative effect on the valley. I urge you to consider the negative effect approval of this “new comprehensive plan” will have on our neighborhoods, our landowners, our small town values, and our community.</td>

<td>Attached is the Statement of Intent for the Comprehensive Plan along with the 360 signatories. Please accept it as public comment on the Comp Plan from the community/neighborhood groups, not just the Alliance. Thank you for your consideration of this important document. Community Support for a Statement of Intent in the Comp Plan. Many committed community leaders have helped to craft a Statement of Intent for the Comprehensive Plan, which is intended to clarify the goals and next steps, and prevent misinterpretation in the future. This is something that we would like to see inserted into the Plan as a documentation of the intent of the Plan and the community. Whereas current regulations allow for decades of growth and a doubling of the built environment we see today; we, the undersigned, respectfully request a statement of intent be added to the Jackson/Teton County Comprehensive Plan that reflects the following: Statement of Intent Purpose: To ensure that the community’s original intent prevails when competing values create opportunities for differing interpretations for current and future decision makers. It is the community’s intent to avoid expanding the urban footprint and to maintain our small, rural, mountain-town character; our quality of life; our unique sense of place; our established neighborhoods; and our stewardship ethic as the gateway to our unparalleled ecosystem on which both our visitor economy and our way of life depend. • It is the community’s top priority to permanently protect wildlife habitat &amp; connectivity, scenic viewsheds and agricultural open spaces through permanent protection of these resources. To that end, density increases beyond base property rights will not occur in any location until mechanisms are in place to link that development to permanent conservation. These mechanisms must ensure that any density increases will be phased in slowly over time in small areas. • It is the community’s intent that a community‐supported and clearly defined amount of growth will result in locations and intensity of development that are predictable. This amount of growth will be calculated prior to adopting the new Comp Plan for each Character District and must reflect and adhere to the stated Vision in the Plan for density neutral solutions countywide. • It is the community’s intent to manage growth in a fiscally responsible manner. Developers must pay their costs for public facilities, services and infrastructure created by new development. Costs of development should not be subsidized by or passed on to residents. New development should not be permitted until an adequate level of infrastructure is in place. • It is the community’s intent that employee generation resulting from commercial and nonresidential development should not overwhelm the ability to house 65% of our workforce locally. • It is the community’s intent that a multi‐year implementation plan that is annually updated must include and adhere to a detailed timeline, budget and a prioritized strategy list.</td>

<td>I have lived in the Nethercott for 30 years, so feel qualified to comment on the plan, especially along the Village Road. Please do NOT put any more density along the Village Road. I can barely turn left out of Nethercott as it is and more importantly, out wildlife is highly impacted along that road. More density, more cars and more animal/car hits. We are used to having moose, fox and many birds in our neighborhood. They need room too and were here before we were. I fully support and am a member of The Village Road Coalition. PLEASE listen to our voices. The valley has changed enough and we are in danger of changing it’s character forever. THINK OF ALL THE DAMAGE THAT GREED AND OVER POPULATION HAS DONE TO OUR WORLD. PLEASE DON’T LET THAT HAPPEN HERE. HAVE SOME GUTS TO SAY NO TO MORE GROWTH!</td>

<td>I am writing out of concern for certain language regarding the Character Districts in the Comprehensive Plan Illustration of Our Vision. The Crescent H Ranch appears to be in District 8.2 and District 11.4 with some of the mountain properties outside of the designated Character Districts, and I am alarmed with the language that seems to allow for future changes to our existing development regulations. Addressing Character District 8.2, Page IV-51 states: “Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented.” It further states that “Redevelopment efforts will be focused on reducing the amount and impact of development.” Page IV-53 states: “Non-development conservation is the preferred land use in this area.” “Development potential in this area should be directed into Complete Neighborhoods or clustered...” “Development that does occur will include small structures and limited disturbance...” How these efforts could or would be applied to Crescent H Ranch or to other existing properties in Character District 8 is at best unclear and potentially very troubling. While I wholeheartedly support the preservation of our county’s wildlife, our wildlife habitat and our open spaces, at Crescent H Ranch our development is managed to promote those initiatives. I also understand the need to preserve and conserve the yet to be developed open spaces and rural areas- areas that are not currently platted or planned for development. However, any effort to re-regulate, re-configure or re-develop existing, permitted and platted properties will be very strongly opposed. In summary, I am very concerned that the Character District plan is unclear in its intent and can easily be interpreted to be an overreaching approach by the county to control the nature of development in the valley through future regulatory changes affecting both undeveloped areas and areas that are currently platted and developed as subdivisions or single private properties.</td>

| 3/12/2012 | Check Into Cash, Inc.       | We are writing on behalf of Allan Jones, Chairman of Check into Cash, Inc. Check into Cash, Inc. owns the parcel commonly known as Tract 12 at Crescent H Ranch. Tract 12 is currently undeveloped, but has for many years been approved in the Crescent H Ranch CC&Rs for the construction of a single family home. The Crescent H has a very strong and comprehensive set of CC&Rs, and in fact the homeowners have a long history of protecting their investments by enforcing those CC&Rs when necessary. This process of private rulemaking and private enforcement has served the Crescent H very well over the years. The CC&Rs have done a more than adequate job of protecting the Crescent H, its property values, its open spaces, its view corridors and its wildlife. And importantly, they have done so without needless government interference or infringement upon private property rights. The "Vision" that has been proposed deviates greatly from decades of successful development at the Crescent H by suggesting a taking of private property. The proposed taking suggests a material impact upon the enjoyment and value of private property rights. On behalf of Tract 12 and all of the private property owners likely to be damaged by the taking of private property rights inherent in your Vision, we respectfully suggest that you consider alternative ways to achieve your results. At the Crescent H, for example, the existing CC&Rs are more than adequate to protect that Vision. Your support of the existing CC&Rs is something that we would applaud. But moving to take away the rights of private property owners in favor of government intrusion is something that we may be forced to oppose in order to protect our investment and our private property rights. We appreciate your consideration of less intrusive ways to realize your Vision and to protect Teton County in ways that we can all support.

<p>| 3/12/2012 | Richard P. Morse           | I am a homeowner at Crescent “H” Ranch, and am OPPOSED to the Teton County Commissioners’ “Comprehensive Plan, Illustration of our Vision”. Please add my objections to those of other Crescent “H” homeowners (and, I suspect, to the objections of other potentially affected home- and lot-owners in The Valley). What I and others purchased (about 20 years ago for me) already contains much of what the County wants in its Plan.......such as wildlife access, keeping our area natural, etc. We certainly do NOT want The County to impose new restrictions on our Ranch properties relative to fencing, size of houses, or interferes in any way with our basic rights as Homeowners. |</p>

<td>LaJeuness, Debbie</td>
<td>Thank you for all your hard work and efforts on behalf of our community to come up with a new land-use plan. I know that the end of the process is nearing and that some in our community are trying to make a last ditch effort to stop and/or amend the conclusions that have been reached so far. I urge you to continue down the path that you have been on, and not get sidetracked by a few vocal groups who, in my opinion, are only worried about their own backyard and not the greater good of the valley. I am talking about the South Park neighbor group and the Village Road Coalition. In my opinion, both the South Park area (District 5: West Jackson and District 10: South Park) and the Aspens/Pines area (District 12) are very logical places for allowing workforce housing, which is one of the most important goals of the current or future land-use plan. This is also where these groups are formed and as typical of most people, they do not want their neighborhoods to change, but these are the most sensible places in the valley to support more development (along with the town of Jackson). These areas are already dense or have undeveloped areas that are adjacent to other built-up neighborhoods which supply housing for the local workforce, and therefore, are logically the place for future density. These complete neighbors have or will have all the necessary characteristics/infrastructure that are needed and can be developed more easily while protecting wildlife with bridges, underpasses and open space/cluster. Housing 65% of our workforce locally is an important goal. Some seem to believe that you all need to define the exact numbers allowed, and I think that this is just a distraction and would allow for even extra arguments and debates; the proposed plan allows for flexibility, which is a good thing. Do not be distracted by this tactic. I believe that the proposed plan, character districts and policies/regulations already in place can be used to create and continue a well-thought out community, one that protects wildlife habitat and natural resources, along with housing. The proposed plan does not go against community will, as some are suggesting, rather, it goes against the NIMBY group’s will. They have not yet accepted, or do not want to accept, that there are many more people coming to this valley and they will have to be housed somewhere and that logical place is in the areas of the valley that already have the most development, including the town, South Park and the Aspens area. Some are being unrealistic by suggesting that we protect the rural parts of the county from future development but also limit development of already-developed parts of the county. As you all know, it’s hard to have it both ways. Many parts of the proposed plan show continued “Rural areas” which is as it should be, but this means development has to happen in areas where development has already taken place. This is as it should be. Also suggested, is that workforce housing mandates should be thoroughly defined and researched, and one the first steps necessary to implement this, is the Housing Nexus study that is already in the bidding process as instructed by you to the TCHA. The comprehensive planning process has been going on for a number of years and the amount of public input has gotten you and the proposed plan where it is now, please do not let the last minute/special interest groups distract you from the overwhelming input from the rest of us and most especially the goal of housing 65% of our workforce locally. I am writing to you as a private citizen (and as a real estate appraiser who knows the valley intimately, which has helped me to form the opinions that I have developed and express to you today), and not as a member of the Teton County Housing Authority Board (but I take their goal of housing 65% of the workforce locally very seriously). Thank you again for all your hard work and vision,</td>
</tr>
<tr>
<td>3/12/2012</td>
<td>Farmer, Jim</td>
<td>18-20,000? I seriously doubt it. It's time for our elected officials to shut their mouths, open their ears and listen to people who care and have lived in the valley for a very long time. It's simple. No new density increases in rural areas of the valley. You can't seriously say that you care about the wildlife and migration corridor while approving density increases. They don't work together. You elected officials are messing with the very reason most of us have lived here for so many decades. That reason being the urban character which we so cherish. The future of Teton County is at stake here and it's our responsibility to insure that further development does not degrade our wildlife, scenic and lifestyle values.</td>

I am writing out of concern for certain language regarding the Character Districts in the Comprehensive Plan Illustration of Our Vision. The Crescent H Ranch appears to be in District 8.2 and District 11.4 with some of the mountain properties outside of the designated Character Districts, and I am alarmed with the language that seems to allow for future changes to our existing development regulations.

Addressing Character District 8.2, Page IV-51 states:
“Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented.”

It further states that “Redevelopment efforts will be focused on reducing the amount and impact of development.”

Page IV-53 states:
“Non-development conservation is the preferred land use in this area.”
“Development potential in this area should be directed into Complete Neighborhoods or clustered…”
“Development that does occur will include small structures and limited disturbance…”

How these efforts could or would be applied to Crescent H Ranch or to other existing properties in Character District 8 is at best unclear and potentially very troubling.

While I wholeheartedly support the preservation of our county’s wildlife, our wildlife habitat and our open spaces, at Crescent H Ranch our development is managed to promote those initiatives.

I also understand the need to preserve and conserve the yet to be developed open spaces and rural areas- areas that are not currently platted or planned for development.

However, any effort to re-regulate, re-configure or re-develop existing, permitted and platted properties will be very strongly opposed.

In summary, I am very concerned that the Character District plan is unclear in its intent and can easily be interpreted to be an overreaching approach by the county to control the nature of development in the valley through future regulatory changes affecting both undeveloped areas and areas that are currently platted and developed as subdivisions or single private properties.
ARE YOU LISTENING??

From article in the Jackson Hole News & Guide, March 7th, 2012

Quote from Mark Barron:

“the push to get elected officials to adopt the statement of intent is not indicative of most county residents’ sentiments and does not outweigh other opinions. Does their voice count? Absolutely. Does it count more than 18,000 or 20,000 other people? You tell me.”

With all due respect, I am going to tell you. You have not received 18,000+ letters of support in your favor!!!! You have no business insinuating the 18,000+ residents are not in favor of adopting a statement of intent. More than likely, 16,000 of those people you are talking about have absolutely no opinion whatsoever. Not only are most of them unable to understand the comprehensive plan, most of them have not even read it. Do not include the SILENT majority as a group that agrees with you or your plan. Silence often means apathy. I would be interested to know how many LETTERS or EMAILS you have received that support your thinking, Mark.

I have lived in this valley for close to 50 years and have watched the birth and the death of comprehensive plans. I have also watched variances, up-zoning and down-zoning destroy the very fabric of the plan’s intent and goal. The untold amount of hours and the amount of money it takes to write a plan is absurd considering how it eventually becomes eroded.

What I don’t hear from ANYONE are the numbers…..the Housing Authority has numbers, the Alliance has numbers, the planners have numbers, the developers have numbers. No one wants to talk about REAL numbers. Let’s hear a number!

I am going to keep my letter of opposition simple:

I am opposed to anything that will change my neighborhood or its character. Not in my backyard?? You bet. I’ve had 50 years of development taking place in my backyard.

When it comes to discussing the protection of wildlife in and around the Aspens, Wilson and Teton Village, your talk of design to manage and protect wildlife viability is, frankly, absurd. Many of us have spent the last 6 weeks attempting to reduce the slaughter of wildlife on 390. WILDLIFE ARE INCOMPATIBLE WITH HUMAN DENSITY. Increased traffic over the years, due in most part to added density, is the reason for this. I do not want a four-lane highway on 390. As it currently stands with just two lanes, we aren’t able manage the speed of traffic and the decimation of our wildlife. What I find absolutely glaring is….I don’t see the county stepping in an helping in the efforts to improve this situation.

As the editorial in the NaG stated, we are NOT hired guns. WE HAVE ALL LIVED HERE A LONG, LONG TIME. Longer than most of you. We are invested in our community, we have been involved, we have been vocal, we have done our homework, we have witnessed past history. WHY DO YOU CHOOSE NOT TO LISTEN!!!!

I regret that I am beginning to see our elected officials playing a huge part in a slogan going around,

RAMP UP....RIP OFF AND CASH OUT!!

Nothing says it better: The future of Teton County is at stake and it is our responsibility to insure that further development doesn’t degrade our scenic, wildlife and lifestyle values.

I EXPECT YOU TO DO IT RIGHT THIS TIME AROUND.
I am writing to you as the Secretary/ Treasurer and a Director of the Teal Trace Homeowners association.

After much discussion and review by our board, we want to formally notify you that we oppose the new language included in the Comprehensive Plan that would introduce new and more stringent land use controls over our Teal Trace properties. We have clear and recently approved CC&Rs for Teal Trace and we follow these rules carefully. We also have a stable neighborhood with good respect for nature and proper access to the Snake River.

We are concerned that the proposed new language will change the rules on our existing residents and could upset our established community. Also this language could introduce new and unnecessary restrictions on our few homeowners who have not yet built their homes. We only have two properties that have not been constructed but we are concerned that you new restrictions would be unfair to these members of our community.

In essence, please leave District 8 rules and regulations as they have been and as they are today. Our community works very well. There is no problem to be solved for us but these new proposals could create unnecessary restrictions and problems for us all.

The current plan works for us and everyone understands the rules. Please leave the county rules and our Teal Trace community alone. Thank you.

I am very concerned re. the language and intent of the Comprehensive Plan, illustration of our Vision. While I certainly am passionate about preserving the environment and safeguarding the access for wildlife, several of the statements in the Plan regarding Character District 8.2 are very troublesome. I have owned property at the Crescent H Ranch since 1990, and presume it falls into this District. The language I am referencing is:

“Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented”
“Redevelopment efforts will be focused on reducing the amount and impact of development”

The Crescent H has very stringent restrictions in our CC&R’s relating to home size, building envelop, etc. Perhaps the most distinguishing characteristic of the Crescent H is the free flow of wildlife, which we cherish and protect. However, the proposed language at least hints at infringing on my basic property rights, which I would zealously protect.

I sincerely hope that you will revisit the issue, and revise the Plan with the input of affected homeowners. We all share the same basic vision, but this Plan, as it is written, jeopardizes the Vision it is designed to protect.

Thank you very much for your consideration.
Siewert, Marylyn

**Comment**

My husband and I are visitors to the Jackson area several times a year. We come for the beauty and openness of the scenery, the wildlife and the general rural ambience of the area.

After talking to locals and reading the editorial in the “Jackson Hole News and Guide”, we were astounded to learn that new land use and density regulations in the County Comprehensive Plan were being contemplated by County officials without giving to the populace specific details of the land use and densities in the plan.

The community and the neighbors must be included in the deliberations and must know the proposed densities and land use. This is not Syria but the United States of America where the people are involved in making intelligent decisions that involve them personally and create the communities in which they will live. From what we have heard, the specifics of the Plan are being withheld.

From an outsider’s point of view, it is mandatory that the rural atmosphere be maintained in the Jackson area. Specifically the drive on Highway 390 to Teton Village is beautiful with its gorgeous vistas and should not be cluttered with high density building and overwhelming commercial development. High density gives an appearance of clutter, degrades views and probably degrades property values as well. High density contributes to intolerable traffic. It appears that the Jackson area already is having major traffic problems. Wildlife habitats and migration corridors must be maintained.

Converting private open space to high density will not enhance the community. Please include the citizenry in the decision making and include their ideas in the Plan. Strive to keep the area beautiful and rural so that we visitors will come back. Please maintain the wildlife habitats and migration corridors.

Thank you for all the work you have put into this project. I know it is a big job since I was twelve years on a planning commission that wrote a new general plan for our town of Tiburon in California. We look forward to many years of visiting the Jackson area.

Lupo, Patrick

**Comment**

In respect of the pending review of the Comprehensive Plan for Teton County, we would be grateful if the County would continue to recognize Lake Creek Ranch as a "specially recognized project" as in the Prior Plan. See Section 1450 of the Land Development Regulations (LDR’s) of 1977 and Docket #06-0001, Findings of Fact and Conclusions of Law and Order, Dated 6th July 2006.

The above reflects the fact that there is a pre-existing Master Plan for Lake Creek Ranch approved by the Board of Commissioners, that the entire ranch (approximately 480 Acres), was placed under a Conservation Easement in favor of the Nature Conservancy, save and except for certain building sites, and that the final plat of Lake Creek Ranch was approved at a regular meeting of the Board of County Commissioners held on December 17, 1996.

Bloom, Rich

**Comment**

While reviewing the on-line staff packet and public comment for the March 14 Character District meeting I noticed it did not include the attached March 1 Rafter J HOA board letter to the commissioners - formally opposing road interconnectivity in district 10. I also have attached the Melody Ranch HOA more complete board position of February 21 - that we copied the Rafter J HOA.

I wanted to make sure the Town electeds and planners saw the attached March 1 Rafter J HOA board letter - and for staff to include it as part of public comment under district 10.

This issue is easily clarified by the addition of "pathway" in the various district 10 locations where the goal of "interconnectivity" is mentioned. This is consistent with other character districts which have qualifiers for example of "pedestrian" and/or "pathway" on interconnectivity goals.

Upon review of the public comment I also noted owners in South Park Ranches and Big Trails subdivisions in southern South Park (which do not have functioning HOAs) have also strongly opposed the concept of forced roadway interconnectivity of their respective private road systems - separated I may note (along with Melody Ranch and Rafter J) by very large parcels of undeveloped rural lands in our sub-area 10.1.

I will remind you that Rafter J and Melody Ranch HOA’s represent the interests of some 900 homeowners - so trust you will make the requested clarification change by adding the qualifier of "pathway" to the interconnectivity goal in district 10.

PS Note Kristine O’Brien has recently been elected to replace David Kauffman on our board.
I am writing out of concern for certain language regarding the Character Districts in the Comprehensive Plan Illustration of Our Vision. The Crescent H Ranch appears to be in District 8.2 and District 11.4 with some of the mountain properties outside of the designated Character Districts. And I am alarmed with the language that seems to allow for future changes to our existing development regulations.

Addressing Character District 8.2. Page IV-51 states:

"Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented"

It further states that "Redevelopment efforts will be focused on reducing the amount and impact of development"

Page IV-53 states:

"Non-development conservation is the preferred land use in this area."
"Development potential in this area should be directed into Complete Neighborhoods or clustered..."
"Development that does occur will include small structures and limited disturbance..."

How these efforts could or would be applied to Crescent H Ranch or to other existing properties in Character District 8 is at best unclear and potentially very troubling.

While I wholeheartedly suppon the preservation of our county’s wildlife. Our wildlife habitat and our open spaces. At Crescent H Ranch our development is managed to promote those initiatives.

I also understand the need to preserve and conserve the yet to be developed open spaces and rural areas~ areas that are not currently platted or planned for development.

However. Any effort to re-regulate. Re-configure or re-develop existing. Permitted and platted properties will be very strongly opposed.

In summary. I am very concerned that the Character District plan is unclear in its intent and can easily be interpreted to be an overreaching approach by the county to control the nature of development in the valley through future regulatory changes affecting both undeveloped areas and areas that are currently platted and developed as subdivisions or single private properties.
Below is an e-mail I have been circulating to my friends and colleagues in support of the comprehensive plan and to clarify what I feel are inaccuracies in recent advertisements by special interest groups. I hope this helps with your upcoming review of the Comp Plan.

Dear Friends and Colleagues,

Many of you will pick up the weekly paper and find a number of articles on the Comprehensive Plan along with full page ads paid for by the Jackson Hole Conservation Alliance, Gail Jensen, South Park Neighbors, Village Road Coalition, Wilson Advisory Committee, Cottonwood Park Neighbors and Save Historic Jackson Hole. These community organizations are asking for a "Statement of Intent in the Comp Plan" among other things. On the surface this may appear a good idea but in essence binds the hands of elected officials and planning staff and essentially turns the current version of the draft Plan into a no growth Plan, making it much more restrictive than the 94’ Plan currently in place. If you think current development standards make projects difficult, I can assure you that the conservation for growth approach will make any new project immeasurably more difficult and add immense bureaucratic hurdles. As a member of the design community and a Town of Jackson Planning and Zoning Commissioner, I would like to lend my perspective to a couple of the key views these organizations are asserting:

1) The Comp Plan should include calculated numbers for each character district so that the community knows exactly how much growth will occur. The Comp Plan does include documented numbers prepared by Town and County planning staff that are the basis for the rough doubling of units proposed in the current Plan and are based on base property rights of 1 unit per 35 acres. As many of you will understand, it is impossible to make the accurate numbers these organizations are requesting because of the many variables involved in developing on any property. These variables include road and wetland setbacks, hillsides, flood plains, overlays, and most importantly the goals of the property owner who may choose not to fully develop their property as many owners have. These organizations, though well-intentioned, are taking a myopic perspective of this issue by asking that mechanisms be put in place so that we know exactly what development moves where and that all growth is met with dedicated conservation somewhere in the county. For example, if a mixed-use project is developed in town that contains more units than what is allowed under base zoning, the development rights of a corresponding number of lots in the County will be required to be extinguished in order to develop those units. As anyone involved in the Comp Plan understands, these mechanisms are very complicated and binding elected officials' and planners' hands with this kind of language will ensure that this Plan becomes the no growth Plan these organizations so readily seek. More importantly, other tools to limit development in the rural county will likely be more effective than requiring a direct linkage. Not only will a direct linkage stifle any desirable redevelopment in town, but it may preclude the exploration of more effective and community-wide efforts to preserve rural lands.

2) Development must pay its own way. As many of us professionals know, it does! Developments are required to pay sewer capacity fees, water tap fees and provide other infrastructure as necessary depending on the project type and location, and we know that landowners pay dearly for these types of mitigation. All of these fees are assessed by the Town or County based on the type of project and are intended to do exactly what is being requested. It’s not necessary and it’s too specific. The Comp Plan is a vision statement and should be viewed as such. Weighting it down with this type of detail is unnecessary and does not acknowledge that there are already many mitigation measures in place. If such measures need to be adjusted, or if new measures need to be added, then this discussion should occur when considering new regulations, not in a visionary document.

3) It’s a downzone, be scared. The current Com Plan is not a downzone. Base property rights are 1 unit per 35 acres and this will not change under the current Plan. As elected officials and planners will tell you it is not legally possible to take away development rights. However, tools may not be allowed to be used in some areas such as a Planned Residential Development (PRD) or Non Contiguous Plan PRD. All tools are discretionary and can’t be counted as a base property right. I encourage everyone to support elected officials and request that all current tools be kept as these tools have allowed for permanent conservation across our valley and will be important tools moving forward into the future.

It is my opinion that the community members behind these advertisements and ideas do not constitute a majority of the valley as they would have you believe. I personally have facilitated many public workshops where the vast majority of opinions expressed were incongruent with these organizations’ stated intentions. Though they tend to be very vocal and well-funded, they nonetheless represent a minority view in our community, and talking louder shouldn’t make their opinions any more valid than yours. I think everyone has the right to express their opinion, but I don’t think it’s fair to try and foist their self-serving "Statement of Intent" policy upon the community at the eleventh hour. I do encourage everyone to read the Comp Plan, talk to planners and elected officials and form your own opinions about the Plan based on the actual Plan. For the first time, I genuinely fear that this minority opinion will throw such a wrench into the process that the Comp Plan will continue indefinitely (after 5 years of preparation) and do our community a great disservice. As many are aware, many planning tools have been put on hold that are vital to continued redevelopment and revitalization in town along with improvements to town zoning districts such as the AR Cottage House, a policy which failed upon its third reading during Town Council because of the pending Comp Plan. There are many other examples like this where much-needed policy changes are not considered because of the prolonged Comprehensive Plan review, something that may benefit ivory-tower special interests, but do great disservice to the
community at large. If this Plan continues to languish our community will continue to languish along with it. The next meeting for the Comp Plan is March 14th, where the Town Council and County Commission will begin the process of reviewing the current Plan with the goal of adopting the current Plan in May. I encourage everyone to take the time to provide comment to the Town Council and County Commission in support of the Plan. Though the deadline for written comment has passed, I believe it is worth your time to give verbal comment at the meeting. It may be an inconvenience now, but without your involvement, I fear our community will not be able to move forward.

3/9/2012 Hubbard, A.C. & Penne Interested Public

We are in complete agreement with Mr. Hoke and hope you take this into consideration.

3/9/2012 Taylor, Ken HOA: Crescent H Ranch

I am writing out of concern for certain language regarding the Character Districts in the Comprehensive Plan Illustration of Our Vision. The Crescent H Ranch appears to be in District 8.2 and District 11.4 with some of the mountain properties outside of the designated Character Districts, and I am alarmed with the language that seems to allow for future changes to our existing development regulations.

Addressing Character District 8.2, Page IV-51 states:

“Development potential will be directed out of this district and efforts to reduce the impact of development on wildlife such as limiting house size and fencing will be implemented.”

It further states that “Redevelopment efforts will be focused on reducing the amount and impact of development.”

Page IV-53 states:

“Non-development conservation is the preferred land use in this area.”

“Development potential in this area should be directed into Complete Neighborhoods or clustered…..”

“Development that does occur will include small structures and limited disturbance…..”

How these efforts could or would be applied to Crescent H Ranch or to other existing properties in Character District 8 is at best unclear and potentially very troubling.

While I wholeheartedly support the preservation of our county’s wildlife, our wildlife habitat and our open spaces, at Crescent H Ranch our development is managed to promote those initiatives.

I also understand the need to preserve and conserve the yet to be developed open spaces and rural areas- areas that are not currently platted or planned for development.

However, any effort to re-regulate, re-configure or re-develop existing, permitted and platted properties will be very strongly opposed.

In summary, I am very concerned that the Character District plan is unclear in its intent and can easily be interpreted to be an overreaching approach by the county to control the nature of development in the valley through future regulatory changes affecting both undeveloped areas and areas that are currently platted and developed as subdivisions or single private properties.

Name: Tillson, Becky

Comment: The Jackson Hole Conservation Alliance is very grateful for all of your hard work throughout this Comprehensive Planning process. As this process nears its conclusion this spring, we wanted to submit the following comments regarding the Implementation Plan.

In a 2011 report, “Technical Analysis of Jackson/Teton County Comprehensive Plan,” Alan Richman provides the following specific recommendation: “Strategies should be organized into an action plan that establishes priorities for next steps and lays out a timeline for completing projects.” The Alliance is glad to see that the creation of such a plan is a priority for the Town and County. As you continue to craft and then finalize this Implementation Plan, we hope that you will address the following comments.

Implementation Plan Scope and Format

An implementation plan should account for the whole process of Land Development Regulation (LDR) updates, data collection, and monitoring, and be more than a 1-year plan. It should include responsible parties and timelines (for both initiation and completion of various tasks), and serve as a road map for the community to the accomplishment of the goals and implementation of the policies in the Comp Plan. Richman’s report also states that an Implementation Plan can come in the “form of a tabular summary of proposed actions, with dates identified for when each will be accomplished and by whom, or it could be in the form of a timeline, with actions shown in the order in which they are intended to be accomplished.” Either of these would be a good starting point for our local Implementation Plan.

Prioritized Issues

This is a prioritized but not exhaustive list of areas to be covered in the Implementation Plan.

1. The first priority of the Implementation Plan should be the development of tools for shifting development potential and achieving permanent open space conservation. As a central tenant of the Comp Plan and the concept upon which the achievement of many of the Plan’s goals hinge, research and debate about tools to shift development potential should begin immediately. This includes an analysis of the existing tools, specifically the PRD, as well as improvements to our current toolbox.

2. Zoning should come after an analysis of the tools that we want to use in this community to shift and direct development, so as not to constrain which tools might be effective in achieving permanent open space, a top community priority.

3. Funding sources identified in the Comp Plan (for housing, open space, transportation, etc) should be further explored and initiated immediately.

4. Various studies and data collection efforts must be initiated in the near future, including but not limited to an economic analysis of the market and the intersection of the market and the Comp Plan, the housing legal nexus study (underway), and a countywide transportation analysis.

5. The lodging overlay in Town and the changes to the boundary suggested in the character district maps should be explored and debated prior to the formal establishment of the overlay. Other outstanding regulatory updates include house size restrictions, incentives and their structure, mitigation fees, and the many other issues called out in the policies for future discussion. Updating the current regulations with regard to these issues to bring them into compliance with the new Comp Plan should be prioritized within the overall LDR update process.

6. Baseline data for the Indicators section should be developed and included in the Comp Plan prior to adoption.

Growth Management Plan

As a part of the Implementation Plan, the Growth Management Plan should be addressed. Specifically, the monitoring program should be further developed to identify additional triggers or timeframes for revisiting how well we are accomplishing our Growth Management goals, such as the northern South Park development trigger. Additionally, the corrective actions, outlined in the Plan, should be more fully explored.

Adoption of the Implementation Plan

This Implementation Plan should be adopted along with the Comprehensive Plan with the intention that it serve as a road map for the next few years of LRD updates and planning work. Again, as stated in the Richman report, “Prioritization of the actions in the Comprehensive Plan will go a long way towards informing citizens as to what they can expect and will allow them to hold the Town and County accountable for whether progress is being made in Plan implementation.” This is an important piece of the final product that will be up for adoption this spring.

Lastly, attached [see actual comment for attachment] is the Action Plan for the Aspen Area Community Plan, which you have no doubt seen. This is a specific example of an action plan with clear responsible parties, timelines and priorities that could serve as a model for our local Implementation Plan.

Again, thank you for your continuing hard work on this issue. We look forward to engaging with the staff and elected officials as we draw this planning process to a close and launch into the fulfillment of the Implementation Plan.

<td>Rosenberg, Vicki L. Interested Public</td>
<td>You all have insisted that our community’s top priority is to permanently protecting wildlife habitat. You have all insisted that you recognize how adding development potential to one area must be offset by permanent conservation elsewhere. Concerned citizens are merely asking for a simple accounting of how much development would be allowed in specific areas, something that none of you have been willing to publicly address. We need to know how much commercial development would take place under the proposed changes, and how much local citizens will be asked to contribute to such development in increased taxes or levies. We need to know if it's realistic to expect that we can house 65 percent of the county’s workforce here; if not, commercial allocations should be reduced. All citizens, regardless on which side of this issue they stand, need to see a defined schedule that sets priorities and timelines for expected implementation of not only development plans, but also of conservation and wildlife protection efforts. Please read and carefully consider the Statement of Intent -- it doesn't ask for miracles... only for respect.</td>
</tr>
<tr>

<td>As a property owner in both Big Trails subdivision and South Park subdivision I totally oppose the idea of interconnectivity and vehicular road access between subdivisions in South Park. The roads in Melody Ranch, Rafter J, South Park Ranches, Big Trails and South Park are all PRIVATE roads. Please change the language involving connectivity in the new comprehensive plan, district 10. I find it offensive as do others.</td>
</tr>
</tbody>
</table>
It was with great surprise that I read earlier this week, and again in today’s weekly paper, that several “advocacy groups” are requesting that you add a statement of intent to the Comprehensive Plan.

I urge you reject that request. The Comprehensive Plan review has taken the better part of five years and provided our community with numerous opportunities for written and oral public comment. Workshops have been held throughout the valley and the process has been shepherded along with consultants to be as inclusive as possible; all with the goal of having a comprehensive, well thought out planning document that represents what is best for the community, not any one special interest group. There are reams of public comment available online and the deadline for citizen input has passed. Why should one or several special interest groups get another chance to attempt to put their imprimatur on the plan?

Is the latest draft of the Comprehensive Plan perfect? No. Do I agree with all of it? No. With a document affecting such a large cross section of Teton County, some people are inevitably going to be unhappy. However, I look at any collaborative process like being a cook. You can’t please everybody.

You have been elected by the public with a mandate to revise our comprehensive plan. Please don’t delegate that privilege and authority to special interest lobbyists. Reject the “statement of intent”.

I thank you for your consideration of the above and the great lengths you have gone to in order to get the document to its final stages.

I fully agree with the content of Bland Hoke Jr. letter to you dated February 29. This is the last and worst example of superficial behavior by the Board. I believe we should expect a more by our elected politicians.

What a long strange trip it has been to get to where we are with the Comprehensive Plan (CP). From the start, the community made it clear that the priorities should be open space and wildlife habitat. Now we have a proposed new CP that provides for increasing density in certain areas without creating binding commitments that will permanently decrease density in other areas. I would urge you to vote against the proposed CP since it does not commit to permanently decreased density in high priority conservation areas to offset the areas of increased density.

The proposed CP is ambiguous and not specific enough with regards to how density will be reduce in hi-priority conservation areas. Given the historical pattern of development in the County and how political the development approval process is in Jackson, the CP needs to be crystal clear with regards to exactly what (how much in terms of exact #s) density will be permitted in what areas.

This lack of clarity is particularly noteworthy in Section 8.1 of the Illustrations of Our Vision (IOV) which sets forth how District 8 would be viewed under the new CP. I was surprised to learn that Wilderness Ranch, where we live, isn’t included in this description while some of the surrounding subdivisions (John Dodge, Tucker, Linn Ranch) are included. The IOV goes on to say that the goal is to RECLAIM as much open space as possible. Please think about the practicality of reclaiming developed land in subdivisions. I would urge you to think in realistic terms and focus on permanently protecting existing open space and not waste tax dollars on trying to reclaim subdivided land. Then Section 8.1 goes on to speak of increasing public access to the Snake River in this area. How is increasing public access (i.e. foot, dog, & skier traffic) along the Snake River going to help wildlife? By having contradictory objectives and ambiguous language in the proposed CP, the commissioners are opening the door to various competing interpretations. This means politics and a very cumbersome bureaucratic process will rule the day as future decision makers wrestle with the lack of clarity in the CP.

To satisfy the community priorities of wildlife habitat and open space the CP must have specific binding mechanisms that tie any increased density rights, above the current base level, to permanent conservation through less density in other areas. Unfortunately, for any such mechanism to work effectively and create some degree of certainty for planners, homeowners and developers, it has to quantify the amount of development (how much in terms of exact numbers and exact densities) that will be permitted. This is the only way that the tradeoffs can be assessed accurately and not be left to the interpretation of parties with conflicting interests.

I am urging you to vote against the CP unless the language is changed to address the issues noted above. Thank you for your consideration.

<td>Lyons, Fred and Dee</td>
<td>As residents of Lake Creek Ranch and former residents of John Dodge, we are extremely concerned with Section 8.1 of the Comp Plan...We respectfully request that the current language of Section 8.1 be replaced with totally rewritten language clarifying that at no time for any reason will the rights of property owners of District 8 be compromised by any such plan. The current language puts us at risk of future imposition. Certainly both of our residences in these areas were specifically oriented to wildlife habitat through stringent building codes.</td>
</tr>
<tr>
<td>3/6/2012</td>
<td>McGregor, Bob and Kim</td>
<td>Please be aware that we, as 16-year residents(owners) of property in South Park Ranches, oppose any attempts to connect our subdivision with any others, either in existence now or proposed in the future. Clarification in the language of anything passed by you-all would be helpful since we doubt that anyone else would be in favor of it either. Increased traffic in our quiet neighborhood is not something any who lives here would relish; after all, most of us live here because it's quiet and peaceful. Though we cannot speak for our neighbors we are letting you know our thoughts and hope you take them into consideration in formulating clear, concise language. Our property values, along with everyone else's, would most assuredly be affected in a negative way. No one would want this. Thanks for listening, and please pass this on to the Jackson Town Council and Teton County Planning Commission, since I don't have their addresses.</td>
</tr>
<tr>
<td>3/5/2012</td>
<td>MacMillan, Kip</td>
<td>We wish to restate the position we made clear in our e-mail of March 12, 2008 that the (Rafter J HOA) Directors reject the idea (vehicular road access) through Rafter J and Melody Ranch subdivisions in the strongest possible terms. Rafter J owns its own roads and our HOA Board unanimously stated that we do not want access from Melody Ranch under any foreseeable conditions. Doing so would increase traffic and adversely affect the quality of life in Rafter J. In addition, our roads are too narrow to meet Wyoming Department of Transportation standards for public streets. In summary, we request that in your future discussions, please keep in mind that Rafter J is not supportive of any direct connection with the former Teton Meadows development or Melody Ranch.</td>
</tr>
<tr>
<td>3/2/2012</td>
<td>Stoker, Troy</td>
<td>I would like to express my thanks for your work on the Comprehensive Plan, specifically for voting to house 65% of the community's workforce locally. I am the Lift Director for Jackson Hole Mountain Resort. I oversee all of the maintenance for the lifts and the Tram at the mountain. This winter, as with every winter, I struggle with my workers who live on the other side of Teton Pass or down south in Star Valley. I am very thankful that a few of my workers have been fortunate enough to purchase an affordable home here in Teton County. This winter, when a big storm came in, Teton Pass was closed, and many of my workers were unable to make it to work. Of course, lots of snow means lots of skiers, and of course that was the moment when a couple of the lifts on the mountain began having problems and wouldn't start. If I had not had the guys who live locally, there would have been a long delay in opening. I have now resorted to purchasing hotel rooms for my workers when a storm is in the forecast because it is imperative that they make it to work to open the mountain and keep it running. However, this gets costly. I appreciate your support of Workforce Housing, and hope you will continue to find areas within the Character Districts to build more.</td>

3/1/2012 Frisbie, Becky Interested Public

I am writing you with concerns I have about some of the verbage in the Illustrations of Vision. After having Hank and Paul Vogelheim at our office meeting yesterday morning, Hank felt an email to you would be justified.

First, one point that was brought to everyone's attention is the phrase "workforce housing" which prevails throughout. What exactly is "workforce housing"? I and many others, feel this needs to be specifically clarified as it can be construed many ways. One, for example, could say our home in John Dodge is "workforce housing" as both Tom and I work. I doubt this is the case, but a specific definition needs to be included so everyone is on the same page.

Secondly, the next area of concern is in Character Defining Features of the area 8 which includes John Dodge. Most specifically stated as "This Conservation Area is characterized by an exiting built form that will become less impactful to wildlife in the future. Subdivision and new development is not appropriate in this area. Redevelopment will result in a reduction of the number and size of buildings, elimination or reduction of fencing, clustering of buildings among existing lots, buffering of waterbodies and wetlands, and other methods of reducing the human impact on wildlife habitat. The goal of this area is to reclaim as much open space and natural landscape for wildlife as possible. Where additional public access is achieved in this area it will be managed to protect wildlife viability." To me, this verbage leaves it very open to many ways of interpretation, including not allowing a lot to be developed or redeveloped! This is quite frightening to me as I feel I live in a wonderful area that has been developed with both wildlife and humanlife in mind. We must not forget that the plan is for the humanlife and making development responsible in a way that allows all creatures to live together!

Please remove this sort of verbage as I think it is detrimental to the process.

I think the plan should be concerned with the parcels of land throughout the valley that have not been developed and those which have been developed responsibly should be left alone.

Thanks for your consideration and I would appreciate a response.

3/1/2012 Wallace, Jim Interested Public

Thank you for your dedication and service to our Community; and for reading this comment.

RE: Willow Street Corridor

The Willow Street Corridor Certified Character District designation, as District 2, Subarea 2.7, is absolutely appropriate and visionary. This designation reflects keen subjective study; an acute understanding of Community Character; considers movement by all transportation modes; envisions the "Complete Neighborhood's" needs & wishes; promotes an attractive & welcoming visual appearance; cleanly enhances local commerce and our tourism economy, and promotes general welfare and over-all human & wildlife safety.

Well done! Thank you,

3/1/2012 Howe, Rick Interested Public

I had to leave to prepare for the NER Centennial Meeting. I just wanted to clarify what I may not have come across clearly as saying. For an elected official to put so much passion as you all do into something like the Comprehensive Plan update, my statement is simply please take the necessary steps to ensure there will be solid enforcement of those Policies that are adopted. It is an insult to your efforts, and the communities vision if what you adopt has no teeth, or the staff that will be willing to enforce it. I probably understand more than most about pre-platted parcels prior to any new adoptions, as referred to with Saddle Butte. I am referring to specifics where someone who may approach a new development, or even redevelopment and look at a 30-50 thousand dollar fine as chump change, vs following the development regulations in the first place (in other words I may chose the the fine as an option to get what I want). This is not an attack on anyone wealthy, as I am happy for anyone who has accomplished success and wealth in their lifetime in order to live their dream. It is not worth going backwards, Bruce mentioned that things are working much better in current situations.

Thank you for all of your valuable efforts,
the maps for character district 10 in the latest draft just released have left out mapping the extensive pathways in Melody Ranch whose access easements were granted to the County long ago and finally recorded by the County against all homeowner’s properties in 2010. Most of these pathways were completed over ten years ago.

These pathway easements were conveyed to the County (who never recorded them until 2010) in 2001 and 2006 by the developer. All of these sections were constructed long ago. One easement was also conveyed in 2008 upon releasing the developer from all future pathway obligations – this included the one unbuilt section along the north side of South Park Loop road (SPLR) in the western section and a small unbuilt connector piece from an existing pathway which brings the total pathway connections to SPLR to three.

I note staff’s legend says the mapping is based on the Pathways Master Plan of 2007. Since these maps show both built and to-be-built pathways - I fail to understand why the pathways (which are public) were not mapped in the recent character map release? Given that our HOA board has made certain arguments to the joint electeds on the wording of “interconnectivity” being constrained to non-motorized pathway connections – I would hope you can clarify staff’s error to the joint electeds as they reconvene on March 14.

I have copied Brian Schilling as he has the most current mapping. Brian I am sure can go over all of these pathways and easements with planning staff if there is any confusion.

Again 90% of the pathways are built with two unbuilt pathway easements granted – one redundant section along South Park Loop road (SPLR) in the western half of the subdivision - and one additional short connector to SPLR from an existing pathway - making the southern connections to the SPL road a total of three – two in the west and one in the east. Of note there is also a public pathway easement across the agricultural open space that traverses Flat Creek between our two housing areas recorded at the same time (2010) conveyed to the County by the owner Paul Von Gontard. That is not noted in the attachment as that is not the HOA’s property – it was built many years ago.

In summary I want to emphasize that the pathway easements already granted - and not mapped on the recent character maps: connect the entire subdivision (pathways completed), stub out to the north in the western section (pathway completed), and in three locations (two completed) connect to South Park Loop road in the south on both sides (east and west of Flat Creek) of our subdivision. In addition the pathways (pathways completed) run continuously to the local convenience along HWY 89 - completing our connectivity via pathways to those amenities.

Please clarify staff’s oversight in not mapping the various extensive built public pathways and easements in Melody Ranch to the joint electeds before March 14 since our HOA has made a specific request for changes to the map language on interconnectivity that relate to these pathway systems. I have copied the joint electeds on this message.

I am sure this is just an oversight given the complexity of the maps and volume of work - but the correct mapping is crucial to the joint electeds understanding our repeated requests to them on constraining interconnectivity in district 10 to non-motorized pathways.
Alex – thanks for verifying the inadvertent slip on mapping the Melody pathways.

On interconnectivity - staff may want to consider a global solution since the term - and the yellow circles - are used on a majority of the maps – although the unique language in area 10 and subarea 10.1 is more specific than any other character district – and strongly infers roadway interconnectivity. Most other districts talk about pedestrian interconnectivity.

I would hope the electeds will adjust district 10 language emphasizing pathway interconnectivity.

The term interconnectivity and the yellow symbol is perhaps confusing as in various areas it can mean, or infer, either pedestrian, pathway (includes equestrian and bike – not just pedestrian) – along with the most controversial for southern South Park - roadway. Assuming the commissioners agree to the change - especially since some felt it had already occurred – area 10 language could be adjusted to clarify pathway interconnectivity.

Meanwhile staff may want to think whether elaboration of the legend on what the yellow symbol means would help interpreting its use in various districts.

Currently the legend only has the following brief explanation:

• Improved Interconnectivity: An area that will be characterized in the future by increased interconnectivity.

There is an exponential jump when one moves from the goal of pedestrian - to pathway - to road interconnectivity.
In reviewing the Illustrations of Our Vision (IOV) I have taken note of Section 8.1. This sets forth the planners’ vision of what they would like to implement in the District 8 area, specifically calling out the residential areas of John Dodge, Tucker Ranch, Linn Ranch and Solitude. The language in the paragraph states:

“This CONSERVATION subarea is characterized by single family homes on multiple acres adjacent to the Snake River. While this subarea is largely developed, it is increasingly inhabited by wildlife. The goal of this subarea is to reclaim as much open space and natural landscape for wildlife habitat and movement as possible while respecting existing property rights. The built form should become less impactful to wildlife in the future. Subdivision and new development is not desired and incentives to reduce density and human impacts on wildlife habitat through redevelopment should be explored. Additional public access to the Snake River should be designed and managed to protect wildlife viability.”

First, OMISSION? Why does Section 8.1 only reference John Dodge, Tucker, Linn and Solitude? According to the map, District 8 includes the following subdivisions and land parcels: RLazy SSubdivision, Yodeler, Lake Creek Ranch, Rocking H, John Dodge, Homestead, Wilderness Ranch, Tucker Ranch, River Springs, River Hollow, Pine Meadow, Wildwood, Teal Trace, Crescent H, Fish Creek Meadow, Eagle South fork, River Meadows, Ely Springs, San Rodo Ranch, Indian Springs, Bar-B-C, Bar-B-Bar, Bear Island, Woodside, Snake River Woods, KKR Ranch, Solitude, Owl Creek, and North Meadow subdivision. Why are these areas not mentioned?

Second, CONTRADICTION? Is the goal for wildlife habitat not already being achieved in this friendly habitat? Your document’s words: “While this subarea is largely developed, it is increasingly inhabited by wildlife.” Even more puzzling: “Additional public access to the Snake River should be designed and managed to protect wildlife viability.” Yes, additional people and lots of loose dogs certainly enhance the wildlife experience. Is there any doubt the County can successfully design and manage the impact?

Third, PROTECTION? I am not sure that I fully understand what the planners have in mind. In studying this language it would appear that they envision adopting new regulations that would change these neighborhoods in ways that no one, except the planners, has ever contemplated. What they clearly imply is that for any land use application in District 8, they will insist that homes be downsized, clustered or, in the worst case, removed -- all in the name of protecting wildlife. This is just ridiculous and frightening.

When the County and Town embarked on this new plan, I do not believe there was ever any input from citizens in all of these residential communities that would have given a shred of credence to the planners to justify proposing these radical actions for solidly established neighborhoods.

In addressing the John Dodge Subdivisions specifically, these parcels have been developed over forty years with some of the strictest covenants in the county -- small building envelopes, restrictive fencing requirements, limited domestic animals - all for the purpose of wildlife protection and quality of environment. People have bought and built on their lots with the peace of mind that they know how the neighborhood will look, now and in the future. I can't conceive of what the planners could dictate to make this area "less impactful to wildlife" and find "incentives to reduce density and human impacts" except to forbid any redevelopment and remove the human element entirely. This would support the planners' axiom: "Subdivision and new development is not desired".

If this is the direction the Commissioners are willing to bless and authorize, then Nelly Bar the Door. Our community will really have something to discuss.

CONCLUSION:

I respectfully request that the current language be replaced with language that states that existing neighborhoods within District 8 will be considered "stable" areas. Either remove the specific reference to John Dodge, Tucker Ranch, Linn Ranch and Solitude or put in all of the names of the residential areas in District 8, including the unplatted but developed areas.

Finally, clarify the intent of the wording in Section 8.1. As it now stands it is vague, contradictory and ambiguous at best. At worst, it leaves the door wide open for homeowner uncertainty and bureaucratic mischief.
2/28/2012  Salter, Andy  Interested Public

I have just reviewed the "Illustration of Our Vision" document posted late last week on the Comprehensive Plan website. While I have a number of concerns about various aspects of your latest effort to revise the Town of Jackson/Teton County Comprehensive Plan, I wish to highlight one area of particular concern. Regrettably, the concept of encouraging 'connectivity' between subdivisions remains in your draft plan despite numerous critical comments during this lengthy process from me, from my neighbors and from various Homeowner’s Associations in South Park. Your latest draft still speaks obliquely about a goal of 'connectivity,' and in particular, in Policy 7.3a of "transportation connectivity." Section 10.1, defining the features of Southern South Park, states: "In the future, residents should be able to travel between existing subdivisions and access nonresidential amenities on the highway WITHOUT USING THE HIGHWAY OR SOUTH PARK LOOP ROAD." (Emphasis added.)

Once again, I urge you to remove ALL references in this plan that urge or suggest an 'interconnection' be developed between subdivisions in South Park such as Rafter J and Melody Ranch. While the general concept of walking pathway interconnections may well be appropriate in the Plan where technically feasible and legally permissible, I and my neighbors in Melody Ranch are vehemently opposed to applying the concept to these two established neighborhoods in the form of a roadway connection. Doing so would ignore the established wishes of the residents of South Park and would unlawfully ignore established property rights. I continue to strongly believe this concept to be an unworkable, divisive and unrealistic goal. It would require a very costly, questionable and controversial “taking” of private property and recreational open space. It also certainly invite costly and protracted litigation.

The Melody Ranch Homeowners Association already conveyed to the County a non-vehicle access easement to our pathway system with connections both on the north and south for any future pathway connectivity. A fundamental premise of the revised plan from its inception, as I understand Commissioner Phibbs to have continually emphasized, has been to respect existing private property rights. Broad and vague “connectivity” language does not accomplish and indeed flies in the face of that goal.

As I have consistently advised you in my written comments, I sincerely appreciate your efforts to preserve and protect the unique and special qualities that have drawn all of us to Jackson Hole and that has drawn my neighbors and my family to South Park. Where ever it has come from, please strike the roadway connectivity concept from the final version the Comprehensive Plan.

Thank you for your consideration.

2/28/2012  Whetzel, Josh  Interested Public

I have read thru the Aspens character district. When do you actually put the policy objectives into numbers of and types of residential units to be allowed going forward? And where will this activity take place?

2/28/2012  Ross, Slade  Interested Public

I am surprised to see this called “Our Vision” when those of us who live in this district have not been listened to! My family is one of the largest landowners in this area and thus we will be impacted substantially by these “visions” which are not ours. This area is one of the last and best places for more complete neighborhoods. If we were allowed to have some conveniences in this neighborhood, it would reduce fuel usage, animal/vehicle incursions and allow the working people of this county a place to live and work.

This plan is too restrictive and needs to be expanded. The scenic overlay also needs to be removed! This is one of the least scenic areas, especially on the west side of the highway in 7.2. This plan completely ignores the uses already in place!
The Jackson Hole Conservation Alliance is deeply grateful for your efforts to ensure that the Comprehensive Plan prioritizes the protection of wildlife in Teton County. Preserving wildlife is central to the mission of the Alliance, and the new Character District Maps provide a unique opportunity to do a quick evaluation of the expected impacts that the planned development pattern might have on our wildlife.

The Jackson Hole Conservation Alliance is pleased to announce that we have contracted with an expert team from Alder Environmental to conduct a wildlife impacts assessment based on the Character District Maps. Our objective is to provide you with an overview of how wildlife might fare under the new Comprehensive Plan. We intend to provide you with the findings of this study prior to your March 14th meeting, and we encourage you to address any recommendations made in the report. We believe that the Natural Resources Technical Advisory Board has the expertise to review this study on behalf of Teton County.

The Alliance would like to provide you with science-based information on wildlife at each step of the planning process. Although this first study will be fairly general, we are willing to continue to refine this work when you are ready to review and adjust the current zoning maps.

Please contact me with any questions or suggestions about this rapid assessment.

As I listen and talk, and travel around listening to neighbors, guests, life time residents, I continue to hear the same thing over and over. Who is the WE that wants all this up-zoning, who is the WE that can't get along with our existing plan?

As I drove to Teton Village the night of February 8th and saw the freshly killed calf moose, I was trying, as I have been for the past 6 months to think of my comments to you all after attending one of your plan meetings, my comments began to form. It wasn't until I arrived at Shooting Star to be greeted with the foulest sewer odor, I am not kidding when I say it made my eyes run and my stomach turn. Then I went to the Mangey Moose where the smell permeated the entire building. It was disgusting.

My comment was born. Until we upgrade our Sewers at both the Pines and the Village, and do something about the carnage and traffic on the Village road and 22 you have no business up-zoning any areas on the west bank. We have been good stewards to the HA, we have both affordable and attainable in Wilson and Teton Village. We as tax paying citizens have done enough to help provide housing. No one bought me a house, or gave me a subsidy. Enough. The people of Teton County are speaking loud and clear, we like our little county as it is, some of us can say you are all in our back yard. We were here first. There is not one property owning citizen in Teton County that deserves to have the zoning changed in or around their neighborhood.

PLEASE KEEP THE WESTBANK STABLE.
This plan, if adopted and followed, will create a homogenously overdeveloped Jackson Hole; one where the fate of each development will remain at the whim of the elected officials who approve or deny it. Who wants THAT?? Maybe a corrupt developer or greedy landowner who stands to benefit from an upzone, but not your local residents who actually live and work here, and who make up most of this valley’s community and most of its homeowners.

In this version of the Comp Plan, I do not see any real protections, especially for rural and conservation areas, which are in need of the most protection. The Plan’s content when you get right down to it is pure fluff with no teeth and no way to enforce any its the zoning districts, proposed rules, concepts and ideas.

Put some teeth into this document and you’ll finally see what real community support feels like.

The Planning Commission should not have given in to pressure from above and recommended approval of a plan it wasn’t completely comfortable with.

This plan should not be forced through the political approval process until it is truly a document this community can contentedly live with.

Currently, most people who live in JH believe this plan is severely flawed, vague and a generally useless document that has no enforcement provisions, too many development loopholes and no protections for the subdivisions they live in and have invested in.

As you have heard countless times, people currently feel a sense of instability and have no idea what to expect for the districts they live and work in. They have no idea whether their home will soon be surrounded by more dense development, whether the quality of life they purchased when they bought their home in a subdivision will continue. Whether their zoning will change at the whim of elected officials at any given time.

Zoning that exists should remain static; upzoning an already approved, existing subdivision or area is ethically wrong for the people who purchased homes there. And for the values determined by the original subdivision and covenants. Homeowners buy the type of home and quality of life they enjoy. Changing the rules on people who have invested everything they have in their home and property is purely WRONG.

We’re not talking NIMBYS or folks who have second homes here. So, please don’t even bring that up. We’re talking about YOUR AVERAGE WORKING RESIDENT OF TETON COUNTY!

What is the point of a rule or a zoning district if it can be changed? Ask someone you know who is religious and you’ll never hear that the doctrines, rules and commandments they live by are changeable.

They are set in stone. Or in books that are considered sacred.

The basic, fundamental laws that citizens follow in this country are not changeable - burglary, assault and battery, homicide, these crimes will continue to remain just that, crimes.

Comparing zoning to the weighty issues mentioned above may seem trite. But please remember that people treat zoning as a RULE, a fixed rule, put in place by their government. It is not viewed as something that is changeable. Only those who have witnessed an unwanted upzone where they live get wise to this practice and become wary. Unfortunately, many in this valley are now wary of a toothless, weightless Comprehensive Plan that allows these kinds of fundamental development changes to a place we live in and cherish.

It is appalling how much money has been spent on this Comp Plan process and how little political will exists to create a document that has teeth and enforcement capabilities. The money would be well spent if our community ended up with a document that guides our valley’s future development with enforceable rules.
Instead, if this document is approved. Our valley will be in the same boat as always; each and every development decision will continue to lie solely with elected officials’ interpretation of the Comprehensive Plan, whatever that may be at the time.

There IS one consistent feeling among people who live in our passionate community: DISLIKE OF THIS CURRENT INCARNATION OF THE COMPREHENSIVE PLAN. And a thorough distrust of the political process this plan is moving through.

It would be great if, for once, decision makers actually listened to these consistent shouts from the community.

I have recently seen a “Statement of Intent” document that should be included in the new comprehensive plan. It is intelligent, simply states the goals of the valley, and brings to light the achievements that you and the community have been working on for the last four years. It should be added right after the acknowledgement page. (I searched but my name is not acknowledged) This is a no-brainer guys. As this “Statement of Intent “ circulates in the valley and builds momentum you all are going to look like cross eyed dragons for not putting it in.

What are you going to say? Gosh, I didn’t understand it, or that is not our intent.” Please.

Take the high road boys (and girl) and let’s get on with it.

We want to express our deep disappointment with the plans for further growth and increased density in Jackson Hole, especially along the Village Rd. As frequent visitors to Jackson, we can tell you that destroying what appeals to us and the thousands of other area enthusiasts would seriously hurt your tourist trade. Perhaps even more importantly, we believe the effect on wildlife would be disastrous. Jackson Hole has always been a retreat for us. It is a place for us to unwind and truly appreciate the beauty of this great nation. A significant part of that is seeing the wildlife that abounds. Where will these awesome creatures go?

How can you bow to the self serving interests of developers and ignore the people who live and work in the Jackson Hole area? How can you justify making Jackson unattractive to its loyal visitors? How can you live with the responsibility of destroying the habitat of some of the most beautiful animals on earth?

We believe the 1994 Comprehensive Plan should more than suffice and that the Commission should abide by that plan. Please think about this carefully.

It’s hard to resist big money - especially in this country, and more specifically, in this county. But we are fast destroying what we love in this valley. I know you’re faced with development pressures and the developers are the ones who populate your meetings. Please be steadfast in your convictions to preserve this valley. You’ve all paid lip service (at a minimum) to this philosophy, and some of you have certainly done more than that.

The bottleneck that inevitably occurs with growth is certainly a mighty uncomfortable thing for planners to deal with. But it is a necessary part of HOLDING THE LINE. We’ve lost so much already. The eutrophication of Fish Creek is a reality, and just a few years ago it was held up as a shining example of small town, pristine waterway health. How many dead moose have I personally witnessed on the Village Rd. (dozens)? The Snake River levy has become the stomping ground of paid dog-walkers. They have displaced all but the aquatic and avian wildlife, but negatively affected those populations as well.

Hold the line! I don't really care how it's done. It doesn't matter in the long run. Lots of damage has already been done. No more.

I am writing to express my appreciation of and support for local workforce housing efforts such as that of the County Housing Authority. I have worked at the Jackson Hole Mtn. Resort year-round for over twelve years, and being able to purchase an affordable home on the Village Rd. two years ago allowed me to stay here in the Valley. The expense and hazard of a long commute likely would have driven me from the area. I hope local elected officials can continue to support this much needed option for workers who wish to remain in this beautiful area.
I HAVE READ AND RE-READ THE CHARACTER DISTRICTS AND STILL DO NOT KNOW WHAT THEY MEAN FOR US. CAN YOU GIVE ME SOME IDEA OF WHAT IS GOING TO BE ALLOWED ON OUR PROPERTY?

Thanks for taking the time to read my comments. Pam and I have attended numerous meetings, written multiple letters and comments and voiced our concerns on repeated occasions. The "node concept" was soundly rejected after the release of the 2009 maps. It was recently repackaged under the label of "transitional" character district in the release of the Vision Maps. Thankfully, the Joint Planning Commission has rejected the attempted up-zoning of our neighborhood, District 12.2, and has recommended the preservation of our STABLE neighborhood. We appreciate the Planning Commission's consistency and urge the Board to preserve our neighborhood character.

Pam and I have lived and owned property on the Teton Village Road since 1977, have raised our daughters here and have always volunteered our time and efforts towards making Jackson Hole a better community. Since 1978 our Raintree neighborhood has been zoned Single Family Neighborhood Conservation. We have invested our resources based upon this zoning. Our neighborhood is comfortable, modest, charming, and typifies Teton Village Road character.

Re-zoning our neighborhood to "transitional" would hold us hostage to the angst, uncertainty, divisiveness, and prolonged battles as speculators attempt to overturn existing private covenants and restrictions, subdivide platted lots, abrogate dedicated open space, and ignore other legal impediments. Private contracts and land restrictions will always prevail over the zoning power unless the County intends to condemn property rights. One of the central tenants of the proposed Plan is to preserve community character. Teton County neighborhoods represent the fabric, charm and uniqueness of our community character. It is a huge mistake to shoehorn contrived urbanized neighborhoods into existing successful rural neighborhoods.

We feel strongly that you should leave density where it exists today and allow the market place and private voluntary negotiations, with proper regulatory incentives, to achieve protection of the values we all cherish. Market forces will properly address cyclical housing gluts and shortages. There is no need to panic and artificially disrupt existing neighborhoods in an unrealistic attempt to achieve short term social goals.

Finally, we all know that the Housing Authority made speculative and imprudent, perhaps illegal, land banking investments. Please do not try to vindicate their bad behavior with the stroke of a pen. It is disingenuous to upzone an entire neighborhood dominated by platted and restricted lots just to upzone an isolated parcel property purchased by the Housing Authority. Doing so will only encourage spot zoning and the destruction of existing neighborhoods.

We, like you, are exhausted by this arduous planning process. However, we hope you will carefully consider the enormous impacts your decisions will have for years to come. Thanks again for your time.
Unclear and Problematic Character Map Language for District 10 - South Park:
In the introduction of the character district maps for area 10 (South Park) the following phrase occurs:
• "Future character will also include improved interconnectivity and internal connection to the commercial amenities along the highway."
In the written description for sub-area 0.1 - Southern South Park - the following phrase occurs:
• "Residents will be able to travel between existing subdivisions and access nonresidential amenities on the highway without using the highway or South Park Loop Road."

On the map for this district a very large circle in Southern South Park is placed - the legend indicates this circle to represent:
• "Increased Interconnectivity"

Melody DOA Request for Change:
The Melody Ranch HOA board, on behalf of its membership, once again requests that these three sections be clarified so that interconnectivity clearly is identified as non-motorized pathway, and not vehicular road, interconnectivity.

Rationale for Change Request:
Our board submitted verbal and written comments in June 2011 to change the language to clarify that pathways are more suitable than roads to achieve interconnection between the various neighborhoods in Southern South Park. In addition last June two members of our HOA legal subcommittee, Marv Heilson and Andy Salter, also delivered public comment on this issue.

Our HOA board supports the premise from a design standpoint, of having new subdivision roadways interconnected. A premise of the plan though was to respect existing private property rights. Our concern is from a legal perspective - does the County intend to put as a policy goal a contemplated action that would require eminent domain takings and condemnation?

The Melody Ranch HOA has opposed in the past any takings to achieve road connectivity going back to Teton Meadows Ranch. In reality connectivity would require the use of eminent domain by the taking of dedicated open space, scenic trust preserve properties, wetlands, several homes lots and homes - as well as the purchase and taking of the entirety of the private roads within the Melody subdivision. Not only is that financially unachievable - is it clearly legally challengeable.

Interconnectivity Opportunities Already Exist:
Non-motorized pathway easements already exist both north and south in Rafter J and Melody Ranch subdivisions.
Our HOA has already conveyed a non-vehicle access easement to our pathway system to the County with connections both on the north and south for any future connectivity. That easement does NOT allow for any vehicle traffic except as related to pathway maintenance. We do not want the County to consider changing that easement, through a takings process, into a vehicle easement - even if it was for transit. In addition we do not want any of our recreational open space, scenic trust preserve lands, wetlands, private lots and narrow private roads to be taken for what would become through traffic from South Park Loop road to Rafter J.

You cannot force a taking of private property after the fact. The reality is there is no way to interconnect our Melody Ranch roads without taking both private homes and crossing permanently protected recreational and scenic trust preserve open space lands and the filling of wetlands (eastern section) - while dumping traffic onto a narrow private road system.

Meanwhile an opportunity already exists in both Rafter J and Melody Ranch with connections both north and south for future connectivity to their public non-motorized pathways systems.

In closing we request that you clarify the maps for district 10 so that interconnectivity unmistakably is identified as non-motorized pathway, and not road, interconnectivity.

After looking at areas like Park City, Vail, Lake Tahoe, etc., and having a home in Mammoth, Ca, my husband and I found Jackson Hole. It is the pristine, beautiful mountain area we were looking for. Not over-developed with so much density that ruins areas like this. Please keep the character of the valley special and do not support the increased development of the New Plan.

As a business owner here in Jackson I would like to thank you for your work on the Jackson-Teton County Comp plan. I know it has been a long process and I appreciate your time and efforts. The current plan keeps in mind the wishes of our community while allowing Jackson to continue to grow and prosper. We must balance our need to protect our wildlife and scenic landscapes with allowing our local economy to grow and businesses to thrive. I believe the comp plan accomplishes this.

I ask that you stay the course and support the plan as it is written.

My name is George Dykes and I’ve been a resident since January 2007. I’m writing to thank each of you for your hard work on the Jackson/Teton County comp plan. I’d also like to encourage you to pass the plan as is. I think the plan is balanced and fair and think you’re on the right track. Thanks again for what you do
Over the past four years I have attempted to stay involved in the process of developing a new comprehensive land use plan for Teton County, a task that has been quite arduous. Now that the process is nearing completion, it seems that there has been a complete reversal of the planning commissions’ recommendations in 2011. We are now back to the “nodes” concept, disguised by the name “community character districts”. This, with its attendant concept of downzoning rural lands, just does not make sense. I acknowledge that the Planning Commission has modified some of the areas, but I would be remiss to fail to speak to these issues as they move to the Commissioner’s desk.

While I understand the desire to move density from the rural areas to the developed areas (nodes), I believe that the impact on established neighborhoods far exceeds the benefits gained by moving that density. This is particularly true for the Aspens/Pines node that seems to float in and out of the planning crosshairs.

The Aspens’ area that the planners have designated as transitional is anything but transitional. It has been a stable area for more than forty years thanks to consistent zoning regulations applied since the adoption of the first plan in 1978. It is characterized by grandfathered commercial and single-family homes, all of which have functioned well for the community over the years.

The only thing transitional about this neighborhood is the pen that the Commissioners can wield that would, in all likelihood, destroy whatever character our community now enjoys. If this occurs, it will unleash a series of unintended consequences on the residents of this area. First, it will undermine the predictability of what is going to happen to every neighboring property. This will immediately cause a chilling of the market because each property will be changing character - transitional. Uncertainty is the devil in any market. The buyers attracted to this type of market will be the speculators; this will further undermine our community and cause enormous conflict and angst for the residents.

I have seen the rendering in the report, “Illustrations of Our View,” that shows a neat, orderly development of multifamily units within a new road system. What is tragically absent is any acknowledgment that there are probably 30 different landowners involved in this tract of land, all with different objectives. To accomplish a comprehensive plan for this area, all parties would need to be in agreement. The likelihood of this happening is almost zero. The unfortunate consequence will be sporadic spot zoning and hodgepodge development. One might cynically say that what exists there now is hodgepodge, but it is stable and predictable. It is a mature, comfortable and highly likeable community. In the absence of a Teton County Redevelopment Authority with condemnation powers and a lot of money, this whole experiment of large scale redevelopment will be a colossal mess.

Also I seriously question the safety of proposing an urban node with a main highway arterial running straight through it with a design that encourages east/west pedestrian traffic across this major north/south highway. We already kill a lot of wildlife on this road, and with this plan it looks like we may just add a few pedestrians to the mix. This is very poor design and planning.

Besides the impracticality of the plan there are also the macro problems with this proposal. There will be added traffic congestion on the Village Road; pressure on the already-crowded Wilson School; demand for more commercial services due to increased population; impacts to water and sewer services on a system that was not designed for this size population. In short it will be shoehorning density into an area that was zoned and built for the existing population.

This simply is not what these families ever imagined. This is an irreparable cost to these folks and it is not worth the perceived benefit to be derived from the protection of other rural areas.

I believe the whole premise of moving density from the rural areas is misguided. Responsible development in the rural areas can be done without damage to the wildlife. What is required are good covenants, reasonable County Regulations and enforcement designed to encourage peaceful coexistence with wildlife and people.

I began developing the John Dodge subdivision areas 33 years ago and have lived in the area since 1979. Over that period of time I have seen the wildlife thrive, even as the lots were sold and houses built. When I first moved into the area there were no roaming elk; now there are herds of over 100. It has been a constant habitat for moose. When I moved in there were no trumpeter swans; now there are regularly 5 to 10. I have observed grizzly bears, black bears, river otters and cougars that I have never seen before. The idea that you have to move density out of the rural zone to

<td>Walker, Kristin</td>
<td>What has worked for land preservation are the Land Trust and the Teton County Scenic Preserve’s activities, and one of their major tools has been the PRD. If this is taken away, one of the few tools that really accomplish land preservation will be taken away. As elected officials I recognize the countless hours you have spent on this planning process. I would only remind you that many, many county residents have also invested time and effort to inform your decisions. Now it is with a sinking heart that many of us feel our input, and that of your planning commission, is being dismissed at the eleventh hour. Please take a careful look before you adversely impact our “community neighborhoods” forever. I would like to thank all of you for your continued efforts on the Jackson-Teton County Comp plan. I know how much time and effort you all have put into updating this plan and ensuring it meets the shared goals and values of the community. I believe the comp plan in its current state does just that. It is a fair, balanced and measured plan which will serve our community well for many years to come. I encourage you to support and pass the comp plan as is. Once again, thank you for all of your efforts.</td>

<td>Hawtin, Bruce</td>
<td>As far as all the issues you deal with, I guess the comprehensive plan floats to the top these days. Even though I have attended several sessions over the years and spoken to several of you personally, I have been very remiss in not being either more vocal or corresponding as often as I should have. I apologize for that. Overall I am very pleased with the process, although lengthy, and with what the final product will look like. At the joint planning meeting last night, I left early as I had heard most of the comments before and it seemed as though there are those that just have to be heard even though they repeat themselves. The usual players were there. On my way home I thought of two comments that I wish I had thought of at the meeting. Other than thanks for the many hours spent by the planning commissioners, I had thought it would have been interesting to poll the audience with two particular questions. One: How many people in the audience have employees? There were three that I could identify; Two: When you leave the meeting tonight, how many of you will have to drive over the hill into Idaho or down valley to Alpine or beyond to get home? I don’t know how many hands would have gone up, but I suspect not many. I know you understand my line of questioning; being able to afford to live in Teton County and absolutely no need for workforce/employee housing. I have had literally hundreds of opportunities to discuss the planning process and those discussions have always been in support of the need for a comprehensive plan. We will have growth in Jackson Hole forever and I want that growth to be sustainable, managed, and controlled. I want the planning document to be firm, but fair and flexible. When I am told that our “Our property rights are being taken away!”, and there is some conspiracy to undermine our rights by the UN, HUD and other federal and international agencies and groups, the answers are too numerous to share and my responses likewise. The bottom line is I am not intimidated by fear and when I feel there is something remiss, I have the freedom to take that concern to one of you knowing full well that something will be done. I may not always like the result but the point being, that my rights are not being ignored. When living in town I was asked years ago about running for the city council and now as a county resident, the same, and my answer has always been, “Thanks for asking, but no!”. I can always give the time element as a reason, as so many do, but the more accurate reason is that if I could be allowed to make decisions only in those areas that I am comfortable with, I would do it, but you all have to wear far too many hats and I could never do that. I respect your willingness to serve this community in your capacities and I sincerely thank you for that.</td>

The Jackson Hole Conservation Alliance greatly appreciates the efforts you have made to more effectively solicit public participation in the Comp Plan process during the last several months. The workshop format that you used for the Character District mapping was accessible to the general public, and generated excellent feedback that have informed your recommendations in each district.

The Conservation Alliance believes that it is important to conclude the Comprehensive Planning process with robust public participation. Currently your schedule of activities seems to limit public input to either being submitted in writing, in personal meetings with decision makers or delivered from a podium in 3 minutes or less. This format effectively excludes many people who are informed and interested, but are not willing to engage in such a formal structure. Public input in this formal structure is inherently less of a dialogue in which people seek to reach mutual understanding, and more a statement of positions that may polarize the community. Continuing to only provide a formal format for the public at this stage in the process will make it very difficult get strong community support for the new Comp Plan.

Therefore, we recommend that you redesign your meeting that is scheduled for March 14th. Please use an open workshop format, in which participants may come and go, and have the opportunity to sit at a table with elected officials to discuss their questions and concerns. We believe this opportunity for conversation will be greatly appreciated by the public, and it will provide you with final round of valuable input before you make your last recommendations. You may then convene the formal meeting later that evening, or a few days later.

We recognize that this will require some readjustment of your schedules, either to add a few hours on the 14th, or to schedule a second day for your final recommendations. However, we strongly believe that it will be well worth your time.

Thank you for considering this recommendation as you look for ways to maintain strong public participation and build support for the Comp Plan.

I would like to echo previous Commissioners’ acknowledgement of Staff and the outstanding job you’ve all done I think throughout this process. This is the third version of this update that we’ve worked on and each one has been better than the last and all three of them were better than the Plan we have in place now, so I’m generally very happy with the direction it’s all gone. I’ll make one comment to the public in general. In the context of this Plan, there’s been a lot of public comment about additive growth. And in the context of this Plan the words permanent conservation and additive growth are almost synonymous. Additive growth is only a byproduct of permanent conservation, so it’s not something that we should be afraid of, it’s something we should be embracing, because any additive growth means that somewhere else there’s some permanent conservation, and that’s our number-one priority. So, I’m...overall, I wish...the only way I think this Plan could have been better—-it’s the best we’re ever going to get and it’s a consensus-based Plan—I wish we could have done a little bit more for the large historic landowners who have been such great stewards of our Valley up until now. But they still have the options they had in the last Plan and the door is not shut on developing new ones yet, so I’m optimistic.

I have lived here off the Village Road, first in the Aspens and then on Cheney Lane, since 1981 when we first moved to the Valley. I have seen the traffic on 390 get increasing more problematic and difficult to maneuver since the expansion of Teton Village. Each time major development has occurred the loss of wildlife and the rural character of this area has suffered. The idea that has been proposed by the planners about adding more density to the Aspens area makes no sense at all. It will place an even greater burden on our road and no one wants to see a 5 lane highway leading out to Teton Village. The plan was supposed to uphold the county's scenic and wildlife values, not dump density in areas just because it “needs somewhere to land”. I applaud the planning commission for their recent vote in keeping this area “Stable”. The task now is to convince the electeds to reconsider this misguided proposal that would dramatically change this neighborhood, Character District 12. Please do your best in having them understand the long term wisdom of keeping any increase in residential density out of the Aspens.

Thank you.

<td>Sturgis, Mindy and Greg Interested Public</td>
<td>I am writing as a concerned resident regarding the proposed re-do of the current Comprehensive Plan provisions. My husband and I are part time residents and own a home in Melody Ranch. We are extremely fortunate to spend half the year here. We've owned property in Jackson since we were first introduced to the area in 1986 and fell in love with the enormous beauty, wildlife, small town charm and especially the vast open space that is so unique to Jackson. I was born in N.Y. and then moved to Ft. Lauderdale in the 70's. Our primary residence is still there but mainly because of close family ties. We have seen the city go from a small town to an unplanned explosion of high rises, traffic and congestion all in the name of &quot;progress&quot; and &quot;economic development&quot;. We couldn't disagree more. Increased urbanization of Jackson would be a crime whether it is on the Westbank or Southpark where there is existing infrastructure. Please keep Teton County a sanctuary for humans and animals alike. It truly is a very special place and it would be a shame to see it destroyed by short sightedness.</td>

<td>2/8/2012</td>
<td>Lockhart, Kelly Interested Public</td>
<td>My name is Kelly Lockhart and I live in South Park. Thank you for &lt;&lt;inaudible&gt;&gt; because of an issue that I have and that is you received comments I think three different times from the Jackson Hole Land Trust and they probably conserve more open space in this Valley than all of us combined, and what they asked you to do was let them stay in business. And what that amounts to is work with landowners to preserve conservation or property conservation easements forever. And what they told you is that the PRD that allows conservation on 35-acre pieces in larger works. It has a long history of working. It works now. It will continue to work. What that means for you is... I guess last meeting, I wasn't there, you took out the 160 acres and you left that open. And what I would urge you to do would be to insert 35 acres where you removed the 160 acres. And while some of you say that is better left to the LDRs, I will tell you that there will be a lot of mischief that will be caused by you removing that and not putting it in the Comp Plan, because the Comp Plan will guide those LDRs, and it's in the current Plan, it's worked, it has kept the Land Trust in business, and it has preserved exactly what you say you want to preserve, which is open space for forever. If you don't do that, you may eliminate a few houses; you may require them to be moved here or there. That won't work. You may down zone it. That won't work. What will happen is you'll eliminate a few houses for a little while until the people change, until the votes change, and then there will be a zone change. There have been two of those since the '94 Plan that have resulted in more development in the Valley than anything else. This is because there were three votes, not three votes at your level but three votes at the County Commission level. So I urge you to just do one simple thing and put 35 acres in where you removed the 160. Now, that will allow the LDRs to continue to allow clustering options, movement of density, and the protection of open space, which is what we all say we want. And I want it as much as the next person. I did note in one of these comments where you talked about down zoning, but the Staff assured you that there wasn't any in this document. I can assure you that if I read it, it is a down zoning, and it is a down zoning to those families that have protected the open space. I have some other specifics. Town, I don't think you should be down zoning Town and I think there are some things that do do that. I mentioned, or I see some language, I'm not sure what having a half circle under future abundance of landscape over built form as the current character to be maintained exactly means, but that has to do with Town, and if we’re not going to have built character in Town, where are we going to have it? So, language like that, even if it is in Town for every district, I think should be removed. My comments from the opening is basically to leave density where it lies. Everyone knows where it is. They seem to be relatively happy where it is. We’ve accomplished a lot of good things since 1994. So, if you leave that, then a lot of the anxiety that you’ve created about where that density might go and might land will be removed. And, at the same time, again, you get 70 percent in a conservation easement and the wildlife appreciate it. I noticed one thing and I haven’t read it all, I noticed that...I will. I know that in Kelly you want to ensure that it’s clear that live/work is not discouraged and I wonder if we might want to not discourage it in the rest of the County also. Thank you.</td>
</tr>

</table>
Good evening everybody, my name is Robert Biolchini. I've got a couple, well, concerns over this Comprehensive Plan and where it’s going and I’m here to make some comments, but more importantly I’d like to ask some questions of all of you. And in the past I asked to have not only you but our County Commissioners and the elected body to assimilate and give back an idea of costs, and I’m not necessarily talking about dollar costs. I’m talking about costs to I guess we the people. This Plan...or in seeking that response I never really got anything that gave me an idea that people were really looking at what this was going to cost us in terms of a community. Most of the people that I’ve talked to with regard to this planning process really aren’t for it. They weren’t for the ’94 Plan; they’re not necessarily for this Plan. And so I started to go and investigate a little bit more. And in that journey I found out that, as we all know, 97½ percent of Teton County will never be developed. And as I start to listen to the language of how this thing is being sliced and diced along the way, all I’m hearing is nodes and open space and let’s take from the people and put it into the collective within the confines of how a committee is trying to determine individual property rights without just compensation. Where I’m going with all of this is, if this Plan was left to a free-market society, all good ideas would surface and all bad ideas would go away. However, what we’re finding is that, if this planning process was a good one, it would have been adopted quite awhile back. However, where I’m starting to see problems and directives on why these processes, meaning the planning processes, get clogged up so much is something that I think some individuals already commented on tonight, which is UN Agenda 21, how it’s infiltrated all levels of planning nationwide, and I would encourage all of you to educate yourself on exactly what UN Agenda 21 really is. It is, in essence, a goal that is put forth by the UN to strip the United States people of their sovereignty slowly over time by way of the planning process. We even have an example here recently that I’d like to bring everybody’s attention to where the people of Teton County are now required to adhere to international codes derived by the UN 21 Agenda and then taxed by these codes, when these codes were never voted on by we the people. And what I’m speaking to specifically, and this is the one example that I found, is the 2006 International Energy Conservation Code amended and adopted the 21st of July 2009 here in Teton County, and this is in fact taxation without representation. Where do these taxes go? What do they go into? Can we have an audit to see where they went, if you are in fact going to take those from us? In my opinion, each piece of property, private property that is, has its own unique merits and it’s the right of the owner of that property to develop within reason—and what I mean by within reason is obviously not to have a pig farm or something like that within city limits—but within reason. And those merits should be drawn upon the free-market society, not by a committee trying to tell you how big your house is or what color it should be or how tall it should be. So, as we start to go through this process, this planning process, that you all are embarking upon and kind of forcing upon us, if you will, what we’re dealing with is the situation that becomes discriminatory. Okay, thank you. It’s discriminatory in that when you all pull out a map and you start to draw lines on a map, you have winners and you have losers, and those winners and losers are...well, you can draw it out in dollar terms if you want...but when it’s subjective, when it’s private property and you’re trying to dictate what people are to do with their private property, I would refer you back to what is referred to in the Constitution as just compensation. And if you all are stepping in to say, well, this development over here gets commercial and this one’s open space, with no regard for the individuals involved, where is the just compensation? And where do you derive that compensation? Does that come from another governing body? Excuse me, does that come from a tax derived from a governing body that we’re supposed to pay along the way? Sure. I’d like to just say that this is a free-market system that we’re in and when I start to look at a lot of the things that we have in front of us, I’m asking this group to adhere to and pay attention to anything that has to do with Agenda 21 and the UN and take it out of this Plan a hundred percent. And with that I thank you for your time.
Hi, Kathy Tompkins, Cottonwood Park neighbors. I just wanted to start out by saying that I really appreciate your patience and all your good work and lots of long nights. Beautiful views and wildlife don’t stop at West Jackson. You also can’t separate the negative impacts of a condensed Town density level subarea 5.6 from established residential neighborhoods and schools by a two-lane road. In Northwest South Park at Town density will degrade the character and integrity of Cottonwood Park and the schools along High School Road. Policy 4.3.a, aims to protect established neighborhoods. It states in the last paragraph character districts will aim to enhance these areas as complete neighborhoods without significantly increasing the allowable density. I think it states that and Northwest South Park is in our district now, District 5, West Jackson, and this policy should apply to Northwest South Park and how it affects our adjacent neighborhoods, because it’s a lot of density if this thing goes through as it is. And, like I said, it doesn’t stop at High School Road. We urge you to take mixed-use small lots and grid, alley terms out of District 5.6 that is Northwest South Park. This language opens the way for Town-level densities and at best a hopscotch inappropriate development that will seriously impact the schools and existing family neighborhoods. Please also delete any extra added industrial to Gregory Lane other than what’s already entitled. I can already see the outcome of these details in 5.6 if they’re not deleted. Investment money will go to projects that look great conceptually but will fail in reality because the funding will end at the street edge. We have seen this in the past, that people in blue-collar working-stiff neighborhoods, like mine, get nailed from both ends with higher taxes and failing roads. We end up with complicated out-of-proportion denying buildings for abandoned holes in the ground that don’t do a thing for safe, walkable streets and a small-town feel. I walked back from Smith’s yesterday on High School Road, which is, by the way, it is point eight miles from my front door, and I live at the west end of High School Road near South Park Loop Road. We are still sharing, through the years, to this day, through this process, we’re still sharing High School Road this time of year with at best two feet between us and the traffic. We will be wasting millions of dollars on new infrastructure in Northwest South Park so I can drive past the convenience store across the road to go to a real store that has more than cigarettes and beer. If and when Town infill is mostly completed and Northwest South Park is needed to permanently preserve other lands in South Park, there should be a residential neighborhood that complements Range View Park density. But first, and I really, really think this is really important—but first make High School Road more welcoming to pedestrians and cyclists so we can walk or bike to the schools, Smith’s and other businesses along High School Road. We are a heartier, healthier breed than the usual run-of-the-mill Wal-Mart shoppers in other cookie-cutter green-field developments. We don’t notice the extra point three miles. Thanks a lot, guys, and again I really appreciate your hard work.

My name is Horton Spitzer. I see very few...I’m from Wilson...I see very few familiar faces. At the last Comprehensive Plan meetings, Rich beat me—my wife and I attended a hundred meetings. You haven’t seen me because I felt very frustrated. Everybody worked very hard on these and within months of that being accepted, there were variations, there was a lot of jams with developers, some with projects that had merit that went for years. This cost us money. This cost the community I think a great deal of lost patience. I suggest that everybody has their day in court, but if you don’t have something in the Plan that says you’re given so much time to present a plan, it may require a variation of some sort, a variance, and okay. But I think something should be considered that you get so many hearings, depending upon the size of the project. Once you pass that, when you come in the next time, [fist knocking] 10,000 bucks there and we’ll hear you. You go back a second time, [fist knocking] 25,000. We have fallen prey to developing and they wear you down. They wear the public down. They wear the Planners down, the Commissioners. And it’s I think a flaw. And we get run by the developers. I’m not saying we shouldn’t develop, but I think the ruled should be firm. I’m not going to name the projects. You know them, the ones that went on for years. I want to...end of that subject. And, lastly, I want to thank you for the consideration you’ve given on the West Bank along the Village Road based upon the feeling that wildlife is our major business now. It’s not construction. It’s not manufacturing, obviously. It’s people come here to see the wildlife. I live in John Dodge and I think that whole corridor is precious. We never had elk migrating through our property but starting at C-Bar-V, the past two years, to wakeup in the morning and find 40 or 50 elk bedded down in your yard is common. I’ve seen migrations of a hundred animals moving through the property. Why that’s happened, I’m not prepared to say, but I think the migration route has changed, so we do have a heavy migration going through that part of our County. And I hope that’s taken into consideration when a development is considered. Thanks for your job, you did a good job. And I do know Mike over here and it’s good to see a familiar face, but let’s not go through what we did before. Let’s learn from our past and figure out how do we keep the Plan you’ve worked so hard for, whether we agree with it or not, from being a Ping-Pong ball when it comes to, oh, here’s just another variance. Thank you.
Hi, Rich Bloom for South Park neighbors. A hundred and seven meetings, four and a half years, I think I've been to 105 of them. Two things. One is just on the record Staff has promised to correct 10.2 to match 10.0 on the importance of the district's open space for wildlife movement. This will fix the incorrect statement in 10.2 that wildlife move solely along Flat Creek, so I just wanted to get it on the record, but Alex assures me that it will already be done. Staff has also promised to correct 10.1 to match the changes Staff has put forward on 10 and 10.2, that whole into and adjacent to existing developed areas. Is that the ?? language? I think Staff is planning new language. Clarify the goal of directing development that does occur into a transition area or clustering it near existing development with the incorporation of permanent open space. So that will apply to all those three areas that have that alternate language. I think that's a good compromise language. I think it respects all of our existing private property rights and it gets to the intent to let those landowners in central Northern South Park to cluster on their own properties. The big mistake and the thing we didn't get to in 5.6 is this clause that's on your modification that says, insert that it develop the subarea should include redundant streets, grids, alleys, small lots and a small area of mixed-use. Let's put mixed-use aside. The rest of that language should be removed, as it's in direct conflict with the existing language. The existing language says a possible location for residential development has a similar density to the adjacent West Jackson neighborhood. And it also says should development be needed, it should be the subject of a neighborhood planning effort so it will get to those details earlier. I talked to Alex at length Monday. I talked to Ben Ellis Thursday afternoon and we just had a hallway discussion. And what really happened there was Commissioner Ellis brought up the idea of shrinking 5.6 considerably by half or more, and perhaps increasing the density as a concept. And that's where he brought in the words of grid and alleys under that concept. It was discussed with that joint group and the group did not push either the grid, alleys forward or a change in the footprint. Unfortunately, Staff made the mistake of letting that language slip through. And by putting through that, and we'll go through these, redundant streets isn't really needed because 7.3.a, says all new developments have to have connectivity, interconnectivity; they won't be dead-end cul-de-sacs, so we have that covered. What grid, alleys and small lots infer to use that in Town, that's AR zoning. That's 16 to 18 dwelling units per acre. By referring to the neighborhoods across the street, you're looking at 4 or 5 dwelling units per acre. And what Ben Ellis—and he's here if you want to ask him—but I think what we were talking about is keeping that same amount of usage. Four to five is eight to a thousand homes. That's all of Melody Ranch, Rafter J and Cottonwood Park put together, which is half the amount you're trying to move around. If this language goes through, especially with the character-based Plan versus a numbers-based, it could infer AR zoning, which is 3000 to 3600 units. So the simplest thing to do is just to take out the grid, alleys and small lots and let that conversation come in in its entirety with the joint electeds so Ben Ellis can talk about reducing the footprint and looking at more density and have that conversation. So, the last thing is...and the same with redundancy. Redundant streets is covered in policy 7.3.a, and we also have that neighborhood planning effort coming up. Meanwhile, Barbara Allen brought up the idea about the adjacent neighborhoods and what that meant. I'm comfortable with the language as is, but I think for clarification you could say, for example, Range View Park, say you weren't talking about the apartment complex that's 24 dwelling units per acre for Ellingwood. So I would hope you would consider that. And then there was a conversation—it was very convoluted, Paul Duncker can fill you in if you want—about how we got to mixed-use. Well, by having mixed-use, that's ?. Mixed-use is commercial on the ground floor; we all know that. And yet we talk about this area being a residential use as its character. So the area is already within walking distance to local convenience. There's no need to have commercial. It would drive traffic into that area, through a school zone, and it would also pull the center of gravity from downtown by having commercial out on the periphery. So I think I would ask that you drop mixed-use. That came out of a County conversation from that because it's incompatible with the rest of the description in that area. That's it. I left that on your paper and thank you for your time as always. And I'm glad you're at the last of your 100 and some meetings.
Armond Acri, representing Save Historic Jackson Hole. We’d like to thank you guys for your efforts; I know you guys put a lot of time into it and we’re close to the end. Thanks for what you’ve done. I’ll focus my comments on items that were discussed last meeting where we feel we’ve gone off track. Area 3.2, District 3.2, Core District, public opinion favors two stories and you’ve gone to three, really question where that came from. Area 4.1, once again, public opinion, 70 to 80 percent favors three stories. This is all from the surveys that started back…and then I heard repeatedly during the open house meetings, and so again I think you’ve strayed off of what the public has asked you to do there. Five point six, redundant streets, grids and alleys, and mixed-use are not compatible with the adjoining neighborhoods. There’s no alleys, I don’t believe, west of Millward, so I’m not sure why all of a sudden we’re going to jump to alleys in that area. That seems like again a ?? And the real question there is why is there so much detail on this when everything else was supposed to be at a higher level? This isn’t supposed to be a Master Plan. I would suggest you go back to the previous statement, which was that it be compatible with the adjoining neighborhoods. That’s a good statement, and when the time comes to develop it, then we can address the detail issue there. Teton Village, we would suggest that you not just limit them to footprint but also put in a statement that any increase in residential must come out of the Master Plan, as Commissioner Schwartz pointed out before. There is a Master Plan that’s also binding, and so just to increase the density there would be a violation of that Master Plan. So, we ask you to go ahead and certify this and pass this along with the comment that you’ve heard the public has concerns about the issues that are not all resolved in the character districts, such as timing of the zoning discussions and decisions, and ask that the electeds resolve that at the next level. Thank you. Keep up the good work.
Well, I, too, definitely want to acknowledge Staff. They’ve done a huge amount of work. I want to really acknowledge the public. Those that have been engaged have been critical for me, very helpful, and I appreciate that. I certainly want to acknowledge our elected officials. They have no easy task yet ahead of them. And I also reflect all the other Commissioners’ thoughts on the tremendous tension in this community between allowing people to exercise their property rights, at the same time, acknowledging the ecosystem that is so valuable to all of us and to the community. And in thinking about that, I jotted down some notes and the notes kept growing, so I’ll read them here. But on any given day of the year any of us can experience the wild of our surrounding public lands, expect to see wildlife, inhale clean air, dangle a line into crystal-clear water, shop at a locally owned store, quaff a locally brewed beer from a locally owned brewery. We have it good. Furthermore, we have a strong and diverse community. From the dishwashers, to the teachers, to the real estate brokers, to the builders, to the financiers, to the third- and fourth-generation landowners, to the retired professionals, there is a place for everyone. This document enshrines balance between our environment and our community. I really believe it does to the extent possible. This document recognizes that ecosystem stewardship is preeminent, that therefore growth should be managed, and that those two efforts taken together will preserve our character. We all recognize that every additional square foot, every additional vehicle on the road, every additional human in Teton County, has an ecological cost. This document recognizes that cost but, more importantly, it recognizes that that cost, foot per foot, car per car, human per human can be reduced, that the ecological cost of someone moving here tomorrow can and should be lower than someone moving here today. On the other hand, this document recognizes the right to property owners. The exercise of those rights can incur ecological and social costs. The exercise of private property rights can compromise the ecosystem, generate growth, and impact community character. Past development did. Past development, under past Plans, placed 70 odd percent of the dwelling units in our County within wildlife habitat and scenic vistas, the very backbone of our ecosystem. Past development and past Plans placed the vast majority of development in the County. In the past, property owners were allowed to exercise their rights without mitigating the cost to the ecosystem and to our community character. This Plan envisions the ideal that new development and redevelopment will recognize and mitigate ecological costs and will strive to enhance community character. To be clear, under the vision of this Plan, development of any degree of intensity can only occur within limited portions of Town and, to a minor degree, in Wilson, the Aspens, and Teton Village. Located on a strong network of public transportation, supported by local services that will be enhanced over time, largely outside of crucial wildlife habitat, these are the areas where it just plain makes sense to have the development that houses our workforce and binds our community together. This Plan strives to conserve the maximum amount of open space possible in our rural County without diminishing the underlying property rights. This Plan does not down zone, though it does ask a lot of our community’s large landowners. Under this Plan, they will be asked to address not just the economic cost of new development but the ecological and social cost as well. Opportunities to cluster exist in this Plan but only when the initiatives to open space are identifiable and substantial. And when all is said and done, this Plan, as structured, envisions an overall buildout less than what the ’94 Plan allows for. Vital to this Plan is that it will be monitored and assessed. Managed growth means that every five years the fundamental tenets of this Plan to mitigate our ecological costs and preserve community character will be evaluated. Key metrics include the 60/40 ratio, development in complete neighborhoods, versus in rural areas, and a 65/35 ratio of in-County to commuting workforce. Many, as have I, recognize that the vision represented in this Plan is just that, a vision. Can it say more? Can it give us more certainty? Can it give us something more substantial to work with, some numbers, something to ponder, some costs and benefits? But let’s consider where we are, what we have, what we are striving for. Our wildlife, our vistas, our elbowroom—these things we take for granted. They are communitywide benefits free and open to all. I can enjoy the open space as I drive south out of Town. You can enjoy the open space as you drive south out of Town. Anyone can enjoy the open space as you drive south out of Town. There’s only one way we can be excluded from enjoying that view. A landowner can exercise their constitutional right to utilize their personal property. Yet, the Constitution also recognizes the right of the community to ask, even to require, that the landowner acknowledge and address some of the costs incurred to the community when exercising those rights. Alas, such costs are often diffuse, intangible, and without price. In other words, they are highly subjective. At what point does the size of one’s house simply cost the ecosystem and our community too much? At what point does the intensity of a clustered development simply cost the ecosystem and our community too much? How many houses built next to mine are too many? One? Three? Five? Ten? How many houses built on the opposite side of the Valley from mine are too many? How long at a stop light is too long? How many dead ungulates on our roadways is too many? Should the span of sagebrush between my house and those houses yonder still be called open space if transformed into the ninth fairway of a golf course? Should a campground populated with small cabins on wheels still be called a campground? Wouldn’t each and every one of us here tonight love a 10-page, double-spaced document that answered those questions in plain English? But I challenge any of us to find even as few as five other people in this room to sit down together and produce such a document. Let’s be clear. It may cost money, plain and simple, for a landowner not to develop their property. Yet, when they do develop, it can inflict ecological and social costs on our community. While these costs may be diffuse and hard to quantify, they are costs. If we as a community want to address them, or avoid them, we can. We can monetize them and compensate landowners for the preservation of open space and wildlife habitat. We can make them temporal and accept slower travel speeds, longer waits and the use of public transportation, even

<td>Stennis, John</td>
<td>Well, I would reiterate Dana’s thanks to all the public who’s turned out to comment on the Comp Plan, the Staff for their immense amount of time that they spent developing this, and then to all the fellow Commissioners for all the volunteer time that they’ve put in. It has been a long process, but I feel like the product that we’re getting from this is really moving us a huge step forward and it is improving a lot of things that we really didn’t like about the ‘94 Plan. And things that we see in the Valley now, that I think there’s a sense that we don’t…you know what you have, so you don’t…you’re worried about what the change will be, and I think we’re doing a lot of good things in this Comp Plan that we probably shouldn’t be so fearful of. You know, unfortunately, I think, to reiterate Michael’s point, that no one Plan can encompass all the ideas presented by the community, but I think we’ve done as good of a job as we possibly can. And I’ll just submit the rest of my comments in writing.</td>
</tr>
<tr>
<td>2/8/2012</td>
<td>Stewart, Peter</td>
<td>I also want to reiterate my gratitude to the Staff and to the public. I definitely didn’t know what I was getting into. [Laughter] And I had been to a lot of public meetings before, and I appreciate what I’ve learned. And tonight’s public comment really illustrates to me the polarity of opinions in this community and affect the impossibility of creating a Plan that has everything that everybody wants in it. It’s just…it’s impossible, I mean, that doesn’t mean what we have is a poor product—I think it’s an exceptional product—but I do think it’s time to move it along to the next phase, to the electeds, and to a discussion of the details of how it’s going to impact the LDRs and that type of thing. But I also do think the character district maps, though imperfect, are a useful tool, because they address one of the public’s main concerns, which is predictability, where it’s going to be. You know, we’re not putting numbers on it, but there’s been really good conversations, you know, ever since we started discussing the character district maps. So, though imperfect, I think they’re a nice tool. So, that’s all I’ve got to say.</td>
</tr>
<tr>
<td>2/8/2012</td>
<td>Allen, Barbara</td>
<td>I am also one of the original members and I also chaired a year of these meetings, and while Michael and I often agree, and I do think that the Planning Commissions have done a great job, and we’ve listened to so much from expert testimony to public comment, etc. It’s been great. It’s been super informative. It’s been wonderful. And I think we all benefit from the different perspectives that these Commissions have, and I think we’ve done a great job talking out those differences. Tonight I think we made great strides. Unfortunately, and I’ve struggled with this since this whole process started, I can’t support these character districts, because I can’t support the inherent philosophy behind them, and I don’t see how a 40/60 goal can be accomplished in any other way than by padding the 60 and taking from the 40. And so, while I think there’s been a lot of great discussion and I support a lot of the things that have been brought up, I inherently stick at that and I think it’s inherently depending upon a philosophy of transferrable development rights, and so I can’t support these character districts that I don’t believe are based on something that works.</td>
</tr>
<tr>
<td>2/8/2012</td>
<td>Hammer, Mike</td>
<td>I was not involved in this process. I came here when the electeds were finalizing the words, but I have worked on the ‘94 Plan and I worked on the 1978 Plan. Interestingly enough, I had a project in 1980 under the PUD Regulations, then the County Plan. They were three pages long and that was it. It’s gotten a little more complicated. I read the character districts as implementing the words of the Plan, as proposed, and as driving future zoning and Land Development Regulations. I’m anxious to see LDRs that incent owners and developers to ?? remarkable things that encourage what ought to be done, rather than saying what can’t be done. And I think this is going in the right direction.</td>

<td>Vanillin, Anthony Interested Public</td>
<td>Hi, my name is Anthony Vanillin. First, I want to thank you guys for your public service. Lord knows I don’t have the time or probably want to take on the task that you guys take on. The previous gentleman here had quite a bit of stuff that I wanted to ask you guys about as much as is supposed to be commentary. I do have one or two questions to whitt. One, the Plan that you guys vote on tonight, is that set in stone? I would like to see it be...that’s my big problem with this. If you guys vote on a Plan and say, here’s the Plan, we’re going to do this, and then six months down the road, we have somebody else come in, well, we’ll just move it over here a little bit and then move it over here a little bit and then we’ll add this and add this and nobody else gets to comment on it, what’s the point of all this? Maybe you guys don’t see what I’m trying to drive at. It scares me that you guys would put together a wonderful Plan, however you may change it, and then just be able to change it later on without the public saying, yes, we want it changed this way and this way without going through this whole process again. And then the second thing is my problem with the Housing Authority. How much authority does the Housing Authority have in this Plan? And then how do we, as taxpayers, hold them accountable? Or how do we hold you accountable to hold them accountable? Because they’re not elected people, am I correct on that? They’re appointed? You guys appoint them? So, who of you guys oversees them that we can say, okay, you’re the person or you’re the person that holds the Housing Authority accountable? Who do we come after to get changes? With that, I know, you guys, it’s supposed to be commentary and you can’t really answer questions, but a couple of points that need to be brought up. Thank you.</td>

<td>2/8/12</td>
<td>Tillson, Becky Conservation Alliance</td>
<td>Hi, Becky Tillson, Jackson Hole Conservation Alliance. This has been the mark of the end of your years and years of involvement. I really just wanted to thank you. I know not all of you have been involved since the beginning, but it’s been a massive effort and you’ve been really responsive to the community and I just wanted to thank you for that. We are ?? Resolution and we’re generally supportive of the direction you’re giving to the electeds, but I have a couple of additional suggestions to add tonight. First, the issue of infrastructure costs, the idea of development paying its own way, was not really covered last time due to time constraints. We hope that you’ll revisit that today. Our commitment to growth paying its way should be included in the introduction to the maps, and we’d just appreciate a little bit of conversation about that. Also from last time, the conversation that was called down zoning, which wasn’t really an accurate representation I don’t think of what the public was asking for, but that was also cut off due to time. In our view, this issues ties into the permanency of open space projection, as well as the idea of producing the overall development potential countywide, and some direction from you guys with regard to that issue would also be much appreciated. Also I’m hoping you will consider adding a statement at the beginning of the maps that clearly establishes the prioritization of wildlife and natural resources. And I know Tyler mentioned that in his presentation, but a real clear statement in there not only that ?? being balanced with the other community goals but that that’s the priority. I think there’s just a little bit different wording that could clarify that. Specific to the districts, looking at District 4.5, which is Karns Meadow. Again, this has to do with balancing. It would be nice if you could clarify that wildlife needs will be prioritized over recreational needs in this sensitive location. A balance right now...it says it will be balanced. I think it’s fair to say they should be prioritized. In District 5.6, I’m just curious as to where the reference to mixed-use development came from, and I didn’t really hear that in your conversation and maybe if you could clarify your intentions around that, that would be helpful. Also in District 5.6, I think we need to clarify the language to say that the desired development pattern is not Town-level density, but rather closer to what the existing neighborhoods around there have, so that we don’t get something that’s super, super dense right there. We support the move to keep the Aspens, 12.2 District, stable, not transitional. As you know, it’s already an overburdened road that has significant wildlife value in the area, so we support that. Lastly, in Districts 2, 3, 4, 5, and 13, those district descriptions would benefit from additional language reaffirming the importance of wildlife permeability. Again, kind of the central goal of this Plan. This is really something that Commissioner Newcomb had mentioned last time that also kind of got cut off due to time, but many areas in our community, even in Town, are either within or adjacent to wildlife habitat and public land, but there’s not a butte in a riparian area for just kind of as open space. It all provides important wildlife habitat, and development does impact that, so if we could mention wildlife permeability in development of those districts, that would be helpful. A lot of the other districts already mention it but these ones didn’t. Thank you again for all of your work on this. We look forward to seeing how these changes are incorporated and I thank you very much for your service.</td>
</tr>

</table>
Hi, I’m Bill Smith. I’ll start with almost an apology that I’ve only dug into the planning documents strenuously in about the last two weeks. I’ve absorbed as much as I can. You, of course, are very conversant with them; I am not. I live in Character District 9 and as I read and reread the text there about Character District 9, I’ll say that things were a bit ambiguous to me. There was little there that I could really say, YES, or NO, to, you know, it was… and also there was a table in there, and I saw other comments about this, that had, you know, solid bullets and half bullets and things like that in the table and, to be honest with you, I couldn’t make sense of that. I didn’t understand what that was trying to say to me. If it said, you know, there were bullets that said this is the way Character District 9 is right now and bullets that, you know, mark certain intersections and that kind of thing, and then a separate table that said this is the way we’re planning it to be with also bullets and proper intersections and that kind of thing, that would have made some sense to me. But I couldn’t discern whether the table that was there was showing me the way it is right now or the way that you would like to plan it to be. Unclear. And that was a general comment about the way this is drafted at this point. To the average reader like me, and I consider myself a decent litmus test, not really easy to read and interpret. The use of acronyms and things like that as well, I would encourage you to, you know, my question, what is a PRD and that kind of thing, go ahead and spell them out. If these are intended to be, again, reviewed by the public, then don’t use a lot of acronyms and jargon that the average reader will not understand. Now, that said, the PDF that you sent out, the packet, or what was on the website there, I perused that pretty carefully and of course most of the content was a compendium of written documents or written comments that had come in, apparently at the January 26th meeting, is that true? And again my earlier question, apparently those comments have not been interpreted nor incorporated into anything that is available to me yet. So, for us making comments tonight, we’re kind of behind the eight-ball to start with in the sense that we’re not seeing the latest and greatest version of the documents. And again a comment for the future, if you do, you know, want public to comment and that kind of thing, take pains to give us the latest and greatest so we can see where it stands right now, not, uh, we’ll get this stuff into it later, you know, that kind of thing. The…tonight of course there will be more public comments that are going to be gathered, including mine, and likewise those are not going to get into the documents tonight obviously and yet immediately following this meeting, apparently there’s a vote of some kind to approve the documents as is. To me that feels strange that there’s an approval of something before it’s in a final form or a final draft form at least. It seems like there ought to be, you know, one feedback loop rather than a rush to vote tonight. I think we all agree that intelligent planning is a good idea as long as it’s done fairly and competently and in keeping with constitutionally limited government. And as I read the documents, of course that was my first reaction about is the government sticking its horns too far into the rights of citizens to control and to use their property. The…neither the…well, the U.S. Constitution, the Fifth Amendment, protects property rights of people who own property. And things like requirements on any government, local or whatever, that say you can’t use a certain proportion of your property, or whatever, folks, it’s a taking of the rights of that property owner. There’s just no two ways about it. And if you say, Bill, you’ve got to reserve 80 percent of your property for an elk migration corridor, personally, I love elk. I’ve got elk all over my property, no problem whatsoever. On the other hand, why should I pay 100 percent tax, property tax, on that property when I can’t even use 80 percent of it? So, it feels like, you know, if we’re going to play that game of putting restrictions on property use, then somebody’s got to pay the price of that and it shouldn’t be the property owner. I’m giving up already. Oh, I’m sorry. Last couple of comments here. This planning process, I’m aware that it does proceed from general to more and more specific and more and more stringent, if you will, in terms of ultimately we’re going to get building codes and ordinances and that kind of thing that are all going to come out of this. And, you know, there is some nervousness on my part about that. Already today we have a UN drafted, drafted by bureaucrats of the United Nations, an International Energy Conservation Code governing what we can do here in Teton County Wyoming, folks. And I’m saying if you observe what the UN does around the world, I’m saying, why is this in my backyard? Why is Bill Smith being governed by a document that was ultimately drafted, or initially drafted by the United Nations, or a bunch of bureaucrats in the United Nations? Aren’t we smart enough to come up with building codes that are particular and right and correct for the place where we live? If that’s where this is heading, I think you’re going to get more and more headwind from me and a lot of other people like me that are saying, wait a second, what is the UN doing in my backyard specifying the building code? I think that’s it. Thank you.

<td>2/8/2012</td>
<td>Moyer, Peter, F.</td>
<td>Sorry, I'll be less windy...Peter Moyer from the Village Road area. Just starting at the north on the character districts—and I'm only speaking for myself—Teton Village, instead of dumping more residential density up there, it would make sense to me...what they've missed up there is having a real Village. And frankly I would love to see more really appropriate commercial zoning, so you don't just have hotbeds up there dumping into other parts of the Valley. I think it makes it a much more quality experience up there, plus in some ways it takes pressure off the roads if you do it right. So, that's one thing. The Aspens, I won't repeat, we've been through all that. I really appreciate, and I think a lot of people really appreciate, your decision when it was time for stability, which is what so many of these neighborhoods want to encourage. Wilson, it's the same thing, you know. You look at Wilson and the Aspens and in terms of creating a lot of new up-zone density in areas that are about 12 to 15 feet beneath the bed of the Snake River right on the Teton Fall just never made a whole lot of sense to a lot of us. I mean, those of us who are there, yes, it's a risk you accept, but in terms of future up-zone density for Wilson, the Aspens area just never made sense. Teton Village is much higher, it's not a problem, even though it's on the Fall. Moving down to other parts of Town, South Park, the Town, to me the key thing is sort of honoring as best you can the sort of wishes and desires of the people in those neighborhoods, so you're not just dumping density from on high from the Ivory Tower where it's really doing it right and making it comfortable for them. You look at what's gone on here and we have a pretty severe recession. What people love is stability. In hard times like this, stability is really important. So, sort of zapping neighborhoods with sort of up zoning decrees coming from on high, I just don't think it's proper at this time, plus the free market actually has been working great along those lines. There's less of a demand on the workforce, we've lost thousands of jobs, plus prices in a free market have come down dramatically. And I've always seen, and I think a lot of people see, Victor, Driggs, Alpine as being part of our community. That's part of our workforce, too, and it just seems nuts to think that by creating new up-zone density, we can compete with prices in Driggs and Alpine and areas like that where they're not deed restricted. They don't need public subsidies. The prices are low. They've got, what is it, 17,000 unbuilt lots over in Teton County Idaho in that region. You know, for us to think we can meet some artificial 65 percent workforce thing just seems crazy, common-sense wise, plus, according to the Housing Authority, the Fall 2010 Report, 68 percent of the households here in Teton County Wyoming work here. That's doing pretty good. I mean, it's really doing well right now and the market has done well as it stands right now. And the second homes, they're not the enemy. I mean, that's part of Jackson Hole. It's a big part of our economy, second homes, and to come up with some artificial workforce housing thing as the driving force to meet some artificial standards just doesn't seem to make sense and it just creates this tension where you're dumping density in neighborhoods. So, thanks, and I apologize if I went too long the last time. Thank you guys for your public service. I mean, it's really appreciated. I mean, we just sort of show up in a cameo appearance; you guys do the work. Thank you.</td>
</tr>
</tbody>
</table>
On any given day of the year, I can experience the wild of our surrounding public lands, expect to see wildlife, inhale clean air, dangle a line into crystal clear water, and finish the day having a locally brewed beer at a locally owned brew pub. This thanks to our unique and sound environment. Furthermore, on any given day I might run into friends that include dishwashers, teachers, real estate brokers, builders, guides, financiers and third and fourth generation land-owners. This thanks to a community that has a place for everyone. This document enshrines balance between our environment and our community.

This document recognizes that ecosystem stewardship is preeminent, that therefore growth should be managed, and that those two efforts taken together will preserve our character. We all recognize that every additional square foot, every additional vehicle on the road, every additional human in Teton County, has an ecological cost. This document recognizes that cost, but more importantly, it recognizes that that cost, foot per foot, car per car, human per human, can be reduced, that the ecological cost of someone moving here tomorrow can and should be lower than someone moving here today.

On the other hand, this document recognizes the rights of property owners. The exercise of those rights can incur an ecological and social cost. The exercise of private property rights can compromise the ecosystem, generate growth and impact community character.

Past development did. Past development under past plans placed 70 odd percent of the dwelling units in our county within wildlife habitat and scenic vistas—the very backbone of our ecosystem. Past development and past plans placed the vast majority of development in the rural county, not in town. In the past, property owners were allowed to exercise their rights often without mitigating the costs to the ecosystem and to our community character.

This plan envisions the ideal that new development and redevelopment will recognize and mitigate ecological costs and will strive to enhance community character. To be clear, under the vision of this plan, development of any degree of intensity can only occur within limited portions of town and to a minor degree in Wilson, the Aspens and Teton Village. Located on a strong network of public transportation, supported by local services that will be enhanced over time, largely outside of crucial wildlife habitat, these are the areas where it just plain makes sense to have the development that houses our workforce and binds our community together.

This plan strives to conserve the maximum amount of open space possible in our rural county, without diminishing the underlying property rights. This plan does not downzone, though it asks a lot of our community’s large landowners. Under this plan, they will be asked to address not just the economic cost of new development, but the ecological and social costs as well. Opportunities to cluster exist in this plan, but only when the additions to open space are identifiable and substantial. And when all is said and done, this plan as structured, envisions an overall build-out less than or equal to what the ‘94 plan allows for.

Vital to this plan is that it will be monitored and assessed every five years. Managed growth means that every five years the fundamental tenants of this plan—to mitigate our ecological costs and preserve community character—will be evaluated. Key metrics include the 60/40 ratio of development in complete neighborhoods vs. in rural areas and the 65/35 ratio of in-county to commuting workforce.

Many, as have I, recognize that the vision represented in this plan is just that, a vision. Can’t it say more, give us more certainty, something more substantial to work with? Some numbers to ponder? Some costs and benefits?

But let’s consider where we are, what we have, what we are striving for. Our wildlife, our vistas, our elbow room—the things we take for granted—are community-wide benefits, free and open to all. I can enjoy the open space driving south out of town; you can enjoy the open space driving south out of town; anyone can enjoy the open space driving south out of town. There is only one way we can be excluded from enjoying that view. Land-owners can exercise their constitutional right to utilize their personal property. Yet the constitution also recognizes the right of the community to ask, even to require, that the land-owner acknowledge and address the costs incurred to the community when exercising those rights. Alas such costs are often diffuse, intangible and without price; in other words, highly subjective.

At what point does the size of one’s house simply cost the ecosystem and our community too much? At what point does the intensity of a clustered development simply cost the ecosystem and our community too much? How many houses built next to mine are too many? One, three, five, ten? How many houses built on the opposite side of the valley from mine are too many? How long at a stoplight is too long? How many dead ungulates on our roadways is too many? Should the span of sage-brush between my house and those houses yonder still be called open space if transformed into the ninth fairway of a golf course? Should a campground populated with small cabins on wheels still be called a campground?

Wouldn’t each and every one of us here tonight love a ten-page, double-spaced document that answered those questions in plain English? But I challenge any of you to find even as few as five other people in this room to sit down together and produce such a document. Let’s be clear. It may cost money, plain and simple, for a landowner not to develop their property. Yet when they do develop, it can inflict ecological and social costs on our community. While these costs may be diffuse, intangible and hard to quantify, they are costs. If we as a community want to address them, or avoid them, we can. We can monetize them, and compensate landowners for the preservation of open space and wildlife habitat.

--- | --- | ---
2/8/2012 | Pierson, Scott Interested Public | Good evening, I’m Scott Pierson. I live and work here in the Valley. I was just listening to Trevor about putting numbers on every area, and if you put numbers on it, you might as well put a bull’s eye on it. Just as with the Aspens, you’ll see each neighborhood rise up and target those areas. I can see the ad in the newspaper, Jackson Hole target over here, 2400 units, target over there, 2400 units. So I’d encourage you not to do that unless you want all this work that you’ve worked on five years just to fall apart, because it will be a reason to protest in each part. It’s just going to happen that way when it happens. It happened already at the Aspens and you pulled back from the Aspens. The reality is the numbers at the Aspens that were projected to be there, it takes two things, at least. One is a willing developer and the other is somebody with the land that’s willing to let it happen. And then you have to say to the community to make sure that that happens as well. None of those three things is here now and I don’t see all three of those things coming in the short-term future. So, when you’re looking 20 years out with those numbers, it’s all going to fungible move around a little bit, so saying 400 here, 800 there, is I think the wrong direction to go. Thank you.

2/8/2012 | Griffith, Gregory Interested Public | Gregory Griffith, West Bank. I couldn’t disagree more with Mr. Pierson. This is a very intelligent demographic of public. We understand the numbers at least as well as some of the decision-makers and we should be trusted with that. I’ve heard elected officials recently say this isn’t a numbers-based plan, it’s a character-based plan. That’s utter hogwash. That’s a derivative of the facilitator. Every facet of planning is a derivative of a number. Even if you’re looking at wildlife, you’re looking at percent above or below an objective, if you’re looking at vehicle miles traveled, if you’re looking at capital improvement plans, population projections—everything is based on a number and we should be trusted with those. The problem with the outcry of the community is the community said from day one they didn’t want additive growth because the need wasn’t there, not because we’re all evil misanthropic mimics. You made me start last week by leaving 12.1 at the Aspens as a naked node, a commercial core that will simply create inflo traffic. It doesn’t stand alone; it’s ?? should actually retake, quite frankly. There’s a lot of questions brought up by individuals in the community here, Kelly and I agree with almost everything Mr. Lockhart said, amazingly. Bill also brought up some interesting.. and I'm glad some electeds are here tonight, because this illustrates how inefficient this process has been. We're still asking and attempting to answer the same questions that we did five years ago. We don’t know the difference, and we haven’t had the studies, and we haven’t had the substantive discourse to determine what is a taking, what is a performance-based incentive, and performance-based property right. But yet we’re talking about all this shifting around and we’re missing the boat on the base premise of this entire Plan, sought from the beginning, and that was permanent protection for our wildlife. In working with landowners who are the stewards of that, I suggested four years ago, and continually suggested, that we have a PRD/transfer mechanism task force so that we could have simultaneously, concurrently, gathered this information, but in the infinite wisdom the electeds saw not to do that out of sheer conflict ??, not because it made sense. Someone could walk up to this podium with a grand unified theory of Teton Village planning and it would be rejected because of political considerations, etc., etc. Anthony, I think I caught the gentleman’s name, brought up one of the big fears moving forward with this Plan and that’s instrumentalism, that we won’t hold to what we say we’re going to do. We’ve seen it happen so often in the past that items that we write in will be selectively interpreted, etc., etc. So, there’s a lot of good comments. One specific request, besides the 12.1, is glossary. Commissioner Mr. Duncer brought this up day one at your...we don’t want to see permeability defined as a five-foot-wide space for a four-foot-wide moose to get through it. We want an actual community-accepted definition. Walkability would be another example. And acronyms that someone from the community mentioned also would be...You know, I brought it up last week about Staff’s numbers. The average from 6800 base property right, how do we arrive at that 11,100 number? There’s about a 45 percent overage in phantom density there, and the only way to refute that is to release the numbers. There are state school sections we know are going to the Park Service. We have NC-SF, RA6, RA3 lot split that don’t have a conducive historic utilization rate to equal those numbers, so it would be nice for you to direct Staff to parse those numbers out so that we can not transfer at the highest level of the scale. There’s one more problem...I could go on all night...but there’s one more main problem and that is the assumption that we’re going to go from 40/50 to 60/40 without going through 50 percent. We’re at 55/45 now. By adopting that 60/40 aspirational goal, it pins us down to operating at the high end of the number scale. Staff’s draft pointed that out, their continuum of choices. The electeds ought to conform to existing policies of going to have to make those high-number choices because of an over ascribing to an aspirational goal of 60/40. Fifty percent would be well within the realm of this Plan. I honestly don’t think by pulling the numbers apart that we can get there, so that’s another substantive change. Thanks.
Good evening, I’m Trevor Stevenson, speaking for the Jackson Hole Conservation Alliance. You all have a number of very specific things you’re going to be working through this evening and I know you’ve just gained a number of other specific things that the public has brought up. I want to put you back at a couple of the really big issues that I think it’s really important that you all, as a Joint Commission, weigh in on, recognizing that ultimately these will be decided by the elected officials but nonetheless that your input is very valuable on this. The first one is to make more clear in the Plan, and in particular in the character districts, that the intention is to shift development around, not to simply increase it in some of the areas, where we’re seeing that clearly illustrated in the maps, but the intention is to balance that. There will be increases and there will be decreases associated with that.

Sort of a statement of intent, clearly put within the character district maps, would again alleviate a lot of concern within the public that they’re not seeing clearly illustrated there the intent to balance increases and decreases in density throughout the County, which I think is an idea that everybody supports. And you’d gain a lot more support for the Plan if that were stated more clearly in there. The second piece that I think is important for you to weigh in on, and I’m not sure really got addressed in your last meeting, was that the Alliance has made a recommendation that you consider more clearly stating the intent around the amount of development in each of the character districts. What we’re talking about here is not buildout numbers, and I know you talked some about buildout numbers last time. But essentially the character districts describe the intent of the future of each area in the County and they describe it in textual terms. It sort of says, you know, the type of development that will be there. We think it would benefit the community greatly and benefit the Plan greatly if you could also give some direction, essentially a recommendation, to the electeds that it would be useful to also include the amount. You hear this consistently from the public and we heard a lot last time about the confusion about the amount of development that was being called for in the Aspens and that caused an uproar. Now there’s confusion about the amount of development that is potentially called for in Northern South Park, Area 5.6. And we can kind of run into this over and over, but I think it would be useful to kind of explicitly name an intended amount, not a restriction, just an intent. So I would ask that you speak to that a little bit. And those are just a couple of the big issues that I think are really important for all of you, as a Joint Planning Commission, to weigh in on, and thank you for your insight on all this.
I'll start. I am one of those people who have been in on the process since the very beginning, since the first meeting at St. John’s, etc. I chaired those meetings for awhile, so it has been a long process, and I think it has been sometimes painful, but a very positive process. I know the public has gotten tired of a lot of this stuff and they’ve made a lot of comment about that, but overall I think that having two boards combined like this, although it’s been very difficult, I think ultimately we brought up some very, very difficult issues that we’ve had to work through with the public. And I think these Planning Commissioners, all of the people who have been involved now and in the past, really have done a good job of working through those. I would say that not...a sign to me of a good Plan is when you don’t get everything that you want, and I can personally say I’ve not gotten everything I want out of this Plan, but I can say that I’ve gotten a lot of what I would like to see for this Valley. And my feeling about that is that I think the two planning boards have listened very carefully to the public opinion. We’ve...boy, have we listened to a lot of public opinion and public comment. And I think overall we’ve done a very good job of taking the Plan that was given us from day one and really, really scaling it back. I know that might not feel that way to a lot of people, but I think that is the overall end result of where we are today, because what we had before is very different from what we have right now. So, overall, I can say I’m overall very happy with moving forward. I think there are...I think this Plan does fix a lot of transparency and clarity problems that were in the ‘94 Plan. I think it is a step forward. I think the challenges that we’ve faced with the public is bringing these issues to light that weren’t identified in the ‘94 Plan. So, by bringing those to light, it causes controversy and question and I think we’ve done a good job overall, the public, Planning Department and our boards, of really addressing very, very difficult issues. I don’t think we’ve fixed everything, I don’t think this is a silver bullet by any means. I don’t think this will carry us for 20 years, but I think it is a very good step forward. A couple more final comments—I know I’m a little long-winded, I’m sorry, but this has been a long process...[Laughter] I do...I think that there’s two things that I would say I’m a little bit...I have a little bit of angst about. My first one is that we didn’t put a little bit more emphasis on property rights overall in the Plan, both in the County and the Town. I think we took a very long hard look at housing, wildlife and things like that, and I think we probably could have gone a little bit stronger on property rights. And my hope in this Plan, and with the electeds specifically, is that, when they look at this, they really take a hard look at those and make sure that those are protected for the public. My other feeling of angst I would say is I think we need...and my advice or solution...my advice to the electeds and looking forward is I think we need to take a really, really strong look communitywide at our housing program. There’s been a lot of public opinion about housing when that came up. We spent a lot of time on that chapter. I know it was a new chapter as of the ‘94 Plan and we have come a long way since ‘94, but I think we’ve gone off our path and I think we need to really take about three steps back on our housing program and the way it’s set up today, and look at how we can come up with some very strong market-rate...or market solutions, free-market solutions. I know there’s members of this public that are here who are on a housing committee that I think came up with some super suggestions on how we can take our program today and make it better, and I think we really...and I would strongly encourage our electeds to take a really hard look at that and make some very, very big changes to our housing program. I think we can accomplish the goals that we want but still have a free-market solution and still get what we want from the public. Overall, I think that’s really pretty much my comments. Overall, I am pleased with where we’ve come. It has been difficult and frustrating, but overall I’m pleased with what the public has done and their input. And I know the faces that are here who have been here as much as we have as well. Thanks to the Planning Department and thanks to all the board members who are here and the prior members who served from day one.

Okay, I just wanted to thank the public and Town and County Staff and fellow Commissioners for all their effort and ideas. And that’s it.

I agree with Rich Bloom and Kathy Tompkins that the trade off for more development in Town and South Park is not adequately guaranteed for more conservation protection. The plan could lead to more development than the community really wants. Hold growth levels to no more than what’s currently allowed. thank you.

<td>Lewis, Richard</td>
<td>My name is Richard Lewis; I’m a broker with Sotheby’s International Realty and many of you guys already know me. And there are just two things that I want to address. You mentioned one of them up here with regard to a PRD and changing that acreage. Over the years, doing a lot of business in this Town, I’ve gotten to know and work with a lot of property owners and I’ve been involved in doing some of the PRDs, and I’ve also become very familiar with values associated with being able to do one with regard to being able to have multiple home sites and the hoops that you have to jump through in order to accomplish these clustered sites on a PRD. And when I start seeing things like 160 acres, even in consideration, right off the bat, I can tell you there’s not that many 160-acre parcels that are even available or exist here, so it almost eliminates any kind of development or PRD situation of any sort. And then if I was an owner of a 40-, 35-, 40-, 50-, 60-acre parcel, acre of land in Teton County, and I see this being considered, I can see that, say, for instance, the number you guys decide is 75 or 80 acres, whatever it is, it’s equivalent to coming in and putting a...the County putting a conservation easement on the property and devaluing it right off the bat, I mean, as much as half, if not more, depending on where it is. And if that was something that was seriously being ready to be voted on, I’d be interested to see all those owners in Teton County what they would really think of their property being devalued right out of the gate, you know, with an action such as that. And the second thing I wanted to speak to is the Housing Authority. I really don’t quite get...I started looking at the money that is...the tax money that’s being given to the Housing Authority just to manage the Housing Authority, not even including the cost of some of the construction and things that the Housing Authority is spending our tax money on. And then I start looking at, as a realtor, I don’t just sell the high-end stuff here, I sell stuff in Teton Valley. Looking for a place for my kids right now over there. I know what’s going on in Alpine. You know, we’re missing the boat I think on this. Those communities should be extensions of us. And, you know, depending on where you are in this community, you’re anywhere from 35 minutes to maybe 45 minutes on average from downtown Jackson. I mean, most people who live in cities, just that’s their average commute anyway. I don’t understand why we don’t sit down and look at the numbers and what is being spent. I mean, you could upgrade the transit system to each one to make it easier and transport more people and spend far less money than we’re spending as taxpayers and burdening current property owners. And especially with the market the way it is right now and as cheaply as you can go over the hill and buy a three-bedroom, two-bath, two-car garage setting on 0.4 of an acre for $110,000/$120,000 right now, and these people would actually own their property without any restrictions. It just seems like a mismanagement of funds and not taking advantage of these communities. And by taking this step, you’re also encouraging the market in those communities, and when the markets come up, you’re going to have more people investing in infrastructure in those communities, which will ultimately make it more attractive to the people who are working and commuting here. Okay, so that’s all I have to say. Thank you.</td>
</tr>
<tr>
<td>2/8/2012</td>
<td>Nash, Paul</td>
<td>I, too, want to kind of mirror what Michael had said. I do believe that a Plan that shows a lot of compromise is a Plan that shows how diverse we are as community, so I would like basically not get into where I think we could have done better or could have done...we definitely could have done worse, but kind of stick to that. What I do want to focus on are going through three sets of thank you’s. First and foremost would be to these committees. I think actually getting involved is the best way to adjust the system, and try and get what you want out of a system is actually to get involved. And seeing what, you know, not necessarily myself, but what everybody else has done and given up, as far as their evenings, I applaud that and I think it’s certainly noteworthy. The second would be to Staff, both Town and County. I think they took most of the heat on a lot of the issues and they bared all of the burden of putting together verbiage and keeping us informed, keeping us on track, and ultimately, in my opinion, providing us with a good document. One suggestion I would have moving forward is that they take this experience and take the time to put together what they think in the future would be a better way to move forward, so it doesn’t take a long time, so we don’t burn out the public, like it’s been obvious, and just so the people that are sitting in our positions right now have a better way. Or maybe this speaks to predictability, a more predictable way of how we’re going to move forward on this Plan in ten or so years in the future. And then the third would be mostly to the public, you know, the dedicated few that are here every night and then also the 500+ others that provided us comments and talked to us on the streets and wrote, you know, wrote in what they were thinking and work, jobs, things like that. So, I think that is ultimately what creates this community, this County, and turns it into something more than just a bunch of people living in an area, that we actually are a community. So, I’ll turn it over to Mark.</td>

Friday, May 04, 2012
I am writing to ask you not to change the comprehensive plan to increase density in South Park adjacent to Cottonwood Park neighborhood and the schools. This whole area is already very, very dense from Indian Trails, through the Blair House apartment complex, the affordable housing developments, Cottonwood Park, the schools and on to Gregory Lane industrial complex, and Smiths shopping center. In the past 12 years alone, I have seen traffic increase and the night sky dim with night light pollution.

I understand that the landowners of NW South Park already have the right to develop their property as a residential neighborhood, but the changes you are discussing could increase the allowable density as well as permit light industrial or commercial development.

In today's persisting economic climate, I do not understand why anyone wants to change the existing plan when there is apparently plenty of room to develop both residential and commercial space in town under the existing plan, and while sales of existing homes and vacant land have plummeted. Whose interests are you serving? I don't know anyone who thinks it is a good idea or even needed.

I cannot improve on the following points, so please accept them as if I had written them.

- We do not want additional density dumped into South Park from anywhere else in the valley.
- The language in NW South Park (sub-area 5.6) needs to be STRICTLY TIED to the minimum amount of growth needed in order to help our South Park rural land owners achieve permanent conservation of their lands in South Park.
- Without this linkage – we do not support any additional density in NW South Park. We do not need any more development, and the sole reason for consideration of the NW corner is to achieve permanent conservation of South Park ranch lands.
- The NW corner of South Park should NOT be developed before the in-fill potential in Town is completed.
- If some development in this NW corner is needed to permanently conserve South Park - then it should REFLECT the mix and density of housing of Rangeview Park and NOT have any commercial, mixed use or light industrial in NW South Park.
- We do not need any additive industrial over what the entitlements already allow in the future on Gregory Lane that would worsen the safety issues for students and families using High School Road. The industrial areas just south of town are the more appropriate place for future light industry.
- Most importantly, High School Road should be a residential and school campus road, period. We do not want it turned into a congested highway collector that would endanger the safety and lives of any school student or family residents living nearby.

Thank you for taking my concerns into serious consideration.

<td>2/6/2012</td>
<td>Creel, Margaret Interested Public</td>
<td>Thank-you for all the work that you have put in over the last number of years to make sure that you come up with a comprehensive plan that speaks to the needs and wants of this community. It has been a long process, one that I have paid close attention to, and one that simply seems to be in constant flux. Although I applaud you in your recent recognition of not increasing densities in the Aspens area, I strongly urge you to not add that density to other areas in Teton County, simply because you “have to put it somewhere”. This is clearly not good planning. In particular, South Park in its entirety is not nor has it ever been the logical place to dump density although there are forces that are arguing to the contrary. As you move forward towards the conclusion and subsequent adoption of the new comprehensive plan, please uphold the map descriptions and delineations that affirm the scenic, wildlife, and ranching heritage values for all of South Park (District 10). In addition, do not even consider putting more density in the NW corner of South Park until infill in the town of Jackson has occurred. This alone could take years. As at least a half century of growth is already entitled here in Teton County, I would say it’s a slippery slope to put together a plan that encourages more density and more development especially given our current economic climate. As much attention has been given to the fragmentation of South Park into the NW portion and other parts, let me be clear in stating that there needs to be significant clarification in the plan that ties any development in the NW portion of South Park to the permanent protection of the rest of South Park. Any development in Northwest South Park needs to be firmly linked to the large rural land owner stewards in South Park achieving permanent conservation of their lands – period. To be quite honest, I do not support any kind of development in South Park. The recent deaths of moose along the Village Road has led to an outcry from many in the community. Why is it that the death of moose elicit more emotion than the death of deer, elk, coyotes, foxes, skunks, owls, hawks, mink and others? These are the animals that I have either seen killed or dead along High School Road, South Park Loop Road, and South Highway 89 over the years that I have lived in Rafter J. These animals are all using the corridors between the Snake River and the foothills to the West and East as well as moving both north and south in annual patterns. They do not understand delineations and designations. Although laudable that you are looking at the importance of the Flat Creek riparian area to wildlife, do not fail to recognize the importance of the larger land area of South Park and the habitat and food resources that it provides. I bet the wildlife that have no voice, will appreciate it. Again, thank-you for the time and effort you have put in towards coming up with a plan that speaks to the better good of this community in the future. Your attention to the importance of wildlife and their movements needs to continue to play a major role in what you decide as you move forward.</td>
</tr>
<tr>
<td>2/6/2012</td>
<td>Lyons, Fred and Dee Interested Public</td>
<td>We have owned property in Jackson Hole since early 1970's, first in the Aspens then over 25 years in John Dodge and now are permanent (and voting) residents in Lake Creek Ranch. All of these locations involve travel on highway 390. It is inconceivable that planners and officials can think about, let alone initiate plans, to increase the density of homes and especially traffic in this area. One only has to travel on the highway to understand that additional traffic is not only undesirable but also risky to wildlife, the safety of persons and the character of the area. We do not want to simply transfer this problem to other areas of the valley. It is an extremely bad concept looking for a place to land. ALL of this valley is a special place and should NOT be subject to urbanized plans.</td>
</tr>
<tr>
<td>2/6/2012</td>
<td>Strawbridge, Robert Interested Public</td>
<td>Jackson Hole is what it is because men like Albright, Roosevelt, and Rockefeller had the vision that this place had a unique combination of natural assets which should be preserved. More growth is threatening to these assets. We are here because of these unique assets and the expansionists want to expand because of them. However, expansion will endanger the very assets which attracted the expansionists and ourselves in the first place. The plan to increase density in the Aspens is only one poor growth idea. Please oppose it. I urge you to vote against all schemes to increase population density in our valley.</td>
</tr>
</tbody>
</table>
| 2/5/2012 | Rockwell, Donald and L Interested Public | We share the concerns of neighborhood groups about your redo of the Comprehensive Plan for Jackson Hole. We implore you to KEEP JACKSON HOLE AND ITS NEIGHBORHOODS STABLE and to curtail the development of the Valley into a more urban community.
McGregor, Bob
Know you're hearing a lot these days - and I thank you for listening
- but it's the same, familiar-by-now story that ordinary people have been trying to get across, since the early days of '08. Wildlife, wildlife crossings, neighborhood character, keeping rural places rural, and of course, my favorite, dumping of density, specifically into South Park.

So, at the risk of redundancy, please uphold the map descriptions that affirm scenic, wildlife, wildlife crossings and rural heritage values of ALL of South Park. Also, any development in northwest South Park needs to be solidly linked to the large rural land stewards in South Park achieving permanent conservation of their lands. Please, Please no dumping of density from places like Buffalo Valley or anywhere else into South Park. NO infill from town should be allowed anywhere until the town infill potential has been satisfied, nor any commercial in S.P. The people are just not into the rampant growth that could happen.

Sorry to be a broken record here but these things are important and we've all slogged through 4 years of this comp plan revision process, to the tune of I've-forgotten-how-much public money. We've lived here 33-34 years, respectively, and have seen so many changes. Please, once again, listen to the common people and take these thoughts into consideration in your deliberations. At the moment we are out of the country and not able to attend meetings, but we have been to so many over the years, and are currently being kept up to speed via emails.

Thank you again for taking the time to listen to 2 more residents of Teton County, and for considering what we've said.

We look forward to resolving these issues soon, as we're sure you do as well.

Greger, Art
I am reading the Illustrating our Vision document on the comprehensive plan. What a beautiful picture of what I believe to be Phelps Lake. This illustrates very well what most people have indicated they want I this comprehensive plan... conservation. The nodes concept has been changed to complete neighborhoods, but the idea is the same. Growth in these areas has been consistently opposed - witness the opposition to growth in the Aspens just this week.

I live in Rafter J and love the quality of life here; I oppose any development of South Park. It is probably the most scenic area that everyone sees coming into our tourist town. It needs to be preserved for its scenic and wildlife values as it is.

I don't believe growth is really needed at this time. How long will the old Valley Feed sit empty? How long will the land west of Staples be for sale? How long will it take to sell the old Mojos, or the old Bubbas? How long will the new lots developed in Rafter J sit empty? When will the hole that is McCabe Corner turn into a swimming pool? How many people are trying to sell existing homes and can't? Infill and improvement are much more needed than more sprawl and area to be developed. A well developed line to the beginning of town exists at High School road, and should be preserved as such.

I see in the plan increased connectivity with roads in the Rafter J area. This has been consistently opposed in the past (when the New Neighborhood was proposed) and will be opposed in the future, I am sure. No one I have ever talked to in Rafter J wants this. There is too much traffic here as it is.

The process has been dragging on for years, and it is still uncertain how many homes, of what type, are going to be put in certain areas? A goal was predictability, and I don't see it. The comments made at the beginning of this process have been consistent, and should still be considered. Most working people don't have the time to follow this lengthy process, but their opposition to increased growth in South Park still stands.

Please focus in conservation, infill of existing areas, and improving existing areas. Please conserve the beauty and character of South Park (and the whole valley for that matter) as it exists. Don't make South Park a dumping ground for unneeded and unwanted development.

van Roijen, Bea
Please reconsider your decision to increase the density on Village Road. We do not want more housing along this corridor. Thanks for your attention.
We would like all of you to know that we very much appreciate the careful thought and intensive energy that has gone into revising the Comprehensive Plan. It has been a long, hard process, but the final drafts seem to be much improved from the originals.

With specific regard to South Park:

We are pleased with the maps that acknowledge the importance of special qualities in South Park (scenic, wildlife, and ranching). Please hold firm to these positives in the final draft of the Plan.

We do not want growth in South Park beyond what is currently entitled, however we support the idea of clustered growth in South Park that is directly tied to permanent open space protection of other land WITHIN the South Park area.

We are concerned about the types of development that may be proposed for the NW section of South Park, and feel that it should be appropriate for a location that is close to existing neighborhoods and schools. This would eliminate any industrial and some commercial activities.

Thank you for considering our comments.

Everything I read suggests that the city and county are in the pockets of the real estate and building businesses. A shame.

I moved here from an upscale NJ suburb with NO open land. The real estate and building businesses did just fine because real estate was in demand and sold quickly and there was a big business inremodels, additions and tear downs. They did not try to tear down big houses and build condos. They respected the character and quality of the town. I suggest that you all do the same for this county and stop trying to make it into a city.

As you (finally!) finalize the Comprehensive Plan revision, please do not give up on South Park and treat it as the County’s unloved stepchild. It would be totally unfair to use South Park as the density dumping ground for more development that no other neighborhood wants either. A lot of us have been reluctantly willing to tolerate some limited additional density in the northwest corner of South Park, so long as it 1) was only used to preserve rural land elsewhere in South Park, and 2) was consistent with the density of the surrounding neighborhoods. But any such development should not precede development in town; otherwise, the whole goal of “Town as Heart” would be meaningless.

When Leland Christiansen was a County Commissioner, he stated at a South Park public meeting that “this is the community’s plan.” Planning Commissioner Patricia Russell said essentially the same thing at a meeting last month. Over the last four years, the community has said over and over that they don’t want more density added to the valley. We already have zoning enough to double the growth we have now; if this is really the community’s plan, how can it identify more “spots” for additional density? The only people that would benefit from more growth are the few large landowners/developers that want to make money at the expense of everything else, including residents, wildlife, and ultimately the economy of Jackson Hole, which is so dependent on the quality of its environment – both natural and built.

The proposed plan started out by offering up South Park as a sacrificial lamb to growth. Over the last four years, thanks to vigorous input from the community, and responsiveness from the electeds, it has been changed to be more responsive to preserving the qualities that make South Park a primary contributor to the overall special quality of Jackson Hole. We’re almost there; please stay the course, preserve the character of South Park and in turn the valley as a whole.

<td>2/3/2012</td>
<td>O'Brien, Kristine</td>
<td>Thank you for your public service and hard work. Current events around the world, and especially in the Middle East today, are a reminder of how fortunate we are to live in a place where public participation is an expected part of the political process. Below are comments on the Comprehensive Plan Draft. A letter similar to the below was submitted to the New and Guide's editor for this week's paper. When the Aspens was delisted as a density target, Planning Commissioner Paul Duncker's response was &quot;we need some other spots&quot;, referring to neighborhoods to which planners could ADD density. It appears the Comprehensive Plan process has become a game of whack-a-mole. Why? The community does not want additive growth nor do we have the funds to pay for the associated roads, sewers, law enforcement and other infrastructure costs, not to mention the costs that are off the books such as the degradation of our environment and loss of small town, rural character. There is already room for a doubling of both commercial and residential development in the pipeline, not to mention a backlog of unused commercial space and a glut in the residential housing market. Who could possibly benefit from adding additional entitlements? The concept of preserving wildlife habitat and open spaces by shifting actual density into already developed areas is constructive and I believe one the community supports. They key is to shift actual density potential, not simply add new density. Adding density accomplishes nothing but sprawl. Right now Middle and Southern South Park are on the maps as rural areas with important scenic and wildlife value to preserve by moving development rights from these areas into a corner of Northwest South Park. If this is done right (i.e. without bringing in growth from elsewhere in The County), permanent conservation can be achieved by clustering units into a residential neighborhood, consistent with Cottonwood Park, the adjacent neighborhood and, most importantly, without adding density. It is important to keep in mind that conservation is the driving force behind clustering neighborhoods, not adding density. No one wants added density of any sort and that includes phantom density. Please instruct the planners to throw out the density you intended for the Aspens. It has no community benefit.</td>
</tr>
<tr>
<td>2/3/2012</td>
<td>O'Brien, Paul F.</td>
<td>As we near the end of the long Plan process I want to re-emphasize a point I have made over the past few years, and raise a new concern. First, the primary goal of this Plan should be to play defense, to control, limit, regulate, and indeed discourage development. This is not because development is bad. It is not. It is because intense pressures to develop Teton County are inevitable. Current development rights are large; the County is uniquely attractive for lifestyles, recreation, and scenery; and growing global growth will fuel demand. Combine that thought with the expressed will of the residents and you have a clear objective. Second, I have been disappointed to see signs that the Plan process may be trying to drive wedges among neighborhoods and communities by looking for &quot;someplace&quot; to put density. The character district approach has value in allowing the Plan to consider local issues and concerns. But it must not be used as a tool to divide. So far, community groups have recognized this risk and reinforced their solidarity. But I would welcome clear and emphatic statements from planners and elected officials that they understand this danger and will oppose any efforts to set district against district. Finally, I want to thank all of you for the work you have done. It has been a long process, but much has been and can be accomplished from it.</td>

<td>Swope, Linda</td>
<td>You may remember the photo collage I sent you a few weeks ago - wildlife roaming through my yard in Melody Ranch... I have been pleased to see further progress made in the Comprehensive Plan to protect and value our truly unique resource. Thank you for listening to public input and acknowledging that our valley residents as a whole do treasure our wildlife. And for some of us in business here, we know that our clients are drawn here because the abundance is distinctive to Jackson Hole. The wildlife brings the families. The families book our services. We pay our taxes. Simple, really. And you know how we feel in South Park: Any development in Northwest South Park needs to be firmly linked to the large rural land owner stewards in South Park achieving permanent conservation of their lands. We do not want unwanted density dumped into South Park from Alta, Buffalo Valley or anywhere else in the valley. The language in NW South Park (sub-area 5.6) needs to be STRICTLY TIED to the minimum amount of growth needed in order to help our rural land owners achieve permanent conservation of their other South Park lands. Without this linkage – we do not support any additional density anywhere in our region – as we do not need any more development, and the sole reason for consideration of the NW corner is to achieve permanent conservation of these land owners other lands that dominate South Park. The NW corner of South Park should NOT be developed before the substantial in-fill potential in Town is completed. If some development in this NW corner is needed to permanently conserve South Park - then it should REFLECT the mix and density of housing of Cottonwood Park and NOT have any commercial, mixed use or light industrial in NW South Park. South Park is a VITAL area for wildlife migration into our valley and beyond! The historic ranch district is the gateway... The danger now is writing in more growth. I don’t know one valley resident that wants MORE growth. Please keep your ear to the ground. That rumble is us, the taxpayers who you represent. Let’s keep the progress we’ve made and know when to call it good. Thank you for your time!!</td>

<td>Please take into serious consideration to resist a transition to this Valley and make it more urban. We have chose to live here because of its uniqueness; it truly is a special place. We came and stayed because of its open space and small town characteristics. We appreciate our wildlife and that they have room to live a natural life. Neighborhoods should not grow - if anything they should downsize. And as far as the tourists and the benefits from them, they too come because we have remained special and held our size. Please dump this re-doing of the Comprehensive Plan - it is fine the way it is and our Valley needs protection.</td>
</tr>

<td>Levy, Allison</td>
<td>I am reading the full page ad in Friday's Daily. I have to speak up because I have lived here for 25 years and fail to understand why county officials continue to think and act like real estate agents. Population has tripled since I moved here but the infrastructure to support that increase has not. Why do you continue to not think basic needs such as widening the roads such as 390 and 22 but instead push more building and concentrated populations. Don't you work with Wydot? I have no clue. But I don't get why you continue to allow building yet don't address increased traffic. There is more money in your virtual pockets to develop. We are busting at the seams. Can't anyone see that? The Aspens area is one of the last places to change the least. Put your egos aside and listen to the people. Traffic, wildlife, the RV's and Fireside resort already are a mess - then you are going to add construction workers and trucks to the equation. And isn't there enough for sale that you don't have to build more? I just don't get it. Thank you for your time. I know this won't make any difference but it helps get it off my chest how frustrated I am with how this town has grown. Its a bummer.</td>

<td>2/2/2012</td>
<td>Harvey, Ann</td>
<td>I am writing once again to comment on the seemingly endless comprehensive plan process. The bottom line, I think, is that you need to ensure that the plan lives up to its lofty ideals of protecting wildlife, habitat, scenery, and the other values that define Jackson Hole. You do not do this by adding more growth, whether it’s in Wilson, the Aspens, South Park, or anywhere else in the valley. The more growth the plan allows, the more fragmented and degraded wildlife habitat becomes, and the more Jackson Hole resembles all the other places where humans dominate the landscape. Please stop thinking in terms of nodes, or spots, or whatever other cancerous terms describe additive growth in Jackson Hole. We do not want or need a plan that calls for more growth. It’s hard to imagine what Jackson Hole will be like with the doubling in growth that’s already allowed—how can you possibly think that it’s your duty to encourage even more?</td>
</tr>
<tr>
<td></td>
<td>Interested Public</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>When will specific mechanisms for decreasing development in rural areas, and permanently preserving open space, be revealed to the public? Learning from the newspaper that there’s a lot of “flexibility” in how 2000 potential units will be shifted from rural areas to denser areas does little to inspire confidence that this is anything more than fantasy. It’s a laudable ideal to concentrate growth in the town of Jackson and decrease it in the rural parts of the valley, but until the second part of the equation is dealt with, you shouldn’t be even considering additive growth anywhere in the County. After 4 years of planning, shouldn’t the means of decreasing density be figured out? It’s easy to allow more growth and hard to preserve open space, but taking the path of least resistance is not exactly good planning.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>I’m glad to see that the current version of the plan calls for preserving much of South Park instead of making the whole thing a density dumping ground. Please stick to this. And if any increase in density is approved for the Northwest corner, it must be clearly tied to decreasing density and permanent open space protection throughout the rural areas of South Park. The map descriptions should affirm this and be consistent with the plan language. No density increase should be directed to South Park until the Town has reached its infill potential. And no commercial development should be allowed in South Park.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>I am also entirely supportive of the Village Road residents who object to adding growth to the Aspens area. It just doesn’t make sense to do that, given transportation and infrastructure issues, as well as wildlife values in that part of the valley.</td>

<td>Campbell, Leon G.</td>
<td>For four long years, elected officials and the Jackson Community have been working on the draft Comprehensive Plan which, when completed, will establish the future character of the Jackson Hole Valley for generations. It has been a long and exhaustive process which remains unfinished yet is being scheduled for completion early this year. It is ironic, despite the long hours devoted to such an important document, that the draft today is hardly comprehensive in the sense that maximum densities are still not established and thus, residential areas including Jackson, the Aspens, South Park and Teton Village fear that additional density from the more remote reaches of the County will be visited upon them in the new Plan, robbing them of their cohesion and unique character. These neighborhoods are in competition with each other to remain relatively rural and open. The Plan must mandate that infill development first be approved in Jackson, but only to a point where the town is able to preserve its Western frontier character as the &quot;Last Best Place&quot; in a rapidly urbanizing nation. However, if growth limits are established for Jackson, it is also necessary to limit the growth in the above neighborhoods at the amount entitled in 1994 which presently allows doubling of the built environment! For elected officials to permit additive growth in these several residential areas in the new Plan is madness. Additional densities can be left to future generations if the situation so dictates well into the future. In the South Park neighborhood, as an example, good planning would dictate that High School Road, which bisects the Northwest corridor of this neighborhood, remain rural to encourage walking and bicycling and minimizing automobile traffic. If development of the northwest quadrant of South Park results in residential growth in view of 1,000 homes it would exceed the size of Cottonwood Park, Rafter J and Melody Ranch neighborhoods combined! Moreover, any density approvals in northwest South Park must be linked to and contingent upon large landowners and the Jackson Hole Land Trust securing permanent conservation easements on the southerly part of South Park which not only functions as a scenic gateway to Jackson but an important wildlife corridor as well. A truly Comprehensive Plan, which has the primary objective of keeping rural, more distant and detached parts of the County, hardly is intended to accept growth from other parts of the Valley such as Alta and Buffalo Valley, at Jackson's expense nor to encourage additional commercial, industrial or mixed-use projects which additive density would demand. Density maximums must be established in the Plan so that growth is sequentially established in Jackson and its several residential communities consistent with their historical character. This is the key component of the Plan that the public has demanded of elected officials for four years and which is still not clarified in the latest draft. The community has spoken plainly that it does not wish additive growth. Nor does it have the funds or inclination to pay infrastructural costs of such growth. If elected officials recognize this fact and institutionalize it with growth limits and density maximums it will become abundantly clear that Jackson has 'men who match our mountains' who have served this community faithfully and well.</td>

<td>Hocking, Scott</td>
<td>Please stop adding density to Teton County. We need a stable community of a small size to not further impact or destroy the wildlife that lives in Teton County. High density housing belongs next to cities, not in this remote corner of our state. Please include buildout population numbers in your forecasts. These allow for rational discussion about future population, and allows residents to envision what size this county can or should become. If we are at 20,000 residents today, we need to take a long look at our waste transfer station, associated costs, and what will be done with that trash as more housing and people are encouraged to reside here. The road system and trash system should be at the front of these discussions, not after they are impacted and turn out to be insufficient.</td>

| 2/1/2012 | Jern, Sherrie     | When I attended the meeting on January 26, I heard one of the county planning commissioners say "no one wants density in their back yard and the growth at Teton Village will break 390's back anyway, so why not break it now."
I disagree on many levels. Increased density in Teton County, for me is not relative to just my personal backyard.
I consider all residents of Teton County to be my neighbors and all of Teton County to be my back yard. I (and many others) also believe that the thousands of homes allowed to yet be built under the 1994 Comprehensive Plan is all that our "neighborhood" can physically support.
To use the term "NIMBY" promotes division and prejudice when you are assuming to know the beliefs of residents working to protect this Valley for all of their neighbors now and into the future. Increased density in any area affects us all. |
| 2/1/2012 | Stone, Cindy Hill | Whoa there pard,
After four grueling years of dealing with planners, and elected officials I think the valley is tired of your rhetoric and BS.
DENSITY? "Where are we going to put it?" ---- Really Paul? Every iota of this valley has been platted and planned for. Right now in South Park if all the large rural land owners decided to cash in there would be another 500 homes. Along with those 500 homes would come a lot of permanent open space. ---Permanent---. And there is nothing you could do about it.
Not to forget the 73 homes in Melody Ranch 2 that are still on a piece of paper in someone’s file cabinet, or the 32 vacant lots in Melody 1. Is Shooting Iron built out? Three Creeks?
You are not the density commissioners. You are the elected officials and planning commissioners. Yup,-------- that’s we the people you hear hollering boys. "We The People” are herding up and we don’t like the color of that horse you’re riding. |
| 2/1/2012 | Gilmore, John     | Simply, be careful! I live in John Dodge, and drive 389 daily, and wouldn't look forward to more traffic and/or a 4-lane road. I have always thought (a 22-year resident) that the density should be mostly in town, with high-rises if necessary. Save the views for rural areas. A hard job - good luck. |
RE: The Basic Problem and Issue -- Social Engineering

It was interesting to read the Ben Ellis quotes in today's front page article. The Jackson Hole community has said over and over again, that we want STABILITY in our neighborhoods, and permanent protection of wildlife/open space resources.

Yet Ben and some others have taken that clear message and turned it on its head. Fictional and temporary down-zoning would be used as an excuse to up-zone immediately for "work force housing" levels advocated by the Housing Authority. That would be pure social engineering by some politicians and government planners. Coupled with Ben's threat to dump up-zoning density in other neighborhoods, if removed from the Aspens! To me that is a bullying "divide and conquer" tactic by Ben, and it is dead wrong.

We already have a Valley where 68% of the people who live here, work here. The remaining second home people are an important part of our history and our economy, not the enemy. Do we really need to up-zone and urbanize Jackson in order to ward off second home owners and to bring in more people from Driggs and Alpine? I think not.

I have enclosed the 2010 Housing Authority "Blue Ribbon Panel" findings which are the basis for Ben's current up-zoning and subsidized housing campaign.

P.S. -- Great Letters to the Editor today. Thank you Kristine, Justin and Kathy.

Teton County and Jackson planners have been pushing a basic re-do of Comprehensive Plan provisions which have been in effect for 18 years. Neighborhoods would be targeted for commercial and residential up-zonings. The only additional protection of open space and wildlife resources would come from selected down-zoning– with no permanent protection of these valuable open space and wildlife resources. Unlike the existing clustering/open space provisions in our Plan.

We believe that this approach is unwise, and would lead to increased urbanization of Jackson Hole with an adverse impact on wildlife, on open space, and on the great community character which attracts so many residents and visitors to our Valley.

Much of the vitality of our community comes from the intense protective feelings so many of us share, for this very special place. Please contact our Teton County Commissioners at commissioners@tetonwy.org and the Jackson Town Council at electedofficials@ci.jacksonwy.us and urge them to keep Jackson Hole and its neighborhoods STABLE, to resist the urge of some planners to transition this Valley into a more urban community.

This is an absolutely critical time, because errors of this kind really cannot be undone. Please take some time to comment. It is very, very important. We hope that you join all of us in caring deeply about our community, our wildlife/open space resources, and our friendly small town character.

Village Road Coalition
Wilson Advisory Committee
South Park Neighbors
North of Town Neighbors
Cottonwood Park Neighbors
East Jackson Neighbors

Please, please, please, keep Jackson Hole Stable. We do not want a more urban community!!!

| 2/1/2012| Huff, Mercedes              | Thank you for taking the time to read this letter and listen to my comments. I know this has been an arduous process and it’s close to the end – which is why it is SO critical to get it right and not ruin our precious valley.  
I am writing to you today because there is a strong inclination on the part of some of you to increase the density in the area of the Aspens by 300+ residential units. That is not to say that I’m not enormously concerned about the Valley as a whole. This same thinking will be replicated in other areas of the Valley. The product of four years of planning was given to you last March and you overturned what the public had so strongly asked for. Through many public hearings and letters written to planning commissioners it was agreed that the idea of upzoned “nodes” was not the direction the people of Teton County wanted to go. But lo and behold, you decided to do that anyway. Under the guise of preserving wildlife, you’re proposing to remove people’s property rights in the more rural areas by downzoning them and transferring those development rights to these “nodes” or “character districts” which will become very dense towns of their own. I can’t think of anything less in keeping with the character of the valley. How can you take away someone’s property rights (without guaranteeing any permanent protection of those areas for open space) and then shove them into another area where they aren’t wanted?  
The basic problem here is that too much density is being created. The 1994 Comprehensive Plan had a population cap which most people have expressed they would like to see DECREASED. What this New Plan proposes to do will actually INCREASE development.  
Much of the vitality of our community comes from the protective feelings so many of us share for this very special place. We didn’t choose to live in a place that could become like Park City, Vail or the like. I strongly encourage you to keep Jackson Hole STABLE, to resist the urge of some planners to transition this Valley into a more urban community. This is an absolutely critical time, because this kind of error and bad planning will have disastrous results that can’t be undone.  
Some might ask why, as a real estate broker, I am opposing this dense development.  
THE ANSWER IS SIMPLE – IT’S THE RIGHT THING TO DO. LESS IS MORE! |
| 2/1/2012| Fossel, Scott               | Unless you can First show what the huge increase in the Aspens will look like AND address current traffic congestion on the Moose Wilson Road, I strongly strongly urge you to STOP further development. With development already underway at Teton Village, we do not have the capacity to add to the Aspens.                                                                                                                                                                                                 |
| 2/1/2012| Leet, Melissa and Ken       | I am writing to say that I strongly oppose any increase in the Aspens area. We are new to Jackson. We chose it as our community because we appreciated that it wasn’t overly built-out in the way that most mountain communities have become. Significantly increasing development would erode its character and its beauty.                                                                                     |

2/1/2012  Sibson, Barry  Interested Public

After four years of participation in the Comprehensive Plan process, I was quite pleased with the "Character District" plan for South Park. The key aspect of the SP plan was the preservation of the current open space. I am concerned, however, about the type of development and added population in the Northwest corner of the area and the concept of new roads connecting Melody Ranch, Rafter J and South Park Ranches.

With the change of direction for the "Pines/Aspens" district, I am very concerned that there might be some thoughts of change in the South Park district. I believe that if any additional development were inserted in the SP district that it would be very detrimental to the South Park community, to wildlife movement and to the visual aspects of the approach to town.

Important to me are:

The open space in SP being permanently preserved, not just a zoning issue that should be changed in the future. Any development in SP should be tied contractually to preservation of open space in SP.

A corridor for wildlife movement down the west side of SP. I live next to Bob Lucas's ranch and have frequently seen and heard elk migrating through his ranch. I believe that they come down through the Sherr Thoss property and not down Flat Creek.

Mainence of the rural view across SP from South 89 to the western mountains.

Incentives for the SP ranchers to continue ranching.

No additive development rights to those already existing.

A decrease in allowable commercial development.

Maintenance of a walkable town with a human scale to all development. Too many of the already developed 3 story buildings in town do not have that scale and are overwhelming. A step back of the third story should be required.

I appreciate the fact that the proposed plan has been scaled down to be more in keeping with the desires of the community, but I DO NOT want South Park to become the default area for growth.

2/1/2012  Costello, M. E.  Interested Public

I have a home at 2665 Tucker Ranch Road on the West Bank

This is email is urge you not to allow our wonderful community to become pockets of high density development. Jackson is the most wonderful community in the west and to change its character in this manner would be disastrous.

2/1/2012  Coelho, Katherine and Interested Public

In regards to the growth plan, we need to permanently conserve the large rural ranches in the NW area of South Park. These ranches help make Jackson Hole one of the most beautiful areas in the U.S. Since the majority of our economy is tourism, it is of them up most importance to preserve the beauty of the area. If it becomes necessary for some small development of this area to help the ranchers conserve the rest of their property then the development should be only in the NW corner and in the same density and character as its neighbor Cottonwood Park. As to any other increase in density in South Park it is totally unnecessary as we have 50-70 years of lands of entitled growth all ready planned for. No leep froging - in fill must be done first.

We also must preserve the linkage for the wild life. In all the meetings I have attended the audience has said that the wild life of Jackson Hole is one of its most important attributes for residents and visitor alike.

Lets keep Jackson as what it is know for; wilderness, wild life and the old West.
Most residents in Teton County made a personal choice, really, a commitment to live in this splendid place. We could have stayed in cities or the ‘burbs and perhaps enjoyed greater monetary reward, but we made the choice to be near nature and live here. I am concerned that density “spots” continue to be a moving target in our Comprehensive Plan. If one targeted zone has the good fortune to be “saved” because of its perceived intrinsic value, then the thinking seems to be that another area must open up. Why? As far as the wildlife are concerned, this is one ecosystem that they live in and travel through all year. Maybe it’s time to stop aspiring to be Boulder/Austin/etc., and appreciate where we are: living in a relatively unwrecked ecosystem with healthy wildlife yet abiding.

In short: please uphold our rural values with the highest priority to protect wildlife. Teton County residents have strongly expressed and supported this throughout the CP process. ALL neighborhoods are valuable, we don’t want more density, we are asking for predictability and conservation. When can enough be enough?

Please protect the south corridor and entrance into our Valley!

- We do not want additive growth from anywhere in the valley when we already have 50-70 years of growth already entitled – a rough doubling of our built environment on the ground today!
- Any development in Northwest South Park needs to be firmly linked to the large rural land owner stewards in South Park achieving permanent conservation of their lands – period. We do not want unwanted density dumped into South Park from Alta, Buffalo Valley or anywhere else in the valley.
  - The language in NW South Park (sub-area 5.6) needs to be STRICTLY TIED to the minimum amount of growth needed in order to help our rural land owners achieve permanent conservation of their other South Park lands.
  - Without this linkage – we do not support any additional density anywhere in our region – as we do not need any more development, and the sole reason for consideration of the NW corner is to achieve permanent conservation of these land owners other lands that dominate South Park.
  - The NW corner of South Park should NOT be developed before the substantial in-fill potential in Town is completed.
  - If some development in this NW corner is needed to permanently conserve South Park - then it should REFLECT the mix and density of housing of Cottonwood Park and NOT have any commercial, mixed use or light industrial in NW South Park.

The guests to southern entrance of our Valley should not be met with a whole lot of development and really impacting our animal corridors!

Please keep the Aspens and the West Bank open and do not allow the natural beauty of our valley to be overdeveloped. Listen to the voice of the people who elected you. No new housing in the Aspens and do not allow more density and development in the neighborhood.
When residents of the Aspens, Westbank and other areas say they don’t want to be targeted for growth, I support their concerns for sprawl and over development 100%. Being from Cottonwood Park we too have the same concerns about green field development and traffic congestion, especially on High School Road. Throughout the Comprehensive plan process, residents of Cottonwood Park have demanded that there should be no dumping of additive growth anywhere in the valley. The focus for preserving open space should come first. Then town infill should come next.

Northwest South Park should not be the dumping ground for the valley’s growth problems. The only clustered development that should be transferred to NW South Park is the minimal development rights from the South Park area itself by working with South Park’s large land owners and the Land Trust using the proper incentive tools, to permanently retire the desired open space there.

To think that dumping town density growth into the North West corner of South Park will protect other areas like the Aspens and the Westbank from growth is a fantasy. We can’t afford additive growth anywhere in the valley when we have 50-70 years of growth already entitled. We must not rely on up zoning NW South Park and down zoning other areas. All it takes is a simple vote in the future to change it. We will only end up with additive growth on top of the already entitled growth without solving the problem the Aspens and other areas are worried about. It will be too late then. South Park will become a sprawling unwelcome place to live.

We will lose the great middle class family neighborhoods to industrial traffic and unsafe streets around the schools. Then, after South Park is ruined, the Aspens and other areas of the valley will be once again, targeted, because we didn’t have permanent protection of sensitive areas, we didn’t have a plan with real numbers, we didn’t have a plan that stated any density increase should be balanced with density decrease, we didn’t have a plan that followed through with town infill first, we didn’t have a plan that said no to zoning changes that can be easily reversed at the whim of whoever is in office.

I know there will be a neighborhood across from us someday. It should be complimentary to Cottonwood Park at a similar density to Rangeview Park with open space along High School Road. High School Road should be a residential road to encourage walking and biking. There should be no industrial or commercial development along High School Road or in the NW corner. It will end up a failing; congested road that not even a connector road will help unless we only allow a small residential neighborhood in the NW corner. Being from Cottonwood Park I could easily say no growth in NW South Park. Put it in the Aspens, put in the Westbank. I won’t, because they too are great neighborhoods that deserve protection of their rural character and small neighborhood atmosphere. Cottonwood Park and the neighborhoods around High School Road should not be excluded from that same protection.

<td>Scott, Mary Gibson</td>
<td>In June 2011, the Teton County Board of Commissioners and the Jackson Town Council formally adopted the Jackson - Teton County Comprehensive Plan. This action was the result of years of hard work by you, your staff, and many others, and we appreciated the opportunity to provide our own comments on issues relevant to Grand Teton National Park. We commend you on this important achievement and are pleased that the Plan includes numerous references to the importance of coordinating with local federal land managers. While the Comprehensive Plan identified common values, principles, policies, and strategies for achieving the communities’ goals, the next step is to identify more specifically how development will be directed in particular areas. The Illustration of Our Vision phase that is currently underway therefore seeks to define the character of 15 individual districts within the Town of Jackson and Teton County. We have reviewed the draft Illustration of Our Vision document and found that it is consistent with and respectful of the resources and values of Grand Teton National Park. We are particularly appreciative of efforts to maintain wildlife movement corridors in areas where it is appropriate to do so. As you continue moving forward with the planning effort, and in other related efforts such as revising the Natural Resources Overlay and the land development regulations, we ask that you continue to be mindful of the potential effects of decisions on Grand Teton National Park. Development on the west side of the Snake River along the Wyoming 390 corridor (Teton Village, Aspens, and Wilson) is of particular importance because of the potential to adversely affect the Moose - Wilson Road corridor within the park. This corridor contains some of the most rich and sensitive wildlife habitat within Grand Teton National Park, and is highly valued for its primitive values, opportunities for wildlife viewing, and access to the Laurance S. Rockefeller Preserve. The rustic, narrow, and winding character of the Moose - Wilson Road, and the relatively slow travel speeds are key to enjoyment of this area. Traffic volumes, however, are rapidly approaching levels that will diminish the quality of visitors’ experience, and are likely not sustainable. Future growth on the Wyoming 390 corridor, as well as transportation-related actions may significantly impact the park and should be carefully considered by planners and decision makers. We also note that Character District 15, the County Periphery, includes agricultural lands and open space that are adjacent to or within the boundaries of Grand Teton National Park. We appreciate that the draft Illustration of Our Vision document states that the areas within the County periphery will remain rural in character, that open space will be preserved, and wildlife habitat and movement corridors will be protected and enhanced. These policies, along with the criteria describing development in the Buffalo Valley and Kelly areas are consistent with NPS goals for management of adjacent park lands. As the planning process continues to move forward, we would appreciate the opportunity to provide input on how the land development regulations and Natural Resource Overlay can be used as tools for protecting park resources and values where development on inholdings or adjacent lands is a concern. We appreciate the opportunity to provide these comments and look forward to continued coordination on planning and development decisions that have cross-boundary implications. If you have any questions or would like additional information, please feel free to contact me or Management Assistant Gary Pollock at (307) 739-3411 or 739-3428.</td>

<td>Moyer, Peter, F.</td>
<td>The attached policy ad will be running in the Daily this week, and the weeklies on Wednesday, February 8 next week. Peter Teton County planners have been pushing a basic re-do of Comprehensive Plan provisions which have been in effect for 18 years. Selected neighborhoods would be targeted for commercial and residential up-zonings. The only additional protection of open space and wildlife resources would come from selected down-zoning- with no permanent protection of these valuable open space and wildlife resources. Unlike the existing clustering/open space provisions in our Plan. We believe that this approach is unwise, and would lead to increased urbanization of Jackson Hole with an adverse impact on wildlife, on open space, and on the great community character which attracts so many residents and visitors to our Valley. Much of the vitality of our community comes from the intense protective feelings so many of us share, for this very special place. Please contact our Teton County Commissioners at <a href="mailto:commissioners@tetonwyo.org">commissioners@tetonwyo.org</a> and urge them to keep Jackson Hole and its neighborhoods STABLE, to resist the urge of some planners to transition this Valley into a more urban community. This is an absolutely critical time, because errors of this kind really cannot be undone. Please take some time to comment. It is very, very important. We hope that you join all of us in caring deeply about our community, our wildlife/open space resources, and our friendly small town character. Village Road Coalition South Park Neighbors Wilson Advisory Committee North of Town Niembros</td>

Delorme, Carrie  
1/30/2012  
I would like to comment on the article in the Jackson Hole News & Guide today about commissioners removing the Aspens from the "high-density" area of growth. They are wondering now where to put the additional housing they approved in the plan. I say NOWHERE. reduce it and remove it from the plan. Who says you need growth and development? Development should be capped almost completely. The town of Jackson and the surrounding areas are congested and over-developed to begin with. ever try driving through town?? Growth inevitably means higher property taxes, higher cost of living, and lower standard of living. It's not necessarily a good thing. Continued growth leads eventually to places like Chicago, New York, Los Angeles. I know nobody wants to say it but everyone is thinking it - NO MORE GROWTH!

Balogh, Holly  
1/30/2012  
I am a resident of Melody Ranch where my family has lived for the past 11(!) years. As a concerned citizen about growth and most importantly about the wildlife and wild lands in this region, I wanted to provide some comments about the planning process.

I took time out of my schedule to attend one of the mapping and planning workshops in Rafter J back in October. Prior to that, I had participated in other planning discussions over the past several years. From these discussions, I expect that the commission will uphold the descriptions that were discussed and commented on for all of South Park – district 10. It was very clear that the majority of residents at the mapping discussion holds scenic, wildlife, and wildlife connectivity as sacred and fully expects that these values will be addressed and not compromised in the final plans.

It is extremely important to me that there is no additional growth placed in the valley when we already have 50+ years of growth already entitled. It is also extremely important to me that development in Northwest South Park be linked to the large rural land owner steward in South Park achieving permanent conservation of their lands. Without this linkage the entirety of South Park could be developed – completely destroying the values we all hold so dear.

Moreover, I think it extremely important that development be completed in town and any potential development be finished their before expansion into other rural Teton county areas. If we do develop part of the NW corner of South Park, let's be smart. Let's develop it like Cottonwood or Indian Trails and not destroy the residential areas with commercial or other mixed use that makes parts of Town, and areas behind Smiths look like a total junk show from any outsider's observations.

I'd like to remind you about our wildlife. We must make these steps to protect our animals who share our space. We choose to live here and want to keep our wildlife alive. Providing them room to roam is critical to their long term survival. This month alone I have had two different mom and baby moose sets, bald eagle, fox, and trumpeter swans in my backyard. Help me help them by protecting this crucial.

Thank you very much for listening. Please feel free to contact me for further discussion.

Muschawec, Erika and  
1/30/2012  
we congratulate you all for the conscientious and diligent work you have done for such a long time in planning the future for Jackson Hole. In a few weeks the new comprehensive plan will be decided and we hope you will consider these last points in your decision.

We have been participating from the beginning in this process and want you to uphold the map descriptions that now affirm the scenic, wildlife, wildlife connectivity and ranching heritage values of the whole of Jackson Hole, and especially all of South Park without raising the possibility of development to more than is already allowed in the existing comprehensive plan.

We do not want additive growth in the valley when we already have 50-70 years of growth already entitled.

Observing the wild animals in Jackson Hole is the most important and talked about happening. We live on the North end of Indian Trails. There are still several moose visiting our neighborhood, there is still the bald eagle's nest on high school butte, but the elk herd which was also coming through every winter does not appear anymore since the Teton Science School built their buildings in the canyon North of 22.

Please cast your votes confirming the voluminous specific and consistent comments from this community and you will be forever gratefully remembered.
I write to you as a resident of South Park. I have been attending meetings and following developments on the Comprehensive Plan over the past four years. I have written to you previously to share my viewpoint.

I respectfully urge that you UPHOLD the map descriptions that now affirm the scenic, wildlife, wildlife connectivity and ranching heritage values of ALL of South Park (district 10).

Please do not burden South Park with additive growth from anywhere in the valley when we already have 50-70 years of growth already entitled – a rough doubling of our built environment on the ground today!

In addition, I request that any development in Northwest South Park be firmly linked to the large rural land owner stewards in South Park achieving permanent conservation of their lands — period. Unwanted density should NOT be dumped into South Park from Alta, Buffalo Valley or anywhere else in the valley.

The language in NW South Park (sub-area 5.6) needs to be STRICTLY TIED to the minimum amount of growth needed in order to help our rural land owners achieve permanent conservation of their other South Park lands.

o Without this linkage – I do not support any additional density anywhere in our region – as we do not need any more development in South Park, and the sole reason for consideration of development in the NW corner is to achieve permanent conservation of the balance of the lands in South Park.

o The NW corner of South Park should NOT be developed before the substantial in-fill potential in Town is completed.

o If some development in this NW corner is needed to permanently conserve South Park - then it should REFLECT the mix and density of housing of Cottonwood Park and NOT have any commercial, mixed use or light industrial in NW South Park.

To date, much progress has been made during the course of your deliberations to protect South Park, its vistas and its wildlife migration routes and I sincerely appreciate your efforts in that regard. Please remain steadfast in your commitment to protect our beautiful portion of the valley.

Thank you for considering my input.
I have owned a home in Single Tree Ranch Subdivision for the past 7 years and lived in many different places in Jackson Hole since 1978. For more than 3 decades I have witnessed many failed planning efforts in Jackson Hole. It seems like the developers always win. I think it is finally time to set reasonable growth limits and once and for all to protect neighborhoods so the quality of life, social, scenic and wildlife values that make Jackson Hole a desirable place to live, work, and vacation are not sacrificed. I believe it is important to keep population growth and development at reasonable levels so there is adequate infrastructure. Infrastructure needs must be able to be met within the current and projected tax revenues.

I have a particular interest in District 10 (South Park) where I live. This district is significant habitat for wildlife and is particularly important for migrating elk and wintering moose. I have personally observed more than 100 elk at a time spend several weeks in the ranch land adjacent to my house, observed elk in my backyard and migrating through my neighborhood. I frequently see moose, coyotes, fox, bald eagles, and osprey from my house. Trumpeter swans, Canada geese, Great BlueHerons, numerous other birds and mammals live in or pass through South Park. I have been participating in the latest comprehensive plan effort for the past four years. I strongly believe that it is not appropriate to increase the density of South Park is a trade off for reducing density elsewhere. South Park has already been developed to a level that should not be exceeded after buildout of existing lots is complete.

Sub-area 5.6 should be strictly tied to the minimum amount of growth so there can be permanent conservation of the large rural landowners other South Park Lands. Development of this area should complement the existing development there, particularly the three school campuses.

The South Park Loop road cannot handle increased traffic without being widened which would destroy its rural character and recreational values.

This planning effort needs to be finally completed so that the time and energy of elected officials and landowners can be better spent on preserving what is best about Jackson Hole and meeting the other challenges of the future.

Thank you for your consideration of my position on this matter.

I have attended a lot of the planning meetings and still do not know what all of this means for our property. We still have people interested in buying to establish construction yards. Is this something that can be done on our property under the new districts?

I really would like to be able to sell something as lane and I have both had major health problems in the last few years. I myself have had 5 major surgeries in the last 18 months. If you can help please let me know.

| 1/30/12 | Salter, Andy      | I am a resident of South Park, I have been closely following your efforts over the past four years to revise the Comprehensive Plan and I have written you previously to express my views.  

PLEASE UPHOLD the map descriptions that now affirm the scenic, wildlife, wildlife connectivity and ranching heritage values of ALL of South Park (district 10).  

Please do not saddle South Park with additive growth from anywhere in the valley when we already have 50-70 years of growth already entitled – a rough doubling of our built environment on the ground today!  

Any development in Northwest South Park needs to be firmly linked to the large rural land owner stewards in South Park achieving permanent conservation of their lands – period. Unwanted density should NOT be dumped into South Park from Alta, Buffalo Valley or anywhere else in the valley.  

The language in NW South Park (sub-area 5.6) needs to be STRICTLY TIED to the minimum amount of growth needed in order to help our rural land owners achieve permanent conservation of their other South Park lands.  

Without this linkage – I do not support any additional density anywhere in our region – as we do not need any more development in South Park, and the sole reason for consideration of development in the NW corner is to achieve permanent conservation of the balance of the lands in South Park.  

The NW corner of South Park should NOT be developed before the substantial in-fill potential in Town is completed.  

Of some development in this NW corner is needed to permanently conserve South Park - then it should REFLECT the mix and density of housing of Cottonwood Park and NOT have any commercial, mixed use or light industrial in NW South Park.  

Much progress has been made during the course of your deliberations to protect South Park, its vistas and its wildlife migration routes and I sincerely appreciate your efforts in that regard. Please remain steadfast in your commitment to protect our beautiful portion of the valley. |
| 1/30/12 | Moyer, Peter, F.  | A nice result Thursday and a nice article today (attached).  

But we are just getting started. Semper vigilis, or whatever the proper spelling should be.  

Peter                                                                                                                                                                                                                                                                  |
| 1/30/12 | Van Gelder, Bill  | With much frustration it has been brought to my attention that South Park is again back on the table for additional unrestricted density.  

I feel frustrated as over the course of this very long, drawn out process, it has been made consistently clear by the community by that south park should not be the place for unrestricted development in the new comprehensive plan. Now it appears, at the very last minute, the language previously agreed to preserving the rural nature and scenic value of South Park is going to be significantly weakened.  

I am not opposed to developing of South Park, and feel that north western south park is appropriate for higher density, however I STRONGLY urge this upzoning of northwest south park needs to be tied to the minimum amount of growth needed in order to help the rural land owners of south park achieve permanent conservation of their lands. Without this linkage I do not support any additional density in South Park, and I do not support this upzoning of North West South Park until ALL of the in Town potential infill is created. Furthermore if the development of NW south park is needed, it should be residential in nature (similar to Cottonwood Park), not commercial or industrial. We don't need town and south park to morph into a mini metroplex of urban sprawl seen from Colorado Springs to Fort Collins. |
Outcomes related to PRD, District’s 5.6 and 10 from Thursday’s meeting.

I hope to see some clarification on several of these decisions before the staff report - not only by the joint planning commission meeting on Thursday but also the County meeting on January 12 - as I do not believe you have captured the strong intent on some of these decisions – especially on the intent of 5.6 and its linkage to 10.1 and 10.2.

So here is what I heard from the joint planning commission meeting (plus some additional notes in a few areas from the joint electeds/planning commissions meetings of the County on January 12 and Town on January 11):

PRD and clustering tools:

• PRD and clustering options were re-affirmed Thursday as critical to large land owner options. That will be incorporated into the plan body more clearly.
• The direct reference in the tables of clustering – thus PRD option on properties only at 160 acres and above – was removed Thursday. Everything from 35 acres up should have clustering incentives.

Area 5.6

• Area 5.6 — now a clear direct link to these two owner’s other properties in 10.2 and also district 9 (Snake River bottom properties below Shooting Iron).
• Clarifying the intent of 5.6 is to use the PRD and non-contiguous PRD (with these land owners disconnected other properties along the Snake River) to achieve permanent open space throughout South Park - and other rural areas if a TDR tool is ever successful.
• This is the key point also confirmed by the County Commissioners – which has yet to be made clear. I expect language that shows the clear linkage here as both bodies where clear in their direction. You can leave an opening to transfer from other rural lands outside of South Park – but we know there are significant barriers to that being realized.
• In-fill priority to town remains first – but should not preclude a meaningful proposal from the families (Gill and Lockhart) that protects important scenic, wildlife and wildlife connectivity - as well as agricultural heritage - parcels in South Park – especially as controlled by these same owners.
• The County also took this position but, like the above, you have not captured their clear intent. I expect to see that clearly stated.
• On cutting the reason for “before in-fill” – the planning commissions clearly cut “workforce housing” and “other community benefits” – not because those do not have value – but they should not be reasons to move forward on 5.6 before Town, and other complete neighborhoods, achieve in-fill.
• The joint County meeting January 12 – again it was not discussed about other community benefits period, meanwhile Hank Phibbs got no other elected support on adding workforce housing as a reason to proceed on 5.6 before in-fill in Town. In fact Paul V. opposed that idea.
• Meanwhile the Town joint meeting from January 11 clearly stated in-fill first period – tied to the growth management plan – with no other conditions or triggers.

District 10, sub-area 10.1 and 10.2

• 10.1 language will stay the same on the intent is to preserve these critical open space areas – clarification will be added that if clustering development is needed to do that – that it should be directed to the north into area 5.6. This is an aspirational goal that does not preclude Seherr-Thoss by clustering adjacent to either South Park Ranches or Melody Ranch – but the big idea of the plan is to see if there is a way to transfer development potential to the north into area 5.6
• 10.2 – again both the joint planning commissions and the County meeting from January 12 clearly responded to the obvious link since 80% of 10.2 are the same land owners that own 100% of area 5.6. I expect to see clear language and direction recognizing that both groups affirmed this. So very clear language on preserving the area is the intent – and if some development is necessary to achieve that due to clustering incentives – then to the north into area 5.6. Again this is aspirational so does not preclude Lucas from doing an independent PRD and have that clustered potential move next to South Park Ranches in the southern portion of his parcel. But the big idea of course in the plan is to see if that potential can be moved to the north into area 5.6.
The focus is on achieving permanent protection through the PRD and possible TDR – and not through zoning alone in 10 and 5.6. District 5.6 is truly unique in its potential to use existing tools on the books to achieve the plan’s goals. I would remind you also that there are 35 acres zoned Suburban in the NW corner of 5.6.

10.2 – Both language and mapping on wildlife movement throughout the district that matches the description in the general introduction mentioned in 10. Both groups by default affirmed that – and staff has said they already intend to correct those biological mistakes that claim the only wildlife movement of large mammals is along Flat Creek. Alex has assured me these green changes have been captured (E-W and N-S) - and will be made - but I have yet to see them listed in a list of proposed changes.

oNOTE: when I drove home late Thursday evening another elk had just been killed on the Lockhart side of HWY 89 just ¼ mile south of Smith’s. This is the same area between Smiths and Rafter J that has been shown for thirty years to have the highest wildlife collision rate between Smiths and Hoback junction on HWY 89. The group of elk had traversed from west to the east across sub-area 10.2 to reach the Snow King highlands – and one member was killed as they crossed Thursday evening.

I also felt the discussion well after the 9pm cut-off perhaps did not allow the joint planning commissions time to address the issue on “mixed use” in area 5.6. If they do not revisit that – then it will be raised again with the electeds in March as I see mixed use not only not compatible in this residential area – but also a clear threat to redevelopment and reinvestment in the Town by bringing those uses so far out to the peripheries of Town. Clearly the public has said if 5.6 becomes necessary to achieve open space protection in South Park – that they expect 5.6 to be residential, with a mix of housing types and a density that reflects the Cottonwood Park neighborhood across the street. Staffs’ addition of “gridded streets and alleys” – which has not been brought up by any elected or planning commissioners – could be misinterpreted that you are suggesting a character different from what the citizens have clearly articulated.

I appreciate staff’s work on the plan – but I am also frustrated that staff seems to not be fully recognizing both public input and elected/planning commission directives without adding their own personal bias. Perhaps that is unavoidable - so I hope you take my perspectives and comments in the spirit they are offered. If need be I would be happy to have a few score of residents at the February 8 and/or March 12 meetings to reinforce their passion for these changes - at the same level you have recently heard from other areas in the valley.

Thanks to all of you who showed up at the County/Town meeting last night. Very productive and most appreciated!

There were many who spoke for the public. The only speaker who strongly supported the Staff and “nodes” was Bill Collins, the private planner who had been the County planning director.

There is something very important to remember there, particularly for people in South Park and the Village Road area, relating to Teton County government ownership when combined with its up-zoning power, and the inherent conflict of interest. That is the current situation with the 5 acre Rains parcel next to the Aspens, which is owned by the County Housing Authority. The Rains parcel has one unit of density and the recorded plat prohibits subdivision. Yet County Staff would ignore that restriction, with a vast up-zoning.

When Bill Collins was planning director, the County Housing Authority contracted to buy South Park acreage from Roger Seherr-Thoss. The County’s initial plan was to up-zone for commercial plus 350 to 400 residences, even though the Plan’s normal clustering rules only permitted a small fraction of that residential density with no commercial. The County kept trying to justify the very high land cost of this “New Neighborhood” project so the up-zoning target kept going up and up, eventually to 1,100 residential units plus commercial. County consultants even pushed for 1,400 units to justify costs. The deal later cratered, and the County forfeited its $350,000 earnest money deposit. South Park -- and Jackson Hole -- could have become far more urban with that up-zoning.

Anyway, just by way of perspective. Not too different than what some County people want on the Rains property. A terrible precedent for all of us, due to the inherent, extreme conflict of interest which can exist when ownership and zoning power are both in government hands.

If an individual County Commissioner used his or her power in government to up-zone their own land, that would be an egregious conflict of interest.

Is it really okay for the County government to do the same thing on the Rains parcel? I do not think so, and hopefully we can all be united on this point.
My name is Steve Sharky and I live in South Park. I love this Village Road Coalition. It’s like fresh troops getting sent into a battle, you know, when you’re getting beaten and all of a sudden they send in new troops and that’s kind of fun. I really just want to thank you for the great job that you did. The Plan that came out of the Planning Commission after...was a good plan, it really was. And it’s tragic, in my opinion, what the electeds did to it. I don’t have a lot of confidence you’re going to be able to have much influence with them, but with ditto to most of the comments that have been made tonight, I really think you did a great job. It’s a huge amount of work; you don’t get paid for it, and I really appreciate it. You know, if I was going to suggest anything, I’d say flip the process. These guys decided to have nodes and decide where they were going to put a lot of growth and saying it’s all going to be density neutral. Let’s then flip it. Let’s figure out where the density’s going to come from, you know. Do TDRs work? Maybe not, based on what we’ve heard. Can you down zone it? Figure that out. There’s really some density there and if you get some of that, give it to John. Jay’s, I don’t...I’d give it to Jay and let them upzone his property. But thank you for your efforts; you did a great job, I appreciate it, and I hope you can influence the electeds.

Over the last four years a tremendous amount of effort, thought and expense has gone into the re-write of the Comprehensive Plan that will be the guide our future growth, development and preservation of this great place I am privileged to call home. The whole process has been long, involved and tenuous. The results are good and I applaud all the participants, but some “tweaking” is still required. Let’s look at the key words and some definitions:

Comprehensive: Wide in scope; inclusive.
Plan: A scheme for making, doing, or arranging something.
For most of the current re-write, the intentions and wording reflect what the desires of the community were in terms of scope and inclusion, but some areas are not specific enough, too general or simply too vague to meet the true definition of a complete Plan. Before you recommend or approve this document, please consider the following points:

•The current proposed language doesn’t address the fiscal impacts (costs) of growth. Even with the entitled development already on the books, realistic infrastructure improvements could be astronomical. Here are some very basic estimates:

- Roads/Highways/Wildlife mitigation $200 million
- Public Transportation $150 million
- Schools (6 more @ 30m) $180 million
- Sewer/Water Improvements $200 million
- Power Grid Improvements $200 million
- Public Buildings (hospital, airport, administrative, trash, etc.) $100 million
- Public Services (Fire, Police, Administrative, etc.) $150 million

As you can see, we will be looking at some serious future costs to provide basic services for anticipated growth during the next 40 to 50 years. Additional language pertaining to fiscal review, an implementation plan/schedule, etc., is warranted in this document. Don’t expect people to keep voting for the SPET!

•Current language doesn’t adequately address the costs and impacts of additive growth to select character districts. Please allow only “already entitled” infill development in all character districts. Remember the pleas for predictability, preserving rural/neighborhood character and NO additive growth!

•Current language doesn’t clearly address an incentive mechanism for preserving wildlife/open space by transferring development to more appropriate areas.

Please keep in mind that anything you/we do regarding our human needs has a greater effect on the natural environment than one can imagine. The Rockefeller’s were looking forward into perpetuity with their vision; our Plan has an intended lifespan of only 10 to 15 years. Let’s make John D extremely proud by approving the best plan possible. Thanks for all the great work!
My wife’s waiting at home. Peter Moyer, I live on the Village road and I spend my working hours in Town. Whatever I say here is really directed to the County Planning Staff and the County Planning Commissioners, because it relates to the jurisdiction?? and that jurisdiction is the County, not the Town. I’ve spent most of my working life, waking hours, in Town but I don’t get to vote for it and it’s really a County issue to me. So again, Town guys, I mean nothing critical whatsoever towards you. By way of perspective, the County Commissioners, a number of years ago, appointed a TDR Task Force, Transferrable Development Rights Task Force. Steve Duerr was the Chairman; he did a wonderful job. It was all over the spectrum. We had Kelly Lockhart and others on the landowners side. They had Alliance people, Nancy Hoffman and others, and a lot of people in between. We looked at models of transferrable development rights, which is essentially exactly what’s being proposed by the Staff now. It’s exactly what’s being proposed. It’s transferring density out of open space, wildlife areas, into places that are already built. That’s what’s going on. We looked at that in detail. There were good things, because under that model we looked at, it was permanent conservation easements from the sending areas. It wasn’t subject to rezonings or anything. It was permanent protection. And then for landowners it wasn’t a down zoning, which is highly controversial for a lot of landowners. It wasn’t that. It was purely voluntary and they got compensated. If they wanted to transfer development rights, they could; they could get compensated if they wanted to and it was voluntary. We looked at the down side, though, and it was unanimously. There were about 14 of us. It was unanimous all across the spectrum. It was unfair and unworkable to use this model because a lot of the transferred development rights were fictional. They were phony, phantom, whatever you want to call them because they never would have been developed anyway. And some landowner could sit there and get money for development he never would have done on his own, or her own, property and send it into other neighborhoods far away, which was highly unfair. Again, it was unanimous—no! The County Master Plan that came in, what, 1994, had a much more responsible and less ambitious version of it, which was cluster, where for a given parcel, the benefit of the burden is right there, on that parcel, and it was permanent protection. Yet, the landowner was voluntary and they got compensated. The landowner got additional development rights if they had permanent protection of open space areas and cluster. And it’s worked for almost 20 years now. SRA started out as something like 42 acres of dedicated open space. Finally, they went to that model that the Billy Resor actually come up with on the Planning Commission and it was over… I believe it was over 1,400 acres of permanent dedicated open space is where it ended up, right up in Teton Village. That worked and it’s worked for a lot of landowners. I look at what’s going on now and what’s being proposed and have gone through all of this stuff, all of this stuff. You can hardly… I read the report and it’s like the Internal Revenue Code, or it might as well be written in Russian. What’s actually going on here is, if you look at the three key groups, if you look at landowners, if you look at conservationists, if you look at old-time Jackson Hole neighborhoods, and you look at the overall community, too, in terms of not many people want this place urbanized. So how does this parse out? For landowners, if government need it, it’s a down zone. It’s not voluntary for these landowners, whether it’s down zoning it in NC zones or eliminating or reducing the clustering. The landowner gets nothing in terms of compensation. And if like government need it, they are down zoned. Not a good thing for landowners. For conservation, there’s no permanent protection. It’s just zoning. It’s down zoning. And that could be changed a day later, or a week later, two weeks later, two years later, five years later. There’s no permanent protection. And I have not heard one single detail from the Planning Staff of how they plan to have real permanent protection. It doesn’t exist on this… yeah, I’ll get there in a second. From the conservation side as well, a lot of what fueled conservation easements, which is great, is the clustering rules, because then you’ve got federal tax deductions, estate and income tax deductions, gift tax deductions, and it’s a huge incentive. This proposal would essentially devastate that whole model. And then for the neighborhoods, I think you probably have a sense now that it’s not real popular in the neighborhoods where you want to dump this density. And a lot of the density is phantom density. It’s phantom. You look at who benefits. Who benefits? Well, landowners don’t; conservationists don’t; old-time neighborhoods don’t. Who benefits? Well, look at the receiving areas. There’s a tiny little bunch of landowners who benefit. Who is the major landowner who benefits from these up zonings? It’s Teton County itself, County government, because they bought five acres, five acres by the Aspen, right next to the Aspens on March 17th, 2007; they paid 1.95 million dollars for it, which was a million dollars over the then current appraised value at the height of the market… [Crosstalk]…I know, I’ll be right… in just one second more. And they have a lot of… I know, but this is… it’s an enormous conflict of interest, because the government is looking to up zone itself. This is a fundamentally flawed scheme that’s being promoted by some people with very little transparency. It’s hide the ball, and it’s fundamentally an enormous conflict for interest for the government. That is what is going on. You are all public servants. You don’t get paid on the Planning Commission; the Planning Staff does. It’s public service; it’s serving the public. It’s not, you know, it’s not your own personal agendas. It’s serving the public and that’s what matters. This is that letter. Thank you.

1/26/2012 Jensen, Gail    Hello, Gail Jensen. I’m also a member of the Teton Village Road Coalition. And we grouped up because we feel...we all are feeling the same thing—it’s called the urbanization of Jackson Hole. I moved here, and most of us moved here, because we wanted a rural lifestyle. That’s why we moved here, and that’s what we want, and that’s why people come here. It is not the intense dense development of the resource. I really am appalled that that looks like the direction we’re headed. Town, the up zoning in Town is immense. I have always ?? in Town, Town Square, right off of Town Square on Center Street, and I am pleased that you have taken a step back for the two-story around Town Square, but immediately behind that is three and possibly even more stories. And if you add up all those areas that you ?? your Town Plan, it’s immense growth, and it doesn’t relate to what the residential densities can be in Town. So, I take a different look at it. Where are you going to put all the employees and all the people that are going to have to work in those commercial areas. But you’re going to have to have the nodes outside in the County to house them. So, I look at it in the opposite direction, and a couple of other people have spoken about. But my main problem is is the urbanization of Jackson Hole. It’s not what I want. It’s not what a lot of people in the community wants. And I really think you need to take a step back and follow what the community wants. It’s, you know, it’s our souls, we’re selling our souls. Are we selling it for the dollars? I don’t see the dollars coming into the community with this growth. I don’t know where the motivation really is. I don’t know where it’s coming from, because it’s certainly not coming from the community at large. Please, please reconsider...please. Thank you.

1/26/2012 Coon, Dave       Hi, Dave Coon; I currently live west of Town on East Bank. Just first I want to say thanks to the immense amount of effort. A lot of new faces I haven’t spoken at for awhile, but thanks to all of you. I’m aware of what’s going on in a lot of the Plan. Not a lot gets through my household without some review. I’m not going to speak on real specifics on character districts, things like that, but probably on a broader scale. I’m horribly concerned about how we’re going to pay for this growth. And I’m just talking mainly entitled growth that’s already on the books. It doesn’t come free; there are costs for infrastructure and such. I sent some wild estimates that...Paul Nash said wild. So, you’ve got some serious planning to do. I’m not talking just in the light of this next Plan for ten or fifteen years, but I’m talking the next Comprehensive Plan and the next Comprehensive Plan. Some of this stuff is 50 years out, but you have to pay for it. And these are big things that go along with this, so I’d like to see some direction and language, maybe an implementation policy, in the Plan that looks that way at least. There’s not much in there that really deals with these fiscal aspects that are way down the road. So, just consider those and again thanks. And actually thanks to Staff and the diligent public out there that...a lot of new faces. It’s been a process. I don’t agree with all of it. I agree with a lot of it and it’s a good process. So, thanks.

| 1/26/2012 | Jern, Sherrie and Ken Interested Public | I would like to specifically address the upzoning issue in Raintree. Ken and I moved from Vail, Colorado because we could not afford to own a home in Vail on our ski instructor and Outward Bound wages. (We lived and worked there for 10 years.) But we saved enough money to relocate to Jackson in 1976. We bought a lot in the Aspens for $17,000. We designed our own house, cut down the logs, hauled them out of the woods. We built this house by hand and by ourselves. We had one daughter, born and raised in Jackson. She now lives in Corvallis, Oregon where she is a teacher and has saved her money and last summer bought a house...on her own.

In 1988, we sold our home in the Aspens and bought Lot 13 in the Raintree Subdivision, where the zoning was one home per 3 acres. We again built and designed a log house. We have invested all of our money and ourselves into this land and house.

We purchased this lot because of the rural lifestyle and the wonderful neighbors up and down the village road. This is home. We love the abundant wildlife, the trees, the water, the quiet. This area is a special spot with horses, sheep, goats, chickens, barns and buckrail fences in addition to moose, both mule and white tail deer, fox and coyotes. The great horned owls, eagles and birds are numerous.

When the new Sally Rains Subdivision was finalized, it stated on the Plat Map that "This Subdivision Shall Not Be Subject To Further Subdivisions"

This was stated on the Map even with all of the principals knowing that the County would purchase 5 acres in this subdivision through the Housing Authority in a two week time period for the very purpose of up zoning it for affordable housing in the future. Not only did the County pay far more than the appraised value of this land, but they stated that it was for "Land Banking" Although records clearly show much discussion by Christine Walker in regards to future affordable housing on this land. (Staff Report February 13, 2007-)

County buys the Land and then later the County upzones it to suit their vision.

Not our vision. Not the vision of the majority of nearby residents. When we retire, we will not be able to afford our home. And we probably will not be able to own a home in Jackson again. That is our problem, not our neighbors, not yours....but ours.

We believe that there is enough growth built into the 1994 Comp Plan. We do not need more. We do not need to ruin our neighborhoods anywhere in the Valley. We do not need to change the lifestyle of families who have lived here for 30 years or more. We do not need or want the change. We have something that the rest of the world envies. We do not need to become them.

Planners want to plan....you went to school for this. But sometimes, things are best left alone.
I am hopeful that you will do right by the people of Jackson Hole who have worked hard to make this plan fair to all.

Under illustrating our Vision it states that “Realizing our vision means proactively planning for what we want – rural open spaces and high quality complete neighborhoods – and identifying where we want them. Our Vision and Common Values describe how we will direct development toward suitable areas in order to preserve and protect the ecosystem and design development to enhance our quality of life. The Illustration of Our Vision identifies where those suitable areas are located. As important as location, is the type of preservation or development desired. Unlike the past, a principle of growth management in this Plan is predictable implementation. By defining the desired character for each area of the community, all community members know what to expect as a result of preservation and development regulations and incentives. In areas suitable for development, the Illustration of Our Vision describes how we will protect the character we love while ensuring that the development contributes to the goals of the Comprehensive Plan. The Illustration of Our Vision also describes how we will preserve and enhance all other areas to provide wildlife habitat, wildlife connectivity, scenery, and open space. The community is committed to continually adapting our implementation strategies to ensure preservation and development occurs in the desired amount, location, and type. This can only be realized if we define desired location and character for the preservation and development. Adapting our implementation also requires rigorous analysis of our successes and failures. The Illustration of Our Vision defines existing, baseline character in addition to desired future character; allowing implementation strategies to be adapted based on analysis rather than theory. Our community’s many districts share common values, but also have unique identities. While each of our community’s policies is important to achieving our Vision, not all policies apply community wide. Each individual preservation and development project should be a contributing piece in the community wide plan for achieving our Vision. The Illustration of Our Vision is the community wide picture of where we will place all the pieces – ensuring that all policies of this Plan are implemented in the context of our Vision and no policies are forgotten.”

We can improve the district maps by including what our our community has always called for and has stated so in OUR vision above. If we don't, the latter part of the above which states that "allowing implementation strategies to be adapted based on analysis rather than theory" will be in fact the opposite. Without the projected growth numbers for each district and over all for town and county, we will be theorizing our way into a quagmire that only developers could love.

Please focus on decreasing development in desirable areas rather than focusing on where growth should go. Focusing on just growth areas will lead to careless development planning and cost overruns that will hurt everyone. Also work with the Land Trust and large land owners by providing incentives to permanently retire development rights. The Land Trust is very important to the success of the comprehensive plan.

Being from Cottonwood Park I would like to repeat the some of the recommendations that JHCA has submitted to the process.

District 5: West Jackson

a. Recommendation: Section 5.2 should be amended to recognize that this area is already trending towards housing and complete neighborhood attributes, and should be encouraged to continue to do so, given the close proximity to schools, a grocery store, pathways and Flat Creek. This is an ideal location for “complete neighborhood” attributes, but given recent developments, it is no longer a particularly good location for industrial uses. Industry should be focused into District 7.

b. Recommendation: Section 5.4 should commit to repurposing High School Road primarily as a residential access road and not a highway.

c. Recommendation: Section 5.6 needs to be clarified with regard to the lower priority of development in northwest South Park.

You can either ruin High School road with theories or go by the numbers. You can't have industrial growth and have a safe environment for school zones and the neighborhoods around them. Hopefully you read my letters in the past pushing for a campus road that promotes safety and less traffic on High School Road. It is so important now that the district map is calling for expansion of the school zone on High School Road. Please respect our wishes as property owners with rights too. We are not looking to make money off of it. We are just looking to preserve our land and it's value as a great family neighborhood.

<td>1/26/2012</td>
<td>Bloom, Rich South Park Neighbors</td>
<td>Good evening, Rich Bloom, representing South Park neighbors. You know my comments, you know my public positions and my overarching concerns which ??, but I want to give you the specifics, so please take some notes. In area 10.2 and in 10, I think Staff’s going to make these changes already, but we have some incorrect mapping of the elk and deer movements. Elk and deer do not cross the Highway and come down through the forest and then march along Flat Creek through Melody Ranch and through Rafter J. They actually move throughout the district. And so the introduction in 10 talks about wildlife moving through the district, and in 10.2, you just need to clarify that and reinforce the what’s already in here. If lines are to be on the map, too, I think through a lot of districts some L-shaped lines that show east/west and north/south movement ?? is appropriate for that district. Again, the ?? and that’s green changes. But the big one is I want to look at 5.6. I think all of you have read the Land Trust letter and this is the big idea that is in this Comp Plan. This is about how to protect permanent open space, you know, in rural areas. And so the whole point was not the shifting of the numbers or ?? . It was using that as an ends to a means, or a means to an end, and the end is conservation. And the greatest opportunity we have in the Plan, and probably the only one that’s really realistic, are the current zonings in the LDRs is in South Park. It...the 5.6 area is about 200 acres, about equally split between Rob Gill and Shelly Lockhart. Those two landowners just south of that have another 350 acres. In addition, both of them own another 600 acres below Shooting Iron, so we’re talking about 2200 acres. So, both of them have great ability, without having to cooperate with anybody else, to shift that density up into a location that makes more sense. And so in 10.2, about 90 percent, 80 percent of that is those two landowners. There is a parcel by Wilson near Rafter J; he’s already conserved about half of it. And then there is the Lucas parcel, about 200 acres, meaning Rafter J, Three Creeks and South Park Ranches. So, there’s some language you’re going to be dealing with tonight about moving development into or adjacent to existing developed areas to the ones to the south, which leads to complete confusion. That could be simply corrected about moving it in area 10.2 to the north into area 5.6. It’s very clear. It gives those landowners and the Land Trust and the public clear direction to see what can be accomplished. The County did affirm that in their discussions. As far as timing, the County actually affirmed the idea of infill first in the Town, because area 5.6 could be a threat to investment in Town. But what they’re really trying to say is the big idea was how do you conserve permanent open space? And the clock ticks on these families because of estate planning needs, and if those families have an opportunity to resolve that land and do a PRD amongst themselves, I think they would be ?? out any development and over time it wouldn’t be a threat. So I think there’s accommodation between what Town said, which is completely valid, about linking it to the growth management plan but allowing the opportunity. What is a threat is language that Staff added in where they linked an earlier timeline on area 5.6 to not just the open space protection but to a workforce housing opportunity, which would happen by default anyway, or other community benefits. And so I think you open the door by saying we want to do infill first unless we get another Teton Meadows Ranch that shows up there. Well, that would be a direct threat to investment in Town I think to those coming in contradiction versus achieving permanent open space. So think about that and just link it to the permanent protection. That’s the idea. You just need to recognize this parcel is very unique because of the ownership and the control there. By doing it just to the north into 5.6 does not leave the Lucas’s out. They could work with the family or they always have the right to cluster themselves on their own parcel down by South Park Ranches. I think you want some aspirational goals here. We all agree I think we’d like it up there by Cottonwood to achieve permanent open space. Thank you.</td>
</tr>

<td>1/26/2012</td>
<td>Kane, Raye and Jim Interested Public</td>
<td>As ten-year residents of Forest Edge and taxpayers of Teton County, Wy we strongly support language in the Character District Maps connecting State Line Road across South Leigh Creek. We drive an additional 20 miles a day to get to Targhee. Same with our school children attending Alta School. Services are not available to us simply because we are not connected; such as, dust coating our roads and regular road maintenance. We oppose any change in the language that might prevent these improvements to State Line Road. We have been waiting a long time. Please do not sidetrack this plan. Thank you.</td>
</tr>
</tbody>
</table>
| 1/26/2012 | Fuller, Lee and Jim Wov Interested Public | We live in the Forest Edge subdivision in Alta and are for the proposed extension of State Line Road for the following reasons: 1) We have 7 children who need to ride a school bus to the Alta School. 2) Fire protection and other emergency vehicles 3)Utility vehicles These are all ESSENTIAL reasons, not frivolous nor indulgent reasons. Thank you for all your hard work and devoted time on behlf of the citizens of Teton County, Wyoming.
Our family has been visiting Jackson Hole regularly for over twenty years. We have made good friends with Ken & Sherrie Jern, and stay with them at the Wildflower Inn whenever we come to visit. When we come to Jackson, we love to observe the abundant wildlife (often from the deck of our room at the Wildflower Inn!), spend time on the Snake River with one of the excellent Westbank Angler guides, hike and bike in the national park, and dine at the Snake River Grill as well as Jackson's other fabulous restaurants. Together, we have climbed the Grand Teton, and Sean has summited other peaks in the Teton Range with Ken. But most importantly, we enjoy spending time in Jackson to get away from the increasingly crowded front range of Colorado. While the front range continues to experience unfettered growth, with the increasing traffic, density, infrastructure, strip malls, noise and crowds that go along with it, we appreciate each time we visit the quieter, more spacious environs of Jackson. We enjoy spending time not only with our friends Ken & Sherrie, but also enjoy experiencing the wonder of the Tetons and Jackson in a less crowded, less congested, and less hurried environment.

We wanted to write to let you know that in our opinion, any additional building, beyond what is envisioned by the 1994 Comprehensive Plan would have a very negative impact on our perception of Jackson Hole as a place we love to spend time. Adding 500 more homesites along the Village Road, above and beyond the 7,000 still available in the County, seems excessive, and would almost certainly negatively impact the fabric of the community we have come to know and love. Unlike in Colorado, we feel that Jackson planners have done an excellent job of keeping unnecessary growth at bay over the past twenty years. The additional growth would certainly impact wildlife and the already-congested Moose-Wilson Road, and would undoubtedly bring the general noise level up considerably. These negative effects would certainly make us think twice about continuing to consider Jackson our second home, and we would be less likely to plan regular vacations there from our home in Colorado. In short, we love to come to Jackson precisely because it is not the front range of Colorado, and doesn't have Colorado's increasing traffic, density and sprawl; we would hate to see what we love and appreciate about Jackson coming to an end.

Thank you for considering our thoughts on the proposal for additional growth beyond the 1994 Comprehensive Plan, and please feel free to contact either of us if you would like to discuss our thoughts further.

It seems the cart is in front of the horse...I urge you to work to rescind the current school district ban while the legal issues and a new plan are under way.

My wife and I have been coming to Jackson and Grand Teton National Park almost every year since approximately 1994 when we first came and fell in love with the area. We have on occasion brought family and friends and now also bring the newest addition to our little family, our daughter Gabi. We have also talked up the area and know for a fact that many of our friends have taken our advice and took an initial trip, also fell in love, and have since often returned with their families and friends. Unfortunately, our disclosure to others of our love for such a beautiful area, blessed with comparably wonderful people, may also have contributed to the beginning of its undoing. Specifically, we have noticed over the past years what seems to us to be a tremendous increase in traffic along the Teton Village road and along the Moose-Wilson road into the park with commensurate road kill and other deleterious effects as a result. Some of this is likely due to close access the roads present to the newly opened Laurance Rockefeller Preserve Center. However, we have also seen significant development along the Teton Village road since our first exposure to the area which must also be significantly contributing to the increase traffic. We were therefore very concerned to read of the proposal to open up the area to even more development. Certainly, there must be long term plans already in place that when originally drawn up were forward looking with regard to future development yet balanced with restrictions to achieve the laudable goal of protecting what makes the area so special. If so, my family, friends and I would ask that due weight be given thereto so as to not further destroy the beauty, serenity and habitat for wildlife this area has historically provided. Progress coupled with development can be a good thing for business and community. However, depending upon location and scale, and if left unchecked, it can also be terribly destructive with diminishing returns to all but those who profit thereby. In this case, my family, friends and I fear allowing up to 500 additional homes is more the latter than the former and, if allowed, would truly benefit only a privileged few to the detriment of the many. I hope that you will listen to this learned voice from Texas who lives in a vast sea of homes and businesses. There is a reason we come to places like Jackson. Reasons that make it special. The more it grows to look like where we live, crowded and full of rooftops blocking the view and access to the mountains, the less likely we are all to return. Memories are usually more clear closer in time to the events to be recollected. Reference should be given to the planning visionaries who initially must have sought reasonable restrictions upon development along the Teton Village road undiluted by the following years of change. We pray you will keep the area special for yourselves and your out of state friends and restrict such further development accordingly.
Date | Name | Comment
---|---|---
1/26/2012 | Quinn, David | David Quinn, I’ve lived in Wilson for the last 15 years and my family’s lived in Teton County for a long time. First of all, I’d like to sort of ditto the last comment. I sat through, I don’t know how long, a couple of years of planning meetings and I think that both Planning Commissions presented a very extraordinary Plan to the County Commissioners, and I think a lot of good thoughts were put forward. You know, a lot of public comment very similar to public comment that I’ve heard tonight from the Land Trust, from many conservation groups, from many landowners, landowners coming from, you know, many parts of the Valley, including Alta, and I think there was a consensus that, you know, the PRD tools, noncontiguous PRD tools, and many other tools should be left on the table. The nodes, you know, clustering in appropriate areas close to existing development. I think the language actually in the ?? as far as clustering goes north and south next to existing development, I mean, I agree with. You know, even Rich Bloom’s comment that, you know, north is an appropriate place. I think that he also mentioned other landowners have moved their density north, that certainly next to existing development, you know, in certain parts of South Park in southern areas should be acceptable. You know, I was quite pleased, very pleased actually, with the document you presented to the County Commissioners. And, you know, I was totally floored, shocked, I don’t know what you want to say, when this mapping process started with these nodes all of a sudden—you know, call it what you want—came about, and I don’t know exactly how it happened. And I don’t know what can be done. And I don’t know what influence you can put on the County Commissioners maybe to pull the mapping away, go back to the Plan that you presented, because I think, you know, the community is hysterical at this point. You know, I don’t know what else to say, but, you know, I do appreciate your efforts. Thank you.

1/26/2012 | Jorgensen, Pete | I’m sorry, Pete Jorgensen and I live in Town. First, I’ve been involved in planning here since the ’50s, having served as the local coordinator for the RUDAT study focused on South Park. Very simple and very straightforward; none of the recommendations in here were involved. I’d like to comment first on the fact that I don’t know as much as you folks do <<inaudible>>. But I do appreciate these opportunities to make comments. I submitted written comments a couple of years ago, which I tried to review at your last public comment meeting ??, so I will keep this very short. And any comments I make tonight should not be taken personally, certainly not by these boards; the County Commissioners, that’s another thing. I saw the first diagram you put up and it reminded me of something I saw in previous business, not here, somewhere else. The company I was working for did projects in Vietnam and somebody got and they drew three overriding circles or interlocking circles and tried to explain it that way. And, I’m sorry, I’m probably getting more dense as I get older, but I just don’t understand where this is going, when the County has made such a commitment to open space, wildlife preservation, 97 percent federal land, which we hope is protected, conservation easements over 10,000, and I don’t know exactly how many. I was a member of the three families who did the first nature conservancies in Wyoming at Skyline Ranch, four hundred dollars and 600 acres permanently preserved. I don’t think we got anything out of it; we didn’t have enough income to take a tax credit. But that’s the history of this Valley. And I guess I don’t want to say we shouldn’t grow, but I will say the County shouldn’t grow. We should split the County and the Town apart for purposes of long-range planning. The Town as Heart makes a lot of sense, but when you look at the implications of growth anywhere, and ultimately that’s what happens right through the Village, it’s easy to understand why WYDOT says, you’ve got to have the three lanes or five lanes. They project traffic 20 years in the future. Every projection that has been made in this County has been met or exceeded. There’s no effort, no meaningful, serious effort by the planning entities, and again it’s not you folks—it’s the County Commissioners who have that authority to limit growth or control what happens. They were spending 80 percent on construction that was federal money; they have requirements that it meet certain standards. That’s their job. They will do their job eventually. The second thing…and the third thing is the districts. And that’s…15 districts is fine but the ones that make up the Town, Town as Heart are the important ones to consider more density. I don’t know whether it should be there or not. We’ll talk about that when you get to that point. But I urge you to try and take care of the County lands. Things Peter spoke to, there are not many properties left that have not been developed that would lend themselves to a large development where you would actually gain a conservation easement in exchange for density. So I would urge you to look carefully at the map and see what you’re really talking about. You’re clearly talking about the north end of South Park. That’s been kicked down the road for 20 years, 30 years. And I’m not sure waiting for infill in Town is doing anything more than just delaying some definitive action that shows some limits. The timeline is another thing I would like to see, and I keep thinking these meetings are a chance that somebody is going to say that this is the deal and recommend it and the elected officials adopt it. But so far I don’t have a sense of where we’re going and when we’re going to get there and I’d really like to have that. Thank you very much.
In 2003 I purchased property in Forest Edge Subdivision north of Alta. At the time, I was informed improvements were being done on Stateline Road, and within two years the South Leigh Creek crossing would be re-established. Since that time I have built an affordable and highly efficient home there, and now commute to my job at Grand Teton N.P. Co-workers live in the Alta and Ski Hill Road area, and should Stateline connect, the opportunity to carpool would be significantly enhanced. The current situation leaves me feeling somewhat disconnected from my community in that what would be a short bicycle ride or walk to visit friends and neighbors, or join up to commute, is now a lengthy and hazardous trip involving travel to and down Highway 33. It seems these issues would be resolved if the following Policies of the Comprehensive Plan were to be fully implemented. I would like to be on record as being strongly opposed to any alteration or interpretation of the plan that would not include a timely completion of Stateline Road connecting the South Leigh Area with the rest of the Alta community. Thank you for your consideration in this matter.

Policy 7.2.a: Create a transportation network based on “complete streets” and “context sensitive” solutions
The Town and County will adopt and implement “complete street” and “context sensitive” roadway design standards. The construction of complete streets and context sensitive roadways will serve as the backbone for a community wide transportation network that supports a significant mode shift to alternative transportation. To achieve the community’s transportation vision, improvements should safely accommodate all users of the public right-of-way, including: pedestrians, bicyclists, automobile drivers, trucks and transit riders. Public safety and reduction of crashes and fatalities (motor vehicle, bike, pedestrian, and wildlife) is a core transportation goal to be considered in the application of all strategies.

Policy 7.2.b: Interconnect all modes of transportation
Our alternative transportation system will provide a means to connect all alternative modes of travel. Park ‘n’ Rides, bicycle parking, complete streets, transit, and pathways will be incorporated into an integrated alternative transportation system. A system of trails to connect our parklands and trailheads should be considered as part of the transportation system. The Town and County will work jointly to identify opportunities for connections between various alternative transportation modes.

Policy 7.2.c: Maximize interconnection, redundancy and hierarchy in the transportation network
The development of an interconnected and redundant network is critical to the assurance of a safe, efficient and complete transportation system. In the event that a road or bridge is closed due to a natural hazard or other event, interconnection and redundancy will ensure continued access between and within locations in the community. It will be important to strike a balance between adding new roads and widening existing roads to provide for this community need. The Town and County will consider the need for interconnection, redundancy, and hierarchy when planning for an integrated transportation network.

Policy 7.3.a: Develop a land use pattern based on transportation connectivity
A goal of this plan is to interconnect existing County neighborhoods and the Town of Jackson with a multimodal transportation system. Within existing County and Town complete neighborhoods, alternative modes of transportation are viable for daily trips year-round, and these opportunities should be maintained and enhanced. Outside of complete neighborhoods the Town and County will promote a land use pattern that supports alternative transportation by requiring interconnectivity of future developments and existing development to the best extent possible.
Armond Acri, representing Save Historic Jackson Hole. I want to start off by saying I think the product that you guys did when you had the Plan originally was excellent. You guys listened to the community. It wasn’t...we didn’t get everything we wanted, but I think the work was good. Staff did a good job. Unfortunately, when the electeds took over, the emphasis shifted from get it right to get it done now. Your efforts resulted in a Plan that we refer to as “our Plan.” Right now, it’s referred to as “their Plan.” There is no ownership. This should be cause for concern. I’d like to talk to some of the reasons now why that there is this lack of ownership right now. A lot of discussion in the meeting two weeks ago on how many stories are okay. What I heard was about not being able to see stories. All the talk was about hiding the stories so that we can’t see them, but there was no talk about the impacts. That is really why people are asking for numbers. That is where the concern comes from. What do we need to accommodate the growth? WYDOT, as an example, we challenged...Save Historic Jackson Hole challenged the WYDOT figures for South Highway 89, which were based on numbers that came from the elected officials. It turned out that the numbers were way, way higher, the growth numbers, for South Highway 89, so we’re not doing what we said we’re doing. We’re hiding when we ignore these numbers. We vilify WYDOT when all they’re doing is responding to the growth that we allowed to happen. What we end up with is bigger schools on a road...build schools on a road that’s failing, the bigger bus line. When Bruce gets up here, he’s probably going to throw on his cute cheerleader outfit, fire up the smoke machine and tell you what a great Plan this is. No parent thinks their child is ugly. The reality is an analysis of the Comp Plan by Alan Richman identified a number of issues, some of which Trevor mentioned, that need to be addressed before we can claim this is truly a visionary Plan. Almost nothing has been done to resolve these issues. One of them is this issue of an implementation plan. The community has asked for numbers because they want to see some kind of accounting for the hand waves. Right now, it’s we’re going to put a little more here and take a little away there. And we’d like to see more than just the hand waves. That’s why we’ve asked for the numbers. The growth management plan is reactive, it’s not proactive. It gives no assurance that you can achieve the goals during the Plan and that’s why we’d like to see the numbers. You might achieve the 60/40 split. Can you hold it to the economy? We don’t know and maybe it doesn’t matter anyway because the Comp Plan is only aspirational, it’s not legal. We ask that you tell the elected officials that the Plan is incomplete without some sort of implementation plan that identifies the timeline for major changes that are planned to accomplish the goals in this Plan, and this must include some kind of numbers facing the County for these hand waves. When isn’t as important as how much. If you fail to provide numbers, you have failed to plan. Thank you.
Good evening, I’m Trevor Stevenson, I’m here to speak on behalf of the Jackson Hole Conservation Alliance. And, Planning Commissioners, I’d like to begin by thanking you for your many years of collective work on the Comprehensive Plan. What I’d like to do tonight, there are some overarching issues that I’d like to bring to your attention, so that you can keep the big picture in mind as you work tonight. First of all, the character district maps define goals for the future more specifically than the policies did by describing the desired future of each specific area of Town and County. We need to be clear that actually achieving any of these goals is very far from sure. Success hinges on coming up with effective regulations to guide development in a way the community desires. And therefore the Alliance has requested that a detailed implementation plan be developed which should outline major tasks ahead and include a timeline and a budget explaining how we get from describing goals to actually having the regulations needed to achieve them. As you work tonight, please take some time to flag issues that you think need additional work after the Comp Plan is adopted, so that these can be incorporated into the implementation plan. Since we don’t yet know how we’re going to actually shift development, we don’t actually, therefore, know how much development we can really shift. And you’re likely to run into this problem repeatedly tonight, as I expect you’ll hear from many members of the public that’s concerned. Next I would like to say that a much clearer statement of intent is needed, explaining that it is a actual shift in development that is desired, not simply an increase in additive growth in some areas. First, please recommend that a statement be added to the introduction explicitly saying that any increases in development should be accompanied directly, or linked directly, to decreases in other districts; otherwise, they simply don’t match the intent of the Plan. We do believe that this is already the intent of the Plan and we feel that it should be a green change to add that additional language, but it is extremely important because it’s not yet clear enough. Finally, I would like to clarify why the Alliance believes it is important to provide information about the amount of growth that is actually desired in each district. Clearly stating approximately what the intention is in terms of the amount of growth would provide much greater predictability for the residents in each area and would enable a broader conversation about what this Plan really means. The Alliance believes that explaining the amount of development desired in each district is important for a wide range of planning reasons; however, this is also the best way to illustrate how the Plan will achieve community goals and we think this is the best way to increase residents’ understanding of and support for the Comp Plan. We recognize that some of you believe that releasing this information would cause a community uproar and derail the Plan. And we disagree. The Alliance believes that being transparent with this information is the best way to address the clear concerns that have been expressed by residents for many years. As you work through the character districts this evening, please take time and think about how much more clear all of this would be if the amount of development was much more clearly explained. So, in a nutshell, three things—implementation plan, look for things that need to go into that; second, link increases to decreases much more explicitly throughout the Plan; third, look at the how more helpful it would be to have the desired amount of growth in each district, rather than just a description of the type of growth. Thank you again for considering our recommendations.
Thank you for letting us give another public comment in this process. My name is Patty Ewing...excuse me, I’m a little horse. I’ve lived in Jackson for quite awhile and I’m focusing...during this whole process, I had great hopes that the planning work plan would be revised, not fully rewritten. And my general feeling is to echo much of what has already been said. But I want to limit my comments to East Jackson, to the Town Periphery, District 6, and I have written a letter, or we have a letter that was submitted on December 3rd, and you may or may not have read this in your public comment, but I’d like to read it to you now. And this was addressed to the electeds. This letter documents the future character of the Town Periphery district which we, the undersigned, desire and expect. We have used simple language to make comparison with the forthcoming land-use Regulations straightforward.

The Town Periphery is a low-density residential neighborhood which borders the undeveloped public lands of the National Forest and the Elk Refuge. It is not unusual to see deer, fox, moose, ?? in our yards. It is a quiet neighborhood with large yards and open views of the mountains. We want it to stay that way. We ask that you design land-use regulations which are predictable and preserve our existing neighborhood character and we look forward to the review of your efforts in the coming months. And these are the things that we asked for on December 3rd: large lots (at least a minimum of 1/3 of an acre); more open space than structures; permeable to wildlife; Planned Unit Development subdivision not allowed, such high density is not compatible; properly maintain the Cache Creek Drive, do not make it a complete street like Redmond is; horses will continue to be allowed; and no new commercial enterprises are needed or desired. And I will submit copies of that letter signed by property owners in the Cache Creek, Snow King Estate, and Upper Cache Creek area. We so far don’t have all of them, except the few we could get. But my cover letter is here and I’ll just make one copy of all of these; I’m assuming you can make copies if you like. And this is addressed to those of you who are the members of this Joint Planning Commission. Please include copies of the attached letters dated December 3rd of 2011 with additional signatures, all property owners in the Cache Creek and Upper Cache Creek areas. The original letter was submitted to be a part of the public comment for the Comprehensive Plan on December 3rd. This letter supports, for the most part, the future desired characteristics of District 6, as published by the Town and County planners on December 7th. We appreciate the recognition by the planners of the importance to retain a part of the Town of Jackson as only single-family units with larger lots, and the recognition of the importance of the permeability of wildlife. We will continue this effort to obtain more signatures and at that point we’ll submit those later. So, if you don’t mind, I’ll submit this and you all can make copies. There will be more signatures coming. Thank you.

I’m Jim Genzer; I’ve lived in the community for 40 years, 38 of that right next door on Snow King Drive. And I would like, first of all, to say Patty Ewing’s comments for Southeast Jackson is very appropriate to keep it as single-family housing. I think our numbers are very, very unrealistic, as Bill has mentioned. Doubling the size of the number of residences in the community is absolutely wrong. The double the size of commercial is absolutely wrong. Increasing areas like the Aspens and the Village by little pieces and then turn around and dumping the rest of the growth in the Town of Jackson is absolutely wrong. That is not the way things should happen. We...in the Town, the core commercial and resort areas to be expanded out to the...it used to be the Y, now the X, is a silly, silly thing. It will eliminate the western flavor, the western atmosphere that we have had for generations in Jackson Hole. That is not what we should be doing. If we want to be in step with a western community and the rest of the State of Wyoming, we will not do that kind of development. Can you imagine driving from the Y into Town with three-, four-story buildings in a dead zone? The only thing you can see is the antennas on top of Snow King. We’re no different than any other city USA. If we want to keep the character of Jackson Hole, we do not allow the Town of Jackson to become the dumping ground for the community. None of this three-, four-story housing. We keep the character that we have right now. I think that, in order to do that, we have to eliminate the idea of having 65 percent of our employees housed in Teton County. That will not work. If we expect growth, 65 percent is wrong, and at a maximum, I would say 45 percent of employees that live in Teton County. And I thank you for the time that you have taken to listen to us and I really hope it engenders some revisions and attitude changes within our County and Town officials. Thank you.
1/26/2012  Jern, Sherrie
Interested Public

Hi my name is Sherrie Jern and this will be a little more personal. To kind of keep up with what Peter was talking about, <<inaudible>>. We had many developers coming to us before the County purchased this property, wanting to develop it but realizing there wasn’t our support and the support of other neighbors that ??. And we basically all said, no, we don’t support development on this five acres. And so these developers went away. They decided that they couldn’t do it without the support of the neighbors there. So, we finally sold the five acres to the County. We knew that the County was purchasing this land and that they would up zone it. They were purchasing it in order to zone it for density with disregard really to what the neighbors want. By putting a lot of density on this property, you’re going to affect the entire Village Road. We’re going to have congestion. Our wildlife is not going to have as much room to roam. A lot of times I feel like you’re looking at these services at the Aspens, this little market, which is extremely expensive, is not a neighborhood market. No one’s going to going there and doing their weekly shopping. There’s still going to be a lot of traffic going into Town. So on the really small, personal, out-of-neighborhood ranches, a development here is going to be detrimental to the entire Village Road. And also I think it’s kind of expensive to the County. When I got all the minutes from the meetings, it talked about affordable housing before it was zoned, and yet on the plat now it says that this property couldn’t be subdivided any further. We all knew that was going to happen and I think that’s where you’re going, and we don’t want it. Thank you.

1/26/2012  Collins, Bill
Interested Public

Good evening, my name is Bill Collins and I live in East Jackson, Wyoming. I’m going to give you a bit of a different note tonight, I think, from a lot of the comments you’ve been hearing; I’m going to speak very generally, but I’m also going to speak very positively. I think this Plan that’s on the table before you is a huge, huge improvement over the 1994 Comprehensive Plan. And having attempted to administer that Plan for more than a decade, it didn’t influence a single decision the entire Town made, in fact. This Plan is really a very good step forward, and it actually does a lot of the things that we said for a decade that we’d like to do, and that is to de-emphasize and discourage development in the outlying areas and redirect it to the areas where there’s infrastructure, where there’s existing development. This Plan really does that and I think it’s a very good step forward, and I think it ??.

We all have our own things we can find in there we don’t like. Mine is I think the character maps are far too complex and cumbersome and difficult to understand. I don’t think they should be that way. There’s been a concern throughout this process about additive growth. I’ve never understood this Plan to be one that attempted to increase the overall growth as currently allowed. I’ve never understood that to be an objective. And I don’t think it ever has been. And what I would suggest to you, in an attempt to sort of respond to that, is to put a policy in this document that says that, as the LDRs are revised going forward, the maximum theoretical buildout of this County will be increased. It will just simply be increased from what it is today. It’s going to work that way anyway. I mean, the whole process of rewriting the LDRs will have that effect; the marketplace is having that effect; existing development, prior to the great recession when there really was somebody proposing something, was taking advantage of that approximately 80 percent of maximum density allowed anyway. So, let’s just sort of lower the temperature and put something in the Plan that says that we are going to lower the theoretical buildout of Town. I actually think that will respond to a lot of the comments that we’re hearing and a lot of the fear that people have. I’m not sure how much density is proposed in each of these character districts or districts. I actually think that the amount of new development that could result from this Plan along Highway 390 should be very ?? And one of the objectives the community has had for a long time was to try to avoid a five-lane Highway 390 and that’s been sort of an ongoing discussion with the Wyoming Department of Transportation. There’s some very extensive transportation demand and management techniques that’s in place in Teton Village, all sort of calibrated to try to avoid tripping five-lane requirement Highway 390. I would encourage you to keep that in mind when you think about the Aspens and Pines and what else you may do on that, along that corridor. This issue of down zoning versus TDR, well, I don’t know, that is a difficult one. I never believed that TDRs is going to work here. The transfer of density from Buffalo Valley to the northwest corner of Herford Ranch, you’ve got to multiply that by 25 or 35 times before the economics begin to make any sense. And this community will never do that, ?? I just don’t see how that’s going to work. I think that the harsh reality of trying to put this Plan into effect is going to be done through zoning changes. I think that’s the practical, realistic technique that we’re going to find ?? But let me end where I began—this is a giant improvement from the 1994 Comp Plan. Thank you.
Hi, my name is Phelps Swift. I know many of the people who have spoken here tonight are truly the all-time real leaders of the community, so I’m gratified that they’re here, and I know you guys are here doing your job and you’re probably sick of it just as we are. But we were passionate about where we are and where we’re going and you’re hearing from that firsthand. We built a... we moved to Teton Village Road in the 1970s, so I’ve lived in ??, ended up buying property in Melody Home in Raintree subdivision in 1985, which is part of your Aspens/Teton Pines, District 12, I think it is. And the first thing I want to talk about here just briefly has been the process, and it’s been a long and flawed and very confusing process. I’m glad Pete Jorgensen was here ??.

It’s been hard to follow where we are, where we’re going, and what the timeline is, so it would be very helpful. And I kind of think I’m involved, I’m a local lawyer, and I read the LDRs, but it’s been hard for me to follow the iterations, imaginations. In one week the nodes are soundly defeated—I think they were thrown out by you guys. Suddenly, they’re revised in character district maps under a different camouflaged name.

So, except for the professional planners and a few very diligent watchdogs over here tonight, Staff members and those with an agenda, like affordable housing and the Housing Authority, the public, the real stakeholders, haven’t been here. Now, they’ve been worn out, they’ve been divided, they’ve been conquered by the process. And so what we have is not really a community plan, in my opinion. I think it’s been contrived by the Staff and please don’t...I don’t fault you; I’m kind of in Pete Jorgensen’s camp. I think it’s their Plan and it’s hard to get an audience with them, and I’ve tried to be respectful and not bother them at home. So, in any event, the 2009 map, you’ll remember, was released and there was a great outrage by the public, then they pulled the maps, everything became fluff, warm and fuzzy. Then there was calm, nobody knew what was going on. It kind of made sense.

Now you’ve released the character maps more ??, and, you know, we’re not going away. So, I really think what the Staff and the electeds need to do is measure the quality of the comments and the people who the comments are coming from, not just the quantity. And you’ve got some real leaders here tonight saying a lot of good things. And I respect them and I appreciate them. I know there are both sides, but I really think the comments you’re hearing tonight are meaningful. I’m part of this new group called the Village Road Coalition. We didn’t think we needed to organize a campaign.

We thought we could do it individually, you know, we’re still Wyoming and we’re pretty independent. Obviously, the Housing Authority has had a campaign over the five acres. We haven’t done that. We’ve been kind of easy targets. We’re a small group; we’re not a gated community; we’re not a berm community. We don’t even have an owners association. We’re not ?? by SPET or other public money. We’re only organized now and I think that’s a sad, sad statement. I talked to one of the electeds the other night and he said I’m glad you finally organized and why don’t you start a PAC because then we’ll listen to you. Listen to these individuals. We don’t need to be organized. We don’t need a PAC. I think you’re...the ivory tower approach to this thing—I need to make this point—it really fails to account for what’s going on on the ground. You’ve got 15 acres in this so-called transitional space in the Raintree subdivision. Mind you, this is a platted subdivision, three-acre lots, it’s been that way for 35 years. This is only for 35 years; these are platted lots; they can’t be divided, some even have open space on them; they’ve got private restrictions. I think it’s just driving this Housing Authority agenda for this mistake they made to buy this five acres. I think what’s been happening out here is tantamount to a condemnation of our property, our values, our lifestyles. And one of the real centerpiece common values in your Plan is to preserve community character. Again, 34 years our neighborhood’s been zoned the same way, three acres, neighborhood conservation, and by the stroke of a single pen, overnight, you want to convert these—not you but the Plan would convert these—into neighborhood destruction, not conservation. It will be the biggest density dump in the history of the Teton County right in our residential subdivision. And I think you’ve heard enough tonight—we don’t want it. So, I, for one, am very skeptical. I haven’t trusted the planning process. I don’t think I’m alone. I think existing, conserved neighborhoods should be preserved, and then if you want to change them, you should have an open process so the debate can happen and negotiations can occur just like they did at Shooting Star and you end up with a good project. You just don’t want to ??, So, to be very specific, I’d like you to reclassify the Core Residential from the Aspens/Pines—I think it’s section 4.2—into a kind of a conserved, I think it is, maybe stable, I’m not quite sure of the terminology, but leave it how it has been and let us go on with life. Thank you.
I think I will be less than three minutes. <<inaudible>>. I was going to make specific comments, but I did want to say that I agree with ?? concerns that too many members and organizations like Save Historic Jackson Hole and the Conservation Alliance have expressed and have written to you and the elected officials about those. I wanted to make a comment about District 5.6. The fundamental principle behind increasing density in this district is conservation of the open space in middle and Southern South Park, and let’s not lose sight of the fact that conservation of wildlife and open space is the justification for increases in development elsewhere in the County. There’s a unique opportunity to work with large landowners in South Park to do this. And people before me have mentioned how effective the PRD tool has been in the past and how beneficial it has been to the community. So, just the section there should read do not preclude the opportunity for meaningful permanent conservation of open space in rural areas, period. Workforce housing may benefit from this increased density, but is not the driving force behind it. And also the term other community benefits is vague and effectively a loophole, so I don’t think that should be in there. Also, mixed-use does not belong in District 5.6. There’s a commitment to make this neighborhood consistent with the adjacent neighborhood, Cottonwood Park, where there’s mixed housing, not mixed-use. I don’t think that belongs there. And then for sections 10 point...just 10 in general and 10.2, the goal for District 10 is to try to preserve permanent open space in middle, southern and other areas of South Park by directing development to northwestern South Park. This is as simple as encouraging the two largest landowners in this district to concentrate development on their respective properties in Northwest South Park. So, a statement which more accurately reflects this goal would read something like any development that might occur in South Park will be directed to Northwest in subarea 5.6, something like that. And then also about the wildlife movement in District 10, I think that needs to be...well, Section 10.2, wildlife movement in this district occurs throughout, not just along the Flat Creek corridor. Someone mentioned that before. So, add language to describe that it’s east to west, as well as north to south, movement of elk and other species, and this would provide a more realistic description and it would be consistent with the overall description mentioned above in District 10. Thank you.

I’m Sami Robinson and I’m a member of that Village Road Coalition as well and the ??, I’ve been a resident of the Aspens for 35 years and I’ve seen firsthand the impact of continued growth and development in Town on the Village Road in the wildlife corridor. The Village Road should be the last place to consider zoning and growth, adding growth. The wildlife trailer actually sits right in the middle of where you all are talking about adding growth, saying, caution wildlife crossing. And it’s very unique, prime wildlife habitat. The idea of nodes has been met with complete resistance from all the residents. People don’t want urbanization of that and lose our small community character. The increased density and up zoning in Teton Village Road should be eliminated from the Comp Plan. And I thank you. Consider that the moose are really important to all of us. Thank you.

<td>1/26/2012</td>
<td>Huff, Mercedes</td>
<td>I am Mercedes Huff and I have been a full-time resident for the last four years and I’ve sold real estate for the last 33 or plus years, and I have to say that one of the things that made my job so enjoyable is that I’ve always been proud to show off our Valley and talk about how responsibly it’s been planned and how it will be maintained with the same stewardship in the years to come. Right now, I think that’s being threatened; I don’t feel that way. I think it’s critical that we, you know, keep its unique value or we’re just going to be Park City, ??, Aspen, and even Sun Valley. It’s a huge thing that we’re looking at here and I’m very, very concerned. I was standing here tonight talking on my own personal behalf but also for the Teton Village Road Coalition, which has been recently formed to...so that we can get a group voice out here to you. I’ve not addressed this board before. I have talked to the County Commissioners and written letters. You know, I just don’t feel that it’s been heard, so I feel...we all feel that, as a group, we hopefully can have a stronger voice. There are a lot of people obviously who couldn’t get here tonight; either they’re out of Town or the weather prevented it. But I would ask the same question I’ve asked the County Commissioners and everyone else—Why are we here? Why are you insisting...or why are they insisting on completely redoing this Comprehensive Plan? And as you’ve been reminded many times, the mandate was to make ??, not to completely rewrite this Plan, not an overhaul. When I first asked one of the planners years ago why we had to come up with such overarching rules and new concepts for these density nodes, I was told it was too cumbersome in its current form to have to ask for variances whenever a property owner might want to do something a little outside of what was currently permitted. What could be more cumbersome, expensive, stressful than what we’ve all, whether Staff, Commissioners, or the populace at large, have experienced over the last four to five years? Personally, I think the variance method was a terrific built-in checks and balance system. Neighborhoods got input and there were no overarching node themes or character districts to ruin large slots of the Valley. I’m very troubled by the concept of down zoning the rural areas and transferring that to proposed nodes. That seems to be a taking—I’m not an attorney—but it seems to be down zoning these landowners. The right to cluster on larger parcels and receive some density bonus in return has been a part of the Plan for a long time and it has real, real value to an owner. How can we just remove that right and tell the owner he now has to shift it to a node? Although my concerns are really about our Valley as a whole and how the vision you’re contemplating seems very flawed and very detrimental to people and wildlife, I’d like to address one specific area, and it’s been brought up tonight, and it is the five-acre parcel, which the Housing Authority bought on a gamble, with taxpayer money, that it would get up zoned. And they borrowed money, which I am...my understanding is it’s against the rules for a public Housing Authority. Totally inappropriate and I hope you won’t give any consideration for new zoning based on that and it shouldn’t be a reason for you to contemplate adding enormous density to the Aspens. That would only be rewarding bad behavior and I think we’ve seen too much of that in the last few years...I think a lot of it. Thank you very much.</td>

Hi, I’m Becky Tillson, Jackson Hole Conservation Alliance. I wanted to start by thanking all of you guys for the enormous amount of time you’ve served the last couple of years. <<inaudible>>. So, thank you for all of that. Trevor covered earlier some of our most comprehensive ?? . Those are also included in our written comments. I wanted to give just a couple of specific suggestions about the maps, district map on the ?? section. Overall, in the introduction, there needs to be a statement that clearly establishes the prioritization of wildlife and natural resources, which in this Plan is the well-documented will of the community. As we did for Buffalo Valley, it should be clear that choosing a goal of housing or workforce or whatever should not trump the top priority of wildlife protection. Also, in the introduction, the definition of conservation area should be clarified that we will not only be reducing impacts of development but actually the overall development potential in the area as well. And lastly—I think Greg mentioned this earlier—there needs to be a clear consideration of commercial development potential throughout the County ?? the need for housing and the amount and type of commercial development that works with ?? districts. Specific to the districts, there’s just a couple of other things. In Districts #2 and 4, I think it would be important to clarify that Flat Creek enhancements are not only social but also <<inaudible>>. In District 2, we do agree that <<inaudible>>, but I just wanted to point out right now that we don’t believe it’s appropriate for the ?? to extend into District 4 unless it’s really explicitly limited to existing nonconforming uses. District 5, <<inaudible>>. I think…I just wanted to make it clear that the idea is not to give an up zone in Northern South Park without first trying to do it elsewhere. It is a good idea to continue the discussion on linking development in this area to the growth management plan, and perhaps a solution maybe is to have linkage to the growth management plan include the caveat allowing for development that’s associated with permanent open space protection ?? . In District 6, I think I mentioned that it would be important to clarify that further subdivision should not be encouraged. District…the River Bottom District mentions ?? and I think that should be included in the Town and County Periphery districts as well. In #10, the wildlife corridors that was mentioned, that Rich was talking about, east/west, are important to point out. High-density development in the Aspens, which is an area with high wildlife values and existing road kill problems and transportation problems, as you all know, is not consistent with the goals of this Plan…high-density development in the Aspens is not consistent with the goals of the Plan. We don’t know exactly how ?? is slated for that area, but it makes sense to really minimize that ?? . In the Village, this new change that we’ve been talking about, about not increasing beyond the established footprint, we think it’s a good idea, but we prefer to see the amount and type of that future growth. ?? development that will generate markets rather than ?? is really inappropriate. The balance of convenience commercial and workforce residential housing could be explored but only with some analysis of the <<inaudible>>. As we change the subdistrict lines, people should be able to maintain the rural character of that gateway area, preserving the rural character ?? really explicit having a change around the lines there. That’s too much and I just wanted to thank you guys again for your years of service and ?? . Thank you.

My name’s Jay Varley. I own property <<inaudible>>. I’d like to talk a little bit about Town as Heart, which was in the last Plan, and also about downtown as, let’s say, heart of the heart, because I think that the density of the downtown area ought to be convenient to alternative modes of transportation. And actually the biggest one of that is walking. And so I think that we need to try to concentrate that development close to the center of Town. And when I talk about walking, you have to consider topography, too, because when there’s some big elevation being like there is from down the Highway coming up, that discourages walking, too, so people won’t walk as far. It also makes the bus transportation to be more effective as well. And that bus transportation also takes people to the supermarkets and other places that you ?? that you have downtown. So I’d like to encourage that. And I’d like to discourage too much development…to consider the Highway too much as the appropriate places for development. And it does encourage sprawl; it encourages people to drive to these places. I’m not saying you can just freeze the whole thing, but don’t be highway oriented. That’s just a typical American suburban type of development, so it needs to be more concentrated ?? . And hopefully the areas that are not really on the Square, that they can develop as mix-use and put people living there. And also in a way we can start getting the kinds of businesses, once there’s enough critical mass in that area, to serve those people and we can have the kind of businesses that would attract the whole community at various times, as well as people living down there. I’m really looking for more for a kind of a European village-type model. Usually very pedestrian oriented and relatively hard lines when you get out of it. That’s my vision as to what I’d like to see. And I think there’s a lot of advantages to it, you avoid sprawl, and it just is a more sensible way to live, and I think that’s the way it’s going to occur in the future anyway, like Town, of course. Oh, I’d also caution another thing, too. It’s when the area gets too big, we take a risk of having development on the fringes where often the land is larger parcels, easier to develop, and we could end up with gaps between that…big gaps between that and the core downtown, which are like dead zones and people don’t really want to walk through. It needs to be interesting through the whole thing for people to want to walk to it. So that’s one of the hazards of getting too far out of the core with big developments. Thank you.
Gregory Griffith, West Bank. Five years, five hundred thousand dollars plus, 105 meetings plus. Are we really better off than we were five years ago? I say not. We’ve got so much of the big substantive discussions we need to have. We keep putting it off, we keep putting it off, it’s at the next phase, it’s at the next phase. Everyone pretty much acknowledges outside the ?? the psychology of the economy. I got into this process for one reason and one reason only, acknowledging that wildlife and open space. We can’t have any substantive long-term beneficial or benefit to our wildlife without protecting more of the habitat they need to not only migrate but to move around on a daily fashion. We can’t do that without permanent protection. This Plan is just completely turned on its ear from a permanent protection perspective. Everything hinged in early days on two issues primarily—affordable housing and the PRD, because without the clustering incentives, without some dedicated funding source, without a myriad or a mountain of some methodology to create this open space and to keep it…to perpetuate this little song of stewardship we have, everything else falls by the wayside. We can’t do that without ???. Several people have spoken to this issue already. The ?? isn’t about anything other than preventing the additive growth without having that ???, that nexus. To add to growth anywhere in the County cannot be achieved without permanent reduction elsewhere, or else we will end up essentially with the four horsemen of the overdevelopment apocalypse and that is density, sprawl, increased verticality, and the one nobody talks about, concentric expansion, which is exactly what’s occurring now because they proposed expansion in the Aspens and in Northern South Park. It’s absolutely ludicrous. I have a specific suggestion. I also count on Staff’s numbers. It’d be nice if you guys would parse out the 4300 overage in the 6800 base entitlement and how that was arrived at. We were originally told the max PRD potential is 2900. I’d really like to see that parsed out, that number, that 4300 number that gets us to 11.1. A specific suggestion would be to eliminate…of the four categories, only have transitional and preservation. That’s what people understand and most people think now that stable doesn’t mean stable, it’s simply the holding pattern for you’ll be transitional next. So, if we’re really serious about that, let’s just have two categories—transition and preservation. And that includes small town, community character, wildlife, scenic resources—the preservation of everything. There’s been a stunning lack of acknowledgement throughout this process about amount of growth. Amount of growth is much more important in a constrained environment in which we live than location of growth. A lot of planners and architects, I understand all these principles as well as you guys do. I’d have that discussion with anybody in the room. In the constrained footprint that we’re under, a lot of these new urbanistic and smart-growth principles have diminishing returns. That’s not my opinion, that’s actual data analysis. The quintessentially high and low development, sea of wilderness in public lands, assuredly as we’re ??, we are constrained and islands have carrying capacities. They have carrying capacity both on qualitative and a quantitative standpoint, but we need to acknowledge that. The amount of growth is more important to the majority of the populace than location of growth. We should have adhered to the better-not-bigger premise and work with an existing footprint. Six point six million square feet, we’re acknowledging a lack of critical thinking and critical problem-solving ability, if we can’t work within that footprint. Six point six million square feet of commercial outstanding and 6800 base entitled units, especially in this economic time, we should be able to work within that footprint. There’s also a lack of acknowledgement about the cost of growth. We keep projecting these growths, this growth and this growth pattern without considering a strong linkage to the cost of growth; most prominent among those are commercial and employee generation rates and our inability to house them where we want to, and that contribution to the commuter rate also should be considered.

We are visitors to your wonderful area and it has been brought to our attention that you have plans for more homes in the area of the Moose Wilson Road. We have been coming to Jackson and the Tetons for over fourteen years. We come to get away from congestion and the city atmosphere. We have loved the Moose Wilson Road area and the thoughts of more over priced homes does nothing for us. The wildlife will suffer and the God given beauty of the area will be gone overnight. Please I beg you to leave the area as it is...you have plenty of homes and entertainment already there. Let us enjoy the peace and beauty that you have without more clutter. When we this country ever learn that some things simply need to be left alone!!!!

Just received an email from Alan Monroe with the information about tomorrow evening’s meeting. Really short notice and I find myself at St. John’s tomorrow morning for a 10:00 a.m. procedure. I am sure I will not feel like staying around for this meeting and will return home here in Alta.

Briefly, my concern and real interest is that the State Line Road project be completed to 6000 North. You have been provided ample reasons for such completion and I will not repeat them.
First and foremost, I would like to thank you for your efforts over the past several years of working with the community and all interested parties on trying to accomplish the goal of making Teton County a place with the highest wildlife and scenic values of any place in our Country.

In regards to the current Comprehensive Plan draft; I would like to make the following suggestions for the South Park area:

First, the goal of wide open spaces and abundant wildlife can be achieved with the right efforts from our community. As the Land Trust stated in a recent letter to the county, it is critical to keep as many tools available for large land owners in order to preserve the character that everyone has been accustomed to. If tools such as the PRD are eliminated, many of the remaining ranches will be divided into the minimum 35 acre parcels that are allowed by State laws, and eventually the wide open spaces that everyone has been accustomed to will slowly vanish and we will be left with views of ranchettes or large second homes, with no community benefit.

Over the past two years, various conservation groups have continued to recommend keeping as many tools available for conservation of large open spaces. Recently, it seems, with the advent of the mapping of Teton County; that many of these important thoughts have been displaced or forgotten about. It seems, as there has been strong pressure from a few minority residents in the community to put a layer of green (conservation) and blue (preservation) over any remaining rural lands in the community, disregarding that these large green areas have a base development right of one house, guest house and barn per 35 acre parcel. These same people are pressuring the county staff and elected officials to have landowners conserve their remaining lands by moving their development rights to town or a small node next to the High School Road. I am not sure if a suitable tradeoff is being suggested. In reality, and financially there are many problems with this concept. The value of the density of large tracts of rural land in the middle of South Park has a lot more value as 35 acre pieces than multiple small town sized lots next to the High School Road.

Allowing landowners to cluster development on their own lands may be a better alternative. There are many areas throughout the County, within or next to existing development, where non-contiguous PRD’s could be successful without limiting land owners to town or a node in Northern South Park. No one knows if the town or landowners in these nodes will accommodate additional density. All landowners have to be given the same opportunity to preserve their lands and cannot be confined to moving their rights to specific areas.

In the last public comment period, 37 residents of Teton County; many that live in South Park, commented that that they would like to see additional development in Southern South Park. Many people commented that it would be a good area for equestrian use possibly with riding areas to accommodate the equestrian community that exists in South Park and the rest of the community. These residents have also expressed having a small grocery store, or amenities that would be advantageous to eliminating additional traffic to Town and beneficial to the residents of Southern South Park. It is important to provide landowners with different preservation options to choose from. Again, this is what the Land Trust has stated in their recent letter.

My final point is that we have all been working on a character driven Comp Plan. Many people are trying to blend a number driven plan into the character plan. Please keep on track with defining the character of each district and do not fall into past mistakes of trying to add numbers to the plan. Numbers will only confuse and complicate the process beyond what people can comprehend. I have been told that a numbers plan was unsuccessfully tried in 2009.

In closing, I appreciate your efforts and hope you can stay on track with your goals. Please see the attached copies of the comments that 37 individuals made in the last comment period. There are many concerned citizens in Teton County that believe that proper planning is the key to the livelihood of our community. Please do not let a few people pressure you into making the wrong decisions.
I wish to comment on the current Master Plan and suggested revisions, in particular to the Re-zoning of Rural Properties and Planned Unit Developments. I am very concerned that Teton County residents will not be able to subdivide or create a PUD on acreage that is less than 35 acres in the future. There are areas in this County where many residents have subdivided larger properties into 10 or 12 acre parcels, leaving a larger (35 or 40 acre parcel) literally "land-locked" by these smaller parcels. In the case of some of these parcels, the owners may have intentions to subdivide or create a PUD in the future, for investment purposes or future (retirement) income. To maintain continuity in a Homeowners Association, it would be odd and not in keeping with area character to have one single parcel of 40 acres surrounded by smaller 10 acre parcels. To eliminate the possibility of future PUD's would be to disregard a Homeowners Association's character, as well as the owner's future intentions.

I respectfully request that you review your possible elimination of future PUD's on acreage of less than 35 acres. One extreme zoning regulation does not necessarily work for all of Teton County, and would be unfair to many land owners. I am asking in particular to review the zoning requirements of the Horse Creek Mesa plateau [see attached map], and leave the zoning as is, with the possibility of future PUD's. I appreciate your attention to this matter and look forward to your response.

I have had an opportunity to review briefly the January 26 Joint Planning Commission Meeting Agenda Documentation at http://www.jackontetonplan.com/files/2011/09/120126-Packet.pdf on the County's Comprehensive Plan web site. It is indicated that public comment will be invited at the workshop. However, with the forecast for another 1 1/2 feet of snow and the recent closures of Teton Pass due to Avalanche control, I anticipate it will be difficult to attend the meeting.

I wish to comment on the changes to the draft wording of the Character District Maps / Comprehensive Plan.

To provide some background information relevant to my comments, the packet for the January 11-12 planning workshop describes the following transportation-related objectives under the heading "Implementation of the Approved Policies in the Character Districts:"

• 7.2.c Maximize interconnection, redundancy and hierarchy in the transportation network
• 7.2.d Complete key Transportation Network Projects to improve connectivity
• 7.3.a Develop a land use pattern based on transportation connectivity

I see from the packet of information provided prior to the 1/26 workshop/meeting that it has been proposed to make a clarifying (coded color green) change to the draft plan wording:
• Remove 7.2.c as an objective, and to Add 7.3.a as an objective.

In view of the considerable public comment which has been offered, it is unclear as to why this is being proposed, as existing transportation "connectivity" is a bit of a hodgepodge. Objective 7.2.c would appear to make it a goal to rationalize the roads and trails network, and therefore would be worth keeping in the Plan. It also would be worthy of consideration to add:
• 7.2.d Complete key Transportation Network Projects to improve connectivity to the Objectives for Alta, as that would relate directly to an objective of completing State Line Road, as originally planned and funded several years ago.

I am writing for myself and my neighbors in the Aspens first filling. We are absolutely opposed and appalled by the recent information on up zoning the village road near the Aspens. We have been attending meetings and plan to speak on Thursday evening. This is a very inappropriate place for up zoning. It is obvious this is where the wild life habitat is. Many animals have been killed this winter already without the up zoning. We urge you to not proceed and listen to the residents. This should not even be considered as an area for more development.

5.1 Highway Corridor: Encourage measures to marry curb cuts and create stronger street walls with landscaping. Broadway continues to be a true eyesore for most of its length; only by creating an environment that is more comfortable for pedestrians with better street walls, proportions, safety and landscaping, will it become a vital street.

5.6 Northwest South Park: A traffic study to identify the impact of an additional connector between HWY 89 and South Park Loop would be helpful in understanding the appearance and character of such a road.

<td>Design Review Committ</td>
<td>2.3 Downtown: The vision of this district is strong and appropriate, and the integration of lodging with residential uses is a very good objective that would boost town's vitality. Completing the strong link between Snow King, the Center for the Arts and Town Square is an important priority. Projects should be supported that add to the vitality of this linkage. A concern to be noted is the proposed expansion of the Lodging Overlay to the 5-way. We hear a lot of complaints at DRC meetings from lodging owners about the hardships of having hotel rooms next to busy roads - thus leading oftentimes to very non-urban proposals. The parking requirements also make this an additional challenge. We would like to avoid seeing suburban development patterns in this area. 2.5 North Cache Gateway: The character of a ‘key gateway’ needs to be more precisely determined and explained in a manner that stresses the equality of importance to that of the Flat Creek redevelopment. It may need to be a more comprehensive description than “should take the form of 2/3 story buildings that address the North Cache and Flat Creek corridor.”</td>
</tr>
<tr>
<td>1/24/2012</td>
<td>Design Review Committ</td>
<td>How will the definition of “Western character” be determined? As a committee we are concerned about the standards with which a regulation to commit to a western character will be identified. Is there the possibility to include a limited amount of residential, mixed use in this model as exemplified by Davies Reid? This will make the Town Square more vital to our community and more regularly occupied with amenities that support a neighborhood.</td>

| 1/24/2012  | Swift, Phelps, Interested Public | Dear Ben,  
Your inflammatory remarks in last week's newspaper deserve a response. Peter Moyer was speaking on behalf of himself and other Village Road residents ... the stakeholders who have lived, worked, and raised their families in the Aspens/Teton Pines district. Peter's comments are not "from afar;" rather, his comments are from the ground and have widespread support from his Village Road neighbors.  
To the contrary, you are attempting to engineer our neighborhood "from afar" by imposing your ivory tower, closed door planning ideas on us and our neighborhood. Our neighborhood works and we wish to preserve its character.  
The Village Road residents have dutifully followed your process by attending numerous public meetings and writing comments over the past four years. I personally attended at least five (5) public hearings, three (3) workshops, and wrote a letter dated June 8, 2009 which is attached. Nothing has changed and my comments, questions, and suggestions are still applicable today.  
The "node" up-zone was soundly rejected and has now been revived by the release of the character maps. Its new name is “transition area”. No matter what the label, it still spells TURMOIL.  
During the overheated real estate bubble, the Housing Authority panicked and recklessly speculated on land. Its purchase of the Rain's parcel, at twice its appraised value in 2006, once only looked foolish ... but now appears to have been illegal. Those bad land deals have costs the tax payers millions and violated the public trust. It is not reasonable to try to vindicate bad investments by dumping density with the stroke of a pen.  
For obvious reasons, I have not been invited to your private planning meetings. Your grand experiment to dump density into a single-family platted subdivision is ill founded, unfair, and destructive. See you at the public hearings.  
Thanks for your consideration.
I'm writing you to protest new plans for growth and development along and at the end of Highway 390. I understand several of you are in favor of growth in these areas which seems astonishing. As residents of Jackson Hole we have a unique opportunity and responsibility to help protect the National Lands at our County boundaries. Wilson and the West Bank also happen to be below the level of the Snake River. From a safety standpoint, it makes no sense to add development in just the place scientists predict to be “ground zero” if the river floods. This is not to mention grim predictions of earthquakes and floods from world renowned geologists, hydrologists and other scientists.

Mary Gibson Scott, Superintendent of Grand Teton National Park has communicated the Park’s resource concerns to the County Planners. She says “Development on the west side of the Snake River along the Wyoming 390 corridor (Teton Village, Aspens, and Wilson development nodes) is of particular importance because of the potential to adversely affect a portion of the Moose-Wilson Road within the Park as well as important wildlife habitat and movement corridors.” She further points out the Moose-Wilson portion of the Park contains some of the most rich and sensitive wildlife habitat within Grand Teton National Park. Therefore she asks that transportation strategies and development decisions be sensitive to the needs of surrounding jurisdictions, including Grand Teton National Park. A wildlife rich dead-end road should be an immediate red flag for future development. As residents of Teton County we have more influence on decisions in Grand Teton than most other tax payers, even though the Park belongs to all of us. We need to help influence wise decisions for every American.

The current Comprehensive Plan allows for plenty of new growth, 7000 units I’m told. Who can justify the need for more? It’s clearly poor planning to suggest such a need without looking at the impacts and providing justification and extensive new plan and all these comments have been ignored. Who's driving this process and why? Where are all the people who want to scrap the old plan and add to growth?

It’s very hard to be supportive of a new plan while knowing the old plan’s zoning and LDR’s haven’t held up, certainly not in our neighborhood. We need to know buildout numbers and how development in rural areas will be decreased. If this information isn’t available we’ll be worse off with a new plan than with the existing plan. Planning means making decisions and commitments and producing documents people can actually understand.

The Teton County Housing Authority (TCHA) Board would like to recognize and commend you for the work you have done on the Comprehensive Plan. We applaud you for making it a truly public process, and incorporating the passion expressed by the community to craft a plan that works to preserve our values.
In particular, the goal of housing 65% of our workforce locally will help ensure stability and vibrancy for this community. The TCHA Board looks forward to helping you implement the many policies articulated in the document as they relate to housing our workforce.
The TCHA Board is grateful for the hard work that both Town and County Staff, Planning Commissions, and Elected Officials put into making the approved Comprehensive Plan a successful plan for the future of this valley.
Thank you for your service and commitment to this community!
There is a basic concept which has some surface appeal, and is being pushed very aggressively by some people: move un-built density away from scenic/wildlife areas, into developed areas of Jackson Hole. Yet even an appealing theoretical concept has no mettle, until it is fully examined in its practical application, in detail, by our community. Those trying to sell the deal have been painfully short on detail. It is high time to take a common sense, informed look at the concept.

This program would be based upon two highly sensitive matters: down-zoning in many areas, which obviously sticks in the craw of some landowners while actually limiting permanent conservation measures as well, and up-zoning in old-time Jackson Hole neighborhoods like Wilson and the Aspens, plus Teton Village, which is extremely controversial as well. You had best get it right, because you are playing with fire on all sides.

1. **Down-zoning.** Most of the density transfer down-zoning would come from the elimination or reduction of the clustering/permancmt open space provisions which have been in our Comprehensive Plan for decades. Landowners receive limited density bonuses if they cluster development with permanent protected open space. Is it really such a good idea to eliminate or drastically reduce this provision? The simple answer is NO:
   - The SRA project ended up using this concept, and the result was well over 1,000 acres of permanently protected open space. Many other landowners have done so as well. That is permanentt protection which is not subject to future political change. Unlike thepending proposal.
   - The clustering rights are the basis for Federal tax benefits favoring local conservation easements. Reducing or eliminating the clusteriang provisions of our Plan could have a very adverse impact on the incentive to donate future conservation easements with permanently protected, critical open space - all or part of the Federal tax benefits could disappear for potential conservation easement donors.
   - The existing clustering provisions can be beneficial for open space and wildlife. Moreover, the benefits and burdens are adjacent - it is not one area getting open space benefits as a result of up-zonings far away.

Bottom line, you would be playing with fire on the landowner rights side AND on the conservation side. Sure, there could be improvements in the existing clustering provisions of the Plan: (a) the clustering provisions should be fairer to small landowners and (b) undevelopable land (streams, wetlands, hillsides, setback areas) should not count in the density bonus formula. But minor tweaking, not wholesale change. Certainly not an excuse to up-zone elsewhere!!!

2. **Up-Zoning.** Your "node" up-zoning proposals have been met with fierce resistance for over 4 years, and due to tin ears of some politicians and bureaucrats the resistance will increase, for many reasons:
   - The impacted neighborhoods in Wilson, South Park, Village Road area, etc. do not want the up-zoning.
   - Many people throughout Jackson Hole, and many visitors to Jackson. Hole, DO NOT WANT JACKSON HOLE URBANIZED. More traffic, more wildlife kills and other adverse impacts, more loss of our friendly small town community character.
   - Most of the clustering density you would transfer through up-zonings elsewhere is phantom density which would otherwise never be used. Essentially phony benefits.
   - The groups fighting this idea are not trying to take away landowner rights: there is no right to up-zoning.

The bottom line is simple. You would eliminate or reduce beneficial existing clustering rules, in a manner adverse to landowners and conservationists. Although much of the current potential clustering density would never be used, you would treat it as real build-out density and transfer it to highly developable places where it will indeed be developed. The opposite of genuine conservation because you will effectively create a lot more development! And make many people very concerned: landowners, conservationists, neighborhoods, visitors.

The concept sounds okay on the surface, but it is fundamentally flawed when one takes a realistic, hard look. A classic lose, lose.
Interesting headlines Monday, January 16. I have been attending meetings for over 4 years regarding how the residents of Teton County actually want the new, updated Comprehensive Plan to look. What I heard and stated at these meetings does not mesh with what the Teton County Commissioners and Planning Commissioners are quoted as wanting in this article.

More growth at Teton Village? With more growth, it will become more like a village? Excuse me...it is Teton Village. It was more like a village prior to the Four Seasons being built.

Where will the traffic go? Down the already crowded Highway 390? Through the underdeveloped, seasonal Moose-Wilson Road? The park will love that. And I believe they will close it or make it one way if traffic becomes even more congested than it is already in the summer. What happens in a disaster? I have seen the traffic backed up to our house which is north of the Aspens on busy ski days, when there is an accident near the bridge and even with accidents on 22. What happens if there is a major earthquake? How will an evacuation happen? We only have one bridge and one road 6 months of the year.

Have you been at the intersection of Highways 22 and 390 when residents are commuting to/from work or school? Let's put more cars on the road? And believe me, there will be more cars. It is idyllic to think that it will be a self-contained "village". Even if one person is employed in the Village, you can be certain that the other will have a job in town, a class to take, a meeting to attend, a dentist appointment, a movie to see, a child to pick up from school.

The Aspens area...ditto for the above. "Coupled with a push to allow for more residential development?" I would like to invite those persons who are pushing for more development to please write their desires here...because I did not hear their voices at the meetings I attended. I heard neighbors wanting to retain the quality of their neighborhoods, to protect wildlife and a way of life.

More density in the Aspens area? Why? It is a congested mid-stop on a busy highway already. And just because we have a few small, local services like a neighborhood market, coffee shop, bank, dry cleaning drop off; you feel we are primed for a larger population? Or are you suggesting that we need additional new commercial development? Last I heard, we have undeveloped existing commercial lots and spaces in the Pines, the Aspens and Teton Village.

I can see it now...a new Smith's across from the Aspens!

Growth. It is really a good thing? Maybe it is time that we do better with what we have and stop wanting more.
One of the downsides of creating land use rules and regulations is the "law of unintended consequences". Unfortunately, we already have some unintended consequences as a result of the Plan that is currently in place. Every day there are hundreds of our Jackson Hole workforce that commute from Star Valley and Idaho to get to their jobs. These commuters waste hundreds of man hours while on the road. They burn thousands of gallons of fossil fuel. They create tons of CO2. Many of them have been seriously hurt in accidents getting to and from their jobs. Some have even died.

I am sure that our planners did not create this scenario on purpose when they were creating the current land use plan. However, I do consider this a failure on their part not to foresee what was going to happen.

The unfortunate thing is that many of these workforce people would not be making this commute if they could find rental housing in Jackson Hole. During the boom years leading up to the economic downturn in 2007, apartment projects had waiting lists and people with jobs had no choice but to go outside the valley to find housing. Today, the problem is not as bad but still exists.

If their is such a large demand for apartments in Jackson Hole, then why hasn't the private sector stepped up and built more apartment buildings? The answer is simple. There is not a zoning district in our current plan that adequately provides for the building of apartments. The only zoning district where apartments are feasible also allows condominiums and townhouses in the same district. It is far more profitable to build condos and townhouses and therefore they win out over apartments. What's more, even if a developer were to consider building apartments, the current zoning doesn't allow high enough density to make apartments economically feasible.

There is a solution to this problem but it would take a major change in the direction that our planners are headed. The first step would be to create an entirely new zoning district in the Plan. This district, let's call it Workforce Housing, would need two major components. First, it would need to allow very high density multifamily housing. Secondly, it could not be subdivided. This would prevent it from being converted to condos at a later date. These two components would separate Workforce Housing from the current AR Residential zoning where condos and townhouses would continue to be built. These two components would also provide the opportunity and would carry the financial incentive for free enterprise to then step up and create the housing.

The second step would be to find an area suitable to build such a project. I do not believe that there are any opportunities within the Town of Jackson to build such a project (except maybe the Rodeo Grounds if it were to be moved out of town). This leaves the north end of South Park as the next possibility. There may be other areas in the valley that could be considered.

Some would say that building large apartment complexes in Jackson Hole would bring unwanted growth. I look at it differently. We would not be adding more people to the valley. Instead, we would be bringing home those people who already work here but are forced to live elsewhere. At the same time, we would be saving the environment, cutting back on pollution, reducing the use of fossil fuels, eliminating wasted man hours and possible even saving lives. Let's get our workforce back in Jackson Hole where they belong.
Alex – thanks – I hope the public sees the changes at least several days before the January 26 meeting.

Two green changes I hope staff will suggest based on the meetings we just had – and also since it is likely now that all “attributes” will be stripped from the maps including wildlife migration corridors.

First green change:

•In the existing general text introduction to district 10 you note on page IV-63, first paragraph “however the intensity of wildlife vehicle collisions on South HWY 89 shows the importance of the District’s open space for wildlife movement as well.”

•In the area 10.2 specific description on page IV-65 (last paragraph) you get the basic biology incorrect by stating “The most important of these open spaces is the area between Flat Creek and the highway. This are not only provides the scenic gateway in Town, but also provides an open area for a wildlife crossing of the highway that would feed wildlife into a preserved Flat Creek corridor.”

•I already pointed out the science demonstrates elk and other large ungulates actually move east and west across area 10.2 (also similarly through area 10.1) - as well as north and south throughout both area 10.1 and 10.2 – not just along the Flat Creek corridor. This was discussed tangentially at the County meeting by Paul Vogelheim on the inconsistency of wildlife corridor mapping across the districts.

•Green change suggestion would be to align the statement on page IV-65 area 10.2 (last paragraph) with the statement on page IV-63 (first paragraph). I would suggest a biologically more correct replacement on page IV-65 be: “The most important of these open spaces is the area between Flat Creek and the highway. This area not only provides the scenic gateway in Town, but also provides an open area for a wildlife crossing of the highway to move through the district. That would feed wildlife into a preserved Flat Creek corridor.”

•If corridors are mapped in an illustrative way (versus 100% accurately) then I believe Paul Vogelheim noted early in the meeting that they be consistent across all districts – by default that would include areas 10.1 and 10.2. I think if you do drop the wildlife corridor illustrative mapping (I would like it to stay) – you should still identify the known, and verified, wildlife collision hot spots on the map’s highways which do line up to JH Wildlife Foundation’s previous documentation and mapping, along with the recent WTI report the County helped to fund. The three district 10 mapped crossing hotspots (termed “wildlife crossing”) - do in fact line up with both of these reports - so no changes would be needed beyond clarifying that they are “wildlife crossing collision hot spots”.

Second green change:

•Given the discussion at the County of not fully understanding “If development does occur, the agricultural open spaces will be preserved by directing the development potential from the area into or adjacent to existing developed areas to the north or south.” I suggest in 10.2 on page IV-65, last paragraph (staff also suggested something similar at the County meeting) that the awkwardness of “into or adjacent and existing development” be addressed. The County also unanimously affirmed to tie 5.6 earlier timing (before in-fill) to opportunities of a PRD that would preserve the adjacent lands to the south.

•Logically then I would simply change, as staff suggested at the meeting to the commissioners, to along the lines of: “If development does occur, the agricultural open spaces will be preserved by directing the development potential from the area into or adjacent to existing developed areas to the north or south. into area 5.6.

Map corrections already noted to staff – also green changes:

•The map on page IV-62 has left out the entirety of northern Flat Creek to HWY 89 portion of the Lockhart’s property.

•The map on page IV-36 incorrectly locates the possible school zone expansion line on the southern boundary of the existing High School. Simply bring it up to match the boundary.

<td>Bloom, Rich</td>
<td>Alex and Bruce – I know you have the tapes etc., but following is my take on where the County landed on areas 5.6 and district 10 – let me know if I got it wrong.</td>
</tr>
</tbody>
</table>
|          | Interested Public  | Area 5.6  
* In-fill first discussion – Outcome = the in-fill language stays.  
* PRD addition discussion on earlier “opportunities”  
  oOutcome = redraft in-fill section – “promote infill, leave open opportunities resulting in permanent conservation of open space via the PRD - if applications come before “in-fill” (Town and other complete neighborhoods) is accomplished.”  
  Hank added “unique workforce housing opportunities” in addition to earlier consideration before in-fill occurs – but emphasis remains on permanent open space conservation - and workforce housing secondary.  
* Outcome = Paul V. said no on the housing addition suggested by Hank, I do not have in my notes of any other electeds agreeing with Hank (just Paul Dunker and Peter) – not sure where this ended?  
  oUses in district – residential only – other? – Outcome = residential focus – but a “little bit” of mixed use.  
  oNot sure where staff’s suggestion for discussion on: “Add vision for redundant streets, variety of housing types, wildlife permeability if developed”  
  Outcome = These ideas were never discussed by the group according to my notes – and they are red changes.  
* Boundary of district – Outcome = no change  
Area 10.1  
* Outcome = leave as written  
Area 10.2  
* Outcome = leave as written  
Good luck the next few weeks compiling all of these “agreed” upon changes – along with what remains as written – plus your green changes. |
Alex and Bruce – I know Shawn took notes and you have the tapes, but following is my take on where the town landed on areas 5.6 and district 10 – let me know if I got it wrong.

Area 5.6
• EW connector (South Park Loop to HWY 89) – Tie to development of 5.6. Split on need, intersection with HWY 89 causing problems, whether it would encourage development…..
• Summary conclusion = soften language and mention it as “one of several possibilities” for traffic challenges in the area if that area is developed.
• High School road – Summary conclusions = strengthen language to focus more improvements for pedestrians safety, school zone, reduce speed limits, traffic calming etc. as traffic “will always go there”
• Basically that HS road needs to be addressed as both the EW connector and Tribal trail connector will not solve the problems on HS road
• Tribal trails connector – Summary conclusion = no changes in language – leave as is
• Timing of considering 5.6 for development –
• “Infill first” language should be considered in all new areas (Mark O) – unsure that was generally agreed to or not?
• Tie are to growth management plan, urban growth boundary – all generally concurred
• Clarify “if necessary” language – make firm, defined, conditional - Melissa
• Clarify density - not just “adjacent neighborhoods” – which neighborhoods, Cottonwood Park or Ellenwood (Babara)
• Summary conclusion of Bruce = “tighten it up more, tie to growth management plan”

Area 10.1
• Summary conclusion = leave as written

Area 10.2
• Summary conclusion = leave as written – let the County review
• Bob’s comment – connectivity between subdivisions language “too aggressive” – not sure where that conversation ended?

Misunderstandings I noticed:

Things I learned that you should consider in your introduction to the County group this afternoon:
• Clarify that all growth management goals are meet in the indentified transiton areas while seeking conservation/preservation of the indentified rural areas.
• That an improtant portion of the plan is to stay within “no more then twice the build environment”
• Rodio grounds – current location is committed under a 24 year lease to the fair board.
• That the Tribal Trails connector and the east-west connector in area 5.6 are two different road sections.
• That there is an easment for Tribal Trails but not one for the theoretical east-west connector in area 5.6.
• That the unmapped exisiting wildlife movement corridors east-west and north-south (apart from the identified Flat Creek corridor that you did map in areas 10.1 and 10.2) is causing some confusion (I know this is a green change I have pointed out – but the current missing wildlife corridors did influence the 10.2 discussion.

Items of importance to staff that were never brought up for discussion:
• You never brought to discussion in 5.6 two red items of staff that should be discussed with the County:
  o “Add allowance for location of PRD development”
  o “Add vision for redundant streets, variety of housing types, wildlife permeability if developed”

Just wanted to forward this red dot comment list from SHJJH. I agree with these comments and strongly urge you to incorporate these logical and forward thinking comments in the character district maps. We need these clarifications that have been supported by the residents of Jackson Hole through out the 5 year comprehensive plan. The more clarification up front will prevent costly arguments and drawn out disagreements over future land development proposals.
If Save Historic Jackson Hole were allowed to participate in the “Red Dot” exercise this week, the attached list is where we would place our dots. After each dot is a brief explanation of why we would place our dots there.

• The Plan must include building and density numbers.
  o A Plan without metrics isn’t a real plan.

• Any density increase must be balanced with density decrease.
  o Permanent Protection of sensitive areas was and is the objective, not town growth.
  o Protection of sensitive areas is what was sold to the public and the promise needs to be kept.

• No Zoning changes and density transfer until a mechanism is in place.
  o With 50-70 years of growth already in the pipeline, we have time to get this right.

• Protect rural character and small town atmosphere everywhere.
  o Jackson Hole is all about small town rural character; that’s what we are.
  o The current draft only extends this protection to the Town Square.

• Eliminate contradictory and confusing definitions.
  o We can provide a list, but start with “stable” and “complete neighborhoods.”

• Do not encourage development in Northern South Park.
  o Infill in Town before we sprawl south.
  o We do not want to refight the Porter Annexation battle.

• Do not expand the Lodging Overlay.
  o The existing overlay already allows for more lodging, where’s the need to make it larger? We are rarely at full occupancy now.

• No Density increase in difficult/sensitive areas.
  The following areas all have access problems and are adjacent to critical wildlife habitat. They should not see increases in density.
  o Between Broadway and Flat Creek in Midtown and Town Commercial Core.
  o Steep hillsides at the “Y”
  o Commercial development at the Aspens should not expand across 390.
In recent weeks, we have received numerous requests from community groups, citizens, and elected officials to comment on the Jackson/Teton County Comprehensive Plan Update, which is now being considered for adoption. We are neither experts on community planning, nor advocates. We do, though, have over 30 years of experience in partnering with landowners to conserve open space in Jackson Hole. Drawing on that experience, we offer the following perspective on the areas of the plan that pertain to open space protection.

Our last public comment on the plan, a May 14, 2009 letter, made three recommendations: 1) consider establishing a dedicated funding source for land conservation; 2) preserve development potential in rural areas as a strategy for conserving those areas; and 3) include provisions for clustering and/or transferring development rights. We stand by those recommendations and make the following additional observations.

The plan makes many Key Points that align perfectly with our experience of how open space and wildlife habitat are conserved in Jackson Hole: the relationship between agriculture and open space protection; the importance of our valley’s private lands in providing habitat and movement corridors for wildlife; the attributes of permanence and active stewardship that are enoenic to conservation easement-protected open space; the key role of ranchers and other private landowners as valuable stewards of these lands. These are all themes that we know from experience to be true and that we are encouraged to see reflected in the plan.

The plan appears to wrestle with a tension between protecting open space through incentives versus through restrictions. In our experience, the best way to conserve meaningful open space is through incentives. This is how we work-in a market based environment, with willing landowners. Setting aside the question of fairness, because of the base density rights that private landowners possess, we think it is impossible for this community to zone its way to strategic, high-quality open space.

The plan expresses a goal of directing growth into areas of existing infrastructure and services, which the plan identifies as less than 5% of the private land in the county. Insofar as the purpose of that goal is to preserve high-quality open space and wildlife habitat in the remaining 95%, we think it is important that the plan recognize the market preference for base-density development and preserve and create incentives for the conservation of those areas that are capable of counteracting that preference. To put it another way, if you want something other than one unit per 35 acres in the rural area, the only way to get it is through incentives. These incentives should be both strong and diverse, as what works for one landowner in a key habitat area may not for his or her neighbor.

Finally, we have increasingly found that smaller-scale conservation represents an important component of our land conservation strategy. Done thoughtfully, the conservation of smaller parcels both complements the protection of adjacent, larger parcels and over time can develop into a pattern of conservation that is greater than the sum of its parts. We have seen this play out in the conservation of numerous smaller parcels along the Snake River, for example, which today constitutes a meaningful network of conserved lands along this key natural feature in the valley. The Planned Residential Development (PRD) tool has been key to this work, as it is the only meaningful incentive for conservation on parcels smaller than 70 acres in size.

As the land trust, we can bring to bear capital from private, state, and federal sources, as well as facilitate the federal tax incentives that have helped bring about so much conservation in the past. But to be successful in conserving open lands in Jackson Hole in the future, it is critical that the policies we identify above be included as other legs of the stool, so to speak.

Thank you for the opportunity to provide our perspective at this important juncture. We are grateful for the work of the town and county planning commissions, elected officials, and staff and all of the citizens and community groups who have contributed to the planning effort.
Thank you for the intensive work all of you have been doing with the Comprehensive Plan in the last several months, and for your commitment to community goals.

I am writing to explain why the Jackson Hole Conservation Alliance believes it is important to verify that the new Character District Maps accurately illustrate overall community goals.

We agree with your general approach to the Comprehensive Plan:
1. Develop broad policy objectives
2. Generate relatively detailed maps based on those objectives
3. Crosscheck that the maps do in fact match up to the overall objectives

We are now at the point in the process where checking the maps against the overall community goals is vitally important, and we would like to provide suggestions on what additional information is needed to conduct a thorough crosscheck.

The Alliance agrees that an important first step is to generate a detailed description of the goals for the future of each Character District. You have already identified the location and type of development desired in each area of every district, and determining the desired amount of this development will complete the picture. This is an important step because:
• Determining the amount of development desired in each sub-district would enable the community to immediately verify whether the maps are in line with the concrete goals we have established in the policies, including the goal for a 60/40% split on rural/complete neighborhood development, the goal to house 65% of our workforce, and the goal of not exceeding a doubling of current development.
• This information forms the foundation for analysis of a range of other issues, including the projected impacts of this development on wildlife, the expected effects on traffic, the fiscal impacts of new development, and the economic viability of commercial endeavors in the area.
• Numerical objectives for future development in each district would provide greater predictability, and would make the Comp Plan more understandable to the general public.

We understand that the discussion about buildout numbers became very heated in recent years. We recognize that this is not intended to be a “numbers-based plan,” yet the public was told that numbers would “fall out of the mapping process.” There is now an opportunity to provide numerical objectives as part of the description of each sub-district in the Character District Maps.

We encourage you to ask the planning staff to provide estimates of the amount of future development that is desired in each sub-district. This step would reduce the confusion that will be generated if people make their own independent estimates, and will clearly illustrate what the plan means for our future.

Over the next few days, you will see a newspaper ad by the Conservation Alliance asking whether the maps accurately illustrate the community’s overall goals. Answering this fundamental question is now within reach, and clearly providing answers on the expected amount and location of development is vital to getting the support of the community before the adoption of the Comp Plan.

The Conservation Alliance has advocated for responsible planning for 33 years. In order for the Alliance to explain to residents why development regulations are important to the community’s ability to preserve wildlife, scenery, and community character, we need to be able to show people how some trade-offs in their neighborhood contribute to achieving the major priorities of the community as a whole. We believe that residents will support the Comp Plan if they can see how increased development in some areas enables conservation of other areas, and achieves overall community goals.

Please give the planning staff the green light to provide this information to you, and to the community, to foster better understanding of the Comp Plan, and better decisions based on that data.

1/6/2012 | Bloom, Rich Interested Public | Paul – thanks for the talk this morning. On the corridor mapping – and misses – attached [see acutal comment] is a suggested marked-up map (similar to what was done for other districts) of two general wildlife movement corridors (east-west and north –south) that were missed. I did that with red penciling. There will be some slight language changes needed below also so the focus is not solely on Flat Creek. I have pasted some of my previous comments in again below.

The attached again has in red some ideas of mapping that is consistent to other areas. I pasted to this PDF the area by Albertsons (the Y) in Town and also Teton Pines/Aspens maps - for similar examples of how mapping the wildlife corridors was done in other areas.

Hope this clarifies what I am suggesting. I pasted the comments [1/3/12 comments] on the two topics we discussed this morning – missing corridors and shifting development to the north (not south) in area 10.2.

I am copying Alex as I discussed this with him – along with my other suggestions - at the open house. I have also copied Ben since I reached out to him also.

Rich

PS I also attached two photos on elk moving through the Seherr-Thoss properties in area 10.2 – this is the movement “corridor” I described that occurs form the north, east and west –then heading south to, or north from, the winter feed grounds along the snake river.

1/5/2012 | , Interested Public | Consider moving the old Sage Brush Motel site into District 2.3 to be included in the lodging overlay. This property would be a perfect gateway property into the Downtown district creating a distinctive western edge to the downtown. The site is approximately the same distance from the Town Square as the Rustic Inn anchoring the northern end of the district. The site would be excellent for a high end short term lodging facility taking advantage of its location along West Broadway for easy access for visitors with a development focused on Flat Creek and the views of Snow King Mountain, the Karns Meadow and Saddle Butte.

1/4/2012 | Fuchs, Tim Wyoming Game and Fis | The Wyoming Game and Fish Department (Department) has reviewed the document: Illustration of Our Vision- Teton County Comprehensive Plan and offer the following comments. Listed on page IV-47 is a Policy Objective (7.3.b) to “Reduce wildlife and natural and scenic resource transportation impacts”. While we applaud this policy as drafted and feel it has merit, the map on page IV-48 depicting locations of the 2 northern wildlife crossing structures across U.S Hwy 89, raises concerns for our Department. These proposed wildlife crossing structures could funnel elk onto private lands where cow/calf feeding operations take place during the winter months. These crossings could place elk in direct conflict with domestic cattle, greatly enhancing the possibility of elk/cattle commingling and raising concerns for disease transmission (i.e. brucellosis) and damage to privately owned stored hay crops. The Department is responsible for compensating landowners for wildlife damages to stored crops and the location of these crossing structures have the potential to create negative economic impacts to landowners and the Department by funneling wildlife onto private livestock feeding operations.

An additional concern we have regarding the construction of wildlife crossing structures in this area is the construction of several miles of wildlife proof fencing in order to funnel wildlife to the crossing structures. We believe the construction of several miles of wildlife proof fencing may force animals into the Town of Jackson. The north terminus of the any wildlife proof fence, would likely end in the vicinity of Snow King Mountain and would undoubtedly funnel animals into more urban areas.

The Department requests Teton County reconsider the location of the northern 2 crossing structures. If we can provide you with any additional information, please contact me at the Jackson Regional office, at 307-733-2323.

Thank you for the opportunity to comment.

Positive language changes that should stay:
- Density now to be similar to adjacent West Jackson neighborhoods
- Priority before considering this area is “infill and redevelop other existing complete neighborhoods”

Recommendation: We all understood that the intent of the development in section 5.6 was that this area will be developed more intensively in exchange for eliminating development rights on the open lands in the greater South Park area. This should be stated explicitly. Otherwise it implies a massive upzoning of this area while still permitting at least 1 unit per 35 acres in the rest of South Park. Our understanding is that the PRD or other transfer tool is envisioned to conserve the open space, and that the development in 5.6 is seen as the best place to concentrate development to achieve that goal. Please clarify this so that this can’t be read as an upzone in addition to already existing rights on the open space you’re hoping to preserve.

Remember also that there are only five large land owners in South Park – dominated by the largest two of Robert Gill and Kelly Lockhart that own and control the entirety of area 5.6 – Northwest South Park. In addition to these 200 plus acres in area 5.6 each owner owns – they also each own another 350 acres in Central South Park (area 10.2) as well as over 600 acres each along the Snake River next to Shooting Iron (greater South Park now in district 9). In summary - area 5.6 could resolve some 2,200 plus acres in greater South Park owned and controlled by these two land owners alone.

Corrections: the map on page IV-36 incorrectly locates the possible school zone expansion in on the southern boundary of the existing High School. Simply bring it up to match the boundary.

Overarching Misses in Character Maps and in the Themes and Policies:

1. The Character District Chapter needs to indicate potential build-out ranges for both residential and nonresidential development by district. Once released, the community needs to support the ranges in order for them to be approved. This was promised to the community when we got to this stage of the mapping and it is extremely disturbing that those ranges are not already included on these maps.

2. Both the Character District Chapter and Policies must state that a transfer method to enable permanent protection of open space must be in place before increased density in populated areas is allowed. Increasing development potential in certain areas should be a planning approach to uphold the priority of conservation, not for the sake of growth alone. The community firmly understood this is to be the core of the plan – and the electeds have generally agreed this is their intent. This statement of intent needs to be added to both the Themes and Policies as well as in the introduction to the character district maps.

<td>Eliason, Bert Clair</td>
<td>We appreciate the opportunity to make a comment regarding planning for Teton County. We live in Alta, a part of the county that is somewhat removed from Jackson, and also removed from the town of Alta. It is in South Leigh Canyon, directly east of Tetonia, Idaho. We have 1 rather simple need. The need to complete state line road connection to our part of Alta to the main town of Alta Wy. The state line road now stops short of our subdivision. This requires a lot of extra travel for us to get to the main town of Alta. Children attending school in the town of Alta have to be transported to Driggs, Idaho and then back up to the town of Alta. This is an added expense and inconvenience. The completion of state line road would not be very difficult or expensive and would be a great service for those of us living in this part of Alta, Wy, Teton county. Thank you for your consideration.</td>

</tbody>
</table>

I attended the workshop held at the Alta Library on October 27, and in Jackson this past September. Numerous Alta residents and many of my neighbors were present at the October 27 meeting. I understand each of the subgroups at the meeting mentioned a desire for State Line Road to be completed, across South Leigh Creek to its northern terminus, where it meets up with Beard Road, providing access to South Leigh Canyon trail heads and to various homes in the vicinity. I will elaborate on the specifics of that issue below. But first, I notice that there are three sub-sections of the Character District Development document which pertain to District 14, Alta:

• 14.1: Alta Farmland
• 14.2: Alta Core
• 14.3: Grand Targhee Resort

A brief paragraph for each of the sub-districts summarizes key aspects of the vision of its citizens. The following statement is included in section 14.1: Alta Farmland:

"A key transportation project for this area which will improve connectivity, reduce vehicle miles traveled, and improve the sense of community is completing the connection of State Line Road to South Leigh Creek Canyon."

As chairman of the Roads Committee for our "Forest Edge" subdivision, I applaud Planning for its good job of synthesizing the many comments which have been made by Alta’s residents, and including the above language in the draft document.

There are some other matters which would be worthwhile to include in the final version of the document, which may warrant a fourth sub-section, 14.4:

• The farmland to the north of South Leigh Creek and to the east of Forest Edge subdivision are within wildlife migration corridors, and may be worthy of consideration for conservation easements if the present owners are amenable. Any significant sub-dividing of said farmland would considerably increase the pressure on the Beard Road / South Leigh Road, and could degrade well water quality and availability in Forest Edge.
• Additionally, it would be in the community interest to improve the availability of water for fire suppression.
• Lastly, because of the high value of the low-gradient gravel road access to the South Leigh Creek trail heads and eastward to the Wilderness boundaries, consideration should be given to the development of pathways connecting the rest of Alta to the area.

The foregoing summarizes my comments, and the following provides further background and detail as to why completing the connection of State Line Road to South Leigh Creek Canyon is of great importance to Alta residents on both sides of South Leigh Creek.

I am a resident of the Forest Edge subdivision, and am concerned that the bridge on State Line Road that used to cross South Leigh Creek has not been replaced. Since Teton County, Wyoming and Teton County, Idaho entered into an agreement whereby Teton County, Wyoming maintains the stretch of State Line Road which runs from Ski Hill road to the northern terminus of State Line Road, and whereby Teton County, Idaho agrees to maintain the stretch of State Line Road south of Ski Hill Road, the northern part of the section to be maintained by Teton County, Wyoming seems to have "fallen through the cracks."

My neighbors who have been present for more years than myself indicate that Teton County, Idaho originally put in the bridge in, and that lack of regular maintenance caused extensive degradation. When a hay swather was attempting to cross the bridge, it got stuck in rotting timbers, according to Bill Beard, who owns property adjoining South Leigh Creek. The timbers on the bridge were removed by Teton County, Idaho, in 1979, and the rest of the structure was removed at a much later date. The frame of the bridge was still in place in 1993 according to Pete and Leslie Mead, who own an adjoining property.

Some of my neighbors were informed several years ago that funds had been appropriated for improvements to State Line Road to its northern terminus, including a crossing over South Leigh Creek. But actual construction work stopped about a mile south of the crossing. Some of the residents 1/2 mile or more north of Hastings Lane, who had granted easements across their properties, were never officially informed as to why the work was not actually performed.

From what I have garnered in discussing this with the County Commissioners, there were a couple of residents who were unwilling to grant easements.
Many of those who are anxious that the bridge be replaced are willing to engage in discussions with these residents to see if common ground can be reached, and with the County Engineer to examine modest re-routing possibilities if other solutions cannot be found.

My discussions with the County Commissioners indicate that maintenance of State Line Road north of South Leigh Creek is not performed by the County due in large part because it is not connected to the remainder of State Line Road across the creek. And that the road would be maintained properly if there were a crossing over South Leigh Creek.

Currently, due to the lack of a crossing, there are numerous problems:
• "Official" maps, as picked up by such mapping sites as Google Maps, Mapquest, and Yahoo, show State Line Road as being continuous across South Leigh Creek. Therefore various people who use such maps try to take the route, and cross the creek. Some of them get stuck in the creek, and at high water, there are risks of being swept away.
• Possibly because of the problem with maps as referenced above, the local Fire Department has failed to respond to a fire in the subdivision in a timely manner. A crossing over the creek would improve the timeliness and reliability of emergency responders, and better-protect life and property in our part of Teton County.
• When the Forest Edge subdivision was first approved by Teton County, the assistant superintendent of schools testified that: "For purposes of our education impact analysis, we used an occupancy factor of .25 and a student population multiplier of .25. This analysis would indicate when the total development is achieved the student population generated would be 1.6875 students.

It is important to note that this is the first subdivision development that has been located in such an area that these students generated from the development would be unable to attend the Alta Elementary School. In accordance with Wyoming statutes, we would therefore have to provide isolation payments to all students K-12. If our student analysis proves to be in error, the school district would have to request from Teton County a possibility of opening the road going north from the Alta Elementary School." [State Line Road]

It should be noted that there currently are 4x as many K-12 students north of South Leigh Creek as had been projected using the formula described above.

o Vehicles crossing South Leigh Creek at State Line Road cause petrochemicals to enter the pristine trout stream. Discussions with Friends of the Teton River indicate support for removing this source of pollution to a key tributary of the Teton River.

o Vehicles which try to take State Line Road but which don't cross South Leigh Creek due to high water or other perceived danger often cross Jim Price's adjoining property without permission, and cause damage to crops and potential damage to Jim Price's private bridge.

o The lack of a crossing wastes a lot of fuel and time for residents who wish to go from places situated south of South Leigh Creek to places north of South Leigh Creek. For example, Google Maps shows that the "preferred route" from my house at 4240 Leigh Lane, Alta, WY to 1040 Alta North Road, is 4.9 miles long, takes 19 minutes, and crosses South Leigh Creek. The actual route out to Hwy. 33 is 16.3 miles long, and takes 35 minutes.

o Bicyclists need to have safer routes. For those wishing to access South Leigh Canyon from parts of Alta south of South Leigh Creek, it is necessary to use Hwy. 33, if they don't wish to cross private property or go through the creek. There have been a number of recent fatalities on Hwy. 33 to bicyclists, and a safer route is needed.

o Teton County, Wyoming recently improved the South Leigh Road, eliminating drainage problems which plagued local residents every spring and fall. But the section of State Line Road north of South Leigh Creek remains a morass during the rainy season. Photographs are available.

We are most appreciative of your efforts in crafting a workable vision of the future for Teton County. We hope these details, though a bit lengthy, will be helpful in achieving that goal.

I have volunteered my time and presently serve on the Teton County, Idaho "Teton 2020" transportation subcommittee. Idaho residents also have indicated a strong desire for completion of State Line Road and improved road maintenance, and we are hopeful that the two Teton Counties can begin a constructive dialogue in that regard.

1/3/2012  Jensen, Gail
Interested Public
• The reference to preserve workforce housing stock does not make sense.
• Wildlife crossings are critical for wildlife permeability.

1/3/2012  Jensen, Gail
Interested Public
• Any structure to divert or direct the flow of any river or creek to enhance private property should not be allowed.
• Snake River Sporting Club should be restricted from expanding this resort.

| 1/3/2012 | Jensen, Gail   | • Wildlife concerns should be the #1 priority.  
  • Visual screening to and from the Hwy should be a priority  
  • Workforce housing in the industrial area 7.1 has not been successful. Heavy business and Industrial use areas do not mix well with residential.                      |
| 1/3/2012 | Acri, Armond | [actual comment could not be pasted]                                                                                                                                                                      |
| 1/3/2012 | Jensen, Gail   | • Further subdividing of this area should not be allowed unless the property is surrounded by similar density that is proposed.  
  • Indian Trails Subdivision should not be dissected into 2 different districts. They are controlled by the same covenants, HOA, etc. The fact that the northern part is just outside the radius for schools should not be a determining factor. This makes no sense.  
  • Policy 5.3.b. Preserve existing workforce housing stock. How does one control the sale and purchase of independently owned homes? Putting limits on the FAR allowed may keep the homes in a more affordable price range that appeal to a working class of people. |
| 1/3/2012 | Jensen, Gail   | • The Northern Broadway area should not allow greater density than is entitled. This is inconsistent with Comp Plan vision. The increase of development surrounding the Karns Meadow is not compatible with a wildlife crossing and wildlife movement corridor. Preservation of wildlife habitat, permeability, scenic and ecological values should be prioritized above recreation and development. There may be too much human activity to encourage wildlife to migrate through the Karns Meadow area. Fencing the hillside above North Broadway so that wildlife can not cross Broadway below, should be considered. |
| 1/3/2012 | Jensen, Gail   | • The redevelopment into 2 to 3 story buildings where one story presently dominates has the potential of increasing the densities and driving growth over and above current entitled development. This will change the character, bulk and scale, of the district. Where is the tradeoff to neutralize in another district?  
  • There is no mention of western character in this district, why not?  
  • Preserving scenic and ecological values of Flat Creek and Cache Creek should be the #1 prioritized goal verses recreation.                                                                                                                                 |
| 1/3/2012 | Acri, Armond | [actual comment could not be pasted]                                                                                                                                                                      |
| 1/3/2012 | Jensen, Gail   | General comments that are consistent with all districts:  
  • I support and agree with the overall comments made by the Jackson Hole Conservation Alliance and Save Historic Jackson Hole.  
  • Without a transfer mechanism or specific mapping of the districts where density will be decreased, there is no reason to map potential density increases over and above current entitled development to any district. Passing this part of the Comp Plan without at least amending the themes and policies to clearly reflect the commitment to keep growth at the same level of 1994 entitlements.  
  • Show us the numbers that reflect the decreases in the areas where a decrease in density can be accomplished and where the resultant increases should be made. How will this be implemented – on a case by case basis? A “score card” needs to be kept as a commitment to the community that this plan does not produce unwanted additive development.  
  • The PRD tool is the elephant in the room and needs to be dealt with immediately.  
  • Every district has lofty goals that will involve funding. Who will pay for these improvements? Will these costs be spread among all districts via property taxes? Will new or re-development pay excise and connection fees that represent the investment the community has to make?  
  • An analysis of our roads and infrastructure must be done to see at what level of development unacceptable levels of service, county-wide and district wide, will occur.  
  • The maps are too vague and without numbers no one can predict what will be in their back yard – predictability. |
| 1/3/2012 | Jensen, Gail   |                                                                                                                                                                                                       |

<td>Gorney, Robert Interested Public</td>
<td>My reason for writing is for the completion of State Line Road from 5000 North to 6000 North. I have lived here in Forest Edge Leigh Canyon, Wyoming, just north of 6000 North State Line Road, since 1995. The residence in this area have been trying for over fifteen years to get the road completed. The original plat for Forest Edge was approved with certain provisions being met. One of those provisions was for the completion of State Line Road. Allen Monroe, a neighbor, has made a more detailed comment to Jeff Daugherty for the reason for completion which I have inserted below;</td>

<td>1/3/2012</td>
<td>Jordan, Tom Interested Public</td>
<td>Having reviewed the Jackson Hole Conservation Alliance Character District Comments (and recommendations), I support those recommendations. I agree with the need for more specificity and clarity regarding growth and growth caps. I am concerned that the cost of growth will be placed on existing tax payers. I am concerned that the Plan in defining Character Districts fails to adequately integrate those districts with adjoining districts and within the Town as a whole.</td>

<td>Aurelio, Linda</td>
<td>I would like to express additional comments on the Draft Comprehensive Plan Character Districts specific to Districts 5 &amp; 10, West Jackson and South Park respectively. One key point going forward is the definition of the Plan matrix which defines, in circle form, (Existing Characteristics Chart IV-2) the weights of attributes of each district. I would contend that Both Districts 5 &amp; 10 receive a &quot;full circle&quot; on viable wildlife habitat connectivity and natural scenic vistas. If you do not live in this wonderful part of the community perhaps you would not see our abundance of wildlife each and every day, or appreciate our vistas as we go about our daily lives. This recognition alone provides the platform on which the residents of these districts have been working so hard to protect from build out and density earmarks. It is the cornerstone of our plea for the continuation of open space and what is left of the rural nature of these two districts. With that said, I do support the most recent Alliance letter to the above parties on recommendation #6 &amp; 7. Recommendation #6: Execute a rapid assessment of wildlife impacts of the proposed development pattern, or authorize the NRTAB to do so. Recommendation #7: Insert more explicit considerations for wildlife permeability in the following districts: 2, 3, 4, 5, and 13 (I would include district 10). Why have we not commissioned the expertise of the NRTAB to provide such an analysis so we may look at the issues for wildlife permeability? Given the public outcry for wildlife preservation as priority number 1, I would think this study would have already been completed in conjunction with recommendations for future growth. Taking a look at District #5 in the Comprehensive Plan (5.3), it is recognized that this stable district already supports the majority &quot;of community workforce housing and every effort should be made to ensure this neighborhood retain its vitality, cohesiveness.... An important goal is to maintain a strong sense of ownership and community in the area.&quot; Given these facts, it would be in everyone’s best interest to continue to support safety and integrity of this vital area for both its residents, school children, and wildlife. By the continuation of support for a connector road (Tribal Trail Connector) through the very heart of this district (pg. IV-35), we would destroy the very neighborhoods we are trying to envision and maintain. Currently, most traffic in this area is school demand at peak school hours. The best solution is to provide enhancements to High School Road for residential, pedestrian, and school access priorities. It is not in the best interest of our community to divert daily commuter traffic though and around town intersections into our neighborhoods as a connector road would certainly do. Last, attention to Comp Plan section 5.6 must be clarified. This section does not provide the necessary definition and direction for the future of Northwest South Park areas. Growth Management goals must be clear and concise and not determined at a later date &quot;if necessary&quot;. This area holds some of the best remaining parcels of open space which can define our valley for future generations. The Plan (Existing &amp; Future desired Characteristics IV-35) talks about the &quot;enhancement of the southern gateway into Town with improved visual appearance&quot; as a key goal of importance. Now is the time to clearly define that gateway so that existing open space and scenic value remain permanent for all to share and enjoy. As always, thank you for your time and dedication to this process.</td>
</tr>
<tr>
<td>1/3/2012</td>
<td>Kosydar, Christine</td>
<td>My husband and I own a lot on South Leigh Road that we hope to build on in a few years. After reviewing the plan, we support it. In particular, we support the preservation of farmlands with development encouraged in the core area of Alta. We purchased our lot to avoid the developed areas of Driggs. We intend to preserve as much as possible of it in its natural state, and we hope and expect that our neighbors will do the same. Had we wanted to reside in a development, we would have purchased a home at a far lesser cost in one of many existing neighborhoods with less expensive homes in the Driggs area. Driggs is an example of what we don’t want. It has failed to develop an appropriate plan and as a result, it is a scattered hodpodge of developments that have destroyed many beautiful and valuable acres of farmland.</td>
</tr>
</tbody>
</table>
The two districts I will be commenting are in greater South Park. Clearly the community cares deeply for this region given that citizen input tallies are greater for the South Park district by a factor of two, or more, than any other district in the County. The character district descriptions for this region are now much more responsive to community input then the previous versions.

I have some overarching concerns that remain in the plan but would like to offer some very specific corrections, clarifications and suggestions for improvement of Districts 10 and 5 – South Park and West Jackson.

Overarching Misses in Character Maps and in the Themes and Policies:

1. The Character District Chapter needs to indicate potential build-out ranges for both residential and nonresidential development by district. Once released, the community needs to support the ranges in order for them to be approved. This was promised to the community when we got to this stage of the mapping and it is extremely disturbing that those ranges are not already included on these maps.

2. Both the Character District Chapter and Policies must state that a transfer method to enable permanent protection of open space must be in place before increased density in populated areas is allowed. Increasing development potential in certain areas should be a planning approach to uphold the priority of conservation, not for the sake of growth alone. The community firmly understood this is to be the core of the plan – and the electeds have generally agreed this is their intent. This statement of intent needs to be added to both the Themes and Policies as well as in the introduction to the character district maps.

1/3/2012 Jensen, Gail
Interested Public

• The clear up-zoning and density increases for this area of significant to heavy wildlife use is not appropriate.
• There appears to be an attempt to re-zone the “Rains Property” and the area purchased for investment by the TCHA to high density affordable housing by just this mapping.
• Hwy 390, is not designed and cannot handle the level of development suggested in all of the sub areas. WYDOT has taken any timeframe for re-design and re-construction off the table.
• The opportunity to create redundancy for road connections does not exist so the intersection of Hwy 390 and HWY 22 will degrade as more development occurs.

<td>Bloom, Rich</td>
<td>District 10: South Park Identifies 10.1 Southern South Park and 10.2 Central South Park</td>
</tr>
<tr>
<td></td>
<td>South Park Neighbors</td>
<td>South Park Neighbors is extremely supportive of the important recognition now included in the text and maps of this areas scenic, open space and wildlife values. All of that should remain as is.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Improvements and Recommendations</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Missed Existing Wildlife Corridors:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Recommendation: Identify the east-west wildlife corridor across 10.2 (Central South Park) associated with the already mapped wildlife crossing on HWY 89.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add the existing east-west wildlife corridor through the northern end of Central South Park (10.2). Also expand the language in the text to identify the more diffuse large wildlife movement corridors north-south in areas 10.1 and 10.2 that exists beyond just the Flat Creek corridor.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>For the last thirty years of wildlife collision data the highest mortality on HWY 89 from Smiths to the Hoback Junction is the section from Smiths to Rafter J. The text recognizes this important wildlife crossing and partially the associated corridor - but has misstates some basic biology. The map of this district should also identify this important east-west wildlife corridor in area 10.2 (Central South Park) west of Flat Creek. Collisions in this area on HWY 89 include mule deer, moose and elk. A large percentage of the collision data show that elk use this area to cross. Clearly this species is not traveling down along the important Flat Creek riparian corridor but rather from the north through South Park and east across to the Snow King highlands - as well as back and forth between the Snake River and across the district (east-west) and HWY 89 to the Snow King highlands. Movement also clearly occurs diffusely north to south to their winter feed grounds. See attached photo to this email that documents one of these crossings last winter.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In the existing general text you do note “the intensity of wildlife vehicle collisions on South HWY 89 shows the importance of the District’s open space for wildlife movement...” In the area 10.2 specific description you get the basic biology incorrect by stating “The most important of these open spaces is the area between Flat Creek and the highway. This are not only provides the scenic gateway in Town, but also provides an open area for a wildlife crossing of the highway that would feed wildlife into a preserved Flat Creek corridor.”</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Recommendation: This needs to be corrected to acknowledge the existing movement corridors that are actually east and west – and also occur much more diffusely through the open spaces in the entire district north-south (not solely along Flat Creek).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• The Flat Creek riparian strip is of critical ecological importance but the primary large ungulate movement corridors are actually the open spaces outside of this stream – again east to west and north to south beyond just Flat Creek.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Shifting Development in Section 10.2:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In the 10.2 section, it states that “agricultural open spaces will be preserved by directing the development potential from the area into or adjacent to existing developed areas to the north or south.” Why north and south?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Recommendation: This should be stated simply “to the north”. Given the 200 plus acres identified in Northwest South Park (area 5.6) – now part of District 5 (West Jackson).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• This is especially true when the two primary land owners Robert Gill and Kelly Lockhart own and control both the lands in Central South Park (sending areas) as well as the receiving area next to Cottonwood Park in northwest South Park (area 5.6).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Interconnectivity of Subdivisions in Area 10.1 (Southern South Park):</td>
</tr>
</tbody>
</table>
Recommendation: This section should clarify that pathways are more suitable than roads to achieve interconnections between the various neighborhoods in Southern South Park.

• Pathway easements already exist both north and south in Rafter J and Melody Ranch subdivisions. In Melody Ranch the HOA has opposed in the past any takings to achieve road connectivity. In reality that would require the use of eminent domain by the taking of dedicated open space, several home lots and homes - as well as the purchase and taking of the entirety of the private roads within the Melody subdivision. Not only is that financially unachievable – is it clearly legally challengeable. The cost of this action would be in the neighborhood of $8-10 million dollars.

Over Reaching:
• START and a future potential new Elementary School are probably not realistic given the current and future density in this area.

Corrections:
• The map on page IV-62 has left out the entirety of northern Flat Creek to HWY 89 portion of the Lockhart’s properties.

1/3/2012 Jensen, Gail
Interested Public

• I believe it is a mistake to allow condominium/penthouse type of residential or non-residential whether it is for tourists, second home or full time use in the town square area. I think it is more appropriate outside of the Town square district. At least, limit this to a small percentage of the building.
• I agree with limiting the square to 2 stories above grade.
• Please keep the western character theme of the town square. Departure from the “cowboy” theme for more of a western, mountain rustic theme may reflect more of what blends with the current age of the various buildings around the Town Square.
• I hope that any redevelopment will encourage and hope to require back door deliveries in the design of the buildings. Large semi’s delivering products blocking traffic during busy times has been a problem.
• Limiting the first floor throughout the Town Square area to only types of businesses that generate sales tax will limit a property owners rights and may be discriminatory.

1/2/2012 Acri, Armond
Interested Public

General comments on all Districts:
- Without estimated build out ranges by District the Plans and Character District Maps are worthless. If fails to meet the most basic requirements of planning. How can we Plan when we do not know where we will end up?
- There is no need to upzone any areas during the life of this Plan. We have sufficient capacity under the current regulations to allow growth for the life of 3 to 5 Comp Plans. (At 10 years per plan and 5 years to update) During the life of the next Plan we can determine methods to achieve the Community Goal of permanent protection of open spaces. This protection should be linked so that any increase in density is offset with a permanent decrease in another location.
- The Character District Maps should commit to protecting of historic western rural character and small town atmosphere in all Districts, not just the Town Square.
- Lodging overlay should not expand. We only fill all the lodging in the Town and County a few weeks of the year during the summer. Adding more lodging will make it more difficult to achieve the goal of increasing tourism during shoulder seasons.
- Higher densities are not appropriate along Flat Creek. The narrow strip of land does not allow enough room for setbacks from the Creek. Development close to the Creek will cause problems with runoff into the Creek.
- It is a contradiction to say that several districts are complete neighborhoods, but have no defined character.
- It is inconsistent with the Policies to state that Resort Districts will not increase in size or density, but say that they are "transition" areas.
- It appears the Plan calls for the taxpayers to fund public parking so that developers do not have to provide parking. This is not consistent with the public's desire to have development pay its own way.
- The diagram showing the transition of development from Town Center to Rural County in both Plan and Elevation views is very confusing and needs to be reworked.
After exploring your vision of the character districts of Teton County Wyoming, I encourage you to provide an appendix or glossary for the entire Comprehensive Plan. A layman, such as me, has a hard time understanding your meanings of the following terms in the context of this plan.

- Corrective actions
- Enhancement
- High quality
- Complete neighborhoods
- Predictability
- Community Character
- Explore
- Exemptions
- Encourage
- Vibrancy
- Compatible redevelopment (Is this not an oxymoron?)
- Local downtown
- Local convenience commercial
- Stable
- Transitional

This document is at best vague without definitions. Does stable mean the same thing in Chapter 5 as it does in your Character district chapters, or does it mean, without change, as in the dictionary?

I found that the Character Districts "Illustration of Our Vision" read nicely. It resembles a Hallmark card, “Wish You Well.”. Assuming that there are 20 thousand tax payers in the valley today and you have spent $500,000 on this plan, that is 25 bucks a taxpayer. Who could complain about that? I would have probably taken that 25 bucks and thrown it away on groceries. Perhaps I would have bought open space, but I’m now in the hole.

This comprehensive plan process has truly affirmed my understanding of politics. Thank goodness that most of the large land owners have been such stewards of the land and wildlife. I applaud their patience, the communities continued involvement, and of course your politics.

- Higher density is not appropriate for steep hillsides at the Y. This area is isolated from the rest of the community by the Highway making access for vehicles and pedestrians difficult. Any solution that attempts to resolve the isolation will be very expensive and will require the community to pay to assist development. It also further encroaches on critical wildlife habitat. It is not consistent to allow dense development adjacent to an area in the County that is identified as an area to preserve.
- Making this area "the local’s downtown" is not consistent with the vision that the downtown area be shopping for tourists and locals. If the goal is to make this the local’s downtown then take out statements that we want locals to go downtown.
- High density around the perimeter of Karn’s Meadow diminishes its value for wildlife. Town should be permeable for wildlife, this point is especially important for Karn’s Meadow.

- Given that current regulations allow sufficient growth for 50-75 years (much longer than the Plans expected life of 10-15 years) there is no reason to develop the Northern portion of South Park during the life of this Plan. It should be identified for the future, but we should be clear that it will not be developed until we have built out Town. That allows time to investigate methods to achieve the community goals of permanent protection of open spaces.
- An East-West connector should be completed prior to any development in Northern South Park. Attempting to build it after development will be difficult.

- Snake River Sporting Club should be discussed in this section. It should not be ignored because it failed.
- Increased density at the Aspens is not appropriate. It is already very dense and increased development will make traffic problems on 22 and 390 worse.
- Increasing density at the Aspens east of 390 is not appropriate. It will require expensive solutions to link the two areas for both vehicle and pedestrians. These solutions will require taxpayers to subsidize the cost of development.

This is so typical. I made comments about ten days following the meeting held in Alta. Since then, nothing after having provided my name, address, telephone number and email address at the meeting. Now here is a last minute request for a response!
I will make my comment very brief. State Line Road needs to be completed up to 6000 North. Reasons were presented at the Alta meeting and do not need to be rehashed here.

I am writing to express concern about the overall treatment of wildlife in this plan. I’m having a difficult time trying to figure out how to make my comments relate to the way the concepts are organized because virtually the entire valley floor is wildlife habitat in one way or another. Just because you identify an area as Complete Neighborhood doesn’t mean the animals will stop trying to move through. We see this all the time right now with deer in town or various species of wildlife in Teton Village.

I divide my time between Teton Village and Butler Creek. I must tell you that I see more varied wildlife, more frequently (Moose, deer, foxes, coyotes, porcupines, bears) in the residential area of the Village than I ever do at the Fall Creek Road location. I feel strongly that addressing “permeability” should be an overarching goal in all character districts. The ecosystem is interwoven through the entire valley not just in the areas that have been identified as Rural: to think otherwise is wishful thinking.

In the character defining features section, I find the “design for wildlife AND/OR scenery” to be problematic. Does this mean there are scenarios envisioned where scenery is given priority to the exclusion of wildlife? A great deal of public comment on the plan did, I thought, put wildlife at the top of the priority list. Why is it not “Design for wildlife AND scenery?”

This section also refers to “Agricultural Exemptions” under Special Characteristics (IV-6). I sincerely hope you do not intend to enshrine the current agricultural exemption for “wildlife friendly fencing” in this new plan. It is a false notion that you cannot contain livestock with fencing that is “wildlife friendly”. To retain this exemption means that the concept of permeability will not be effectively supported in this Plan. The most egregious wildlife Unfriendly fencing in the valley has been constructed under this exemption. A couple of examples in 2011 are: The Pinto Ranch in Buffalo Valley where a 52” height top rail, FOUR rail buck and rail fence with a minimum 42” spread was constructed between the Buffalo Fork and the Park Boundary, This fence is exclusionary not permeable.

The Doshay Property between the Gros Ventre River and the Kings Highway /Queen’s Lane area. Most of this property is now fenced with exclusionary style buck and rail fence. The newest construction this fall placed the 52” high buck and rail fence along the edge of a deep irrigation ditch. On the south side of King’s Highway. In effect this is total exclusion. This property also has a conservation easement on it with the JHLT. So, at the moment, the current Teton County Ag exemption for fencing allows wildlife exclusionary fencing to be constructed on lands that have conservation easement for wildlife values!

There are numerous other examples:

Spring Gulch. The 4 rail 52” high buck and rail fence along the west side of Spring Gulch Road on JH Land and Cattle property, some of which is JHLT conservation easement. The 52” high Buck fence on the east side of the road is built of steep slopes making the effective height much higher.

The 5 strand barbed wire fence with a top rail at 52”+ that runs east-west across Spring Gulch Between JH Land and Cattle and the Box L (Lucas) Note: This is also conservation easement on the JH Land and Cattle property but the easement is held by the Teton County Scenic Preserve Trust!!

It is ironic that the image chosen to illustrate the “Rural Neighborhoods with Conservation Opportunities” on pg IV-4 features most prominently a buck and rail fence!

I hope that permeability and connectivity will be given serious consideration as the Plan moves forward and not merely lip service. Wildlife cannot know where the boundaries between Rural and Complete Neighborhoods are. It is up to this community to figure out a design and a plan that allows us to live compatibly with wildlife.

Thanks for the opportunity to comment

Lodging overlay should NOT include narrow strip along Flat Creek. Too many issues. Not existing lodging. Too narrow. Threat to already threatened Flat creek, no parking, etc.
Cowboy Village Resort SHOULD be in it’s entirety

<td>Cummings, Kathy</td>
<td>The character district &quot;County Valley&quot; makes no mention of the airport and its impacts on the valley and the wildlife. The airport generates considerable noise and light pollution, plus ever increasing traffic on the roads. To ignore it in the Character District leaves the district description incomplete, and makes it difficult if not impossible to implement mitigation measures.</td>
</tr>
<tr>

Thank you for the extraordinary amount of work that each of you has put into the Comprehensive Plan and Character District Mapping processes. As we near the conclusion of this public process, we are appreciative of your commitment to the community’s goals and values. To assist in this process, we would like to provide you with some detailed feedback on the draft Character District Maps that were released in early December.

Enclosed is a memo that highlights some of the principle concerns, questions, and recommendations that we have about the Character Districts maps overall, as well as some thoughts on many of the individual districts and subareas. Also highlighted are areas that we believe the Character District Maps cover quite well.

We look forward to continuing to engage in the Comprehensive Plan process in the coming months and working towards a product that the community can embrace. Thank you for your work.

Comprehensive Plan Character District Maps: Overall Comments
There are several overarching questions we have about the Comprehensive Plan Character Districts, and we have identified some topics that could benefit from additional analysis and exploration. Broadly, our primary concerns are outlined here along with recommendations that we think will improve the final product. Many of these broad concerns and suggested actions also apply to many of the distinct character districts. More specific comments and recommendations about each of the districts that are not covered in the broader points are included in the next section of this report.

Implementation Plan and Regulations:
An Implementation Plan will be a critical component of the finished product, set for adoption in April. We have made several recommendations in our November 30th letter and report with regard to this Implementation Plan, and specifically with regard to the Character Districts. There are several additional issues that warrant consideration.

There are many sections of the Illustration of Our Vision document that implicitly call for specific regulations to be developed. The forthcoming Implementation Plan should prioritize these regulations so that they are developed and implemented as soon as possible.

Examples of such regulations include: agricultural exemptions, density transfers (some districts mention strategies that appear to be district specific, some county-wide), clustering tools, mitigations, building permit timing allocation systems, definition of local convenience commercial, lot consolidations and associated allowances, minimum and maximum lot and structure size, wildlife protection standards (fencing, ponds, etc), among many others.

Second, as part of the Implementation Plan, a feasibility study for START should be executed. For example, the Character District descriptions mention bus service to Kelly, but without the relevant data we cannot be sure that that is a realistic goal given the small population and relatively remote location.

Shifting Development Patterns:
One of the primary tenants of the Comprehensive Plan is the goal of directing development potential from the rural areas in the County to the Complete Neighborhoods, identified in the Character District descriptions. The question remains, how will we achieve this shift? It is important to answer this question as soon as possible to let the community know what they can expect from future development and conservation efforts. Without knowing how this shift will take place, the goal is merely aspirational and leaves us without any answers. This fall, the Alliance brought Mark White to Jackson. Mr. White is an expert on regulatory tools to shift development patterns, and suggested several approaches that are suited to our particular community. The timeline for acting on regulatory tools should be outlined in detail in the implementation plan.

That said, the Illustration of Our Vision section covers quite well the locations and types of development increases throughout the valley. However, the opposite side of the equation, the decreases, are not as well described. Often, they come couched in the goal that with redevelopment of certain areas, density and intensity of development will be decreased. This may discourage reinvestment and redevelopment, and is not satisfactory as the primary tool for decreasing development in undesirable areas. This decrease must be clarified and described such that the community can understand where development will not occur in addition to what the maps lay out as places suitable for growth.

Recommendation #1: Within the implementation plan, create a clear timeline to explore and implement regulations that can meaningfully shift development patterns.

Recommendation #2: In the Character District Maps, provide a better description of where decreases in development are most desirable, rather than focusing primarily on where increases in development are planned.

Amount of Growth:
Additionally, the community has asked repeatedly for numbers associated with the proposed development pattern in the Character Districts. In fact, the introduction to the Illustration of Our Vision section states “the community is committed to continually adapting our implementation strategies to ensure that preservation and development occurs in the desired amount, location and type.” This is laudable goal, but without a more accurate estimate of the amount of development that is desired or expected, it may be an unachievable goal. The community was told that the numbers would
fall out of the mapping process. The commitment to a rough doubling, the 60/40 split and the goal of housing 65% of our workforce locally are good starts, but are not sufficient. This section should also clarify what “rigorous analysis of our successes and failures” means with regard to implementation of our goals.

Recommendation #3: Provide estimates, on a district level as well as a countywide level, of the approximate amount of residential and commercial development that can be expected from this Plan.

Recommendation #4: Clarify that the overall amount of growth is not to exceed what is currently entitled, and demonstrate that the plan is working towards this goal by providing rough projections for each district.

Recommendation #5: Clearly define the “rigorous analysis” that you anticipate doing.

Wildlife Impacts and Considerations:
A rapid assessment of the projected wildlife impacts of the development pattern illustrated in the Character District maps should be completed and incorporated into the maps section prior to adoption, and perhaps some changes should be made to the maps depending on the outcome of the assessment. With this, we can begin to understand the impacts of our desired development amount, type and location on our areas’ wildlife. Wildlife permeability in new and existing development needs to be an even stronger consideration throughout the Plan. Certain districts, like the Town Periphery, cover the idea quite well while other areas would benefit from more explicit commitments to wildlife permeability. Many areas in our community, even in Town, are within or adjacent to wildlife habitat and public lands. Buttes, riparian areas, and more broadly, open spaces, provide important wildlife habitat. Development that occurs in or near these amenities must account for wildlife movement and the resulting regulations for these areas, when they are written, must also respect wildlife permeability.

Recommendation #6: Execute a rapid assessment of wildlife impacts of the proposed development pattern, or authorize the NRTAB to do so.

Recommendation #7: Insert more explicit considerations for wildlife permeability in the following districts: 2, 3, 4, 5, and 13

Predictability:
The document as a whole needs an increased focus on actual predictability. For example, on the page “What Does the Illustration of the Vision Address”, point number 6 suggests a lack of predictability, whereas it is one of the central tenants of the Plan according to the introduction. Further exploration into this idea is warranted. Additionally, without estimates of the amount of development proposed, this plan lacks the predictability it aims to achieve.

As we explained in Recommendation #3, we recommend that you provide estimates, on a district level as well as a countywide level, of the amount of residential and commercial development that can be expected from this Plan.

Prioritization:
The first page of the Illustration of Our Vision references ensuring “that all policies of this Plan are implemented in the context of our Vision and no policies are forgotten.” It is important at this point to clarify that the community values enumerated in the Vision are prioritized.

Recommendation #8: Clarify the language to prioritize the community values as the policies do.

Definitions:
The definitions of areas of stability, transition, preservation and conservation are helpful and indicate a commitment to achieving community goals.

The gradient on the page entitled “Character Defining Features” is a key component of the Plan, and needs to be improved upon somewhat. The “clustering” image should better illustrate allocation of open space, as the current image implies a landscape dominated by structures with very little open space. Also, it will be important to clarify whether clustering tools will be available on parcels smaller than 160 acres; a formal review of the PRD tool as well as other density shifting or allocating systems would help to answer this question.

Recommendation #9: Correct the misleading graphic of “clustering” on the gradient map,

Recommendation #10: Determine how to best review the results of the PRD tool, and include a timeline for this review in the implementation plan.

Costs of Growth:
Recommendation #11: The costs associated with the growth described in the Character District should be addressed in introduction to the Illustration of our Vision section. Growth must pay its own way, and the direct and indirect costs of development must be considered.

Enforcement:
Recommendation #12: The introduction to the Illustration of Our Vision section should mention the importance of enforcing as strict as possible adherence to the intent of the district maps.

Recommendation #13: The introduction should clarify that the transition zones between character districts should not cause incremental encroachment of the character of one district into a neighboring district. In other words, character district descriptions should be closely adhered to, regardless of the character of a neighboring district.

<tr>
<td>12/29/2011 Stevenson, Trevor Conservation Alliance</td>
<td>a. Recommendation: In the diagram on the first page of this district, we should aim to make “viable wildlife habitat and connectivity” a “half circle” in the future column, and clarify that enhancements to Flat and Cache Creeks should be explicitly ecological. It will be important to ensure that excessive lodging not overwhelm housing and other commercial development in this district. b. Recommendation: Flat Creek corridor enhancements in this district should be focused primarily on ecological enhancements, and setbacks and other considerations should be explicitly mentioned in this chapter. Future enhancements should focus on the creek as a community amenity that prioritizes scenic and ecological values over recreational opportunities. c. Recommendation: Section 2.2 should include a commitment for new development in this area to take into account existing neighborhoods and work to integrate into them rather than overtake them with inappropriate bulk and scale.</td>
<td></td>
</tr>
<tr>
<td>12/29/2011 Stevenson, Trevor Conservation Alliance</td>
<td>a. Recommendation: In section 3.5, the statement “parking should be minimized” should be replaced with “surface parking should be minimized.” This leaves more options for other approaches to dealing with parking. b. Recommendation: Also in section 3.5, the reference to “some limited local convenience commercial” should be more tightly defined. You may be referring to the often-discussed idea of a small grocery store, but “convenience commercial” could mean a wide range of other uses.</td>
<td></td>
</tr>
<tr>
<td>12/29/2011 Stevenson, Trevor Conservation Alliance</td>
<td>a. We are very supportive of the references to natural resource values in this district. b. Recommendation: In section 4.2 it would be helpful to add a statement with regard to keeping bulk and scale down. We are also supportive of a wildlife crossing in this sub area. c. Recommendation: In section 4.5, the last sentence should be amended to read, “Moving forward, wildlife needs will be prioritized over recreational amenities in this sensitive location.”</td>
<td></td>
</tr>
<tr>
<td>12/29/2011 Stevenson, Trevor Conservation Alliance</td>
<td>a. Recommendation: Section 5.2 should be amended to recognize that this area is already trending towards housing and complete neighborhood attributes, and should be encouraged to continue to do so, given the close proximity to schools, a grocery store, pathways, and Flat Creek. This is an ideal location for “complete neighborhood” attributes, but given recent developments, it is no longer a particularly good location for industrial uses. Industry should be focused into District 7. b. Recommendation: Section 5.4 should commit to repurposing High School Road primarily as a residential access road and not a highway. c. Recommendation: Section 5.6 needs to be clarified with regard to the lower priority of development in northwest South Park. We are supportive of efforts within the Growth Management Plan to proactively allocate development to certain areas of the County before others. D. Recommendation: In section 5.6 there is mention of a “neighborhood planning effort.” This term must be better defined to include plans for roadways, public areas, pathways, and other components of development in such a large area. The neighborhood planning should happen prior to accepting any development proposal, and should include a rigorous review of any major development application by the public and the elected officials, beyond that required by an ordinary development application. This is extremely important given the large scale of proposed development in this area. E. Recommendation: We believe that the intent of the development in section 5.6 is that this area will be developed more intensively in exchange for eliminating development rights on the open lands in the South Park area. This should be stated explicitly. Otherwise it implies a massive upzoning of this area while still permitting at least 1 unit per 35 acres in the rest of South Park. Our understanding is that the PRD or other transfer tool is envisioned to conserve the open space, and that the development in 5.6 is seen as the best place to concentrate development to achieve that goal. Please clarify this so that this can’t be read as an upzone in addition to already existing rights on the open space you’re hoping to preserve.</td>

| 12/29/2011 | Stevenson, Trevor             | a. We are supportive of the important recognition of scenic values as well as open space and wildlife values in this district  
b. Recommendation: The description of this district should also identify important East/West wildlife corridors as areas that should be protected  
c. We are supportive of the wildlife focus of Flat Creek, as it is not a suitable area to prioritize recreational amenities.  
d. Recommendation: This section should clarify that pathways are more suitable than roads to achieve interconnections between the various neighborhoods in South Park. |
| 12/29/2011 | Stevenson, Trevor             | a. Recommendation: Please clarify that there should be no increased commercial development on the east side of highway.                                                                                                                                                                                                                  |
| 12/29/2011 | Stevenson, Trevor             | a. This district description is particularly aspirational, specifically with relation to the needed amendments to the Resort Master Plan. How will this take place?  
b. Recommendation: This district should include explicit mention of the goal to ensure that future commercial development serves the resident population at the Village and does not generate additional vehicle trips. Without immense increases in the local convenience character of current and future commercial development in this district, the residential development will merely generate a significant number of trips on the already busy Highway 390. |
| 12/29/2011 | Stevenson, Trevor             | a. This district description is good overall.                                                                                                                                                                                                                                                                                            |
| 12/29/2011 | Stevenson, Trevor             | a. Recommendation: In the diagram on the first page of this district, it seems that natural scenic vistas warrant a completely filled in circle in the existing and future columns  
b. We are supportive of the focus on scenic values in this district  
c. Recommendation: This description should clarify that the transportation goals are centered on improving existing roads and access points and not building new ones.  
d. We are supportive of and encourage environmentally sensitive roadway design.  
e. Section 15.2 says “future development will be clustered in and around existing neighborhoods.” Since we believe that the intention is not to expand the neighborhoods within each of the four areas identified as 15.2, some clarification is needed. Otherwise this could be read as creating new “nodes” within these rural areas, especially since the maps also show “Workforce Housing” as a goal within each area of 15.2. If possible, it is probably preferable to shift development totally away from District 15 and into Complete Neighborhoods and section 15.2 should probably say something to that effect. Of course, we would need some new regulatory tools to enable that sort of shift to take place, as we have said before. |
<p>| 12/29/2011 | Stevenson, Trevor             | a. We are supportive of the mentions of both wildlife crossings and wildlife permeability in this district |</p>

</table>
My concerns revolve around the lack of specific response to the concerns of the citizens of Moran as expressed at those earlier meetings.

As I recall, the primary concern of the citizens was to maintain the viability of the community here in face of the changing demographics. Mainly, that we are losing our middle class families and being populated with older part time residents without children in this community, nor the same level of involvement in community affairs.

Maintaining the viability of the community should be a specific goal for the Moran/Buffalo Valley area, but nowhere do I see that mentioned.

An essential part of this goal would have to include affordable housing in the Moran area, since working class families with children are priced out of the housing market, even now, when prices are reduced. Where is the affordable housing plan for Moran?

Having families with children is essential to the community since a certain school age population is required to keep the Moran Elementary School open. The MES provides a cultural core for the community, and also makes it viable for our largest employers (Grand Teton Lodge Company, Park Service, Forest Service, and Signal Mtn Lodge) to attract and retain employees. Representatives from both GTLC and NPS spoke directly to this issue at the last meeting.

The other part of the families with children issue is that that demographic also provides the most volunteers for the Moran Fire Station, another important institution hovering on the edge of extinction. There are currently only about 10 members, barely enough to keep it going.

I would like to see a plan by the County to identify and purchase properties to be used for affordable housing with some requirement that residents of such be involved with the MES and/or MFS. There are also partnering possibilities with the GTNP in the Moran area itself. This might include the Park providing the land and utilities for housing, and the County, using affordable housing funds, to build the structures. Of course, such units would be rentals, but even so, the goals of bringing in families and populating the school and fire department would be addressed.

The other glaring problem of Moran is the lack of commercial zoning to provide basic services to both residents and visitors on a year-round basis. The only such existing area is the Grand Teton Park RV Campground. This property makes the most sense for this type of activity since it is more centrally located than other possible sites, and it is already a developed site. Oddly, it is partly zoned BC and partly rural, in a fashion inexplicable to me.

I feel the zoning issue on that property should be clarified with the intent to encourage such uses. As an alternative, the County should identify what other areas of Moran it feels would be suitable, if not this one.

The preservation/conservation goals, while having some merit, seem out of place to me since Moran is already 99.9% park, forest, and open space in conservation easements. How much more do you want? Can you point out any significant parcel that is wildlife impermeable? With the existing SRO and NRO overlays (which I presume are not going away), this goal has already been met, and should not override the goal of maintaining the viability of the community.

Really, though, I don't see some small expansion of commercial activity and 6 to 8 units of affordable housing as being threats to the conservation and preservation goals. If properly done they will coexist quite well.

So, to recap, this is my best recollection of the bulk of the discussion at that meeting, yet I see almost none of it reflected in the plan. If we were to have another meeting, it would be to find the black hole into which our input disappeared, and to reiterate our resolve to get the County to respond to our needs as we, the residents, have expressed them.

I am cc'ing this to other folks who, as I recall, were at the public hearing referenced by Alex, so they might comment on line, since it appears we will not have the opportunity to do so in person. To those of you recieving this via cc, please feel free to add your comments or forward this note along to others who may be interested.
First, thanks to all who have been tireless in their involvement in this public process. Wow! Whatever the zoning outcome, I hope we can have work, shop and living all together in the “greater” downtown area. I wish it could be flexible and encourage (instead of hinder) small scale projects that create more living/working/shopping spaces. I hope that the zoning changes allow our family the economic viability to continue to live on property that has been in the Hagen family for 80+ years. I want S. Cache to be busy and vibrant and livable for our family all at the same time. I must admit that sometimes this whole process has seemed so overwhelming and filled with such conflicting viewpoints that it is hard to see the end! Audrey P.S. I love everything about living downtown except the front end loaders and plow trucks at 3:30 AM!! -- I think the public works department does a great job, I just wish it wasn't so early in the morning!! I hope that part of this plan defines how town services (lighting, plowing, etc.) can coexist with residential as well as commercial.

The proposed character for the 3.2 district is very unfavorable to the existing neighborhood residents. It would basically open up the old AR-2 zone to wide 3-story multi-family development throughout, with fewer restrictions than the very undesirable PUDs. The continued mixed-use content is satisfactory. However the plan does not recognize the several quite-different neighborhood pockets within 3.2: Glenwood vs Historical vs Art Center periphery vs Karns, etc. On the smaller lots, the principles are satisfactory: 3 units with alley, 2 without, 2 stories. On the “larger residential lots and along mixed-use commercial corridors”...multi-family...”in order to replace existing commercial uses and to blend the borders of the Commercial Core with the Residential Core”, you open Pandora’s box. Probably 70%+ of the 3.2 lots could be argued to fall in this category. Recommendation: make the definition stick to “existing commercial uses” and to the "MHPs and Urs" and preclude the accumulated 3- and 2-lot current residential uses. This will reduce some of the speculation in this zone and will offer mid-block protection for existing residents while permitting eventual conversion of the large nonconforming parcels.

Second, completely avoid going to 3-story structures. These are totally incompatible with this area and do not exist elsewhere. Even the pre-1994 multifamilies went only to 2 stories. There is no way an existing 1-lot existing resident can abut comfortably with a new 3-story structure. This appears to be a naked sop to the developer/speculator group.

Recommendation: apply the same guidelines to the new multi-families as to the mixed use office, e.g. "same bulk, scale and intensity". There is enough lateral flexibility to create multi-families at the existing density of about 17 units/acre.

I echo Jim’s [Wolf] conversation. However, there needs to be a reason to renew this category and for people to reinvest in town. What is the reason?

The town still has a chance to redevelop along the lines of Anne Frame’s example. Officials need to stop talking about upzones that encourage landowners to hang on for a higher selling price and let the town develop. End the affordable housing exaction and the energy exaction and give yourself a competitive advantage against the county. Also, the threat of an affordable housing ghetto going in next door diminishes the incentive to follow Anne Frame’s example. The officials seem quite content to preside over a town of resort employees, affordable housing, and illegal workers. This does not build value for anyone.
Below are my written comments concerning the Planners' open house on Thursday. Thanks to the Elected officials and staff who dedicated so much time to explain the Plan and listen to community concerns.

First, I appreciate the steps taken towards conservation in Middle and Southern South Park, the affirmation of its scenic, rural and wildlife connectivity values as well as its value as the gateway from the south. And I like the commitment not to develop the Northwest corner of South Park before infill in town is complete and also to require potential development in that section to match the character of the existing, adjacent neighborhood. The acknowledgment of a need to address the highway wildlife crossings is commendable (although I would like to see the widespread East-West wildlife connectivity drawn on the map as is the North-South corridor along Flat Creek). These kinds of positive steps towards conservation and preservation serve the community well now and for the future.

Second, as a general principle, it is best to err on the side of too little development as opposed to putting as much as possible in targeted areas. Development does not need a head start. All development has social and environmental costs associated with it. The Comprehensive Plan should do as much as possible to ensure that the doubling of development now on the maps pays its own way as it is obviously unsustainable to use growth to solve growth related issues. Future generations will have to defend this ecosystem against the weight of an increasing wealthy global economy. The Plan must foster permanent preservation of open space, wildlife habitat and scenic vistas as large profit margins will always tempt us to overdevelop in a piecemeal fashion. In many parts of the world clean air and enjoyment of nature are already so rare they are available only to a privileged few. Let's not let that happen here.

Finally, for the sake of clarity, predictability and transparency of government, please release the build-out numbers for each district. Ranges are fine. The community is smart enough to understand the difference between a worst-case, maximum build-out scenario and what is likely. People are aware that there is already a huge amount of development potential embodied in current property rights. That's why we've all agreed not to add new potential. People can't know what their neighborhoods will look like or what the overall impact and cost of growth could be, without knowing the amount and type of development possible in each district. In addition, business decisions are better made in a predictable environment. At a time when trust in government is at an all time low, it is important to be as transparent as possible in the process.

Where quality public space has been identified as a core characteristic, LDR's need to reinforce integration of design professionals at the earliest phase in the development process if we are to benefit from public art that have been thoughtfully integrated into the design and serves a function in the development.

Our culture and heritage are a core component of what makes Jackson Hole a quality place for people to live, work and visit. To encourage the future vitality of creativity in our community and to continue to benefit from the positive economic impact creative professionals have on our community, live-work spaces need to be planned for and even subsidized as part of our affordable housing pool. The cost of property is a key factor in young talented creative professionals moving to other communities. Live-work spaces also reduce traffic and add character to our neighborhoods. Developers in the Town Square and commercial core should be given incentives to include live-work spaces for creative professionals who may be producing visual arts (fun to watch artists working from ground-floor studios open to street/level), who are producing creative intellectual or digital capital or who work for arts and culture organizations.

Cache Street is a major artery anchored by the physical features of GTN Park and Snow King with the Elk Refuge in the middle. These natural wonders connect us directly to our lifestyle of recreation and environmental conservation. Our culture and heritage institutions exist along this artery, the NMWA, Historical Museum and the Center for the Arts. This artery also supports visitor services such as Home Ranch Welcome Center and the GY Visitor Center. Building added value into development along Cache Street will allow for a greater economic impact and connection to our commercial core, the town square. This artery should visually demonstrate, through well-designed public space and the inclusion of public art, the unique values we share as a community.

<td>Hadden, Kenny</td>
<td>Hi! I'm just writing to reiterate a couple points I've made in person. 1. I'd love a bus stop at the PO in Wilson that is for local travelers to and from town, not just folks commuting over the pass. 2. I think the bike path from Wilson to Jackson should be made a top priority. The section needed over fish creek would get used all the time by foot traffic in Wilson as well. 3. If there must be more development in wilson, I think the style/density of the attainables on 3rd street could be expanded to several more blocks headed north. 4. I love the idea of a median in downtown Wilson, as well as pulling buildings to toward the road so that parking is behind them, creating a little commercial plaza. Thanks for all your hard work!</td>
</tr>

<tr>
<td>12/6/2011</td>
<td>Bloom, Rich</td>
<td>Alex - Yup – saw it finally go live during the JIM. Thanks. I will have some input, suggestions and corrections naturally. With that aside - having skimmed all of it (all districts and introduction) – I do want to thank the planning team as this approach on finally putting lines on the ground – and the detail within the descriptions (at least verbally and visually – as we are still missing the extremely important “Appendix I”) - is the right direction forward. We know the rub is how we actually move development from rural to existing or new expanded centers – while leaving the incentives in place to permanently reduce the development potential in those critical rural areas (via permanent open space easements) – all within our cumulative existing remaining development potential (approximately double our current built environment). But that has more to do with some stronger affirmations and commitments within the body of the themes and policies – so it is clear on where the LDRs changes should be focused - and what goals are to be achieved. Kindly let me know when the one-page 60/40 spit build-out numbers summary (as Jeff explained to the electeds yesterday afternoon) is ready for public consumption - as I know you will have it for the open house. Also please explain the timeline for an updated “Appendix I” with build-out ranges by district – and in aggregate. I would hope we have that well before the January joint meetings (electeds and planning commissions). We all expected that to be part of this phase of the maps. Again – I want to acknowledge the amount, and quality, of work the planning staff has put in – and the responsiveness to public feedback that I do see in character districts 10 (South Park) and 5 (West Jackson) especially. It is appreciated and noted. Although I, along with my neighbors, continue to still have specific concerns – we have come a long way to improving the characterization for the future of the greater South Park region. As your lead in sentences for the South Park district states so well: “The South Park District is, and will continue to be, the agricultural southern gateway to Jackson. The existing agricultural open space that defines the character of the district provides a scenic foreground for Teton views, wildlife habitat connectivity, reference to heritage and stewardship ethic, and a quite rural setting for residents.” You can pass my positive reception on to the planning team.</td>
</tr>
<tr>
<td>12/6/2011</td>
<td>Whetzel, Josh</td>
<td>I do not think you have the wildlife corridors plotted correctly. You show them in Green running sort of North East to South to South West through the Aspens/Pines district. My place is in the Berry Patch and from what I have observed and seeing other areas directly North of the district, wildlife moves more East West through the area. I pointed this out to a planner this fall during an open house at the Art Center.</td>
</tr>
<tr>
<td>12/6/2011</td>
<td>Hadden, Kenny</td>
<td>Hello, I saw an ad in the paper (run by Save Historic JH) decrying the recent community meetings as “manipulative” and I just wanted to write to let you know that I found them to be exactly the opposite. The meeting I went to was open, informative, and extremely well run. The planners are doing everything they can to get people’s feedback and interpret it in the context of what is possible. I felt my voice was heard, and I found it an interesting and engaging process to be involved in. I was honored how seriously they took my feedback, as a fairly recent transplant with no city planning experience. The planners are a tremendously thoughtful, positive, motivated bunch and they deserve a ton of credit for the work they are doing.</td>
</tr>
</tbody>
</table>
This letter documents the future character of the “Town Periphery” district which we, the undersigned, desire and expect. We have used simple language to make comparison with the forthcoming Land Use Regulations straightforward.

The Town Periphery is a low density residential neighborhood which borders the un-developed public lands of the National Forest and Elk Refuge. It is not unusual to see deer, foxes or moose in our yards. It is a quiet neighborhood with large yards and open views to the mountains. We want it to stay that way. We ask that you design Land Use Regulations which are predictable and preserve our existing neighborhood character and we look forward to a review of your effort in the coming months.

Desired Future Character of “Town Periphery” District

• Large lots (1/3 acre minimum)
• More open space than structures
• Permeable to wildlife
• Planned Unit Development subdivision not allowed, such high density is incompatible
• Properly maintain Cache Creek Drive, do not make it a “complete street” like Redmond
• Horses allowed
• No new commercial enterprises needed or desired
The Jackson Hole Conservation Alliance believes that the community, the planning staff, and the elected officials have made great progress towards completing a valuable Comprehensive Plan to direct development in the coming decades. The policy document that you have approved is not as detailed as the Alliance recommended over the last several years, yet we recognize that it is an acceptable way to approach Comprehensive Planning, and it may very well achieve the community’s goals if it is accompanied by strong Land Development Regulations. We appreciated the opportunity to work with staff on the Character District mapping and help to reengaging public participation.

We look forward to the results of this productive process. Still, much remains to be done in the next several months.

As you move towards the ultimate adoption of the Comp Plan, the Alliance will continue to provide you with information and recommendations. Our goal is to be a valuable asset to the community and the elected officials in this important work. We strive to provide recommendations to help achieve the ambitious goals of the new Comp Plan, as well as recommendations that we believe will help address the primary concerns of the community members that you represent, many of whom are members of the Alliance. As always, we welcome any feedback on our work.

In the next several months, we strongly encourage you to look for ways to continue to actively engage the community in this important discussion. The participatory methods you have used recently have made this process much more accessible to the countless people who are intimidated by microphones and formal letters. As you review and solicit public comments for each Character District, we ask that you continue to use methods that keep the discussion open to a wider range of participants. We suggest working on individual districts to inform your choices as you make hard decisions about which issues and opportunities to pursue. The Alliance would be happy to refine suggestions on how to best do this in discussion with the planning staff.

We are including a detailed report with this letter, which outlines our primary objectives for the Comp Plan process between now and the eventual adoption in the spring. Our two broad recommendations are:

1. An Implementation Plan should outline exactly how meaningful progress will be made towards achieving the priorities of the community
2. Maps should illustrate community priorities and provide details on the desired future of Jackson Hole

Much more detail on these recommendations is provided in the accompanying report.

We feel it is important to provide you with this information at this point, as you consider how to best plan your work for the coming months. Please take some time to read through our proposals, and contact us if you’d like to discuss any of these ideas further. The Alliance would love to see these next steps implemented so that the community can support the final adoption of the Comp Plan.

Jackson Hole Conservation Alliance Position on the Comp Plan

Theme 1: An Implementation Plan should outline exactly how meaningful progress will be made towards achieving the priorities of the community

Overview:
The Alliance recognizes that the Comp Plan serves primarily as an aspirational document that outlines the primary goals of the community, but doesn’t resolve how we will actually achieve those goals. Assuring that the community’s priorities actually are achieved has been central to the last several years of Alliance comments, and widespread public mistrust of the Comp Plan process seems to largely revolve around a lack of confidence that the Comp Plan will result in meaningful change.

The Alliance is well aware that much of the specificity and predictability that the Comp Plan is supposed to provide will be addressed to some degree with the maps, but will primarily be achieved via upcoming revisions to our Land Development Regulations. However, in order for the community to trust that this Comp Plan will lead to truly effective LDRs, we need to clearly see that steps are being taken to achieve the priorities expressed in the Comp Plan. In addition to responding to public concern, we believe that outlining these next steps will enable more effective implementation after adoption of the Comp Plan.

The Alliance recognizes that creating LDRs that implement the community’s vision will take considerable time and expense, yet we all know that doing this well is a top priority for the public. Before the adoption of the Comp Plan, we strongly recommend that a detailed and realistic Implementation Plan be created, presented to the public for comment, and included as an integral part of the final adoption proceedings. The timeline of this
Implementation Plan could stretch over several years, to match the needed scope of work to available planning staff time and budgetary constraints. Detailing and publicly committing to these next steps prior to adopting the Comp Plan will not only allay the concerns of residents, but it will also provide a roadmap for action to ensure that we ultimately achieve the community’s objectives over the coming years. There are many key points that should be addressed in this Implementation Plan, and clearly some issues must be addressed very early in the process, since other decisions will need to rest on a strong foundation of the core LDRs. We will briefly highlight key points that the Alliance believes should be addressed in the Implementation Plan.

Key Points:
1. Regulatory tools to shift development patterns are vital to the success of the Comp Plan. Rigorously researching a wide range of potential tools should be a top priority, as these tools lay the foundation for achieving many of the major goals of the Comp Plan. The Alliance sponsored a presentation by land use regulation expert Mark White to illustrate 16 different regulatory tools that could be used to achieve the desired development pattern in Teton County. Mr. White strongly recommended that research and development of these policy tools begin immediately, to provide a better sense of what sorts of development shifts might be achievable in Teton County, and to reduce the delay between the adoption of the Comp Plan and the implementation of regulations that can meet the objectives established in the plan. For a link to the Alliance letter on this subject, a summary of the presentation, and a copy of the full presentation, please go to: http://jhalliance.org/Library/Comments/2011/CompPlan11/ShiftDevPatternsComments.10-21-11.pdf

It is vital that a clear plan of action is prepared exactly how you will proceed to develop LDRs that will direct development in ways that meet the ambitious goals set by the community and by the Comp Plan. The Alliance does not expect a consensus in the immediate future on which regulatory tools to use in Teton County, but we would very much like to see clear progress and commitments towards this important goal. That should include drafting a request for proposals from qualified experts on this subject. We also recommend scheduling a detailed review of the effectiveness of the current PRD tool, perhaps as part of the broader work of exploring possible regulatory tools.

2. Identify how and when unresolved issues within the Comp Plan will be addressed. As we discussed last spring, many policies in the Comp Plan essentially say that key issues will be “explored” or figured out later. That may be fine, but a formal list of these unresolved issues should be created, and should identify who is responsible for figuring these issues out, by when, and with what budget. We’re aware that you may not get to some of them for years, but these unfinished policies should be addressed systematically, and in the order of priority that seems most appropriate to you.

3. A permanent funding source for the preservation of open space, scenic areas, critical habitat, and migration routes must be established. We hope that the work the Alliance is doing with the Land Trust and the Trust for Public Land will lead to the creation of this funding source for Teton County. However, if that initiative doesn’t work out, it would be very important to create a different mechanism that will generate funding for the implementation of the priorities of the Comp Plan. This will provide you with flexible funds to use as needed when other options don’t work.

4. A more detailed plan to improve our natural resource regulations should be developed. There are many approaches that we could take to improving our natural resource regulations, and the Alliance is pleased that the NRTAB can provide guidance on how to best review and improve our natural resource management. Broadly speaking, we believe that the NRTAB could better serve the community if it is given a clearer mandate and a small budget for exploratory work. We encourage you to work with NRTAB to build a timeline for review of natural resources regulations, and a modest budget, into your implementation plan.

5. Greater specificity is needed on the scope and methodology the Growth Management Plan. The current Growth Management Plan is more reactive than proactive. In addition, within the existing policy document, the Growth Management Plan doesn’t clearly explain what sorts of “Corrective Actions” might be appropriate if the next few years of development don’t meet the objectives established in the Comp Plan. Different people seem to have very different understandings of what “Corrective Actions” might entail. Since the Growth Management Plan is central to the success of the Comp Plan, the Alliance recommends that you review this section of the policy document, and consider adding more proactive elements to this important portion of the plan, as well as additional detail about what sorts of corrective actions you envision.

Theme 2: Maps should illustrate community priorities and provide details on the desired future of Jackson Hole

Overview:
Community members and planning experts agreed that the inclusion of detailed maps as an integral part of the Comp Plan is extremely important to increase the specificity and predictability of the plan. The Alliance is pleased that you agreed to complete the maps and include them in the final adoption of the Comp Plan, and we want to make sure that these maps provide details that accurately reflect the community’s priorities. Maps provide an important opportunity to generate a clear picture of the desired future of Jackson Hole. The public has been told that the maps will produce a detailed illustration of the land use changes and community character changes that people should expect to see in the coming decades. We
have also been told that “numbers will fall out of the mapping process,” and that projected growth will stay within a rough doubling of the population and will be distributed so that no more than 40% of new growth will occur in rural areas. The maps are the opportunity to clearly spell out the amount of expected future development, and thereby demonstrate that your plans are working within the boundaries that you have committed to. At this point we have not yet seen the maps that illustrate the public input from Phases 1 and 2 of the Character District Mapping. There are several basic components that we would like to see addressed in the final maps, and we are hopeful that several of these may already be sufficiently dealt with in the maps that will be presented on December 7th. We expect to send you more detailed feedback on the maps once the draft maps are available for public review. Meanwhile, below are some key points that we believe the maps should cover.

Key Points:

Maps should illustrate the location, type, and amount of growth in each character district
The public has requested this level of detail for quite some time, and the maps make it within reach of completion. Since the maps will illustrate the desired future character of all areas of Teton County, they will inherently show the location and type of growth that is planned. It is a relatively straightforward matter to calculate an estimate of the number of new residential units that can be expected in each area. This would clearly respond to the desire of residents to see some details on what is planned for the future of their neighborhood, and would enable a more comprehensive look at how much growth we are planning for overall, and where most of that growth might be.

Providing as much detail as possible on the expected location, type, and amount of growth is foundational to any efforts to plan effectively. Generating estimated growth projections for each Character District would provide valuable information for use by the public and for frequent use by elected officials and planning staff.

Overall plans for growth should not exceed the amount of growth currently entitled
Demonstrating that future plans are in fact working within existing entitlements, rather than creating additive growth, will be simple once the amount of growth is identified as explained above. This will also demonstrate your commitment to not exceeding a doubling of the current population of Teton County.

A rapid assessment of the projected wildlife impacts of this development pattern should be completed before adoption
The Alliance has already submitted a request that the NRTAB provide guidance on how to best conduct this type of rapid assessment. Since the County Commissioners rejected that proposal, we request that you find another way to get some sense of the projected wildlife impacts prior to adoption. Minimizing impacts on wildlife is a top priority for the community, and it seems wise to get a sense of expected impacts to respond to this overriding concern. The Alliance is interested in working on this rapid assessment using whatever methodology seems most appropriate.

“Issues” and “Opportunities” for each Character District should be discussed in detail by elected officials, and preliminary decisions should be made regarding which issues and opportunities will continue to be pursued in greater detail.
Public comment has generated an extensive list of issues and opportunities for each character district. To the extent possible, elected officials should review these options and begin making the hard decisions that are needed. Public input on the ideas for each Character District should be solicited to better inform these decisions.

Clearly connect the Comp Plan policies to the maps.
The current policy document does not clearly explain the important role of the maps. Legally defensible language is needed in the policy section of the Comp Plan to clarify the degree to which all future land use decisions must align with the maps.
As you prepare materials for Phase III of the Character District Development process, we ask that you consider the following comments and suggestions.

Phase III needs to provide clarity and predictability
Predictability on the amount of growth has been a key request for years – Phase III must respond to this. Without this predictability, the needs of the community will not be met in what will be a five-year planning effort.

Phase III needs to be consistent with Community Vision and Good Planning

In order to respond to requests for predictability and clarity, the revised Character District maps need to indicate potential buildout/numbers specific to each district.
(You can’t really plan without numbers. In order to plan for basic infrastructure, transportation and parking capacity, and set up a system where new development pays its fair share of the costs, the community needs to clearly understand potential amounts of growth in various districts. Without a clear picture in mind, we could just make incremental changes, year after year, to the detriment of the community.)

In order to respond to community concerns about the level of development already in the pipeline in both Teton County and the Town of Jackson, the Character District Chapter should not support additive growth in any districts.
(We already have enough development potential in the pipeline, 50 to 70 years! There’s no need to add more now in what is supposed to be a 10-15 year plan. We have yet to see the impacts of what is already a given, and on the way. Prior to any expansion of county nodes, the goal should be to support infill of the Town.)

In order to protect the unique assets of Jackson Hole, the plan must demonstrate a clear commitment to the protection of historic, western rural character and small town atmosphere in ALL planning districts.

In the case that you promote density increases in certain “complete neighborhoods”, the following conditions should be met:

- A real commitment to shifting growth, not just adding growth (plan should state that any density increases in this plan must be contingent upon permanent density reductions elsewhere and must result in permanent conservation)
- Level of density increases and development types must be acceptable to community members and neighborhoods.
- A commitment to identify information gaps and conduct important planning analyses such as transportation capacity and fiscal impact studies before density is increased.

The Character Districts chapter needs to highlight the importance of planning for the valley as a whole and not as isolated planning districts in a vacuum. (Cumulative, incremental impacts matter. Transportation is just one example.)

Contradictory and confusing definitions specific to the Character District Chapter need to be modified. For example, “stable” areas should mean stable. It is confusing that the current policies indicate that stable areas will see increased density.
First of all, many thanks for the hours and patience as well as diligence you have demonstrated throughout the Character District workshops.  I have received positive comments on how that format worked better than the formats employed the previous three years for gaining public participation and input.

The following are the comments submitted by the Chamber concerning the Character Districts.  While I believe you may have captured a good number of these from my individual Board members during the workshops, there may be a few that are new or presented differently that could be good input your revising of the Character District descriptions:

-Maintain/preserve open space in Teton County wherever possible while protecting property rights of land owners and developing tools for transferring development density to the Town of Jackson
-Integrate land use planning with transportation planning
-Support initiatives or incentives that will help facilitate filling existing commercial space, responsible new development particularly where there is not already existing commercial space that could be utilized, and expanded commercial zoning to create thoroughfares connecting commercial sectors.
-Maintain current 1994 Comp Plan total non-residential, commercial square footage level
-Conduct research and analysis on enhanced pedestrian areas on or around the Town Square
-Maintain Town Square integrity, including current zoning, building height limits, and building requirements/codes on the Town Square
-Conduct research and analysis on building heights accommodating a third floor in the commercial zones other than the Town Square
-Emphasize incentives rather than regulations to mature current commercial zones
-Encourage complete neighborhoods and streets wherever possible
-Locate parking behind commercial buildings wherever possible to strengthen accessibility and pedestrian friendliness
-Decisions concerning zoning, building height, architecture, and landscaping for entrances to gateway communities should take into account best practices in the industry in order to create a welcoming sense of arrival to Jackson consistent with community character
-Split Highway 89 Character District into two zones/districts to accommodate (1) commercial/light industrial development and (2) wildlife
-Create an economically sustainable base village (Teton Village).
-Integrate land use planning among the Aspens and Pines
-The Wilson Character District should take into account the results of the Wilson Charelettes
-Avoid the use of the term “Midtown” since very few people understand where that is.  Use the term “West Jackson” instead to cover the areas referred to as “Midtown.” Do not refer to Cottonwood Park as “West Jackson” since it is located in Teton County.  Refer to it as “Cottonwood Park.”
Thanks for taking the time to review these comments and seeing where they may strengthen the Character District information.

Hi there!
My name is Eddie Miller. I’m recently stopped in the area, fallen in love with the scenery and wild of the Teton and, have a plan that I think will fit well in the Comprehensive plan.

We should keep, conserve, and mow the slope with a small herd of Elk! They would stay in the trees mainly, water is already set up (?), long-term permaculture is desirable on national forest there! Existing populations of red deer there have been getting killed also going across the road.. I bet we could both save two birds with one action if we put some fence up and kept them in there. . if we keep that area as forest and put some elk there to give the businesses something to talk about!

If the Conservation Alliance would like to put it on the agenda for support/funding the meeting of the 8th, I’m just the hands-on man for tracking them, shepherding some elk in, and filling up their water bowl... Love, the Jackson Elk Shepherd,
Eddie Miller

| 11/11/2011 | Tom Hedges                  | Interested Public                                                                                                                                         | [David Quinn Maps]  
This (area 1/2 mile north of Rafter J west of Flat Creek to SP Loop) seems to be an appropriate location for additional housing, and commercial development. Multiple friends and associates would agree, that by offering additional commercial amenities, as developers would create a better, more efficient quality of life for residents of South Park area. |
| 11/11/2011 | Cathy O’Shea                | Interested Public                                                                                                                                         | [David Quinn Maps]  
County/Town does not have the right to dictate to private landowners that their land will be preserved (central South Park). |
| 11/11/2011 | Jane Hill                   | Interested Public                                                                                                                                         | [David Quinn Maps]  
Increase density (1/2 mile north of Rafter J from Highway to SP Loop) |
| 11/11/2011 | Mary Crothers               | Interested Public                                                                                                                                         | [David Quinn Maps]  
I support the development of a rural neighborhood with conservation opportunities and similar density to Melody Ranch (1/4 mile north of Rafter J from Highway to SP Loop) |
| 11/11/2011 | David Quinn                 | Interested Public                                                                                                                                         | Jeff,  
I have attached thirty-four maps with various comments from a broad spectrum of Teton County residents. It was not difficult to find people to comment on the existing plan and maps. I feel the great majority of people I came across represent the sentiment of the people of Teton County. Many of these people find it impossible to leave their jobs and families to attend meetings, even if the results of the meetings are going to change the direction of Teton County. I have included their wishes and I hope that you include their comments with the ones that you currently have. As you will see many of the people who commented are either business owners or working people who have a significant stake in the future of Teton County. I think there are strong feelings towards a mix of development in the South Park area that encompassed both the County’s definition of complete neighborhoods and real areas. I think after studying the County’s website that we can all find a happy medium. I look forward to your thoughts and, as I have said all along, I appreciate the great effort that you have made to make this process transparent and open to all. |
| 11/11/2011 | Pamela Rankin               | Interested Public                                                                                                                                         | [David Quinn Maps]  
I would be proponent particularly of a density development (area within a 1/2 mile of South Park Loop Road to east) |
| 11/11/2011 | Will Dornan                 | Interested Public                                                                                                                                         | [David Quinn Maps]  
This area (1/2 mile north of Rafter J west of Flat Creek to SP Loop) of Jackson Hole needs to be available for increased density and future growth in Teton County. We need extension of communities similar to Melody Ranch and Rafter J that provide housing and amenities for all classes of Teton County residents. As a business owner in Jackson Hole I wish that my staff could live in the valley and maybe be able to buy a home. |
| 11/11/2011 | Skip Wright-Clark          | Interested Public                                                                                                                                         | [David Quinn Maps]  
(Area between Flat Creek and Highway) Scenic. This area (1/4 north of Rafter J west of Flat Creek to SP Loop) of development makes good science and expansion for housing and small families with tax revenue. Elk Migration (through central South Park) |
| 11/11/2011 | Gaylyn Frantz               | Interested Public                                                                                                                                         | [David Quinn Maps]  
Good area (central South Park) for future growth with similar neighborhoods to Melody and Rafter J. Equestrian use a great plus! |
| 11/11/2011 | Greg Choo’lijian            | Interested Public                                                                                                                                         | [David Quinn Maps]  
Planned communities with open land adjacent to neighborhoods (in centeal South Park) would be beneficial. As a construction worker this would provide work and houses to locals and further help our community. |
| 11/11/2011 | Mina Neishabouri            | Interested Public                                                                                                                                         | [David Quinn Maps]  
Keep the same density as purple areas such as Rafter J or Melody Ranch (1/4 mile north of Rafter J, Highway to SP Loop) |

More density close to layout of the Aspens (area 1/2 east of SP Loop) |
| 11/8/2011 | Bloom, Rich   | Alex – quick question that I have gotten.  
Will the next draft of the character district maps have build out ranges attached – plus a net summary? I am pretty sure the electeds committed to this in some manner. |
| 11/8/2011 | ,             | We would like to reiterate our past comments on the proposed Comp. Plans for the Alta Community.  
We look to Planning and Zoning for future reliable predictability, and are counting on County officials to come through for us with votes on policies that stand firm.  
Our priorities are preserving scenic corridors, wildlife corridors, quiet neighborhoods and open space (especially the historical agricultural space). In conversations with our neighbors, we believe that these priorities represent the majority of ideas circulating in Alta.  
Allowing for business zoning in Alta is promoted by some as a good idea “because business atmosphere for growth is much more favorable on this side of the State Line”. As true as that may be, if we look to the future, that is precisely why zoning for business is a bad idea. A bustling business community in Alta is not appropriate. People bought property here for the ideals listed above (scenery, wildlife, and quiet rural atmosphere), not for more convenient access to stores and businesses (which are a mere 5 miles down the road now).  
We also want to voice our support for the inclusion and use of P and Z tools which would allow for the shifting of development density away from rural areas like Alta. Policies which would allow for compensation to our historic agricultural producers for not selling out to developers makes good sense and preserves the open spaces for both wildlife and people. |
Tillson, Becky

11/7/2011

We are writing with regard to the upcoming Phase 3 review of the Character District Maps, the products expected to be reviewed during that phase, and the role of public input.

First, we would like to express our appreciation for the incorporation of our suggestions for Phases 1 and 2, and for successfully reaching out to the public for input. The Alliance worked hard to increase the public involvement in the process, and to prepare people to be productive participants. We were pleased with the number of folks who participated and impressed with the depth of their suggestions. Effectively incorporating the public’s suggestions is extremely important as this character district review process nears completion.

We would like to continue to provide recommendations on the process moving forward to try to ensure that the public’s will is represented and reflected in the maps. To that end, we have several suggestions for the upcoming Phase 3.

First, the meeting on December 7th seems to be designed around a particular mapping product for each of the 15 character districts. Building upon what was tentatively outlined in the scope of work for AECOM, that product should:
1. Include specific written descriptions of the future character of each district and each subarea within the districts
2. Provide an expanded list of issues and opportunities, while making clear that many of these may be options for the future, not commitments
3. Include decisions on all options that fall within staff jurisdiction, and clear identification of issues that require a decision by electeds. It should also indicate which items need to be decided before adoption, and which will need to be decided in the future. As much as possible, decisions should be made now, and not put off until the LDRs.
4. Contain an explanation of the methodology for determining which issues and opportunities were included in the district descriptions. Also, include an explanation of how you determined who is responsible for decisions on each issue, and how you determined the timeline for that decision.
5. Include the number of new homes (including type: single family, condo, etc) and nonresidential square feet that are to be expected in each of the districts if they are fully developed according to the character district maps (i.e. Appendix I). If we “buildout” in the pattern indicated on the maps, what would this really mean for increased residential and non-residential development in each district?

Second, there is likely to be public input that will be discarded or rejected due to being unrealistic or conflicting with a Comp Plan policy. In these cases, we would suggest that staff summarize the input from the public and explain why it isn’t included. For example, if a comment was not incorporated due to a conflict with a policy, a clear statement as to which policy it conflicts with would be useful. The rationale should be available to the public in writing, which will enable the public to review policies that don’t match public sentiment.

Third, we would like the public to be able to review these products prior to December 7th to best be able to contribute constructive comments at the open house and in the weeks that follow.

We always welcome any conversation about these points if that would be helpful in clarifying why we feel these products are so important at this phase of the process.

Thank you for your continuing work and commitment to a product that reflects the community’s vision for this valley. Best of luck with the coming months of public comment review, and we look forward to continuing to engage with the planning team, the elected officials and the public as this process progresses.
Jackson is a very special place. It is the jewel of Wyoming. It is America’s Serengeti. There are few places where we are privileged to live amongst the wondrous wildlife and be able to view an avian paradise & even hear the sweetest sound of their wings as the trumpeters fly overhead. The glorious mountain scape of the surrounding Tetons and Gros Ventre Mountains and the ever changing light are of constant delight. The Grand Teton National Park and nearby Yellowstone are a call of the wild to visitors globally. The Tetons steal your heart and make you long to stay forever. Many do come back to fulfill their dream and move here both part and full time. It is a place of unlimited recreation for biking, hiking, mt climbing in summer and skiing in winter. The bike trails wind round the town and go all the way through Teton Park. There are golf courses all around. Currently the residential neighborhoods are in and surrounding the town in all directions. These neighborhoods are far from finished being built out, as there are numerous lots to finish being developed in time. Actually we have 50-70 years of residential and commercial development already approved – but unbuilt – an approximate doubling of the built environment we see today. Town has another approximately 1,200 housing units approved but unbuilt under current zoning. The County about 4,000 potential homes (including apartments, condos and houses in the wings) - without even counting the open space clustering tool that could be used on rurally zoned lands. Simply stated the County has 4,000 more homes to be built in the County NOT including the rurally zoned lands, which includes all of South Park that is at play. Then there is already a doubling of all the commercial square footage siting collectively in the Town and County. So the question is why do we need to be planning for more future development when that is already designated for the next 50-70 years out? See clearly now that when you drive through town these days you see more dump trucks and earthmoving equipment than wildlife sightings. Could this be a precursor to loosing our drawing card , the wildlife, to over development? In planning for the future preserving the wildlife and maintaining open spaces should be our primary aim. Open spaces for hiking and biking and wildlife migratory paths are our number one priority. More subdivisions are just not a need for many,years to come. We should finish out what we have already designated for development before we take on further plans to develop any more. At age 9 Helen Mettler said"GOD BLESS WYOMING AND KEEP IT WILD. Lets do just that and say NO to future development. ENOUGH IS ENOUGH! [see comment for picture]
Policy 7.3.a was modified in the June 22 release to:
Policy 7.3.a: Develop a land use pattern based on transportation connectivity
A goal of this plan is to interconnect existing County neighborhoods and the Town of Jackson with a multimodal transportation system. Within existing County and Town complete neighborhoods, alternative modes of transportation are available for daily trips year-round, and these opportunities should be maintained and enhanced. Outside of complete neighborhoods the Town and County will promote a land use pattern that supports alternative transportation by requiring interconnectivity of future developments and existing development to the best extent possible.

See my public comments previously in June below – where subsequently the commissioners modified the language and took out the direct reference to Melody Ranch and Rafter J.

Likewise as you review the District 10: South Park descriptions – I encourage you to keep this in mind as your review the current issues and possible opportunities sections. "Opportunities" certainly should not be expanded to pursue the connectivity of the two subdivisions (beyond pathways where that opportunity already exists – even there care should be taken so it does not presume a specific land use pattern on the Seherr-Thoss property that is not congruent with the current mapping) – but rather use the less specific language you are using below probably is more appropriate.

Meanwhile an opportunity that does exist is both Rafter J and Melody Ranch do have non-vehicle access easement to their respective pathway systems already conveyed to the County - with connections both on the north and south for any future connectivity in both subdivisions. So that is an opportunity - versus road connectivity which has serious private property and condemnation, along with financial implications not appropriate to this document.

I just wanted to point this out to you. Review my previous comments on the subject below and attached. I believe both Marv Heileson and Andy Salter delivered legal public comment on this also around the June 7 period.

In closing I would point out another strong opportunity in District 10 is that all of the rural land in play is owned by five large landowners. The northern two thirds are controlled by two landowners that both have logical “sending areas” and “receiving areas”.

Rich

ISSUES
• Lack of connectivity + walkability in dead-end subdivisions
• Limited access to transit + lack of walkable complete neighborhood amenities
• Impacts of development on wildlife, open space + rural character
• Compatibility of commercial + industrial with residential character
• Development of South Park should only occur following infill of already developed areas

OPPORTUNITIES
• Additional schools, convenience commercial, parks + other amenities
• Additional workforce housing
• Preserve rural character + agricultural open space
• Preserve wildlife movement corridors + Flat Creek corridor
• East - west connector between Highway 89 + South Park Loop south of High School Road
• Improve connectivity between developments by complete streets
After reading the October 26 Jackson Hole News and Guide's wonderful Guest Shot by Kathy Tompkins and numerous well-crafted Letters to the Editor, there can be no further doubt that the citizenry of Jackson Hole have lost all faith in the ability of the County Commissioners and other elected officials (and their obsequious staffs) to deliver a new Comprehensive Plan that accedes to the community's expressed demand for specificity that guarantees controlled growth and the preservation of Jackson's unique, small town character.

What good are numerous workshops for community input, hundreds of letters and testimony, and years of "planning" if the electeds simply ignore the public will? At the Raftier J workshop, for example, Hank Phibbs was absent, as were two other County Commissioners and all Town Planning Commissioners save one, while 75 citizens, the media, and representatives of Save Historic Jackson Hole, the JH Conservation Alliance and the JH Land Trust once again attempted to makes the cases they have done so many times earlier. Attendees noted that the Commissioners asked the same questions, hid behind Bruce Meighan, their hired lead facilitator and other staff, in a further effort to distance themselves from the people elected them.

You all are credited and a frustrated public has no redress other than to vote Commissioners out of office. But of course by that time the damage to Jackson will have been done and the finger (middle?) will point directly towards you, our last best hope. A shame really.

You have probably gotten a fair bit of verbal comment on South Park and certainly do not need any more words from me at this moment.

As the true gateway from the south to both Town and the resort facilities, South Park has long been epitomized by its scenic hayfields and long-range vistas of the mountains. It is one of the most widely noticed and clearest materializations of our rural character. Maintaining these scenic view sheds is an important community objective and should be prioritized for our district. Rural development, agricultural fields and open space provide for a sense of scenic small town character at the southern gateway to the Town of Jackson. Along with its wildlife, wildlife movement corridors (E-W and N-S), riparian resources and habitat connectivity values – its scenic and agricultural values are unique - as so many experience them each and every day.

For a visual review of some of the scenic and agricultural values please spend two minutes and visit photographer Hamish Tear's South Park photo essay at: http://photos.htphotographics.com/southparkbook

It will only take a few minutes of your time to quickly scroll through the photos of what we all experience every day throughout the year – and our visitors experience as they enter the southern gateway to our town and valley.

We owe a huge debt of gratitude to the five families that have quietly preserved the open space in South Park that we all value so highly. Without them we would not even be having these discussions. They are also central as we move forward to solutions that meet their desires and needs.

There is a lot of unnecessary anxiety that the current approved (but not accepted) policies and themes are somehow to be less binding then the 1994 plan. I am quite fluent in the role of a comprehensive plan versus zoning and land development regulations. I also have pointed out that if the LDRs and comp plan somehow are in conflict – the LDRs trump as they have the rule of law. Still when LDR's and/or zoning is modified or changed – or variances or changes in zoning are considered – they currently do need to legally link back to the policy document for the changes or additions to be approved. In fact in our LDRs currently in the County - LDRs always link back to the policy document.

I would simply like to take the suspicion off the table that somehow the 2011 Comp Plan – themes and policies and character district maps – are any less binding in giving direction to the future LDRs and zoning then we currently have. Below is the 2011 statement from the recently approved themes and policies. In red is the section that has a bunch of folks alarmed. I am personally not that concerned.

Could one of you in simple words just tell me (so I can definitively tell others) that the applicability section in the current approved comp plan version (2011 – Themes and Policy) effectively is not different than what is in the 1994 plan? For me it is fairly simple – a jointly approved comprehensive plan is the approved policy direction – so is binding as to direction and compatibility of the LDRs and zoning – although the LDRs and zoning always trump if there is an unintended conflict since they have the force of law. To others they unfortunately think the clause below is meant to be an "escape clause" so electeds can do what they want when it comes time to modify the LDRs and/or zoning to align with the new plan. I find that unwarranted - but this belief is strengthening unfortunately.

Sorry I cannot find online the similar clause in the 1994 plan – perhaps someone can provide it.
Thank you for responding. I really appreciate that you are reading and responding to your constituents' concerns. I am glad you agree about not having them below Cache Creek Drive in family neighborhoods. I would say neighborhoods like the Gill Addition and Cottonwood Park that are made up of families and chose their neighborhood for its safety, lack of urban noise and lack of urban night life should not have convenience stores. I am afraid that if the northern South Park area were developed, they would try to put it along High School Road or in Northern South Park. I would not consider neighborhoods along High School Road a good candidate for convenience stores because we already have a great supermarket within walking and cycling distance. Most people including myself stop at the supermarkets on their way home from work to avoid having to go out again. I would rather hop on my bike, in my car or walk to Smith's, save some money and get quality products than take my chances on expensive out of date milk and eggs at a local convenience store. I would take the bus if we added opposite loop service and weather protected bus stops (That would be awesome!). Adding local convenience stores would not be profitable for the retail investor for the same reasons that local convenience in East Jackson did not work. The store in East Jackson has now reduced it’s service offerings to cigarettes and alcohol. We definitely don’t need that kind of store in any family neighborhood. I use to support the idea of Mom and Pop stores, but have backed away because I have yet to see a neighborhood Mom and Pop general store proposal let alone one that succeeded in our town of high rents. Those days are gone along with penny candy and one dollar milk. Can we force one over the other? Can we guarantee success for someone to try a Mom and Pop store? It will end up being a chain store version that basically caters to the transient over family and push alcohol and cigarettes over milk and eggs. I hope that clarifies Number five and explains my opinion on number seven. One quick comment on the Tribal Trails connector... more roads equals more traffic. To get people out their cars, you don't need more stores, you need to be serious about alternatives like traffic calming, increased and improved bus service and narrower roads with safe pedestrian and bicycle paths that puts the pedestrian and cyclist equal or above importance to the motorists.

Here’s a list of questions for you Greg, all of the elected and staff that might help in answering our worries over unwanted increased density.

1) Can we have a plan with no transfer of density until it clarifies how much is transferred and from where (no phantom density transfers from unbuildable rural or unaccounted for sites)? Maybe a proven mechanism that clearly produces the goal of permanent open spaces and wildlife protection during the life of our comp plan. We already have adequate supply that outlasts the present comp draft plan, so there is no emergency to increase density (commercial or residential) above the present level allowed.

2) Can we have clear statements instead of just considerations for achieving our goals?

3) Can you give the public a clear estimate of what changes in development will occur as a result of the district mapping?

4) Can you give the cost and impacts to our community and impacts on wildlife, any new infrastructure will have?

5) What infrastructure is required to support the proposed growth for the life of the Plan? What is the cost?

6) Can you show commitment to wildlife by putting off any decisions until we have all the information on impacts? (that also includes the first question about TDRs)

7) Can you omit the statement in the administration section that says the Comp Plan is only a vision document with no regulatory effect? If this statement is to bridge the time between adoption of the new comp plan and the old plan, the LDRs should clarify this.

Thanks again for listening and responding.

After attending 3 mapping sessions (one in South Park and 2 at the hub with Bruce Meighan and Lindsay Travis(?)) I felt that the mapping sessions were set up in a way that reaffirmed unwanted additive density in places that shouldn't be touched until town infill is completed. It was difficult to communicate what the map should like when you leave it to staff to translate what was suggested. In some cases for instance, with Lindsay, she tried to limit us in what we could remove from the map like the large area of the NW Porter Estate across from Cottonwood Park that was pegged as a transition/complete neighborhood. She did finally relent and took it out of play. I don’t fault Lindsay, I think she was trying to do what she was told and I believe that was to direct the public into agreeing with the map that was put in front of us with the predetermined growth areas. Therefore, I would like to resubmit the comments below [see 10/27/11 comments] concerning the future land use plan being developed for the Teton County/Town of Jackson Comprehensive Plan.
Salava, the Village Fire Department Chief the sustainability of well trained emergency workers at Teton Village is a concern. TVFD currently has 6 housing units that provide affordable rental housing, provided by the T.V. Fire department. TVFD has 17 1st responders of which only 1 has afforded to purchase a home in this community. To be sustainable, having affordable housing to purchase for the 1st responders is essential. It takes 1-2 years of training to get an emergency worker prepared to respond. The fire department needs opportunities for 1st responders to purchase a home so they become a lasting citizen, rather then a couple year renter and then leave. The Housing Trust offers no viable opportunities for Teton Village 1st responders. The Housing Trust has homes only if you would live in town, which does not support Teton Village emergencies. The Housing Authority has some possible plans for affordable purchasing but is challenging and probably not viable for what businesses pay full time workers at Teton Village.

There seems to be a disconnect on what workers who volunteer are really making vs. what the county says the average worker makes, at least at Teton Village. I am concerned that in the years ahead Teton Village Emergency Services volunteers will find it difficult to provide the great services we have in the past because of the lack of volunteers being able to afford to live here and the growth of Teton Village. So my 2 concerns are the availability of affordable buying opportunities for 1st responders at Teton Village and the figures that the average worker makes in income is skued and does not accurately reflect what the workers of the community are really making. That in turn makes affordable home prices in Teton Village out of reach of the 1st responders. Teton Village continues to grow and I want TV emergency services to grow with the Village. I believe the community currently supports volunteers and wants to support emergency workers but we need to reevaluate where we are and what the future will be. Thank you for this opportunity to express my thoughts on our future.

For public art to be successfully integrated into complete streets, complete neighborhoods, school zones, civic spaces, gateways, parks and transportation projects guidelines need to be established, as a step in the design review process, that help project stakeholders identify if a project is appropriate for the inclusion public art.

Planning departments should work with the Public Art Taskforce to draft guidelines that outline if a project is suitable for public art consideration. Identifying projects very early in the design process allows for the public art to be integrated and for artists to participate as part of the design team, resulting in more creative outcomes, better integrated and functional art.

If a project is not suitable for the inclusion of public art, the resulting budget should go into a pool for maintenance, education and or use on projects where public art is identified as highly beneficial.

It seems eminently logical to me that the perfect solution to the problems of congestion and vehicle/wildlife collisions on Highway 390 would be to revisit the so called, “North Bridge” crossing of the Snake River again and press forward with all haste its construction.

This bridge would solve not only the above problems, but also immeasurably enhance tourism in the valley by eliminating the arduous and circuitous journey required from the airport through town by visitors destined for the Village.

<td>11/1/2011</td>
<td>Siverd, Nancy, John</td>
<td>Hello...I am a resident of Alta and participated in the comp plan gathering at the Alta Library last week. I was at Shawn’s table. When I spoke with her by phone with some followup comments and questions, she suggested that I send you an e-mail, in order to have my additional comments in writing. Further, I got some clarifications from her that were helpful in my better understanding of the comp plan, subsequent processes, and things that are already &quot;on the books.&quot; My further comments are: •We stressed in our group the importance of maintaining the rural character of Alta and minimizing population growth. I urge that incentives of various kinds be considered, so that the farmers can keep their land in agricultural use. There are many mechanisms for doing this and I hope that the comp plan and subsequent codes will employ these (eg, conservation easements with PRDs allowed; transfer/sale of development rights; issuance of conservation bonds). •It is important to me, my husband, and many of us that wildlife corridors in Alta be protected, while we have the chance to do so. Teton County Idaho is an example of how wrong things can go, if there is not an adequate comp plan and not adequate zoning/planning tools. We need to prevent this in Teton County Wyoming, especially in a rural area such as Alta that has a specific character of its own. Therefore, I urge the careful consideration of significant set-back requirements on all of the creeks in Alta. They should be protected, where they can be for the future. I believe that this can and should be done without much, if any, disruption of individual land owner rights. •View corridors should also be protected. •In our group, there was a suggestion that any commercial, light industrial, or office zoning in Alta have architectural review of proposed buildings. The person suggesting this recommended that the Alta Advisory Committee be charged with this responsibility. For consideration are the following concerns. Do the current codes provide enough &quot;oversight&quot; to assure that new buildings of this sort in Alta will fit in appropriately? If architectural review is desirable, what is the best mechanism for this? Is such a mechanism possible? I don’t think that the Alta Advisory Committee is the appropriate oversight for this, for quite a few reasons. However, there may be a more appropriate way to take these things into consideration. And, maybe the current or future building codes are enough. I don’t know. •It is difficult/impossible to get the same information or &quot;story&quot; about why State Line Road does not any longer or yet connect the south and north ends of Alta. Accurate clarification of the State Line Road connectivity issue and its feasibility or lack of feasibility would be much appreciated by Alta residents. We have all heard numerous iterations of the history, current situation, efforts that have failed, and so forth. We would appreciate clarification as to what may or may not be possible and why. Alta is isolated from Teton County, as it is. It would be beneficial for many reasons to have the south and north parts of Alta connected. Please feel free to contact me by e-mail or phone. Thank you for your time.</td>

<td>Goldfarb, Joan</td>
<td>I am currently not in JH so cannot attend the meetings. But I feel the Aspens is fully built out and wildlife is very prominent in our area. The roads cannot hole and maintain integrity if we continue to increase traffic on a two lane road. In addition the property on Kennel Lane owned by the Housing Authority should be build with affordable housing but hopefully not the density they have south on the Village Road.</td>
</tr>
<tr>
<td>10/31/2011</td>
<td>McGregor, Bob and Kim</td>
<td>Unfortunately I have been out of town for the entire span of the local meetings about the comp plan so have to resort to sending this message. I want you all to know that as I understand the current thinking on your parts is that once again the desires and needs of the community are being disregarded. What’s up with all the &quot;nodes&quot;? I thought this concept had been scrapped because of all the folks who don’t want them. Why is the preferred alternative of filling in all the places in the town of Jackson first being shoved aside? I don’t know who this consultant is who has been paid such large amounts of our money, but it appears that he wasn’t listening to what the people want and need. Shades of Wall Street and our congressional &quot;representatives&quot;, but that’s another problem. Please stop now and listen to what most of us who live in Teton County are saying: Slow growth is not what you’re proposing. Forget about identifying additional sites in the county, especially in South Park, since projections for buildout on existing sites are 50-70 years down the road. Get rid of the unpredictable and unwieldy additive density tools. Protect the wildlife and scenic open spaces that we all said were so important and what make our valley unique. I’ve been attending meetings off and on for years about this stuff and it seems we’re back where we started 4 years ago. Listen to the people! After spending half a million more dollars (at least) why are we still harping on the same subjects? Please, please, do the right thing now. Thanks for listening,</td>

<td>This letter is in response for information regarding zone 7 of the new planning plan. I am okay with zone 7 in our area. I would like to see commercial zoning and smaller lot sizes off the light industry lots. I would also like some rural, as this is currently rural.</td>
</tr>
<tr>
<td>10/31/2011</td>
<td>Fillmore, Jim and Ella</td>
<td>I would like a definition of “Character District.” To me it sounds like a name applied to an area that has developed on its own, or been allowed to develop to a certain level with natural characteristics already in place - ie open spaces, commercial aspects, rural aspects, wildlife and residential. If South Highway 89 has any unique points it would be in my opinion that it is a conglomerate of all the characteristics of a developed area, with the exception of perhaps sewer and water. It has heavy industrial, light industrial, light commercial, residential, open areas, wildlife, recreation and has certain neighborhood/community characteristics and qualities. Yes there are issues with South Highway 89 District. The number one issue, in my opinion, is the County imposed moratorium placed on new building in Teton County. This directly affected property in the South Highway 89 district. This has taken the ability of any and all development away from the property owners in that area. As stated before, South Highway 89 already has all of the characteristics listed, heavy industrial to open spaces. All aspects of what you list as desirable are in place in this Character District, with water and sewer being the only exception. I would think that any development in this District would be appropriate and blend with what is already there. I would describe South Highway 89 as a Complete Neighborhood. It has the unique quality to absorb any development because most all aspects of development are already represented.</td>

<td>I live on High School Road in Cottonwood Park.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>And, thanks to the closure of the Flat Creek Bridge, I already know what High School Road is going to be (sound) like once the building of homes starts in South Park. I have the pleasure of being wakened each morning now, Monday through Friday at, oh let’s say, 6-6:30am from all the traffic due to my South Park neighbors using High School Road in the morning to get to 'wherever' they are going. Never thought I’d rather hear my alarm clock go off at 6am than being wakened by dual exhausts, humming tires, giant trucks and the THUMP-THUMP of Jay-Z each morning. And each and every day now, my day gets worse ... because after I’m suddenly awakened, I soon realize that there hasn't even been one house built yet due to the Comp Plan and it's 'maps'.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Please, please consider a neighborhood of good and honest working people you will be affecting (their property values, their health, their safety ... their SLEEP ...) with your 'maps'. Allow the neighborhood of Cottonwood Park and High School Road to stay just that ... a neighborhood ... and an access road for its families ... and not allow this road and neighborhood to become just a thoroughfare for South Park residents and others from &quot;infinity and beyond&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Before &quot;mapping&quot; South Park for housing, &quot;Fix&quot; High School Road first - add an east-west connector road south of the High School, and utilize the in-fill properties of the Town while you still have the chance. The Valley doesn't NEED South Park for housing - at least not for the next 50 years. By then, you'll want to do another Comp Plan anyway... and then decide.</td>
</tr>
</tbody>
</table>
As you may already know, the Jackson Hole Conservation Alliance facilitated seven “Alliance Neighborhood Discussions” during the last two weeks. The purpose of these discussions was to help reengage the public in the Comp Plan process, and to prepare people to participate effectively in the official Character District Discussions that are going on now.

Within the Alliance Neighborhood Discussions, the Alliance staff briefly presented on the current status of the Comp Plan process, and what the focus of this phase of public input is. We very specifically did not present the Alliance positions or analyses at these meetings, in order to avoid overly influencing participants. Nonetheless, we were pleased that participants independently prioritized many of the same issues and objectives that the Alliance is most concerned about.

We hope that our efforts will help make public comment more relevant and specific during the workshops that run until next Tuesday. We will keep our members and the participants in our neighborhood discussions informed as to how their input is incorporated into the plan after this phase is completed.

For your interest, I am attaching the full notes from all of the Alliance Neighborhood Discussions. This document includes the key ideas brought up by residents. When we sent this document out today, we also included the key recommendations of the Alliance as an organization, since we did not address those during the discussions. I hope that this document provides you some insight into the work we’re doing to support community involvement in the Comp Plan process, and I think you’ll enjoy seeing some of the ideas that were brought up in each neighborhood.

I look forward to seeing all of you at the workshops over the next few days. Summary of Alliance Neighborhood Discussions in Teton County

In October, the Conservation Alliance facilitated 7 neighborhood discussions in the Town and County to discuss the Comprehensive Plan and the character district maps. We asked people discuss their goals for the future of their neighborhood, and the future of Teton County. Several key themes arose from those meetings, and are outlined below.

The Town and County are holding meetings until November 1st to solicit public comment and input regarding the future of our community. Please go to the meeting nearest your home or to the hub location (details below) and make your voice heard. At the meeting, be sure to verify that the facilitator in your group discussion is recording each of your ideas in writing so that it is included in the public record. Follow-up emails and letters to the planning staff and elected officials are a great way to make sure that your opinions are heard.

Key Recommendations of the Jackson Hole Conservation Alliance:

The core objective of the Jackson Hole Conservation Alliance is that our new Comprehensive Plan must respect that Jackson Hole’s identity, community character, quality of life, and economy all depend on sustaining our precious wildlife, landscapes and natural resources. To achieve this objective, the Conservation Alliance has several recommendations for next steps in the Comp Plan process.

1. Work must begin now to identify how we will ensure that permanent conservation is achieved in exchange for increased density in some areas. One of the primary goals of the Comp Plan policies is the shifting of development potential away from rural, ecologically valuable areas to areas of existing development that are more suitable for future growth. However, there has been virtually no progress towards identifying effective methods to achieve this shift in development. There must be assurances that this objective will be met and details as to how it will be met before the Comp Plan is adopted.

2. No net additive growth should be allowed. Before completing the Character District Maps, the county should report back with the amount of future development we could expect to see if the maps became reality, so we can gauge whether we have a plan that would enable a drastic change in the character of Teton County.

3. Wildlife migration corridors, habitat connectivity, scenic vistas and open space preservation must be clearly illustrated as priorities on the final Character District Maps.

4. An “Action Plan” must be developed to detail how and when unresolved issues in the Comp Plan will be addressed, and how the conservation objectives of the Comp Plan will be funded.

Many policies within the Comp Plan essentially say “we’ll figure this out later.” Before the Comp Plan is adopted, the community needs to see a concrete plan for how and when we’ll resolve these issues, and how we’ll fund community priorities.

Key Community Ideas:

Below are themes that we generally heard echoed by almost all participants in the Neighborhood Discussions, in all areas of Teton County.

1. Wildlife connectivity and habitat, scenic corridors and land conservation are critically important to protect and maintain our wildlife populations and community character.

2. Road development and expansion often has negative effects on the surrounding neighborhoods and should be avoided. Reduced speed limits, increased safety, rural character and the risks to wildlife should all be considered when new or expanded roads are being proposed.

3. Additive growth is unacceptable. If development potential is shifted into or otherwise increased in already developed areas, there must be a
mechanism in place to ensure permanent conservation in rural areas.
4. Limit the overall amount of growth in the valley and within each of the districts.
5. This Comp Plan needs to focus on predictability in terms of the amount, type and location of growth, and the regulations need to be stricter when awarding variances.
6. There is largely adequate commercial development in many of the out-of-town districts and no additional commercial zoning is needed.
7. Infill and redevelopment is preferable over suburban sprawl, but is only appropriate in certain areas.
8. Workforce housing is important but must be located in appropriate areas.
9. The Comp Plan needs to be more specific about how it plans to accomplish its goals.
10. The discussions about each of the districts should include their context within the county and relative to adjacent districts.

Official Neighborhood Workshops Schedule:

October 27
11 am - 2 pm Nick Wilson’s, 3265 W. Village Drive
5 - 8 pm Jackson Senior Center, 830 E. Hansen Avenue
6 - 8 pm Alta Library, 50 Alta School Road
October 28
7 - 10 am Bar BC Ranch House, 4745 N. Spring Gulch Road
5 - 8 pm Café Boheme, 1110 Maple Way
October 29
10 am - 1 pm Rafter J Childcare Center, 3105 W. Big Trail Drive
2 - 5 pm Old Wilson Schoolhouse, 5655 W. Main Street
October 31
3 - 6 pm Teton Pines Clubhouse, 3450 Clubhouse Drive
November 1
12 - 2 pm Snow King Grand Ballroom, 400 E. Snow King Avenue

"Hub" hours
9am-4pm, Oct. 27, 28, 29, 31, Nov. 1 at the 4H Building (south Miller Park)

Appendix A: Neighborhood Discussion Summaries

Below are the detailed notes generated in each of the Alliance Neighborhood Discussions. The points presented here do not necessarily represent a consensus among participants, but document ideas that were brought up.

South Park – October 12, 2011

Values to preserve:
• Scenic vistas and hay meadows
• Wildlife habitat and connectivity for small and large animals (Nature Mapping (citizen scientists) should be better incorporated into wildlife assessments throughout the County and in South Park)
  o Connectivity both north to south and east to west
  • Flat Creek as a riparian corridor (particularly valuable for birds)
  • Importance of agricultural lands and vistas - especially Flat Creek to Hwy 89
  • Do not widen South Park Loop Road
• Any development as a result of obtaining permanent conservation easements should be set back from South Park Loop and High School roads to provide a visual buffer.

Ideas on growth management:
• The Plan should help facilitate the five large landowners to preserve land and develop clustered developments that are well planned out. Landowners should also be able to get value for their land.
• As a landowner it is frustrating to have your land use decisions dictated by elected officials
• Do not transfer in any new density to South Park from outside of South Park
• Do not grant any additional density within South Park without associated permanent conservation
• No more growth is appropriate for South Park
• Maintain current rural zoning and prioritize permanent conversation
• Do not identify any additional large developable sites in South Park
• High School Road is currently accommodating more cars than it was designed to, and this must be taken into consideration if any new development is considered for South Park
• Future growth in South Park should be concentrated where it already exists
• Do not mix residential and business uses in South Park – people appreciate being able to leave town behind to come home.
• Use a limited number of new sewer hookups every year as a way to limit growth
• Put apartments and multi-family units instead of single-family units in the suburban zone in the north-west corner of South Park; single-family homes already exist elsewhere
• Downzoning South Park is a possibility

Additional opportunities for transition:
• Finish the bike path from Rancho Alegre to Melody Ranch
• Get rid of the two gravel pits
• This is a rural area, not a complete neighborhood
• Build a wildlife underpass under Highway 89

The Aspens – October 17, 2011

Values to preserve:
• Wildlife is the character of this area, and it is why we live here
• Protecting wildlife habitat, habitat connectivity, migration corridors and pockets of space for them to rest is very important
• The Aspens is a “complete” neighborhood – and in this case “complete” means finished. Basically, it is a stable area
• Keep the Teton County Housing Authority’s 5-acre parcel zoned single-family
• Keep the area west of the Aspens/Pines zoned rural Ideas on growth management:
• Do not build a 4-land highway where 390 is right now
• No more commercial development
• Require large employment centers, like the Village, to provide adequate housing and thereby reduce traffic generation

Additional Thoughts:
• Predictability is very important, and we should move away from making exceptions on land use decisions. This Comp Plan is a moving target still, and not predictable
• Don’t ask us to make decisions in a vacuum. We need to bear in mind the context and the surrounding areas, such as Teton Village

Indian Springs/Cottonwood – October 18, 2011

Roads/Transportation Issues:
• The proposed Tribal Trails connector road should not be built because:
  1. It will degrade scenic views
  2. It will reduce nearby property values
  3. It will bring unnecessary traffic into the area
  4. It is unsafe to add more cars where there are so many schools and kids
  5. It will bisect important wildlife habitat
  6. Added infrastructure would not preserve the character of the area
  7. It will encourage people to get into their cars rather than biking or walking, particularly the traffic to and from the schools
  8. It will inevitably be used as a regional cutoff road and not only by local traffic
  9. It is simply moving the burden of increased traffic from the “Y” intersection to the tribal trails area – a connector cannot be built to save the “Y”. There are many solutions to that intersection that warrant further exploration
  10. It would not help to further the Comp Plan’s goals of wildlife and character preservation
  11. It will be expensive for taxpayers
• South Park Loop Road north from High School Road could be improved by reducing speeds and making the pathway crossings safer. There are a lot of homes and families directly on the road.
• The character of South Park Road should be protected, particularly the cottonwoods, which would be threatened if the road were to expand. We should also be conscious to plant new cottonwood trees to replace the old ones.
• Speed limits on highway 22 should be 45 mph year round.
• We need better signage on the highways to alert motorists of wildlife activity in the area.
• Wildlife crossings should be a priority.
• High School road should be preserved for its aesthetic, scenic, academic, neighborhood, and rural appeal. It is not a highway. A bike path should be added on the south side of the road to make travel to and from school safer. Traffic calming methods such as trees planted on a median to create a boulevard feel should be explored.

Wildlife/Scenic Values
• The whole greater South Park area has wildlife habitat and corridors.
• The haystacks across from Smiths create a cool view.

Character
• The school area as it exists today is a great place to educate our community’s children, with all of the open space, the wildlife and the views of the mountains.
• We should preserve the rural, neighborhood feel of the greater South Park area, which is currently perpetuated by both the physical surroundings and the layout of the neighborhoods. We should also maintain the family feel of the area, and recognize that it houses much of the workforce, which is one of the backbones of this community.
• People appreciate being able to leave Town “behind” when they go home to their neighborhood at the end of the day.
• Northern South Park is an extension of Cottonwood: when planning the future of both of these areas we should consider the context and the valley as a whole, not individual neighborhoods in isolation.
• If development happens in northern South Park, there should be a buffer zone planned for the northern most portion along High School Road to South Park Loop Road to help maintain the rural feel of the area, and it should be community oriented open space.

Development/Redevelopment
• Gregory Lane would be a great place to redevelop into workforce housing, and transition the industrial uses further south.
• The entire corridor surrounding Sunrise and the old Feed Store could be redeveloped to more closely resemble the Smiths Plaza (i.e. mixed use) and maintain a livable, Town-like feel. This is the gateway to Town from the south and should be redeveloped.
• Infill in Town and revitalization of already developed areas should be prioritized over new development.
• This community should continue to provide workforce and affordable housing opportunities.

Wilson – October 19, 2011

Five Main Concerns:
• No additive growth in Wilson, limit to existing by-right
• Preservation of wildlife habitat, connectivity, and corridors by maintaining openness
  o Wildlife and human activity work together in Wilson with the existing density – residential areas can be wildlife habitat – they are not mutually exclusive
  o Conserve existing open space directly adjacent to Wilson (Waldron Property) and distant from Wilson (Fall Creek Road)
• No more commercial zoning – there is already 30% of available commercial vacant, Wilson does not need more.
• Preserve Wilson’s character, perhaps with Wilson specific standards or codes
• Planning staff and elected officials need to check back in after the next round of public comment with residents to make sure they heard what we said.

Other comments we heard:
• Stay the way it is now
• How do we accommodate more growth and stay the same – incompatible goals
  o How (form) to develop is important – formed based code – specific design standards – need finer plan codes
• Traffic Calming measures are needed
• We need predictability
• Fencing – aesthetics, predictability, a sense of openness in Wilson and wildlife permeability
• Limit light pollution – dark skies initiative
  o Codes not up to the whole county, smaller scale
• We have a lot of wetlands and wildlife habitat, even in downtown Wilson
  o Tradeoff of wetlands in Wilson for wetlands in Buffalo Valley or elsewhere are not acceptable
• Nature mapping and other citizen science should be incorporated
• Include specifics in the Maps – deal with issues now, don’t delay
• Community and neighborhood standards – be clear on what you want
  o Wilson character – informal, livable, flow, human & wildlife activity, lack of density, integration of different lifestyles, wildlife corridors, openness
  o Maintain scenic, low density on Fall Creek Road to the southern end
• We need a report back from the elected/planners to make sure they heard what we said
• Wildlife corridors, connectivity, crossings (WTI study integrated in the plan)
• One valley – what happens in Wilson affects elsewhere, what happens elsewhere affects Wilson

Alta – October 20, 2011

Key Points:
• Maintain rural atmosphere & character, scenic nature
• Preserve wildlife corridors & open space, while balancing private property rights

Other Points & Comments:
• Connect Alta to Alta with improved roads, pathways & bridges
• Large landowners might change, need clustering, zoning, TDR’s to plan for this
  o Protect open space by clustering development
• Split on the issue of needing commercial, retail space
  o Might be nice to have home based offices or some commercial so residents can conduct business in Wyoming, not Idaho
  o Office complexes should not interfere or conflict with existing character
• Protect the water supply
  o At what point does development impact water?
  o Planned future population limited by viable water supply
  o Residents do not want a municipal water supply
• Stable areas include around the church, school, existing subdivisions
• Alta is stable just as it is right now, allow as little development as possible
• Nothing should ever change, period.
• Transitional areas include south of Teton Creek, north of Golf Course, East of State Line (across the street in Idaho is planned for denser development). East of State Line might be appropriate for light industrial
• Any industrial/office/retail needs specific design guidelines
• Question: if BLM or other public lands are sold within the character district, what zoning/rules would then apply?
• Maintain Teton Creek and South Leigh Creek as areas to preserve for wildlife
• Finish park in Targhee Town
• Pathways to connect with Forest Service trails
• Preserve views through conservation easements (Wilson property)
• Incentivize Wilson property to maintain agricultural uses
• Preserve farm land on Alta North Road and North State Line Road
• Commercial would have to be ‘handpicked’ in order to align with the community’s desires and needs for what the business is and what it looks like
• Teton Teepee area is a transitional area
• Predictability of what ‘it’ will look like and how ‘it’ fits into Alta
  o Alta specific building standards

East Jackson/Town Periphery – October 25, 2011

Future growth and development
• No commercial development, including resorts, in the Town Periphery district and down Cache Creek Drive, as it would just draw people there. It is not a complete neighborhood. Also it would not be viable.
• No high-density development in the Town Periphery district
• Transition mobile home parks to single family zooming
• The Planned Unit Development (PUD) too is the largest threat to this district as it offers higher densities
• Tighten the regulations so that there are not so many variances granted; ensure that variances are granted in accordance with state law (stipulates that there must be a hardship to receive a variance)
Date       Name       Comment

10/28/2011  Smith, Emily   Interested Public

Please protect the beautiful area of South Park. We all love the country feeling of driving down South Park Loop Road lined with the beautiful cottonwoods. There is no need for additional retail as we have a grocery store, gas station, medical center, dry cleaners and much more already available to us within only minutes.

Please uphold the 1994 Plan with emphasis on the importance of protecting scenic, wildlife and open space values in our area.

Thank you for your consideration.

| 10/28/2011| Verna, Diane, and Jeff J Interested Public     | We are Alta residents. We have lived over in Teton Valley, Idaho for 20 years. We do not want to see any further development on Alta North Road. This area has become too developed with increased traffic from what was 12 years ago when we moved into our home. We want to see Alta retain as much of its rural character as possible. We want to see the ski hill road in Alta remain rural. This is winter range for wildlife. We could use more signs for people to slow down in winter with the wildlife.
|           |                                               | Development in Alta should be centered around the already dense area of Targhee Town. The rest of the zoning should be 3 acre lots or larger and farming should predominate the area. |
| 10/28/2011| Daly, Meg Interested Public                    | I support public art being part of the comp plan. Public art helps add identity to neighborhoods and districts, and helps brand the town and county in a unique and creative way. Public art demonstrates our commitment to a creative economy and enhances civic projects, parks, and transportation. |
| 10/27/2011| Wallace, Jim Interested Public                 | Willow Street Neighbor – Especially from Kelly to Snow King Streets
Willow Street Today:
Ninety Percent Commercial/Government offices.
Only Five Family Occupied Homes ion entire Eight Block length of Willow.
Brunn Way connector, about 20 yrs ago transformed Willow to Major North-South connector.
Vehicle Traffic daily: 2,200 to 3.300; ten times greater than allowed for residential zone.
Due to traffic and noise, not suitable or safe for family living or residential.
Willow is a dense center of activities due to ski resort, park, resorts and government.
Motels and multi-family units, MR4 + also border within one half block of Willow.

Future Vision:
Willow Street: No need to use South in title. There is only one Willow Street.
Commercial and Lodging over-lay zoning for lots bordering Willow: 50 to 75 feet deep.
One-Way Street: North to South traffic only, one-way traffic can be effective and less costly than re-development of the street.
Two to three stories, like corner of Willow and Parl. Ridgelines running North and South.
Professional offices and Boutique shops on grade floor: Short-term rentals/apartments above. Small food and service shops on grade permitted.
No set-backs on Willow: yards/open space in rear. “Fencing” of Willow will permit safe and suitable residential areas behind. Fencing = two to three story front of building bordering Willow Street.
Side-walk and Bike pat on West side of Street: Diagonal parking. West side because Side-walk only needs to extend from Kelly, where presently ends, and Eastern exposure will aid in melting snow in mornings.
Move Government offices/Jail, vs. remodel and develop area as tourist/person attractive.
OR
Close Brunn Way.
Reduce and restrict traffic to local only: Not trucks and no more than 200 vehicles per day.
Thank you for accepting our vision ofr the practical and wholesome use for our neighborhood and the good of our town. |
| 10/27/2011| Ewing, Patty and Frank Interested Public       | The “Town Periphery” character, particularly as it relates to the southeast perimeter:

Single family dwellings only with large lots. The dwelling has open space instead of the lot being dominated by large structures, and the lot is permeable to wildlife.
This is an area of town where the rural character must be retained by not allowing urban density/PUD; the rural character of Cache Creek Drive be maintained as is; and horses are allowed.
If the existing Mobile Home Park is re-developed, it should revert to single family SR zone density. No new commercial enterprises/schools or whatever else fall into the new comprehensive plan, definition of “complete neighborhoods” is needed or wanted. We view our neighborhood as good as it gets and we want to keep it that way. |

<td>10/27/11</td>
<td>Tompkins, Kathy</td>
<td>I would like to submit the comments below concerning the future land use plan being developed for the Teton County/Town of Jackson Comprehensive Plan. 1) Before directing growth anywhere we should recognize that there is valuable wildlife and scenic agricultural open spaces to preserve in “all” of South Park. 2) Do not add anymore density in Northern South Park or anywhere else in the valley until town infill is completed. We need to exhaust the 50 to 70 year supply for building with current zoning. We should build out Town (at current limits) before we start developing new areas like South Park or increasing density in nodes/complete neighborhoods. 3) Work with organizations like the Jackson Hole Land Trust and landowners to “ensure perpetual restrictions on development while allowing for private ownership of the land”. It’s been successfully done already on thousands of acres in and around Jackson Hole. Let’s help them create even more permanently protected open space. 4) Eliminate density tools that create unchecked and unwanted transfer of growth without getting any permanently dedicated open space in return. 5) Long established residential neighborhoods and school zones should be declared “off limits” to urbanization. 6) That means no to the Tribal Trails connector that transfers traffic problems from the Y intersection of Highways 22 and 89, to and through residential neighborhoods and school zones. 7) It also means no to light industrial and convenience stores. This would degrade the neighborhoods we have now. We already have Smith’s and Gregory Lane businesses that round out our district. Our hardworking community members deserve some peace, what’s left of the quiet and quickly disappearing star filled nights at the end of their work day. 8) The community wants a strong, non-contradictory plan to prevent unwanted, unchecked growth that will “Preserve and protect the area’s ecosystem in order to ensure a healthy environment, community and economy for current and future generations.” This quote is our vision statement from the first part of the comprehensive plan.</td>

<td>Mishev, Dina</td>
<td>Just wanted to write to let you guys know that I do NOT agree with the Save Historic Jackson Hole ad on page 7 of Thursday’s (October 27) JH Daily. The ad states that &quot;Most of us want the small town lifestyle we have now, with rural not urban development.&quot; Downtown Jackson has already been developed. I’d rather see future growth concentrated there and our rural landscape saved.</td>
</tr>
<tr>
<td>10/26/11</td>
<td>Bloom, Rich</td>
<td>Reviewing now – also trying to understand what the structure is. Wish we had been given more time to review before the first workshop. Also know how much work went into these updates.</td>
</tr>
<tr>
<td>10/26/11</td>
<td>Bloom, Rich</td>
<td>Alex – clarify the scale (legend) in the lower right hand corner (see attached) – I think you mean this to apply to the insert maps? Bottom-line the ¼ mile radius circle does not line up with the two mile line below in the legend – a bit confusing. Question – it appears you have the NW South Park (complete neighborhood) transition area basically from High School Road to about one half mile south— then clearly east to Flat Creek – correct? Second – I believe these maps show your thoughts in how the character district edges may shift – along with the summary to date on what in the sub-district areas – and there descriptions. This is really then a draft future character district map is a way to look at it – correct? It may just how you are dividing out the four sub-types of stable and transition. Anyway this is a good summary of where the draft is at this point with lines on the map for the four types of stable/transition descriptions. Then the second attached (just the one page I parsed) is the existing conditions for South Park – with a summary of current conditions and public input to date. This is the verbal component that marries to the map. Correct? So really these are the two most important pieces for folks to review, form an opinion and offer feedback on? The summaries of all the input from various sessions BTW is nicely organized. My confusion remaining is the third board which would be the outcome of all of this – the future character – that is not part of the materials but could be inferred (the draft proposal at this stage) from the map of areas of stability and transition (first attachment) and where the current conditions and opportunities boards may lead you to think. Correct?</td>
</tr>
</tbody>
</table>
Tyler – are the three boards available for the districts yet? I have navigated the comp plan web site and see nothing new. There should be updated – or for me first look – for the boards that cover:

1. Current conditions and public input
2. Areas of stability and transition
3. Future character

I am most interested in South Park but also Cottonwood Park area in addition. I would like to review before the sessions start tomorrow morning.

I am a resident of South Park and am again writing you out of concern that the final version of the Jackson/Teton County Comprehensive Plan will designate the South Park area for substantial future development. As such this scenario would threaten the unique character of Jackson Hole and its ecosystem which no thinking person wants to do. Your actions and votes are thus critical to our 'last best place' and future generations.

The process of approval has been long and in general good intentions abound. But everyone involved must recognize that the 1994 Plan permits significant development potential despite an economy that presently cannot fulfill this potential. This allows you the opportunity to address the overall amount of growth and location of development over the next two decades or so to assure that Jackson can control its own destiny and thereby retain its unique character.

The Jackson community has spoken clearly and nearly unanimously in support of 'least growth' solutions which preserve the rural character of our area. While the production of Character District maps are a step in the right direction they need to include specific numbers rather than simply directing allowable densities going forward. South Park has at least five large landowners whose plans must be factored into the area's future since these properties constitute the southern gateway to Jackson Hole and the west bank resorts.

At present there is little confidence that, unless the permissible amounts of growth are finalized, along with permanent open space and wildlife corridors linking South Park to both north-south and east-west connector systems, the Comprehensive Plan can institutionalize the values expressed by the community and supported by local government. The Highway 22 corridor open space, made possible by the heroic efforts of the Jackson Hole Land Trust and others, represents the finest example of smart growth and conservation. A similar plan is needed for South Park because of its gateway qualities, rural character and scenic view watersheds.

The draft Comprehensive Plan was initiated because land use planning has proceeded apace since 1994. As the process winds down specific growth numbers must be set that are constrained by openspace and habitat necessities and which together guarantee Jackson’s rural future. People choose to live and work in Jackson and its environs for specific reasons, many of which concern uncontrolled and unwise growth. You cannot overlook this fact in your growth deliberations.

The Commission simply must take the final step of specificity through zoning that restricts 'additive growth' rather than passing on the problems to future commissions. Make the Plan truly Comprehensive and enforceable; make it reflect the community you represent and the Commission and other elected will have accomplished something meaningful for Jackson and future generations who live and visit here.

Thank you for your considerable time and efforts in connection with the development of revisions to the Jackson/Teton County Comprehensive Plan. In the many hours of public testimony and the reams of paper submitted to you over the past few years of this process, a few points should have been unequivocal and clear:

Preserve South Park. It has scenic and wildlife values that are treasures in our community and should not be lost. These values exist now, are enjoyed daily by my neighbors and my family and cannot be replicated. The scenic vistas over South Park are unique and unmatched.

Place strong and enforceable limits on the residential and commercial development that may be allowed in our area in the future. There are 50 or more years of residential and commercial growth already in the pipeline. There is little demonstrated need for more.

Existing development in South Park has already strained our transportation system, South Park Loop Road is not capable of handling any significant additional growth. Repairing the bridge over Flat Creek is just the start of what will be needed if more growth is permitted here.

Uphold the 1994 Plan’s emphasis on the importance of protecting scenic, wildlife, and open space values in the South Park area. I have personally witnessed Moose, fox, coyotes and countless birds ON MY OWN PROPERTY. There is a very significant wildlife presence here. Please allow me and my neighbors to continue to enjoy these priceless resources.

REJECT the nodes concept and the additional unneeded and unwanted growth it would spawn. Instead, the Plan should promote "least growth" solutions and the preservation of the rural character of our area.

Permanent open space must be established in and around South Park.

Our area has a unique character that caused my family and our neighbors to choose to live in this part of the valley. Please help us preserve and protect what we have.

<td>Bloom, Rich</td>
<td>Tyler - We were lead to believe that the revised maps would be ready by the 21st. I know this is a lot of work for a reduced force planning staff but the public has a right to see what has been incorporated with enough time before the next phase. Frankly Tyler there is a lack of trust that has only built in this process. We cannot see what you have heard — and/or how you have interpreted what folks have said - in outcomes on the maps unless we see those changes. Meanwhile folks I am sure will weigh in — and have — that they do not fundamental support the shift — and watering down — of polices approved by the electeds. That is their right. Your comment that you are only incorporating comments &quot;based upon the overarching policies adopted by the elected officials&quot; only fuels that distrust. Since the plan has been watered down — many things could be interpreted in its language. In ways I know also that you are between a rock and a hard place. Simply let me know when they are ready for the public at large to review.</td>

<tr>
<td></td>
<td>Hill</td>
<td>Preconceived notions, of what Jackson Hole is and what Jackson Hole isn’t, were stamped onto your forehead before being employed by the Jackson Hole Town Council and the Teton County commissioners. Your first public presentation said the same thing as it did after months and months of meetings and work by the community of Teton county Wyoming. We get it......... You are employed by the elected officials and not the community. At the end of the comprehensive plan process, I remind you that we are not Fort Collins. We are not Aspen or Vail. We do not compare to Telluride or Pagosa Springs and we are not Sun Valley, Idaho. We are unique and to pull us out of a folder that you obtained in graduate school is uneducated. ELECTED OFFICIALS, That said (see above), the people of Jackson Hole realize that, Bruce, your facilitator is running interference so you do not have to interact with the everyday hicks that elected you, me included. What really chaps me is that you have used my tax dollar to pay him to do your job. The planning commission volunteered their time to come up with a comprehensive plan which you turned down. It would be lovely to think that you read mailed or e-mailed correspondence but after years of first hand experience I am not so easily fooled. You keep asking the same questions and you keep getting the same answers. My conclusion can only be that you have memory loss or you really don’t give a shit. Either way your lack of concern for the residents of Teton County is a discredit to the people that elected you. VALLEY RESIDENTS The only fix to this situation is to vote. Next election let’s switch it up. You know what they say about Catfish and Politicians, Ones a bottom feeder------Ones a fish.</td>
</tr>
</tbody>
</table>
The Jackson Hole Conservation Alliance greatly appreciates that many of you took the time to attend the presentation by planning expert Mark White to discuss potential tools to achieve a shift in development patterns in Teton County. I am writing now to provide you with a summary of the presentation, links to the full PowerPoint presentation, and a radio interview with Mr. White. I strongly encourage you to review these materials to refresh your knowledge of the many tools that can be used to achieve our shared goals.

Achieving a meaningful shift in development patterns is a top priority for the residents of Teton County, and we have heard this point consistently reaffirmed by more than one hundred people in neighborhood discussions all over the county this week. Finding ways to achieve this goal has clearly been a top priority for our community for years, and as planning staff and elected officials, you have all claimed that this is a top priority for you as well. Action is needed now to achieve a real shift in development patterns, and to regain the trust of the people you represent. We currently have a limited set of tools to shift development, but they have not fully met expectations when we look at the results of development in recent decades. We need to strengthen our existing tools, and develop a new set of policy tools.

As we interviewed leading national planning experts on this topic, all of them emphasized that many communities develop Comprehensive Plans that state shifting development patterns as a goal, but in practice, very few communities actually achieve this goal. In his presentation, Mr. White strongly recommended that we begin work on this keystone of our Comp Plan now.

If we are serious about shifting development patterns in Teton County, we need to begin work now. For years community members and elected officials have floated ideas on tools that might work here, but there is no real consensus, and no meaningful progress toward selecting and developing tools that can do the job. As we near your planned completion date of the Comp Plan, this level of vagueness, and the lack of a plan for how to proceed, is not acceptable.

The research and writing of consistent, functional, legally defensible regulations that shift development patterns will not be easy, especially given the relative land values in Teton County. It will likely take years of hard work by a firm with expertise in regulatory frameworks and coding. But this goal is achievable, and it should be a top priority. Other communities similar to Jackson have successes that we can learn from, and adapt to meet our situation here. We have the opportunity to become leaders on how to best achieve real shifts in development patterns.

We are aware that you have said for years that beginning work on this complicated subject doesn’t need to begin until after the adoption of the Comp Plan. As an expert in the field, Mr. White strongly disagreed, and for years the Alliance has also strongly disagreed with this postponement. Finally, the residents of Teton County seem to overwhelmingly disagree with the idea that they should trust you to figure all of this out later.

If you do not begin research and development of tools to achieve your vision now, you will end up adopting a Comp Plan in March, and then have to rely on the same inadequate tools that we have had for years. We will fail to achieve our objective on development patterns until we have a complete set of cutting edge policy tools. We need to stop putting off this vital work if you want to see real change during your tenure.

Perhaps more importantly, significant action is needed on this topic to regain the trust of the public you represent.

In our recent neighborhood discussions, we consistently heard from residents that they support shifting development patterns, and they might even be willing to allow increased residential density in some areas, if that was offset by permanent conservation of critical wildlife habitat. But many of your constituents don’t trust that this tradeoff will actually happen. They fear that you will zone some areas for increased density, and then fail to counterbalance that with conservation easements in rural areas. This could actually increase the overall entitled development potential in the county, which most residents clearly oppose. Given years without progress toward developing at least a consensus on the tools we will use, and without making a plan for when and how we will research and develop detailed regulations that are appropriate in Teton County, their mistrust seems justified.

In the current Character District process, residents are now asked to identify where they could live with redevelopment and increased density, and where they would like to see conservation and rural character. Residents rightfully ask how you intend to achieve the vision they can draw for you on these maps. You urgently need a more concrete answer than what you have offered so far.

The Alliance strongly urges you to begin this process now. Create a Request for Proposals on a regulatory framework to shift development patterns in Teton County Wyoming. Publicly commit to selecting an expert firm for this important work before the end of this year.

The Alliance will help you in this process in any way we can. We are committed to the same goals you have reaffirmed for the future of Jackson Hole, and we want to make sure we actually achieve them.

We hope that the presentation the Alliance organized on shifting development patterns was useful as an illustration of the many tools that are available to us, and as an indication of the sheer volume of important work
that remains before us.
I would appreciate the opportunity to discuss this further with each of you.
Sincerely,
Trevor Stevenson
Executive Director

Alex and all – we were told that updated maps would be available today. So where are they? Cannot update interested residents if we don’t see what you have incorporated from public comment to date.

10/21/2011 Walles, Mackenzie
Interested Public
It seems very interesting that the two Wilson dates have major conflicts with Wilson families. October 29th is the Wilson School carnival where many parents volunteer to set up in the afternoon and participate in the evening event. I do not think you will get a good turnout on a day where families are focused on a big family event in our community. It also seems ridiculous that the other Wilson date for the Aspens at Teton Pines is on Halloween. Once again this is not a feasible time for families in our community to participate in this process. It is important that the members of our community attend our neighborhood specific meetings and I think that this is very poor planning on your part. Please consider a schedule change for these meetings.
Thank you for taking the time to read the following, and the opportunity to voice my concerns regarding the final phase of our Comprehensive Plan. I would also like to thank all of you for your time and continued efforts to achieve that goal. I hope to see you all at one of the upcoming meetings.

REGROWTH vs. NEW GROWTH:
As the Comprehensive Plans draws to an end, the final discussions concentrate over appropriate growth. Significant agreements on wildlife preservation and scenic values have been solidly established as the first two priorities in the Comp Plan. These priorities are shared by our community citizens and elected officials, county and town alike.

Given these two priorities, the remainder of the Plan should be straight forward. What remains is how to best carry those stated values into the planning process for potential future growth. The equation of growth vs. wildlife/scenic values must remain neutral at best to continue to keep our priorities in balance. With that equation, the only growth we should be planning for is re-growth, not new growth.

Regrowth concepts allow for existing, underutilized footprints to be renovated to serve the potential needs of housing and commercial development. For example, two potential target areas for renovation/regrowth consideration could be existing commercial buildings on either side of Highway 89 south of the Kmart Plaza and the Gregory Lane commercial area. These two areas hold high potential for shared commercial/housing space without sprawl and excessive build out. The 5-way intersection in town also represents huge potential for regrowth capacity and design excellence. Sprawl would be our worst case scenario, and in direct conflict with our committed priorities. Renovation and revitalization of these existing areas meets a responsible decision for growth.

Transportation also plays a crucial part of the equation. Upgrading the infrastructure of our existing roadways, Start Bus routes, and neighborhood street upgrades to include bike paths, pedestrian sidewalks and enhanced pedestrian cross-walks will allow for much needed enhancement toward public safety and the satisfaction of traffic flow demands far into the future for Jackson. This regrowth approach affords the protection of our wildlife and scenic values, while improving multi-use transportation ideals.

Regrowth concepts can work in every district in the Jackson area, as its residents deem necessary. Improvements can be met without additional build-outs and road construction. Precious remaining parcels of private lands can protect their property rights structured through this process combined with permanent open space protection mechanisms such as transfer development rights (TDRs) and planned residential development (PDRs) guidelines. These tools need to be clearly outlined in the Comprehensive Plan. Let us stay creative and keep Jackson magnificent today, and in our future.
Hi All. Found the article below in the NY Times. Beware of returning Walmarts in the future. Probably reducing the permitted impervious surfaces for commercial development and no trades for added parking in the regulations might help. It may be a while before they look here, but another fight to drive them away may not be as energetic as before. Who knows.
Also, I attended first time the S. Park group meeting last week to talk about our vision for the future. It was quite clear that everyone enjoyed the rural character of the area and felt a total community would not be appropriate, since so many services were close by. It helps to have a Smith's so close. Also the connectivity of the Snake to the buttes on the East are extremely important to maintain for wildlife. There is a lot of it as demonstrated by the animal road kill this past winter. There was also acceptance of some intense development in the northern portion of S. Park and working a win win with the two landowners was imperative. Sorry there is so much stuff here.
Hope all is well with you.
Cheers, Nancy Hoffman

(Reuters) - Wal-Mart Stores Inc will shut its four Marketside stores next week, abandoning the concept after three years as it works on opening other small shops.
Marketside marked Wal-Mart's attempt to give U.S. shoppers a quick place to buy prepared food such as roasted chicken and freshly baked bread for last-minute meals without the need for a trip to a larger grocery store or supercenter. The stores also carry produce, wine and other groceries. The world's largest retailer opened its four Marketside stores in the Phoenix metropolitan area in 2008. A year later, it started to sell some Marketside branded food in other Walmart stores, and it will continue to do so.
The four Arizona stores -- in Chandler, Gilbert, Mesa and Tempe -- will close on October 21, a spokesman said on Friday.
Wal-Mart is not the first U.S. grocer to abandon the concept of a small shop selling prepared food to consumers looking for quick meal solutions. Supervalu Inc shut down a similar upscale concept store in Chicago, Urban Fresh, in 2009 after just over a year.
Now, Wal-Mart is banking on another small-store concept, more aligned with its roots, as a potential growth vehicle in rural and urban locations where its larger shops would not work.
Wal-Mart's Marketside stores, at roughly 16,000 square feet, are about the same size as the Walmart Express test format the company launched in June.
So far, Wal-Mart is pleased with the five Walmart Express stores in Arkansas, North Carolina and Chicago. It plans to have 11 such stores by the end of the year.
"We continue to believe it will take multiple years for Walmart to perfect this concept, if ever," said Avondale Partners analyst Mark Montagna.
The analyst said he does not expect the expansion of Walmart Express to hurt one of its strongest low-priced competitors, Dollar General Corp, which happens to be making some of its small stores a little bigger.
Walmart Express, still in its infancy, recently came under new leadership.
Anthony Hucker, who had been a Wal-Mart vice president overseeing Walmart Express, left to join Ahold's Giant Landover grocery division in September.
Debra Layton, senior vice president for small formats, layouts and space productivity, is now in charge of Walmart Express.

SHRINKING STORE SIZES
Walmart Express stores, which range from about 10,000 square feet to 15,000 square feet, feel more like traditional Walmart stores than the Marketside shops. Walmart Express stores are stocked with groceries and some housewares. Pharmacies are included in some of the locations.
Earlier this week, Wal-Mart said it would ramp up openings of its Neighborhood Market stores, which at about 42,000 square feet are much larger than Marketside or Walmart Express stores but much smaller than Walmart supercenters.
The first Neighborhood Market opened in 1998. There are about 185 such stores now. Wal-Mart plans to open 80 to 100 small and medium-format stores in its next fiscal year. Most will be Neighborhood Markets. This year, it plans to open just 25 to 30 small and medium shops.
The majority of Wal-Mart's new U.S. stores -- up to 120 this year and up to 135 in fiscal 2013 -- will continue to be supercenters.
Even those are getting a bit smaller.
New supercenters are set to be roughly 90,000 to 120,000 square feet. Walmart supercenters used to average about 185,000 square feet.

<td>Gridley, Mary</td>
<td>I live in Indian Trails. When you do the connector road on Tribal Trail, it will become a speedway for young drivers heading to/from the high school and parents dropping off/picking up children unless you put in stop signs on Tribal Trail. The only way to make it a safe road for our families who live in Indian Trails is to make all three intersections with local streets (Cherokee Lane, Lakota Lane, and Seneca Lane) Three-Way Stops. Then the cars will have to stop at the stop signs, allow residents to exit their streets, and slow the traffic to a reasonable speed. Without the stop signs, there will be no reasonable way to slow cars and trucks down if a policeman is not there on duty.</td>

<td>Bloom, Rich</td>
<td>Alex - We were able to make copies for the meeting last night. Thanks again. Great attendance so late in the process – we spent close to two hours with around forty residents. Although we focused on the next plan steps the end of this month – and how to prepare them to participate – the overriding comment was: •“Why do we have to do this all over again – have they not been listening to all of our comments, polls, and mapping exercises over the last four years?” The cynical view also expressed last night was the planners and electeds: •“Keep asking the same question over and over again. They just don’t like our answers and are looking for a few people to finally tell them what they want to hear – so they can ignore the rest of us.” Anyway just being straight up – I understand their feelings - but encouraged them to still participate one last time. We spent our time reviewing their vision for South Park – and educating about where in the process we are - and how to participate next. I will say many have simply dropped out through communication to me (emails and/or conversations). Their reasons can be simplified to two general feelings: •“I have already told them what we wanted a number of times. I am not going to do it again.” •“We have already been clear what we wanted in South Park – they just don’t want to hear what we have to say.” You can pass along these thoughts to the electeds if you wish – I have copied the other planners and consultant. I am doing the best I can to keep people engaged – but nearly everyone I talk to is suspicious of this current phase – and want to make sure the “powers to be” focus on the very consistent public comment that has already been submitted in droves from our region – and from the public in general – over the last four years. What I fear is if the updated district maps before these late October workshops – or their final versions - deviate much from what folks have been saying for years – then you truly will see people irate. So to summarize I am asking folks to participate. The rate of participation has dropped off considerably – as folks are struggling to keep their homes, raise their families and enjoy our valley. Plus the majority that are still hanging in – and nearly all of those that have dropped out – have lost faith that the process is fair. You really need to emphasize that you are equally weighing all of the previous comments and polls – and that this last phase is not an end-run around the public. I truly believe we only get one more chance to show the public the comp plan process is fair and balanced. I continue to try to be part of the solution – and not part of the problem. Rich PS Again like all communication this is public – I do think the electeds should know my sense of the frustration I have now heard in the last few weeks from scores of residents. I probably hear more from the public at this point in the process - then the electeds do. The planning team is the one to consider my thoughts - and decide to share it with the electeds – or not.</td>

Chirp?

It’s time for our decision makers to hear more than just the sound of crickets chirping.

This month is one of your last chances to tell planners and your elected representatives what you want Jackson Hole and your neighborhood to look like in coming years.

The town and county are holding meeting on the second half of the Comp Plan – the Character District Maps – Oct. 27 through Nov. 1 (Visit www.jacksonetonplan.com for times and locations.) These maps are intended to show how the Comp Plan policies will be implemented “on the ground,” and will form the basis of the town and county zoning maps and land development regulations to come.

That’s why your input on them now is so important. Every voice is critical in the next phase as the Comp Plan policies are translated into these maps that will guide growth, development and conservation in the valley for years to come. Even if you haven’t been involved, or if you have been but stopped, now is the time get engaged.

Get ready for these meetings by attending one of the Alliance’s neighborhood discussions being held in mid-October. Share ideas, and become better informed and prepared. Visit www.jhalliance.org for details.

Remember, this is your community and your voice matters!

Alex - We were able to make copies for the meeting last night. Thanks again.

Great attendance so late in the process – we spent close to two hours with around forty residents.

Although we focused on the next plan steps the end of this month – and how to prepare them to participate – the overriding comment was:

• “Why do we have to do this all over again – have they not been listening to all of our comments, polls, and mapping exercises over the last four years?”

The cynical view also expressed last night was the planners and electeds:

• “Keep asking the same question over and over again. They just don’t like our answers and are looking for a few people to finally tell them what they want to hear – so they can ignore the rest of us.”

Anyway just being straight up – I understand their feelings - but encouraged them to still participate one last time. We spent our time reviewing their vision for South Park – and educating about where in the process we are - and how to participate next.

I will say many have simply dropped out through communication to me (emails and/or conversations). Their reasons can be simplified to two general feelings:

• “I have already told them what we wanted a number of times. I am not going to do it again.”

• “We have already been clear what we wanted in South Park – they just don’t want to hear what we have to say.”

You can pass along these thoughts to the electeds if you wish – I have copied the other planners and consultant.

I am doing the best I can to keep people engaged – but nearly everyone I talk to is suspicious of this current phase – and want to make sure the “powers to be” focus on the very consistent public comment that has already been submitted in droves from our region – and from the public in general – over the last four years.

What I fear is if the updated district maps before these late October workshops – or their final versions - deviate much from what folks have been saying for years – then you truly will see people irate.

So to summarize I am asking folks to participate. The rate of participation has dropped off considerably – as folks are struggling to keep their homes, raise their families and enjoy our valley. Plus the majority that are still hanging in – and nearly all of those that have dropped out – have lost faith that the process is fair.

You really need to emphasize that you are equally weighing all of the previous comments and polls – and that this last phase is not an end-run around the public. I truly believe we only get one more chance to show the public the comp plan process is fair and balanced.

I continue to try to be part of the solution – and not part of the problem.

Rich

PS Again like all communication this is public – I do think the electeds should know my sense of the frustration I have now heard in the last few weeks from scores of residents. I probably hear more from the public at this point in the process - then the electeds do. The planning team is the one to consider my thoughts - and decide to share it with the electeds – or not.

Support commercial development for communities south of town e.g. Melody and Rafter J. Retail, services etc.

| 10/4/2011  | Flosbach, Amanda | A note of thanks for inviting the community to participate in your feedback sessions last week. I attended late Thursday evening and was part of a group led by Mike, and I enjoyed not only the opportunity to share my vision for Jackson, but also the well-organized format and engaged facilitators - it was both effective and fun. I wanted to follow up by putting the thoughts I shared in writing and sending it to you. Here are my two cents, focused primarily on the Town Square business character district:  
  • Preference for development up, not out - the land has already been "broken" so since it's very unlikely anyone is going to "undevelop" it and restore it to its natural state, let's do something interesting and ALIVE with it.  
  • Desire to encourage complete neighborhoods whenever possible (walk to services, grocery, restaurant, activities w/in .5 mile radius)  
  • Recommendation to expand zoning restrictions to encourage greater vibrancy in select neighborhoods of higher density: Allow for all types of mixed use to include Restaurant and other vibrant, people-filled businesses that serve visitors and locals (aka not just vacant office space) from Broadway to Snow King along the King, Cache, Glenwood and Millward corridors, which would allow for more supporting businesses and activities to develop around the Center for the Arts and Brew Pub/Fitzgerald's.  
  • Need for complete sidewalks the full length of above streets to make said corridors pedestrian friendly to encourage flow between these denser vibrant enclaves/nodes  
  • Interest in creating a family friendly pedestrian mall on or around the Town Square for locals and visitors alike, such as an open space with playground or appropriate activity (successful example = new Teton Village Commons where the playground/water fountain combo allows kids to play while parents eat on the deck at Osteria. For many of my friends with kids, this is a favorite summer activity. Something like this would be totally possible on/near the Town Square.)  
  • A need to clean up and create a welcoming sense of arrival at main entry points to Jackson, whether its landscape architecture affected by the Town or basic requirements of maintenance for frontage property owners  
  Thanks so much for the opportunity.                                                                 |
| 9/30/2011  | Krieger, Nicole  | I just wanted to say how impressed I was with the setup last night at the Center for the Arts. It is clear how much work has been put into the process. Thank you!!                                                                 |
Thank you again for meeting with the Alliance last week, and for sending these documents for our review and comment. I'll provide some feedback here that I hope is helpful to you in designing and facilitating the upcoming workshops.

First, I would like to point out that there is still a lot of confusion around what exactly each phase of the process will focus on. These documents help clarify, but please note that you have not been consistent in what to name each phase, which adds to the confusion. For example, your 3 documents give 3 totally different names to the first phase of the process: “Illustrating our Vision Workshops”, or “Identifying”, or “Existing Character Workshops”. I’d encourage you to use consistent naming, and think that “Existing Character” and “Future Character” Workshops are the clearest names for what people should expect in each phase.

Second, I’m unclear how many Character Districts there will be. You presented 15 to the electeds, but they decided to add one more, so don’t you have 16 now? Your documents still say 15.

Moving on to the Workshop Agenda, we have a number of concerns and suggestions. I’ll present those point by point on the questions you present in your agenda:

1. What makes the District special?
2. What sort of info are you hoping for here? What will you actually DO with this info? Unless you’re clear how you would USE the answer to this question, don’t ask it.
3. Where do people live and what are the housing types?
4. Where are the employment or commercial centers?
5. What amenities are present (trails, transit, recreation, schools)?
6. Identify areas that are likely to change. What are some opportunities for these areas?
7. Describe improvements needed to preserve and enhance the character of the district as well as meet the community’s goals.
8. Based on the definition contained in the Comprehensive Plan, is the District more suitable as a complete neighborhood or a rural area?

Additional Questions we feel should be included:

First, remember that you had previously talked about the primary purpose of Phase 1 being to adjust any Character District boundaries as needed based on public feedback. If so, we believe this should be an explicit question, and an emphasis of this Workshop. Your workshop agenda says “Actual districts to be determined”, so please be clear in asking people to work on that. However, I will note that we are still not convinced that the actual boundaries of the Character Districts matter for much.

Second, we feel the public could provide valuable input on their sense of the “Character” of each character district. You will capture some of the technical, quantitative information on character with your questions, but you haven’t done much to gather information on the more nebulous QUALITATIVE character of each district. What is the social character of each district? Young families? Retired? Wealthy? Working class? Highly organized and cohesive? Individualistic? Tendency to use pathways, or only cars? This is data that may not be as readily available to planners, and can be useful in thinking about what issues to focus on in each character district, and how to approach the different audiences that live in each district. We would encourage you to ask questions that get at the qualitative social character of each district.

Thoughts on Public Participation

We do not anticipate broad public participation in Phase 1 of your process, due to very late release of a plan for the workshop, confusion about what the purpose of the workshop is, and a very skeptical and burned out public.

The Alliance is interested in strongly encouraging public participation in Phase 2 of your process, but in order to do so we need much more detail on how you intend to conduct Phase 2. We would like to work with you in identifying exactly how you will organize and facilitate the workshops in Phase
2. We need clarity on what questions will be asked, what workshop format will be used, and how participants feedback will be used to inform your decisions. We also need to know where these workshops will be held, and which character districts will be the primary focus of each workshop. Bear in mind that we need answers to all of these questions by the first week of October if you expect to engage the public meaningfully in Phase 2. The Alliance respectfully requests an opportunity to meet with planning staff and AECOM in the immediate future to discuss your plans for Phase 2 and provide you with suggestions before you finalize the design of the next workshops.

Thank you again for your work on this vital step in our Comprehensive Plan, and we look forward to continuing to work with you.

9/23/2011 Wallace, Jim
Interested Public

Willow Street, from Snow King to Gill, is a Commercial through-fare, although in non-compliance: Vehicle traffic ranges 2000-4000 autos p/day, not including trucks & buses. The effects of such high activity preclude residential or AR zoning. There are only four owner occupied residences on Willow; the remainder being primarily heavy commercial, mostly large Town & County blds. Commercial zoning of all lots which border Willow St. on the East & West, will preclude the requirements to re-route or restrict traffic; protect adjoining property occupants; add attractiveness & function; create a welcoming & friendly village style district & concretely illustrate our [Town] vision.
I have lived & worked @ 450 Willow for 30 yrs., and know this district intimately. Our property @ purchase was zoned MR4. It was the Bruun connector & prior Town planning that designated Willow St. use as Commercial.

9/19/2011 Stevenson, Trevor
Conservation Alliance

On behalf of the Conservation Alliance, thank you for your attention to this letter. We recently had a productive meeting with Jeff and Tyler, and wanted to follow-up with this brief memo outlining that conversation and the conclusions that we drew.

We appreciated the clarification of the different phases of the process, specifically the emphasis on public participation. As you know, the Alliance will be working hard to motivate the public to participate if we believe that their involvement will result in meaningful improvements to the plan.

We are encouraged that the planning staff intends to submit press releases to the local papers to outline the overall process, and then again in advance of each of the phases to alert the public to the goals and logistics of each phase. This process is complicated, and the more it can be explained to the public, the more likely they are to participate. Press releases are a vital part of your overall outreach and community engagement strategy.

A more specific definition of a “character district” and what it means for an area to have lines drawn around it would also benefit your communications to the community. A key way to engage the public effectively will be to make sure that they understand the goals and content of this character district review process, and what their role in this process is.

We recommend that you clearly explain why the public should invest time in this process.

This is what we understand the first three phases of process to be; we would appreciate any clarifications if we are incorrect.

Phase 1: Community Workshops
We see that the primary contribution of the public in this phase is ground-truthing, or confirming that the existing conditions as laid out in the draft character district maps are accurate.

Phase 2: Neighborhood Workshops
This phase seems to be the most important for public involvement. This is the primary opportunity for the community to share their opinions on what their neighborhood (within the character districts) should look like in the future. This is also a time to bring forward new ideas for the desired future of each district.

Phase 3: Open House
This is one of the final opportunities that the public has to ensure that the maps will implement the community’s vision for the life of the Plan. This is the chance for the community to review the policies once they see them illustrated, and give feedback on whether the policies are generating the desired results as seen in the maps.

The character district maps, as outlined in the Plan’s policies, are meant to be a reflection and illustration of the policies themselves, in map and text form. That said, one of the most important aspects of the resolution to accept the policies was that there be room for refinements to the policies if the character district mapping process revealed inadequacies in the policies. Allowing space for this final check-back of the policies is an important part of public input before final adoption of the new Comprehensive Plan.

We continue to believe that effective community engagement is central to the success of this character district mapping exercise and to the overall plan. The community needs to be sure that their input is valued and has the potential to improve the final product. It will be important to not only inform the public but also solicit and incorporate their input.

Thank you for your work on behalf of the community and your commitment to the success of this community exercise. The Alliance is eager to help you find ways to effectively engage the community, and we hope that you will be in touch if we can advise on how to best conduct this important final phase of the Comp Plan process.
RE: 115 Nelson Drive, Petersen Living Trust  
Parcel # OJ-001547  
The Petersen family has been in Jackson Hole since the 1890's after homesteading on what is now the National Elk Refuge. In the 1930's Charlie Petersen Sr. was on the work crew that hand dug the city water lines from Cache Creek to town. He worked as an outfitter, guide, bartender, manager and was part owner of the Cowboy Bar. The Petersen family, through their hard work, has contributed to the culture, spirit and development of Jackson for over 100 years. The property at 115 Nelson Drive was my Dad's residence since the 1940's. He recently passed away at the age of 101.  
When the Daisy Bush property was before the planning commission (Prugh), I appeared at the meeting and requested that our property be treated in the same manner in the future. Both Daisy Bush and the Petersen properties are currently zoned SR. The property to west is zoned AR (Rancher Street Condos), property to north is zoned NC-SF (Nelson Subdivision), to the east is USFS.  
The property is approximately 115' x 515'. It is 1.33 ± acres.  
SR zoning currently allows (outright uses), single family uses, planned unit development, condominium subdivision and townhouse subdivision. In the proposed "conceptual future land use map" for District 15: East Jackson, Daisy Bush and Rancher Street Condos are proposed for Single-Family Mixed Type and the Petersen property is inexplicably changed to Single-Family Low.  
Under the Future Land Use Plan chapter-Land Classifications of the proposed Comp Plan, SF-Low allows, one unit per lot, and only detached single family units. SF-mixed type, would allow single family, duplex, trip-plex and four-plex units compatible with the neighborhood character.  
Because of the narrow shape of this lot, SF-Low does not provide normal development options that would have been allowed under the CURRENT ZONING of SR. By down-zoning to SF-Low, the town is effectively creating a one acre lot with only one unit.  
The Petersen Family Trust requests that this parcel retain the land classification/zoning that is being applied to those properties that adjoin it and are currently in the same zone as this property (Daisy Bush). It should be included in the SF-Mixed Type zone of the proposed comp plan, 7500 square foot lot size.
Back to talking about "small is beautiful" with the link below to better explain what I mean. They are called Pocket Neighborhoods. Has there been any small neighborhoods (with around ten to twelve homes in it) like this done or planned? I seem to remember a giant neighborhood plan with garages in the back of the homes and common area in front for Northern South Park back in 2000. The closest I've seen to pocket neighborhoods is the affordable small home neighborhood along South Park Loop Road with the garages along South Park. The paragraph I included below is from this site's codes page that has a PDF help guide to codes for pocket neighborhoods.

There is still too much emphasis on getting moderate to low income people into tiny 2 and 3 story boxes covering lot line to lot line in an urban setting leaving the wealthy to keep building their mega mansions gobbling up energy, wasting materials and creating the need for more service workers (that need more housing) to look after their McMansion the 48 weeks the owners aren't there. Lets start downsizing everybody not just the little guys.

http://pocket-neighborhoods.net/index.html
Pocket Neighborhood Codes

Pocket Neighborhoods are allowed to happen, or not, by the zoning codes that regulate development. Unfortunately, zoning regulations in many jurisdictions in America date back to the 1950s and 60s when suburban standards for single-family homes were the norm. Pocket neighborhoods may not fit these narrow prescriptions in a number of ways, making them difficult to develop. Many towns and cities, however, are writing new codes to accommodate a wider choice of housing options, including pocket neighborhoods.

The Municipal Research and Services Center in Washington State has compiled links to several cities that have adopted cottage courtyard codes, as well as a synopsis of ‘cottage housing’ and related articles.

Another useful site to go to for further information is The Housing Partnership. In 2001, after the success of early cottage courtyard developments in the Puget Sound Region, they wrote “Cottage Housing in Your Community” (download PDF), a guide to drafting cottage housing ordinances that provide general considerations and parameters for such codes.

If your city or town has a pocket neighborhood, cottage housing or innovative housing ordinance, we'd like to know about it. Please write us.

--------------------------------------------------

You notice that the pocket neighborhoods don't have convenience stores. There are a lot of great complete neighborhoods without having to throw everything and the kitchen sink into them. Have a great week! Kathy
Town council and County commissioners,
I read the article in the JHN&G about trimming costs on the comprehensive plan process to accommodate the consultant’s fee. Please don’t cut out the outreach (I like neighborhood input) meetings for the mapping part of the comp plan. That would be the final blow to public participation and faith in the process.

Great article below on changing the way we view and act on our economy. (Scroll down to the comparison list) We can get a lot more done for the whole of the community if we follow the meta economic view instead of the destructive quantitatative. We shouldn’t be competing with Teton Village for the high end dollar. It only rewards a few and punishes the many people who work hard to make ends meet. For instance… homes under $500,000 are getting hammered with devaluation while the upper end is enjoying a stable market. It seems that all the safety nets are protecting the people who don’t need protecting.

One more thing… Don’t forget “Small is Beautiful” !!
The neglect, indeed the rejection, of wisdom has gone so far that most of our intellectuals have not even the faintest idea what the term could mean. But where can wisdom be found? It can only be found inside oneself. To find it one must become liberated. Through such liberation one can become relevant. Wisdom enables us to see the hollowness and fundamental unsatisfactoriness of a life devoted primarily to the pursuit of material ends, to the total neglect of the spiritual and the sustainable.
The influence of economics upon the management of government has grown exponentially since the seventies. However, it is now being realized that the judgment of economics is a most fragmentary one. Classic economic theory deals with demand and supply but all contemporary demand and supply is exchanged through the medium of money; fiat money. Due to the importance of stable money supply to the correct stewardship of any economy no government should unduly tamper with its smooth operation. To do so invites mayhem. As a result of catastrophic error, sub-prime crises, derivative explosion, credit balloons, defunct regularity oversight, debt monetization, and private credit exploitation the money supply has become so corrupted it is almost impossible for anybody to make correct economic decisions. The historic medium of exchange model has been broken. Fidelity with the integrity and the sacrifices of our forefathers has been compromised by a shallow elite.

To get out of this “economic crisis” governments must now start thinking in Meta-Economic modalities. Thus we must acknowledge that to sort out the mess we must go beyond “classic” quantitative economic thought. In the new paradigm, wisdom must prevail. The fatal flaw of lack of adequate purchasing power, under the current “credit” model, must be acknowledged. Without this conceptual breakthrough the crisis will never be adequately solved.

Current economic thinking only touches the surface of things and takes for granted so much that should be accounted for; i.e. clean air, fresh water, moral integrity of the majority, faith in authority etc. etc. In a sense this quantitative model promotes total institutional selfishness and irresponsibility. This is all very well as long as there is no systemic failure but, unfortunately, systemic crisis is exactly what we are now faced with. Gross irresponsibility has taken the sacredness out of life.

The macro crisis is not simply an objective one. It becomes personal in the form of depression, loneliness, isolation, meaninglessness, exhaustion, marriage break-up, atomization, pharma-medical dependence, addiction and suicide. To bring about change in this zeitgeist quality must be brought back into the quantitative social model. We must strive to bring LIFE back to the process of living. The formula for this is to reintegrate simplicity, integrity and constraint into the functioning of our institutions, enterprises, thought processes and behaviour. Patterns of action must be championed that honor human satisfaction on all levels not just financially.

To comprehend this “meta” concept, some examples of Meta-Economic mind-set principles V’s those of Quantative Economics one are set out below:

<table>
<thead>

</tbody>
</table>
For economics to become valuable and relevant again to sustainable society its practitioners must realise the truth that economics is a social science and as such it deals with human beings, not atomised ciphers. Rationality must reconstitute itself with morality, ethics and philosophy. If national and international economists continue to lose these classical thought centres, social disintegration will spiral out, uncontrollably. Governments and economists must begin to see the whole picture again. We have foolishly and recklessly abandoned our great Western-Christian heritage. The task now is one of metaphysical regeneration. Economics must stop being taught where awareness of human nature is lacking. We are suffering from a metaphysical disease and therefore the cure is meta-physical: meta-economical. It is time for economics and accounting to grow up and transcend there historical roots.

| 7/11/11 | Stevenson, Trevor  | Attached are some suggestions from the Jackson Hole Conservation Alliance on the Character District Mapping phase of the Comprehensive Plan. Since we're emailing this on the day of your JIM meeting, I'll also bring printed copies to the JIM meeting this afternoon. I request that you give me the opportunity to speak briefly on this topic during the public comment portion of today's meeting. On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to provide comments on the next important phase of the ongoing Jackson/Teton County Comprehensive Plan rewrite – the “Illustrating Our Vision” Section. We are basing our comments on the information provided in the staff report for the “Character Districts Scope and Fee for Professional Services.” We would like to reiterate our goal of ensuring that this process is highly participatory and includes meaningful public input, which are vital to helping us develop well-designed plans for the future of Jackson Hole. To achieve that goal, we need to review the timeline of events to make sure that the public is given enough time before each meeting to review materials and provide well-informed comments. It will also be important to review the structure of each meeting in the process to facilitate meaningful input by the public. We recognize that many of the details of this process will be worked out in the upcoming months and we request that you consider our input as your plans are refined. The Alliance will assist in the next phase by working to increase informed involvement for the public. Our detailed recommendations are included below, and we appreciate your careful consideration of our input as you design the next phase of the planning process. Form and Content of the Character District Section Data Compilation In the recent report “Technical Analysis of Jackson/Teton County Comprehensive Plan,” Alan Richman provides the following statement related to the Character District section of the plan: “So the stakes for the upcoming character district mapping process could not be higher... Completion of the character district maps is an essential part of this Comprehensive Plan. The initial step in the mapping process should be a rigorous analysis of the amount and locations of development that are proposed to be reduced in conservation areas and an equally detailed analysis of the areas proposed for increased development as complete neighborhoods. In other words, the maps need to be more than a pretty picture of a planning concept.” Based on the information provided in the scope of work, it is still unclear to what extent rigorous analysis will be used to inform the creation of the Character Districts. We urge you to recognize that many members of the public are looking to this next phase of the process to provide more predictability and specificity than the policy section of the plan currently provides. However, in order for this section of the plan to do this, and to do so in a positive, informed manner, it will be important to conduct thorough analyses of the NRO, SRO, and the cost of growth at both the individual districts and valley-wide scales. Without these analyses, it is difficult for the maps to be more than “pretty pictures.” By the August JIM, we hope that you will commit to initiating strategies that would benefit the Character District mapping process, such as the creation of a task force to explore potential transfer mechanisms. We are pleased that information will be compiled and incorporated during the month of July. As part of this effort it will also be important to acknowledge data gaps, and possible implications of those gaps in terms of future planning decisions. In our June 24 correspondence, we highlighted several data inquiries that we believe should be immediately initiated: • Collecting the best available wildlife science that can inform policies and maps • Assessing the cumulative impacts of development on wildlife • Identifying key scenic resources • Determining which transfer mechanisms might work in Jackson Hole • Identifying growth boundaries that would inform the maps Also, in the case that information is outdated, or is lacking, it will be important for this plan to take a precautionary approach and err on the side of caution when proposing new development-based “enhancements” to planning districts. Illustrating our Vision – Including Individual District and Countywide Scales The final Character District Section should include a component that addresses the comprehensive picture of the valley, and not just focus on depictions and descriptions of individual districts. For example, the April 2009 Future Land Use Plan did not include an overall, comprehensive map of the county demonstrating how different districts are related at a broader level, nor did it illustrate a comprehensive depiction of the various town districts. The districts were only depicted individually, which detracted from an overall comprehensive look at the community vision. This comprehensive look is a critical component of a comprehensive plan. It is important to understand that all areas or “districts” are strongly interconnected in terms of planning at the valley level. What happens in one location has implications for planning issues in other locations. Specifically, impacts from development are direct, indirect and cumulative; all of these impacts must be considered when evaluating suitable locations.
amounts and types of new development. Overall, this concept of interconnectedness among planning districts must be strongly upheld within the maps and narrative of the new section of the plan.

Re-engaging the Public
The proposed scope of work includes a number of opportunities for public involvement. In order to maximize effective public engagement during the community’s review of this section of the plan, it will be important to prioritize the following issues and either provide clarifications or make changes to the proposed work.

• Additional information should inform improvements to policies
The creation and review of the Character District section of the plan constitute the test of how well the policies and vision can be implemented. At the most basic level, a plan must be clear and its implementation must be feasible. It will be important to allow time for the planning team and the public to learn from this next phase of the process and to make suggestions for how the policies section of the plan could be adjusted based on additional information, prior to final adoption. Although the elected officials spoke to their intention to do this in the last JIM meeting, this component is currently not described as a potential need in the scope of work, and should be added. Overall, the scope of work should build in time to make final adjustments to not only the Character District section, but also the policies section to create an overall better plan.

• Clarification of the Expectations of JIM #1 with regard to public input
The scope of work states that the planning team will facilitate a JIM in August to “confirm the consistency of the preliminary character district boundaries, descriptions and classifications…” If public input will be accommodated in JIM #1, materials describing these preliminary boundaries and descriptions should be provided to the public well in advance – at least two weeks before the meeting. In general, it would be helpful to clarify the elected officials’ intentions for desired public input at this stage of the Character District review process.

• Sufficient notice of the schedule of specific dates and times of public meetings and open houses
Many of the opportunities for public involvement include either condensed meetings in one week, or within one day. In order for the public to plan ahead to participate, it will be important to have the schedule of meetings confirmed early in the process (at JIM #1) as well as a specific description of what will be presented and discussed at each meeting. This is particularly important given that critical meetings are scheduled for November and December, a time of year when many residents are not in the valley.

• Sufficient opportunity to provide written comments after information and new draft materials are presented during meetings
If the planning team plans to utilize community workshops as a way to initially present materials to the public and to gather input, it will be important to allow for two weeks for the public to absorb the information presented at the community meetings and respond via written comments. Based on the scope of work, it is clear that the planning team intends to rework materials for subsequent phases based on public input from these meetings. However, prior to revisions by the planning team at all phases, it will be important to accommodate diverse methods for input, over a long period of time, given the public’s diversity in schedules.

• Sufficient Consideration of Previous Public Comment
In Fall 2007, Clarion Associates initiated what appears to be a similar workshop process on character identification and preferences for future development in specific areas of the town and county. Considerable public input was gained as part of these meetings; it is important to include this previous input as the planning team works to define the new character districts.

• Sufficient opportunity for public review of final document (Vision, Common Values, and Achieving our Vision)
Prior to final adoption of the new plan in its entirety, the public needs a minimum of three weeks to review all sections of the plan. In the most recent phase of approving the policies section of the plan, the Alliance believes that the public should have been given more than one week to review the final draft prior to formal action by elected officials. It is unclear how the proposed schedule for January could accommodate all of the scheduled hearings as well as adequate time for public input and subsequent modifications.

• Additional Public Hearing
We appreciate that the proposed schedule for January 2012 includes two public hearings in January 2012, one with the joint planning commissions and the other with elected officials. The process, and the product, would also benefit from a larger public hearing prior to January. This would serve as an opportunity for citizens to gather with a countywide vision in mind, testify for the public record and hear from one another sometime during the process other than the final meetings.

In conclusion, the Conservation Alliance looks forward to the upcoming stage of the process and anticipates significant opportunities for dialogue among members of the public and decision makers. We will continue to encourage public involvement during this important time for our community. Thank you for your close attention to these suggestions and always feel free to contact the Alliance with any questions.
After attending almost all of the Comp Plan meetings and workshops over the last 4 years, myself and many other community members have come to the same conclusion: take the 1994 plan and improve and tweak it to better reflect the need to protect wildlife habitat and connectivity, keep our small town character, plan for the future already entitled growth, keep visitors coming to Jackson Hole and try to do all this in a manner that respects the environment. The Vision – Themes and Policies part of the document does an adequate job of outlining many of tweaks to the 1994 policies. The missing piece that is not clearly stated is the plan of how infrastructure improvements necessary to implement the policies will be undertaken. The updating of and expansion of infrastructure just to accommodate entitled but not yet built development is a major concern. Accurately analyzing infrastructure and their costs need to be presented to the community before policies or maps are approved. Commitments to supply infrastructure to already entitled development plus up-zonings whether located in town or the county could bankrupt our community.

Please consider the following comments specific to the Character District Chapters:

- **The County**

  The Character District maps are vague purposefully to allow a vast amount of additive growth in a number of Districts. Too many uncertainties exist which include what will be next door, how dense, how tall, what will this do to wildlife, roads, traffic, what will it cost. The additive growth that the Character District maps show does not retain the character of Rural Jackson Hole but creates urban nodes of high densities that the community has consistently rejected. Limiting growth to infill development following existing zoning and character throughout Teton County respects existing property rights and retains what we all love about Jackson Hole. We all know and accept these numbers and feel that this is the maximum build out that can be supported. Why not keep the Character District Chapters but eliminate all additive growth? Why not adjust all incentive based tools (PRD) to attain the goals identified in the Vision (Themes and Policies) for minimizing rural and greenfield development to better protect wildlife, open spaces, yet still respect property rights? Why not make the PRD more of an individual “CUP type process”? A letter dated 1/9/2012 from the Jackson Hole Land Trust states “These incentives should be both strong and diverse, as what works for one landowner in a key habitat may not for his or her neighbor.”

  The concept of feathering out density to and from drastic hard line changes in density should be a consistent policy throughout all town and county districts. This has been left out of numerous districts in both town and county. One particular example is the southern area of district 12.4 where a hard line of 10 units per acre (JH Campground) back up to now a hard fast suggested change for a policy of 1 unit per acre. The specific Neighborhood Form illustration is not accurate. A general policy of minimum lot size for the area with density feathering allowances would be more appropriate for the area.

  Districts along Teton Village Road. A letter dated 6/11/2009 sent to Teton County Planning and Development from Grand Teton National Park Superintendent, Mary Gibson Scott states “Accurate build out forecasts are important to understanding future development impacts and are needed to ensure protection of wildlife, natural, and scenic resources.” “Development on the west side of the Snake River along the Wyoming 390 corridor (Teton Village, Aspens and Wilson development nodes) is of particular importance because of the potential to adversely affect a portion of the Moose-Wilson Road within the park as well as important wildlife habitat and movement corridors.” “Future growth on the Wyoming 390 corridor, as well as transportation-related actions, may significantly affect the park and should be carefully considered.”

  Review of Appendix K (page 8-54) in the Vision document anticipates a Level of Service for Highway 390 to drop from high LOS E(1996) to a High F(possibly already by 2012 as no reconstruction has occurred as was anticipated by 2004). Additional growth beyond what was planned in 1994 will further degrade the LOS below the report used in in Appendix K. Any additive growth on Hwy 390 without improvements to a LOS of at least D as required by County standards is irresponsible planning.

- **Town of Jackson**

  It is very clear that the Town of Jackson has a big growth agenda. I do not see much resistance from town residents. There is no effort to relate the
amount of non-residential growth potential to what the resultant residential workforce housing needs will be based on the Character districts. Infrastructure improvements capabilities and costs must be analyzed. Will Town establish a new tax (property or sales) to pay for the massive additional and upgraded infrastructure needed for this expansion?

Again feathering changes in density from one district or even within districts is a very important policy especially with the amount of growth that town is proposing. The area of Karns Meadow and surrounding properties appears to be trying to be too many things for many non-compatible uses. Is this area to be more for a wildlife corridor or a developed city type park? Is the park to be focal point for intense commercial buildings surrounding the park? How Does the Start facility fit into all of this? I hope the choice to develop Karns Meadow into a low key more interpretive park with minimal development except a pathway is more of the approved direction.

Thank You for considering my comments at both the planning commission level and the commissioner/mayor/town council level.

Phase: BCC/TC Review

4/27/2012 Coon, Dave
Interested Public

David Kuhn, Teton County at large. I have had the privilege of being a resident, a worker and a recreationist here for 30 years and we're all doing a great job on this—the electives, the community, Staff—I mean, everybody's working hard at it. We're not quite there yet but we're trying. I'm going to keep it brief. I am kind of a simpleton and a numbers guy and a budget guy. And a number is I think still missing, a build-out number, and I think it has so much direction to other things. It gives us a growth number to shoot for, which gives us the predictability we need of what we'll allow and where we'll put it, and what kind of density. It also goes...the predictability goes into our character district maps, how we define those. I mean, I’m also a map guy. I would never take a trip of any substantial size without looking at a map. You get halfway there and go, you’re lost. You get reactionary then. You should have had that map of where you’re going, putting it in simple terms. I’m also involved in Sewer & Water boards, and so my concern about infrastructure and transportation relates back to that number. How do you know what you need to provide without a number? I mean, it may sound real simple, but it is real simple. So, I think I know that build-out number has been...I don’t know if you’re afraid it as an election issue, or...it’s not a bad planning tool, but it just, it will go a long ways to helping this and it just affects so much of the stuff. But again I want to say thanks for everybody’s hard work on this. We have a ways to go still but we’re getting there, and it’s been a pleasure to be able to work on this with all of you. Thanks.

4/27/2012 Labelle, Ernest
Interested Public

My name is Ernest Labelle. I’m a West Bank resident. You know, for thousands of years we have learned to live and survive in close proximity to the natural world. And that’s...our quality of life has improved over those ions. We somehow have inextricably found ourselves moving away from that close proximity to the natural world that we once experienced. And sometimes it’s I think helpful to step back and try to see the forest, rather than just the trees. And I hope that all of you hard-working, lovely men and women who are working on this Comprehensive Plan will do just that and will bear in mind that in the past hundred years or so, we have moved quite far from that close proximity to the natural world. We all feel that. We all cry for it. We die within ourselves every time a deer is hit on Broadway, every time we see an elk, a herd of elk, trying to move through a fenced area to get to its summer pasture. We feel those things. And what is going on here I think is that we also feel deeply that as we move into this Comp Plan, this Comprehensive Plan, we’re dealing with those very deep and real truths about our existence. And I hope that in the process of getting through to the end of this Comprehensive Plan, we will also remember that there are not very many places in the world today where there are opportunities to reverse that inextricable move away from the natural world. And Jackson Hole is indeed one of those last many opportunities. So, please bear this in mind and realize that this is the opportunity that we have. I hope one day to read an article in the National Geographic and the New York Times Magazine about how Jackson stepped back...stepped up to it and addressed that truth and reversed that trend to the best interests of everyone in the human and the natural world here in our Valley. Thank you.

<td>Shuptrine, Sandy</td>
<td>[My apologies] for my internet tantrum last week-looming Comp Plan deadline, lost input, counting characters, etc. all contributed to a bit of regretted comment on my part. Thank you for bearing with me and giving a courtesy reply. Let me see if I can summarize what apparently went into cyberspace last week: First, was a sincere compliment to all involved for listening and responding. Also for a professional quality work in progress—the graphics, format, etc. are refreshing and interesting. I also encourage special attention to river and stream setbacks which I understand no property owner wants, but neither do taxpayers want to assume the flood fight costs. When it comes to setback performance standards, I believe they should be much increased or adapted to specific situations, especially in light of recent intense weather events aggravated by climate change. Ask Bob Lucas where his house would be if he had built 150’ from the Snake (ans.-Palisades Reservoir). Finally (for now), I wanted to state that my recollection is that it was not a GOAL of the 1994 Plan to have a 40,000 plus population. Instead, It was the best reduction that could be done at the time with the tools available and with which we could achieve consensus. For this reason, I encourage specifically identifying and detailing methods to secure the current Plan’s values of less dispersed, more complete community, development. As I have mentioned, I believe the SPET is one possible resource, especially when it comes to implementing our Comp. Plan. There are others, but they seem elusive and perhaps difficult to implement. Voters have already supported ballot issues that include conservation easements (i.e. Valley Springs). This is now longer than the original so I’ll stop here for now... Keep Up the Good Work,</td>
</tr>
</tbody>
</table>
| 7/5/11 | Morris, Bob      | Why not begin your Comprehensive Plan as follows: “We are stewards of the largest intact ecosystem in the Lower 48. This Plan seeks to protect its scenery and wildlife.” Instead, your opening paragraph is: “As inhabitants of one of the nation’s largest intact ecosystems, we must have a Comprehensive Plan organized around stewardship of our ecological resources. Wildlife, natural and scenic resources draw both residents and visitors to this special place and are at the core of our heritage, culture, and economy. To be responsible stewards of this area, we must protect and enhance the ecosystem in which we live.” The thoughts in your Draft are really quite simple, but your writers try to express them in prose as complicated as possible, with as many unnecessary words as possible. Remember my offer to translate a page of your Draft from bureaucratese into sentences which are clear, simple, direct, forceful, lively, vivid -- even elegant -- and conversational in style. New Yorker Magazine is a good example. (I certainly don’t mean “stream of consciousness.”)

<td>Stevenson, Trevor</td>
<td>I’m writing to thank you for the serious consideration you gave to the Conservation Alliance proposals this week. As you know, those proposals were focused on many of the core issues that the Alliance has worked on for many years. Although you voted not to include the text proposals we submitted in the final policies, we greatly appreciate that you had a frank and substantive discussion of the issues we raised. Your discussions revealed that we are in fact largely in agreement on core issues. You have committed to creating a multi-year Action Plan to study the issues you have slated for further exploration in the Comp Plan. You also clarified that you expect some additional adjustments to the Comp Plan policies if those seem necessary after the mapping phase, and you have indicated that the studies that will be conducted will inform refinements to the policies. Those commitments give us confidence that we can continue to work with you to provide information that may improve the plan. We also hope to discuss how we can be most useful to the planning process as participants in the many of the issues that will be in your Action Plan. On the issue of permanent conservation of open space, the language already in the plan identifies this as a priority, and we trust that we will see this commitment put into practice. The Alliance is currently investigating ways to provide funding mechanisms and other support to open space conservation, and we hope to present potential tools to you in the future. Finally, we are pleased that you agreed to immediately create a task force to study potential transfer mechanisms that might work for Jackson Hole. I want to clarify that the Alliance is not tied to any one tool to achieve the community’s objectives. We would like to assist on this task force as we search for the most practical policy tools for locating future development in the most appropriate places while also permanently preserving priority areas. We hope this task force will begin work as soon as possible, as this work will be critical in informing how you develop the character district maps. We understand that some of you do not feel that we have presented compelling enough evidence on how additional growth management tools could help you achieve the community’s goals. We will continue to research relevant growth management tools as you work to finalize the plan, and we will have some solutions to propose when the current growth management monitoring system indicates a need for improvements to our growth management policies. The Alliance intends to work closely with elected officials, planning staff, and AECOM to further develop a highly participatory approach to the character district mapping process. I look forward to meeting with each of you to discuss how the Alliance can be most useful in achieving the community’s goals during the important work that is now before us.</td>

<td>Interested Public</td>
<td>I left the comprehensive plan meeting on June 29th feeling like a fool for believing that you all were going to pull it together in the end. What a slap in my little naive face. We don’t doer like that out west, boys. When we start talking Character districts or nodes, we don’t want to talk to your staff; we want to talk to you. Think about that when you’re outlining your action plan. You need to get off that tall horse your riding and come to realize who is feeding that plug. You’ve spent a half a million of our tax dollars on this comprehensive plan and now your facilitator, in the middle of the job says he wants another $90,000. Was that part of the action plan? When someone mows half my yard and then tells me he wants another hundred bucks to finish it I point him south and make sure my boot starts him on his way. You are all certainly intelligent folks. Please do not make a mockery of local government. You know the old saying: Fool me once shame on you. Fool me twice shame on me. Fool me three times take’em out behind the barn. Get your chaps on!</td>
</tr>
</tbody>
</table>

Friday, May 04, 2012
Thank you for the opportunity to once again comment on the Comprehensive Plan. The Plan is full of vague, ambiguous terms. However, because the Town of Jackson is the primary target for density and will be the “receiving” area for high density development, my comments are, for the most part, specific to Sections 3 and 4. (My written comments are in bold)

Section 3.1 The overview states: “Complete neighborhoods provide: defined character and high quality design”. What does that mean? Is it vague and open to very subjective interpretation? Is it price? An architect’s or developer’s vision of urban Jackson? Design which fits into the existing neighborhood?

“Identifying specific areas for existing and future complete neighborhoods will enhance our community character and relieve development pressure in areas we wish to preserve.”

Town currently has neighborhoods which are worthy of preserving to maintain a rural, small town character.

Policy 3.1.c: Maintain rural character outside of complete neighborhoods

“Outside of existing and future complete neighborhoods, it is the community’s goal to maintain our historic western, rural character.”

Low density and quiet neighborhoods are certainly a part of our rural town character. “Complete neighborhoods” should also reflect the historic and rural character of town. Complete neighborhoods do not mean urban neighborhoods. What are the consequences of not maintaining rural character in complete neighborhoods? Existing and future complete neighborhoods should not be excluded from protecting the historic western, rural character of existing and future neighborhoods

3.2e Emphasize a variety of housing types. “Maintaining a diversity of housing types and styles (single family homes, duplexes, condos, small lots, small units, lofts and apartments), including deed-restricted housing of all types, is an important component of creating complete neighborhoods and meeting our community’s housing goal.”

When lots are reduced in size to promote small houses, presumably for workforce housing, the lots should be deed restricted.

Policy 3.2.e: Promote quality public spaces in complete neighborhoods. “Integrating fine arts professionals in the design of projects will be encouraged in order to create unique and visually engaging public spaces—including sidewalks and walkways, parks, outdoor squares, landscaped areas and public art.”

4.4.5.1: Coordinate with a public art task force to write a public art plan for the community.

“Public art” should be confined to parks or the Center for the Arts” not placed along streets, sidewalks, walkways or highways. Art, as is beauty, is in the eye of the beholder.

Policy 3.3.c: Provide predictability in land use decisions. “Performance-based incentives should be limited and have clearly defined intended public benefits and ties to indicators to evaluate effectiveness. While discretionary land use tools provide additional flexibility, they do not provide predictability and are not appropriate for managing growth and development in the community.”

Predictability is critical and the community has repeatedly asked for predictability. I support this statement. Planning tools do not provide predictability.

Policy 4.3.a: Preserve and enhance stable neighborhoods. “Character Districts will aim to enhance these areas as complete neighborhoods without significantly increasing the allowable density.”

What does “significantly increasing the allowable density” mean? This statement is much too open. Density must be predictable. Who decides what is a ‘significant increase’? This is another example of vague wording which is alarming. Reference: Policy 3.3c.

Policy 5.1.b: Focus housing subsidies on full-time, year-round workers. Some members of the local workforce can find local housing that suits their needs and is affordable for their household. For those who cannot, governmental and non-governmental subsidized housing programs will continue to provide deed-restricted affordable housing opportunities to ensure realization of the community’s housing goal. Affordable housing is housing for which the mortgage payment or gross rent and utilities does not exceed 30% of gross household income. Subsidized housing programs will focus on providing housing for those members of the community who work locally full-time, year-round, whether at a single or multiple jobs.

I support the direction for governmental and non-governmental subsidized housing to be rentals.

In closing, the Staff Report requests that amendments after today won’t be considered, however, it is important that, as the Character Districts are formed, the dialogue remain open.

I have tried to send a comment but keep getting a message re: 1000 ‘character limit’-my estimate, not counting spaces is that the comment was less than that. This goes to my biggest frustration….trying to make a meaningful comment and discovering ‘the rules’ after the fact!
Thank you for considering the two major analyses of the draft Comprehensive Plan we recently submitted. We strive to provide you with timely and relevant information to help you develop the best possible policies for the future of Jackson Hole.

We greatly appreciate the work planning staff has done to incorporate our recent recommendations, and there are some clear improvements in the draft that was released on June 22nd. Staff should be commended for their excellent work on this draft. However, we are concerned that the major recommendations made by independent expert Alan Richman and the Alliance have not been seriously discussed, and vital policies cannot be improved without explicit direction from elected officials. This is an important time for elected officials to decide how to address these recommendations.

Our Comp Plan’s policies should direct the upcoming maps and regulations to ensure that we will achieve the community’s goals. It is important for us to reflect on whether we have created a framework that will accomplish the vision. Based on the analyses of the Comp Plan we submitted to you, we recommend:

- Growth Management: Add language similar to Richman’s recommendation that “…at a minimum the Comprehensive Plan be amended to recognize the need to explore these approaches [growth management techniques]. An action strategy should also be included in the plan committing to conduct this exploration and to adopting a growth management approach that will limit the overall amount, and if determined to be necessary, the rate of growth in the community.”
  - This commitment to explore growth management techniques could be added as a new policy under principle 3.3.
- Permanent Conservation: Permanently conserved lands are noted as a priority, but this can be stated more clearly in the policies to help direct future regulations. Text should be added stating that “The permanent conservation of lands will be a primary land use strategy in the future.”
  - This text could be added to the chapters on growth management and ecosystem stewardship.
- Transfers: Add language taken straight from the Richman report: “Density transfers must be accompanied by permanent elimination of development rights in sending areas.”
  - This recommendation is based on Richman’s analysis that “…the Plan does not create enough certainty as to the overall buildout of the community. One way to provide some of this certainty would be to ensure that the development rights transfers out of the rural area as envisioned by Principle 3.1 are accompanied by permanent conservation easements or deed restrictions that eliminate development potential in perpetuity.”

Please take time to discuss and vote on each of these three proposals on June 29th.

In addition, we need to more clearly articulate how planning work will proceed. In many ways the Comp Plan is on track towards excellence, but hasn’t yet clearly defined how it intends to achieve overarching goals. Your discussions in recent months have identified topics that need more work and slated them for further exploration. It is reasonable to move forward with Character District mapping only if we are simultaneously working to research key topics and develop an Action Plan that explains how we will further refine the Comp Plan in the coming years.

It is important that you acknowledge that the Comprehensive Plan includes important policies that are not yet fully complete. Although there is vague language suggesting that these issues will be explored further, there is no plan in place for any additional research into several key topics. The Alliance believes that the plan’s policies cannot be adopted without a clear written commitment explaining when and how these vital issues will be adequately studied and incorporated into the Comp Plan. The Alliance will continue to submit detailed recommendations for how to best study these remaining issues, and will work to assist in this research.

Attached is a summary of how you might proceed to develop an Action Plan, reach an informed decision on several of the core policies, and adjust the Comp Plan to incorporate these findings.

Also attached is the Action Plan framework used in the Draft Aspen, Colorado, Area Community Plan, [see full comment] which we think may provide a good model as you work to develop a similar plan.

We trust that you will commit to completing an action plan, and to revising any policies as needed to align with the results of further exploration. We note that past commitments for action have not always been completed, and we ask that you carefully consider the financial and time implications of the many issues you have slated for further exploration. This ongoing work is vital to achieving the community’s vision, and must have the needed resources for completion.

Feel free to contact the Alliance to discuss any of these recommendations further, and we look forward to seeing you in the meeting on June 29th.

Sincerely,

Trevor Stevenson
Executive Director

Below are the JH Conservation Alliance’s Comments and suggestions related to the following two issues:

A. Inclusion of an Action Plan & List of Prioritized Strategies in the new Jackson/Teton County Comprehensive Plan
B. Initiation of some Strategies to help inform the Character District Mapping Process

Please consider these recommendations as you proceed with your review of the Plan’s Policies and the Character District Maps.

A. JH Conservation Alliance Recommendations regarding Action Plan:

• Direct Staff to incorporate a Detailed Action Plan prior to the effective date of the new Comprehensive Plan, which would outline an approximate timeline for actions and identify the entities responsible for carrying them out.

• Direct Staff to incorporate a List of Prioritized Strategies in the “Achieving Our Vision” section prior to the effective date of the new Comprehensive Plan, which would highlight which strategies should be implemented first.

Background:

In the recent report “Technical Analysis of Jackson/Teton County Comprehensive Plan,” Alan Richman provides the following specific recommendation: “Strategies should be organized into an action plan that establishes priorities for next steps and lays out a timeline for completing projects.” Following are brief excerpts from this report outlining the rationale for this suggestion, and specific solutions:

“Prioritization of the actions in the Comprehensive Plan will go a long way towards informing citizens as to what they can expect and will allow them to hold the Town and County accountable for whether progress is being made in Plan implementation. This can be done in the form of a tabular summary of proposed actions, with dates identified for when each will be accomplished and by whom, or it could be in the form of a timeline, with actions shown in the order in which they are intended to be accomplished.”

“A prioritized action plan needs to be formulated with a timeline identifying when, how and by whom (1) any missing or incomplete elements of the plan will be finished and (2) key implementation actions will be initiated and completed. This action plan should be inserted into the section entitled “Achieving Our Vision” and will provide a work program for the community in coming years.”

Once this action plan is available, a prioritized list of the strategies to be completed prior to major June 2011 – JHCA comments regarding the need to prioritize Strategies in the Jackson/Teton County Comprehensive Plan updates to the land development regulations could be incorporated into the “Achieving Our Vision” section of the plan. This step will be critical in providing clarity and proactive consensus about how to proceed in the annual work plans.

Attached is a specific example for how an action plan could be created as part of the new comprehensive plan. (See the attachment “Aspen Area Community Plan – Appendix for Action Items.”) Note that all policies to be adopted as part of that plan will identify an approximate timeline and responsible entities to carry out the described actions.

B. JH Conservation Alliance Recommendations regarding the Character District Mapping Process

• Direct staff to address the five specific recommendations outlined in the following pages

Note: While all strategies outlined within the plan are important to address, and many of the proposed strategies are strongly linked to one another across sections of the plan, there are some strategies that are so essential to the foundation of the plan, and to the success of its implementation, that they must be addressed immediately, prior to the adoption of the Plan. More specifically, addressing some of these key strategies now will help to inform the character district mapping process, which has become a very important component of the overall plan.

Given that this new plan intends to be organized around stewardship of our ecological resources (as described in the first sentence of the plan’s vision chapter), those strategies most directly related to this goal are in need of immediate action. In practical terms, most of the policies in the plan hinge on the capacity for our community to address wildlife protection and growth management issues in a timely, effective manner.

Background:

In the recent report “Technical Analysis of Jackson/Teton County Comprehensive Plan,” Alan Richman provides the following statement, as it relates to the plan’s suggestion to use a transfer program: “The complete neighborhoods concept is a cutting edge approach to planning, but its success hinges upon work that has yet to be completed. If this part of the planning process cannot be successfully completed, the entire Comprehensive Plan is in jeopardy of failing.” In brief, much of the success of the implementation of the plan hinges upon fundamental factors that have not yet been studied or discussed.

In Richman’s words:

“So the stakes for the upcoming character district mapping process could not be higher... Completion of the character district maps is an essential part of this Comprehensive Plan. The initial step in the mapping process should be a rigorous analysis of the amount and locations of development that are proposed to be reduced in conservation areas and an equally detailed analysis of the areas proposed for increased development as complete neighborhoods. In other words, the maps need to be more than a pretty picture of a planning concept.”

In summary, immediate action is necessary to inform the upcoming design of what will be a critical component of the community’s new comprehensive plan – the character districts. To provide the level of predictability that the policy portion of the plan does not provide, it is imperative that the maps be based on the best information possible. To make this information June 2011 – JHCA comments regarding the need to prioritize
Strategies in the Jackson/Teton County Comprehensive Plan available, and to facilitate informed land use decisions in the future, immediate action is necessary on some of the plan’s proposed strategies.
(See attached “Referenced Strategies for Immediate Action,” page 7, for strategy language that is included in the most recent draft of the Plan, which is referenced below.)

Specific Recommendations:
1. Support immediate action to initiate and carry out strategies to obtain the best available wildlife science to inform future development and conservation policies (with an emphasis on strategies 1.1.S.1, 1.1.S.2, 1.1.S.5, 1.1.S.7, and 1.1.S.8)
   a. Suggested Immediate Actions:
      Direct the Natural Resources Technical Advisory Board, with the help of local agencies and non-profit organizations, to address the specific strategies for native species protection. (Some are underway; some should be initiated immediately.) This effort should specifically address how existing data will be compiled to inform the character district mapping process, identify key outstanding data gaps, and provide an outline of research priorities to be completed in the next year.
      In general, the best available science should proactively inform the character district mapping process, identifying the most important areas for permanent conservation and the most suitable locations for new development and redevelopment. It will also be important to identify the types of data that are needed prior to the revision of land development regulations, such as an updated Natural Resources Overlay.
2. Support immediate action to initiate a strategy to assess the cumulative impacts of growth and development on wildlife and natural resources (1.1.S.3)
   a. Suggested Immediate Action:
      As part of the recommended action above, and subsequent to actions that are necessary for the character district mapping process, direct the Natural Resources Technical Advisory Board to identify how existing data and resources can be used to establish important baseline data for future monitoring of cumulative impacts. As part of a long-term work plan for this Board, it will be important to prioritize this strategy.
3. Support immediate action to address the strategy to identify key scenic resources (1.3.S.1)
   a. Suggested Immediate Action:
      To help inform the character district mapping process, the planning team should immediately identify how “key scenic resources” will be defined. (It is unclear how the mapping process could be completed without these areas being identified.)
4. Support immediate action on the part of community members and the planning team to address the strategy “explore tools for transferring development potential from areas of ecological significance to existing and future complete neighborhoods in the Town and County.” (3.1.S.2)
   a. Suggested Immediate Action:
      At the broadest level, support an immediate community effort – in concert June 2011 – JHCA comments regarding the need to prioritize strategies in the Jackson/Teton County Comprehensive Plan with the character district mapping process - to research appropriate transfer mechanisms for Teton County, Wyoming, in order to address the community priority for permanent conservation.
      Details – We’d encourage you to take the following steps, to be followed-up with a commitment on the part of the elected officials to a best practices approach to transferring development potential that will work in Teton County:
      i. Hire an expert consultant for a presentation on transfer mechanisms to highlight the successes and challenges of different approaches to transfers, including transfer of development rights programs
      ii. Establish of a Citizen Advisory Committee or taskforce, to include a diverse spectrum of backgrounds and relevant expertise and include staff and elected officials, to discuss the best options for a transfer mechanism specific to Teton County, Wyoming
      iii. Compile necessary analysis and research to inform discussions, including a feasibility study and detailed economic analysis for a transfer of development rights program
      iv. Compile necessary analysis and research on alternatives to formal transfer programs that could work to ensure permanent conservation of lands in return for allowing more density in areas that already have some development
5. Support immediate action, as part of the character district mapping process, to address the strategy “explore growth boundaries, associated expansion regulations and criteria for complete neighborhoods in the Town and County” (with less emphasis on regulations) (3.1.S.5)
   a. Suggested Immediate Action:
      For the character district mapping process to be effective, this strategy must be initiated now. For example, the concept of growth boundaries must be explored prior to proposing specific character district boundaries. As indicated in our letter, the potential overall amount of growth in the valley has consistently been a top issue of our community. Growth management techniques, such as growth boundaries, and others that are outlined in Richman’s analysis, must be considered prior to the adoption of the plan and the revision of the land development regulations.
Overall, in order for the implementation of this plan to be successful, it is important that certain strategies are completed prior to other strategies, and some prior to implementation of the Plan. Some policies cannot and should not be implemented without a basic foundation that first and adequately addresses the highest priority of the community – wildlife stewardship.

Sincerely,
Kristy Bruner
Community Planning Director

Referenced Strategies for Immediate Action

Section 1. Stewardship of Wildlife, Natural Resources and Scenery
Strategies to maintain healthy populations of all native species (Principle 1.1)
1.1.S.1: Create a vegetation cover map that can be used to help inform the identification of relative criticalness of habitat types.
1.1.S.2: Identify focal species that are indicative of ecosystem health and determine important habitat types for those species. Evaluate habitat importance, abundance and use to determine relative criticalness of various habitat types.
1.1.S.3: Establish a monitoring system for assessing the cumulative impacts of growth and development on wildlife and natural resources. Implement actions in response to what is learned to provide better habitat and movement corridor protection.
1.1.S.5: In the interim, as focal species are being identified, work with Wyoming Game and Fish and other partnering agencies and entities to update the mapping that provides a general indication of the location of the Natural Resources Overlay (NRO), based on current protection of critical “species of special concern” habitat.
1.1.S.7: Identify areas appropriate for public and private ecological restoration efforts.
1.1.S.8: Identify areas appropriate for underpasses and overpasses and speed reductions in heavy volume wildlife-crossing areas.

Strategies to maintain the scenic resources of the area (Principle 1.3)
1.3.S.1: Evaluate and remap the Scenic Resources Overlay based on accumulated knowledge of potential visual impacts and changes to scenic policy.

Section 3. Responsible Growth Management
Strategies to direct growth out of habitat, scenery and open space (Principle 3.1)
3.1.S.2: Explore tools for transferring development potential from areas of ecological significance to existing and future complete neighborhoods in the Town and County.
3.1.S.5: Explore growth boundaries, associated expansion regulations and criteria for complete neighborhoods in the Town and County.
As you begin to consider the Character District Maps for the Comprehensive Plan, we ask that you consider the following suggestions. After attending the Smart Growth talk sponsored by Plan JH, it is apparent to us that while many people advocate “smart growth” they do not follow all the principles. Communities that have been successful in managing growth all seemed to follow these key principles:

1) There was a clear benefit from any changes in density for the whole community, not just developers, that was obvious to all. This applies to both density transfers and density bonuses meant to incentivize specific types or locations of development.

2) Where density changed, there was a known increase for targeted areas so neighbors knew exactly what they were getting. No hand waving and nebulous numbers.

3) When density changed, neighbors were asked to determine where they would like to locate the transferred density in their neighborhood. The amounts were determined globally, but the locations were determined locally. The neighbors had input in the process of determining the proper location.

Following all three principles is not easy, but failure to follow them will lead to failure. All character map discussions should make it clear what changes are proposed to neighborhoods.

Another key concept of successful communities was that they did not hand wave and draw circles on maps to determine where to allow growth. They used a rigorous method to analyze the boundaries for areas deemed to be appropriate for growth. They also evaluated the amount of growth projected for the life of the plan in addition to the total amount of growth allowed. We would ask that Staff prepare overlay maps that examine the following items:

1) Distance from first response locations should be evaluated to determine estimated response times. Fire and ambulance response time should be noted as “acceptable in all conditions”, “questionable in certain conditions”, and “not acceptable.” Areas that are “not acceptable” should be avoided.

2) Current START service. Show actual routes and current stops.

3) Location of current infrastructure (water, sewer, storm sewer, electrical power, schools, pathways and parks). We need actual locations, not comments that “this area has sewer.”

4) Location of complete neighborhood components (commercial, day care, recreation, public space). This overlay should include grid lines at ¼ and ½ mile intervals to aid citizens in visualizing the goal of having these components within ¼ to ½ mile of their neighborhood.

5) Congested roads which should be avoided.

6) Open spaces that should be avoided. This can include areas under conservation easement in addition to areas targeted for protection.

7) Critical wildlife habitat that should be avoided. Not all habitat is critical for wildlife. In our high mountain environment critical habitat is often winter range and nesting/parturition areas. Summer habitat is not normally the limiting factor in wildlife populations. Also critical are travel corridors in addition to migration corridors. We have some data on migration corridors, but we have less information on travel corridors that link key areas.

All these criteria should be weighted equally and overlaid on a single map to determine logical boundaries for growth within the boundaries set by our Comprehensive Plan. We ask that this information, most of which is readily available be used to show the public how boundaries were developed. We believe this method is superior to drawing circles on the map.

I receive you news letter. I would like to know how long you must live in Teton County before you can apply for one of the houses? Any kind, low income, affordable whatever. Do you have to have a JOB in Teton County? Do you have to promise to live in the dwelling for a certain amount of time before you sell it? Can you buy one of these if you are on well fare?

Gentlemen;
As you well appreciate, the enjoyment of living in Teton County as well as the preservation of our property values is dependent on maintaining the character of our community. I have just read Alan Richman’s review of the current draft and am trouble about three aspects:

1. It appears we are not doing enough to limit either the ultimate population of the County or its rate of growth.

2. It appears we are depending on transferable development rights to meet the different development goals of the Town and County. I do not believe this technique has been found widely effective.

3. It appears implementation depends on multiple studies and formulations which have not been sufficiently specified or scheduled.

I urge that adoption of the plan be deferred until these aspects are corrected.
Thought you might like to read the article link below and look at the slide show link. The last meeting on the comp plan made me realize that most of you are still not dedicated to raising the bar and expecting more out of our comprehensive plan when it comes to future sustainability goals. Approaching Net Zero is not pie in the sky wishful thinking to be scoffed at and pushed down the road because it sounds unattainable. We can make jokes about the goal and brush it aside but in the end we will be paying a high price and playing constant catch up because we did not take our goals seriously. Seizing innovations and the day will yield much better results.

As for the little guy not being represented at the comp plan meetings... Do I need a neon sign? Am I too old a demographic to be taken seriously? (Don't answer that unless it's complimentary) I might be one of the older members in my neighborhood, but I get plenty of positive feed back about the issues I harp on from my younger neighbors that have 2 or 3 jobs and young children that keep them from the meetings.

I'm glad you will be taking more time to tweak the plan. Hopefully, it will resemble a document with clear, concise language and goals that represent what has been repeated over and over again by the majority of town and county residents.

Thank you all for your time last night.
There are a few details that did not warrant time during comments last night, which I would like to see Staff include in their clean up work on the Final Comp. Plan. These include:
-Rephrase Policy 1.4.e Conserve open space to use public lands more responsibly – doesn’t make sense, needs some plain English;
-Re-write Policy 3.1b regarding the use of Transfer of Development Tools.
-Contradiction in Policies 3.3e and 4.2b in relation to making policy decisions independent of economic considerations;
-Strategy 3.2.S.4. Teton Village Master Plan + Principle 7.1 Alternative Modes of Transport – Westbank resident commuter solutions need to address the workforce not visitors. Essential to reducing SOV trips.
-Generally, quantity of measures and indicators – there’s still too many in the Plan to be realistic and cost effective.

| 6/7/2011   | O'Donoghue, Tim Chamber of Commerce | The following comments are submitted by the Jackson Hole Chamber of Commerce based on a review of the Jackson/Teton County Comprehensive Plan draft dated May 20, 2011. These comments pertain to Section 6: A Diverse and Balanced Economy.  
General Comments
(1) The recurrent citation of ecotourism as the focus of the tourism sector of our economy is very limited. Ecotourism is one aspect of a much greater current state of and opportunity for our community – Sustainable Tourism. Sustainable Tourism is defined as tourism that leads to the management of all resources in such a way that economic, social and aesthetic needs can be fulfilled while maintaining cultural integrity, essential ecological processes, biological diversity and life support systems. Ecotourism addresses the environmental or ecological resources of our community but not the cultural, arts, historical and heritage resources of our community. While there are references to “cultural tourism” later in this section, it would be more accurate of our current and potential tourism economy and consistent with the world-wide trend in tourism to use the term “Sustainable Tourism.”
(2) Include a reference to strengthening the family orientation of our tourism economy. Jackson Hole and Teton County should appeal to a broad range economic demographic. A continued and new focus on middle class families should be integrated into the Comp Plan. Family visitation has been central to the success of our community’s tourism economy. Left unattended, current economics are driving new commercial development towards high-end business that is unaffordable for many families. In order to continue to attract families, commercial development policy should support affordability for visiting families. The policy and tourism goal of providing a high level of services and amenities is not limited to high-end development and high priced services.
Specific Comments
(3) Replace “Eco-tourism” with “Sustainable Tourism.” Replace “green” with “sustainable.”
(4) Policy 6.2.a “Create a positive atmosphere for economic development”: Delete the first sentence that reads, “Attracting the right types of business will be essential to achieving a ‘better not bigger’ economy.” The usage of the term “right types of business” is subjective, ambiguous, open to conflicting opinions, and does not add to the quality of this policy.
(5) Policy 6.3.b “Enhance tourism as a basis of the economy”: The reference to “retail-based tourism” in the last sentence could be interpreted to mean that the Comp Plan does not support our local retailers. Change the sentence to read, “The community will continue to avoid carnival-type attractions and outlet malls as tourism assets as they do not support our desired community character.”
(6) Policy 6.3.d “Promote light industry”: The term light industry is ambiguous and open to conflicting opinions of what that includes. Provide greater specificity in the use of that term by either providing examples of what light industry might include and/or use a standard or common definition of “light industry.”
(7) Strategy 6.1.S.1: Revise the strategy “Market the community as a ‘green’ location to visit, live and work, and promote business based on ecotourism” to read, “Market the community as a world-class sustainable tourism destination and a location to live and work.” The wording change recommended is more consistent with the emphasis on Sustainable Tourism than eco-tourism.
(8) Strategy 6.2.S.1: The term “non-financial” is ambiguous and open to many different interpretations. Please provide greater specificity in the use of that term by either providing examples of what non-financial tools are and/or a definition of non-financial tools.
(9) Strategy 6.2.S.2: The use of the term “appropriate types of business” is subjective, ambiguous, open to conflicting opinions, and does not add to quality of this policy. Revise “Evaluate and update land use regulations to foster a positive atmosphere and attract appropriate types of business to the community” to read, “Evaluate and update land use regulations to foster a positive atmosphere and attract the types of business that are consistent with the principles and policies of the Jackson/Teton County Comprehensive Plan.”

| 6/7/2011   | Matthews, Heather Interested Public | Please incorporate comments and suggestions provided by the Jackson Hole Conservation Alliance and Alan Richman.  
We need a comp plan without loopholes. We need a proactive plan to keep Jackson Hole special for future generations of people and wildlife. The comp plan must have mechanisms to ensure permanent protection of open space and policies to manage growth and to protect wildlife.  
Doubling this valley’s population will not sustain the ecosystem or community character, in fact it may destroy it. Please at least limit growth to current entitlements.  
Thank you for your time and consideration.   |   |
Regarding Sect. 7, Transportation, the Plan makes it clear we are looking to degrade the level of service to "D" in order to move people to public transportation. In theory, this is a good idea but as a local business owner, I am VERY concerned that with all the effort that local business owners put in to creating an "A" level of service can be wasted on a horrendous visitor experience due to traffic backups. We (businesses) spend money & effort to create great guest experiences to welcome people, and even more important, to bring them back. If the first real visitor experience they have is a one hour trip from the airport to their hotel in Teton Village, this guest is already considering a different town to visit next time.

This is a very strong statement and if executed on, could have severe & negative impacts to our financial lifeblood. Citizens saying they do not want a wider road must be balanced with the reality that all of our efforts to provide 1st class service.

6/3/2011 Tompkins, Kathy
Interested Public
http://dl.dropbox.com/u/21259626/Plan%20JH%20presentation%20052311.pdf

Hi, Above is the PlanJH link to the Smart Growth Presentation at the Wort last week. If you scroll down to page 78/79 you will find a box on design review and it’s restrictions on home size in McCall, Idaho. The presentation also has samples of overlay maps with "GIS tools to assess the lands inside the Urban Services Area as to their relative suitability for residential development."

Design review
• Process for using Design Guidelines
• The City of McCall Design Guidelines is a separate document
• Design review approval required for just about everything except a single family home less than 3,500 square feet that is not in the Scenic route or Shoreline zones
• Subdivisions with design review procedures approved by the City would be exempt from this requirement

Why couldn’t we do something like this but start out at 2500 sq ft and combine it with the permanent retiring of 35 acre developable land for small increases in the size of a home? I think every square foot counts when it comes to reducing the burdens of service workers needed to maintain large homes. The carrot and stick approach would be more evenly spread out between townies and rural homeowners. Right now the rural homeowners get the carrot and the townies get the stick.

I am also anxious to see the JHCA’s comments today. I don’t think it is about complete urbanization in a mountain setting. We need to know the limits on how much can be transferred to town areas through TDRs, so as not to degrade the existing neighborhoods with total urbanization. It’s about unambiguous options and a well defined complete comp plan that get us to our goal of permanently protected open space, wildlife and a sustainable community with a small western town feel.

6/3/2011 O’Donoghue, Tim
Chamber of Commerce

In Principle 6.3 of the Comp Plan, Policy 6.3.b: Enhance tourism as a basis of the economy, the last sentence reads “The community will continue to avoid carnival-type and retail-based tourism, as they do not support our desired community character.” How do you define “retail-based tourism?” I assume the statement is not meant to say that our community retailers will not be supported. Am I correct?

Here is my comment or recommended change to the wording: Change text to read, “The community will continue to avoid carnival-type attractions and outlet malls as tourism assets as they do not support our desired community character.”
As you know, our community has a long history of dedication and commitment to protecting the values of Jackson Hole that make it world renowned – its wildlife, open spaces, scenery, recreational opportunities and small mountain town character. The Conservation Alliance believes that we have a unique obligation to protect this area for generations to come. Jackson Hole, and the Greater Yellowstone Ecosystem, of which our valley is a fundamental piece, deserves no less. The local planning decisions that we make today will have consequences, both intended and unintended, down the line, which is why we need to ensure that we create the best possible Comprehensive Plan for our community.

With this in mind, we request that you consider our comments on the most recent draft, attached below [see full comment]. While we recognize and appreciate movement in positive directions, we believe this plan needs some additional improvements before it is best able to achieve our community goals and is ready for implementation.

Broadly, there are several overarching concerns, also addressed in our attached comments, which need to be addressed prior to completion of this portion of the review process:

1. The overarching, lingering concern in this Plan is the lack of a proactive approach to managing the amount of growth in our community. The Plan’s proposal for monitoring and reacting to growth is useful, but cannot be the central strategy to managing future growth.
2. Many of the Plan’s sections and policies rely heavily on the ability of an undetermined mechanism to transfer development potential from the rural county into “complete neighborhoods.” Without a clear explanation and exploration of this transfer system, it seems premature to hinge so many other policies on it. In the development of such a mechanism, it will be important to bear in mind that many members of the community expect real tradeoffs; that future development truly is offset by permanent extinguishment of development potential in other, more sensitive areas of the County.
3. The Plan also needs a more proactive approach to wildlife protection, recognizing that avoidance of impacts in sensitive areas is often preferable to mitigation of impacts. To this end, this Plan needs a stronger focus on permanent protection of open space.
4. This Plan generally lacks acknowledgement of existing conditions and the unique context of Jackson, and relies too strongly on cookie cutter concepts without a realistic understanding of how planning principles should best be approached on the ground. This general ambiguity in the vision of the future of Jackson Hole results in a scenario where many of the hard decisions about the location, amount and type of growth will be debated in a piecemeal way in the character district review process rather than in a proactive way in the policy document.
5. Throughout the document, there are far too many “to explore”s on fundamental issues, where there should be “will”s, to ensure that community goals are able to be upheld by the Plan’s policies.
6. This Plan needs to set the top priorities for the next 18 months, as it is clear that many of the called for studies and work plans will not be included in the document itself.

In addition, attached to this letter is the draft policy document. We have highlighted key policies and phrases that we believe warrant additional consideration or modification. Our comments are categorized by section and are in the form of footnotes; please reference the draft document when reviewing the comments and recommended actions. Some of the points we have raised over the years, and, given the significant changes in this new draft, some are new. We urge you to consider these recommendations as you undergo your review of the draft plan during your June 7th JIM.

Thank you for your work on behalf of the community these past months. This community faces some unique challenges and the ongoing effort and commitment that have gone into this Comprehensive Planning process is remarkable. As we near the conclusion of the review of the themes and policies, we ask that you continue to represent the community’s interests and create the best plan that we possibly can.
The Jackson Hole Conservation Alliance appreciates this opportunity to provide you with two detailed analyses of the latest draft of the Comprehensive Plan. The goal of the Alliance is to provide you with the best available information and analysis to help you in developing the strong and effective comprehensive plan that we all want to guide the future development of Jackson Hole. For years, we have focused a tremendous amount of our organizational resources on assisting you in this critical work, and we have redoubled our efforts in recent months. We trust that you will recognize our efforts by giving serious consideration to the recommendations presented here.

The Jackson Hole Conservation Alliance has worked to identify and hire an independent expert on effective comprehensive planning for communities like Jackson Hole. We are delighted to present the analysis of Alan Richman [see actual comment for analysis], a renowned expert in this field who was also one of the key authors of our groundbreaking 1994 Comprehensive Plan (see Richman’s attached qualifications). The Alliance, with support from Save Historic Jackson Hole and community members, has contracted with Alan Richman Planning Services Inc. to complete a technical analysis of the draft Comp Plan. Richman and his associates were directed to conduct a thorough, independent analysis of the degree to which the policies of the Comp Plan represent best practice in the field, and whether these policies are likely to achieve the stated goals of the community. We have been careful not to influence or pressure Richman towards any particular conclusion, and his analysis represents his expert opinion. As you read his analysis, you will note that he generally agrees with most of the points that the Alliance and other community members have been making, although he also differs with the Alliance’s historical stance on some issues. We’re certain that you will find this independent review interesting and useful, and we encourage you to discuss his recommendations and take action to strengthen our Comp Plan.

The Alliance is also pleased to present a detailed, line-by-line review of the draft Comp Plan. This work was led by Alliance Community Planning Director Kristy Bruner, who has an advanced degree in this field and years of involvement in the development of this Comp Plan. The line-by-line review highlights numerous details and nuances in the document that can be improved, and also provides explanation of key issues that still need to be addressed within the draft. We ask that you reread the annotated Comp Plan that the Alliance is submitting.

We would like to draw your attention to a few of the key findings of these reviews. It is important to note that, overall, the goals of the Comp Plan are clearly outlined in the current draft, and some of the policy text is quite good. Most of the concerns with the draft revolve around the degree to which many sections use vague language, and key issues are only partially resolved in the Comp Plan. Although many policies are fine, the fact that key components are missing from the plan will prevent it from fully achieving its stated objectives.

In particular, we ask that you review consistent concerns that the draft plan still needs:
- Mechanisms to ensure that valley’s open, rural spaces will be permanently conserved in return for allowing more density in areas that already have some development.
- Stronger, more effective policies to manage growth, not just monitor and react to growth.
- Policies to provide a more proactive approach to wildlife protection.
- The Alliance requests that elected officials give the planning team clear direction to address the detail-level recommendations in these two reports.
- Give the planning team authority to incorporate all recommendations that are consistent with the intent and previous discussions of the elected officials.
- Review the use of policy statements that include terms such as “should,” “may,” and “explore,” and direct staff to replace as many of these weak terms as possible with stronger words like “shall” and “will.” This will strengthen the applicability of the Comp Plan.

We believe that some of the central issues of this Comp Plan need to be reviewed by elected officials to ensure that the plan will meet community objectives.
- Please review the substantial recommendations on the content of policies related to impacts on wildlife, growth management, and transfer of development. Consider the recommendations of the Alliance and Richman as you work to strengthen these sections, as they are vital to the overall success of our community.
- Work with the planning staff to develop a workplan that outlines how and when you will complete the additional work needed for a fully functional plan, to address sections of the plan that rely on further exploration, data collection, etc. Detail who will do this additional work, and by what date. Many portions of the plan won’t work well until this supplemental work is completed.
- Clarify what issues you expect to address in the Character District Maps and Land Use Regulations, so we can see what work is still ahead of us and make sure we aren’t missing any essential components of good planning. This will reduce concerns that we haven’t fully resolved many key issues in the policy section of the Comp Plan.

We greatly appreciate your commitment to produce a cutting-edge Comprehensive Plan that will exemplify the priorities of Jackson Hole, and we trust that our work will help you develop a plan that fully achieves our shared goals.

<td>Whetzel, Josh</td>
<td>Do you have any maps or drawings showing the areas where development and at what densities will take place according to your draft plan? Its hard to visualize the intention of the written plan without an on the ground interpretation. I live in the Aspens and have seen a previous map showing future development making that already congested area even more so. I think the written intensions are good but without a map it is hard to comment. So I think that it would also be difficult for the Council and Commissioners to adopt a plan without giving enough time or discussion of the whole package. I guess what I am saying is that the meetings you are having now an the comments you are hoping to get will be pretty much meaningless without the maps or at least written specific designations of the areas and expected densities of future development.</td>
</tr>
</tbody>
</table>
There are significant improvements in this Plan and we want to recognize the hard work by all parties that got us to this point. It’s been an arduous 3-year process. We support a considerable portion of the document and are pleased to see improvements such as a stated desire for smaller buildings, the need to preserve the character of some neighborhoods, and the limiting of Resorts to their current footprint. We also feel the goal to monitor our progress against our vision at regular intervals as a significant improvement from the previous Plan.

In some instances we have copied passages from the Comprehensive Plan and all our comments and recommended changes are in red to make them stand out from the Comp Plan text.

Because of the compressed timeline for review, we are concerned that many of our detailed comments could be lost. The issues we have raised are important and discussion in detail may be necessary to assure good communication. We are therefore prepared to meet with planning staff and/or elected officials as may be required and request the opportunity to do so.

General Comments
- Save Historic Jackson Hole and Jackson Hole Conservation Alliance collaborated to have an independent review of the current draft. The Richman Report should be available later today and will be submitted by us separately from these comments to meet the noon deadline. We support the conclusions and recommendations in the report and ask that you incorporate the recommendations in the final draft.
- This Plan still needs more detail in a number of areas. Our detailed comments below list specific examples. Past experience has shown that lack of detail will result in controversy and confusion during the evaluation of specific projects. It is easier to be fair to all parties involved by providing the detail now rather than later. Once a project is brought forward the evaluation is clouded by the personalities involved and the economics of making a profit.
- How do we resolve conflicts? We need guidance on how we are going to balance wildlife needs with human needs, and private property rights. How do we balance the rights of current residents with the rights of future residents? In the real world not all these decisions will be “win-win.” How will we make the hard decisions?
- Leaving the Transportation Plan separate to the Comp Plan repeats a mistake made in 1994. It should be an integral part of the Plan. They are interrelated. Keeping the Transportation Plan separate delays the hard decisions to later instead of tackling them now.
- It is difficult to comment on the Plan without character district maps. How do we know we will achieve our vision without some detail of what we plan to do on the ground?
- While complete neighborhoods have the laudable goal of reducing traffic and increasing livability, we are concerned that an unintended consequence is the urbanization of our community. Most people moved here for the small town atmosphere and the rural character. While complete neighborhoods might work in more urban areas with densities much higher than Jackson and Teton County, we are not convinced it is economically feasible to have convenience commercial, daycare, schools and other components of complete neighborhoods within ¼ to ½ mile of each complete neighborhood. This Plan should focus on things which we can control. We can allow an individual to pursue their dream of a business, but we cannot guarantee that it will succeed. We also can control what types of businesses are allowed in a specific location, but we cannot tell an individual what specific type of business to build.
- We need to acknowledge we may not be able to transfer all development from rural if receiving areas are destroyed in the process. In this case the details (i.e. specific numbers transferred) are as important as the concept (preserving the rural county).
- We have submitted a list of what we consider to be minor edits not related to policy to staff. We ask that you direct staff to incorporate those changes.

Questions
ES-15 “0.12% of County will handle majority of future growth.” We understand how this number was obtained, but it should be explained to the public.

Policy 1.2.d (CV-1-6) Improve air quality: How to measure? Are we concerned about ozone, particulates, SOX, NOX, or CO2? If we all drive less, but the population increases faster so total miles driven goes up, have we improved the situation?

Specific Comments
Policy 1.1.g (CV-1-5) Encourage restoration of degraded areas: Does restoration of degraded areas mitigate impact in other areas? This seems to be double dipping by giving credit to a new sin for rectifying an old sin.

Policy 1.3.b (CV-1-7) Maintain expansive hillside and foreground vistas: “Through mitigation and development restrictions, the protection of scenic foregrounds and forested hillsides in the Town and County will be enhanced beyond the guidance of the 1994 Plan to the extent that it does not prohibit development of property rights or impact wildlife habitat, or wildlife movement.” What does it mean? It is very vague and seems to set up a conflict between wildlife and property rights.
Policy 1.4.c (CV-1-9) Encourage rural development to include quality open space: “Possible incentives include density bonuses such as house size, locations, guest house and other options.” These are not density bonuses. Change to be consistent with 1.4.5.1. “Consider incentives in addition to density bonuses including house size, locations, guesthouses, and other options.”

Policy 2.4.e (CV-1-17) Encourage smaller buildings: “The community will explore regulations and incentives to encourage the construction of smaller buildings.” This seems in conflict with the Town’s desire to increase FAR but is consistent with the Communities desire for smaller buildings.

Section 3. Responsible Growth Management: Delete the sentence “Equally important is to develop our great stable neighborhoods and methods to preserve and enhance them.” The sentence is confusing and seems contradictory to sentences immediately preceding it.

Principle 3.2 (CV-2-6) Enhance existing and future complete neighborhoods: It is unrealistic to think we can provide “childcare, commercial, recreation and other amenities within walking distance (1/4 to 1/2 mile)” of all neighborhoods. This is acknowledged on CV-2-15 “Not all components of a complete neighborhood can, should or need to be provided in every area of Town.” The same needs to be said about other complete neighborhoods in the County. We should also acknowledge that in a free market, we can encourage business that we think will make a neighborhood complete, but we cannot require them.

Policy 3.2.b (CV-2-6) Locate nonresidential development to complete County neighborhoods: “County completer neighborhoods with lodging may also include visitor oriented commercial development that encourages a vibrant, year-round, pedestrian character.” Simplify and be clear, we will consider commercial development at Teton Village and the Aspens that encourages visitors to walk instead of drive. This should not conflict with our principle that Town is heart. Visitors should not be able to stay at the Aspens or Teton Village and have no reason to go to Town.

Strategy 3.2.S.4 (CV-2-11) Strategies to enhance existing and future complete neighborhoods: “Explore opportunities to amend the Teton Village Master Plans to allow for a more vibrant, year-round complete neighborhood that includes more locally-oriented nonresidential uses.” This is in conflict with “Town as Heart.” In addition to maintaining the footprint, it should not increase entitlements such as square footage and lodging units. This is consistent with Policy 3.1.d (CV-2-50 which says “No new planned resorts should be created, and existing resorts should be limited to their existing footprint.”

Policy 4.2.a (CV-2-17) Create Mixed Use Districts: It is not clear what we are trying to create. This needs more explanation and definition.

Policy 4.2.d (CV-2-18) Create a Downtown Retail Shopping District: “Local sales tax collection within Town will be centered in this district and must be maintained and expanded to continue to fund basic public and community services.” It is not clear what the goal is. We need to recognize that sales tax revenues may follow economic trends outside our control.

Policy 4.2.f (CV-2-18) Maintain lodging as a key component in the downtown: Maintain the current lodging overlay. The public has been clear they do not want to expand the lodging overlay. Except during the summer peak we have excess lodging capacity. The public has been clear any expansion should be in the shoulder seasons, not in overall capacity.

Strategy 4.1.S.1 (CV-2-23) Strategies to maintain Town as the central complete neighborhood: Evaluate and update base zoning requirements and performance tools consistent with Principles, Policies and Character Districts. This is not predictable and sounds dangerous if we are going to do this on an ongoing basis. Be clear that this strategy is a one time activity.

Policy 5.4.b (CV-3-7) Avoid Regulatory barriers to the provision of workforce housing: “This may include providing exemptions from certain regulatory requirements…” Needs to be more specific, will we exempt from life safety or zoning requirements? We need to acknowledge the community is not willing to give unlimited density bonus to workforce housing. It is not predictable and is damages existing neighborhoods.

Policy 6.3.c (CV-3-7) Ensure year-round economic viability: It is not clear what long-term lodging is as is not defined in the LDRs.

Section 7 Multimodal Transportation (CV-3-23) We should include South Highway 89 on the list of projects even though it may be complete before the Plan is done.

Policy 7.3.a (CV-3-24) Avoid Develop a land use pattern based on transportation connectivity: “A goal of this plan is to interconnect existing County neighborhoods and the Town of Jackson with a multimodal transportation system.” This is especially important for new development. We should learn from our past mistakes and require any connectors to be complete before construction begins. This is a powerful statement to add to this policy.

Policy 9.1.a (AV-4) Trigger the Growth Management Program at 4% growth: “A goal of this plan is to interconnect existing County neighborhoods and the Town of Jackson with a multimodal transportation system.” There should be an explanation on why the trigger only includes residential and does not include nonresidential growth.

Annual Indicators (AV-9):

-Growth by type looks at a variety of categories, but the information will be flawed if only examine new construction and ignore changes in use. How will we handle changes in tenants that do not require redevelopment or new construction? (ex: Local retail to visitor retail, private office to nonprofit) Need to add another trigger for corrective action: failure to provide indicators or required annual report.

-Affordability of housing should decrease? How do we define affordability? It makes no sense, we have no control.
Increasing lodging occupancy by season is in conflict with the desire to not increase tourism in summer. It should read “increase lodging occupancy in shoulder seasons.”

Applicability of the Comprehensive Plan (AV-12): “The Comprehensive Plan is a policy document that articulates the community Vision and does not have the force of law. The Land Development Regulations (LDRs) and other implementation mechanisms provide means to implement the community vision with the force of law. Where conflicts arise between the Comprehensive Plan and the LDRs or other implementation mechanisms, the mechanism with the force of law will prevail. Additionally, tools envisioned by this Plan but not implemented through a mechanism with the force of law are effectively unavailable until the latter occurs.” This is an egregious change from the previous Plan which required that all project approvals review the project against the Comprehensive Plan to be sure the project met the intent of the Plan. Despite our best efforts, conflict will occur. We expect our elected officials to resolve them by considering both the intent and vision along with regulatory mechanisms. All our visions in this document mean nothing with this statement. It sounds like the Comprehensive Plan is a throw-away item used to develop the LDRs then ignored from the point they are adopted rather than as a guiding document to be referred to at intervals in the future to determine if we are achieving our vision.

In addition to the comments we submitted before the noon deadline for inclusion in the staff report, we also wish to have the attached independent review of the Comprehensive Plan done by Richman included in the record of public comment. This was a collaborative effort between Save Historic Jackson Hole and the Jackson Hole Conservation Alliance. We agree with the recommendations in the JHCA cover letter and the recommendations in the Richman analysis. We hope the analysis be discussed at the joint meeting on June 7.
Thank you all for the thought and care with which you have considered the various issues germane to the affordable housing challenges of Jackson. We hope the following points of clarification, notes of concern, and recommendations for change will help tighten the work done to date on Section 5 of the May 2011 Comp Plan.

1. As discussed at the April 22 joint Information Meeting, the term Workforce Housing is a significant departure from the terms that we have been using for the last twenty years (affordable and attainable). While it is time for a new direction, everyone seemed to acknowledge the potential layers that could be included in the more encompassing term. For example, does the term include hedge fund managers; investment bankers? We believe the definition could be tightened by clarifying that “Workforce Housing includes local market and deed restricted housing occupied by people who currently earn their living in Teton County, Wyoming”.

2. Policy 5.2.a: Zone for the provision of a variety of housing options. We agree that specific locations in the Town and County should be zoned to allow for a diverse mix of housing options. However, we believe that the concept of "zoning for housing" needs to be cautiously pursued for a few reasons:
   • First, zoning is not permanent. As the "zoning for housing" concept has been described by members of the Blue Ribbon Panel, we understand that in order for the market to function, zoning changes must NOT be coupled with any resale restrictions. In this scenario, where zoning is leveraged to create market workforce housing options, the community would not have any guarantee that the housing will remain affordable to our workforce over time. It is our strong belief that when our community is asked to make an investment in workforce housing - either financial support or the support and acceptance of neighbors and the larger community - that our community wide investment should be protected.
   • Second, we are concerned that it could take ten to 20 years for the market to adjust to changes in zoning. A change in zoning will only facilitate the creation of free market workforce housing once land values adjust and respond to the change. Beyond the great amount of time this approach could take, we are concerned that the pain this approach could cause many landowners in our community threatens the viability of this approach. For example, in 1994, the Comprehensive Plan down zoned much of the general commercial in Town by a factor of 12. It was ten years before the Town of Jackson started to see redevelopment.

3. Policy 5.2.b: As noted in Policy 5.3.b, over 90% of the current workforce housing is “market housing”. Given this imbalance in the type of housing serving our workforce, it is hard to understand why both Policy 5.2.b and Strategy 5.2.S.1 are dedicated to the identification of areas that are appropriate for the provision of additional market workforce housing.

4. Policy 5.2.d: As currently worded, this policy suggests that incentives and regulations "will be" used to deed restrict existing market units. We appreciate that this policy has the potential to be a community sensitive strategy, but we believe the benefits of the strategy must be thoughtfully considered and balanced against the potential cost and long term liability that could accrue to the tax payers. Amending this policy to read: the deed restriction of existing rental units will be explored given the Town and County additional time to assess the cost implication of this strategy.

5. Principle 5.3: We appreciate that Principle 5.3 acknowledges that there are a variety of factors that affect the affordable housing issue in Teton County. In lieu of using this Principle to introduce the forthcoming policies identified to implement Principle 5.3, we think it would be worthwhile to expand on Principle 5.3 to give weight to the importance of exploring all component parts of the problem. For example: In order to meet our housing goals, the community will need to regularly monitor the percent of the workforce housed locally and strive to understand what forces are shaping the evolving demographics of our households. This will allow affordable housing providers to adjust programs to the changing needs of our community and make sure that we are addressing the core causes of the housing shortage.

6. Policy 5.3.a: As was discussed at the April 22 Joint Information Meeting, the nexus study is critical for a variety of reasons. It is equally critical that the adopted 2011 Comp Plan not include language that presupposes the outcome of the study. The second sentence of Policy 5.3.a seems to be a holdover from the 1994 Comprehensive Plan. Stating clearly in this policy that the impact from new residential, commercial and other non-residential projects will be determined by the updated nexus study seems sufficient without suggesting an outcome.

7. Policy 5.3.c: This policy should clarify that when incentives and direct funding are used to create additional deed restricted housing, the housing must provide the community with permanent workforce housing benefits.

8. Policy 5.4.d: This policy provides two opportunities to clarify that incentives and density bonuses should be used so long as they result in the preservation of existing workforce housing that will serve the workforce in perpetuity.

9. Strategies: This section identifies almost twenty strategies that should be implemented to achieve our community housing goals. Some of these strategies are time sensitive and necessary to help inform future action and to ensure that forward progress is not put on hold while we wait for updated data. We respectfully request that the legal nexus study be prioritized and that the electeds aim to complete this study by 12.31.11. In addition, this nexus study will provide our community with updated information that will inform the development of the Housing Implementation Plan. For the same reasons, we respectfully request that the electeds commit to the creation and adoption of the 10-year Coordinated Workforce Housing Implementation Plan by 12.31.12. Most of the other strategies identified for Section 5 of the Comp Plan can be prioritized in the 10-year
Implementation Plan.
Thank you all for your thoughtful consideration of our comments as well as the tremendous commitment you have made to this critical planning process.
I have read the updated draft Comp Plan. The document is better organized and clearer. However, I did see a number of points that I would like to raise with you:

Housing

Principle 5.1—Maintain a diverse population by providing workforce housing
I question the use of the word “provide.” County and Town governments cannot and should not be in the housing business. First of all, you don't have the fiscal resources. Secondly, we have had a grim lesson over the past few years of the consequences of government involvement in housing markets. Could you do better?

I understand why housing the County workforce in the County is important, but you should not view a simple percentage as the sole metric of success. What if someone prefers a detached house with some land in Alpine to a small condo in Jackson? Is that a failure of housing policy?

Finally, be careful about committing to a broad entitlement program at a time when governments across this country are coping with the fiscal burdens of past promises. Be realistic. Many County residents don’t have health insurance – isn’t that more important?

Policy 5.1.a: House at least 65% of the workforce locally
This is not a policy, it is a goal. And it is tough to claim it is a realistic goal. The data are in the draft: The median home price is 14 times the median income – and this is after the worst housing price collapse ever experienced in this country. If the median home costs 14 times the median income, a bottom quartile home must cost up to 7 times median income. But under new mortgage rules, it will be tough to get a loan much more than 3 times income, and that is with a 20% downpayment. Please, before you commit to this goal, get the facts about land costs, construction costs, and mortgage standards, to see what workers in the County can truly afford.

Policy 5.1.c: Prioritize housing for critical service providers
Absolutely. But, be careful about the fine print: “Especially for volunteer service providers...” What does this mean? Volunteer providers of what services? Who makes the determination? Remember, you are making a big, expensive social and financial commitment. It is valuable, and people will want to take advantage of it. I would recommend you be careful about expanding eligibility for housing assistance. Your risk is too much demand for workforce housing, not too little.

Policy 5.2.d: Encourage deed-restricted rental units
This is the only policy that mentions rentals. An emphasis on renting is the only way to make market-based workforce housing practical. Beef this policy up.

Principle 5.3—Address all causes of workforce housing shortages
This principle is wholly unrealistic. The main reason for the shortage of workforce housing is the demand and cost trends driven by global economic conditions. Another reason going forward will be constraints on mortgage credit from more conservative lending standards. These are things you cannot possibly address. How about, “Adopt policies to resist forces reducing the supply of affordable workforce housing.”? And, mention those global forces so people understand the challenges.

Policy 5.3.a: Mitigate the impacts of growth on housing
This policy is far too weak if you really believe in the 65% goal. You don’t “mitigate”, you “fully offset.” This is one of the few areas where local government can actually do something tangible about the supply/demand balance of workforce housing. Given all the other challenges to your workforce housing objective, if you allow development to worsen the balance you are not serious.

Policy 5.3.b: Preserve existing workforce housing stock
The is the elephant in the room. Commissioner Phibbs reported spotting it strolling through one of the JIMs, but all of you must have seen it. 90% of
the workforce housing stock is privately owned and much of it is valued far beyond the means of the median earner. How do you “deed restrict” these homes without disadvantaging the current owners? I know you intend to pass this elephant on to a “community housing implementation plan” (policy 5.4a), but do you honestly expect to avoid having to take responsibility for it at some point? If not in this Plan, when?

Policy 5.3.c: Create workforce housing to address remaining shortages
The text of this policy should recognize the issue of leakage of deed restricted housing in the form of retirees staying in their homes after they stop work. You may well believe they deserve to stay, but please do the math on how this magnifies the long-run demand for workforce housing and flag it as an important policy issue.

Principle 5.4—Use a balanced set of tools to meet our housing goal
The policies under Principle 5.4 are reasonable ways to address the goal – but only if that goal is achievable at an acceptable cost. I would like to see some mention of a cost/benefit analysis of the 65% workforce housing goal itself. This is particularly the case with Policy 5.4.e on funding. How much of the County and Town budgets can be devoted to this goal?

Balanced Economy
This section of the Plan doesn’t really say much. It is largely aspirational. I can, however, offer two criticisms:

- First, a word search of the section will find zero instances of “technology”, “broadband”, “internet”, “knowledge”, “science”, “education” or “research.” You will find “light industry” mentioned five times. Light industry is a perfectly good idea, but is that our best idea to develop competitive, modern jobs for our local economy? Let’s reach for a few stars.

- Second, I don’t see any differences between Principle 6.2 (Promote a diversified economy) and Principle 6.3 (Promote a stable and balanced economy.)

Based on an initial review of Section 6 of the Comprehensive Plan, I feel it is important to note that the recurrent citation of ecotourism as the focus of the tourism sector of our economy is very limited.

Ecotourism is one aspect of a much greater current state of and opportunity for our community – Sustainable Tourism. Sustainable Tourism is defined as tourism that leads to the management of all resources in such a way that economic, social and aesthetic needs can be fulfilled while maintaining cultural integrity, essential ecological processes, biological diversity and life support systems. Ecotourism addresses the environmental or ecological resources of our community but not the cultural, arts, historical and heritage resources of our community. While there are references to “cultural tourism” later in this section, it would be more accurate of our current and potential tourism economy and consistent with the world-wide trend in tourism to use the term “Sustainable Tourism.”

6/1/2011 O'Donoghue, Tim Chamber of Commerce

Balanced Economy

Based on an initial review of Section 6 of the Comprehensive Plan, I feel it is important to note that the recurrent citation of ecotourism as the focus of the tourism sector of our economy is very limited.

Ecotourism is one aspect of a much greater current state of and opportunity for our community – Sustainable Tourism. Sustainable Tourism is defined as tourism that leads to the management of all resources in such a way that economic, social and aesthetic needs can be fulfilled while maintaining cultural integrity, essential ecological processes, biological diversity and life support systems. Ecotourism addresses the environmental or ecological resources of our community but not the cultural, arts, historical and heritage resources of our community. While there are references to “cultural tourism” later in this section, it would be more accurate of our current and potential tourism economy and consistent with the world-wide trend in tourism to use the term “Sustainable Tourism.”

Please let me know if you would like additional information on or if you have questions about Sustainable Tourism.

6/1/2011 Tompkins, Kathy Interested Public

Any chance you can bring some of your cohorts, I splurged on halfway decent coffee beans. I might even bypass the day old coffee cake and buy fresh. I’d like to show you the different affordables and what works and doesn’t work here. Also, how the one way in and one way out for Cottonwood phase one could pose serious problems if High School Road is the main traffic corridor for West Jackson. These are a few of the issues that will become big problems if there is too much flexibility and LDRs trump neighborhood character policies in the comp plan.

Many here think that in order to be fair-minded, the size of homes in town and county need to be reigned in to stem the tide of service workers needed to maintain them. Jonathan Schechter (Compass Symposium back on May 19th) believes that there will be even more emphasis on the uber rich because other states are going to become less inviting by raising taxes, making it more inviting here in the hole. Nothing wrong with that, but after the smart growth presentation at The Wort last week, the speaker reminded me, you have to have a carrot and stick approach towards the McMansion builders. I can’t help but feel that they are getting carrot cake and we are getting the big stick. Well, I better get outside and finish planting my veggies, I make my own carrot cake:) Looking forward to our chat! Kathy
Hi everyone, Thought I would point out one of a few concerns I have over some policies in the latest draft. I did submit this for comment to the JHN&G. I have been getting more defensive because it does comes down to Northern South Park in the end. I just don't want it to become a field day.
It needs to be fair for people who are already struggling and don't have the time or energy anymore to deal with the future of Northern South Park.

Kathy

I have been reading through the latest draft of the Teton County Comprehensive Plan and would like the elected to clarify and strengthen a policy so it doesn’t open the door to creative interpretations by future planners, developers and town and county elected.

In section three, titled “Responsible Growth Management” under Policy 3.1.d: “Cluster nonresidential development in existing locations”, it states; “existing county nonresidential uses outside of complete neighborhoods will be encouraged to redevelop in a manner that is more consistent with rural character. The possible exception to this would be the location of additional light industry opportunities that respect wildlife, natural and scenic resources and neighborhood character goals.”

I understand this is directed toward places like Hog Island where homes and light industry coexist and there is a need to support home businesses. But, I worry that this policy will also lead the way for more light industry along High School Road and around the high school. The comp plan's joint planning commission voted down expanding light industry in and around the schools because of all the congestion and environmental problems it would cause on High School Road and Flat Creek. By including this statement in the latest draft, "The possible exception to this would be the location of additional light industry opportunities that respect wildlife, natural and scenic resources and neighborhood character goals" the comp plan will give opportunists the opening they need to expand light industry to Northern South Park and degrade the existing neighborhoods and schools in and around High School Road. Whose version of respecting neighborhood goals will be followed? When do neighborhoods have meaningful input on neighborhood goals or is it left up to each individual project of which I thought we were trying to avoid through a well defined comprehensive plan rewrite?

We need to error on the side of "no expansion" of light industrial along High School Road and around Jackson Hole High School to ensure that we do preserve and enhance existing neighborhoods through park like open space, and traffic calmed complete streets. This is one of a few ambiguous policies, under the guise of flexibility, in the latest comprehensive plan draft that need to be clarified to prevent Northern South Park from becoming the cure all for Teton County’s growth problems.
Below is an updated letter that I submitted to JHN&G for an editorial a couple of weeks. I added a suggestion that you may or may not of heard before from other concerned residents. It could help our goal for a more sustainable economy and environment in Teton County. I believe the latest draft of the comprehensive plan backs away from the commitments of the joint planning commissioner’s draft and still has ambiguities to be resolved. I liked the common sense overlay map that was discussed at the “Smart Growth” presentation in the Wort, last night. The example map was for Mizoula, Montana and helped with practical info that included for example, how far a neighborhood is from a fire house, etc. I think PlanJH.org is going to post the meeting highlights. We need this practical overlay map before we delve into the final FLUP. It might of saved us four years of many comprehensive plan draft revisions. I was a little disappointed that the presentation didn’t touch on housing size and energy conservation in downsizing. It dealt mostly with moving the impacts of supersized homes to town. Have a great Memorial Day weekend! Kathy

Dear Elected,

I understand that everybody has to make sacrifices when it comes to preserving open space by stripping density from rural areas and shifting density to town and Northern South Park. But shifting “the burdens” of service worker housing needed to maintain large homes in or bordering sensitive areas in the valley, to Northern South Park, will only serve to increase traffic problems and negatively impact wildlife in all areas. We have not seriously considered the 4,000 square foot, supersized gorilla in the room that can still be built in and bordering sensitive areas that Transfer Development Rights don’t capture.

“A 2005 article in the Journal of Industrial Ecology showed that a very well-insulated 3,000-square-foot house consumes more energy than a poorly insulated 1,500-square-footer. Building a 25 percent smaller house saves more trees than are saved by using advanced wood-efficient construction techniques. The average U.S. house in the 1970s had 1,500 square feet; by 2006, the typical house was heating and air conditioning almost 2,500 square feet, despite having fewer people living in it. The average home today has three times as much living space per person as in the 1950s.” Many McMansions on the West bank exceed these averages and require many laborers to maintain them.

What we need is a combination of a permanent funding source to buy and extinguish development rights and TDRs that do not negatively impact existing neighborhoods in the receiving areas. TDRs also need to be closely monitored and transparent, so as not to allow phantom density transfers from unbuildable rural areas to receiving areas. We also need a long overdue realty check in the form of new responsibilities for want to be Mansion owners.

When planning for a more sustainable economy and environment in Teton County, prevention is far cheaper and less complicated than trying to play catch up by containing the negative impacts of McMansions in Northern South Park or other areas of town. The maximum size allowed for McMansions needs to be drastically reduced. One example is to only allow a 2,500 square foot house to be built on 35 acres. If the landowner wants to supersize, he or she needs to extinguish development rights on another 35 acres, to add, let’s say, another 1000 sq ft. to the house size. Along with TDRs, this combination will give you a three for one triple win strategy by increasing permanent open space, decreasing the amount of wasted materials and energy needed to build and maintain the McMansions and decreasing the amount of McMansion service workers that would need housing and services in town and any future “greenfield” development in Northern South Park.

Transfers of service worker housing to Northern South Park without in place, numbers monitoring, checks and balances, will lead to sprawl southward. It also tempts developers and landowners to push for more light industrial around the schools, over priced convenience stores, low quality, lot line to lot line high density housing, for service workers sacrificing open space for families and schools. The proposed Tribal Trails connector will add to the traffic problems. The increased traffic impacts will pressure existing neighborhood families to increase car use because our roads will be unsafe for children to walk or bike to school.

If change does come to Northern South Park, include open space that starts at the West side of the high school and ends at South Park Loop Road. A new, smaller, low carbon peak neighborhood can be concentrated along the Southern border of the open space or around the high school. The open space can double as a wildlife corridor and learning park for the schools teaching conservation that could include xeriscape practices, solar and wind power generation, native habitat learning center, etc. Include a x-country track for skiers in the winter and runners in summer. Have local produce fairs in the park on summer weekends to help promote locally grown food and the (hopefully future) downtown Vertical Harvest Greenhouse Project. We would love to be able to walk or bike across High School Road to take advantage of these possibilities.

Any new neighborhood should have its infrastructure like roads and sewers in place before home building starts. This will keep construction traffic off of High School Road. The infrastructure needed should be paid for by the proposed new development. Gravel pits in Northern South Park should be discouraged. The blowing dust and noise from a gravel pit at the entrance to Jackson, close to neighborhoods and schools is unacceptable. There must be a parallel road South of High School Road (connecting Route 89 and South Park Loop Road) that can drop off and pick up students behind Jackson High School to alleviate traffic on High School Road. The new road must also take the majority of traffic from the proposed Tribal Trails connector if it
unfortunately becomes a reality.
High School Road should be declared a campus corridor and the school children walking and biking to and from the schools should get top priority. It needs safe, weather protected START bus stops and narrow car lanes with trees, paths and other traffic calming methods to promote a shared campus corridor that slows traffic in favor of pedestrians and bicycle riders. There should be no light industrial added around the schools except for where it already exists on Gregory Lane. There should be no heavy commercial traffic allowed between High School Road at Gregory Lane and South Park Loop Road.

Working class family neighborhoods bordering Northern South Park are committed to help cure our growth problems so we can preserve wildlife and open spaces in ALL of Teton County. But we will not suffer the burdens of an urbanized dumping ground shifted from anywhere in the valley, while others continue to build their labor intensive, energy inefficient McMansions. Strong medicine is needed for everyone, especially for those infected with the environmental and economic debilitating disease called Affluenza. (Epidemic of overconsumption)

5/23/2011 DesGouttes, Yves Interested Public

Let me mention before everything else that as our elected officials for County and Town you are easily accessible and it is the proof of a healthy democratic process. I must mention that I am an advisor to the board of a non-profit which deals with social causes. I want to make it clear that the opinions that I am exposing are my own and do not reflect the policies and directives of that organization.

The process of dealing with the “Comp. Plan” has been a tedious one. However I have examinaed the latest draft dated 5/20/2011 and I am very encouraged with what I have read. The draft clearly identifies the most relevant issues by addressing the economic future of our valley. In the section called “Common Value “; Principles 5.3 & 6.2 are the most pertinent and in particular sub section “Policy 5.4.e”, which is dealing with a “reoccurring source of funding for affordable housing” although the source is not definite in a concrete manner. The vital correlation between affordable housing and a prosperous Jackson Hole is clearly deduced. The draft recognizes that JH cannot only rely on its beauty but must prepare the conditions for small businesses to thrive. Tourism and Constructions cannot be the sole motors of our economic activities. We must create a variety of jobs created by small, environmentally low impact businesses. The no-growth lobby may not realize it but their ideas would lead towards economic death and generational unsustainable (I mean with that expression the impossibility of generation from a same family to stay in our valley).

The road map for a more stable economic life is as followed:

Affordable housing ➜ favorable climate for businesses ➜ more stable economy. I am heartened that the draft tackles these thorny issues.

The above implies changing our zoning laws. The new influx will be naturally limited to the land still available for construction, which is a finite number. JH has probably a maximum capacity of 30,000 inhabitants. This would kick start the building industry, not by building a few mansions but numerous middle class dwellings.

Wildlife and quality of our environment have been and still are a major concern of ours. I believe that in the past decade we have been successful and have tried to minimize our impact on nature. We must continue to do so. As one elected official pointed at a recent meeting, the problem is that we do not have any scientific tools to monitor flora and fauna and therefore they would have to be created so that we base our decisions on true science and not on pseudo science.

I like to conclude by mentioning the reality of the present. We are now three years into an economic crisis, hardship has unfortunately settled in our mist, but it is only recently that it is starting to make the news.

I have been looking at the budgets from Town & County; money earmarked for social services have been cut like everything else. I looked at page 19 for the County (FY 2011) and page 107 for Town (recommended budget for FY 2012). The total allocated to social services has a combined total of $1,470,391. - Total expenditures for the 2 entities are $55,439,824. - Hence Social services represent 2.65% of the spending and could have been left alone. The money raised by private donations is 70% higher than the public one [calculated by researching IRS public information]. We may give ourselves a pat on the back as private initiatives pick up the difference from what is lacking from the public funds. In my mind it is hardly a source for rejoicing, as in the long run we cannot rely so much on the good will of private donors. The local governments probably feel that raising taxes for social services would be politically difficult? That would imply a change of attitude in all of us. I want to thank each one of you for the dedication you bring to your position. You have a very difficult task in these trying times.

The latest draft is a genuine try at solving our economics vows.

I will also send a copy of this letter to the editors of the two weekly papers as what I said to you could spur some creative thinking with people at large and also, I am certain, some criticisms.

<td>Conservation Alliance</td>
<td>Deer today, gone tomorrow? Not if we stand our ground. Wildlife today. Wildlife tomorrow. Thanks to your calls and comments, your elected representatives have pledged that the new Jackson/Teton County Comprehensive Plan will: Honor the community’s will that future growth should be limited to existing development entitlements. Include a growth management program to evaluate the amount, location, type and impacts of development as it occurs. This program is also intended to specify what will be done if future expansions were to threaten the valley’s wildlife, scenery and rural character. Incorporate “Character District maps” in the plan, with buildout ranges for certain areas, so we’ll know what future development will look like. Now, let’s all walk the talk. The new plan is due out on May 20th. Soon After, the Alliance will post and expert analysis at jhalliance.org. There’s no more critical time to be involved in the Comp Plna than the next few weeks. Please show up and speak up for wildlife on: June 7, 2011: 5 to 9 p.m. at Snow King Resort’s Grandview Lodge. The draft Comp Plan will be presented and verbal public comments taken. June 29: Same time and place. The elected officials are expected to approve the plan’s policies, but not formally adopt them until later. You can also comment online anytime at jacksonetonplan.com. Questions? Call us at (307) 733-9417, or stay posted at jhalliance.org. And please remember – it’s up to each of us to stand our ground for Jackson Hole’s wildlife and quality of life. Thanks for your help!</td>

<td>Thanks to the planning team for the hard work on this new draft, and for getting it out as promised May 20.</td>
</tr>
<tr>
<td>5/13/2011</td>
<td>Tillson, Becky</td>
<td>Hope all is well. Briefly, in the case that you are sending anything on to AECOM this afternoon or next week, we wanted to give you one comment on the Common Directions. We plan to send a few more brief questions/concerns/suggestions Tuesday afternoon of next week. But for now, one issue in particular - transfers of development potential - stood out because it has been such a consistent concern/question on the part of the Alliance and many members of the public. Specifically with regard to Common Direction #3: Where it says, &quot;Whether by transfer or other right, development in these...&quot; the question of what other right(s)? comes to mind. The issue of transferring development potential is clearly a key issue in this Plan, and this common direction should result in policies that are clear and detailed. As Trevor likely mentioned to Jeff, our newsletter, out at the end of the month, with have a highlighted section on transfers and open space preservation.</td>

<td>Whalen, Lynne</td>
<td>I have watched with interest the community dialogue over the Comp Plan. I had not intended to add any more comments to the vast amount you have already received, until now. I have knowledge and training in this issue having served on the Casper City Council for 8 years and the Board of The National League of Cities for 4 years. So therefore I will just make a few comments. I support growth. I believe all local public officials must support community growth. To due anything different limits the future of the community. Public officials must be mindful of many things but at the top of that list has to be jobs for their citizens. Limiting or capping growth of a community sends the wrong message to potential businesses looking to locate, relocate or expand. I understand the significant challenges faced by this community and many of them will be limiting factors in and of themselves. But if the official position of the community, written down and adopted through the Comp Plan is to limit or cap growth it in effect tells businesses that they are not wanted here. I realize the community does not wish to become another Aspen or a Vail, but it should not want to become another Boulder either. It makes perfect sense and is completely logical to encourage growth in areas that have basic infrastructure such as roads, water, sewer that are already in place. The vast majority of citizens can understand that fact. This prevents having to run roads and service lines through virgin land and to stretch out public services such as police, fire and garbage collection. It is cost effective in both the short and long term. Sometimes the use of fuzzy consultant words such as nodes or character districts obscure an easily understandable fact spoken in plain English. One of the most limiting factors for growth in Jackson and Teton County is traffic. While I watch the community spend and plan for many means of alternative transportation, I see no attempt to address the most vital transportation issue, car traffic and roads. Most citizens in this community still use their cars for the majority of their trips. Our weather and the convenience dictate this. But if growth is to be encouraged in areas such as South Park and the west bank, this issue must be addressed first. I do understand the need to work with WYDOT to plan and fund some of these roads and bridges. Yet there has been little public discussion on developing and identifying funding for redundant roads and bridges even though their sitting has been identified previously. To publicly tackle the car traffic problem should help increase public support for increased density in these identified areas. I do realize just how much time has been devoted to this issue and appreciate all your efforts and dedication. I know you do not get the thanks you deserve for all you do. Thank you for taking the time to read my comments.</td>

<tr>
<td>5/8/2011</td>
<td>Young, Tim</td>
<td>This rainy day is good for something - I went over the Theme 6 word doc you sent me, and provide suggestions with track changes. [see actual comment] I hope these are helpful and still timely in your revisions. I think these suggestions are all within the policy agreement on Theme 6 that the electeds have reached. I tried to keep as much as possible within the length and detail of the PC draft. In a couple sections, an added paragraph seemed helpful. I took a shot at another way to state the &quot;Potential Transportation Network Projects&quot; table after 6.3.e - these edits suggest a more general approach, to update the TIP and just list the most significant projects for each mode coming up. This creates a list of the key multi-modal projects and then you can reference where more detail will be provided (like in the TIP, or START Master Plan, Path plan etc.)</td>
</tr>
</tbody>
</table>
Thank you for the invitation to provide language suggestions for Theme Four of the Comprehensive Plan. Please consider the following ideas to help memorialize the discussion and direction of the electeds.

1. The definition of “workforce housing” raised confusion and concern for most of the electeds. Further discussion among the electeds is necessary to clarify who in our community should be included in the definition. For example: Should retirees be included? Should employed persons be included that do not earn their living in Teton County, Wyoming (investment bankers)? This central definition should be tightened by the electeds prior to adopting the final Comprehensive Plan.

2. Why is this theme addressed? If we assume that “silence suggests support”, then it seems the electeds were supportive of Mark Obringer’s recommendation for a synopsis of the primary cause of the affordable housing problem.

3. New Policy 4.1.b: Create and adopt a 10-year housing action plan that identifies the specific actions the community will take to meet its housing goals. Meeting the community’s housing goals requires a variety of tools as well as coordination of the various housing groups. The 10-year housing action plan will be based on updated and current data, it will include an assessment of the tools and strategies that serve our community well, a revision and/or elimination of tools and strategies that have not performed as well as we hoped, and an analysis of potential tools that have not yet been implemented. The action plan will explore historic funding sources as well as potential new sources for funding. This comprehensive, strategic and technical plan will result in a coordinated, resource efficient plan that will ensure housing for 65% of the workforce in Teton County, Wyoming.

4. Amend Policy 4.1.e to read: Explore preservation of existing workforce housing stock. As noted by Melissa Turley, the costs and implications of this policy need to be further discussed by the elected officials. Further consideration of this policy option could be deferred to the housing action plan.

5. Principle 4.2 and Policies 4.2.a and 4.2.b: As Andy Schwartz cautioned, in the new economy, we can’t assume that new development will generate new employees that need new housing. Perhaps this principle and the associated policies should be tabled until after the housing nexus study from 2005 is updated. This updated study will determine if new development is in fact creating a demand for new employees. And if so, it will determine at what rate and at what thresholds. Inclusion of this Principle and the associated policies, if appropriate, could be incorporated into the housing action plan.

6. Principle 4.3 and Policies 4.3.b, 4.3.c and 4.2.c: Given the current expansive definition of workforce housing, the electeds discussed, but did not conclude if incentives and density bonuses should be awarded and regulatory barriers should be removed for workforce housing units that are not permanently restricted. With a range of opinions on this issue, this could be deferred to the housing action plan.

7. Indicators: All electeds agreed that there is a need to track the percentage of the workforce housed locally. In addition, there was understanding that this effort is independent of the nexus study. It should be tracked on a regular basis; it should be tracked more frequently than the nexus study, but it may not be necessary to track every year. This indicator should be updated once staff and electeds create a master plan for tracking the various indicators in the Comp Plan.
Planning Staff and Bruce – as you meet next week on the composition of the character maps – plus the associated public process - I wanted to touch on one focused concern:

Clearly whether through enhancing the existing PRD tool, new approaches via some form of TDRs or other to be determined mechanisms – there should be both a focus in mapping of density “receiving areas” – as well as “sending areas”. In South Park in particular the initial FLUPs had a very large and non-congruent mapping that was bounded by High School road and South Park Loop road. My concern is that for this area – and similarly for other receiving zones such as Town, Teton Village, Aspens and Wilson – you not paint the entire area with a broad brush which did occur in much of the language and values ranking (e.g. wildlife) in the old FLUPs – especially for my region.

In addition, by the plan now committing to work within the overall entailments – more or less – any idea of holding back of any rural areas as potential sending zones in order to have future growth 50 years from now after we have doubled the built environment - is basically off the table. I bring this up as an unspoken assumption was that some of South Park was not to be prioritized for conservation so “as not to tie the hands of future generations” – this is now old thinking that has gone away via the public process to date. So - I expect a large portion of South Park’s rurally zoned areas to be sending areas – especially given the large land owners of Robert Gill and Kelly Lockhart that control both the logical receiving area near Cottonwood Park as well as considerable sending areas themselves – including non-contiguous parcels they control in the Snake River bottomlands near Shooting Iron. If we really want to see transfer of development rights happen - we need to accept this ownership reality and the existence of the PRD tool which certainly can be enhanced – but at least is already in the LDRs.

So please consider how to address an area like the current middle/northern South Park FLUP map – either re-divide the maps to address this (brining much of these lands over to the Three Creeks/Indian Springs Ranch map). Alternately consider in an area like the old “middle” South Park FLUP map – that you then will need to indentify stable areas (Rafter J, Melody Ranch, South Park Ranches etc.) – plus areas that should most definitely be consider sending areas e.g. east of Flat Creek to HWY 89, central and southern South Park (Lockhart, Gill, Lucas and Seherr-Thoss) – then a focused character district description of NW South Park as a receiving zone.

I just want to make sure the character district mapping for this area not only describes a “density receiving area” – but also represents that it has defined “stable areas” - and other significant “sending areas” (east of Flat creek and in the middle and southern portions) which are not only now zoned rural but the majority are also mapped within the SRO - plus this area is also specifically called out in the 1994 Comp Plan for scenic/agricultural/wildlife protection. The old FLUPs in multiple ways disavowed these embedded qualities (plus known habitat connectivity values) and I want to make sure the new character district maps reaffirm these values along with defining the character of the one portion that is to be a density receiving area.

You will have this same issue to varying degrees in the remainder of the receiving zones of Town, Aspens, Wilson and Teton Village – unless you break those zones out separately from the old FLUPs that contained them.

Good luck – I would love to give feedback on your chosen approach – and perhaps pull together a small interested group together again – before you simply present a plan to the public in June.

I am extremely concerned that you safeguard the environment-the reason people come and the reason people want to come back. We owe the people of this valley, the visitors, the future people, the future visitors to protect and preserve the environment, the aura of the town itself. You MUST place a moratorium on "box" stores and chain stores. The small businesses in this valley need the support of the local people and the visitors. Big chain stores dilute the integrity of the town, bring down wages, put other businesses out of business. This is true for all major corporations. One of the things that is especially important is to maintain the spirit of independence for those creating businesses here and now and in the future. Please do not allow yourself to be lured into betraying the people of this valley by BIG MONEY interests.

You must also place LIMITS on the amount of development allowed if we are to preserve our environment. Please NEVER change the town square or the small businesses around the square. PLEASE do not allow huge hotels, motels, corporate store to change the small town atmosphere. We have a saying, "Please don’t 'Vail-ify' our valley."
Rich Bloom

4/29/2011

Comp Plan Update - Substantially Responding to Recent Community Concerns

[Dates for release of the final draft Plan should have been stated as May 20 instead of April 20 in my update. Sorry for the confusion. - Rich]

AS ALWAYS – FEEL FREE TO FORWARD

Comprehensive Plan Update

I wanted to thank the scores of you that have commented the last several weeks – and the close to 50 citizens who attended the public comment session Wednesday afternoon/evening.

The Plan has continued to respond to overwhelming resident feedback and concerns. Although it does not have firm growth caps – the new changes (and clarifications) are a significant and positive response to community concerns. Caveat - given the workshop format and various directions to staff for rewriting – we will not see exactly what was captured via changes until the final draft Plan is released to the public on April 20.

After over 30 citizens verbally conveyed their concerns to the joint electeds the previous evening - the electeds yesterday morning did address all recent major issues to varying degrees. I would summarize that the Plan will now include language that does the following in some manner:

Directions Issued for Comp Plan Rewrite

• The Plan will mention a “desired community size” that is no more than twice what is on the ground today. Given the imbedded entitlements that basically match this number – they have acknowledged by “referencing” this statement in the managing growth theme and/or introduction – that this is the context the community expects the Plan to work within to achieve various community’s goals.
• There will not be a hard cap either as a total or for any specific density receiving area (northwest South Park, Wilson, Aspens, Teton Village and Town). I would say they are establishing a “soft cap” approach instead based on sensitivity to each density receiving area’s unique limits and existing character.
• “Character Districts” for all areas of the valley (replacing the future land use maps – FLUPs) will each have buildout ranges – along with descriptive and illustrative explanations of their future design.
• Staff is to create a new “Appendix I”, which documents the outcomes of the Character District discussion and shows ranges of what may be possible in each district (and in total) and then compare that to the 1994 entitlements.
• The addition of a progressive restrictive adaptive growth management process to measure (and respond) as we grow. As outlined in Wednesday’s News and Guide newspaper article, this will measure at set growth trigger points, whether we are matching our goals we want to achieve on:

o The mix of development: especially commercial versus residential – and workforce housing units versus second home development.

OThe pattern of development: achieving permanent open space in important rural areas (this should include currently unprotected portions of South Park) and seeing development transferred (and/or purchased) via tools that are to be determined - either into various County “nodes” and/or Town itself.
• There will be a statement that “measuring cumulative impacts of development on wildlife and natural resources is an important goal for the plan” – “but that the tools to achieve this are still being developed”.
• Elected officials are to “affirm” the Plan Themes and Policies in June and this summer move into Character District discussions - then adopt the entire document as ONE package.
• Elected officials are committed to completing the entire Plan in December 2011 – and staff is to set a schedule to achieve this.

Thanks to the Electeds and Staff

This has been a long and difficult process – collectively the electeds HAVE responded to a large degree to recent community concerns. Aside from a few unfortunate comments from a small handful of electeds yesterday - that they were responding only to a “vocal minority while a silent majority was not being heard from”…. – in general they respected the concerns and the will of their constituents. | **Supplemental Information** |                            | •Web link to the Comprehensive plan - http://www.jacksonetonplan.com/  
•This includes audio recordings of all sessions, staff reports and meeting presentation materials.                                            |
|            |                           | Your South Park Neighbor - Rich Bloom, cell weekdays 690-5273                                                                                                                                     |
| 4/29/2011  | Mortensen, Sue            | After attending the public comment meeting on the 27th ( thank you for providing this space and time!) I thought of one issue that was not specifically addressed.                                                |
|            | Interested Public         | It seems that under the present process a developer can get 70 - 80% through the approval process without ever addressing how the proposed subdivision will impact county infrastructure and how the developer plans to deal with those issues. The county and the developer together should know exactly how infrastructure issues are going to be solved very close to the beginning of the process. |
|            |                           | In addition every prospective developer should design wildlife permeability into the general layout from the beginning and those corridors should be compatible with already existing corridors. For example Cottonwood Park has wildlife permeability that is completely blocked to the north by subsequent development. |
|            | Interested Public         | All themes need to be addressed simultaneously to create a plan that enhances the valley for everyone. Please do not cripple the efficacy of the plan to appease interest groups that target one theme in order to protect their personal view corridor. |
|            |                           | I appreciate the Elected’s return of Nodes and ARU’s to the plan. Comments they are ignoring the recommendations of the Joint Planning Commission is not true. As the commission progressed past theme 1 and 2 meetings and began addressing workforce housing, the economy, and traffic issues the commissioners realized early tie votes had created conflicts in the themes and did not represent their current beliefs. |
|            |                           | Nodes are integral to a plan that addresses our valley’s love of open space, preservation of workforce housing and a traffic plan that reduces fossil fuel consumption.                                      |
RE Town of Jackson, specifically, character of Willow Street:
Resident for 30 years; seen it all, know area very well, neighbors too; wish to actively contribute to FINAL plan for this area. How can I do that?

I believe a growth plan is very important. I think the planning departments proposals have been well thought out, and represent the best approach to protecting open space and wildlife as well as supporting efficiency.

As much as I would like to see zero growth, I don't think this is a realistic scenario. We are a tourism town and rely on being open and welcoming. Zero growth will make this town exclusive and difficult to access for many people that bring so much to it. I think it is important to allow for reasonable growth and embrace change. In one way or another Jackson will change. Old houses will be replaced with new houses. Old buildings with new buildings. I think it is important to make the most out of these changes and well thought out zoning seems like the best tool/approach to achieve this. I think that efficiency should be a major concern of the plan. Efficiency in transportation, heating, recycling and ease of access to essential amenities. I think that nodes are the best way to achieve efficiency. I believe in infill and upzoning, although I would agree that we should choose our areas for this wisely. I like the idea of mixed use development (residential above commercial).

I want the plan to accommodate the next generation and the generation after that. Our children should have the opportunity to live and work in this valley. Jackson has changed a lot. It was great growing up here in the 80's, and it is great living here in the 2000's, but in no way is it exactly what it was in the 80's in the 2000's and this seems to me to be a fact of life. What we have lost in small town feel, we have gained in worldliness. I think making Jackson a smart growth leader should be what we are shooting for. Thank you for taking this into consideration.
I would like to thank all the people, public and private that worked so hard on the Teton County comprehensive plan to date. After a few years the public has been worn thin by the process as you can tell from the decreasing attendance numbers in our most important final phase of the plan approval. We owe it to the public to implement policies and themes that have been overwhelmingly favored by the public.

We want to provide stewardship of wildlife habitat and other environmentally sensitive areas through science back monitoring and permanently preserved open space.

Build out should be clearly identified and provide guidance in policy creation.

We all live with limits or boundaries. The Comp Plan is intended to put limits on the amount of growth. People surveyed said, to limit growth in the valley was most important. We would like to see an estimate for how much growth is allowed before the Plan is approved. That includes Non-residential square footage and dwelling units. Let’s get the bad news up front instead of pawning it off on our children to deal with later when it’s too late.

Up zoning in perimeter areas is not smart growth. Only allow development in Northern South Park that leaves a small environment damaging footprint. Any development should be preceded by infrastructure including roads, pathways, open space, etc. to reflect and enhance a safe and inviting academic corridor. Up zoning in places like Northern South Park will cause damaging negative impacts to the established neighborhoods and school zones on and around High School Road. It is foolish to think that up zoning won’t lead to never ending sprawl. We don’t need convenience stores. Again, we do need family safe and bike friendly roads, paths, parks and open spaces to enhance our existing neighborhoods and school zones.

Over 70% of the people surveyed said that they would be willing to pay higher taxes to conserve open space and natural areas. Do not rely on any one tool like transfer development rights. The community also needs to weigh in on TDRs and PDRs through community workshops. Performance based tools should be well defined. We can’t rely on vague terms such as “it will provide community benefit”. When I hear that term and it is not followed up with any actual benefit to the community other than higher tax revenue, then vaguely defined performance based tools serve no purpose except to fuel our addiction of relying on growth to solve our growth problems. TDRs if used must be well defined to prevent transfers that only benefit the money changers. People in proposed receiving areas should be given priority as to what and how much can be added to their neighborhoods to prevent negative impacts. Small property owners in neighborhoods are equally important and valuable to the community as the few large property owners whose property rights seem to get more attention and respect in this process.

The Character District Maps are an essential bridge between the Comp Plan and the Land Development Regulations. The Comp Plan should not be approved until the Character District Maps are completed and included in the overall plan. The public needs input into all aspects of the character maps process and how they are incorporated. Character district maps are essential to a complete and enforceable comprehensive plan.

The proposal for a growth management plan is a big step in the right direction. We need to monitor commercial growth, not just dwelling units. The trigger for reevaluation should be lower than the proposed 7% to give ourselves more time and tools to do deal with any growth problems that rear its sprawling head. I also have a problem with the 50/50 split. It needs to be lowered in the county to give us an earlier warning signal to take actions to rectify the failure. Predictability is important to the community because we cannot plan for the future if we do not know what we are going to allow to be built. This means we can’t shy away from the numbers, indicators, science and actions needed. Don’t be vague. Take out the loop holes and confusing doubletalk that people with narrow profit minded agendas can take advantage of. We need to be bold and thorough in order to pioneer a comprehensive plan that succeeds where the 1994 plan failed. If we fail again, there won’t be a next time.

Post comment meeting remarks...I heard from a couple of people at the public comment portion of JIM 8 that we should be prepared to get pushback from the neighborhoods when the character maps (flup - future land use plan) are dealt with and that the officials need to push through. They sounded sincere in their wants but what are the neighborhoods affected suppose to do, roll over? Don’t we have a right to want the best for our neighborhoods? We can work together to create a great comp plan but we also can’t ignore the small property owners in the affected neighborhoods, who most of the time bears the most of the cost of what others decide is best for us.

Congratulations on being so thoughtful. I am supporting your thoughtful growth model. I think the more we can shift from having to use our cars the better overall for people and wildlife. I would like to see more START bus transportation and also maybe some commercial marketing mixed with housing. Some small stores or restaurants precluding the need to always run into town. I would also like to the town continue to use its renewable resources such as wind and the use of more solar energy.

<td>4/27/11</td>
<td>Pierson, Scott</td>
<td>Good evening, I’m Scott Pierson; I’m a resident of Teton County. Bill Collins said that you should include maps. I agree with that, but I think first you need to finalize what you’re doing and agree to the final draft. You don’t have to adopt it as an organization, one or the other, until you get the maps, but the maps are going to be a minefield. Every neighborhood you go into is going to blow up because you’re going to want to put additional density in those if you hold to what this Plan is talking about, whether it is the nodes in the Aspens, to the node in Teton Village, the node in East Jackson—they’re all going to blow up on you. And you’ve got to have the political courage to stick with the Plan draft that you guys are looking forward to adopting. Open space, wildlife, people, diversity, economy, all equal our community. You guys have done a great job so far. Keep up the good work. You’re heading in the right direction. Move forward and try to get it done before you all wear out. Thanks.</td>
</tr>
<tr>
<td>4/27/11</td>
<td>Sharkey, Steve</td>
<td>My name is Steve Sharkey. I’m a County resident living in South Park. I’m interested in predictability and a cap on population growth, and for that predictability I think it is important that the character district maps are the real FLUPs, right? It’s hard for me to stay up with the process, but I think they should be finalized and they should become part of the Plan. Bill Collins made a great point. That’s the link to the LDRs and that would provide some predictability, so I thought that was an excellent point that he made. And I think a cap is important but it’ll take a long time to get there, so I do like the idea of an adaptive management plan. I think there could be a lot of merit to that. You want to kind of monitor the progress as you go to see how you’re doing, instead of just waking up in 20 or 25 years and saying, ohmygod, you know, here’s where we are. So, those are my points. Thank you.</td>
</tr>
<tr>
<td>4/27/11</td>
<td>Bloom, Rich</td>
<td>Rich Bloom, speaking as an individual; I’ll switch hats at one point. Thank you for your time and your diligence with your frank discussions. All of this would have been easier if we just had accepted that workable two-times number and had committed it ?? but a different pathway. And the whole process in these workshops, to me, who followed this closely, to me it’s still as clear as mud on portions of it. So, you’re already well aware of the overwhelming concern of the community on build-out and having limits to put on growth. I think that is your ?? to your plan and it’s also what you have to have so you know what you’re working towards so you can achieve other community goals—reinvestment in Town, workforce housing, all the other things we want to achieve concurrently. Even heard, you’ve individually stated strongly, publicly and also in the press, you basically committed to work backwards from the character districts to a build-out number that likely will match or is below where we are already headed. That is what I heard you say. Yet, talking to Staff, you basically unwound all discussions on growth limits as being two, so that means this undermines a key to predictability. So, to your credit, you have endorsed an adaptive growth management plan—thank you for that. It’s not the same as addressing that all growth, no matter where it’s located, or whether it’s residential or nonresidential, has off site impacts on natural resources. So I am for smart growth especially as far as trying to extinguish entitlements found in sensitive rural areas, but there has to be an acknowledgement that we all have our ??, even when we’re living in a proper location. So the Plan I think needs to be a little more intellectually honest because this point of the Plan is missing. So, I think that is where you’re headed and that you want to do that. You’ve committed to try to meet goals within a certain amount of budget. Some specifics I would suggest then, and you’ve even referred to those numbers in the growth management plan, because you’re talking about 7 percent of 10,000 as a kind of a working number. So in this context I’ve asked for several items be addressed specifically. In theme two, you need to recognize that growth management encompasses not only the pattern of growth but also the total amount of growth. We’ve also talked about mix and ??, which has impacts and they will be addressed via the character districts as far as where they’re going to go. But I think you need to tie into that whole idea that we can mitigate some of the impacts, that they don’t go away just by locating them in certain areas. Be intellectually honest, because they do cross over impact—wildlife, natural resources, transportation systems, etc. Clearly, the character district maps will provide predictability. They need to have build-out ranges by area for that to be achieved. That since the character district maps are so integral to the Plan, the Plan cannot be adopted without those maps being completed. And then the build-out ranges, which I’ve heard you promise individually, would be calculated in total and compared to where we are already headed to give us a check. And that receiving areas, called nodes—now complete neighborhoods—I think we said in theme one pretty clear that that’s linked as much as possible to shift current entitlements and extinguishing and getting permanent open space. If we don’t know what the multipliers will be, all the mechanisms, but it really confused all of us, me included, when we had those growth-cap discussions about exactly what would go in these receiving areas, nodes complete neighborhoods. A couple of other things. I would suggest you use Bruce Meighen more integrally on a revised draft instead of simply reviewing the Staff work at the end of it. Staff has great direction and capable, but Bruce has also got a broad experience and fresh perspective. I think if he could work with the team in the next few weeks, that would be money well spent. I would also switch hats to ?? briefly as a Blue Ribbon Panel and not just...again, I’d ask you to accept the report, while not necessarily endorsing recommendations, so it’s somehow accepted by this group. And then last, as far as South Park, to reiterate, it’s obviously one of the several logical receiving areas. I would just want to say for my South Park neighbors, greater South Park has habitat connectivity, wildlife, agricultural and scenic values that are codified in the current Plan, and we want to achieve some of those values, along with moving things from those areas up towards the north, you know, in a very thoughtful way, dealing with the traffic issues on High School Road. But we want to see some regional gains. Thank you.</td>

</table>
Good afternoon. Hope everybody’s enjoying spending this beautiful spring day working on the Comp Plan. My name is Trevor Stevenson. I’m the Executive Director of Jackson Hole Conservation Alliance, and it is an honor to be here to speak on behalf of the Conservation Alliance, an organization that was founded to develop a good Comprehensive Plan for Jackson Hole and has now worked on these issues intensively for more than three decades. I want to begin by saying that we appreciate the years of effort that you’ve put into this work and your recent openness to the meeting with me and the other members of the Alliance to discuss many of the key issues in this Comp Plan directly. And we’re heartened by the proposed growth management plan that you unveiled the other day. We believe that this may be the beginnings of a good framework. And we hope to collaborate in developing a resultant ?? and appropriate details for the growth management plan to help it really be effective, recognizing that we also need to do a lot of proactive work within the Comp Plan itself so that we’re not simply reacting once the growth management plan gets activated by the different numbers ??.

Personally, I believe that in many ways we in fact are fundamentally on the same page with regards to what we want to accomplish within the Comprehensive Plan. But I think that needs to be made much more clear. It is clear through the years of work on the Comp Plan that the community has clearly expressed a desire for some things to be addressed, and as a new Executive Director, I’m reading through a lot of the years’ history, work on this, and seeing what themes have been emphasized. Certainly, the Alliance has done the best possible to convey these priorities to you in letters, publications, conversations. They revolved around issues like growth management, around public participation, and around timeline and process for adoption of the final Comprehensive Plan, including, as was just mentioned, the maps as an integral part of that Plan. I’ve been doing my best to calm down some rhetoric that I think has perhaps gotten a little bit out of control, and asking people to give you a chance to clearly demonstrate that you will be responsive to their requests and to provide…that you will be providing clear solutions to these concerns. My hope is to address a couple of these overarching themes now so that we can have a more productive discussion for the next few months. The process that you use on a Comp Plan will largely determine the quality of the result that you get and, unfortunately, it has not been at all clear what that process will be. The process of your meeting today did not clearly address how you’ll proceed. And, Ben, I appreciate that you opened with some comments in terms of how you proceed for the next month or so, but beyond that it’s very fuzzy, it’s not clear how this proceeds, and that is extremely concerning to everyone involved, I believe. Instead, today we prioritized a number of cosmetic details when I think that time should have been spent clarifying, certainly, perhaps voting, on how this process will proceed. And I think all of you actually want to address this concern, but within the structure of the facilitative meetings for the last month, that has not been possible and I urge you to find the space, create a space, to clarify that process as far in the future as possible. If you’re not able to allay some of the public concerns tonight, through our participation, and the timeframe for maps and final adoption of the Comp Plan, unfortunately, we can look forward to months of angry, fearful and frustrated comments that don’t necessarily help address the important content of the Plan. I will not be able to continue asking people to wait, or to trust that you will address this, and certainly this is not what I want to happen, and I’m sure it’s not what you want to happen. And I’d like you to take the opportunity to address these concerns tonight. Note that we made a deliberate decision not to activate the full 2000 household membership of the Alliance for tonight (I’ll be done in a second), and we’ve not really conducted any outreach to those groups. We will be doing that after the draft is out with something more concrete to report. Overall, we’d like to mention that the elected officials and the Planning Staff we believe have become too isolated in this process and in deciding these vital policies. Public involvement has been too limited lately, and I appreciate that you expanded the comment session tonight from what was originally envisioned, but I think more is needed. More importantly, we believe you need a greater involvement of independent experts, and not enough effort is being done…is being made to do necessary research and analysis to inform the decisions that you’re making and to compare your work to other cutting-edge Comp Plans in the region. We’re trying to contribute to this from the Alliance by bringing in some independent review and analysis on some specific issues, but we also feel that you, as electives, need to do more to prioritize independent analysis, studies and comparisons on many of the other aspects of the Plan. Our decisions need to be clearly driven by the best possible data and not just by our own intention and opinions. In sum, please work to address some of the public’s key concerns and open the process to allow for more productive involvement by the public, make it a priority to conduct the necessary studies, involve key experts, and clearly make your decisions on the best data possible. The Alliance is delighted to have this opportunity to work with a group of elected officials that…and Planning Staff who share our priorities for the preservation and enhancement of our ?? wildlife, our spectacular scenery, and our unique community character. We hope to strengthen our support of this process to ensure that we achieve the best possible Plan. And we appreciate you taking our concerns and recommendations into account. Thank you.

<td>4/27/11</td>
<td>Christel Tammy</td>
<td>Hi, my name is Tammy Crystal and I’ve lived in the Town of Jackson and lived here for a total of about 12 years. Thanks for letting us come today. Since the Town of Jackson’s ?? plans were voted down via public referendum seven years ago, a true in-your-hands measure of community sentiment expressing its will that we not overdevelop our Town and not speculate with the master resort, destination allure of Teton Village. We’ve watched development happen anyway. When citizens said no to the RD, development rights were simply granted individually, one project at a time. And here we are with the ?? of empty commercial space, large quantities of unsold real estate units in a community that feels ever more transient to me. I talk to friends all the time who wonder if they should stay in the Valley or leave it. Town planners and the community have spent four years giving their lives over to creating a plan to shape the future of this special place. We have been asked to trust our comments are truly heard by our leaders. As a community, we cannot afford to know we’ve all been whistling Dixie without a logical process of implementation. Otherwise for all of these years our community has merely engaged in an exercise. Preserving environment and quality of place, managing growth, and creating a viable broad-based economy are Jackson’s great challenges. We need a certain critical population ?? to achieve that balance, but most crucial is ensuring we promote and protect our wildlife, its habitat and other environmentally sensitive areas. We must continue moving towards making arts a part of our constitution, as it were. We can remind all visitors of our history by including beautiful and lasting public places in our Comprehensive Plan. That sort of planning aides in building tourism and it also supports finding out what level of economic success we can really expect to reach. We should as ?? strengthening sustainable tourism practices using cultural assets as tools. Growth should incorporate landscaping, parks and grace of space. Let’s create space that’s both sacred and fundamental. Without these provocative elements, we will forfeit the higher level of urban vibrancy. We should encourage current local businesses and new companies to establish desired products and services that are appreciated and put forward by locals and tourists alike. We should develop specific strategies designed to attract employers and fill the empty commercial space, rather than planning for more building. It still feels like developers are feeling encumbered by wildlife. Our core economic stability lies in protecting and preserving the power of this place. All new projects should be primarily concerned with that goal. Geography and wildlife are our golden eggs and they’ll only become more precious. We should keep downtown vibrant, give it an identity that’s separate from Teton Village—we can’t match that profile—and use it as a place where families who can’t afford $400 a night lodgings might stay. We want to keep those families from ??. We want them to be able to come here and experience the wonders of Jackson Hole and want to educate them. If we don’t do that, why will anyone want to protect it. We come home and there’s a moose in the yard. We pick up the phone, call our friend in Atlanta and get them to guess what’s outside our window. It’s not just going to the parks to see these animals—it’s having them right here with us and living with them. Nobody has the diversity of wildlife that we do, let alone have it as physical as it is and interwoven with our daily lives, and we don’t want to lose that. Thank you.</td>
</tr>
<tr>
<td>4/27/11</td>
<td>Varley Jay</td>
<td>My name’s Jay Varley. I’m a resident of the Town of Jackson, essentially the downtown of Jackson, and I own some commercial property in the Town of Jackson also. I’ve been involved with Jackson Hole for almost 25 years now and participated when I could along the way in planning and things like that. I’m going to urge you to do something that I’ve urged before and that is to give ?? to the fact that community is a complex system. And this...when I’m talking about this, back when I was in engineering school, that was one of the things I studied. That was way back in the ‘60s. I’m kind of surprised that this is even more ?? today. But what really...a community is a complex system and these efforts, while I commend what you’ve done so far, need to consider this. And what it means is you can’t take just all the parts and deal with them separately and then hope when they’re put together you’re going to end up with something close to an optimal solution. Typically, it only yields about 60 percent of the overall optimal solution, even though it’s a very human thing to do and people want to try to do it all the time. And the reason for that is the interaction between all the parts. And it’s the word synergy is used sometimes that has both positive and negative aspects to it, but it basically means that the whole is more than the sum of the parts on both sides, though. So, you need to look at these things. A lot of the so-called unforeseen consequences don’t really have to be unforeseen if you take this approach, and start looking at what you’ve already done and start taking that approach. And many of them can be anticipated. Some of the different parts are not compatible with each other. And you need to recognize that and you need to see how they’re going to influence each other. Some of externalities that are outside the community can be foreseen also. Demographic trends in the country, in the world, all sorts of externalities that look like they’d be external to this community really aren’t. They have very strong impacts on it. Jonathan Schechter writes about these things quite a bit, and I think you can and should look at those. I’d like to applaud what Bill Collins said and I support everything he said, and Mark Sullivan as well, about the importance of the downtown and the importance of having...going up instead of out. And it has so many benefits that’s it’s hard to really even enumerate and I won’t try to do that up here. But one of the things that’s not talked about a lot is the social aspect of it, where people are meeting each other on the street, they’re talking, they’re just interacting with each other in a very day-to-day way. And that yields good political results, too, because they’re better informed, they’re just...they’re more involved. Thank you.</td>

<td>4/27/2011</td>
<td>Tompkins, Kathy</td>
<td>Hi, I'm Kathy Tompkins. I live over in Cottonwood Park. First of all, I would like to thank Armond Acri for a list of essentials to a great Comp Plan that I posted to a couple of websites. Very succinct and to the point, which I am not. So, I'd like to start by thanking all the people, public and private, that worked so hard on the Teton County Comprehensive Plan to date. After a few years, the public has been worn thin by the process as you can tell from the increasing attendance numbers in most of our important final phase of the Plan approval. We owe it to the public to implement policies and themes that have been overwhelmingly favored by the public. We want to provide stewardship of wildlife and habitat...wildlife habitat and other environmentally sensitive areas through site, monitoring, and permanently preserved open space. Build-out should be clearly identified and provide guidance in policy creation. We all live with limits or boundaries. The Comp Plan is intended to put limits on the amount of growth. People surveyed said to limit growth in the Valley was most important. We would like to see an estimate for how much growth is allowed before the Plan is approved. That includes nonresidential square footage and dwelling units. Let’s take the bad news up front instead of pawning it off on our children to deal with it later when it’s too late. Up zoning in ?? areas is not smart growth. Up zoning in places like northern South Park will cause damaging negative impacts to the established neighborhoods and school zones on and around High School Road. It is foolish to think that up zoning won’t lead to never-ending sprawl. We don’t need convenience stores. What do we need is safe family and bike-friendly roads and paths, parks and open spaces to enhance our existing neighborhoods and school zones. Over 70 percent of the people surveyed said that they would be willing to pay higher taxes to conserve open space and natural areas. Do not rely on any one tool like transferrable development rights. The community also needs to weigh in on TDRs and PDRs through community workshops. Performance-based tools should be well defined. We can’t rely on vague terms such as it will provide community benefit. When I hear that term, and it is not followed up with any actual benefit to the community, other than higher tax revenue, then vaguely defined performance tools serve no purpose except to fuel our addiction of relying on growth to solve our growth problems. TDRs, if used, must be well defined to prevent transfers that only benefit the money changers. <tr>
<td>4/27/2011</td>
<td>Aurelio, Linda</td>
<td>As the open-door format for the Comp Plan committees began last month, it appeared as though both official elects and the community had come to strong agreements on the importance of wildlife, scenic values, and open space as our main priorities. These priorities would be the focus of future planning and development to maintain the delicate balance of “habitat criticalness” unique to Jackson Hole. It was recognized and documented that wildlife was our heritage, and a valuable asset to be protected for generations to come. However, as talks wore on, the open-door forum became open ended with regard to build out numbers and density projections. Smart growth initiatives seem to be lost in the current debate over future building potential and property rights. At this point, there is no agreement to submit exact cap numbers on growth, for fear of anger in the community. However, a doubling on growth of the current Comp Plan baseline is being suggested. This is irresponsible governance which contradicts our commitment to wildlife integrity. Sustainable wildlife habitats and open space are not compatible with a doubling of density in Jackson. The combination of the two, growth and wildlife, are not mutually exclusive, they are a delicate balance. Simply put, increasing growth decreases wildlife. If everyone doesn’t get that simple arithmetic, we are in trouble.</td>
</tr>
<tr>
<td>4/27/2011</td>
<td>Harvey, Ann</td>
<td>I strenuously object to reviving nodes. What about decreasing development potential in the rural parts of the County? Without specific tools to decrease rural development, the node concept is a developer’s dream: greatly increased development in the nodes, and continued development across the rest of the County as well. How, exactly, will development be transferred from rural lands to nodes? Have you investigated other areas (e.g. Pitkin County, CO) who have programs to protect rural lands and direct development into specific areas? What do they do in terms of downzoning, deed restrictions associated with granting TDRs, creating a market for TDRs, integrating TDRs with conservation easements, etc.? Do you know what successes/failures they’ve encountered? Their program is not some vague list of “incentives.” Do you have the political will to create such a program? You should not even consider nodes until you have real tools to decrease development elsewhere.</td>
</tr>
<tr>
<td>4/27/2011</td>
<td>Stevens, Sally</td>
<td>I am disappointed that this important meeting is being held on April 27th, a time when the people most likely to participate are out of town for spring vacations. Those of us left behind, such as myself, are busy working to cover extra shifts and are also unable to attend. The residents of Teton County have overwhelming spoken out against nodes and have requested predictability in the Plan. I also strongly disagree with any participation involving Mark Barron and the Town Council - those that are elected to ONLY deal with Town of Jackson issues. It is my strongest wish that you uphold the very well-documented will of the people and make the correct decisions.</td>
</tr>
<tr>
<td>4/27/2011</td>
<td>Gilday, Peggy</td>
<td>To all of the hard-working participants of the Comprehensive Plan including Town Council, County Commissioners, Planning Staff and Commissions and the Facilitator, I would like to express my appreciation to the entire team working on this enormous and important task. After attending a recent meeting, I was impressed with the solid direction and efforts put forth to ensure that positive motion be executed for our special community. You have had to consider the many facets of serious issues faced by our community and although some are divisive, you continue to find a balance while making excellent progress. I support you in your continued efforts and while I personally agree with many of the decisions you have made and may have a different take on others, I encourage you to keep up the excellent work. It is great to see progress. With continued support,</td>
</tr>
</tbody>
</table>
I wrote you about this before but want to re-emphasize the need for affordable housing in Jackson Hole. I work for the Bridger-Teton National Forest and have been a permanent full-time Forest Service employee for almost 25 years. I applied for affordable housing when I first moved to the valley almost 6 years ago and my name is just now coming up for a house with the Housing Trust. Unfortunately, I cannot afford the house I was offered--priced at $275,000. The Trust then offered a house in the same development for less money, but I still cannot afford to pay that amount of money--well over $200,000. I am single, and on one salary such costs are unreasonable for me. My income puts me in a category where I do not qualify for Housing Authority houses that I can afford. The affordable agencies do not allow housemates, and I do not want one: as a working adult, I feel that I should be able to live like an adult.

Having been in government housing since my arrival, the Forest is telling me I must look for other housing options. I am trying to find a rental, but the barriers are (1) cost, (2) finding a rental that allows a dog, (3) finding a place with a yard where I can set up a dog run (I'm out in the field and work across the entire Forest. I need a place where my dog can stay outside all day). I have been looking in earnest for months, without success--my limit is $1000/month which should, reasonably, allow me to find lodging, but so far I haven't been able to find a place.

I am an active member of the community, volunteering my time for a number of functions, and I feel that Jackson is my home. I do not want to commute to Victor or Alpine: plus, it would be unsafe for me to do so, given my irregular work schedule which makes the bus non-viable much of the time. After working long hours, driving the additional distance would not be safe. I should be able to live here.

The comprehensive plan needs to work toward providing more affordable housing in the valley for the local workforce. This needs to include affordable rentals, as well as units for purchase, for single individuals like myself who do not have a spouse to provide a second income. Prices need to be set in a range that is commensurate with working incomes in the valley. There is too much emphasis on providing for second homes and real estate in the million-dollar range. No one I know who works in town can live in those units, and if the working locals are not supported, local businesses will not continue to operate. Please support the Jackson community in the comprehensive plan.

My name is Nancy Taylor and I’m speaking on behalf of the Jackson Hole Conservation Alliance; I’m Co-Chair of that. And I just want to mention that we have a board meeting at 5:30, and so if you see a mass exodus of Alliance-related people, that is not a protest, it’s not a walkout. It’s simply to attend to the Alliance business of living in this beautiful place. So, Mayor Barron, Council and Commissioners, thank you for this opportunity for the public to speak and for the hours of the endless meetings that you’ve had to endure to consider this Comprehensive Plan. I’d like to point you once again in the direction of the character district maps. The role they play should not be just an emotional picture of what might be, but the character district maps are a tool that will give the themes and policies predictability. And over and over again, you all have spoken about your commitment to predictability, and I think the community wants that, too. I guess none of us really like the unknown, so the predictability will be helpful to everybody.

Without the maps being connected to the themes and policies, I think there’s a disconnect, which I’ve spoken about before. Apparently, the themes and policies are now going to become pre-segments, so if they’re going to be general guidelines at best for kind of the philosophy of what we want this place to look like. But I urge you not to adopt the themes and policies separate with...separate from the character district maps, because they refer to each other, they’re interrelated and one is not complete without the other. So, I urge you to make the hard decisions— you said you would— by giving serious consideration to the build-out numbers within each character district. Without you making the hard decisions, there’s no teeth in this Plan.

There’s no enforceability. And it will make your work much more cumbersome and difficult down the road, because you will be reinventing this Plan with each new development proposal. And I don’t think you want to do that, and we don’t want you to do that either. It’s been a long process for both the public and you. We understand your need for it to be over and done with. And we are on the cusp of doing some...you and we, the community, are on the cusp of doing some really lasting work that will serve this community well. So, I urge you to make a decision tonight to combine the themes and policies with the character district maps. If you do, you will have concrete guidelines that will shape the character of this community for years to come. Please don’t give up now—it’s still snowing, but keep going.

Our family echoes Lou’s thought. [reference Louise Wade’s 4/26/11 comment] The magic and spirit of this valley is in the relative balance that’s been maintained between wildlife and people. Having just returned from the mountains of Colorado, it’s an easy and tragic thing to lose.

Please place "maintaining safe migration corridors" very high on your priority list.
Hi, my name is Linda Wheal, I live in Wilson. I’ve been here since ’95 either full time or part time. And over the past ten days I’ve been able to sit in on your discussions and deliberations of the two boards and I want to thank you for your time and your thoughtfulness. I feel very optimistic about the direction that our Comp Plan is going. And I’d like to thank the consultant for helping move this process along and facilitate a very civil group. And I want to mention specifically that, on the face of it, I felt that the adaptive management plan that was introduced to the group as a planning tool, as a monitoring tool that was introduced last week, I think it’s a very wise and potentially very useful tool to make our Comp Plan a living document, rather than a static document that is a snapshot of now. So, personally, we would like to see the electives move forward in looking into this further and finalizing it and turning it into the kind of tool that was described last week. I think it could be very useful. And I think it will help instill viability and trust with the community that you are... you will be the stewards of this new Comp Plan. Last week there was also a lot of usage of the term neighborhood character, neighborhood integrity, trying to capture and preserve a certain neighborhood’s feel, the importance of predictability. What that says to me is, as important as the Comp Plan is, it’s a foundational document and the next two steps will be very important. That is moving to the development of the, what do we call them, neighborhood character districts and then revising the LDRs. And I would appreciate that when you get to these next two steps, which I think are going to be key to the success of this process, that you consider a widely used and very successful process for communities going up and down the Gulf Coast after Hurricane Katrina. And it was done again and again and again in communities that were partially devastated, where community members, who were very tied to their land, they had a strong sense of community character, and they were very worried about how their new community was going to be built—what it’s going to look like, how do we capture this character that is unique to the south. And it was a process that was very participatory. The people who lived in those neighborhoods were telling the design professionals what made, specifically, what made their neighborhood special, what they want to try to preserve as their neighborhood grows and develops, and what they would like to replicate as their community grows and develops. And the process was also very visual, which I think was along the lines of what Pete was alluding to in his comment. That is, you can design a process where there are images of what neighborhoods in both Town and community will look like based on different scenarios, build-out scenarios. So I highly recommend that you take a look at this process. It’s very used; it’s been successful, and of course it’s combined with the expertise of the planning professionals that we have in the Town and the County. But then the products that are created from that process, the LDRs become a translation, a written translation of what those visuals are. And I think that will help here with the predictability factor in this whole process. So, thank you for your work to date.
Like many residents in Teton County I will not be able to attend tonight’s comprehensive plan meeting. I have participated and submitted my thoughts countless times over the last four years. It is difficult for me to muster the energy one more time to submit feedback knowing full well that it will either not be read or ignored. But I must because I love this valley and think that the elected official’s extreme reversals at the midnight hour of this process will ruin this special place. I did not send this email to the Mayor or the Town Council because I do not believe they have the legal authority to make decisions for Teton County Residents. They have no electoral accountability to 55% of the residents of Teton County and have had an undue influence on the planning process.

I cannot express how disappointed by I am by the recent decisions and certain commissioners spin/double speak in the paper responding to the legitimate concerns of members of our community. The joint planning commission’s decisions to eliminate the Nodes and work within the existing entitlements were the first time in the process that the majority of county resident’s vision was honored. These decisions were well reasoned and sound planning for the future of Jackson Hole.

Re-instating Nodes was in direct opposition to the overwhelming amount of public comment throughout the process. It is irresponsible to make this decision without having analyzed the fiscal impact of dense nodal development or if there is in fact any benefit for the whole valley. There was little support for the concept when the real estate market was booming and there is none now. This is an urban planning concept that simply does not apply to Jackson Hole. You can call them Nodes, Character Districts, or complete neighborhoods. It is the same flawed concept that will only worsen our traffic problems, ruin our quality of life, destroy the character of the special places most of us live, and further harm the already struggling middle class. This is simply not “smart” growth. Open space can be more effectively achieved privately through the land trust or with a permanent funding source. Sprawl can be limited and open space can be preserved without sacrificing our quality of life.

Not working within existing entitlements is also in direct opposition to the will of the people of Teton County. It is challenging enough that we will already grow to twice what is on the ground today. Is that not enough? People have overwhelmingly and consistently asked for predictability. You must commit to working within existing entitlements to have a functioning plan. Perhaps you intend to limit growth and work within existing entitlements. The public trust was shattered when the planners released the 2009 draft which was a complete disconnect from their vision. Please commit to limiting growth within the plan. Numbers in the county and in the various areas need to be set prior to approval of the plan. Simply “monitoring” growth is unacceptable. People will need written assurances for limited growth for this plan to have a chance of being viewed as legitimate.

The public is worn down by this lengthy process. I have talked to numerous people that are busy living their lives and unable to attend or speak at tonight’s meeting. I assure you that lack of numbers tonight does not represent the public’s approval of the current plan. It is clear that you have not listened to their thoughts for four years and that the interests you are serving are not the majority of your constituents. You are going to hear from those various special interests whose agenda the current plan serves. They will say they are proud of you for making the “tough decisions” all the while calculating the financial windfall the comprehensive plan will bring them. It is not too late to point this plan in the right direction. I truly hope that you do the right thing to reverse or at least refine your recent decisions. Please give the people what they have repeatedly asked for which is predictability, measurability, and accountability. If you do not I have faith in the intelligence and passion of the people of Jackson Hole. We will vote in County Commissioners that serve our interests and lessen the consequences of this ill-conceived plan.

Keep the moratorium on growth. The most important thing is wildlife and to keep the corridors for migration available. Financially, wildlife, is what brings the money to our valley.
For the record, my name is Bill Collins and I also want to thank all of you for the hard work that you’re doing on this thankless job. Now, I’ll be very brief and fairly specific. I would encourage you to include land-use maps into this decision. The current Comprehensive Plan was adopted in ’94 and referring to a policy chapter, not the LDRs, I would venture to say that that document has not influenced a single decision in a meaningful way since it was enacted. And there are a couple of reasons for that, but I would say that the biggest single reason for that is that there are no maps. And so every time an application comes before the Planning Commission, or Town Council, what applies? Habitat preservation criteria, or the affordable housing density levels? And those arguments occur in Buffalo Valley and they occur in ??, and they occur because the policies, the goals, the implementation strategies have no relationship to the ground. So, I know that you are eager to adopt something, but I encourage you to take whatever time is necessary to include the maps. And when you’re doing the maps, I believe the concept of concentrating development in the smallest possible footprint, and the term is nodes that’s been used throughout this process. It is smart planning, it’s intelligent planning, it’s good for wildlife protection. It’s good for the affordable housing strategy; it’s a good transit strategy. It’s all around good land-use planning. And it’s unfortunate that we’ve kind of become uneven with that term, and irrespective of whether you use that term or not, please incorporate that concept. Because it truly is taking the ’94 policies one more step. And one of the objectives of updating the Comprehensive Plan is you go beyond where we were. And that’s actually the step that takes us beyond where we were in ’94. I’ve also read that this draft that’s before you recommends 15 more plans and 79 indicators to be monitored. I’ve been in this profession for a long, long time, longer than I care to say anymore, and I can tell you, that’s not the way it’s done. Those plans have to get done, those ?? to be monitored. It’s just not realistic. When you’re into the day-to-day governing and day-to-day decision making, and you’ve got to deal with some sort of an issue, or you’ve got to deal with some sort of an application, are you going to deal with that application, or deal with that pressing issue? Or are you going to work on the ?? You know, 15 plans and 79 indicators are really quite good ideas, but they’re not going to get done. And I would encourage you to pare that down so that you’re including the plans that truly need to be done, and I would guess there’s not more than two or three. And I would encourage you to pare down the indicators that truly need to be measured and monitored, and I would guess there’s not more than a half a dozen. And when you go to monitor the indicators, much of the data that’s revolved there is not precise enough to justify reviewing it on an annual basis. So, bring some common sense, some reality, to, along with the additional plans and the long list of indicators to be monitored, and adopt what’s truly feasible and what’s truly necessary. Something else I would...I will wrap it up. My last point is that, you know, Jackson Hole is a full-fledged community. It’s a real diverse population and that is one of the characteristics of this community, and I ask that as you wrap this Plan up that you keep that in mind and keep in mind who we want to see living here, able to live here in 25 years. Thank you.

Hi, Shirley Thomas, I live in Melody Ranch and I’ve been a resident for 11 years. And thank you all again for everything. Just a very brief comment. When you’re looking at all of the planning that you’ve been doing, please, please, please don’t forget the old theme eight of a green community. I know we’ve been working towards that. Sustainability, reduce/reuse/recycle, LEED certified buildings, and we’ve gotten a lot of those going. But we need to keep that key element woven into every single one of the things, every single one of these needs to be in there. And that’s it.

Stephanie Thomas. Sorry we’re making all the noise. Obviously, this isn’t a very successful place for us right now, so we’re going to get out of your hair. But this is our first time at one of these meetings. It’s not that I don’t believe in following the Comp Plan and making considerations. It’s just that this doesn’t make it super successful. I’m a Teton County resident and I’ve lived here for ten years. The reason I moved to this Valley was because of the wildlife and the scenery ?? (Shhhh, be quiet.) But the reason I’ve stayed is because of the people. And when our friends...oh, here— it always works. When our friends started moving to places like Victor and Star Valley, they ended up leaving because they didn’t move to Jackson to live in Victor and Star Valley—they moved to Jackson, Wilson and Teton Village to live in Jackson, Wilson and Teton Village. So, I guess I’m just there to say that the more we can do to make our communities accessible to the people of my generation, so that 50 years from now we are sitting in a Comp Plan meeting and making decisions about our children and their children, it’s a place that we’re able to stay and we’re able to be a part of. And that means to us being able to ride our bikes to the grocery store and being able to walk down the street to get some baked goods and come to Snow King for a wonderful Comp Plan meeting. So, I’m sorry for the noise and we’ll get out of your hair now. Thank you.

I’m a shorter person...Hi, Gail Jensen, Teton County resident for going on 31 years. Thank you everyone, electives, Staff, County and Town, Bruce and his Staff, and all the community for participating. We need and want build-out numbers. Not any number, one that represents base entitlements of today. A Plan is a budget. The build-out is the budget. The adaptive growth management plan will be a great tool to keep us on budget. This tool needs refinement. Let’s make this part of the Plan. The character district maps must be part of this Plan and not an afterthought. These need to be vetted through a public process. Please do not adapt the themes and policies without these maps. Please put the community stamp on this Plan, follow our hearts and not the dollars. Thank you.
4/27/2011  Thomas, Ned  Interested Public

Hello, my name is Ned Thomas and I’m a Teton County resident. And I am going to address you on nodes and that is from my experience of six years on the Planning Commission and also going through much of the same process you’re going through here today adopting the transportation chapter of the Comprehensive Plan. I commend you all for your work. I believe in nodes as being...as they’re being called as essential, cohesive and a well-planned Comprehensive Plan. Nodes facilitate good planning, open space, reduce traffic, reduce interaction and possible death to wildlife. Nodes create open space, wildlife migration, and reduce infrastructure. These nodes already, in most every case, have water, sewer, roads, bus service, thus reducing costs and expenses of all these services in the future. We cannot have open space, natural beauty, save wildlife, reduce sprawl, unless we concentrate ???. The nodes are the logical place for that development. We have a choice here. Small...sprawl, excuse me, or smart growth development of our community. Please make essential choice. Thank you.

4/27/2011  Sullivan, Mark  Interested Public

Good afternoon, my name is Mark Sullivan; I’m a County resident. Mr. Mayor and members of the Planning Commission, thank you so much for your time and amazing effort ?? here. There’s a couple of things I want to emphasize this afternoon. I’m something of a refugee. My wife and I moved here...we grew up in southeastern Michigan, which has become kind of a suburban sprawl nightmare. It’s pavement from Toledo Ohio to Flint Michigan, some 180 miles, and we’re here because of the extraordinary quality of this Valley and the viewshed and wildlife and this place, its character. But we’re also here because of the strength of the community, as a few speakers have mentioned. And a lot of that grows from the strength of our Town. The Town itself has an attractive and robust population with creative thinkers, artists and artisans and we've got an amazing community growing here and I’d like to see that continue. And so I have...my perspective is focused on these two common directions here, two and three, which is I’d like to see the open space preserved, because that’s what brought us all here to begin with, or many of us. Certainly those of us who have moved here. And then I’d like to see Town grow and become even more robust and more dynamic and more interesting and have a stronger population, so that it’d have more street life and more vitality than it does even now. And so, I mean, I could still listen to three words that come to mind when I think about our long-range plan here for the County, and that’s simply up not out. Let’s preserve the open space, let’s do our best to create incentives so that we can keep up the control of those properties. We’ll shift some of that development east of Town into our population centers and drive growth where it belongs, where there’s already pavement, where there’s already development. So that’s just up not out, just as simple as that. Thank you.

4/27/2011  Genzer, Jim  Interested Public

Hi, I’m Jim Ganser. I’ve lived here for almost 40 years and most of that time I’ve spent in the Town of Jackson. Actually, the Town of Jackson grew to us rather than the other way around. I thank you as elected officials for giving us the time as members of the community to speak to you. I attended some meetings last year where we were talking about doubling everything that exists on the ground. Buildings, perhaps even greater population, and so on. I really...that blows my mind. We have less than 3 percent that is privately owned in Teton County anyhow, and to double buildings and population seems very ridiculous to me. In order to do that, I can see you bulldozing the whole community, or your whole neighborhoods, I should say, to build high-rise condos and apartments to house such people, and I think that is absolutely unacceptable. I’m also a numbers guy, as has been mentioned, and I would really like to see the square footage on buildings and the population build-out in the Plan. I’d like to see a real commitment to actual numbers to be put in the Plan as a not-to-exceed type of situation. We really need to accept the fact that we are not going to house all of the workers in Jackson Hole, that they are always going to come to Star Valley and Teton Valley, and we can’t plan to house everybody in just a small community. If we are putting some fancy words into our...or new words perhaps into our vocabulary of smart growth and nodes, which to me is nothing more than the PUDs and that sort of thing that we’ve been working with in the past, and in the Town of Jackson—and I’ve spoken about this at Town meetings before—I think this has really been disastrous to our traffic, to our parking, and to our infrastructure. And developers have paid very little of the cost, if any, for the problems that they have created. The bottom line, very simply, is I want to see a real commitment from each of you as elected public officials to limit growth in the future in Teton County. Thank you.
Thank you, Chairman and members of the respective boards. In a way I hate to be here, because I’ve watched this for 50 years, and in going through my piles of planning stuff, I came across ?? and opened it up and wonder of wonders <<inaudible>>. [Laughter] I sent comments on May 17th, 2009, in response to something, in an email, and I didn’t hear anything back, so I just want to quickly run over those comments if I might. Thanks for the opportunity to comment on the planned proposal for ?? An incredible amount of study and work has been into planning efforts in this community for years. This set of papers present the opportunity to simplify the issue and resolve it. The interest in land use in the face of development goes back over 40 years when I was one of three local families who developed Skyline Ranch development in the ‘60s. This 600-acre development was accomplished on 250 acres with no bonus incentives. The remaining 400 acres constituted the first Wyoming Nature Conservancy easement in the state of Wyoming, permanently protecting both the open meadow along Wyoming Highway 22 and the entire arian strip of land ?? Snake River. Since that time, between the Land Trust involved… and excuse me, I’m going to ignore the audience, I want to focus on you folks... over 10,000 acres, perhaps more, have been preserved in a similar way in this County. And when you add that to the 97 percent that’s in federal stewardship, we all have an incredible heritage in this Valley. We’re very fortunate to be here. And one of the most important things I think that comes with that heritage is to look around and state what we are and where we are and what we need to protect, because it will all go away. If you look at the population or building projection, I did not thoroughly read the paper this morning, but there was a 7 percent growth in something or other. When 20 years of that, we’re at 50,000 population. That’s the size of Idaho Falls, or Casper, or Cheyenne. Can you imagine stuffing that into this five-pound bag? It’s not going to work. You’re going to have roads, you’re not going to have a lane. I know you don’t like roads. [Laughter] Since that time, I started mentoring and serving as a land planning consultant to other developments going on. In the early ‘80s, I served as local coordinator for the ?? land-use planning study for South Park, copies of which I believe are still existing, but I didn’t find one. It’s all about South Park; it’s pretty straightforward. It said that a part of South Park is a natural appropriate expansionary for the Town of Jackson, the heart of the County. Why do we get beyond that? I am not a Teton Village ??, but I don’t see any others who are capable of supporting what a node is supposed to support, so it’s a self-sufficient place where you don’t need to drive your car somewhere. And whatever you folks think a node is— I’ve seen some of the descriptions— I’d like to see, instead of 18 common directions, about 6 maps, whether it’s character maps, I don’t think... the names of these things keep changing, but it’s really just only a map. Do some scenarios and get reaction to that, because I think under every comment, nearly every comment you may hear today, is a frustration that we see 10 years ?? delay, another ten years ?? delay, and another, and now we’ve had 50. And it’s really unnecessary and I know you all understand that. I propose a simple scenario which might satisfy the citizens. Modify what’s in the current Plan, which authorize PUDs, clusters or higher densities beyond the base density to restrict such additional density throughout the County, to restrict or prohibit. Accepting new development on lands adjacent to the Town of Jackson as that Town boundary runs along High School Road from U.S. 89 West and Spring Gulch Road. This would be a focused fix to the current Plan of additional <<inaudible>> affordable housing, and then it could be worked out as the next step. This would have the immediate effect of removing higher densities from a majority of the County, concentrating it as a logical expansion or growth within or a part of the Town of Jackson, exactly what I understand Town as heart to represent. This node would be within walking, biking and START system access with all necessary support services. The...Thank you. Affordable housing seems to be a frequent justification for the proposed additional nodes throughout the County. The fact is that affordable housing is being used as a cheap currency and so it’s in more density. There’s a lot of affordable housing opportunity in Star Valley, in Teton Valley, where you have START system service, despite the difficulty in <<inaudible>>. And I acknowledge that. But we are not going to fit that stuff in this County. There’s neither enough public money nor private money to pay the cost of doing that. I admire the work of both the Housing Authority and the Housing Trust, but there are limits, and we’re... I don’t know if we’ve passed them yet or not. The rest is... I’ll probably just get in more trouble if I go on, but I just... what I’m asking for is a summary to what I perceive the public has over 50 years expressed as their desire for housing value for the Town. If you say we can’t have limits, then we should have everything. We should be like the rest of the state of Wyoming. We’ve got ?? OSHA, so people get killed almost randomly in the oil fields. We don’t want federal OSHA in here. We need regulation. We have something that’s worth protecting and preserving. I hope you folks think of this. <<inaudible>>.
Hi, my name is Penny Mowen and I’ve just lived here a lot. Not on any boards or ?? or any of that, but I thought it might be relevant to say why I live here. I came from Chicago 10 years ago, and when I began to think about the fact that I could finally get out of the city, where did I want to go to? And so I looked at...I had three criteria—outdoor life style, natural beauty, and enough culture to keep my brain ticking. So, I looked at college towns and places like that. I also looked at Aspen, Vale, and Park City, all of which I’d been to in the ‘60s when they were...well, Aspen was a charming little mining town, really charming. And Vale was a little Swiss village created out of ??, I grant you, but still not unlike little Swiss villages. And Park City was also kind of a real place, you know, a lot of mining shacks were still in, use and that is miners’ homes, a family kind of shack, and so on. And so in 2000, when I went back to look at some of those places that I had known in the ‘60s, it was appaling. The hillside, you could see was carpeted with townhouses and high-rises and, well, maybe not high-rises, but places for people to live. The land had disappeared in these places. And, I mean, I didn’t even look back, you know, just through town and out. And I decided on Jackson. My son was living here, which was a factor, I’ll grant you, but this was a real place; this was a place that had not done that and had not carpeted over every dandelion, you know. After I’d been here about two years, someone asked me, well, why did you decide to stay, because I moved to a place I just wasn’t sure I was going to stay, or really make that kind of transition. And I thought, what am I going to say? How am I going to...I sort of stepped outside myself and thought, well, why did I decide to stay? What’s the answer? And I said, the natural beauty and my son, in that order.

Gregory Griffith, West Bank. Starting with the vision, I think we should seriously consider inserting a statement of intent to balance the statement of ideals, as well as an action plan into each theme. Come up with an action plan which allows specific entities within the community to participate. We’re in a pay-to-play society. If they want the individual action items, they probably want to do some of the research themselves. As far as theme one goes, I think theme two is going to have much more to do with theme one than theme one goal. The only permanent protections, the only real value we can add to our wildlife is more permanent protections in the form of habitat and open space. Theme two, this entire Plan is predicated on a transfer mechanism, yet that’s something we haven’t talked about. There is no smart growth. There is no inherent dissimilarity to smart growth without a transfer mechanism. There is no Town as heart without a transfer mechanism. So, I propose, as I’ve done for the umpteenth time, a transfer mechanism task force. You guys have had four years to come up with some original thought on this and you’ve not yet given us any essentially solutions or any specificity, so give a shot to some of the skill set within the Valley to do this. There are 181 different transfer mechanisms operating in 33 different states right now, and each and every one of them are unique and specific to the community in which they’re craft. It requires a tremendous amount of critical thinking and critical problem solving to implement one of these. As far as Town as heart in theme three goes, there is no Town as heart without a transfer mechanism. Town, as we currently look at Appendix I, only has 35 percent of the ?? dwelling units. Town is going to become a net sum exporter of housing requirements to the County in the very resource lands we attempt to protect. There is no Town as heart without a transfer mechanism. As far as theme four goes, the 10,000-plus platted, yet unbuilt, lots in Teton Valley Idaho, plus their property tax structure, is going to have more to say about our 60 percent, or 65 percent aspirational goal than anything we do here. And if it’s not deed restricted, it eventually becomes part of the problem, not part of the solution. As far as theme five goes, our ecology is our economy. It’s axiomatic. It’s also our very competitive advantage in moving forward into our future. Theme six—I’m going to make some enemies here—but we tend to oversimplify when we tend to overassign traffic reductive values to local convenience, START, and pathways. If you added them all together and actually looked at the data, it’s less than...it’s a fraction of one and 11.4 trips we take on an average daily basis. So, the only reason I mention this is because we constantly use these as growth facilitators and growth precipitators when the traffic reductive value, the actual data, doesn’t back it up. The other part of the START is that if we actually attained our transit goals, we would go broke because the pro-rata subsidy ??, I’m a big fan of START. I think we should have a more aggressive designated funding source for START. I consider it, personally, the third most actionable item we can engage in. Theme seven, all I’ve got to say is build-out, you guys are so afraid of build-out numbers and working within existing entitlements, but we all know it’s going to happen when that point does come, 65 years from now when the current allotment of 7200 units with no PRD potential figured in in...you’ll simply, or they, at the time, will simply up zone something out of the ?? like you’re proposing with the node, the node concept now, so I don’t think we should be afraid about planning within the numbers. Theme eight is just fine like it is. I agree with some of the comments to date. The FLUP, I, personally, don’t think it’s within the statutory requirements for you to certify the Comp Plan without the FLUP the way the current structure is. The FLUP is designed to be the bridge between the bark of the Comp Plan and the bite of the LDRs. I think they’re so symbiotic related. You’ve really got to answer that question soon for the application. The last thing I’d like to say, as I hear the buzzer over here, after four years and $400,000 of direct expenditure, I really believe we owe it to future generations to insert something in the administration chapter to act as, essentially, a ?? before and as a warning to precisely how not to run a Comp Plan. Really, I’m not trying to be funny. I really think we owe it to future generations to pass on that legacy, that wisdom that we’ve gained on what worked and what didn’t. If the ‘94 Plan crafters had that foresight, then we would have benefited from that. So let’s not replicate mistakes of the past and let’s send it forward. Thanks.
I am Claudia Gillette. I live in Jackson. I was born and raised here. And there’s a limit to the people...the people crammed in here. We have to live in limits; there’s only so much wildlife we can handle now. I’d just like to say that not only the more population, the bigger population, the more crime we have, the more dogs, the more crime, the more it grows, the more infrastructure, the more everything. And I should say that the gentleman who was speaking about how quiet it is downtown, he didn’t live here in the ’50s, I was babysitting for ??. But I do appreciate your work and I hope that we can come to a resolution on this that is agreeable to the whole community. And I thought that at one time we were on the verge of that last year. Thank you for your time, and let’s take steps forward instead of a couple backward.

Hi, Anthony Stevens, Teton County, and I’ve lived here my whole life. I sort of want to echo a little bit of what you said. We live in an unbelievable place, as you all know. Mountain towns across the world are almost identical. The one thing that makes, you know, Jackson and Teton County unique is that we have an entire intact ecosystem. And, you know, having grown up here and recently having a son, I want to make sure that my child has roughly the same experience I had growing up. Obviously, the Town has changed since I was a kid, you know, ?? helicopter doesn’t land over at K-Mart anymore. But we have an opportunity to keep it as unique and special as it has been for the last...at least in my lifetime. One thing I would like to see a little more emphasis on is wildlife crossings and road redevelopment. You know, a true commitment to wildlife is what has made this Valley extremely unique. And, you know, it’d be great to see that commitment moving forward. And thank you all for the hard work you’ve already put in. This is obviously a long process. So, thank you.

After re-reading April’s email from yesterday and thought I’d send you a quick note as she suggested. This will not be another email (I’m sure you’ve had a couple) with a bunch of comments about the plan as I feel you, the planning staff, and the elected officials have done a very admirable job in putting the plan together. I submitted quite a few early comments online and many years ago worked on the downtown redevelopment guidelines with Tyler and other young Architects and design professionals.

The approach of Town as Heart combined with a recognition that identifying other, diverse/distinct nodes is the responsible thing to do. Unfortunately I won’t be able to attend the meetings during the next few weeks and so it continues to seem that the silent majority will always be overrun by the vocal minority, I guess the vocal minority don’t have jobs or kids. Just wanted to say that although you probably don’t hear it much, keep up the good work and be assured that there are many out there that appreciate the planning efforts to consider the many different views/opinions, not just the no-growth or NIMBY population.

Hi, I’m Pegi Sobey. I’m a Teton County resident and I’m also another Co-Chair of the Jackson Hole Conservation Alliance. And I want to thank you for the opportunity to comment on the Jackson Hole Comprehensive Plan. Even with the best of intentions, we’ve all seen communities around the nation and throughout the world where areas are named or memorialized or replicas of what once was there. And I think it’s great that we’ve committed to protecting the wildlife, scenic and natural resources as our top priority. This can become a reality only if we also defined a realistic timeline and key benchmarks to track progress for reaching those goals. With that in mind, we must continue to work to substantiate our value statements with some workable policies and strategies. In concert with your excellent start to developing a meaningful, adaptive growth management plan, we can create indicators that are measurable and that actually work to protect what we value here. As next steps, we can collect and use the best available data when making...conducting our annual studies and making land-use decisions. We have a wealth of resources within our public agencies, our NGO community, like the Conservation Alliance, to consolidate existing and achieving late relevant data to inform our decisions. We can update our natural and scenic resources overlay. You’ve already tapped the extraordinary talent and expertise of the Natural Resources Technical Advisory Board to improve the vegetation mapping, which is crucial to updating the Natural Resources Overlay. If we’re going to prioritize wildlife, scenic and natural resources, we need to fully establish how we are going to implement strategies to not only achieve but exceed those goals. We also must commit the resources necessary in this proposal. Thank you all, Staff and board members, for your tireless efforts to work with our entire community to create the best possible and measurable Comprehensive Plan. Thank you.

<td>Bullinger, Brooke Interested Public</td>
<td>Curt Bollinger, I’ve lived here 37 years. I had originally planned to spend a lot of time to try to come up with a great presentation today with all kinds of salient points to make and then decided, no, actually I didn’t need to bother. I’m on the sizable portion of the general public who’s very disillusioned with this process. Perhaps an example would help you see it from our side. If you had been at the Wilson neighborhood meeting that was held two years ago and had seen and heard the outcry over the possibility of nodes there, you would have found the depth of passion incredible. Afterwards, we felt the planners had listened to us and that nodes were no longer in the picture. And then low and behold, under your direction, the nodes were done. It definitely makes you shake your head in despair of anything you say; it never has any kind of impact. Jackson is such a special place and that is why we get so worked up about it. The people who live here are by and large of much higher intellect and are much more publicly involved than the average community. We know what we want and I think you as electives take a risk when you disregard the voice of the public. What I really want to emphasize here today is that everything goes back to wildlife, open spaces and viewpoints. The Town itself is not that special. The reason people live and stay here, despite extreme weather, financial burdens, etc., and the reason people visit here by the millions is because of our wealth of wildlife and natural beauty. It drives our economy and our entire social fabric, everything. If you keep building up and out, you become like everyone else in every place else. So, of course, it takes more work to preserve and protect, but this unique place is worth it. Please do not let us down. Thank you.</td>

<td>Young, Tim Friends of Pathways</td>
<td>Good afternoon, Tim Young, Executive Director of Friends of Pathways. Thanks to both boards here, Chairman Ellis and Mayor Barron, and your boards for all your hard work on this; I really appreciate it. And I want to echo the Mayor’s comments and thank the Staff for the good job they’ve done to incorporate the Planning Commission direction and review this. Quite of bit of that work has helped the product you’re working with. And overall I’m going to focus a little bit on a principle in theme six, the transportation theme, and just to say, while we generally support the direction in the conversation you had last week at your meetings, I think our view and the future needs for this is very compatible with what I’ve heard you echo. A couple of key points to make, though. Why this theme is addressed in theme six, I think we need to...the Plan could benefit by emphasizing safety for, in this case, safety for people a little bit more. A policy to improve highway, street and pathway safety is important and some indicators of progress, but to decrease crashes 10 percent, for example, might be while we’re still shifting modes. And it would be complementary to wildlife vehicle crash-reduction goals. I think it’s just a missing element in there. We definitely agree that transportation choices must be considered regionally. One component of those is stress. I think you focus a lot of workers. And that’s important, but our transportation system is a lot more than that. And one key area is to include visitors. It doesn’t quite address the two to four million people coming through our community every year as visitors and it’s a great impact on us, and addressing that is I think very helpful. The next point is on page 75, the Planning Commission draft references Appendix K and it’s the current Comp Plan transportation chapter. As you look at that, it references...it’s substantially highlighted in yellow, meaning it all needs to be updated. And those major additions are necessary and pretty darn important. But I’d like to see, as you’re concluding this process, that you could get a more clear process map on the direction and how that will be accomplished, the key task you’re willing to take in the next year, and then some statement of what the desired outcome is. Will it be a new transportation plan that covers all the modes? I think it will be helpful for all of us to know how that’s going to play out. A couple of quick things on principles and policies. We support all the alternative modes in each corridor; however, it will vary in terms of its potential to shift trips. In the language, there remains a bit of a language focus on transit. It’s sort of a leftover from the earlier drafts. I think that could still be improved so that you look at the full toolkit of potential solutions and transit is certainly one. Transportation plan management would...might be another one. The pathways, sidewalks, those combinations of what...it won’t be a silver bullet—it’ll be all of those, and referencing that would be good. And mode shifts, to conclude here very quickly, should be more specific and measurable. We don’t have any baseline data in there, and we should put...if we don’t have perfect data, let’s put what we have and qualify it. But the best mode shift could be shown in like four pie charts—existing mode shift for all modes, existing budget for all modes, future projections for mode share, and how you’re going to spend your money in the future. That would probably help everybody, I think, and would be helpful. A regional transportation authority is mentioned. That’s a specific authority with taxability defined in Wyoming statutes. I think you might be better by being more generic, like a transportation program, a regional program, for example. Let the specifics be worked out because you may or may not want to have establishing a tax liability, I don’t know, but this may not be the place to do that. And then coordinate into your transportation. I’d like to comment that it mentions WYDOT, that they’re crucial, but it’s more than WYDOT. I think including other federal agencies, which both impact us and have substantial access to funding and could help us. So, Grand Teton got $11 million to date for the ??, for example. They have access to transit. And the strategies—one final point and I’ll conclude this—they’re all good and I support those. I’d like to see you if you could add a point regarding our...to expand or enhance our pathways and sidewalks through a sidewalk program. That could be mentioned in those strategies; it would align with the rest of them. Thank you.</td>

Well, first of all, I want to thank you guys for all your time, effort and hard work. It’s an arduous process, but it’s important that we do it and important that we get it right. I’m sorry, I’m Carol Waters. Apparently, we are all in agreement that wildlife protection is paramount in this Valley. But how do we get that? As far as I can see, to succeed the Comp Plan must ensure that the primary concern in all land-use decisions is permanent protection of wildlife habitat and the preservation of all movement corridors, both seasonal and ???. Nothing else will achieve our agreed-upon goal of wildlife protection. To do this we need to incorporate the best science available into these decisions, and when we don’t have adequate data to inform our decision, we should invest in the necessary long-term research to get it before making the decision. Clearly, wildlife preservation requires incorporating into our Plan a real, specific, public commitment to limit growth. I don’t see what’s wrong with growth caps. Unlimited growth would clearly be unreasonable and unacceptable. The amount of growth matters greatly and we can and should decide what we want it to be based on best science. Whether or not the existing entitlements are an appropriate amount of growth and development remains open to serious question. Those numbers alone already doubling what we have here. I’d say that it’s highly unlikely that our wildlife and our natural resources could be protected to any significant degree. Of course, the rate, the scale, the location of growth are also huge factors. The Valley bottomland is primary winter habitat and many species of wildlife depend upon it to survive. I believe it is essential to monitor the cumulative impact of growth and development going forward and to alter that growth and development based upon the information provided by that monitoring. And an enabling mechanism for a cumulative impact analysis should be an integral part of the Comp Plan, not an addition decided upon at a later date. Without strict monitoring and appropriate responses to what is found by that monitoring, the hope of preserving our wildlife is very slim indeed. And, lastly, I would agree with the other comments on the character maps. I think that without knowing the role that they will play and the impact they will have and when they will be adopted, the public cannot evaluate the themes and policies because they’re interconnected. Thank you.

Hi, my name’s Robin Levy; I have a terrible cold; I’ll try to talk as loud as I can. Thank you for all your hard work. I know how many hours you’ve put in, and I know how difficult it’s been and I really appreciate it. I admire all of you for your willingness to do it, because you have to be out of your mind to be in that position. None of us want growth. I don’t think a single one of us wants another house in this Valley. And if we could legislate that, I think every single one of us would support even doing it. I don’t think any of us want additive growth, and by that I mean one house more than what’s already entitled today. So, everybody talks about wanting growth caps. I support that, except that I know that if you adopt a growth cap, it will be thrown in your face time and time again when you’re trying to implement the other goals that are important to this community like workforce housing. (Excuse me.) So, I like where you’re headed. I like the growth management plan. I think it’s a little more flexible. It will allow you to do the other things that are incredibly important to us. And I support you, and I hope you can maintain your courage, because you are in the unenviable position of trying to introduce reality to our desires, which is I think essentially no growth, because I think that’s what would be best for our community as a built environment. If I could wave a magic wand and turn 65 percent of our homes into deed-restricted workforce housing, that’d be great. If everyone in this room would sign up and deed restrict their home, you guys could start, but I’m going to guess that’s not going to happen. So, we have to plan for how we’re going to achieve that some other way. So, when you talk about community character, the character maps are going to be really important to us and I do also encourage you to get to that before you finalize this, because I think it’s going to illustrate the reality for a lot of people and what the constraints are that you already foresee but maybe some other folks don’t. When I hear predictability and integrity, the thing that, I mean, that’s great and we all want that, but the thing that I fear in that is that’s going to become don’t change my neighborhood. And I don’t think that’s going to be possible in some places and these maps are going to illustrate that. And so bear up because I think you’re going to have a lot of arrows in your back when you start mapping. It’s going to be ugly; it’s going to be contentious. But I believe that you all have our best interests in mind. I’ve been before you before representing land owners and developers and I know you all don’t want growth because I’ve seen it. [Laughter] So, I feel very comfortable that you don’t, and maybe that’s where my faith comes in and that’s why I’m not so fearful of what you guys are going to do. So, I know you’re going to do the right thing and I really do support you. Finally, workforce housing, you know, we all talk about it. It’s very difficult. I don’t want to see it all in Teton Valley Idaho and Alpine Wyoming because I don’t want to see five-, six-, seven-lane roads and that is what we will have zipping in and out of this Valley. I don’t want to see our volunteer Fire Department degrade any further. My husband’s a volunteer fire fighter and I support that organization a lot. I don’t want to see our volunteers go ???. I don’t want to see anymore teachers have to commute to get to work and get stuck as the Pass is closed. I don’t want to see all that. I want to support workforce housing and I know to do it, you’re going to have some tough work ahead. You’re going to need to zone for it, and please do it. Thank you very much.
Although I have not been in Jackson to attend your meetings I have been following your deliberations through email and the newspaper. Your careful consideration of all the issues has earned my respect and you are all to be congratulated for working hard through the whole process. Because I haven’t had a chance to speak to any of the issues, I want to express a few opinions as the public comment period is coming to an end.

First, I understand that the buildout potential is increasing over the prior comprehensive plan. In fact, one opinion I read said the buildout potential is doubling. Since, the number one priority expressed by the population of Jackson is to protect wildlife, this increase in future population seems inconsistent with the goal of wildlife protection.

I’m confused as to the potential large increase in commercial development is being suggested in this new plan. A modest increase seems much more compatible with our number one goal of protecting wildlife.

The Conservation Alliance and others have used a wildlife overlay to help guide future development planning. I hope that a wildlife overlay will continue to be used and is incorporated as part of the new plan.

Jackson Hole along with many western towns enjoys beautiful scenery, great fishing, skiing and a robust tourist economy. The one thing Jackson has that other western towns don’t have is our wildlife. We need to make sure that we don’t sow seeds that will eventually drive away the beautiful animals that also call Jackson Hole home.

Hi, Anne Hayden Cresswell. I came tonight to speak about affordable housing, but now I don't have to; Robin just did that for me. She did a great job, thank you. And honestly the only remaining comment I wanted to make tonight about the chapter four, housing chapter, is to really sincerely thank the hard work and incredible work of the Planning Staff, the 41 meetings that the Planning Commission has put in to do the work on the housing chapter because it is a terrific chapter. So, thank you for all that work. It was also, I have to add, a treat for me. I’m coming upon my ninth year as Director of the Housing Trust, and I’m pretty certain it was the very first time in nine years where all of our elected officials have dedicated four hours to so many different topics related to affordable housing, which I think is such an important issue.

Instead of speaking tonight as ED, I would like to speak as a resident of the Town of Jackson and offer a slightly different perspective than I think you’ve heard tonight. We’ve heard and read a lot about the need for build-out numbers, a growth cap, about needing character districts now, and about wanting regulations now. And I appreciate the passion that we all share for this wonderful place. We all live here because we love it, but I also have learned over the years how quickly passion can turn into panic and turn into panic really fast. But I think if we look at the last 20 years, our rate of growth between 1990 and 2000, and I will quote three unnamed, almost certain, individuals in this room that that rate of growth was between 1 and 1½ percent between 1990 and 2000. We know that between 2000 and 2010 it was 1.2 percent. If every person in this room could agree on one thing tonight, my guess is that we would all agree that the growth coming forward in the next five years is going to be a lot smaller than it was over the last 10 years. My perspective then tonight is that we are not in a place of crisis and rather that we have time to make really thoughtful decisions and continue the conversation that we’re having tonight. I would like to add that I think on balance you have done a very good job with this vision and policy doc. I think we have identified every possible monitoring tool which will help us make sure that we’re meeting the goals in our Plan, the one thing being maybe an 8-cent tax to help pay for all of those monitoring tools. I applaud the growth monitoring program that was presented on Friday. I think that’s a terrific start and I think the character districts, and of course the workforce housing action plan, are critical. But again I think we have time on our side to be thoughtful and to continue some of the really important conversations that have gotten started where we’ve scratched the surface, but I think have some additional meat to unpack there. So, thank you so much all of you for your work.
I’m Robert Biolchini; I’ve been here for 20 years now. We’re pretty lucky with where we live; we all know that. And given Teton County, we’re down to about 1½ percent of the land that we’re speaking about right now, given that 97 percent is already protected and now what is developed has been developed. I guess my concern is, as we look forward, we’ve got two things that are kind of clashing. That’s the reason that the Comprehensive Plan is put together is to slow free markets. We don’t want to see the free market up ?, so to speak, and grow in a direction that would not maintain the quality of life here. My biggest concern moving forward is understanding the cost, not the cost to our community but actual financial cost as we move forward. When we start restricting things, we’ve got the private sector versus the public sector and who is burdened with those bills. It would help, as we move forward with this Plan, to get a sense—I know that the exact numbers are going to be very, very difficult—but at least get a sense of sources and uses of cash, so that we can better understand who is going to benefit from and who is going to pay for some of our or your all’s decisions moving forward. Anyhow, that’s just my thought in terms of, well, as this community builds out, who’s going to pay for it? We are, I would bet for the better part, we are at a pass right now, in that, you know, we’ve got our little piece of Jackson. We’ve got to consider those in the future and how they’re going to afford to live here...kids—I don’t have any kids yet but I’ve got plenty of people who are concerned with, you know, where are their kids going to live and how are they going to afford to live here, and so forth. Budgets can get out of control quickly. All we have to do is look to our federal government to see how quickly that can happen. And my biggest concern, as a small community, is how we’re going to use those sources of cash to the best of our ability moving forward. Thank you.

Hi, Franz Camenzind, resident of Jackson Hole. I appreciate you allowing me to speak here and the opportunity for this community to speak. I think it’s great that you’re setting aside this much time. And I really want to thank the Staff, because they really are the ones that put in the most time over the years on this particular project. I think there’s been so much negative things here said this morning, or this afternoon, I’m not going to try to repeat those, but I will say that if we do want predictability, we do have to have some kind of growth cap, whether you call it that, or we have to know what the build-out number is. The ‘94 Plan gave us some idea what the build-out number was. It didn’t send people over the mountain or whatever else. We knew what it was; it’s roughly doubling. We may not like it but that’s what we have now, and there’s some sort of predictability with that. Now, we know that it’s very, very, very difficult to down zone. But I’ll tell you what, it’s going to be very unpopular to up zone, and all we have to do is remember the DRD from a few years ago. Growth will have impacts. It’s going to have impacts. I don’t care how smart it is. And we can call them neighborhoods, we can call them nodes, I really don’t care what we call them. It’s what we do there that matters. If, for example, we have a cowboy town that has a hundred people, or a hundred units, and double it, the best we can hope for is to capture 10 percent of that traffic. That means 90 percent is going to be new traffic and that’s going to hold up just about anywhere in the Valley. I mean, a 10 percent capture is incredibly optimistic, so let’s not forget that. We can, you know, support the START and we should be doing that and we should have community pathways. Those are all good, but at best if we can capture 10 percent, we have that extra 90 percent that’s still going to have an impact on this, and that’s going to be impacting roads, it’s going to be impacting our deer and elk and moose, and so forth. Again, what we do in these nodes will change the character. And we’re concerned about character and I think most people are and I think most of you are, too. We can’t just double it and then try to figure out what did we do to the character of the node, whatever we want to call it. And I would say the same thing for the Town of Jackson. Clearly, it should be the Town of heart, or Town as heart. It is the heart of the community. Most of our services are here. But we can overlook this Town, too. Maybe moving into South Park, a little bit is okay, but going up is congestion. I don’t care how you look at it. You don’t want to congest your heart. There is no Lipitor for community congestion. [Laughter] It’s going to happen if we let it build like that. We are building not only in protecting character for ourselves, but we’re also trying to protect the character in this Valley for our visitors. There’s three million plus people a year that come here. They come here for the public lands and the wildlife and the scenery but they also come into Town for the character, so we have to keep that in mind, too. I think one of the things that—and I hope I don’t embarrass you when I say this—but I agree with Bill Collins, despite everything that he said. [Laughter] And I think it’s very clear. We had a pretty good Plan with the ‘94 Plan. There were certainly some things missing, and I do absolutely believe that we have to have these maps sooner than later. That’s part of the predictability that we want. I think what we need, and I’ve been playing with this in my head for too long now, but however many themes we have, we should be able to write down what we want with these themes in a couple of pages and it should be simple and it should be very specific, so that when you do the LDRs, you know the boundaries that you have to work in. The Staff can say, okay, we want to protect this or that, we don’t want this to go beyond such and such. Then they could come up with the LDRs. I mean, I think what we have right now is too vague. It’s not predictable. There’s no indication of how we’re going to get any of these transfers into Town, or into the nodes. You’re leaving that completely open. Yeah, the idea of monitoring is great, but if you don’t have teeth to stop something, if you don’t have brakes on it, monitoring is just going to give you a history of what we did wrong. So, I would really...what we have is the potential for growth here. Let’s just find out the best way to rearrange those development potentials so it works for everyone. And I would hope that by rearranging that, we can end up with the good ship Jackson Hole and not the Titanic. Thank you.
Good afternoon, my name is Meagan Hill and I’m a resident of Wilson. Mayor, Commissioners and Council members, I’d like to thank you personally for the hard work and ?? courage for tackling some of these issues and to discuss them in the public realm. When I look back at my comments from March 8th, I see that many of my concerns have already been addressed, so thank you for listening and thank you for taking action. I want to specifically highlight some points of discussion and decisions that will be most important to me, and I want to start with smart growth principles. I support the rewrite of policy 2.1.A, to limit the base development rights. I agree with your approach to that the Plan results in population rights and smart growth principles. And I agree, whilst it may be unpopular, with removing language to ?? . Thank you. But I agree and support the rewrite of policy 2.1.B, preserving existing County neighborhoods to maintain character while allowing density changes in existing neighborhoods. I don’t know in fact if it’s going to be really difficult to deliver within the character. District discussions is going to be challenging. I support the rewrite of policy 2.1.D to promote infill and redevelopment in Town, shifting the focus specifically to complete neighborhoods within the County. In addition, I appreciate the decision made recently to clearly differentiate between commercial and nonresidential. I think that terminology is key in perhaps dealing with some of the fear and frustration that’s been discussed by other folks today. To include a comprehensive multi-modal transportation plan and to include a growth management plan. I mean, so many positives. I have one significant concern. Quite frankly, I’m a little perplexed at the admission of they might ?? sustainability and energy from any substantial discussion. I listened to a lot of talk about green community, green ??, and the importance of wildlife and natural resources. I believe it’s imperative that theme eight strive closely to achieve the goals of the community. I believe the changes in climate, weather patterns, and air pollution, water quality, and so forth, will impede our ability to live up to our wildlife and natural resources. So, I see some significant imbalance in front of us at this point in time. Moving on and to conclude, as you wrap up with the Plan, I encourage you to zone for workforce housing, to incentivize mixed-use development in a manner that allows us to locate our workforce in ?? of services and facilities, which not only help transportation and many other plans, but it will also help support businesses here. And finally my pet project is to recognize the importance of water as a natural resource and provide best practices ?? . Thank you.

I’m John Mobec from the Murie Center and also spent some time with the Chamber of Commerce several years back, so I’ve seen a couple of angles of this Valley. Sincere thanks to everyone who’s been involved with this process. As far as I can tell with the work you’ve done so far, you’ve done tremendous work and most of it of course is thankless. As you know, we’ve got an incredible legacy of conservation in this Valley. The Murie family, who I probably represent…well, I can’t speak to representing them, but I work for their organization that furthers their legacy, was responsible for building the Grand Teton National Park, expanding it. A hard fight, a tough fight. The good fight and the right thing to do. Let’s not forget about those proud achievements that this Valley can hang our hat on. Grand Teton National Park being one of them. Yellowstone National Park being another. These are some of America’s best ideas. At least, these are the things that make us different. This is the end of the world. This was the place where we decided that we were going to set aside landscapes where humans and wildlife could coexist peacefully, harmoniously and for the enjoyment of the people, as well as the preservation of the wildlife. We have an opportunity here to preserve an incredibly unique landscape and come up with America’s best new idea, which is the true harmonious relationship between a community, its infrastructure’s development and the wildlife that surrounds it. So let’s not be afraid to be bold in preserving this vision for people and wildlife. President Roosevelt, former President Roosevelt, famously said, there’s nothing more practical than the preservation of beauty than the preservation of anything that appeals to the higher emotions of mankind. That’s what I hope that all of you are doing and thinking about as you think about this Plan. If it all becomes irreversible, the subsequent impairment of our landscape might also be irreversible. If we overreach, we can’t travel back in time and rethink our development strategy. Limitation is an important concept in sustainability; it’s an important concept in systems thinking, which we heard a little bit about before; it’s an important concept in ecology. We manage these things in sustainable preservation of these systems, including humans and wildlife. We’re trying to find a dynamic equilibrium where our community can create a template that other communities can look to as we’ve achieved something like a harmonious relationship between human communities and the wild landscapes. It’s a delicate balance that’s difficult to achieve, but I think we’re up to it and our history suggests that we can do it. If that balance is disrupted, we could destroy what makes this an incredible, beautiful place. So, exercising your strength, appropriate caution, limiting growth to a real number is one way to ensure that we have a chance—just a chance—to build a sustainable community where people and wildlife, a place for beauty in all of its forms blooms brilliantly. Thank you, to each of you, to all of you, for fulfilling this significant promise.
Armond Acri, representing Save Historic Jackson Hole. I’d like to thank you, first of all, for allowing me to talk and all your thoughtful conversation that has led up to this point. You guys have had some real I think in-depth discussions that were good. I’m going to steal a queue from Bruce. It’s actually kind of hard to comment at this point, because there’s really not a hard draft in front of us. So, I’m going to steal Bruce’s queue and talk about what I think I heard you guys decide and give you some feedback on that. [Laughter] Because that was actually a real good way. I think you guys got to a lot of our things, so I’m not going to beat on that anymore. But transferrable development rights, I think you got some of it. I think you have the concept of the importance of the permanent transfer, because what we don’t want is the worst of both worlds, which will be to allow increased density in wherever—I’m not going to touch where right now; I’ll let you guys tackle that ??—but a key issue remains that how much, because it’s not just important where, but it’s how much, and that’s one of the key discussions that needs to be had there. Some of the things that I think maybe you didn’t get as much was the idea of no new resorts. I still hear people struggle with, well, what if we have another good proposal come in. I think people were pretty clear and would point out that the five resorts that we…these are the true resorts that are approved that have resort plans. Two of them are in trouble and two more may be in trouble. So, that’s not a real good record. Maybe we need to rethink—I’m not going to throw rocks here—but we need to look at that model, so I think you need to think about that. The issue of an expansion in the lodging overlay, tourism is flat and this morning when I had this discussion, there was talk about not trying to fill…trying to fill the shoulder season, rather than trying to fill more hotels. So, expanding the lodging overlay seems to be a contradiction; I’m pointing that out then. Predictability, that’s another landmine. The community I think is really clear. What they want to do is plan once, not plan for each project. That’s really what the community wants. They don’t want to have to come out for every project. They want to make clear what’s going down. Don’t want to reward speculation. The problem…one of the things that’s happened is that we have people paying more for real estate in the expectation that they would get more development rights. And that’s just increased the spiral which has then trickle-down problems instead of trickle-down benefits in terms of housing and everything else. ?? was a good example of that. I don’t have the statistics; I wish I had time to figure that out. But how many of the PMUDs that were actually approved actually were turned around and built, and how many of them went right on the market right after that? It benefited the developer and not the community. There were no jobs created immediately after that. So, think about that. We do look forward to seeing the draft and the proposal will provide us with more details in the coming days. But we would ask that there be a workshop to discuss after you have a hard document where people can talk about it. Because I think you need to convince the public that it does address their concerns, and I think the way to do that would be an informal, maybe a workshop kind of a ?? thing, with a two-way conversation unlike what’s going now. It’s been very efficient up to this point so we would encourage that. A couple of last things. One, I think you guys need to give yourself more credit. This morning, you guys were dismissing your impact on the local community, and I would say you actually have a bigger impact than you want to believe. You did a pretty good job in the last couple of years. I’d also say, qualify that, it could have been better perhaps. But growth management is the way to soften the bust. There was talk about the boom-and-bust cycle, and it’s a principle that’s used in the stock market, electrical theory, everything. You know, to protect from overheating. And I think all you need to do is look over the hill in Teton Valley Idaho or Las Vegas Nevada and see the problems that happen from not allowing…for allowing things to grow with no limits. We look forward to working on a growth management plan and would ask you lastly to improve character district maps because we do consider those a vital link, too. Thank you.

1. Next issue I would like to discuss is complete neighborhoods. Sounds good to me. though vague, If it allows us to make a few less trips in the car, I’m for it. If it is an attempt to retrofit our hyper sprawl and put community services closer to more people, I’m for it. We need neighborhood shopping, food & prof. services in carefully designed and crafted centers.
2. The character of these centers is as much determined by the physical form as it is by the activities that happen there. The best way to determine the desired physical characteristics of place is a good form based code. That should be the next step in this planning process. We have expressed a desire to be a leadership community. The way we deal with transportation and land use patterns will be one huge indicator of how well we have succeeded. I hope we look back at this time as the moment we made good choices.
Thanks again

<td>Thal, Lawrence E., AIA</td>
<td>Thank you to all re Transportation. We have to take seriously the goal of reducing vehicle travel. Our excessive reliance on driving and the large VMT threatens core goals of the plan such as community character, wildlife, economic vitality, climate sustainability and energy conservation. Ground transport accounts for 62% of energy use. Land use patterns are huge factor contributing to that #. The draft comp. plan calls for “per capita vehicle miles traveled” reduction. Great. I’m for it but shouldn’t we set higher goals? My thoughts are: 1.Set a substantial target such as 20% reduction in Vehicle Miles Traveled per capita and a net overall reduction in vehicle use by 2020. 30% x 30 This could be a boon to future economic vitality. 2.We are not going to get there with our current land use practices. Every planning &amp; policy decision made from here on out has to be looked at through the filter of reducing vehicle trips. THANKS</td>

<td>Stone, Cindy Hill</td>
<td>Oh, I’m Cindy Stone, I live south of Town. So, ten/fifteen years from now, believe it or not, this ??, this ?? is going to look really different and you guys are going to be gray, &lt;&lt;inaudible&gt;&gt; and Jackson Hole will look different. We need to limit change, or to limit growth. We can’t say slow down, or be careful. We have to say 35 miles an hour. And so we need an end-game number, something that we can work with. And we’re past the point of saying, hey, everybody jump in, we’re going to move to Wilson. Because there are only five seat belts in my car, so I can only take four riders and myself. And we need to realize that; we’re at that point now. Every...a smart businessman knows that more is not better. Most of the time it’s just more. And that’s a hard lesson to learn and most of us learn it the hard way. Now...sorry, I’m nervous...my great grandchildren don’t know me and ??, excuse me, that we stand for clean water and air and moose and trees, and so we have to remember that. I’m sorry...okay, I’m done.</td>

<td>Vance Carruth</td>
<td>My name is Vance Carruth and I live in Teton County. And I arrived here in 1963 with the intent of staying here forever as a result of a tour visit with my parents in 1952. And I have always had an abiding love for the beautiful scenery we have here, as well as the diversity of wildlife that’s here. And when I came here, this was a very small community, to say the very least. Much of what I’ve seen happen to this community over the years, I have found somewhat appalling, and other aspects I see very encouraging. So, it’s kind of a mixed bag of how I feel about how this community has grown over the years. But in terms of the community itself and in terms of all of you folks whom I greatly admire everyone that’s sitting at that table—your dedication, your sincerity, I know that you want to do the right thing for this community, for us and for all the future generations that are going to live here. At the same time, I also admire and respect the community at large who sits in these seats and comes up and makes all these excellent comments, and even though there’s a diversity of opinion here, I do feel like that there has to be a way to bridge the gap between one side and the other at the two extremes of whatever we look at. Too often in our society today, the polarization is palpable, and it frightens me personally for my children and my grandchildren that we have so much anger and so much frustration with dealing with government. And you represent the government. And so I read some letters in the paper, I hear some comments that I find offensive because they attack personally the motivations, or whatever, of the people sitting here. And to me, we elected you people. It was majority vote. And you’re here now and I know many of you personally and I admire all of you. I certainly don’t have any expertise in pointing out what kind of a Plan you should make and I certainly don’t envy you what you’re attempting to accomplish here. But my overriding objective is to see this community and the beauty and the wildlife remain as the main focus of all the efforts we make, so that if we’re going to build more roads or more homes or more subdivisions or whatever we’re going to do, we need to think about how is that going to affect the wildlife we all came here to enjoy...and the scenery and the pollution locally produced and all the other accompanying aspects. So, I can certainly see, as I listen and as I read in the papers about going between flexibility and predictability, there has to be another way and it seems like you folks have come up with a Plan that might just accomplish both of those things that hopefully would satisfy all sides. But if you don’t, or you can’t, and it’s impossible and you do have to draw a line in the sand and say, this is what we’re going to do and this is how we’re going to do it, that I would hope our community would pull together and continue to work with you folks to accomplish the goal in whatever way it is humanly possible. But of course my big dream is to see these wildlife crossings brought into the Valley when all these new highways are constructed, because to me the overriding objective here is to see sustainability for the wildlife and the connectivity of the wildlife, allowing them to move across the landscape freely and get where they need to go without having the impediments that are created by all of us. And in my opinion there are too many of us here now. So, if you’re going to double the population and you’re going to double the size, well, all I can say is I’m very grateful that I only have probably 20 more years on this planet, because I don’t want to be here when it reaches the Salt Lake City stage. Anyway, I just want to thank all of you and all of you out there in the audience. And I love living in this community, which to me is kind of an anomaly out there according to the rest and I do not want to see us go down that line of adversarial positions where it’s fight to the death. I just cannot tolerate that in this wonderful community. Thank you all very much.</td>

I would like to address Theme 5 (Provide for a diverse and Balanced Economy) of The Comprehensive Plan.

Sustainability is an important element of this Theme. However, I am concerned that the policies described to achieve this goal are either insufficient or in direct contradiction to it.

An economy cannot be sustainable unless all economic activity pays its own way, both socially and environmentally. For example, exactions should be required to house workers for jobs created, or to help build roads, sewers and other infrastructure related to a project. If an enterprise harms the environment it should be taxed to pay for it. Sooner or later someone pays for all of these things and linking them to the economic activity that generates them is fair and efficient. Creating development caps at no more than current base entitlements are an integral part of this. Caps force us to face the reality that we cannot grow forever, that an important aspect of the cost of growth and development is a run-down of our finite amount of natural capital. Over-development or encouraging other unsustainable businesses leaves less for the generations that follow.

The world has grown past the point where more is better. This is particularly relevant in Teton County where our Natural Capital is our biggest asset.

If we ignore limits or hide costs because it's easier not to look, we will decrease our own wealth. Furthermore, we will exacerbate the problems associated with growth, selfishly passing them down the line to future generations. A more positive way to view this is that as the world grows, develops, and pollutes at an increasingly greater pace, genuine environmental capital will becomes more and more valuable. Protecting our environmental capital is an excellent investment.

I have several specific concerns about the economics theme in the draft Comprehensive Plan:

First, the goal of stabilizing booms and busts is laudable, but wholly unrealistic as written. As you all well know, County and Town finances suffer along with everyone else when the economy is bad. The only way for government to support the economy in bad times is if it raises extra revenue in the good times. If you want to keep theme 5.1.b in the Plan include in it the need to tax cyclical businesses when they are strong to raise revenue to spend in the bad times. Anything less is making a promise you cannot keep.

Second, it is incorrect to characterize tourism and real estate development as equally cyclical, as implied in theme 5.1.b. They are not. Park visits and ski days have been much more resilient than construction activity and home values. Please recognize this difference in the Plan and encourage selling experiences through tourism as a much less volatile basis for the County economy than selling property. Also make accumulating a rainy day fund an explicit part of having development pay its own way.

Third, apply sound economic principals to the goal of diversifying the economy (theme 5.3). Businesses that involve shipping physical products, or frequent travel, are not competitive in Teton County. Transportation is just too expensive and unreliable. Enterprises that can be competitive are information based. To attract and keep these the best incentives are to encourage appropriate infrastructure such as a powerful Internet backbone, fiber-optic cabling, and top-quality schools. You also need to point out the link between the natural environment and economic diversification. A unique natural environment is the competitive advantage that will attract and keep the entrepreneurs who build knowledge-based businesses.

Please resist the temptation to fill the economics chapter of the Plan with nice but unrealistic aspirations. Take the opportunity to give the community some serious guidance for building a diverse and sustainable economy.

I am concerned that the limits to growth in Theme 2 is being considered for removal. I want you to know that I am opposed to its elimination. Please listen to the community and do not be swayed by comments from developers who have their on self interest only in mind.

<td>Ferguson, Jean and Dick</td>
<td>We are on vacation and unable to attend the meeting so we are taking time from our holiday to let you know our views. We hope you listen to the many citizens who are very concerned. There are strong opinions in town that the energy and input that citizens have devoted to many surveys, meetings, letters and emails over years are useless in the Jackson political process. We don’t agree because we know many of you individually and think you may have personal differing opinions but you do listen to the public more than during election season. We also know you work hard and devote long hours. But your credibility is at stake here. People feel that the very future character of Jeackson is at stake here. Over several years we have established some common goals for the new comprehensive plan. We want it to be more predictable and have fewer variances. We want to keep the build out numbers specific and limited to those of the old plan. We are very concerned about cumulative development, not just looking at each individual project in order to manage growth and protect wildlife. Don’t put off the hard choices of build out numbers. Thank you for listening.</td>
</tr>
<tr>
<td>4/26/11</td>
<td>Folgeman, Jane</td>
<td>I strongly oppose the concept of &quot;Nodes&quot; within your possible New Master Plan. The spirit and character of existing neighborhoods in the Town and County should be protected. They should not be destroyed by artificial up zones.</td>
</tr>
<tr>
<td>4/26/11</td>
<td>Kolsky, Eddie</td>
<td>The community has consistently and strongly expressed that the priorities of the new Comprehensive Plan should be the protection of wildlife and open space. Having predictability and build out numbers will help achieve those goals. Build out numbers should be equal to or less than the doubling of what currently exists. Please listen to what the community and the planning commission are saying. It is what is best for this valley. So much is at stake.</td>

GOD BLESS WYOMING & KEEP IT WILD! HELEN METTLER AT AGE 9
AS A FIFTH GENERATION JACKSON HOLE RESIDENT AND A PRIVATE PROPERTY OWNER, I'M BECOMING GREATLY CONCERNED THAT THE UPDATE FOR THE COMP PLAN IS LEANING TOWARD FURTHER RESTRICTIONS OR EVEN DISALLOWANCE OF DEVELOPMENT IN RURAL AREAS ON WHAT LITTLE PRIVATE PROPERTY REMAINS IN THE VALLEY.

I HAVE BEEN TRYING FOR THE LAST 25 YEARS TO BE ABLE TO GENERATE SOME SORT OF Viable income to help with life's expenses and possibly generate some retirement income. up to this point, the only thing i have been able to realize is a meager income from a depleted dry farm crop and the joy of paying taxes. most of my efforts would have been beneficial to the county in the form of waste disposal, affordable housing, storage facilities, travel park, gravel source, etc. to my way of thinking this amounts to a county government taking of my property. i'm sure i heard somewhere that a taking of private property is against the law. it seems that the major focus is on open space and wildlife issues with little concern for property owning taxpayers, work force personnel, business owners, and service employees to make the area productive. i feel it is time for our elected officials to stop side stepping the issues and deal with the people related problems facing the community. there is entirely too much focus on open space and wildlife issues. in a county that is 97% open space that appears to be a fairly low priority. one can only wonder how many citizens both local and visitors, have seen or will ever see, even a fraction of the open space available through out the county and adjoining areas. i also believe wildlife to be much more resilient and adaptive than most people seem to give them credit for when it comes to dealing with humans. it might be interesting to do a study comparing the loss of wildlife due to traffic and human intervention, disregarding legal harvesting, to the number of animals lost due to the slaughter imposed by the re-introduction of wolves to the local environment. if scattered or even clustered development impedes migration and animal movement, maybe it would be a good idea to line the major traffic corridors with that kind of barrier as a deterrent to animal-vehicle incidents.

Even though you are trying to cover all the issues, it is inevitable that certain matters will be overlooked, poorly designed, or will simply not fit a particular situation. therefore, it would be beneficial to include a tool in the plan that would allow for making changes, modifications, or adjustments to the plan without having to go through the time consuming and expensive process of a complete revision or update. no matter what you come up with, old historic jackson hole is just a part of someone's memory, it no longer exists!!
4/26/2011  Stevenson, Trevor  
Conservation Alliance  

We greatly appreciate the effort you made in the meeting last Friday to develop an adaptive management plan that may address some of the recommendations we have discussed with you. The Conservation Alliance looks forward to working with all of you to help refine the framework you discussed. Please let us know how we can be most useful in strengthening this tool so that it will help achieve the overall objectives the community has identified for the Comp Plan. During the meeting this week, we believe it is essential for you to clarify how you intend to move forward with the next stages of the planning process. This will help allay the public’s concerns that they are not being given sufficient opportunity to review the upcoming draft, and should clarify when the Comp Plan will be formally adopted.

There are two major areas that we believe it would be appropriate for you to address in the April 27th meeting:  
• The inclusion of Character Maps in the final Comp Plan  
• The Inclusion of Character Maps in the Final Comprehensive Plan

We are grateful that you have moved to include more substantial public comment in JIM #8 and #9. In addition, we recommend that you clearly lay out a process for community discussion of the upcoming draft. This should include a mix of area-specific charettes, and several county-wide discussions that can address the broader impacts of the draft Comp Plan. In order for the public to participate effectively, you will need to provide enough time for community members to read the draft, and publicize the dates and locations of public meetings several weeks in advance, so people will have time to adequately prepare. In Wednesday’s meeting, please clarify how you will address public participation in the future.

The Conservation Alliance has many detailed recommendations with regard to how this process might best move forward. We would like to work directly with the planning staff to develop a more detailed process that incorporates appropriate venues for public participation and any necessary studies and analyses. We believe it would be best if the agreed upon process could be formally published as soon as possible, to alert the public to upcoming opportunities for involvement in this important work.

4/25/2011  McClure, Bill  
Interested Public  

Please put caps on residential and commercial development that Preserve what makes Jackson Hole different from we very other Rocky Mountain community.

4/25/2011  Steinberg, Ethan  
Interested Public  

I've lived in my home on West Street in Wilson for over 10 years. I was part of the outcry against the Node proposal the first time around. I thought it was very clear then the community as a whole didn't want it. I understand it has come up again. I appreciate how much feedback Teton County looks for from it's community. However, most of us who work and have families don't have time to mobilize every time the County proposes something we have strong feelings about (unlike a concentrated special interest might).

Our vigor and focus gets worn down by the County re-hashing issues that are unpopular. I'm taking the time send these comments because I want to be clear that while there is vocal (albeit tired) opposition to this strategy, there is a much bigger quiet part of your constituency that is strongly opposed to this that doesn't have the time to attend 3 hour meetings (again, I think it's great that the County allows that feedback opportunity). As elected representatives we mostly trust that you 'represent' us. If the County pursues this strategy, I and many of my fellow Node inhabitants will have to start taking more precious time out of our days to mobilize for County representation that better reflects our community goals.
4/22/2011  Flitner, Sara
Interested Public

I had hoped to come comment in person today, and thank you all directly for the time and effort you've given thus far to the comp plan process. As I told Mark earlier, I have driven 2000 miles around Wyoming since we got back from Spring Break, so I am a little behind. Also, I am unhappy to report that the weather is nicer EVERYWHERE than it is here!

On the comp plan process itself, I applaud your efforts to give us what we ask for: a fair and transparent process, the opportunity to weigh in, and the respect of considering our opinions. I do believe you have done that. I emphatically disagree with some of the letters I read last week that the electeds have veered off the path or not considered input. The translation for me is that there are a few extreme views that are unlikely to be folded into policy, and those special interests are unhappy. Please maintain your leadership and cool, and continue to make thoughtful, deliberate decisions. I believe people see the name calling and hand wringing for what it is. I do believe that you are on the right track, and I see the deliberations ripen as more knowledge of the nuances comes into play. I support you in your efforts to MAKE A PLAN. There are many positive frames for good policy here - there is, for instance, recognition for the value of housing our workforce locally. There is recognition that we don't want sporadic development all over the county, so most agree it belongs in the town, and - less consensus here - near services and existing development when being proposed in the county. There is recognition that housing and open space must be planned together to achieve success for either.

I believe that we have a chance to have a strong plan - maybe the best chance yet. It will be a lost opportunity if we focus only on criticizing the plan and the decision-makers, especially as you work through your own educational process. I support your efforts, this planning process, and your hard work.

RE: Complete neighborhoods; TOJ, Willow Street from Broadway to Snow King: All lots, 50' to 75' deep, facing Willow, require Commercial Zoning. Past, current and future absolute commercial use of Willow; Vehicle traffic exceeding 3000+; all BUT one & a half block[s] is now in commercial use; environmental & safety issues preclude residential use: Commercial frontage of Willow will preserve Character and desirable use of adjoining property. Without Commercial Zoning, traffic must be reduced and redirected.

4/21/2011  Minshall, Werner, E.
Interested Public

I am a real estate developer from Washington DC. I have a home in Teton Village and have been active in the local commercial real estate market. The comp plan assumes that the work force / affordable housing zoning legislation will continue in effect as it is currently constructed. I would like to suggest that philosophy behind the existence of affordable housing be reviewed, and that its effectiveness in accomplishing that philosophical goal be assessed.

This review should include a statistical review of the beneficiaries: where they work, what they do and what percentage of the population of their workforce do they represent.

Affordable housing was built into the code and the plan in the 80's and may not be accomplishing what the community desires. This program should be assessed to determine its benefits results and its unintended results.
The Jackson Hole Conservation Alliance is writing to provide our perspective on current Comp Plan discussions, and to offer concrete suggestions for how we think this process can best move forward.

We greatly appreciate that many of you have highlighted community values, including the importance of wildlife as a top priority of residents. We also appreciate that you are making significant efforts to respond to recent concerns and comments from the community, and that you are willing to reconsider and clarify some of the issues that you have been considering.

As you know, the Conservation Alliance has been committed to ensuring responsible planning for more than three decades, and this continues to be one of the top priorities of the organization. We believe that Jackson Hole’s Comprehensive Plan needs to embody the best practices currently available, and should be seen as a model plan. As part of your recognized commitment to devise a visionary plan for our community, we want to be sure that you have the best available expert technical advice on best practices. To that end, the Conservation Alliance is contracting the services of a preeminent expert on comprehensive plans in similar communities of the Rocky Mountain West. Alan Richman has impressive qualifications, which are outlined in his attached C.V. More importantly, he is extremely committed to seeing Jackson Hole produce a cutting edge Comp Plan, due to his previous involvement in the drafting of the 1994 plan and his appreciation for this unique place. Richman will be utilizing the expertise of wildlife specialists as he works to produce a series of impartial memos addressing key issues that still need to be resolved. In the coming weeks, Richman will initiate his work by providing brief summaries on best practices for growth management and wildlife-related cumulative impacts analyses. We look forward to working with the planning staff and elected officials to ensure that we are implementing best practices models in these areas. We will continue to involve Richman as needed to provide expert review and guidance in the future stages of the planning process.

The Conservation Alliance supports your efforts to locate development appropriately, and we have been pleased to see your emphasis on trying to preserve important wildlife habitat by reducing rural development in sensitive environments, and by concentrating future growth in ways that could constitute “Smart Growth” in Jackson Hole.

Including strong policies for growth management is central to the success of our Comp Plan, and the community clearly sees this portion of the Comp Plan as a priority. The basic factors that need to be addressed in a best-practices growth management plan include defining limits on the location, rate, type, and overall amount of growth. More detail will be provided soon based on Alan Richman’s work on this topic. We are encouraged to hear that you will be refining your work on this issue over the next sessions, and we urge you to be specific in defining how you will address this.

Meanwhile, there are several steps the Conservation Alliance requests that you take over the next week, to enable the development of a best-practices growth management plan that upholds and implements community goals and priorities.

This week, we ask that you:

- Publicly commit to placing limits on growth, even if that exact limit will be determined later in the process.
- Publicly commit to using best-practices approaches to Growth Management. Direct planning staff to produce a recommendation on what studies are needed to do this appropriately.
- The Alliance will work with Alan Richman to provide support in identifying the best practices in this field.
- Since not all necessary studies have been completed, make an interim commitment to at least work within existing entitlements until appropriate planning studies have been completed. This is a precautionary approach, since it is not yet even clear if existing entitlements may still result in too much overall development.
- Clearly authorize retaining existing strong language on limits to growth. Your previous discussions suggest that this language could be removed. During the next month, it is essential that you publicly commit to completing the maps and verbiage that will be produced as part of the Character Districts or Future Land Use Plan prior to adoption of the Comp Plan, and that you adapt the policy portion of the Comp Plan to reflect the information that will be produced during the community’s mapping process.

We understand from your discussions that you expect “a buildout number to fall out” of this next phase of the planning process. This would clearly require that you revisit this topic in the policy portion of the Comp Plan after completing the maps, and that you commit to limiting growth – not simply monitoring it. We recognize that some additional technical analysis would benefit the development of a strong growth management plan. This will entail the completion of basic studies that are central to any planning effort on this issue.

Taking a longer view of the Comprehensive Planning Process, the Conservation Alliance requests that you provide the public with a more detailed overview of how this process will proceed in terms of plan review, public input, map review and adoption, and explain how you believe this methodology will ultimately address community priorities and produce a top notch Comp Plan.

The Conservation Alliance will work to provide a more detailed proposal on how this process could move forward, for your consideration.

Thank you for the hard work you are doing for the future of this community. We look forward to working constructively with you to develop a best-practices-based Comprehensive Plan.
I would like to add my comments for the proposed Comprehensive Plan Draft as a Teton County resident and a Jackson Hole Community Housing Trust home owner.

I compliment you regarding the “Principles and Policies” for affordable housing in the draft plan. I ask that you continue to build strategies and solutions for affordable housing and adopt policies that help keep workers living in the Jackson Hole Valley. I ask that you consider the following:

1. Adopt a schedule and deadline for the 10 Year Workforce Housing Action Plan. Please involve the local housing organizations and key stakeholders in the conversation to work towards an effective and strategic action plan.
2. Continue to commit to wildlife with developments that integrate appropriately so as not to degrade habitat and key wildlife connecting corridors. Government agencies, non-profit housing organizations, and habitat biologists should work together to devise plans that are designed accordingly. Zoning alone will not solve our wildlife and housing problems. All stakeholders need to be at the table for a workable solution.
3. Commit to as strong a balance for worker housing and home ownership opportunities in the Town of Jackson as for wildlife considerations.

It is critical that this plan addresses a vision and a strategic plan for community housing. A well planned Workforce Housing Action Plan will move us in the right direction and will help to balance wildlife concerns and housing needs.

It is imperative that we strive to keep housing affording and subsequently keep residents in the valley who are champions of wildlife and appropriate development. We will build more depth in our community as a whole if the plan takes into consideration the people who care about the future of Jackson and its surroundings.

Thank you for your consideration.

<td>Carrie Geraci,</td>
<td>Thank you for your diligent work on the Comprehensive Plan and for taking the time to consider our request. The public art project started under the Center of Wonder with support from board members: Sophie Craighead, Gary and Veronica Silberberg, Erin Dann, Cindee George, Susan Thulin and Brot Coburn. The Public Art Initiative continues to have broad community support as a project of the Cultural Council of Jackson Hole and represents countless volunteer hours of the Public Art Taskforce and significant private investment. We are actively administering projects for the Town, County, pathways and the museum. Community organizations supporting our efforts include the airport, the Chamber of Commerce, the Center for the Arts and the Community Foundation of Jackson Hole. Our mission is to build a public art program that celebrates our unique cultural, historical and environmental heritage and increases public access to the arts. We collaborate with public entities and private organizations to: increase permanent and temporary public art and to provide education for residents and visitors that encourages investment in our creative economy. Funding from the Wyoming Arts Council and Cultural Trust Fund will support: hiring a conservator to identify, document and create a conservation plan for our existing public art collection, establishing voluntary guidelines for integrating public art into capital improvement projects, a policy for accepting donations of art and developing a website, modeled after Philadelphia’s Museum without Walls project, that will host an interactive map of public art, increasing access and education. Your support for these grants will help us continue to leverage private investment in the program. A public art program will have a positive impact on the economy. Public art animates public space making it more attractive for residents, tourists and a creative workforce. Creative professionals help our local economies be more competitive in a global marketplace and add to the quality of life. Cultural tourists tend to stay longer and spend more, investing in arts and culture events and purchasing original art. These dollars will sustain and grow Jackson Hole’s creative economy generating revenue for our local and state governments. Jackson Hole is home to nearly 200 non-profits, 75 of which have a strong relation to the arts. These organizations employ hundreds of people, while their events and programs serve tens of thousands and help bring visitors to the valley during shoulder seasons. Their boards, constituents and donors represent a large portion of the population. It is hard to find a voter in Teton County who does not have some connection to the arts. Public art is the practice of commissioning artists to create artwork that reinforces community identity and enhances the places where we live, work and play. Trends in public art include: commissioning temporary installations, building a collection of permanent public sculpture, integrating the work of artists into landscapes, streetscapes or architecture, using public art to promote cultural tourism, and integrating arts and cultural activities into community plans. While the environment drew us here, the arts are the fabric that binds our community. Your support will increase community access to the arts and develop an amenity that is both educational and meaningful, and inspires for generations to come. I hope you will support us in our efforts to secure this important funding. Thank you for your consideration.</td>

<td>Kenny Hadden,</td>
<td>Thank you for reconsidering capping growth. I think it is unfortunately something that must be done to prevent the valley from becoming indistinguishable from every other spawled mountain town. Thank you also for reconsidering nodes, which I think offer a good compromise between offering affordable housing for the town’s workforce while still avoiding sprawling into the open space that gives the town it’s character.</td>

| 4/20/11  | O'Brien, Paul F. Interested Public | Getting housing right is one of the biggest challenges you have with the Comprehensive Plan. Please keep the following in mind:  
1. The root cause of the County's housing problem is price. Home prices are driven by national trends and are de-linked from local incomes. The financial crisis has reduced the gap some, but it remains and it will grow.  
2. A consequence of the crisis will exacerbate this gap: Revised mortgage lending rules will require buyers to put up much higher down-payments and have higher incomes for a given loan size. It will be much tougher to qualify for a loan, including for deed restricted homes.  
3. As a result, the cost of providing an affordable home will go up.  
Please make the Plan require explicit funding sources for commitments to provide affordable housing. This is fair for the taxpayer. It also is fair for those workers in the County who hope to benefit from affordable housing. Don't give people false hopes or expectations you cannot deliver.  
Your fellow elected representatives in Washington are grappling with exactly this problem: How to fund entitlements that were promised without adequate allowance for rising costs? Don't make their mistake.  
Affordable workforce housing is an essential part of our community. Please support it in an honest, sustainable way by identifying adequate funding and aligning commitments with our resources. |
| 4/20/11  | Heine, Daniel Interested Public | This entire comp plan is a never ending bad joke, Jackson Hole lost its way long ago. Stop sending me this spam! |
| 4/19/11  | Viehman, David Interested Public | We should commend our elected officials for the diligence and openness they are devoting to the comprehensive plan. These planning processes always are arduous and contentious, and they are prone to being influenced by only the few who spend many hours attending meetings. But the decisions the Council and Commissioners are making reflect a balanced approach that considers everyone. Their decisions are both protecting open spaces and wildlife and providing places for people to live.  
No one makes plans to fail but many communities fail to plan. While our elected officials are placing a priority on protecting open spaces and wildlife habitat, they also are making equally important decisions to steer growth to defined nodes. They realize a plan that avoids sprawl by directing growth to concentrated areas also protects open spaces and important habitat. This type of a plan also helps with other important goals like workforce housing and transit service.  
If you are unable to attend planning meetings, your voice can still be heard. Go to the county's web site and make a comment to support a comprehensive plan that is truly comprehensive. Support a plan that avoids sprawl and steers growth away from important open spaces. |
<p>| 4/19/11  | Manning, Richard, A. Jr. Interested Public | A days notice? Really?!?! |
| 4/19/11  | Silcox, Jeremy Interested Public | I have been a Teton County resident for 20 years and have worked for 17 of those years as an employee of Teton Youth and Family Services. I have been awaiting selection for affordable housing for the past five years now and am hopeful that this community will continue to support and build affordable housing for the people that provide the most essential of support services for this community. I am glad that efforts have been and continue to be made in this area and hope that we will continue to recognize the value of affordable housing in this community. I am in support of the continuing effort to define and implement a Comprehensive 10-year Workforce Housing Action Plan. |
| 4/19/11  | Wallace, Jim Interested Public | If wildlife, character &amp; growth/build-out are the major plan tenets: Nodes, wildlife winter habitat preservation &amp; lodging [visitors] &amp; resident population/accommodations caps therefore become the mandates. |
| 4/19/11  | Levy, Robbin Interested Public | I support the recent decisions made by the elected officials in their review of the Jackson/Teton County Comprehensive Plan. I believe their work serves to protect the shared values of our community and the vision we have for our future. The perception that the electeds are ignoring the will of the public, expressed over the last several years of process, is regrettable and, I believe, incorrect. The electeds have the unenviable task of applying reality to our ideals. There is give-and-take and compromise in that reality. There must be flexibility to create tools and strategies to implement our goals. We must understand that the electeds cannot implement a vision for our future within an unrealistic framework, which would ultimately fail to protect those things that we value. Please support our elected officials in making the tough decisions. |</p>

<td>DesGouttes, Yves</td>
<td>I think we share the same concerns. The militant i.e.: Jackson Alliance, Historic Jackson, Rich Bloom et al. are vociferous but contrary to what they claim they do not represent any majority. Their egoism is indecent. If their ideas were followed this County would become a sad, semi-empty place where the rich would come for 1 month a year. We must learn from this most serious economic crisis that the County has experienced since the mid-1980's. Tourism and construction are not enough. We must diversify our economy and that means make it easier for small firms with low impact activities on the ecology to settle here. That will entail to have a policy of affordable housing which is practically inexistent. The community should grow along the line of creating jobs so that we become real and not tinsel town. While I am writing to you, I am sure you are aware of the increasing suffering by many people who have lost jobs and houses. The problem is such that volunteer organizations are overwhelmed. The local authorities have to step in and help. I have bothered to look at the town's and county's budgets. For all the talks of helping social need, it is kind of disingenuous because social services have been cut just as much as anything else. What should have happened is that they should not have been cut at all. When I think that the Sheriff department got an increase so did the County Clerk employees it is wrong! So Melissa there is plenty to be concerned about. Please think about the ordinary working folks: the salt of the valley, when you legislate.</td>
</tr>
<tr>
<td>4/19/11</td>
<td>Gammer, Michele</td>
<td>I am unable to attend the upcoming April 27 hearing on the Comprehensive (“Comp”) Plan. I do, however, want to share my viewpoint with you. Throughout the four-year revision process, the community has spoken through its comments and surveys and made clear that residents want a plan that will not add any more development capacity or build-out beyond the baseline of what is allowed under the current Comp Plan. I urge you to commit to a revised Plan that works within and does not expand the valley’s existing development potential. The community has been consistent in telling you that any revisions to the Plan should limit build-out potential; protect our existing neighborhoods; preserve wildlife, wildlife corridors, and open space; and preserve the character of the Town and the valley. There is a definitive amount of existing unused development potential in the Town and County. I urge you NOT to increase and instead set reasonable limits on development potential. Please honor and abide by the will of the citizens who elected you and develop revisions to the Plan that preserve, rather than threaten quality of life, wildlife, and the unique character of our Town and County.</td>
</tr>
<tr>
<td>4/19/11</td>
<td>Soper, Keith</td>
<td>I don't see how you can justify your actions to ignore the input and will of the people who participated in the meetings and planning process. A well defined plan will be easier and less costly to administer than one that is ambiguous and open to interpretation by whoever has the most money to spend on lawyers. Your actions should NOT be to privatize gain and socialize loss.</td>
</tr>
</tbody>
</table>
Dear electeds – a few items as Theme 4 has a lot of needed work. First I would hope that you formally accept the Blue Ribbon Panel report on workforce housing. You can do that without having to commit to all of its recommendations. It has a much better structure to base Theme 4 on.

The following comments are a simplification that is in the record - which I submitted to the joint planning commissions last May 27.

Comprehensive Plan Comments – 5.7.2010 Draft
Theme 4: Meet Our Community’s Housing Need

Workforce Housing definition page 53:
• All of our LDRs and the work of the last years by our community have defined this as housing for our workforce – whether seasonal or year-round. OThis new definition of “all housing occupied by people living in the community year-round regardless of deed restriction or employment.” - is very problematic! Workforce housing is tied to employment period – whether in deed restricted or free market housing units – whether owned or rented – whether seasonal or year-round. Please clarify that workforce housing – is for the workforce.
• You need to break out the types of workforce housing – season and year-round, rental and ownership, deed restricted ownership, deed restricted affordable, free market – ownership and rental etc. Without this there is no way to tell where governmental efforts are to be focused.
• See my discussion later on how this focus on workforce housing then achieves secondarily the other goals of social diversity, sense of community and generational continuity that are identified in this Theme.

Why This Theme is Addressed and other areas throughout the theme:
• The key issue here is that supporting the goal of at least 65% of our workforce living locally will result in the other three bullets being achieved – socioeconomic and demographic diversity, generational continuity and a sense of community. Olt needs to be clear that the reason we are focusing on the plan is to address workforce housing goals – and that will achieve these other three bulleted goals – not the other way around!
• OThe way the Theme is currently written – we are left with whether we should incent or mitigate for retirees, generational continuity – or for our workforce? It is for workforce housing that this theme is addressing – but the other goals of diversity, generational continuity and sense of community will be achieved by this statement of ideal and focus on what we are intervening for through regulation, mitigation, exactions and incentives.
• Olt is currently the greatest flaw in this theme – along with the confusion of who is the workforce (retirees and second home owners?) – and differentiating between affordable housing and workforce housing.
• OThis is also found in Principle 4.1 – which should be rewritten to focus on workforce housing which then leads to achieving the other three bulleted reasons for this effort.

• “Catch-up” – is clearly not something we have talked about since identifying the goal of housing at least 65% of our workforce locally. This is old language and dated thinking from the 2007 Housing Needs Study that predated our establishment of a realistic and achievable goal of no less than 65% of our workforce being housed locally.
• OSince we are at 70%-75% plus, and have never dipped below 67% - the discussion has focused on “keeping up”.
• Olt is a gigantic leap to now say we want to achieve 100% of our workforce living locally – the financial and regulatory implications of that are simply draconian and unachievable. I would strongly recommend removing all references to “catch-up”.
• OAgain this is mentioned under “A Residential Workforce – page 55 – “The community’s goal is to increase the percentage of the workforce living locally, improving the existing situation.”

This again is Theme four’s second greatest weakness and will do great harm to our affordable housing efforts if it is included as written. It must be made clear that we will NOT be incenting for a goal above 65% of our workforce living locally - or our collective work over the last number of years will have all gone to waste. You need to clarify that the focus is not falling below 65% - for our workforce – living locally.

This is a very important point and I cannot emphasize it enough!
• The statistics staff states on page 53 in the first paragraph, are not updated to the reality of the last two plus years where1,800 workers have been
lost in just a year and housing prices have retreated 40-50% from 2007 highs along with rents, increased vacancies, total houses for sale and distressed sales.

To be fair in this section you need to direct staff to bring this section current. The Teton County Housing Authority has more current statistics, and possible language, and it is something the Blue Ribbon Panel report addressed.

I am sending this again because I see that it was either deleted or ignored in public comment.

One Lady and Gentlemen,

I would like to alert you to the fact that what is being printed in your advertisements in the newspaper is not what is being discussed and concluded in the “JIM” meetings regarding the comprehensive plan.

I base this on the fact that I have sat through everyone of the Comprehensive Plan “JIM” meetings and listened to the audio twice, thinking perhaps my comprehension of the English language was lacking.

I have the greatest respect for Charlotte Reynolds, the county’s public relations manager, but I would caution you to have her print the facts of the meetings and not the watered down version of them.

We, the valley residents have been duped by elected officials before. It would be foolish to think that because we are all tired of the process we can be bulldozed over.

I, too, am exceedingly disappointed and disturbed by the recent decisions, taken by you, the County Commission, the Town Mayor and the Town Council, to exclude the idea of limiting growth to the existing entitlements, to remove the inclusion of build out numbers and to eliminate consideration of cumulative impacts as a strong, central policy. The public has made it’s desires clear. It wants both limited growth and predictability. To remove these considerations from the Comp Plan is to eviscerate any possibility for predictability. Clearly, predictability is necessary to understand and plan for the infrastructure needs of the community, in addition to understanding where we are headed.

It is foolhardy to disregard the cumulative impacts of growth and development. This is one valley. Any development decisions made in one part of our community have real, long lasting effects on the rest of the community. It will not be possible to protect our ecosystem, our wildlife or our community character without a fact based system in place to monitor continuing development and to alter that development based on the information provided by the monitoring. This concept must be included as an integral part of the Comp Plan, not as an addition decided upon at a later date. Additionally, we need to look at the whole picture, to consider not just the location of the development, but also the type, the amount and the rate.

What we have in existing entitlements is sobering enough as it is….a potential doubling of everything we already have on the ground! The idea of even considering going beyond that is dismaying! How can it be "unreasonable" to limit growth beyond what we already are bound to have? Not limiting growth is what seems unreasonable! Apparently, you, the electeds, are considering just that… Not limiting growth. Unlimited growth is a recipe for disaster. For one thing, the economic viability of this valley depends in large part on our wildlife and our vistas. People won't be coming here to look at our buildings!

Without predictability, without limited growth, without incorporating the best science available regarding wildlife viability into our development decisions, the possibilities for protecting and preserving our presently abundant wildlife, our fabulous scenic vistas and our rural character are dismal.

I urge you to re-consider these decisions and thus restore the confidence the people of this community have in this process and have in you.
As part of the Conservation Alliance’s work to ensure responsible land stewardship in Jackson Hole, we are writing with regard to the upcoming JIM workshops on April 20, 22 and 27. Throughout the joint planning commission review, the Conservation Alliance submitted extensive comments on the topics of community character, workforce housing and the economy, all of which are already included in the summaries of public comment. With that in mind, below is a brief outline of key points we hope that you consider as you discuss these topics. Additionally, as you give direction to planning staff for the rewrite, the Conservation Alliance is committed to providing specific recommendations on policy language as this process progresses.

### Growth Management and Smart Growth as an Overarching Element

On March 25, as a whole, you gave direction to staff to remove language regarding regulatory limits to growth in the new Comprehensive Plan. As suggested by the facilitator at that workshop, this action will have profound implications for the way that all of the chapters will be rewritten – including the topics you are scheduled to discuss during your next three workshops. While the Conservation Alliance appreciates and supports your efforts to steer development into appropriate locations, we have also always advocated for adequately considering the rate of growth, the type of growth, and the overall amount of anticipated growth as part of planning in Teton County. We will continue to advocate for a more complete approach to growth management to be incorporated into Theme Two, “Managing Growth Responsibly,” and other relevant policies throughout the new plan.

### Community Character

Following are key points of discussion that relate to community character:

- Please clarify if the new plan will now be rewritten in a way to reinstate a community character framework as a foundation for new land development regulations. Only recently has the broad topic of community character been reinstated into the planning process as a key point of discussion. (Unlike our current plan, it has not been a “theme” or defining framework for the entire draft planning process. Our current plan states, “Jackson and Teton County hereby formulate a land development regulatory system which protects the health, safety, and general welfare of the citizens of Teton County by responding to the components of community character.”)
- Related to the implementation of the new plan, please clarify how “community character” concepts of the Themes and Policies portion of the new plan will be linked to the “character district maps.” Will your discussions on April 20 provide the background to incorporate more narrative about how the character districts will function as part of a new plan? This is an important outstanding question and it is essential to have additional clarification before you finalize your discussions.
- In respect to the legacy of conservation that has long defined Jackson Hole, the Conservation Alliance respectfully requests that you give direction to place a greater emphasis on permanently conserved lands as a defining element of community character in the new plan. Our existing plan places strong emphasis on the role of the natural environment in shaping community character, preserving rural character, and protecting a small town atmosphere. We hope that the new plan does the same, by not only addressing community character in terms of the built environment (which is more specifically addressed in the staff report), but also by further emphasizing the natural environment. The Conservation Alliance commits to providing specific recommendations for policy language on how this emphasis can be incorporated in a new draft.

### Workforce Housing

Following are key points that relate to workforce housing:

- The Conservation Alliance supports community efforts to secure housing for our local workforce, close to the workplace, as a core component of long-term strategic land use. From a land-use planning perspective, and given our community's ability to learn lessons from past development proposals, we believe predictability will be a vital component of affordable housing programs in the future. We respectfully request that the existing chapter on housing be significantly reworked to better distinguish between affordable, deed-restricted housing and workforce housing, and their associated policies. Specifically, definitions and policies should be reworked to clarify when policies are meant to address workforce housing versus affordable housing. Without these clear definitions, this chapter will not provide the necessary predictability that the community has requested. To provide an example, Policy 4.3c states, “Provide additional incentives for the provision of workforce housing” and Policy 4.2 states, “Remove regulatory barriers that prevent the provision of workforce housing.” However, the workforce housing definition that is provided on page 53, “workforce housing means all housing occupied by people living in the community year-round regardless of deed restriction or employment,” essentially defines this type of housing as nearly any form of housing, including market rate housing.

Smaller, free-market homes do not always function as accessible, affordable homes for the workforce; this has been demonstrated in a number of resort communities like Jackson Hole. To be strategic in the long term, more emphasis should be placed on adequate mitigation rates to supply deed-restricted units.

### Economy

Following are key points that relate to economy:
As we mentioned at the beginning of this correspondence, the actions you took on March 25 will have considerable implications for all chapters in the new plan, including policies on the economy. The Conservation Alliance fully supports some of the existing language in the current draft. For example, the language in policy 5.2a, which states “The community will seek opportunities within established growth potentials (see Theme 2) to increase the community’s economic capital without decreasing the community’s natural capital.” Also, on page 66, language states, “In order to achieve the community's overarching goals of stewardship of our wildlife and natural resources, the economy cannot be dependent upon growth and expansion related tourism and real estate development. “

We respectfully request that this chapter retain an overarching goal that our economy should not be dependent on population growth. Overall, the Conservation Alliance believes that stewardship of our valley’s irreplaceable wildlife and natural resources is an essential, central economic strategy for creating a long-term sustainable economy.

Conclusion

The book, “A Place called Jackson Hole: The Historic Resource Study of Grand Teton National Park” includes the following statement: “Conservation, represented by federal agencies such as the Forest Service and Park Service and the philanthropy of John D. Rockefeller Jr., is arguably Jackson Hole’s most important historic theme, because of its impact on the character of this valley.” We believe that Jackson Hole’s legacy of conservation should continue. We encourage you to take the actions necessary to uphold this legacy, and to make our community not only proud of its distinct heritage, but also capable of meeting its responsibilities to future generations. Thank you for considering our comments.

4/16/2011 Chadwick, Kelly
Interested Public

My name is Kelly Chadwick and I've been fortunate enough to live in affordable housing since October of 2004. I don't think I would still be in the valley without it.

I'm writing to compliment you on the "Principles and Policies" in the affordable housing draft Comp Plan, but encourage you to schedule an adoption deadline for the 10-Year Workforce Housing Action Plan called for in the draft Comp Plan.

4/16/2011 Hoyt, Clay
Interested Public

Let your public control the Comprehensive Plan. Hear us. Wilson is overwhelmed with the current growth plans. We presently have 3 office buildings standing mostly empty with another in the plans to be built. These standing empty building prove that the present growth plan is irresponsible. Wilson and the West Bank have more than fulfilled our affordable housing quotas. The increase in the moose, elk and deer motor vehicle deaths is sickening. Please protect the wildlife who have been programmed to migrate our corridors for hundred of years. Please protect us residents, our property and rights. In comparison we have lived here mere 30 to 60 years. The moose are being funneled down Fall Creek due to the widening of the road and building of retaining walls. After being hit by motor vehicles they die in our yards. Our forests, water flow and marshes are being consumed too. This node action is financially irresponsible, especially in the light of our debit laden economy. STOP. ENOUGH. Please be patient and think through the right growth plan for our needs.
We respectfully submit the following thoughts for your consideration as you embark upon your review of Chapter Four of the 2011 Comp Plan: Meet our Community’s Housing Needs.

We reviewed the chapter with the understanding that this is a long range future planning document that consists of a vision and preferred policies with new guidance and strategies to inform future land use decisions; it is not a regulatory document.

1. We believe Chapter Four would benefit from a brief problem description that is cast in the broadest possible terms. Currently, the scope of the problem definition (page 54) is limited to new development and redevelopment ("keeping up" and "catching up"). A more macro definition of the source of the problem would help open the door to additional possibilities for problem solving in the future. At the heart of the problem is a very limited supply of private land available for development. This, coupled with global demand, makes access to affordable housing a significant challenge for our workforce.

2. We believe the planning commissions and planning staffs created four strong housing goals for our community. Additionally, each goal appears to be measurable, though tools will need to be explored that will allow us to monitor our program’s ability to keep current with each goal on an annual basis.

3. We would like our community and our electeds to consider using the term Community Housing in lieu of Workforce Housing. Community Housing would be inclusive of all housing occupied by primary residents of our community regardless of whether the unit is restricted or not. Community Housing would include free market housing, permanently restricted ownership housing, employment-based housing as well as rental housing. It would include subsidized and non-subsidized housing as well as housing occupied by full-time and seasonal employees earning their living in Teton County, Wyoming. Community Housing would include retirees, people with special needs, stay at home parents and caregivers who are not paid employees but nonetheless make a significant and meaningful contribution to our community.

4. The strongest recommendation in Chapter Four has unfortunately been relegated to the very end of the chapter and buried as one part of Strategy 4.1: Adopt 010 Year Workforce Housing Action Plan that identifies specific actions the community will take to meet its housing goals. We believe this effort is long overdue and we are happy to avail the resources of our organization, staff and board so that our community can have a coordinated, comprehensive and strategic 10 Year Action Plan for Workforce Housing that capitalizes on the strengths and capacities that all three housing organizations can bring to bear on the issue. To give sufficient weight to this concept, we would like the Action Plan to be introduced at the very beginning of the Comp Plan (Policy 4.1.b). In this light, Policy 4.1.b could be reorganized to read:

Create and adapt a 10 year coordinated, comprehensive, and strategic workforce housing action plan.

With this reorganization, Chapter Four could be simplified by capturing several of the other actions (currently listed as independent policies) as future tasks to be explored during the creation of a 10 year Action Plan, e.g.: Regulations, incentives and permanent funding opportunities will be explored in an effort to meet stated housing goals.

We respectfully request the electeds consider and memorialize a process and a timeframe for creation and adoption of the 10 year plan.

5. Policy 4.1.e: Preserve existing workforce housing stock. We appreciate that this policy has the potential to be a community sensitive strategy. We support language that encourages cautious exploration of this strategy. However, we believe the benefits of the strategy must be thoughtfully considered and balanced against the potential cost and long term liability that could accrue to the tax payers.

6. Principle 4.2: Require that new development mitigate its workforce housing impacts. This Principle would be redundant and could be removed if regulations are a noted component part of a 10 year action plan as suggested above.

7. Principle 4.3: Provide incentives for the preservation and creation of workforce housing. The construction or acquisition of any workforce housing unit, whether rental or ownership, always requires an impressive combination of "subsidies" which include but are not limited to financial, time and commitment of staff, board and elected officials, and commitment and acceptance of neighbors and the larger community. With these subsidies contributed to the creation of each affordable home, incentives should be granted only for permanently restricted workforce housing so that our community wide investment can be protected. In addition, we believe this clarification is important given the more encompassing definition of workforce housing in lieu of more familiar and narrowly defined terms like affordable and attainable housing.

8. Principle 4.4: Utilize funding to provide workforce housing. This effort will be critical to our community’s success in ensuring that we have a diverse residential population. However, this Principle would benefit by clarifying that the goal should be to not overburden anyone sector of the community whereas the current text focuses on developers only. A true community-wide solution will be necessary in the future if we hope to significantly address our community-wide problem.

9. While we are previously on record in support of Chapter Four’s goal to house 65% of our workforce, we would like to reiterate how essential it is for our community to have a measurable baseline. This baseline gives our community the opportunity to regularly monitor the progress of our various housing programs and adjust our programs so that they can be more responsive to the ever changing needs of our community. It allows us to proactively ramp up or dial back certain programs depending on our ability to successfully hover around 65% and meet the goals of our community.
housing program.
A critical goal of the Action Plan, however, must be to identify a reasonable and affordable tool that will allow our community to annually track this number as well as our program’s ability to address the previous four program goals mentioned above.

NOTE: We believe a change to the primary indicator is required given the pace (glacial) at which affordable housing efforts can be executed. In lieu of every five years, we feel strongly that we should be able to reliably and affordably measure the percentage of our workforce housed annually.

Ideally, this effort could allow us to move away from the incredibly expensive and time intensive legal nexus study that we have relied upon in the past towards a more manageable and affordable annual assessment that can provide us with current data on which we can base critical resource decisions.

10. The first directive under Strategy 4.3: Update Land Development Regulations and the Zoning Maps could be simplified to read: Update regulations and implement incentive programs to reflect outcomes of the 10 Year Workforce Housing Action Plan.

Thank you all for your thoughtful consideration of our comments as well as the tremendous commitment you have made to this critical planning process.

I’m writing in response to the new watered down changes to the Comprehensive Plan. The recent decision to take out specific build out numbers and goals is in direct opposition to four years of the planning process. I would like to see an emphasis on predictability. I realize numbers are controversial but how else will we know how much development is possible?

I cannot support a plan that more than doubles the commercial and residential development that already exists. The Wilson area is full of important wildlife habitat including wetlands, moose habitat and a migration corridor, making it inappropriate for major development, as the new verbiage would allow. I do hope world-renowned hydrologist, Luna Leopold, is incorrect in predicting the town of Wilson will one day be underwater due to the Snake River’s path. Our levees have held so far but everyone on the downhill side of the Snake or on the West side of the Snake needs to understand the inherent risks of living here. A minor accident on Highway 22 already plugs up traffic for miles and unfortunately there aren’t alternate routes.

Wildlife, open spaces, and small town character are the key issues I’d like to see designed for in this plan. The public has spoken many times in support of these key issues.

As our elected officials we depend on you to represent us i.e. use all the work and input done thus far on the plan. Let’s improve upon the existing plan that has worked quite well for many of us and not leave open-ended growth possibilities.
Gentlemen, I am writing you with great concern that your recent meetings and changes to the draft comp plan are a grave mistake that starts your portion of this review of in a totally wrong direction. The Planning Commission did good work and heard the message that the citizens of this county have repeated in meetings that have spanned years. Wildlife is a priority, Wildlife habitat is a priority. Constraining development must happen NOW.

Certain guidelines should be self evident. We will never be able to house everyone who wants to be in Teton County. We will never be able to provide jobs to everyone who wishes to work in Teton County. If we wish to maintain the basic human values that we think make it a special place in Teton County, the time to act is NOW (if it has not already past). The task is not easy. The results will not please everyone. You as our elected officials must listen to what has happened in the multiple arduous meetings that have already sorted these issues into the best wishes of the thousands of public comments.

As I have recently witnessed in my efforts to sort out one boondoggle at the county planning level (Poole vs. Daugherty) the rules listed in the guidelines are not followed. The broad language in the titles, headings, and descriptions through to the individual meanings of a word in the text must be defined in such a way as to leave no room for the lawyers to roam. I was very disappointed by the Commissioners response to, "Neighborhood character" and "Reasonable effort" for example. The title of a section can't say one thing and the body of text another unless the document defines the intent as so in the definitions.

It is very clear that the citizens think your recent revisions fail to protect wildlife or will allow the option for nodes, even if you say it is in a descriptive section you do not just say "sorry we didn't really mean that" later on. NOW is your chance to have the strength and the courage to have the vision for our future that the citizens of the county have repeatedly asked for, please find those values.

I attended the planning meeting that voted out the Node concept as presented in the draft document. The issue was not one only of public concern but also one of the legal framework that would permit the kinds of transfer of development rights that the concept was built on. Please review the minutes from the meeting and discuss the idea with legal counsel. Then come back to me and show me the places in your proposed nodes that are not already overbuilt and do not contain wildlife habitat and wetlands. I feel the in my node, Wilson, you will not find one more development that does not effect these most important values. Private property rights exist for the present residents as well as those wishing to develop. In my recent case, mentioned above, the rights of the existing community were disregarded for a developer who is not even a resident of our community.

Finally, I feel strongly that the town officials should not be voting on county issues without representing the entire county voting population. The County Commissioners need to hear the town officials of many aspects of the plan, the town has a great stake in the planning results, but they should not represent my opinion if I cannot vote for them.

Thank you for your attention to these concerns and your commitment to serve.
I am very opposed to the recent decision to reinstate nodes and remove the growth cap. In one swoop, citizens of Teton County have been undermined and overturned after four years of hard work. Many people spent years, months and days at meetings for this process. We were told we were defining our future, making a difference and doing the "right thing". Now I ask our "elected officials" to do the right thing and reverse this decision.

Most disturbing facts involving this decision:

- March 25th. This meeting was held on the one day of the year when most residents are leaving town for spring break. The largest volume of residents are out of town and completely unaware of this situation.

- The Mayor of Jackson and the Town Council. You have got to be kidding me! What are they doing in this process? I have a huge problem with the Mayor of the Town of Jackson and the Town Council being involved with County decisions. They are elected by only town residents and only for issues involving Jackson city limits and not the County! They are not on my ballot for voting so, therefore, I want them out of any decisions involving Teton County.

- Serious concern. It is a serious concern when elect-eds are involved in decision making that is not in their jurisdiction. This goes against the basic foundation of our country's Constitution and the founding of our governments, including local government. Can this even be legal? I would like to research the legality of this very disturbing issue.

- Lack of peace of mind. We have entrusted our elected officials to uphold the very well-documented will of the community and give us the peace of mind that the entire situation would not unravel on us by one meeting, when only a few adjustments were to be made. This did not happen. After a long winter and in view of the current exhausting economic situation, Teton County residents deserve to go on spring break and not have this reversal sprung on us. This hardly qualifies as a "few tweaks."

I certainly hope this decision is reversed.

I am writing to express my frustration over the direction of the new comp plan. I attended meetings in the beginning until the nodes were taken out of the formula thinking that part was over. Now I see the nodes are back. The public does not want the nodes, that is clear. Can we get back to the clear direction from the public input. Wildlife first, open spaces, no nodes, cap on development. These are the values that make Jackson great.

I have been a Teton County resident for 21 years and currently live in downtown Wilson. I am wrought with anxiety over the possibility of the reinstated nodes in Wilson and the Teton Village road. The charm and continuity of this little town is what dreams are made of. Having raised two boys in Wilson has been such an amazing experience because of the community character additionally with regards to less traffic, less pollution and the positive attributes to the amount of wild life we experience.

With current entitlements, Wilson will already grow to twice the current size which already will be a huge strain on current infrastructure. The Wilson area has critical wetlands, Moose Habitat, and migration corridors that should never be considered for dense development. Nodes in Wilson will ruin the small-town character with increased traffic, more pressure to widen Highway 22, and immeasurable pressure on the Wilson school. When my children were in Wilson school 3 and 6 years ago, the student to teacher ratios were already well above the national average.

Wilson already has more deed restricted affordable housing than any similar area in the county and the West Bank has already received the greatest portion of development since the 1994 plan.

With similar issues, nodes reinstated at the Aspens location will be equally as devastating. With increased highway traffic and noise pollution, the quality of life for residents as well as wild life will suffer greatly.

Please do not reinstate the nodes in Wilson or the village road.
I have always considered myself a moderate and felt like the comprehensive plan was heading in the right direction. I have looked upon groups such as save historic Jackson Hole and friends of south park as in the fringe, pushing a very specific agenda.

After watching the public discussion for the past two weeks, since what I view was a complete turn around from the direction the comprehensive plan was heading, I find myself agreeing with those groups more and more.

The final straw was a 1/2 page ad in the paper yesterday telling me I was wrong, probably paid with my tax dollars. As are the people telling me I am wrong.

The plan needs to cap growth, the plan needs to protect what makes Jackson special, wild life and scenic resources, the plan needs to an implementable plan to move forward and protect Jackson for generations to come.

In my opinion the changes you have made to the plan do not, and need to be reversed.

I am writing to express my concern that you have veered toward a more development oriented comprehensive plan, despite the overwhelming public support for a "limited" development plan that places wildlife and the preserving open spaces as the primary concern. The Valley simply cannot accommodate the number of residents that your plan envisions without fundamentally altering to the negative our community. I urge you to heed the voice of the broader community, not the limited number of those in development/construction, and create a more conservative plan as it relates to the future of our Valley.

I am alarmed at the recent decisions made by the Teton County Commissioners, Jackson Town Council, and Mayor regarding the Comprehensive Plan, which are in opposition to the 4 years of planning and the will of the Jackson Hole community.

Previous public comment has clearly expressed the desire to limit growth to a predictable maximum buildout set forth in the Plan's Appendix 1. To disregard this will irrevocably damage the small town character, wildlife, and quality of life of the proposed "Nodes". The town of Wilson stands to be especially impacted by this, as well as by the stresses to existing infrastructure, traffic, and pollution caused by such lack of foresight.

To reinstate the development Nodes allowing for more than double today's buildout, with no limits to growth is shortsighted and negligent.

I implore you to honor the previous years of circumspect planning and return the "Monitoring of Cumulative Human Impacts" on wildlife and human resources language to the Comprehensive Plan, as it is irresponsible to eliminate such and important policy of checks and balances.

I also am shocked that "Flexibility" in the comprehensive Plan would replace "Predictability". It is imperative that a concrete and modest growth cap that is less than the doubling of buildout be established.

If the goal of the Comprehensive Plan is to represent the wishes of the majority of the residents of Teton County, then you need to listen to us, as well as the special interests whose motives are driven by financial gain, rather than a respect for preserving the unique character of this place we love.

Should a few larger landowners' property rights to develop their land supersede the rights of the majority of the county's citizens who wish to limit growth? While a few stand to gain, most of us stand to lose.

Please use your position to make this place one you will be proud to have helped preserve.
4/13/2011 Spence, Kent

Comment

I am strictly against high density development in Wilson and area. I was sure we already visited this issue and the majority of public opinion was against this.

I understand that the commissioners and town officials are seriously discussing this matter again in the light of "land owner rights". Yes, I believe in such rights but I also believe in the rights of the community and those who have long lived in the Wilson area.

The Wilson area has critical wetlands, Moose Habitat, and migration corridor that should never be considered for dense development.

Dense development in Wilson will ruin the small community character and Jackson Hole will get nothing in return. There will be increased traffic, more pressure to make Highway 22 into more lanes, more noise and degradation of environmentally sensitive lands. Putting thousands of people on dense islands of development in the outlying community only generates more trips to town to work, the grocery store, soccer practice, school etc.

Please vote against the move to allow "Nodes" or high density development in Wilson and keep any growth in already dense areas where grocery stores and other services already exist.

Thanks for considering my vote on this matter.

4/13/2011 Walles, Mackenzie

Comment

I am very dismayed with what is going on with the Comprehensive Plan revision. I am a resident of Wilson and have been involved with this plan from the beginning of this long process. It is hard for me to understand how after 4 years that you, our public officials, have not heard the PUBLIC. Your recent decisions have been in direct opposition to what the public has said is important to us in this plan. The public made it very clear that we want predictability in this plan, which you have decided not to provide. The public made it clear that we are not in favor of nodes and you have reinstated them. Why is it that the planning commissioners heard the public but you have chosen to ignore them and ignore us?

I am also very concerned with the fact that the Town Council members are voting on decisions for the County when they have absolutely NO ELECTORAL ACCOUNTABILITY to us! Why are the Mayor and Town Council deciding what happens in Wilson and other areas of the County when we are not allowed to vote for these representatives? They do not represent our views and I am afraid not our best interest.

The citizens of Wilson are against higher density than what is currently allowed which is twice what is in Wilson . It makes absolutely no sense to me to put dense development in Wilson so that our citizens are required to make more trips in their cars to town where the majority of jobs and services are. The West Bank and Wilson have received the highest amount of additional density since the 1994 Comprehensive Plan. Wilson is not an appropriate location for increased density now. Wilson has many critical wetlands, critical moose habitat and important migration corridors. It is not appropriate to put high density in Wilson which will increase the stress on our wildlife and wetlands. The public has made clear that wildlife, wetlands and migration corridors are important to our community.

I am shocked that the elected officials in our community do not put a greater value on our wildlife and natural resources. The fact that you deleted the "Monitoring of Cumulative Human Impacts" on wildlife and natural resources from the plan is counter to the well documented public will. I understand that this was not a unanimous vote and I ask that you reconsider this ill-advised action and reinstate this in the plan.

The people of Wilson want our quality of life preserved. Your voting public would like you to listen!

When the comp plan draft was first released we were astonished that our tax dollars were being wasted on planners who did not understand or appreciate the unique nature of the valley we call home. At that time, with the growth proposed and the high density in sensitive areas, I said we should fire these sad, short-sighted, Colorado imports.

With the town meetings they claimed "we listened to your comments", but all the evidence is to the contrary. Those planners have earned dismissal. Send them back to their rocky mountain home.

More disappointing is the vote of the elected officials. The cynics said early on that the process was designed to wear down the voters until everyone lost interest. The cynics were right. Our elected officials have shown little regard for the wishes of the community and the need for only the most limited and necessary growth.

Clearly it is time for a new county commission. The next election will indeed be interesting.

Respectfully (but just barely),

Please do all you can to support affordable housing in this valley. My wife Meg and I live in Melody Ranch, and the affordable housing upgrades the place a lot, bringing in young families and children that make it a real neighborhood.

I have attended almost all of the public meetings on the Comp Plan and many of the meetings of the Stakeholders Advisory Group. (STAG) After a desire to protect our wildlife the most common desire I heard was for predictability. It seems many of our citizens believe we would benefit from a Comp Plan that meets this desire, but many of our electeds maintain that we need flexibility not predictability. Why is that? Are the two mutually exclusive?

At the simplest level, people want to know what kind of building can be built next to them. How big will it be or how many units will it have? How high will it be? Can it be located to block my views or my sunlight? Business owners have the same questions and also wonder if the building will affect their parking, and access for their customers. Taken to the next level, if we know what can be built on individual lots, we can understand what our community will look like in the future when those lots are built out. This helps us plan for our future.

Why do some of our elected officials want to hide what our future will look like? One of the biggest faults of our current Land Development Regulations are the discretionary tools like the PMUD and the PUD-AH that allow our elected official to “horse trade” extra development rights for what they perceive to be public benefit. These alphabet soup projects are almost always controversial and benefit no one except a few lawyers. They have resulted in hotly debated public meetings, tied up planning staff and elected officials, and resulted in several lawsuits.

That kind of flexibility doesn’t benefit the community. Buyers pay a higher price expecting to get extra development rights. They then have to pay a high cost to have their team present a complicated plan to the electeds. This increases the cost of development which increases the cost of real estate in both the Town and the County, and prices locals out of the market. Let’s go back to building smaller buildings that can built by our local trades people, not large projects that require large out of state corporations. We do not like to shout, but so far it seems only Ben Ellis and Paul Vogelheim have heard our request for predictability.
O'Brien, Paul F.

Listening to the JIM discussions on the comp plan, I'm impressed with the seriousness with which our elected officials are discussing issues and tackling important policy questions. And rightly so. They have taken on the public trust and the duty to work in the public interest.

However, I was disappointed by the unrealistic discussion in the March 25 meeting on caps or limits to growth. You could have been listening to a meeting in Anytown, USA where the big planning worry is making sure the buildings look nice. But Jackson is not Anytown. Teton County is one of the few accessible, high mountain habitats and recreation areas on the planet. Its uniqueness will grow in the decades ahead as global warming takes its toll. At the same time, the global population, now 7 billion, will be 9 billion within a generation, and global GDP, now $60 trillion, will double every 15 years or so. Sure we are now suffering through the aftermath of a financial crisis, but the future is clear: There will be powerful demands to visit, exploit, and buy a piece of Teton County. Any planning caps or limits we choose will be tested like Japan's sea walls in last month's tsunami. If the Plan seeks to control growth through a sequence of short-run checkpoints it will be overwhelmed by the pressure of global demand.

The logic of starting the Plan with a robust cap or build-out limit is that this acknowledges that the significant existing development rights in Teton County are a uniquely valuable resource. Limits help to build a culture of husbanding that resource, and making sure that it is used wisely. Limits require tough decisions that recognize trade-offs. Some may call a build-out limit a "scare tactic" approach to planning but it is not. It is simply an honest recognition that this Comprehensive Plan has to take account of the long-term global forces we face. Anything less would be a refusal to accept reality.

Commissioners Ellis and Vogelheim have supported development caps as well as mechanisms to monitor and enforce them. I hope they persevere in those efforts and that their fellow elected officials join them.

Ewing, Patty

Content:

I'm confused! After over three years of well attended meetings, and hundreds and hundreds of public comments, in the fall of 2008 JHN&G printed the following ad: "The Comprehensive Plan Will Be Responding to Public Comment. What you (the public) said: Wildlife and open space protection is the most important value in the community. Buildout should be clearly identified and provide guidance in policy creation. Growth Rate regulation should be implemented to slow the impacts of development to natural resources and community infrastructure. Workforce Housing should be provided by commercial development and include a mix of rental and ownership options. Commercial Development potential should be limited with sensitivity to building design, community character, and not exacerbate the workforce housing shortage. South Park should only develop at town density in the northern portion in order to address the workforce housing needs of the community. Plan Format should be more clear, concise, and user friendly."

Compare this to the ad (Also paid for by the joint Town/County Comprehensive Plan) in the March 30, 2011 JHN&G. “Meeting Summary for March 24 & 25”. The ad reflects discussions from the elected official that essentially reverse the direction of the Comprehensive Plan. This isn’t an argument about no development or no growth. Consider the following growth is already entitled and/or approved for future development:

Commercial: Town - Already built commercial: 4,576,840 sq. ft.; allowable NEW commercial: 3,436,798 sq. ft. County - Already built commercial: 3,476,829 sq. ft.; County allowable NEW commercial: 3,179,295 sq. ft. And, current Empty Commercial Space is now estimated 40% rate of occupancy. Residential: Town/County current built dwelling units, 9,644; Town/County allowable new dwelling units: 10,000

And now we hear that this is not enough and you want to not limit yourselves to this already doubling of everything as a reasonable constraint to plan within. Simply put, during the last three plus years, public comment has consistently asked for: Predictability, not flexibility; Community Character definition which is clear (not urbanization of Jackson Hole); Cost of growth: infrastructure, roads, sewer, water, traffic, schools, and social services. I am confused. I’m frustrated! I’m beginning to believe that public comment, however well-reasoned, well-researched and well-written has no impact. I’m beginning to believe that it doesn’t matter what the issue is, public comment does little to change what the electeds want to do. The Comprehensive Plan will be so complex and unintelligible to the average reader that it will provide cover for any action the electeds want to take. And, this will be the most expensive Comprehensive Plan in the country!

<td>Huff, Mercedes</td>
<td>I will keep this short, as I have been on record many times with this same concern. Why are you trying to develop this valley with such detrimental numbers, developments and nodes? It has been very clear from the public input that they don’t want to see that. When the rewrite of this plan was undertaken, it was supposed to be a few points of clarification. I was told that Wilson needed a new plan because every time someone wanted to build something it took a variance. So what? That at least gave us a baseline to ask for a variance. The other concern was that it took too much of staff’s time. I can’t think of anything that could be more time consuming, for staff, officials and the public, than these last three years of intense meetings and desperate outcries to STOP this rampant obsession for build out. I believed that the public had been heard when nodes went away from the plan. Why the reversal? We can still protect wildlife and open space without these massive nodes which will be abused and ruin the character of our valley. Once again, I will say that not everyone has an entitlement to live in Jackson Hole. We can’t produce housing for everyone. There have to be caps or we will become like so many other resort areas — nothing special. After working in the real estate profession here for over 30 years, and having tried hard to participate in a meaningful way to have people understand the intrinsic value of lack of development, I truly believe that less is more. Everyone's values will be better protected by not overrunning us with more and more growth. In fact, what you’re proposing will actually harm property values across the board! I’m very disappointed in the direction you are heading after your last meeting. PLEASE rethink that position and listen to what has been put in front of you for the past few years by your electorate.</td>

<td>Poole, Carol</td>
<td>To preserve our highest community values of wildlife, open spaces and small town character – I will not support any plan which more than doubles residential and commercial development. I demand that the plan is predictable and that starts with setting a reasonable – and achievable – end-state of growth that is equal to, or less than, the current doubling they have now thrown out as a reasonable constraint. I demand the nodes only be established if we work to constrain growth to no more than double what we have – and any development potential moved to nodes is achieved by transferring or purchasing of existing rights - thus permanently extinguishing them to achieve permanent open space in important rural areas – that includes the bulk of South Park. I demand that the monitoring of ongoing human impacts on wildlife and natural resources is a critical policy for managing growth and should be reinstated in the plan.</td>

<td>I feel that I have been slapped in the face. Four years of attending countless meetings, writing letters, talking with officials, presenting not just opinions but also facts and in one fell swoop, you have wiped out the hard work that the people who live and work here have done. I will not stoop to restate my opinions, obviously they have been ignored. Simply put, growth does not equal quality of life for anyone in Teton County. (or elsewhere in the USA, obviously) We have something special in Teton County....but it looks that we are headed to be &quot;everywhere&quot; land. I am so disappointed in your actions. Leland Christensen attended so many of those meeting with the planning commissioners......where were you? Nodes, who supported nodes? Certainly not the people living in those areas, only developers. Guest houses? Do you really think we should double the density of a lot from single family to dual....and also, how many &quot;rich&quot; people now use their guest houses for caretakers.....very, very few. Most locals do not want to turn into indentured slaves, which is what most caretaking positions are. You can't state a top number for growth? It would upset the population too much? What are we? Children who do not know what is good for ourselves and our families? We can't handle the truth? Or are we not smart enough to know how we want to live? Four of my employees live in Idaho and have worked for me over 4 years each. Two own houses there, two rent. None would prefer to live on this side of the pass. They love working here but would not choose to live here. They feel that their quality of life is better where they are. (three of them make the drive at 5 am in order to work for me) Good transportation would eliminate a great deal of employee issues without promoting a more than double index for growth in Teton County Wyoming.</td>

Dear electeds – I do believe each of you has the preservation of both our natural resources, and our community and its economy, at the center of your beliefs. I also know that trying to both simplify - but at the same time highlight - direct changes in course that did occur on March 25 via an email alert – had its risks. Believe me it was not what I wanted to do – but I felt that a significant course change had indeed occurred. I was not alone in that view. I admit it also felt a little like “nailing Jell-O to the wall”. That does not mean I doubt your core values – but you need to understand as a collective body it did at least defer - and also seriously call into question – whether you will work within the existing extensive entitlements or not.

You have all seen my alert – as I made that transparent to you. I do not feel we really are that far apart – but both “Smart Growth” and the continued dependence on growth is still a core philosophical divide. Instead of what you may see as another “email blast” from me to anyone – please read and consider my following thoughts:

Is “Smart Growth” the Ultimate Oxymoron?

“Smart growth” is an urban planning and transportation theory that concentrates growth in compact walkable urban centers to avoid sprawl. Smart growth is at the core of the debate in the Comp Plan as its principles portend to achieve the development of vibrant, healthy communities. Premise: Sustainable, unending population growth in a valley (or planet) with finite resources and land area is an oxymoron; no possibility of such “Smart Growth” exists.

Argument: Merely concentrating humans and their built environment cannot compensate for the fact that ever-increasing residents and visitors ultimately require ever-increasing resources, infrastructure and energy inputs. The view that high-density human settlement protects our wildlife, public lands, agricultural/ranch lands or open space, in the long run, is illusory: all are increasingly stressed by the demands of burgeoning residents and visitors in “high-density” areas. Long-term solutions require policies that stabilize population and create permanent open space.

Logically, Smart Growth alone will not create or maintain sustainable communities. When in-fill projects and high-density development reaches capacity, sprawl will resume unless population stabilizes and open space has been permanently preserved. Smart Growth masquerades as the ethically more responsible choice, while ignoring the reality that more people use and over-use natural resources and public lands, whether they are physically located inside or outside the higher density area. Ultimately, it only slows the pace of sprawl and obscures real, workable solutions offered by population stabilization combined with permanent open space preservation.

Comp Plan Realities: We have 30 to 40 years – or more - of growth already entitled according to Appendix I. That provides ample time to adjust ongoing, permitted growth to create a sustainable, stable population within existing parameters to achieve community goals. It makes no sense to allow additive growth when we are not even close to buildout. Now is the time to recognize real limits and put appropriate tools in place so we don’t reach capacity with community needs unmet. We need to acknowledge that the Comp Plan is a de facto cap on the number of buildings and the mix of development. This indirectly controls population. Until you address the community mandate to work within the extensive existing entitlements, you will find little support for the process and our community will lose faith in its own government. The prospect that we collectively can achieve workforce housing and fiscal balance within a viable and stable economy – while maintaining our wildlife, open space, natural resources and small town rural character – will continue to recede.

As an individual trained in free market capitalism who also has two degrees in ecology and environmental studies – I know communities develop more sustainably when they create jobs, income and savings by doing more with what they have. This is especially true with workforce housing and governmental income. True Smart communities recognize constraints and determine a desired population. Their economy develops, the environment stays healthy and the valley remains a place people want to live and others want to visit. This is better – not always and certainly not forever – bigger.

Possible Solutions:

Growth Management – what many of us want

- In the Themes and Principals section - commit to work within the extensive existing overall base residential and commercial zoning and entitlements collectively within – and between (shifting) - the Town and County to achieve community goals. Status: postponed till after the character district discussions.
- State that we desire a viable community of no more than 40,000 residents – and an economy that is not dependent on population growth. Status: collectively you did not accept this approach.
- Add a statement that both the pattern of growth - AND our resident and effective (includes visitors in our hotels and campgrounds) population has on-site AND off-site impacts on wildlife, natural resources and community character. Status: this has been partially addressed - but not directly. OOnly by addressing both our population (via buildout) AND our pattern of growth - can the community be assured of achieving its greatest community values of wildlife, open space and community character. Status: this has been deferred until after the character district discussions.
- “Adaptive management” approaches should be considered – to measure achievement of our goals on reinvestment and revitalization, workforce housing ratios, wildlife and natural resource impacts, transportation systems, and fiscal balance of income versus expenses. Status: collectively you did
not accept this approach.
Pattern of Growth – what many of us want
• That the preservation of permanent open space is much preferred over temporary zoning – thus permanent open space should be the primary goal of any shifting of development rights. Status: this was addressed.
• That development potential in important rural areas is thoughtfully either extinguished through the purchase of those rights – or transferred to appropriate receiving areas. Status: this was addressed.
• Receiving areas should be evaluated not only on existing infrastructure – but also on the natural and scenic values on those receiving areas and potential impact to existing neighborhood character. Status: I assume this will be discussed in the upcoming meeting on Character.

Impacts of Growth – what many of us want
• Reinstall at the policy level that measuring cumulative impacts of human activities on wildlife and natural resources should both be collected, and also be one of the foundations that informs policy decisions on future growth. Status: the policy was removed while the indicators remained. This should be revisited.

Cost of Growth – what many of us want
• Growth, regardless of location or type (residential or commercial), should pay its full share of direct incremental impacts on workforce housing, infrastructure and social systems. Status: I assume this will be discussed at one of the upcoming meetings probably under Economy.

4/8/2011  Trachtenberg, Barbara
Interested Public
I am extremely disappointed in my elected officials and worried about the future of my home—to me the beautiful spot in the US. The Comprehensive Plan should and must protect our neighborhoods, valley ad precious wildlife from unpredictable growth. Please listen to your community.

4/8/2011  Trachtenberg, Barbara
Interested Public
Mark [Barron],
Please be a voice for the community that elected you, and put limits on the Comprehensive Plan. This could be a mistake that will never be rectified.

4/7/2011  Unfried, Amy
Interested Public
I was horrified to learn that after all the meetings, all the countless hours of effort put into the process by planners, electeds, and concerned citizens, all the progress that had been made on developing a plan that everybody could live with has been undone in a stroke.

There has to be a limit on growth, and it should NOT be more than double the current amount of development and population in the valley. There have to be protections for wildlife, which was the number one value that the community identified in public meetings early in the process. Wilson must not be allowed to grow to five times its current size. There has to be respect for the property rights of small landowners who hope to live in a community much like the one they bought into, not just the rights of the big landowners wanting to maximize when they sell out. There has to be predictability, which means there have to be measurable standards.

The community has been speaking throughout this process, and it seemed that it had been heard. Now it appears that although it may have been heard, it is being ignored.

Please reinstate all those things that you’ve just taken out.

4/7/2011  Unfried, Steve
Interested Public
We were shocked and dismayed to learn that our elected officials have reversed years of progress toward a reasonable comprehensive plan that would have preserved our unique wildlife and channelled future growth in the least harmful way. There is already too much potential buildout authorized; the existing limits should not have been disregarded after all the discussion thus far. Concentrating future growth where it will create the least traffic and disturbance of wildlife is essential to maintaining our community character and attractiveness to visitors, who continue to be a mainstay of our local economy, therefore reinstating excessive growth at various "nodes" around the county is counterproductive. We continue to be very concerned that the new plan will not provide enough predictability to guide its implementation over the years ahead. It needs serious benchmarks, limits and monitoring to be effective.

We are uniquely blessed with the most intact temperate ecosystem in North America, which has been the wellspring of our community and economy for some time. Now is not the time for any further encroachment on it.
Salter, Andy

4/7/2011

Over the past years and over the course of numerous public meetings, valley citizens and organizations have repeatedly and consistently urged you to commit to revisions to the Comprehensive Plan that will preserve the character of our community, protect the natural resources and wildlife of our valley, retain and not exceed the limits of the valley’s existing development potential, and provide some certainty with regard to the scale and locations of future developments within the County. The Comprehensive Plan is perhaps the key document that articulates the community’s vision for future development in the Town and County.

While I could not attend your March 25 meeting, I was distressed to read that you have tentatively decided to remove constraints on future growth and development in our community. I strongly urge you to reconsider those tentative decisions.

Growth within the Town and County must be managed responsibly and to do that, the revised Comprehensive Plan needs to provide clear direction for the future and provide citizens with the assurance that there are reasonable limits on future development in our community. I urge you to commit to a revised Comprehensive Plan which works within and does not expand the valley’s existing development potential. I understood that one of the main reasons for revising the current Comprehensive Plan was to make it more predictable. The community has been remarkably consistent in its public comments during the revision process that any revisions to the Comprehensive Plan should limit build-out potential; protect our existing neighborhoods; preserve wildlife, wildlife corridors, and open space; and preserve the character of the Town and the valley. There is a definitive amount of existing unused development potential in the Town and County. I urge you not to increase, and instead to set reasonable limits on that development potential.

The three prior draft revisions to the Comprehensive Plan, written by the initial consultant in 2008, the Planning Staff in 2009, and the joint work of the Town and County Planning Commissions more recently, all properly incorporated public input and mandated limits on future growth to preserve the existing character of our community. The referendum on the Downtown Redevelopment District in 2003, the Lake Research Partners survey of Teton County voters in 2007, and the University of Wyoming survey of Teton County voters in 2008 all establish that the vast majority of citizens of the Town and County find it critically important that community character be preserved.

The wildlife and abundant natural resources in our Town and County makes ours a unique community. Impacts on those resources should be minimized by the revisions to the Comprehensive Plan. Predictability regarding land use decisions should be increased.

The Comprehensive Plan is critically important to shape and guide development patterns that leave a legacy for generations to come. Your March 25 vote ignored community input and disregarded the input of your own consultants and professional planning staff. The “flexibility” some of you seek will remove the predictability and reasonable constraints on development that we should expect to see in the plan. The character of our community is defined by appropriately scaled developments, considerable open space, and abundant wildlife. These natural resources of our community must be preserved and protected.

Please honor and abide by the will of the citizens who elected you and develop revisions to the Comprehensive Plan that preserve, rather than threaten, the economy, quality of life, and character of our Town and County.

Stone, Cindy Hill

4/4/2011

I would like to alert you to the fact that what is being printed in your advertisements in the newspaper is not what is being discussed and concluded in the “JIM” meetings regarding the comprehensive plan.

I base this on the fact that I have sat through everyone of the Comprehensive Plan “JIM” meetings and listened to the audio twice, thinking perhaps my comprehension of the English language was lacking.

I have the greatest respect for Charlotte Reynolds, the county’s public relations manager, but I would caution you to have her print the facts of the meetings and not the watered down version of them.

We, the valley residents have been duped by elected officials before. It would be foolish to think that because we are all tired of the process we can be bulldozed over.

Parker, Jon

4/4/2011

Unbelievable! After more than three years, holding more than 40 meetings, paying professional consultants, and lots of public input, you have gone against all of the previous drafts to come up with a new plan that allows virtually unlimited future growth. This is such a sham that you could have saved us all a lot of work and grief if you had just done what you were going to do anyway. Did you listen to anyone beside the developers?

<td>Thomas, Shirley &amp; Dan</td>
<td>Thank you to all for continuing to work on our Comprehensive Plan. However, we believe you are now heading in the wrong direction on a number of issues. We MUST continue the monitoring of ongoing human impacts on wildlife and natural resources. This is a critical policy for managing growth and should be reinstated in the plan. We MUST continue to preserve our highest community values of wildlife, open spaces and small town character. We will not support any plan which more than doubles residential and commercial development. The plan MUST be predictable &amp; MUST set a reasonable and achievable end state of growth that is equal to, or less than, the current doubling. If we re-establish the nodes, we need work to constrain growth to no more than double what we have. The development potential moved to nodes should be achieved by transferring or purchasing of existing rights. We MUST permanently designate open space in important rural areas, that includes the bulk of South Park. We will continue to follow the plan progression &amp; hope you will take our comments into consideration.</td>
</tr>

<td>Whissel, Fred</td>
<td>As you know, Rich can occasionally go off the deep end, when conversing about the comprehensive plan – but only because he is so dedicated to getting it right. In this case, having read his attached comments, I have to share his concerns. If what Rich describes is true, then you certainly may be making an unforgivable mistake, and the subsequent huge increase in allowed development will forever destroy the very thing that makes Teton County great. For what? A few tax dollars? Please be certain to fully consider both the short-term and the long-term consequences of your impending decision, and choose the course that will achieve the greatest good for the greatest number, both now and in the future. I have only one vote, but I have a great propensity to write letters and to draw editorial cartoons when I feel the need justifies the means. This does.</td>
</tr>

<td>4/1/2011</td>
<td>Long, Katsey</td>
<td>I would like to make note that the recent vote on the comp plan by the Co Commissioners be revisited since it goes against what the people, consultants and others have said is too much. Please stay within the bounds of what has been agreed upon by the majority, not the few.</td>
</tr>
<tr>
<td>4/1/2011</td>
<td>Adams, Justin</td>
<td>Your recent changes to the Comprehensive Master Plan in JH are very disappointing. In view of the overwhelming community outcry for eliminating nodes and a growth cap in the numerous public meetings that started this process several years ago, your decision seems to make a mockery of the good citizens who made the effort to attend the meetings. Many, many people studied the situation, made informed comments and were led to believe that they had made a significant contribution. Even the Planning Commission recognized the contributions of the many people who live here and generally honored their comments. Since we can double under the existing development plan, there is plenty of room for economic growth at hand. Abandoning the cap on growth will not have anything to do with the Depression that grips our area at this time. Why should citizens take an interest in their community going forward? And I object to the Town Councilmen having so much influence in the County’s Plan. County residents never voted for or against them.</td>
</tr>
</tbody>
</table>
AS ALWAYS – FEEL FREE TO FORWARD – Neighborhood networks - please consider forwarding all or portions of this alert to your neighborhoods.

Comprehensive Plan Alert - I will cut to the chase – last week the public trust was severely violated. The final phase of the comprehensive plan is now before the only party that has the legal authority to change and finalize the plan – the Teton County Commissioners, Town of Jackson Mayor and Town Council. Although much good work has been maintained and reaffirmed – I am reactivating the South Park Neighbors alerts because last week the joint electeds went against the overwhelming community will and made devastating amendments to the plan that threaten our economy, quality of life, community character, likely worsen our workforce housing shortages and further degrade our natural resources and wildlife values.

In a nutshell the largest negative changes in the plan last Friday were:
• A GREATER than DOUBLING of everything on the ground today - The joint electeds in basically a 8-2 “vote” (Ben Ellis and Paul Vogelheim petitioned to uphold the community desires and Hank Phibbs found a way to modestly address the community will) – said that limiting future development to no more than double everything you already see in the valley – homes, commercial, institution facilities, traffic - was not a reasonable limit to plan within. Instead they implied they were willing to more than double everything – with basically no limits on how much upzoning could be possible. This unlimited approach to try to grow oneself out of growth induced problems is unacceptable and goes against all three drafts of the plan including: the initial consultant draft in 2008, the professional planning staff draft of April 2009 – and after a year of work (41 meetings) by the joint volunteer Town/County planning commissions – their certified draft of September 2010. This reversal in effect not only goes against the community will – but also their own consultants, professional planning staff and the joint planning commissions!
• The approved planning commission version’s (9/10) “statement of ideal” on managing growth stated: “Limit growth to established development allowances while encouraging preservation of open spaces and existing neighborhoods.” – has now effectively been modified to the published meeting summary this week of (emphasis added):
  • “This plan must protect wildlife resources and our unique landscape, while ensuring private property rights, continuing to support reasonable land uses and minimizing the effects of population growth on community character.
  • A potential buildout number will be calculated following discussions and decisions about the appropriate character throughout the community in order to analyze future development patterns.”
  • So what does this mean – that the potential amount of growth does not matter; that only shifting some of its location is a concern. That your input – staff’s input – the joint planning commissions input – over the last four years did not matter. That even after all the decisions are made and the increased buildout is recalculated – there is no commitment to do anything other than continue to direct additional future development potential - with no end in sight.

• They reinstated the NODES in Wilson, Aspens, NW South Park, Teton Village, Hoback and Jackson – with much better – yet still incomplete language - that this would only occur by the transferring of existing entitlements from important rural lands. Given the reversal of trying to work within the tremendous existing development potential – some 10,000 additional homes (think 20 Rafter J subdivisions) and nearly seven million square feet of new commercial (visualize 132 new Smiths) scattered through the nodes and valley – the nodes appear again to contain substantial additive growth. To be clear I support the redirecting of existing entitlements to compact centers – as long as it achieves the protection of permanent open space and is done within our overall substantial existing development potential. On Friday this intent was made very unclear given the lack of commitment to honor community concerns on working within overall existing entitlements.

• They deleted the “MONITORING OF CUMULATIVE HUMAN IMPACTS” on wildlife and natural resources - they stripped this approved policy in its entirety – so that no policy decisions will have any linkage to the wildlife and natural resource impacts that have already occurred via previous decisions. They said it is not important to monitor human impacts on wildlife and natural resources at the “policy level” – and have relegated it to a few “indicators” that they may monitor. This was a close split “vote” so can be reinstated if the community weighs in.

• Deemphasized the prioritizing of PREDICTABILITY – The language of the plan continues to get watered down – and the most fundamental predictable metric – knowing just how much future development will be allowed – has been removed in its entirety until all the decisions are completed. Even then the intent appears to continue to grow after that is reached - with no end contemplated. Several of the electeds said they want “flexibility” above predictability - directly contradicting the will of the community.
NOTE: Remember the current slowdown in construction and the significant vacancies and foreclosures are not tied directly to the comp plan. Millions of square feet of new commercial and thousands of homes could start construction tomorrow under current entitlements. Although the plan will effectively direct the next several decades of growth – the burst housing bubble, surplus of existing commercial and rentals and the still stuck credit markets – on a global scale – have caused new development to slow to a crawl – not the arduous plan process.

ACTION ITEMS:
The next three weeks will make or break the plan! A number of electeds have stated they are willing to revisit and/or clarify these recent decisions – but they need the weary community to weigh back in. Do that as you see fit – but make your positions and concerns known.

• Privately you can do that individually with any, or all, of the ten electeds representatives in the Town and County. I have listed their names and public email address below. Have a private conversation, give them a call, or send them a private email.

• I would ask in addition for you to again submit a formal comment on these concerns to our decision makers - and make it part of the public record.
• It can be as short as: To preserve our highest community values of wildlife, open spaces and small town character – I will not support any plan which more than doubles residential and commercial development.
• Demand that the plan is predictable and that starts with setting a reasonable – and achievable – end-state of growth that is equal to, or less than, the current doubling they have now thrown out as a reasonable constraint.
• Demand the nodes only be established if we work to constrain growth to no more than double what we have – and any development potential moved to nodes is achieved by transferring or purchasing of existing rights - thus permanently extinguishing them to achieve permanent open space in important rural areas – that includes the bulk of South Park.
• Demand that the monitoring of ongoing human impacts on wildlife and natural resources is a critical policy for managing growth and should be reinstated in the plan.

"[The Comp Plan] will set in motion development patterns that will leave a legacy for the rest of our lives and the rest of our kids’ lives. And I think it’s important to do the planning within the entitlements and implications that are on the ground today....

Without designing within the potential as listed in Appendix I, or with a percentage less than that so that we have the ability to move forward, I think that we would be making a grave mistake....

I think we would be ignoring what is a strong comment by the community that predictability is tied to this concept. And I think we would not be planning as well as we could by using Appendix I, which is again essentially the entitled development rights today, for our discussion.

Comments made during last Friday’s March 25, 2011 Comp Plan hearing by Teton County Commission Chairman Ben Ellis as the majority of the electeds were unwilling to constrain future development to a reasonable level.
Note: “Appendix I” in the September 2010 certified draft quantifies the breakdown of doubling both future commercial and residential development potential in the valley.

3/30/2011  Wallace, Jim
Interested Public

Agree: Nodes or clustering, receive global and historical support. Used for centuries, this concept of connected villages with preservation of open space has been proven to be the most desirable land use design.
Wildlife: Winter habitat is critical. Critical losses to development: Teton Science School c, Karns Hillside, County Heli-pad at junction, Snake River corridor developments; require identification and preservation. Purchase & relocation of present occupancy is the best option.
Dogs: Wildlife killings by dogs are increasing: Harassment of wildlife by dogs at critical levels. An unsupervised dog running free on 35 acres can easily render such land as inhospitable. Sound planning, in the interest of wildlife, encourages further restrictions and limitations upon pets; dogs, cats, horses, etc: our County’s carring capacity maybe a limit of no more than 10,000 dogs.
Government: Combine Town & County.

<td>First the expression of three per 35 is actually a misleading phrase. Any free standing 35 acre parcel in Teton county will be reduced to two units once the Base Site Area is calculated. There are a significant number of properties where because of the river, streams and hill sides reduce the BSA = 23.65 acres to one unit. The PRD at one per 35 was a compromise for the down zoning of the RA-3...RA-20 zoning of the 1978 plan. The configuration of the two units on less than 1/3 usually 1/5 of the property clusters the compound leaving permeability for the wildlife. The LDR environmental standards still must be met as well, such as the 30 foot setback from wetlands. In addition there is then a site for a caretaker and therefor workforce housing. I would gladly discuss this further with anyone so as to provide you a better understanding of how non-subdivision PRDs are used and the negative and positive impacts.</td>

<td>Bloom, Rich</td>
<td>Greg – thank you for your phone call just now asking for more information on the PRD, its benefits and its limitations – basically how do we achieve permanent open space – and how does it fit with Smart Growth principals? As I discussed the presentation from County planning staff today only focused on how the tool has been used in direct applications through their office. Although considerable benefit has been achieved on smaller parcels – the entire story was not shared with the electeds this morning. I hope it is alright that I have copied in both Laurie - and also John Sheppard – who has been attending all the joint sessions. Attached are the Land Trust’s formal public comments on the April 2009 draft that reinforces our conversation we had just now – on the benefits of the PRD for achieving open space even when the use is not necessarily visible to the planning office. That is not to say the tool does not need some refinement and enhancements. Second the Trust’s comments cover the relative value of permanent open space versus temporary zoning that you and I discussed – and is a foundation of Smart Growth principals. The letter also echoes in addition why I, and the public at large, were so concerned when the draft plan was released in April 2009 – basically how were they going to redirect the existing potential – shift it or simply down zone the entire rural areas? The Trust has expressed these concerns quite well in the attached May 14, 2009 letter. The second attachment is from rancher Brad Mead who weighed in on the issue though a News and Guide Guest Shot - when the County, without completely understanding the implications - was considering removing the tool in its entirety – as they could not see the non-visible (outside of planning office applications) achievements as it was used. That is because - as we discussed - it is a private conversation between the land owner, the land trust, the land appraiser and the IRS. The Trust states it quite clearly – that after the PRD was adopted in 1994 – unseen to the County – some 10,000 acres came under permanent conservation easements – versus 5,000 acres in all the proceeding years. Granted some 2,400 of that 10,000 were directly seen in the planning staff PRD applications. Those other 7,600 acres were never seen by the planning staff as direct PRD applications – yet the PRD played a critical tax role in the Trust’s ability to achieve thus easements. With the Town as involved with the Land Trust as partners on Karnes, Flat Creek and now Snow King – I would suggest you sit down with Laurie in the next few weeks. Again thank you so much for the call – I just wanted to make sure you also consider talking to the true experts on how permanent conversation easements are actually achieved with willing land owners. Feel free to share this email and the attached public documents with other members of the Town Council and/or Mayor – as we discussed the PRD is a tool largely unfamiliar with the Town electeds. The next joint meeting will be the County’s turn, as we discussed, to understand the complexity of some of the Town tools – the main thing is that we all continue to learn through this process before making the final policy decisions.</td>
</tr>

</table>
The current PC Certified Plan indicates that the Future Land Use Plan (FLUP) will be appended to the plan upon completion of the Themes and Policies. I find this approach completely disheartening, as the FLUP is the primary component of interest to most concerned citizens. I believe the final Comp Plan should be reviewed and approved just as the name implies, in a “Comprehensive” format, rather than the piecemeal approach currently being undertaken. The ramifications of the verbiage within the Themes and Policies cannot be fully evaluated without concurrently reviewing the FLUP. Regarding Themes and Policies, the reviewing body must contemplate the current economic climate and outlook when considering outdated information collected at the outset under brighter conditions. Attracting growth and improving the economy likely garner much more weight now than when this colossal process was first begun FOUR years ago. At this point in time, growth in any respect should be welcomed, but definitely cannot be discouraged or stifled as was outlined in past plans. Just because some properties within the County are not located within or adjacent to designated development nodes does not mean they should be completely discarded when considering future development.

The decision makers of the Comp plan should be reminded that only 3% of the entire land mass comprising Teton County is privately held, developable land. It is unnerving that the officials responsible for approval of the plan, which has taken four years to date and will likely require an additional year or two to finally complete (I have heard as many as three additional years), will dictate property uses throughout the entire valley for the next 15 – 20 years. Under the present economic conditions and atmosphere of uncertainty, fluidity in any particular eventual land use from that dictated in the plan should be achievable by some means. If this cannot be provided for, specific nodal development designations should be revisited and include major portions of the Hog Island area.

The County is constantly opining the affordable housing problem but refuses to allow or zone for development that could and would alleviate the issue. The concerns of maintaining wide open spaces, acceptable view corridors for tourists, and unlimited migration paths for wildlife of all species far outweigh the pesky dilemma of maintaining a viable, LOCAL work force. The decision makers of the comp plan, and perhaps the public in general, need to be made aware (or reminded?) of the reality that currently exists. Only a smattering of local law enforcement, emergency responders, healthcare providers, teachers, etc are able to reside in the valley. The majority of the active workforce commutes from one of the many satellite communities that actually provide (and actively encourage) affordable housing. Access to this valley from those satellite communities is dependent on two narrow canyon byways and a mountain pass that is regularly closed for maintenance. A minor event such as heavy snowfall (not to mention a much more devastating one such as a major earthquake) could conceivably isolate the entire valley, leaving the area bereft of critical services, potentially during the greatest time of need. The comp plan should be more focused on affordable housing and providing the tools throughout the valley (not in just three or four nodes) to accomplish and actively promote development thereof.

I am uncertain how closely the eventual, appended FLUP will resemble the original version depicted in the April 2009 Draft, but would like to offer the following comments regarding District 7 (Hog Island/Game Creek) as portrayed in the April 2009 version:

1. I and other members of my family own significant portions of property in this District. The FLUP that is ultimately adopted will essentially determine the value and worth of our property, and dictate what (if anything) will be allowed to occur on the property. I do not believe that the April 09 Draft proposed use schedule accurately reflects existing conditions or reasonable future land use expectations, especially along portions of the Highway 89 corridor. Many areas slated for Single Family Dispersed classification (which is 100% Residential) is either sandwiched by or directly adjacent to Light Industry property. The configuration of lots and existing uses (which in many cases are not residential at all) indicate that much more property in the area should be classified under Light Industry, or some other use allowing home businesses by right and businesses of all types through a CUP process. Mandating these properties to be 100% residential while they are surrounded by industrial uses of all varieties is indisputably asinine.

2. The Teton County Gravel Study (which also has been on the last several years) identified the Ross Plateau as a viable gravel extraction location. However, the designation in the April 09 FLUP indicates strictly agricultural use. This is completely contradictory considering the Evans pit and yard are proposed as Light Industry. The decision makers must consider the gravel study during their deliberations, even if the study remains technically incomplete. The status of this study is ambiguous, but my understanding is that final release of the study is being upheld due to ongoing litigation with another landowner mentioned in the study.

3. It should be noted that Ross Plateau is one of the rarest properties in the valley, offering expansive development potential while unseen from any public byway. This property could prove to be an invaluable resource to the entire community as: 1) an alternative gravel source 2) an affordable housing location 3) any other positive development contribution ALLOWED OR PRESCRIBED IN THE COMP PLAN, FLUP, AND FINAL LDRs.

4. As implied in 1 above, a new zoning designation needs to be created to accommodate existing configuration and uses in the Hog Island area. A very large percentage of existing residential properties contain either grandfathered, nonconforming uses or businesses allowed through the CUP process. This area epitomizes the actual working class of Teton County. This being the case, the ultimate zoning for most of Hog Island should allow for both residential growth and growth of businesses of all types, including heavy equipment contractors. Under current rules and regulations, the only zone allowing these types of businesses is BP, and even under that zone, a CUP is still required. What is so scary about heavy equipment contractors,
especially if their existence is regulated through a CUP?

Thanks for considering these comments during your deliberations. Many County residents share these or similar opinions. Unfortunately, most of those that do are busy making a living and are not afforded the valuable time necessary to consistently voice their opinions, as so many other valley residents and organizations are.

maybe not, but i get the feeling that campgrounds might get a few more definitions labeled to them in the new comp plan as a result of these application. when/if this discussion happens, can we make sure that we are apart of that discussion? just do not want this to be talked about and decision made without our input. will we be notified if there are discussions about this?
Dear electeds – You have heard staff, myself and many others state that we are already heading to roughly doubling everything we see on the ground in our valley today – and the community expects you to work within – or less than – that potential to achieve community goals. I state in today’s N&G in a “letter to the editor” specifically there are 6,600,000 square feet of additional potential commercial and some 10,000 potential more housing units in the Town and County. For explanation I want to clarify how I got there – as you know I do not quote numbers randomly. Following are some footnotes to my letter to the editor.

Footnotes: The latent development potential I quantify in my letter comes from the joint planning commission’s certified draft – Appendix I: Buildout Numbers and Assumptions. See first attachment – complete assumptions are found in the rest of this appendix – second attachment.

For commercial existing and potential - I used the fairly straightforward numbers in the table of 8,050,669 square feet existing and an additional 6,616,093 square feet of potential. I did not go into the Town versus County commercial potential split but it is an additional 3,436,798 square feet in Town and an additional 3,179,285 square feet in the County. Especially in Town – some of this latent commercial square footage has the potential for conversion to residential - which I mention in my letter.

For residential this was a little bit harder to not over estimate the potential.

Existing is straightforward at 9,644 housing units with 3,898 units in Town and 5,746 in the County. This does not take into account short-term rentals – just housing for the workforce and second homes. Note this also does not include housing on federal lands - as they are outside the legal application of our plan. Naturally it also does not include campgrounds, hotel rooms and the like – all which add to our “effective population” on any given day.

For additional residential potential - Town is also fairly straightforward at an additional 2,534 units. This is modest estimate as it under estimates the potential in the significant AR zone because attached rentals to a home are consider all one unit.

The County is a little more difficult to not over estimate the potential and is based on the following assumptions:

• The appendix quotes the potential of an additional 18,820 housing units in the County alone (I used about 7,500 in my letter to the editor – plus the Town potential of 2,534 - for a total of 10,000). In total Town and County would give us some 21,354 more potential housing units – which is clearly too high (again I used 10,000).

• This includes 3,567 units under “potential base Dus” - a combination of numerous platted and not yet built lots – such as the 30 vacant lots in northern Melody Ranch and the 73 homes to be developed via the final phase of the PUD south of South Park Loop road; potential in addition outside of PUDs and subdivisions such as the housing in planned resorts – think of SRA and Targhee; Suburban zone (note 140 of this housing unit potential sits south directly across High School Road from Cottonwood Park on 35 acres zoned Suburban) and NC-SF zoned lands; and finally this also includes base property rights in rurally zoned lands (think 1 unit per 35 acres).

Obviously the 3,567 housing “potential base Dus” breaks out as: 1,220 base rural potential (1 per 35), 1,190 in the NC-SF, 174 Suburban, 282 NC-PUD, 549 Resorts, 152 other. There are also much higher numbers called “possible” (see Appendix page I-11) – which I simply ignored. This would have brought the “potential base Dus” of 3,567 to 8,264 – or an additional 4,697 units. I used the much lower 3,567 “potential base Dus”.

• Then there are some 1,100 potential units of “commercial ARUs” and “employee units” possible in the County.

• The numbers that I then adjusted downward a lot so as not to overestimate - were the potential County accessory residential units (ARUs) – if they were all actualized (10,946 ARUs). I also reduced significantly some of the open space clustering tool “bonus” potential (the PRD – 2&3/35, 6/35 and 9/35 multipliers) in the County. If it was all utilized then another 3,651 units in “Planned Residential Development” (PRD) bonus potential. Note: this 3,651 has actually already been reduced by staff by 23% based on “historic utilization” of the bonus PRD tool.

On the attached appendix it strips all 10,496 potential County ARU’s (given the joint PC vote - which personally I did not support) and also leaves out
all 3,651 bonus PRD units since the multipliers were “to be determined”. That left just 7,207 potential additional housing units in Town and County – which is much too low as the PRD will remain in some fashion and the ARU’s (which are probably over estimated) will likely be put back into the plan.

OL chose to add back to the 7,207 total Town/County unit potential a modest 1/2 of the County bonus PRD potential (already reduced 23% by staff) for around 1,825 – since the tool will remain in some form – or likely be added to with some sort of additional transfer of development tool. Then I only added about 1,000 back in of the potential County ARUs (or less than 10% of the 10,946 total potential) to represent both a reduced utilization rate and the likely residential impact via rental to the workforce of these units – versus simply used as a seasonal guest house instead.

That brought me to a realistic – and probably conservative - estimate of 10,000 additional housing units in Town and County – with 75% in the County and 25% in Town. Still a daunting number and much higher than most people are aware of.

Nearly half of these 10,000 potential County housing units location can be shifted and redirected and/or simply reduced - in a variety of ways - as I touch on in my letter. In particular some 3,000 - 5,000 units (depending on how you calculate it) of potential rural zoned units - and much of the nearly 1,200 units of excess capacity on the NC-SF zoned lands – the bulk of which sit in the Snake River riparian corridor.

Letter to the Editor – News and Guide

How to manage growth - NOT whether to grow or not grow – is the critical issue being addressed in the ongoing comprehensive plan process. Town and County elected officials will focus on “managing growth” this week. Base property rights and current entitlements will already roughly double housing units and commercial square footage. In numbers, that translates to 10,000 additional housing units to the 9,650 we’ve already built - or the equivalent of twenty more Rafter J subdivisions. At buildout, 6.6 million square feet of commercial development will be added to the existing 8,050,000 square feet of commercial space in the valley. With Smiths at 50,000 square feet, visualize 132 more Smiths scattered through Teton Village, Snow King, Targhee and Jackson proper. The implication of this much future growth is mind boggling.

Our community has wisely weighed in strongly against nodes as presented in the draft plan. With no mechanism of transferring development rights, “new” centers in Wilson, the Aspens, South Park, Hoback and Teton Village represented additive growth beyond existing buildout numbers that already pose daunting challenges to our transportation systems, wildlife, public lands, community character and quality of life.

I urge our electeds to redirect and shift existing growth entitlements to compact centers to preserve sensitive rural lands, scenic vistas, wildlife movement corridors, some remnant of our ranching heritage and curtail sprawl. There are a wide variety of tools to shift future entitled growth without increasing ultimate buildout. These include enhancing our existing rural open space clustering tool, outright purchase of important open space by partnering public money with private philanthropy, conversion of commercial square footage to residential, refinement of Town tools to invigorate significant unutilized in-fill potential, a measured reduction of development potential in important rural areas, and various legal mechanisms for landowner-to-landowner transfer of development rights. I believe our community wants “no additional growth” solutions to address community goals. Roll up your sleeves and see what you can do with what we already have.
On behalf of the 2,000 members of the Jackson Hole Conservation Alliance, we would like to submit brief comments regarding your ongoing review of the Jackson/Teton County Comprehensive Plan, particularly in light of the staff report that was released last week.

Background
The Conservation Alliance is dedicated to responsible land stewardship in Jackson Hole, Wyoming, working to ensure that human activities are in harmony with the area’s irreplaceable wildlife, scenic and other natural resources. Our organization has worked on local planning issues since its inception in 1979. Our work is rooted in the recognition that this valley, particularly its wildlife, scenic and other natural resources, is incredibly rare and is worth protecting for future generations. With over three decades of history in local planning, we understand that these unique attributes that largely define Jackson and Teton County’s character do not exist today by accident; there is an extensive history of active and dedicated community and elected official involvement that has shaped our valley for many decades.

In an effort to continue this community legacy, the Conservation Alliance supports a fact-based, conservation-focused and precautionary planning approach as the most effective way to uphold community values. As in other words, the plan must include a clear prioritization of community values, incorporate essential data and the best available science, identify a need for precaution in cases where data is lacking, provide unambiguous policies and realistic implementation measures, include maps consistent with prioritized values, and, as a result, increase overall predictability. Most importantly, it must work to protect what makes this community so unique – our rural landscape, open spaces, scenery and abundant wildlife (values which currently fall under “Theme One”) – by clearly placing them as the primary factors for consideration in all land use decisions.

Discussion Topics and Key Issues
The future implications of planning decisions made today are sure to be significant. With that in mind, the Conservation Alliance would like to emphasize the following few points for inclusion in your discussions in JIM #4 and #5, on March 24 and 25, in addition to pointing to our previously submitted comments, some of which are included in the appendices of this week’s staff report.

1. Wildlife and natural resource protection: Attached to this letter is a November 12, 2009 memo that we submitted to the planning commission highlighting how we believe the policies on wildlife protection could be improved. Many of these policies are still up for debate today. For those that have been incorporated in the plan, we hope that you continue to support them.

Overall, wildlife and natural resource protection is the community’s top priority and this needs to be reflected in the draft plan in a consistent and enforceable way. Our abundant wildlife, scenic vistas and rural character should be the top priority in all land use decisions, backed with strong and consistent policies. Themes and values truly need to be prioritized, not just balanced.

- Wildlife Stewardship Plan
A key issue, which we hope that you can address, is the need for a more specific Wildlife Stewardship Action Plan. This tool is critical given that the values under Theme One are the community’s highest priority. (This could be similar to the proposal for a community housing plan in the sense that these types of plans would include measurable steps, with timelines, responsible parties and specific goals. This is particularly essential if the Comp Plan itself is not going to dive into much detail.)

2. Avoiding oversimplification of planning principles, including Smart Growth: Four years into this process, after countless hours of meetings, volumes of public comment and significant work on the parts of the elected officials, the planning commission members and the planning staffs, we hope that our community doesn’t oversimplify the issues that we are facing. If we oversimplify concepts, we will not achieve an overall and primary objective of this process – an increase in specificity and predictability as a way to avoid piecemeal, contentious decisions in the future. Many of the issues up for debate in JIM #4 and #5 are complex and nuanced, and all are important. The concept of smart growth, for example, by its nature necessitates consideration of our existing context and conditions - not a blanket application of the term to describe simplified development patterns.

Case Example – The “node” concept
We will provide one example that is sure to be raised again - the concept of nodes. From a planning perspective, it can be an easy question to simplify – do you support confined development footprints, or not? While we certainly cannot speak for everyone, it is likely that most people in our community
would support this basic planning concept (including the Conservation Alliance which has expressed concerns about the application of the “node” concept in the April 2009 draft). However, what the Conservation Alliance has recognized, as well as other members of the public, is that the important issues, the ones that must now be discussed in order to achieve the objectives of the plan rewrite process, are in the details. Following are some of those details that should be considered:

- Are there mechanisms that would enable permanent tradeoffs for shifting development into these areas? In other words, does “growing up” in fact prevent our community from “growing out?” Or, does the expansion of these centers represent additive growth?
- How much more expansion is appropriate for distinct areas? (including those that are already called out as mixed use villages in our current plan)
- How much development potential do these areas already have (including approved, but not yet built)? What timeframe are you planning for?
- What is the existing balance of commercial and residential development in those areas?
- Are these areas geographically scattered throughout the valley? What are the consequences of this?
- What type of transportation infrastructure exists to support expansion in different areas? What is the existing capacity (for example, on Highway 390 or High School Road) to accommodate additional traffic?
- We have existing areas, such as Wilson, where concentrated development has already occurred. Just because concentrated development has occurred there in the past, does it mean it should go on endlessly? What are the pros and cons of placing growth boundaries around these areas? As the Conservation Alliance has stated in the past, we believe that growth, regardless if it occurs “next to existing development,” should first and foremost truly respect community priorities, such as avoidance of further encroachment into wildlife habitat. In short, continuing to intensely develop in the wrong area (such as in the middle of wildlife habitat just because it is “next to existing development”), does not make it right.
- What are the fiscal implications of expansion of certain areas (in terms of schools, law enforcement, transportation infrastructure, etc.)?
- Overall, the Conservation Alliance recognizes how interconnected different areas of the valley are. What could happen in one “node” or “village center” affects the valley as a whole. This is a critical point to keep in mind. As fragmented discussions on “character districts” occur, this need to come back full circle and understand the comprehensive picture will be essential. In summary, and in response to the clearly outlined objectives of the process, members of the public have expectations, after over four years, to move beyond approval of simplistic concepts that can then be interpreted and acted upon in myriad ways in the future.

3. Tools: First, according to the staff report for JIM #4 and #5, it appears as though fundamental, hard decisions could be made in the “character district” maps, formerly the FLUPs. As we have stated before, the maps and accompanying narrative are an integral, predictable part of the plan and should not be treated as an addendum. Also, the Themes and Policies should go into more detail as to which areas are appropriate for development and which should be prioritized for conservation. This would help in providing a comprehensive picture of the valley to serve as the larger context for framing the production of “character districts.”

Second, as many community members have requested, we would like to once again ask that a workshop (or series of workshops) on the PRD and TDR tools be held. These two issues alone stand to have big impacts for overarching principles of the new plan. They are too complex to be adequately covered as one of several topics in a single meeting.

4. Predictability: Increased predictability is and has been one of the primary goals of this Comp Plan rewrite process. To create a truly predictable plan, the topic of buildout (in terms of dwelling units
and square footage should be addressed. It’s important to remember that identifying buildout was a key desired outcome by members of the public. For example, on October 15, 2008, the Planning Team placed an ad to confirm recognition of top community concerns voiced during public comment. Under the title, “The Comprehensive Plan Will Be Responding to Public Comment: What you said”, the second bullet point stated “Buildout should be clearly identified and provide guidance in policy creation.”

Again, thank you for your dedication to the creation of a Comprehensive Plan that truly reflects our community’s priorities. Jackson and Teton County are faced with unique challenges and should be approached as such. As history has shown, if we don’t make the hard, detailed decisions now, we’ll end up making them incrementally as each development proposal comes up in the future. We look forward to working with you over the next several months. If you have additional questions, please feel free to get in touch with us.

Sprawling development that dilutes customer bases while destroying open space, wildlife habitat and scenic vistas is dumb growth. And that is the most likely outcome of a plan that promotes nodal development. A community of 20,000 people does not generate the volume of commerce necessary to support a variety of shops and services in each of several “nodes”. As a result, people would end up driving among multiple nodes to do their shopping. Moreover, promoting satellite commercial centers would pull investment dollars away from Town. It is important to keep the primary tax base in town so we can afford to build the public infrastructure associated with commercial centers. Quality of life and our environment are assets that attract high-value businesses. Sprawl will make us just another ski resort town. Please implement a Comprehensive Plan that creates value, that is ensures permanent protection of open spaces and fosters a vibrant town center. Say no to nodes and sprawl.

3/23/2011 Stone, Cindy Hill Interested Public

I encourage each of you to remember that wildlife, habitat and open space are the priorities of this valley. Each theme of the comprehensive plan should reflect that.

e.g. Because wildlife is the valleys highest priority, affordable housing will be encouraged in this manner. Because Wildlife and open space are Teton county’s highest priorities transportation will be dealt with in this manner. Thank you for your continued hard work

<td>Habitat for Humanity</td>
<td>On behalf of Habitat for Humanity of the Greater Teton Area, we thank you for your leadership on workforce housing and for calling for the formation of The Blue Ribbon Panel on Workforce Housing. We would like to acknowledge the tremendous amount of work that the volunteer panel invested in learning about the history of housing in Teton County and discussing strategies to house 65% of our workforce locally. In general we support the findings in the report and would like to touch on four points: 1. We agree there is a need for a more decent, affordable rentals and this would be achieved by zoning for multi-family rentals. We also want to emphasize the importance of providing our workforce with homeownership housing options, as we know that high homeownership rates in a community result in a more stable workforce, better school attainment in children, and more active citizens. 2. We are strongly in favor of having a goal on which we as a community can measure our success with regard to housing our workforce. We support the goal of having at least 65% of our workforce live locally, as we know that will help maintain the strong sense of community we currently enjoy. We recognize that maintenance of the 65% goal will require a steady and sustainable approach despite the fluctuations in the market, and we appreciate your continued support of the Teton County Housing Authority to monitor this number and provide leadership on this matter. 3. We support the encouragement of free market solutions. We understand workforce housing to mean all types of housing that serve our workforce, not just deed-restricted, subsidized housing. As the free market has not traditionally been effective in providing Category 1 – 3 ownership opportunities, we agree with the assertion that the housing agencies should focus on creating those categories of housing while allowing the free market to provide solutions for higher category housing. 4. As Habitat is made up of community members with an appreciation for all that Jackson has to offer, we strongly appreciate the importance of balancing housing with other community values of wildlife, open space and our western heritage. We understand there are trade offs and we appreciate the fact that housing needs to be appropriate and predictable. As work is currently underway on the Comprehensive Plan, we hope this report and the comments it generated will be a resource to inform the discussions around housing. Thank you for your consideration of these comments and for the work you do on behalf of our community.</td>

<td>I ALSO WOULD LIKE TO ASK THAT THE ROSS PLATEAU BE ZONED FOR THE GRAVEL PIT THAT WE INTEND TO PURSUE.</td>
</tr>
<tr>
<td>3/14/2011</td>
<td>Potzernitz, Lisa</td>
<td>I am in support of zoning changes for the South Hwy 89/191 area. Because there are a large number of home operated business' along Hwy 89 (that include masonry, construction, electrical, landscape, etc), it only makes sense to change the zoning to allow for this type of use. It will also enable landowners that might have vacant land the possibility of marketing their properties to a larger pool of potential buyers. It is my understanding that there is a huge need for areas to stockpile during construction projects with little to no locations available in Teton County. I fail to see the sense in trucking this material out of county or state when there are viable options available yet unattainable due to a zoning issue. This only increases the cost for the owners and builders and takes money out of Teton County. Due to the lack of options available to landowners currently, changing the use could open avenues previously declined thru the planning process. These changes could include a sit down with county planners to ensure that intended uses are both beneficial to the landowner as well as Teton County. Thank You.</td>

| 3/14/2011 | O'Donoghue, Tim Chamber of Commerce | Dear Jackson Town Council Members and Teton County Commissioners,
A reference was made in last Monday's Jackson/Teton County Comprehensive Plan presentation by the planning staff concerning the status of Tourism as a contributor to our local economy. The statement made was based on information that was limited (i.e., source of personal income in Teton County) and not inclusive of all of the data available from the Wyoming Department of Revenue and Wyoming Office of Tourism. For your review and reference, I have attached information from these sources which will provide a more comprehensive, accurate status of Tourism's role in our local economy. To highlight the attached data, you will find that:
Tourism accounts for $572 million in spending in Teton County
Notes: (1) This is the average between years 2006-2009 (the most representative years of Tourism in Teton County)
(2) Visitor spending has been increasing at an annual average rate of 4.3% since 1997.
Tourism accounts directly for 6,315 jobs annually in Teton County
Notes: (1) This is the average between years 2006-2009 (the most representative years of Tourism in Teton County)
(2) Approximately 24% of our workforce is directly dependent upon and benefits from Tourism. More jobs are indirectly or secondarily dependent upon and benefit from Tourism.
(3) Jobs from Tourism have been increasing at an annual average rate of 1% since 1997.
Tourism generates $189 million direct payroll income annually in Teton County
Notes: (1) This is the average between years 2006-2009 (the most representative years of Tourism in Teton County)
(2) Spending of income earned by employees generates “secondary” sales tax revenue and revenue in all Teton County industries including professional and other services, local government, wholesale and retail trade, and finance, insurance, and real estate.
(3) Direct payroll income has been increasing at an annual average rate of 5.3% since 1997.
(4) Approximately 18% of income of Teton County residents is directly generated from Tourism (investment income is the #1 source of income)
Tourism DIRECTLY generates 44% of the annual sales tax revenue and SECONDARILY at least 70% of the annual sales tax revenue for Teton County
Note: (1) This is the average between years 2008-2010.
I hope this information is helpful in your understanding of the basis of our economy, what metrics are used to measure this, and for your discussions concerning the Jackson/Teton County Comprehensive Plan and other contexts.
Please let me know if you have any requests, comments or questions for which I can be of further service. {referenced attachment on tourism dollars available hard copy in the Teton County Planning Department} |
| 3/13/2011 | Weenig, Andy and Andr Interested Public | To whom it may concern involved in the TOJ &/or TC comp plan, Thanx for receiving my public comment in favor of the TCHA and JH affordable housing in general. We think the TC affordable housing program has been vital to our family's full integration to this community. After renting & working in JH for six enjoyable yrs, we were able to buy an Ellingwood condo in Cottonwood. Almost immediately we felt connected to this community in a deeper way than the previous yrs, notwithstanding a very involved relationship w/ folks at church. And in response to what we felt, we helped out w/ local activities more & more; also we got involved w/ community groups: scouts, community garden, FOP, public health, Rendezvous PTA and more. Four yrs later, we're raising our young family, and we absolutely love this place and feel extremely committed to the entire area and its residents. We honestly think we have, in some small ways, made this a better place to live for others. This wouldn't be possible without home ownership made possible thru the program of affordable housing. Thank you. |
I have been writing the Forest service and Ranger Dale Dieter regarding the US Forest Service' plans for the Teton to Snake Fuel Management Program. The program details plans for commercial logging and prescription burning of a large swath of Bridger-Teton forest in the Wilson area. I am deeply upset by a plan that is designed to burn a forest in order to save it. The forest is the most positive feature of our area and I feel they are wrong in pursuing this. The Forest Service has held public meetings to discuss this, but I don't think any one individual has the clout to avert this destruction.

I would appreciate it greatly if the county would consider playing a role in preserving the forest. While there are currently discussions about the Comprehensive Plan, this may be an ideal opportunity for the county to formally take a stand on this. Please see the attached correspondance to Mr Dieter....Dear Mr. Deiter:

I am writing in response to the article published in the Jackson Hole News & Guide entitled “Forest Service Moves on Thinning Project”.

My wife and I currently own property bordering the Bridger-Teton National Forest in the Butler Creek, Highland Park community in Wilson. We are currently in the process of building our home which we intend to occupy full time within the next two years. The site is a magnificent densely wooded property with a panoramic view of the Bridger-Teton National Forest. Finally moving there will be the culmination of our dream to retire to the forest. We purchased the property because of the trees and the proximity to the National Forest, something we value very highly. We chose this site to build, knowing what the risks might be in the event of a forest fire. I would imagine there are many others who chose to live near the forest who are of the same sentiment. We have followed all of the code requirements of the Fire Department for building in the Urban-Wildlife Interface in order to reduce the risk of catastrophic loss in the event of a fire.

I was horrified to read of the Forest Service’s plans to “thin” the forest in our area. We already mourn the loss of so many trees to the pine beetle, but dread even more, the intentional destruction of thousands of trees in an attempt to save them and to protect housing. I understand the concerns regarding fire safety for the homes along the corridor for planned thinning and feel certain that others, like us, chose to build there knowing the inherent risk of fire living in or near the forest. I personally do not want to live in an area that has been laid bare by logging and prescription burns. What I have seen of other such projects has been heartbreaking. Given the loss of so many trees to the beetles, I personally don’t feel we can afford to loose any more trees. Furthermore, I am greatly concerned about the number of “controlled” prescribed burns that have gotten out of control and destroyed tens of thousands of acres of forest. We are loosing forest at a rate faster that would occur naturally. I have a deep faith in nature and a belief that she can take care of things by herself without our help. We are more than willing to accept the potential risk of fire to keep the trees. If a fire happens, we will deal with it. Trees, as I am sure you agree, are the principle beauty and asset of the Tetons.

I implore you to please reconsider this project and abandon any plans to clear the forest. I understand there are many others who are part of this planning process and ask that you please express our concerns while there is still time. As a reasonable compromise, would you consider public discussions before committing to this project? Would you consider modifying the plan to clear only the dead wood to reduce the more combustible fuels but leave the live trees standing? Can we invest in more effective aerial firefighting equipment to reduce the need to prophylactically clear the forest? Are there any other options at all, short of clearing the forest?

I very much look forward to hearing your response.

THE AREA BETWEEN COWBOY AND KDC LANE, 9 MILES SOUTH OF JACKSON, NEEDS AN UPDATED ZONE TO ALLOW CONTRACTOR YARDS AND SIMILAR BUSINESSES TO OPERATE. AT THIS TIME THERE ARE 35+ BUSINESSES OPERATING WITHIN A 1 MILE RADIUS OF THIS PROPERTY, MOST ILLEGALLY ACCORDING TO CURRENT ZONING, THIS PROPERTY COULD BE USED TO IT'S HIGHEST AND BEST USE IF ZONED FOR INDUSTRIAL USE. THIS ZONE WOULD BE FOR CONSTRUCTION RELATED BUSINESSES, NOT BOX/OFFICES AS SEEN IN VALLEY VIEW.
I WOULD LIKE TO LEAVE A COMMENT ABOUT THE FUTURE ZONING FOR OUR PROPERTY SOUTH OF JACKSON. THE PROPERTY LIES BETWEEN COWBOY WAY AND KDC LANE.

WE HAVE HAD NUMEROUS OFFERS TO SELL THIS PROPERTY TO CONSTRUCTION RELATED BUSINESSES. WE HAVE TRIED TO GET THIS ZONE CLARIFIED SO THAT THESE BUSINESSES COULD LEGALLY OPERATE THERE. SO FAR NO LUCK, ALTHOUGH THERE ARE 35+ BUSINESSES IN THE IMMEDIATE AREA SURROUNDING THESE PARCELS. MOST ALL OF THESE BUSINESSES ARE OPERATING OUTSIDE THE LEGAL ZONING IN PLACE NOW. THERE SEEMS TO BE A GREAT NEED IN THIS AREA FOR MORE INDUSTRIAL USES. IF THESE ISSUES ARE NOT ADDRESSED, IT WOULD SEEM THAT THESE BUSINESSES WOULD NECESSARILY BE PUT OUT OF BUSINESS IN THE JACKSON HOLE VALLEY AND WOULD BE FORCED TO RELOCATE OUTSIDE OF THE VALLEY, THEREBY INCREASING ROAD AND FUEL USAGE. THIS DOESN'T SEEM TO BE THE BEST ANSWER.

I APPRECIATE YOU LOOKING AT THIS PROBLEM.

WE OWN 13+ LOTS ON HWY 89 BETWEEN WY DOT AND KDC LANE. WE HAVE HAD THIS PROPERTY FOR SALE FOR SEVERAL YEARS AND THE ONLY OFFERS HAVE BEEN FROM BUSINESSES SUCH AS TRASH COMPANIES, CONSTRUCTION COMPANIES, LANDSCAPING, ETC. IN THIS AREA ALONE THERE ARE 35+ DIFFERENT BUSINESSES, MOST OPERATING OUTSIDE THE CURRENT LAND USE PLAN. MANY OF THEM ARE CONSTRUCTION BUSINESSES. WE WOULD LIKE TO PROVIDE A BUSINESS PARK OF SOME KIND FOR THESE BUSINESSES TO LOCATE LEGALLY. SO FAR WE HAVE NOT BEEN ABLE TO ACCOMPLISH THIS GOAL WITH THE PLANNING DIRECTOR AND WOULD LIKE SOME CLARIFICATION ON THE FUTURE LAND USE IN THIS AREA. IF WE CANNOT CREATE A LEGAL ZONE, THEN ALL OF THE ILLEGAL USES LOCATED THERE NOW WOULD BE TERMINATED AND THESE BUSINESSES WOULD HAVE TO FIND A PLACE OUTSIDE THE VALLEY TO RE-OPEN.

WE FEEL THAT PROPERTY RIGHTS SHOULD ENTER INTO THE EQUATION SOMEWHERE WHEN TALKING ABOUT FUTURE LAND USES. WE FEEL THAT TETON COUNTY HAS DONE A TAKING ON OUR PROPERTY AS WE CANNOT SELL EVEN THOUGH NO ONE HAS OBJECTED TO OUR PLAN EXCEPT THE PLANNING DIRECTOR. WE HAVE HAD MANY CHANCES TO SELL THIS PROPERTY, WHICH HAS ALWAYS BEEN USED IN CONJUNCTION WITH OUR OWN CONSTRUCTION BUSINESS SINCE 1966, BUT CANNOT BECAUSE THE BUYER WILL NOT BE ALLOWED TO BUILD A CONTRACTOR YARD OR SHOP. THIS PROCESS HAS DRAGGED ON FOR SO LONG THAT MANY OF US ARE BEGINNING TO WONDER IF IT WILL EVER END AND WHEN IT DOES IF WE CAN LIVE WITH THE END PRODUCT. WE DON'T SEEM TO HAVE MUCH ABILITY FOR INPUT AND DIRECTING AN OUTCOME EVEN THOUGH OUR FAMILY IS ONE OF THE FOUNDING FAMILIES IN JACKSON. GUESS WE GET TO PAY NOW FOR NOT SLAMMING THE DOOR SHUT IN THE 1940'S.

HERE'S HOPING THAT THIS PROCESS ENDS SOON.
Brendan Schulte, Chair of the U.S. Green Building Council, Wyoming Chapter. Thanks for the opportunity to speak today. I submitted, or our board submitted this policy statement to the Planning Department last year and we stand by it. Encourage you to read it; happy to resubmit it to Staff if I need to. Some things have already been said. Obviously, we want to encourage infill development and direct proposed development into existing nodes of development, and also look at...try and take a look at form-based code options instead of saying you put in code options, so that way we have the bulk and scale development as kind of a guide where more development should go. So that’s something we want to think about. I was very encouraged to hear the conversations and look at the summary yesterday as far as what has been discussed. Unfortunately, I was not able to attend; did have to work. So, that was very encouraging to hear all the smart-growth terms being thrown around, and I was very satisfied to hear that. To quickly go through the points that we laid out in this policy statement from our board last year. It’s mainly focused on greening the current infrastructure of our buildings. That’s our focus. And more, our focus is trying to transform the built environment so it’s more sustainable. And I want to just read one paragraph that we wrote here. The idea of sustainability should encompass more than approved use of development and energy of natural resources. Successful sustainability is also measured by wise and responsible growth and economic development on a scale which will allow the community and its inhabitants to flourish while maintaining their specific identity. Without this attention to positive and integrated community development, the message and purpose of sustainability could become confused, diluted, or equated with other luxury items to be enjoyed and practiced only by a few. That kind of reinforces what someone else said about who they want to live here later. I definitely want this community to stay the same 25 years from now as far as who is living here, who is working here. And then more specifically, some of the recommendations we make—and I’ll close on that—we recommend reduce greenhouse gas emissions and energy consumption associated with development and patterns in transportation. And people have already discussed how we can do that, so I won’t reiterate. Reduce greenhouse gas emissions and energy consumption associated with buildings—that’s the big one. Thirty percent of those things...30 percent of greenhouse gases is attributed to buildings and we’ve really got to stay focused on that. The County and the Town have made great strides so far. I encourage you to take the next step. Encourage water conservation, again reinforcing what someone else said. And then finally increasing recycling composting—no one has really talked about that. It’s kind of one of those underlying issues, is what do we do with all of it, but if we can try and spread that out and reuse a lot of it, that’s going to help as well. The last thing, on a personal note, I want to commend the County and Town again for moving forward on energy conservation and implementing measures to encourage energy conservation, but I would also encourage you to provide more incentives and less penalties to encourage people that make those things happen to do it because they want to do, not because they have to do it. Thank you.
I originally submitted this commentary to Mr Norton regarding plans for Wilson:

I read with great dismay, the county’s proposed comprehensive plan for the future of Wilson. I refer to the front page article in the May 6th edition of the Jackson Hole News and Guide in which numbers between 120 and 690 were sited as the number of proposed new housing units including worker/low income/affordable housing. Based on the many commentaries published in the following two issues of the paper, there are many others with a similar sentiment.

I have no desire whatsoever to trash Wilson by tripling its population density. Contrary to the vision of the commission, my personal vision is to see Wilson, and for that matter, the rest of Teton County left entirely as it is. I fail to understand this driving need to destroy the natural beauty that makes the county so unique by overdeveloping it and paving it over. The commission’s proposals serve to benefit the developers and large land owners who might seek to develop their properties. The proposal does not clearly benefit the average resident, the land or the wildlife. As a tax paying property owner in Wilson, I look to the Commission to protect the township from overdevelopment, not promote it.

In the Wilson plan described in the article referred to above, 7 themes were listed as priorities. The first two points sited were to “promote stewardship of wildlife and natural resources” and “manage growth responsibly”. I might suggest building up to 690 new homes would be in direct conflict with both these goals. Planning for 690 new homes in a town of just over 200 residents is not being responsible and certainly not in the best interest of the residents of Wilson. It seems reasonable at some point to ask the residents of Wilson if this is what they want for their town.

Item number 4 refers to “meeting the communities housing needs”. Here again, I might suggest that the community affected by these decisions be the ones to determine it’s own needs. This should not be a county issue. If the public opinion supports provision of affordable housing for Jackson, then Jackson should provide that housing. It is inappropriate to presume that Wilson should provide the low income housing for Jackson. We have been inundated with the excessive reference to affordable housing in almost every statement issued by the commission. The planning commission and it’s perceived need to provide low income housing is in my opinion, excessive and out of control and does not reflect the vision of the current permanent resident majority of the community.

I do however support the development of services for the community. I agree that projects such as improved transportation services and utilities should be a high priority in planning for the future of Wilson and Teton County. These represent efforts that would directly benefit all residents.

In summary, a global rethinking of the future of Teton County should be considered.... How willing are you to sacrifice those assets that make Teton County unique for the sake of growth.

| 3/8/11 | Gregory Griffith     | Gregory Griffith, West Bank. I want to hit on what I consider, after four years in this process, the two apex topics, as I see it, the two topics that will allow us to derive the greatest of scenic benefit and downstream benefit. I really don’t believe we can achieve our aspirational goals as a community if we don’t look at these long and hard. You can discuss these during your opportunity segment later on. I would suggest that you possibly insert them Strategy 1.1, or possibly Strategy 2.1, if you see fit. What I want to request is that a PRD/TDR task force be formed. There are four questions that we’re going to have to answer at some stage that nobody in this room is sitting here with the answers to. A parallel, a concurrent review by a group of citizens, primarily composed of ranchers, large landowners, Land Trust, Nature Conservancy, Teton Scenic Trust Preserve Board, people with legal and land-use acumen, like Commission Mr. Phibbs, whoever you see fit. We’ve gotten a lot of our best work in this process out of citizens, quite frankly. If you look at STAG, if you look at the Joint Planning Commissioners, if you look at the Build-Out Task Force, Commercial and Employee Generation Task Force and, hopefully, at some stage the Environmental Commission. Citizens do great work and they do it for free and that free up Staff from looking into these questions. The four questions that I would suggest be looked at is, what should the multiplier be and why? Should we consider a strategic, qualitative acquisition component to all land that is strictly acreage based multiplier that we use today? That would be a pertinent question. How can we best leverage effort and funding resources? And finally what I consider, quite frankly—I don’t want to sound pedantic—but the number-one question… I challenge everybody in the room to come up with a singular question that will have a greater systemic benefit across the eight themes than are we going to consider a transfer mechanism? It’s going to require a lot of work. It’s great in concept. It’s very hard to implement, but there are successful examples nationwide. At some stage we’re going to have to look at this. And if you get a running head start, we can benefit from some of that information already being gathered, so we don’t end up with pretty much arbitrary multipliers like three, six, nine—throwing darts at numbers. We can have some systemic benefit and fiscal impact analysis after that. The second issue, and the final issue, is… no one mentioned this yesterday—I consider it an apex issue also—is the incredible overwhelming amount of latent commercial potential we have. It’s going to drive the bus and it’s the… quite frankly, it’s the tail that wags the dog. We’ve got 6.6 million square feet of commercial potential. And in Town, for example, it doesn’t even have the ability to house the low end of that employee generation number in Town, so that ties right back into the TDR transfer mechanism. So, thanks.
Rich Bloom – South Park Neighbors – you already have my comments and I will do my best to follow up tonight’s brief comments with more complete thoughts later.

Last night when I could not sleep – again - due to yesterday’s session. I thought of the serenity prayer: “Grant me the serenity to accept the things I cannot change, courage to change the things I can, and wisdom to know the difference.”

I seem OK in the courage department and am working every day on the wisdom portion – serenity over the last four years though has been very hard to find. I think that is true for you also – as we all care deeply about this community and this special place.

I want to address those things perhaps I can inform you on - change though is done on a personal level and I would not be so grandiose to think I can change your minds or world views.

Address the pattern of growth – Smart Growth goals – I know you will do this.

Define the end-state of our community’s growth – the total amount of growth – this perhaps you are unwilling to do - or simply do not believe needs to be addressed.

Address the types of growth – especially the balance of residential and commercial – and large second home housing units (homes, condos) and housing more likely to be accessed by the workforce (rental and ownership).

Address the cost of growth - Growth, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems.

Again you have some of my comments on this.

I want to emphasize a few items that the joint Planning Commission in the certified Theme 2 – Growth Management got right. The primary topic to not unwind - is addressing in some manner the end-state of growth and what you can do to rearrange the growth that is already in the pipeline. But I want to approach that from a world view that perhaps you may accept or at least be open to.

The community clearly does not want new growth areas – regardless of where they are - and sprawl. I don’t think any of you want both new growth areas and sprawl. You also probably don’t want new growth areas at the expense of reinvestment, revitalization and in-fill in places like east Jackson of north Broadway.

Smart growth is best when it focuses on substitutive growth – that is when it tries to work with what we already have – and we have a lot already entitled. We can’t do that completely, and I know there are also some underlying zoning we need to fix – especially in town. The community has learned and acknowledges though that we have base property rights and current entitlements that will already lead to roughly a doubling of both residential units and commercial square footage. Even with Smart Growth principals applied – that which we can - the off-site implications of an eventual doubling is daunting to our transportation systems and public lands – our community character and quality of life. Much of the community wants you to apply “least growth” solutions to address community goals – meaning seeing what you can do with what we already have - before you add a whole bunch more – especially for the next 10-15 years when we sit on significant empty commercial, vacant rentals and un-utilized significant commercial and resort entitlements.

It is a slippery and dangerous slope to merely try and grow oneself out of growth induced problems whether they are jobs, workforce housing or tax revenue. Be careful – and be modest on growth that is not substituted growth but true new growth.

You also need to talk about the cost of growth. Michael Kinsley of the Rocky Mountain...
Institutive spoke elegantly through a parable on the cost of growth issues. Consider the story of the recently unemployed builder: Undaunted by downsizing, he buys a truck and a load of vegetables to sell beside the highway. After a terrific day, he’s sold out. Back home, he gushes to his wife about his success. “How much did you earn?” she asks. “Eighteen hundred bucks,” he crows. “And how much did you pay for the veggies?” Punching his calculator, he hesitantly announces, “Two thousand.” “Hmm,” she says, “there seems to be a problem.” Dreamily, he says, “Yeah, I need a bigger truck.” Communities develop more sustainably when they seek ways to create jobs, income and savings by doing more with what they already have. In these smart communities, the economy develops, the environment stays healthy, and the town remains a place where its residents want to live... and nobody needs a “bigger truck.”

In summary then – FIRST: please address the cost of growth – start with something tangible like a 15-year capital improvement plan. That should keep you busy.
SECOND: Please talk about redirecting and reshaping existing growth as much as possible – again the community is absolutely clear in their comments - we do not want both new growth centers and sprawl! You don’t either I suspect. There are ways to do that while respecting private property rights.
And THIRD: talk about how to achieve permanent open space – don’t take the easy route and simply downzone large rural areas – permanent open space is much more preferable than temporary zoning.
Thank you.

3/8/2011 Pierson, Scott
Interested Public

Good evening, Mayor and Council, Commissioners. I’m Scott Pierson. I’m a consultant, a land surveyor, business owner and I live on Teton Pass. It looks like you’re off to a good start with your planning process. I heard you talk last night about pragmatic goals and these big vivacious goals are supposed to be within reach, pragmatic. I think the goal of property rights was mentioned last night is important, because it keeps us within a certain pragmatic goal structure. In trying to create something that takes that away, it creates jobs for the lawyers in the community, maybe, but not necessarily everybody else. I like the smart-planning goals, the smart-growth goals that you’re talking about. It’ll help us to direct the inevitable growth that will come to Teton County and the Town of Jackson to where the community wants it. In 1978, we planned the County in three- and six-acre lots and we got three- and six-acre lots. In 1994, we planned for 35-acre lots and we got 35-acre lots. Thirty-five acre lots aren’t too bad, but if we didn’t have the Melody Ranch, the Indian Trails, and the expansion of Wilson that were kind of drawn out of the pre-94 Plan, who knows what would have happened with regards to the other approvals that might have just built up. But we’re still working through that, approvals pre-94 up to now. If we go with nodes in the Town as heart that you talked about, I think that will be a long way to get there. The FLUP separation I think was a good idea at the beginning and I think you can continue that while you talk about those other issues, because as soon as you start threatening, as far as people are concerned in neighborhoods, all you’re going to get is opposition, just like the Planning Commission got. They’ll throw the nodes back out and you’ll get, cram it all into Town, Town will say, don’t give us all the burden, and we’ll be back to where we are today with the failures of what I think happened with the Planning Commissions. I believe you guys were all elected to represent all the people, so let’s try and keep it that way. Thank you.
Larry Jorgenson; I live in Jackson; I’m an attorney. And I attended yesterday in the joint meeting discussion. One thing that continues to hang up in my mind is the issue of transportation which has plagued us ever since growth really took off. And we never seem to move any closer to a solution. I’m particularly disturbed, as a resident of Town, at this time, of the idea that we can begin to solve it with more and more bus traffic and so on in Town. And taking, quite frankly, Mayor, the Visitors Center in that area and making kind of a bus hub there. Because the more we begin to move those bigger vehicles in and out of our streets and the main highways coming into Town, the livability factor of in-town residency begins, in my opinion, to diminish more and more. The traffic that we relied on, at least when I was on the County Commission, always seemed to be in ??. The traffic studies, the parking, and so on. Nothing ever seemed to be truly hitting the nail on the head. And so that problem has continued to exacerbate and become more and more, do we solve that by mass transit of a certain type of buses, because that’s what we relied on. And I have to question that. We have to find an alternative. And we aren’t going to do it with bicycles and pathways and room on the sidewalks for strollers. That’s part of it, but that’s certainly not the solution. In my opinion, we have got to do something to come up with a different form of mass transportation than the large buses, even the smaller ones, by multiplying those in number and continuing to crowd our streets with those vehicles. The other thing with regard to transportation that I’d urge you to look at is the cost of our START system as it relates to the numbers of people that we’re bringing into the Valley for our workforce. And the relative cost of where that money’s going. I could recall our discussions at that time on the Commission as it...primarily on some questions I was raising about where is that money going? If all of those people are coming in on buses to this community to work and taking most of their paychecks and going home and spending it in Idaho, whose pockets are we really enriching here in this County and what are we doing to our quality of life? We have to become a bit more parochial, in my opinion, in addressing the livability factor as influenced by our workforce. Building homes and affordable housing for our workforce here at a rate of 65 percent of the workforce, laudable in concept, may very well be inadequate when compared with the ownership, the market ownership workforce that we have and be so far out of balance that the only thing that we have coming in to supplement our workforce at that time is indeed these other communities who are taking their paychecks home and not spending them here.

Hi, my name’s Roger Strout and I just want to begin by saying yesterday I heard some great discussions and I’m super impressed with really all of you who gave your comments and your ideas and your thoughts on this Plan. I recognize this process is really difficult and timely, and so I’m very impressed with the Planning Office as well. I just wanted to comment on a few notes that I heard the other day. One has to do with the Town of Jackson, a comment on here that I had a number of green dots on it. And the statement was that Jackson would be the only place for residential growth, and to me that doesn’t make any sense. I realize and I want to see growth, future growth happen in Jackson and I think it’s the logical place for the majority of that to happen. I also heard another comment— I’m not sure whether I misunderstood it, or—that the only growth in Jackson should be residential. And I don’t know if that’s I’m just misstating something I misheard or not, but I’ll throw that out there anyway. The other comment I want to make is on Andy Schwartz’s comment, which I thought was really good, in that we do need a reality check, a financial reality check on some of the things that we’re going to be trying to implement, before actually following through with those. And then we talked a little bit about sort of a mechanism for achieving the goals that we’re going to set and that’s all fine and good in my mind, but I’m hopeful that those mechanisms can result in positive incentives for achieving these goals, instead of negative incentives, or penalties and so forth. I prefer to see that on more of the positive side. And then, finally, I have to say that I’m very in favor of the concept of nodes. I know that that at one point was a very big issue for many people, but I see that as, sort of going along with Bill’s comment, of deciding where we want the growth to happen, and I think that improves our potential for achieving efficient mass-transit systems and so forth. So, the word node doesn’t bother me at all. Thank you very much.

The Comp Plan meeting yesterday was very productive, and your efforts to get to that point were visible. I had one brief comment, and Bruce indicated that I should email you before 10:00. My understanding is that this phase is working on the Principles…I do not recall Principle 4.5 – Predictably locate a variety of housing types listed yesterday. Maybe I just did not see, but if not, this seems to be the most important Principle and the piece that came to the surface through the Blue Ribbon Panel efforts. It was stated a little differently...identify areas and zone for workforce housing...and identify locations and zone for multi-family rental units. Basically, the 62% chunk that you called out. I look forward to hearing the discussion this evening.
Rich Bloom, speaking for South Park neighbors. You already have my comments and I’ll do my best to follow up tonight’s brief comments with more complete thoughts. Last night, when I could not sleep again, reviewing yesterday’s session—and I’ve never been to Alcoholics Anonymous—but I thought of a serenity prayer: Grant me the serenity to accept the things I cannot change, the courage to change the things I can, and wisdom to know the difference. I seem okay in the courage department. I’m working every day on the wisdom portion. Serenity over the last four years, though, has been very hard to find. And I think that’s true for you also. And ultimately that’s because we all care deeply about this community and this special place. I want to address those things perhaps I can inform you on. Change, though, is done on a personal level, and I would not be so grandiose to think I can change your minds or your world views. Address the pattern of growth, smart-growth goals. I know you will do this. Define the end state of the community’s growth, the total amount of growth. This perhaps you are unwilling to do or simply do not believe it needs to be addressed. I understand that. Do address the types of growth, especially the balance of residential and commercial, about large second-home housing units, homes and condos, versus housing more likely to be accessed by the local workforce, landowner ownership. Address the cost of growth. Growth regardless of its location and how that would be paid for. The primary topic, though, I open the room is addressing the end state of growth and what you can do to rearrange some of the growth that’s already in the pipeline. But I don’t want to approach that from a world view that perhaps you may accept or at least be open to. And that is the community clearly does not want new growth area, regardless of where they are, and sprawl. That’s what we’re concerned about. I don’t think any of you want both new growth areas and sprawl if you can avoid it. You also probably don’t want new growth areas at the expense of reinvestment, revitalization and infill in places like East Jackson and North Broadway. I think you should give some consideration of that competition. Smart growth is best when it’s focused on substantive growth, especially when you’re starting fresh, when you can move it around or start fresh with a piece of land. That is when it ties with entitlements we already have. The concern the community has, and we’ve learned in this, is we’re already going to roughly doubling of housing units and commercial. And even with smart-growth principles of pride that can be to those, also implications of an eventual doubling is daunting to our transportation systems, our public lands of community character and quality of life. It scares the bejesus out of us. It is a slippery, dangerous slope to merely try to grow oneself out of growth of these problems, whether they are jobs, workforce housing, tax revenue. Be careful and be modest, especially on any new growth that is not substantive. You also need to talk about the cost of growth. Michael Kinsley of the Rocky Mountain Institute spoke eloquently through a parable on the cost of growth issues. Consider the story of a recent unemployed builder, daunted by down size, he buys a truck and a load of vegetables to sell beside the highway. After a terrific day, he sold out. Back home, he gushes to his wife about his success. How much did you earn? Eighteen hundred bucks, he crows. How much did you pay for the veggies? Two thousand. Hmmm, there seems to be a problem. Grimly, he says, yeah, I need a bigger truck. [Laughter] So, in summary, first please address the cost of growth, starting with something tangible like a 15-year capital improvement plan. That should keep you pretty busy for the next five months. Second, please talk about redirecting and reshaping existing growth. We do not want both new growth centers and sprawl. Third, talk about how to achieve permanent open space. Don’t take the easy route and simply down zone large rural areas. Permanent open space is much more preferable than temporary zoning. Thank you.

Good afternoon, my name is Meagan Hill; I’ll keep it short. There’s three main things I want to hit on. I’ve been listening to the comments and I think the first one I’ll start with is a statement of the obvious and that relates to growth. I want to make sure that we recognize the fact that, like it or not, global population is increasing and so, as we move forward in the Plan, regardless of whether we like growth in our backyard, we need to plan for it and we need to address it. With that in mind, I’ll move to my second point, which is the concept of nodes. We do treat that as a four-letter word, we do some of the time for it. We need to acknowledge the fact that we have, you know, existing areas of density—Wilson, the Aspens, the Village, Town and so forth—and so it makes sense to focus our density on those areas to allow ourselves to best manage infrastructure costs for the Town and the County, and best provide transportation, whether it be walk, bike, or bus. My final point is our natural resources, and I would specifically like to encourage you to increase your emphasis in the Plan on water conservation. I think so far we’ve made great progress on energy conservation, energy efficiency with the ten-by-ten plan, the stormwater project, Wilson sewer and so forth. What I think we’re missing at the moment is the opportunity to recognize the correlation between water conservation and energy efficiency in what may be the next ten-by-twenty plan. But the most important thing is the future burden on infrastructure costs that we don’t even know about yet and we haven’t forecast. If we continue to spend our water resources the way we are, it’s going to bite us in the back pocket before we know it, so I would encourage you to increase that. Thank you.
3/8/2011 Cresswell, Anne
Interested Public

Anne Cresswell speaking on behalf of the Jackson Hole Community Housing Trust tonight. My comments today will be related to the principles of Chapter 4, Bruce, Commissioner, as well as about the goal of 65 percent that’s baked into the Chapter 4. Most importantly, we agree a goal of housing 65 percent of our workforce will help advance and strengthen our community’s housing program and ensure that we are, in fact, meeting our community’s housing needs. I personally believe the only reason to embark on or participate in the Comp Plan process is that, at the end of the day, our goal is to improve the programs we collectively provide and better serve the residents of our community. What’s so attractive about a 65 percent goal is that it provides a baseline for us to monitor our success. With a measurable baseline, we have an opportunity to grow our program so that it is more responsive to the ever-changing needs of our community than perhaps we have been able to be in the past. This in turn allows us to ensure we are allocating the appropriate resources, time and money, to the issue at any given time. I really see the goal of 65 percent as a pivot point—and I couldn’t think of any other word to use to describe it—but this pivot point would allow us to ramp up or dial back our program, depending on our ability to successfully hover around that 65 percent number. The key here, and the area where I think we need additional discussion—a blue dot or two, or maybe I just need more information—is that this only works if it is easy and affordable to measure where our workforce lives on a regular basis. And I’ll throw my own measurables out on the table. I think we want to be able to measure this on an annual basis and I think we should ultimately be able to measure for about $110,000 a year. Part and parcel of this measurement conversation is the premise of Chapter 4 that our community housing program should also aim to accomplish four primary goals, goals which also can be measured. But the question is, how easily can we measure this info and how good is the information that we ultimately get? Andy touched on this yesterday. Are we creating unmeasurable goals and expectations? And if we think we are, can we recalibrate them now? Specifically, the information we would need to know, as I understand it, is from every household, to understand if we’re meeting the community’s housing program, we would need to know the age, income, location of employment, length of time in the Valley of everyone in the household, as well as if the residents are second homeowners, seasonal employees, or if Jackson is in fact their primary residence. Again, is it possible for us to get this information from every household? At what cost? And the indicator matrix at the end of the chapter suggests we would have this information annually. If so, are we using estimates? Are the estimates good enough to base important decisions upon? As Principle 4.1 states, housing programs, like the Housing Trust, will need to ensure we meet these goals. This is something our organization can easily do. We can do it affordably and we’re happy to provide this on an annual basis to the electeds. But I don’t think the royal we can meet our community-wide housing goals if we don’t have this information for every household. The other principle I just want to flag for you and touch on is that I would ask you to clarify 4.3 and that incentives...it would be our recommendation that incentives continue to be considered in exchange for permanently restricted workforce housing and not just a word for the creation of unrestricted free-market housing. Thank you.

3/8/2011 Hankey, April
Friends of Pathways

Okay, April Hankey, Assistant Executive Director at Friends of Pathways. I couldn’t sleep last night either, Rich. I think it’s more to do with my dog sleeping on top of me and less to do with yesterday. Thank you all so much for all your thoughtful work. This is a long tedious process and you’re great and thank you and thank you for representing all of us. A couple of things. When you guys talk about transit tonight and traffic as manifestation of growth and your transportation plan, we really hope...and nodes aren’t a bad word, I don’t think...but we really hope that you all can support development patterns that in turn support multi-modal transportation, and that includes biking, walking, ride sharing and mass transit. It also includes looking at complete streets like our Town Council did very recently. And thank you all on Town Council; you guys really set a precedent and showed leadership on that, that’s providing sidewalks for people to walk on, people in wheelchairs, people with babies, people who are running late to work and are trying to catch the bus that stops, you know, on the sidewalk. That includes really enhancing our mass transit system. You know, 65 percent of the people in Teton County drive themselves by themselves, by themselves, themselves by themselves, whatever, to work every day. That’s a big number. And the only way we’re going to get that number down is if we really support our multi-modal transportation system. So I really encourage you all to take a stand with that and again appreciate all of your hard work. And, as always, we hope to be a resource if you ever...if you have questions. So, thank you and good luck.
Good evening, Bill Collins. I live in the Town of Jackson. Don’t be afraid to make plans on where you want to see growth located. And I think the ’94 Plan I think had a major shortcoming in that it did not deal proactively with locating growth. And that did not mean growth did not occur; it just means it occurs in haphazard locations, haphazard forms, with not a lot of thought given to the character of it. And I think I sort of sensed the Planning Commission kind of drifted in that direction through their reviews. It’s very good to identify the resources that should be protected, and that’s crucial. And the ’94 Plan was very good at doing that. But that’s a half a Plan. The other half of the Plan is when growth occurs, where should it occur? What should be its character? At what level? So be proactive in doing that. I think that will entail reinserting the land-use maps, and I also think that entails reinserting the concept of nodes. The ’94 Plan kind of moved us away from the checkerboard zoning of three-acre lots to clustering within the boundaries of somebody’s property. I think it’s very important that this Plan take us to clustering on another level, and that is clustering on a community-wide level. And that’s what’s behind the idea of the land-use maps, I believe, and I think that’s what’s behind the idea of the nodes. But that is really planning proactively for growth, because it will eventually begin to occur again someday and we need to have a Plan that deals with that. And in thinking about that, I also would encourage you to have...be mindful of who we really want to be living here in 25 years. And Jackson Hole and Teton County, the legacy that it’s a full-blown, comprehensive working community. It’s not just a playground for people who can afford it. It’s truly a working community with a resident labor force. And as we think about the next 25 and 50 years, let’s try to maintain that. I think that’s an important characteristic of this community. And that also sets us apart from a lot of other resort towns. Thank you.

Armond Acri with Save Historic Jackson Hole. I’ll start off with what I see as the top issue or opportunity. At least, the biggest challenge is how to manage growth. I think we all pretty much agree on what we want to do. The real issue where we believe we diverge is when we talk about how to achieve those goals. So, with that in mind, a couple of things to think of as recommendations. To manage effectively, it’s important first to set goals. That was done in the ’94 Plan and we’re doing that again now, and that’s good, that’s important. The second step is to measure against those goals. Unfortunately, since the 1994 Plan, we’ve done nothing until recently to go back and do that. So that’s a shortcoming that we need to overcome as we go forward from this point. And the third thing is to adapt, because no matter what, we’re going to make mistakes and the market’s going to change. We all talked about that. So we need to be able to adapt and not dig in our heels and stay on the course that we do. Having said that, I want to talk about when we grow fast, one of the problems with that is that we stop taking those measurements. That’s what happened during the boom period. That’s bad. Your Staff can’t keep you updated on whether you’re even doing things, so I would suggest that is one metric to decide whether growth is too much to be managed properly. If you can stop making measurements, that’s bad. The key is to get the proper goals. What do we really want? Building permits do not necessarily equal local jobs, and big cranes building big steel buildings don’t necessarily equal local jobs. So, it’s really important to focus. If we’re talking about jobs, we can create jobs, but do we want to create jobs for local trades people? So that’s an important thing as you focus on what do we want to actually measure. Big jobs that go to out-of-state companies would submit don’t do as big a benefit to this community. And so that is something to think about when you think about the size of the buildings that you want to do. Do you want to build buildings that are going to put local people to work or out-of-state people? You need to provide a clear vision for the developers. A recent example that was very divisive was Teton Meadows where, as was talked a little bit about yesterday in terms of transportation, we had a development that didn’t have adequate infrastructure to allow for mass transit that we say we want. But we let that developer spend all that time, and the community go down that road arguing it, when it...they had a fatal flaw. Clearly communicate, if that’s going to be important, transportation, put that in there and make the developer see that so that they don’t waste time going down there. Make that a priority for any new development in the County that it have adequate connections for transportation, that the highest and best use is going to be dead end. The developer will make more money and people will say that that’s where they want to live, but that’s where you need to have the backbone to say that what’s best for the community, though, is to have through trans exit. One last thing, there’s a lot of talk about what we can and cannot do. I think it’s important to say that we can, that management of growth is not a bad thing. All we’ve got to do is look at this community and Teton County Idaho and compare ourselves to Teton County Idaho. We’re in way better shape. And that was I think the result of letting them do whatever they wanted to do. So, I close by saying I think focus on what you can do and what you can control. The market will correct things, but it is painful. Your job is to make it less painful. Thank you.
Thank you. My name is Tim O'Donoghue; I’m Executive Director at the Jackson Hole Chamber of Commerce. And I just want to give a prefacing statement. But I think the Comp Plan process is an opportunity and responsibility for our community to establish the bounds of the economy, community, the environmental priorities, and I think that we realize that the key to sustainability is to integrate and balance the triple bottom line—economic, social and environmental priorities. So, two other things I’d like to say that the Comp Plan I think addresses, but I want to be sure our community knows that the Chamber of Commerce is of like mind, and one is that we agree that we should be balancing our economic development with stewardship of wildlife, scenery, and natural resources. The other one is to integrate resident and visitor transit and concentrate development. So, I think what Bob Lenz said yesterday about really focusing on the transit as part of our Comp Plan with deciding how we want to develop in the future, where we concentrate development, is pretty key. Support a more sustainable Teton Village. Teton Village has a certain amount of commercial space allocated to it that may or may not be enough for them to be a sustainable village center. And so I think the process here should address that concern and issue, not only in Teton Village but the business community. Create sustained workforce rental housing. I think there needs to be strong emphasis in the Comp Plan for affordable rental housing, as well as just open free-market rental housing. I think we’re really short when it comes to housing for workforce in the rental area. Strengthen economic diversity in Teton County by supporting the network of small locally owned, operated and supported businesses consistent with community stewardship, social, culture & arts and heritage goals. So, it’s supporting small businesses as strongly as we possibly can and looking at supporting businesses that have a consistency with what our community’s goals are for history & heritage and culture & arts, as well as sustainability. Strengthening the community orientation of the tourism economy. There’s a concern in the business community, as well I believe elsewhere, that our development patterns are showing businesses coming in that are requiring higher and higher income levels to afford to stay here and visit here. I think the core that’s always been—and it’s weakening over time—in our economy is the families, especially in the summertime. So, if we’re going to be looking at development, should we be...the question mark for you all is should the Comp Plan be addressing the affordability for visitors here? Are we looking at development that may or may not help families continue to come here? So, if will strengthen the community orientation or family orientation of the tourism economy. And then, lastly, orient economic development towards community self-reliance and sustainability. The Comp Plan should support the formation and growth of businesses that support our goals of self-reliance and sustainability. Such businesses be consistent with our community’s orientation towards balancing economic, social and environmental interests and concerns in creating jobs, perhaps like green jobs for our community. And our community’s tourism economy be strengthened by the attraction of discriminating travelers just like Jackson Hole as their destination of choice because of our community’s economic development and orientation, progress towards sustainability, and protection and promotion of makes us unique and distinct—our history, our heritage, our cultural arts, and our environment.
Commissioners, Council, Mayor Barron, my name is Nancy Taylor, co-Chair of the Jackson Hole Conservation Alliance and I’m speaking for the Alliance this evening. Given your three-minute cap, we can’t talk about every policy and principle that needs additional work, but for the last four years, you have our written and verbal comments about these policies, in addition to what we submitted yesterday. We’ll continue to summarize the major issues and inconsistencies and continue to provide specific recommendations on each draft. The pivotal decision that has been made to separate the FLUP, the future land-use planning maps from the themes and policies, I’m afraid, in the end, will make a whole lot more work for you, as elected officials, and I don’t think you’re looking for more work given how rapidly you want this process to go, your timeline. We have set objectives of predictability, measurability and accountability and those objectives cannot be met without the inclusion of the future land-use planning maps. So, it’s a disconnect and they need to come together. You, our elected officials, are the guardians of this pristine place. You’re the keepers of the crown jewels in this unique ecosystem and all that it encompasses. I was involved in the first comp planning efforts in Teton County 30 years ago and I’ve watched the Valley change in a piecemeal fashion. The crown jewels need to be guarded, not sold off in little pieces. As guardians of this unique land, it’s incumbent on you to make this Comp Plan strong and enforce it with your clear vision. That’s what we’re asking for. Chief Seattle states: treat the earth well—it was not given to you by your parents, it was loaned to you by your children. We do not inherit the earth from our ancestors; we borrow it from our children. We as a community are not taking this message to heart. We’re not treating this earth well when we approved five golf courses in this tiny community, when we approve more commercial development while commercial space is sitting vacant, and we don’t have the resources to monitor the impact of that which we approve. This Plan needs teeth and you, as our elected officials, need to ensure that it’s strong and then you need to enforce it with every decision you make. Why not make history as a group of elected officials that took the long view, that recognized with every ill-conceived development, we are borrowing from our children. This Valley is a finite place and you have a responsibility to protect it with a strong Plan, clear and enforceable LDRs, and with vision that carries this community into a vibrant and sustainable future. The economy of Jackson will tank as soon as the wildlife that depend on open migration corridors are gone. The animals can’t attend your meetings and speak about wetlands that have been filled in, that used to be their winter habitat. They have no representation on your Natural Resources Technical Advisory Board. This is an invitation to you from the Jackson Hole Conservation Alliance to step forward with courage and a strong united voice to protect this fragile and unique place for perpetuity. If you do not act now, no one will and it will be too late. Thank you for listening and for giving the public an opportunity to speak.

Hi, Kristine O’Brien. I was one of those people listening online yesterday and I’d like to thank everyone for the hard work they’re putting into the Plan. I just want to say that Teton County is a small part of a global economy and we cannot change that and we cannot affect what goes on in the rest of the world; however, we can, to a significant extent, determine the shape of our community, if we have a strong and sound Comprehensive Plan, one that acknowledges the cost of growth and allocates resources within our means and according to community priorities and goals. We need a clear map of what we want our community to look like with clear and predictable land-use regulations along with incentives for permanent conservation easements. Teton County’s comparative advantage is its natural capital—its wildlife, open spaces and scenic vistas. Moreover, I agree with Commissioner Ellis that our landscape has an intrinsic value and our stewardship responsibility for it transcends our personal and economic interests. Cost of growth must not only consider fiscal costs—for roads, crime prevention and other public amenities—but also the degradation of its natural capital for use by current and future generations. For example, irreversible destruction of wildlife habitat and scenic vistas. A Plan that promotes economic activity, such as eco-tourism that is renting this capital, rather than selling it all out in an attempt to create another real estate boom will be sustainable and affordable. It will also distribute wealth across a wider range of individuals, in addition to making the Jackson experience accessible to more people both now and in the future. And I appreciate that some of you expressed concerns about the cost of growth yesterday. The Plan can only be a Plan if it is feasible and sustainable. I’m counting on you to provide leadership and ensuring the Plan is going to be moving forward, that we are not kicking the can down the road for future generations to pay in the form of unsustainable debt, as we are seeing in communities across America, or in running down the natural capital that sustains our economy for good times and bad, such as burst housing bubbles, and the stewardship of which is the number-one priority of this community. Thank you.

<td>3/8/2011</td>
<td>Levy, Robbin</td>
<td>Hi, Robin Levy; I’m an attorney in Town. I was encouraged by the conversation yesterday. I think you guys are doing a great job and I thank you for your service. I thought it was very appropriate that the Commissioner started with a conversation about a fundamental truth that we’re dealing with, which is private property rights. We can’t waive a magic wand and make it go away resulting no growth, so we need to deal with that. And I think that that pushes us to smart growth and smart planning, which is obviously what you’re all about today. But I think smart planning...I heard a lot of conversation about smart planning among the group and it was very encouraging. I think, Greg, you might have brought up nodes and getting the nodes back in the conversation, clustered development. I think density transfers and moving development into the nodes is going to be challenging. I think the thing that I push today is to encourage you to keep that toolbox as big as you can in this Plan and don’t inadvertently tie your arms together, because I think moving density that already exists that we can’t take a magic wand and wipe out into the nodes and into clusters is smart development that’s going to result in all the things we care about, like mass transportation, less cars on the road, open space, protection of our natural resources, and all those things that are important to everyone. So, I’m just giving you support for the hard work you need to do and asking that you, please, carry on and make those tough decisions for us. Thank you.</td>

<tr>
<td>3/8/2011</td>
<td>Jensen, Gail</td>
<td>Hi, Gail Jensen. I’ve written a lot of...I’ve attended a lot of Planning Commission meetings and I’ve written a lot about what my feeling are, but I’m trying to keep it up to the higher level this evening. And where I think a lot of importance is is in predictability. And I guess I go contrary to just the last comments, in that I think we do need to map. I think everybody in this community, that’s what they have asked for, that’s what they’ve wanted. They wanted predictability. They want to see the maps. I’m not so sure that they’ll oppose. You need to locate the density where you want to put it and let’s put it out there. Let’s not surprise people. Let’s not pull the rug out from under their feet after you’ve already approved a Comp Plan and you’ve thrown the maps out there. Let’s talk about it; let’s get it out there right now. Let’s figure, let’s talk to the predictability and what smart growth means. And we can plan for it. Also, the cost of growth is really important to me. I see, since I moved here in 1980, I have seen a very...a lot of lack of planning when it comes to infrastructure—well, we can’t certainly ask this developer to do it because we didn’t ask the last developer to do it. We really need to plan for infrastructure. I feel we’re at a critical point right now. We can double in size here with what’s entitled and we really don’t have a plan for our infrastructure, improvements for our highways. We really need to get that under control. We need to plan, truly plan. And I think that that’s critical. Who’s going to pay for it? With everything that’s in the current draft, I’m not going to be able to afford to live here, if we entitle everything, the whole wish list, in every one of those themes. If you look at the end point of those strategies and how we get there, and it’s all about, well, we’ll incentivize; well, the public will fund it. You know, it just doesn’t add up. So I think we need to take a hard look at that. And I’m all for any energy conservation, any smart building, any kind of ways that we can protect the environment and to save on energy. Thank you.</td>
</tr>
<tr>
<td>3/7/2011</td>
<td>O’Brien, Kristine</td>
<td>It is imperative that we have a sound comprehensive plan, one that acknowledges costs of growth and allocates resources within our means and according to community priorities and goals. We need a clear map of what we want our community to look like with clear and predictable land use regulations, along with incentives for permanent conservation easements. Teton County’s comparative advantage is its natural capital; its wildlife, open spaces and scenic vistas. Costs of growth must not only consider fiscal costs, but also the degradation of this capital for use by current and future generations. A Plan that promotes economic activity such as ecotourism, that is, renting this capital rather than selling it all out in an attempt to create another real estate boom, will be sustainable and affordable. It will also distribute wealth across a wider range of individuals in addition to making the ‘Jackson Experience” accessible to more people both now and in the future. I am concerned that the Comprehensive Plan, as it stands, takes no account of the cost of growth, neither fiscal (taxes for roads, schools, crime prevention and other public amenities) nor environmental (irreversible destruction of wildlife habitat and scenic vistas, pollution, etc). How can the plan be a plan if it does not consider what is feasible and sustainable? The Plan must be one we can afford and not a mechanism for short-term gain, kicking the can down the road for future generations to pay in the form of unsustainable debt (as we are seeing in communities across America) or in running down the natural capital that sustains our economy through good times and bad (such as burst housing bubbles) and the stewardship of which is the number one priority of this community.</td>

Since I've been asked, here are some thoughts about housing needs. I am single, without children, and not likely to be marrying (again), but I have a dog. There are many individuals like me in the workforce in Jackson, and the current affordable housing options are biased against people like me. The options I've been offered have been extremely expensive (over $250,000), which I cannot afford on a single income, they have only one bedroom (which, having been in the workforce since 1987, is pretty pitiful -- I don't think it's unreasonable to be able to have a second bedroom to use as an office/spare bedroom for guests), and they generally lack access to even a small yard for my dog. Side-by-side duplexes are preferable to apartment-style situations for those of us who work. I often cannot return home during the day to let my dog out, and need a small yard where I can set up a dog run. Oh, and the dog-verbotten Golf and Tennis housing (TCHA) is positively out of my consideration. Please consider the needs of single people, and don't assume that we all want roommates. If 2-bedroom, side-by-side accommodations-- both for ownership and for rent-- at a reasonable cost were available, many people would be happier staying in Jackson. A reasonable cost for purchase would be about $150,000, and reasonable rent would be about $450-$500 per month. P.S.-- I neglected to say it, but I work for the Bridger-Teton National Forest, am currently renting government housing, and am on the verge of being told that I can no longer stay in government housing. I am active in volunteer activities in town and after almost six years here was finally offered a home through the Housing Trust-- but I cannot afford it, even though I have been a federal employee since 1987. It is over $260,000. The availability of housing will determine whether I stay in Jackson or not, much to my regret. I consider Jackson my home, but I cannot drain my bank accounts to live here.
Given the Conservation Alliance’s work to ensure responsible land stewardship in Jackson Hole, we are writing with regard to the staff report that was released the afternoon of March 3rd for the March 7th JIM meeting. Given the short turnaround made available for public input, combined with your regularly scheduled meetings, we recognize you may not have time to review a lengthy correspondence prior to the comp plan hearing scheduled for Monday afternoon, March 7th. With that in mind, we respectfully request that you consider the following brief comments.

The staff report that was released on March 3rd provides an example of why it is beneficial to allow some opportunity for limited verbal input at the beginning of each hearing on the comp plan (at a minimum). While we appreciate the commitment to provide a summary of written comments at the beginning of each hearing, in cases where there is such an abbreviated timeframe between the release of information and a scheduled meeting, the approach does not seem sufficient. Since the release of the staff report, citizens were essentially given one business day to evaluate what is being proposed, formulate thoughts and recommendations, and submit them in written form. This type of timeline is not conducive to enabling adequate citizen input for issues that are time-sensitive. Of key significance, these are not issues that the public has had the opportunity to comment on in the past.

Specifically, the staff report that was released on March 3rd introduced a number of new ideas and fundamental issues that the public should be given ample time to evaluate and subsequently provide input on. Some examples, which are not minor, include:

- Quantitative Analysis of Public Comment
  The quantification of public comment in the staff report raised some questions. From a practical standpoint (i.e. the time required to enter the data), we can appreciate why data analysis would be limited to April 2009 and beyond. However, it is essential to understand that the database leaves out a critical element of public comment – more than 1.5 years of the early public comment, which was during the main public outreach component of the overall process. In addition to the surveys outlined in appendix D, individuals were energetic and engaged in a number of different meetings and open houses commenting on broad values, all of which is highly relevant to your broad level discussions. In short, we are surprised to see the approach to represent the data in quantitative statistics when the dataset is incomplete. It also has the potential to send the message that recent comments are somehow more relevant. If the database is “to serve as a valuable tool for informed decision-making” as appendix A states, it is important to recognize it as only a partial dataset rather than an entirely complete picture of all public comment to date. Overall, the graphs in the staff report are confusing. How were the percentages figured? For instance, the sum of the percentages is 110 percent.

- Newly Established Definition of Community Character as “Value #2” of the community
  It was very surprising to see a newly established top community value that utilizes the term “community character,” a term that already has a strong significance in local planning. Specifically, our current land development regulations are based on a community character framework. (Our existing Comp Plan states “Jackson and Teton County hereby formulate a land development regulatory system which protects the health, safety, and general welfare of the citizens of Teton County by responding to the components of community character.”)

The April 2009 draft took a significant step away from using community character as a framework for planning. Also, based on the “opportunities” outlined in the recent staff report under the value of “community character,” there appears to be a different focus than what is currently recognized in our existing plan as components of community character. In short, to be a fundamental, key value of the community, there needs to be consensus on what the term means and whether the “community character approach,” as an implementation strategy, will still be used as it is in our existing plan.

We believe the approach can be a good planning tool, particularly in the case that objectives for implementing a desired community character are clear. It’s important to note that some public comments regarding “community character” likely referred to principles in other sections of the draft, particularly themes one and
two, which focused on growth management and natural resources. (These themes’ principles are not mentioned in the staff report under “community character.”) Following is an excerpt from the community character chapter of our existing plan, which describes community character more from a land planning approach, which we believe should also be maintained:

“A fundamental objective of this Comprehensive Plan is to preserve rural character and enhance it where possible; to allow development, but to make sure that new development is consistent with rural character. Primarily, rural character is defined by large amounts of open space in relationship to the floor area and volume of structures. Therefore, preserving a rural character requires that very large amounts of open space be set aside as development occurs. Open space also results in the preservation of natural resources, wildlife habitat, and scenic vistas, if the regulations are so structured to protect these attributes.”

Overall, we appreciate that many of the issues identified in the staff report are relevant for “community character,” but we believe that the list should be more comprehensive, particularly given the historical context of the term in local planning and the potential for it to be a top priority in the new plan. It would be good if some explanation could be provided regarding the criteria, or rationale, for grouping the various comment topics under “community character” in the staff report. This will help ensure everyone is on the same page before identifying the community’s top values.

- Proposed agenda item to discuss potential new format of the plan

The agenda for March 8 includes a “format and outline brainstorm” to discuss structure choices for the plan - three values, one vision, or eight themes. We would like additional clarification on this item. It is surprising to discuss structural changes to the plan that are this fundamental given where our community is in the process – approximately four years into the rewrite. The community, including volunteer planning commissioners, spent considerable time with the plan framed around “eight themes.” If you choose to reformat the entire plan, it is unrealistic, and inappropriate, to say our community is in the “FINAL” phase of review and to give the public such a limited timeframe at the end of your discussions to review a new draft. More valuable to the process, in terms of discussing “the format of the plan,” would be to dedicate considerable time evaluating the decision to separate the “Themes and Policies” from the “character districts.” The Alliance respectfully disagrees with the tentative decision to adopt the “Themes and Policies”-without the Future Land Use Plan/Character Districts - as the new plan. This is specifically in response to the way the new plan was written, which is very different than our existing plan that provides considerably more direction within its narrative on specific geographic areas throughout the town and county.

To date, no explanation has been provided as to why our community would benefit from not reviewing the plan components in their entirety prior to adoption. As we have stated before, the Conservation Alliance supports the joint planning commissions’ unanimous recommendation to adopt the plan as a complete unit and to not simply incorporate the maps as piecemeal addendums.

Conclusion

The Conservation Alliance will submit comments shortly regarding specific recommendations on discussion topics. (Attached is a memo that we submitted at the end of the planning commission review that summarizes what we believe are key inconsistencies and contradictions with the draft plan. Most of these concerns still hold.)

At this point, we respectfully request that some of the items in the staff report be further clarified before you finalize decisions on common values in the March 7 meeting. Thank you for considering our comments.
Hi everyone,

Don't know if any of you have seen these websites. It is a clearing house of ideas and policies that embraces localism with emphasis on individual and community responsibility to the environment which in turn rewards that community with a more enduring stable economy and healthier, richer (spiritually and monetarily) households and individuals. I think the only people that would be against what I stated above are CEOs of natural gas, coal and oil companies that need us to be dependent on their products. Hope everybody is enjoying the snow! :) Kathy

About the New Rules Project
A program of the Institute for Local Self-Reliance, the New Rules Project started back in 1998 and continues to bring fresh new policy solutions to communities and states to ensure that they are "designing rules as if community matters".

• It Takes a City – How better rules and regulations promote local self-reliance- this excellent article by David Morris published in In Character magazine (February 2007) provides a fantastic overview of the reasons behind our New Rules Project.

• Communities: Building Authority, Responsibility, and Capacity
A good overview article on the concept of local self reliance by David Morris, published in State of the Union, 1994.

The New Rules Projects features a number of policy areas and several key programs and initiatives, including: The Hometown Advantage, Telecommunications as Commons Initiative, Biofuels and Plug-in Hybrid Electric Vehicles, and Climate Neutral Bonding. Meet our staff.

Why New Rules?
Because the old ones don't work any longer. They undermine local economies, subvert democracy, weaken our sense of community, and ignore the costs of our decisions on the next generation.

The Institute for Local Self-Reliance (ILSR) proposes a set of new rules that builds community by supporting humanly scaled politics and economics. The rules call for:

• Decisions made by those who will feel the impact of those decisions.

2
• Communities accepting responsibility for the welfare of their members and for the next generation.

• Households and communities possessing or owning sufficient productive capacity to generate real wealth.

These are the principles of "new localism." They call upon us to begin viewing our communities and our regions not only as places of residence, recreation and retail but as places that nurture active and informed citizens with the skills and productive capacity to generate real wealth and the authority to govern their own lives.

All human societies are governed by rules. We make the rules and the rules make us. Thus, the heart of this web site is a growing storehouse of community and local economy-building rules - laws, regulations, and ordinances - because these are the concrete expression of our values. They channel entrepreneurial energy and investment capital and scientific genius. The New Rules Project identifies rules that honor a sense of place and prize rootedness, continuity and stability as well as innovation and enterprise.

Click on any of the sectors listed and you will be taken to a web page that contains a list of categories of policy tools appropriate for that sector.

Questions and Answers
Isn't it unrealistic to expect communities to be self-sufficient?
Yes, it is. Localism does not mean self-sufficiency. Nations are not self-sufficient, and neither are communities. But nations that are self-conscious and self-determining are stronger because of it. The same holds true for communities. But aren't there economies of scale?
Yes, but empirical evidence has shown us that in many important areas—education, health, manufacturing, farming, the generation of power, for instance—it is not globalization and bigness, but localism and smallness that are more cost-effective, more profitable, more environmentally benign, more democratic, more enduring. The only thing that smallness lacks is power, the power to make the rules.

Doesn’t localism pose a threat to those who are not in the majority? Doesn’t it allow those with means, or power, to secede from responsibility for the whole, leaving the powerless behind?

If localism were absolute, yes, it would do that. But it is not. Localism is an approach that allows us to sort out which roles are appropriate for which levels of government. Guarantees of basic rights must come from the federal level. Higher levels of government appropriately should set floors—e.g., a minimum wage or a minimum level of environmental compliance or minimum guarantees of political rights— but not ceilings. They should not pre-empt lower levels of government from exceeding those minimums (as international trade agreements do, for instance.) Why would localism guarantee efficient, environmentally benign development?

It doesn’t. There are no guarantees in a true democracy, because power rests with the citizens. But it does create the possibility. And without localism, we are guaranteed the opposite: rootless corporations with no allegiance to place, other than to the place with the lowest wages and least environmental restrictions; long lines of transportation, which are inherently polluting; and out-of-scale development that wrecks neighborhoods and destroys habitat. By its very nature, localism would shorten transportation lines, encourage rooted businesses, demand an active citizenry. Localism is a development concept that would enable humanly-scaled, environmentally healthy, politically active, economically robust communities.

Isn’t localism simply nostalgia for a simpler time?

No. Just as globalism is mistaken for progress, localism is often confused with a desire to reverse technology, or turn back the clock. There is nothing inherently progressive about globalization, and there is nothing inherently backwards-looking about localism. Localism has to do with (1) where decisions are made, and (2) the principles guiding those decisions. Those are issues that will and should remain central to society throughout time.

Is localism anti-technology?

The new localism relies on some of the most sophisticated technologies (e.g. integrated pest management, flexible manufacturing, solar cells.) At the end of the 19th century, as we switched from wood to steel, from water wheels to fossil fueled central power plants, and from craft shops to mass production, technology seemed to demand larger scale production systems and economies. At the end of the 20th century, as we switch from minerals to vegetables, from fossil fuels to solar energy, and from mass production to batch production, technological progress encourages decentralized, localized economies

The over-riding goal of the Comprehensive Plan should be to prepare for an inevitable return of intense development pressure. It may not look like it now, but demand will return, probably powerfully. Poor economic conditions in the United States belie a strong global expansion, and the worldwide population with the income for travel, or the wealth to afford high-end resort property, is growing much faster than the overall economy. The experience of the past boom should have convinced you of the challenges that lie ahead: Protecting the environment and wildlife, managing access to affordable housing, and maintaining a balanced community will be extremely difficult. You must prepare for that now, with a Plan that presents a clear, unambiguous vision and lays down meaningful ground-rules to maintain community goals. Anything less would be to ignore a critical opportunity.

| 3/4/2011 | Uhl, Richard          | Thank you for the time and effort that has been expended on working through the Comprehensive Plan. It is a daunting (and probably feels thankless) task, but very necessary to provide a viable economic future to our community and county. Here are a couple of thoughts/ideas that I would like to share with you, as you consider moving forward with an updated plan:  
1) Homeownership has and will be an important factor in the survival of a sustainable workforce, citizens that are socially and economically involved in the local community, and preservation of a long-term, multi-generational community base.  
2) We need to be careful that we don't shut-down development where and when it is appropriate, by prolonging the approval process and charging fees and requirements for affordable housing mitigation that discourages developers from pursuing. In the long-term, we lose potential tax income, jobs, new housing opportunities, families, stable critical service providers, etc. by being too short-sighted.  
3) Zoning needs to be allowed for multi-family rentals. Not everyone will own a home during their tenure in Jackson. I don’t see that it is realistic to provide homeownership to everyone either. Many of these individuals, families, workers, adventure seekers, etc. are here for the short-term (2 to 5 years) and do not need homeownership, but could be housed in apartments. As well, homeownership is not a right; it’s a privilege and may become more difficult to obtain in the future.  
4) If possible, we should have a goal of housing at least 65% of our workforce. This does not mean they all own a home though. It will be a combination of deed restricted housing, market housing, and rentals.  
5) We have three affordable housing entities in Teton County, the Teton County Housing Authority, Habitat for Humanity, and Jackson Hole Community Housing Trust. These entities with their expert staffs, boards, and abilities to provide housing should be utilized to their full extent by the Comprehensive Plan to promote and provide solutions for housing in the local area. |
| 3/4/2011 | Harrington, Kathy      | Hi Charlotte, Thank you for sending me this, but at this point after spending the past 3 years trying to partake I feel the planning staff Mr. Doughtery in particular are deaf to the community, and the top priorities that you mention in line one of your note are totally disregarded. In dealing with the MESS we have in front of us presently in Wilson all our comments of the past Comp Plan Meetings have fallen on very Deaf ears. When Andy Swartz asked Jamie Mackay if postponing a decision on his mess in Wilson would cause him financial issues, I realized have been bought off. We have ended up with "A Node" we have ended up with a project that we don't need or want. I presented the commissioners with over 300 signatures of people that don't want what we are about to end up with in the heart of Wilson. I believe it quickly became Andy's fire starter. 6 months ago Susan Johnson told me "We love this project in Wilson" even worse, the planning staff has now become the developer, working diligently with the applicant to assure it's passage. How is it that the Senior Planner has the power to determine the use of wetlands is necessary. Frustrated, saddened, and sickened. I doubt you can find a citizen of Wilson, let alone Teton County that doesn't echo my feelings. |
| 3/3/2011 | Anderson, Kristie     | As a five year valley resident and future teacher in TCSD I'd like to have my opinion heard on the matter of Workforce Housing. I believe having decent, accessible and affordable housing in Jackson is (not only the right thing to do morally and ethically but) what will keep our community thriving with diversity, education, art, music and kind family oriented people who want to stay here and get invested in building a future here. Please include an array of WH in the Comprehensive Plan that will help people like myself, a hard working single mom, find a place to live that will support my efforts to be a secure, stable, involved and positive community member! |
While I have many preferences for the future of my community, I find it distasteful and presumptive to suggest that my preferences should have any bearing on what my neighbors do with or on their private property. I am writing to ask that local governments and their agents decline to continue with social planning and instead allow creative, diverse and free people to build their lives as they each choose. Despite the grandiose manner with which I often enjoy presenting myself, I lack the actual arrogance to think that I or any of my friends or associates could possible out-plan the natural processes of the free marketplace. The individual choices made by thousands will yield a far better tomorrow than the noisy intellectual dictates of dozens or hundreds that “get involved” as petty tyrants attempting to rule their fellow’s lives. Oops, I just got involved by sharing this letter of encouragement. 😊

I love ya’ll, and ask you again, please don’t plan our futures; plan instead (if you must plan) to meet our infrastructure and emergency safety needs as we continue to blossom in our own inspired ways!
Since we were given the opportunity to give feedback, I’d like to just let you know what my husband and I are thinking. I’m really thankful for everyone who works so hard to make housing affordable in our area! We think you guys do a great job! We have lived in Jackson over the past 11-12 years (away for 5 of those years for grad school), and do not currently own a home yet. It seems like it is difficult for a young family to live in Jackson with enough space to raise that family. We have 3 in our family and 1 on the way. With a growing family and my husband working out of our home, 3 bedrooms seems to be an adequate sized home (or 2 bedrooms and an office, something like that), but seems to be pretty unaffordable. I’m sure none of this is new information to you! And we understand, it’s not our right to own a home, especially in such an incredible area. However, we’ll share our situation so you have some more information to help you lead our community in this area.

One of the things that has made owning a home difficult is the limited amount of Category 1, 3 or more bedroom houses. Since the restrictions changed, and it became impossible to purchase a home outside of the financial category one falls in, our family is limited to purchasing a Category 1 home. We understand completely the reasons this changed and know that is fair. However, since there are only a few Category 1, 3 bedrooms in the valley (particularly on the westbank), owning an affordable home isn’t much of an option for us. As I said before, our family size is growing and my husband works out of our home. The Category 1, 2 bedrooms aren’t big enough to decide to spend that type of money on in our situation.

In addition, we would qualify financially (in Teton County) for a Habitat for Humanity home. However, given the stipulations required to own one of those homes, it would be almost impossible for us to own one of those as well. One of the stipulations makes families who have the “potential” to earn more money than they are currently making, lower priority to be chosen for one of these homes than a family that does not have that potential (i.e., a single mom with 5 children, etc). My husband works full time in a job that focuses on serving and helping the people in our community. I stay at home with our daughter and work part time from the home, as well as help with my husband’s job. Full time for my husband looks like 70-75 hours a week, because we choose to give more of our time than a typical 40 hour work week to serving people in our community. He could make more money if he only worked 40 hours doing this and then got a second job for the other 30-40, but we feel it benefits our community more for us to give a lot of our time away for “free.” With that stipulation in place and our decision to pour into helping people in the community with more of our time, we would be lower priority for a Habitat for Humanity home, although we barely make ends meet every month.

A market home is not really an option for us either. The prices are lower than they’ve been in a long time, but not low enough for us to be able to afford a mortgage, unless we purchased a 2 bedroom, 750 square foot home for $200,000. Again, not conducive to a growing family or to working out of the home.

We’ve even found it to be difficult to rent a place that’s big enough for our family. With very high mortgages, owners have had to charge a lot more for their rentals. It’s easy enough to fit 3-4 skis bums in a 3 bedroom home and charge $1850 or $2000 a month, but for a working family in Jackson to pay that amount to rent a 3 bedroom place is out of the question. At least for us (and I think many families in similar situations) it seems one of the needs of the hour is affordable housing options for families with more than 1 child.

In no way, do I want this to be taken as a complaint. Again, we are so thankful for the hard work people do in our community to make housing affordable! As well, we understand the choices we make impact in some ways our ability to be able to own a home. However, as you are continuing to think about ways to serve the workforce in our community, we thought it would be helpful to share our specific situation.
Members of Town Council and Teton County Commissioners,
-As you begin your review, we hope you will keep asking if the document is clear, concise, and easy to understand. The Plan must meet this criteria to be effective.
-Town and County compete for limited resources. (tourists and tax dollars) We need to acknowledge that fact and discuss how we can make that competition constructive, not destructive. (improving services is constructive, building bigger and bigger high end lodging is destructive) Our Comp Plan may be joint, but the needs of the Town and County are not always the same. We can try to fool ourselves but the reality remains.
-To be effective the Comp Plan must examine all the impacts. A Comprehensive Plan must be just that, comprehensive. It must include a visual representation of the vision for different locations. (Character Districts or FLUPs) It must also include a capital plan to address the needs to accommodate growth that is anticipated during the Plan’s life. We recognize the capital plan will need to be updated more frequently than the Comp Plan, but that does not mean it should be adopted later. Adopting the Comp Plan piece meal will undermine its effectiveness because it is not comprehensive.
-We know you have heard the community say that protecting wildlife is our highest priority. Do not fall for the mistaken idea that some areas have no value for wildlife. As an example, permeability of development is an important concept to maintain our wildlife populations. Development patterns should allow safe travel corridors and road crossings. This concept is just as applicable to Town Development or other areas of dense development as it is in Rural Areas.

| 3/3/2011 | Stone, Cindy Hill | The Comprehensive Plan???? Can you believe they are still working on this??????? It’s been over four years and over $400,000 (No s—t). Who pressured me to get on this bus????? The most recent stab is a facilitator, $78,000 to conduct the meetings. He seems like a nice enough guy. He laid out the rules, “No name calling, stay on subject, when the bell rings everyone to their corners, don’t look the public in the eye.” Two bouncers from the Cowboy could have done the job for $700 a piece but who am I to know the workings of politics? They want this to go fast. It really doesn’t matter what the plan says at this point, let’s just git –er-done. Here is my take; 

“***SHOW ME THE MAP***

There will be no FLUP (future land use plan) until after the comprehensive plan is finished.

“HELLO”

I thought the future land use plan basically was the comprehensive plan. One is a map; the other is a wish list. You can’t have one without the other. There are no more “NODES”. Remember, nodes are new growth centers or neighborhoods. They are now “CHARACTER DISTRICTS”.

Moran – Cowboys
Kelly –nomads with a view (transcendental meditation)
Golf and Tennis – corporate funding
2

Town – broken heart
Teton Village – corporate heart
Wilson – new money
South Park – every man
Hoback and Hog Island – outlaws (we’ll finish with them after South Park)
Alta – farmers (they won’t be a problem)
The electeds don’t want to hear what I have to say or what you have to say because, face it, they have heard it before.
I’m a mom I know the reality of “How many times do I have to say it?”
“What did you not understand about what I said the first time?”
Did we say WILDLIFE and OPEN SPACE first? Is that being incorporated into the plan?
Where? |
Good afternoon!
I would like to share my concern for workforce housing in Teton County. I grew up in Jackson, have experienced the challenge of getting into our own home and work with folks every day who are trying to obtain homeownership in our community.

We are starting to see first time homebuyers jumping into the real estate market and many into the deed restricted product. A few have been able to move up from deed restricted into market homes. However, it remains a huge struggle. It is especially challenging for a family. I have attached a worksheet that shows estimated payments on a home priced at $500,000. The annual income required to service the loan payment would be $92,300 assuming that the purchasers do not have any other monthly debt (a highly unlikely scenario). The median income for Teton County is $92,500. This is the link to that documentation. http://www.huduser.org/portal/datasets/il/il2010/2010summary.odn

There are a number social benefits for homeownership. A couple of those include enhancement to children's learning, improved neighborhoods, and higher volunteer activity. I've included a couple links for that research.

http://researchnews.osu.edu/archive/chldhome.htm
http://www.jchs.harvard.edu/publications/homeownership/liho01-12.pdf (conclusion page 22 sums it up nicely)

Not everyone is desirous or merits homeownership but should have access reasonable rental product. Thus the need for the comp plan to consider proper zoning for multi-family housing.

Thank you for your consideration and the time you devote to our community. {worksheet outlining typical closing costs attached--available hard copy in the Teton County Planning office}

A ridiculous aspect of the current situation/regulations is the limitation of certain employment-based housing to US citizens only. The county has employed me, a legal resident alien, for the past 11 years, yet it does not see fit to allow me to purchase employment-based housing at, for example, 810 West. It's employment-based, I'm employed by one of the entities controlling the housing, yet I am not allowed to take advantage of that housing.

It would be good if the current round of planning addressed this discrepancy.

It would be nice to have employment based housing that is really a house. I currently have a market condo. Hopefully, the market will change someday and I can sell it and move to an area that has affordable homes with yards and garages...
Example 1: In Ohio, I owned a brand new 3,600 sq ft home for the cost of my condo.
Example 2: In upstate New York I owned a 2,000 sq ft home for ⅓ the price of my tiny condo.
Example 3: On the beaches in South Carolina, I had a custom built brand new home for ⅓ the price of my condo.

Most people move to Jackson Hole for the beauty and the outdoor activities. They don’t realize how hard it is to find a good job and affordable housing (I didn’t). Unfortunately, the housing situation is getting old. I want a house with a yard and a garage like I used to have.
My name is Arty Polo and I am lucky enough to live in an affordable home in the 810 West units. I moved here in 1999 and over the years have worked at JHMR, C-V residential treatment facility, and for a number of food service providers in town including Trio presently. For the past nine years I have worked for and now manage the Van Vleck House Group Home in town which houses youth ages 10-17 who are experiencing problems living at home. I am on call seven days a week for crisis and emergencies. I can honestly say that I would not be in the valley if there had not been an affordable housing program. I do not want to live in Idaho or Alpine. I do not want to commute 1.5 hours a day. I love this community and want to be a part of it. I feel that the housing program allows for creative, motivated, and competent people to feel that they are a part of this special Jackson community. I also manage a staff of 18 young people, all of which are college educated, enthusiastic, public servants. They are working to provide a safe and structured environment to at-risk youth from this community for less than what some of our residents can make working at one of towns fast food restaurants. All of us, including myself, have a second job. We do it because we want to be here. Most will do there time and move on to further their education or move closer to home. Others will want to stay but will feel that making a life here may be too difficult because of the cost of living. I know for a fact that just knowing that there are options out there to be able to own a place in Jackson keeps people here. I have had friends on the list for years and they are still hopeful. They still apply over and over again. They will hopefully all be in an affordable one day. The affordable housing program is needed in our community. Our community servants, emergency workers, counselors, teachers, and our hospitality workers all are needed to keep our town functioning. We need to do out best to keep good people here and to not loose them to other communities. Jackson is great because great people flock here to explore, be adventurous, and live healthy lives. I believe that the affordable housing program is a crucial piece in keeping our community great and making it better.

Thank You!

I am just writing to share my experience as a teacher who has been in this valley for 8 years now and has been a part of the free market system and is now living in an affordable home. I worked hard and saved in order to put a down payment on an apartment 5 years ago. Without the help of my parents my mortgage would have been a stretch and would have kept me from saving for retirement and putting into other important aspects of life. I met my husband a few years ago (a valley resident for the past 14 years and someone who had never owned a home as it had been out of reach for him). We were expecting a child last year and went in pursuit of a new home that would fit a family of 3. My condo was a mere 700 sq ft. place and we were in need of more space. We looked a free market home and decided it was out of our reach. There was no way for us to live a balanced life, save for college and retirement and own a modest home in this valley without the affordable route. We are living in our 3 bedroom 2 bathroom home with our daughter now and couldn’t be happier to have this option for our family. Without affordable housing, I don’t know that we would have stayed. We are two hardworking individuals that are very imbedded in our community. Now we can go home at the end of the day to “our home” and feel at ease about managing our expenses and living comfortably in this beautiful place.
To Everyone working on Workforce housing issues in the new comp plan,
I’d first like to commend everyone for all the hard work you been doing. Next, I’d like to say how important wildlife issues are to most in our
community and that I agree with many of those sentiments.
However, I also think that a lot of the folks that already have their little piece of heaven have lost sight of keeping our valley, economy and human
residents happy as well, and they are not thinking clearly about where we need to house people, now and in the future.
As I look at the Teton County GIS, and those areas already protected by conservation easements (thereby precluding most further development), it
leaves very little land available for housing our residents. The most logical place for housing is all the areas between High School Road, west to South
Park Loop Road and south to South Park Loop Road. As you know, there are already several dense subdivisions in this section of the valley (South Park
Ranches, Melody Ranch and Rafter J). If these areas are allowed to be developed, in the same density and keeping open spaces for animals to migrate,
it is the ideal space for housing.
It irritates me that NIMBY folks have been able to shut down proposed subdivisions in these areas, when it is a perfect logical place for people to be. I
hope that you will zone, plan and regulate this section of the valley to allow greater density. It makes sense for animals, traffic, and in so many other
ways.
Thanks,
Debbie LaJeunesse, 2225 E. Porcupine Road, Jackson, WY 83001 307-739-1461
P.S. I’d prefer if this letter were not printed in the newspaper.
Date: 2/22/2011

Dear Electeds,

I’ve been asked my opinion on the Comprehensive Plan’s “big items” that need full discussion with the joint electeds by a few of you - and have been responding individually. I thought I should do that now to the full group. Following is my stab at the big issues - as I think we already agree – more or less – on most of our shared values and their priorities including wildlife, natural resources and open space - a diversified and stable economy - goals for sustainability and energy conservation – predictability - etc.

Following are the five most difficult, complex and important topics (from my perspective) for the County and Town to discuss in detail.

Growth – Growth is item number one that needs a full discussion – it is – and always has been – the elephant in the room. It is not just about where growth goes – but how much occurs in total. It also is about the types of growth and in periods when we do boom – the rate of growth.

- The existing (1994) comprehensive plan states our community’s vision is to ‘promote economic sustenance that does not depend on population growth.’ (p 5)
- This topic then is about both improving the pattern of growth (Town versus County, Town as Heart, “smart growth”, reduced carbon footprint etc.) but also about the end-state of growth (call it what you like – build out, rate of growth, growth caps, getting to an economy not dependant on growth).
- Acknowledge and quantify that growth will already occur. Current entitlements are quite large - close to a doubling of both residential units and commercial space.
- Impacts of growth are significant off-site through public land use, transportation and other impacts. Improving patterns of growth – only modestly reduces cumulative and off-site impacts. That is why the community is so concerned. The plan should recognize this and you should discuss it. That can only be done by visiting the end-state of growth discussion.
- The rub is the community does not want both sprawl and new city centers. The community wants a potential build-out that matches, or is less than, currently where we are reasonably headed. The first plan drafts dramatically over estimated the rural PRD and other tools – then transferred a bunch of “phantom density” to multiple “nodes”.
- County planning chair Paul Dunker summarized it well in his final comments: “What Staff wound up with, however, was a hypothetical buildout number that included every rural landowner using the PRD to its maximum potential, as well as every landowner with the right to construct an ARU doing so, and then transferring all of this hypothetical development potential into the various nodes designated in the April 2009 draft.”
- This discussion should also include the balancing of job inducing commercial versus residential units. Also large second home (mostly in the County) job inducing impacts versus a balance of housing most likely to be utilized by the local workforce.

Open Space – This is about the clear benefit of permanent open space versus temporary zoning.
- It is also tied to the “pattern of growth” discussion. Basically is there a way to move base or current entitlements? So this is about the County’s PRD tool; changing the multipliers and enhancing the non-contiguous PRD.
- It is also a discussion on whether some version of a Transfer of Development Rights (TDRs) - beyond the PRD - could work and should be considered – both within the County – but also from the County to the Town?
- It also includes direct acquisition approaches and whether we should identify a permanent public funding source to complement the private philanthropy to achieve open space? Both municipalities have great achievements to reflect upon – the Town with the recent Karnes Meadow and Flat Creek acquisitions – the County with the Hardeman Meadows. All three partnerships with the JH Land Trust.
- It is also about the limits of simply down zoning to 1/35 acres in the rural County – that it is both not permanent and also would end up with an undesirable pattern of development. So simple “by fiat” decisions of major down zoning and then subsequent major up zoning – is limited. It also brings in the concept of a modest upzone versus downzone balance that may be still needed though (while still preserving base property rights) – so is tied to the sensitivity that you don’t end up with any one landowner either with a “Wipe Out” or a “Windfall”.
- It is also tied to overall end-state growth goals - which the community clearly wishes discussed. Basically again that the community doesn’t want both sprawl and new city centers – something we termed as “additive growth” in our discussions.
- I think this topic is actually the most complex and important discussion of the five. Your joint Planning Commissions spent a lot of quality time on this issue.

Economics – this is tied to the decades old tension between Town and County for the following: visitors and visitor’s dollars they spend – basically simplified to the tension between a vibrant downtown and a viable Teton Village.
• It is also tied to how tax dollars are then accessed by each municipality – and how costs are allocated between Town and County? So when a benefit is clearer let’s say to the County (pathways for example) and the Town is asked to pay half the cost – it creates tension.
• The other most important aspect to this is ongoing perceived competition between Town and County for significant dollars to be available in the free market for reinvestment and revitalization. I believe this has been the driver for Town in some of their development tools like the PMUD. It is a very legitimate concern – simplified again to: Teton Village gets all the investment capital and Town does not. It all then percolates down to jobs of course.

Cost of Growth – basically first acknowledging that growth generally does not pay its own way.
• That the increased tax dollars do not pay for the increased obligation of the new growth. So how do we pay for the next trash transfer station site, the expansion of START, the sewer and water system expansion when that becomes an issue, identify the next school sites, public parks?
• Do you want all development – commercial and residential - to pay for the full incremental impact it engenders – whether sewer, roads, water, parks or workforce housing?
• It should be an integral part of your discussions – boiled down to how much should each new development pay (legally never more than their direct impact – you need to be able to actually document that though –thus the need for updated legal nexus work such as for workforce housing impacts). Basically how much should be paid for by the public at large – perhaps an approach such as parking districts? Simplified how much do you “privatize the profits” of a change in zoning or new development - and then “socialize the impact costs”?
• To not address this – and also to not know what the fiscal implications of your polices will be – is not a prudent approach.

Workforce Housing –
• I will not go into the details as you know them well. This has to be discussed also – it is still relevant. The Blue Ribbon Panel report should be the framework to launch this discussion.

Everything else then is tied to these five topics – especially transportation and transportation systems (roads, pathways, START etc). They are tied to both rate of growth, end state of growth (build out) and pattern of growth. So if there was a sixth item it would be transportation – e.g. roads – Town, County and WYDOT.

In Closing - Whatever you do – please actual plan – that means make the hard decisions, make them specific and move towards a LDR approach that is predictable for all parties. The will mean drawing lines on the map and producing the numbers of units and square footage desired. It is called planning – and it should be comprehensive.
I have finally taken the time to read most of the articles that Kathy has forwarded. It is déjàvu. I built my Bar Y Estates home in 1980. It is passive solar, I utilized a double 2x4 east and west wall system, positioned the house so that the 2 longest sides were the south (all glass) and north totally buried into the hillside, roof and under slab concrete "solar collection floor "were heavily insulated. In 1980 the Federal energy credits for solar were still in place so I was able to take credits for what was attributed to additional costs for the solar envelope. Without state income tax, Wyoming was not one of the states that gave these credits. The addition, in the early 90's, of light sensing electronic window quilt shades on all of the south glass really make the house work! In the winter when the sun is out, the shades are up and down at night and during cloudy snowy weather - all automatically. I built this home on a strict budget, choosing to spend money on the structure and envelope than finishes. Finishes can be upgraded over time but the big energy efficiency savings come from how the structure is built and insulated. Our energy use is about 50% of comparable sqft homes. Dave and I have since remodeled the home and upgraded to take the energy efficiency to a yet higher level utilizing new products that were not available in 1980.

We are not the only ones that have pursued solar and energy efficiency. I admire all that have made the commitment. We should encourage everyone to build smaller and more energy efficient.

The new Comp Plan draft (Theme 8 - Energy Conservation) does not go far enough to raise the bar on requiring building more energy efficient structures, both commercial and residential. Stricter building codes specific for Teton County should be adopted which require more insulation and better building techniques that accomplish energy savings. Thermal imagery of every newly constructed home and Commercial building should be required and a standard set that must be met. I wish this was available when I built in 1980. If Teton County can not do a detailed enough inspection to stop the construction abuses that ran rampant the last 30 years, then a 3rd party inspection service should be used. Many of the construction requirements for leed certification and leed qualified inspectors should be used. Costs need to be born by the owner. I have always felt the maximum sqft of residential building is too high and should be reduced. Energy efficient building is not a new concept, it should be required in all construction.

Build smaller - Build more energy efficient!

I forgot to add this article.
A Net-Zero-Energy Home for $180,000
http://www.finehomebuilding.com/item/11546/a-net-zero-energy-home-for-180000
Hi,
Here's some good winter's night reading... The below article link talks about New Landscape Urbanism Vs. New Urbanism; Either way we have to ask each theory the question "Where does our milk come from?"
Has some good links for further reading and debate.
This article is for the energy nerd in hopefully all of us;
A little history on the how the American house came to be what it is today for better or... who are we kidding... for worse mostly.
The American House: Where Did We Go Wrong?
Have a great day! Kathy

<td>2/15/11</td>
<td>Tompkins, Kathy</td>
<td>I would like to bring the public back into this most important public document. I support Kristy Bruner’s op ed piece in the JHN&amp;G on Feb 9th “Land-Use plan A Flop Without A FLUP”. We need to be proud of our unique valley and take seriously, the responsibility that goes along with being the first gateway community to our national parks and being live in caretakers of the Greater Yellowstone Ecosystem. Please remember going forward that a desired vision for the new comprehensive plan is one that doesn’t impart negative impacts on established family neighborhoods in order to satisfy development rights of large property owners. More development equals more traffic which leads to more roads and therefore degradation of established neighborhoods. The proposed Tribal Trails connector’s negative effects on the schools adjacent to and near High School Road and the Cottonwood Park neighborhood, in part, to mitigate dense growth in Northern South Park, is one example of satisfying the right of a large property owner to the detriment of a large group of small property owners. Sincerely, Kathy Tompkins Cottonwood Park</td>

<td>2/15/11</td>
<td>Acri, Armond</td>
<td>Armond Acri, representing Save Historic Jackson Hole. I’ll try to be brief. I pretty much agree with I think a lot of the comments already made. I’ll try to add a few new points, too. One thing I think I want to elaborate a little bit on the issue of the public participation, though. Good communication really is two way. It involves a timely exchange of information and for that reason we would encourage you to consider having even a brief period. I think people were generally respectful for that during the Joint Planning and Zoning Commission. It’s a way to stay engaged in the process, to give brief comments that were focused on the topics of discussion for that time period, not to go back and bring up other issues. It’s really important for us as we try and talk to people and try and encourage people to be involved in the process. If, you know, when I tell people and they say, well, can I go to the meeting and can I make public comment, and you say, well, no, you won’t be allowed to make comment at that meeting, I heard people say, well, then, what’s the point of me going, I’ll just go and read what ?? has to write in the newspaper then the next day. So it’s something to consider. I think people would be respectful; if you think it’s being abused, it’s certainly something to go back and revise. So, that would be a real way to encourage ownership. The important point I think that Gregory touched on is this concept of how you’re going to phase this in. I think that is important to at least have a plan for how you’re going to do that. Because I think, as we try and learn from what happened in the past, to Bruce’s point, and what worked well and what didn’t work well, one of the key things from our organization’s standpoint that didn’t work well in the ‘94 Comprehensive Plan was we kind of got burned out, we worked on the whole Plan and we left out the transportation document because...for a bunch of reasons, I don’t know, I wasn’t directly involved, but you guys didn’t actually adopt it, the elected officials, until 2000, almost four years after the Comprehensive Plan itself was adopted. And that was...that undercut some of that effectiveness of the transportation plan. So I think that it is key to envision this truly as a Comprehensive Plan and keep all this stuff in, and if you’re not going to address it right now, at least talk about how you’re going to address it, because you lost a lot of engagement in that transportation because people said, wow, the Comp Plan is done, you know, let’s all go home and let’s party and we’re done. And really there was a lot of work to be done there. So, hopefully, we won’t make that mistake. Let’s keep all of the key principles together and move them at the same time, or together. So, thank you.</td>

---   |---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
2/15/2011 | Griffith, Gregory | Thanks. Gregory Griffith, West Bank. As far as the 20 topics go, I think there should be more consideration that if it’s going to be five board discussion meetings with four hours each, that’s one hour per topic, sixty minutes each, on some of the pressing issues of our time. I would suggest that you relegate 14 or 15 of those issues into overflow or contingency topics so that we could mark up and discuss the big-ticket items that we really need to discuss. We know what issues are controversial. We know what issues are going to cause the problems. We know what issues have the greatest potential for negative downstream impacts and undesirable development patterns. After about four years and four hundred grand rec expenditures, I really think we should be engaging in discourse at the, again, the solutions-oriented specificity level, not the generalities and abstraction levels. That’s just one suggestion. Absolutely strictly to the process, I feel that there’s a way that we can combine JIM #2 and JIM #3 to give you one more core discussion meeting. I feel like that could be compressed. That’s just a suggestion. Public comment for 9 and 10, JIM’s #9 and #10, is basically superficial inclusion. If you gave up the comments, significant public comment at JIM #8, it would affect what you direct Staff to go and write, instead of having the horse out of the barn in 9 and 10. Split votes, you’ve addressed those. I really would like to comment, though—this is zero disrespect to the Mayor and Town Council—but we do have issues we have to confront about jurisdictional and regulatory authority on some of these issues, primarily in the FLUP, but the majority of residents in this County, a full 52 percent, can’t vote for the Mayor and Town Council, so at least some consideration of that topic would be nice. We continually ask for measurability, enforceability and predictability. I don’t see why we want to attain those aspirational goals as a community if we don’t get into specific wording. That would be something that would be nice to address also. I also have a question of what we’re going to do on June 30th if a development application comes through in Town or County, will we be operating on the ‘94 Plan? Or will we be using this incompletely vetted, non-specifically worded document that was designed to function as horse and buggy with the FLUP. So what are we going to do on June 30th? That would be a nice question to answer. The last thing I have on process is I think we should consider and provide a contingency for JIM #11, so that we don’t have a situation where the travel schedule or the allocation or the budget for the facilitator artificially attenuates the process. What we want…well, at least what I don’t want to see is having the process define the end product more than what we need to talk about. Thanks very much.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
Hello, Gail Jensen...actually, well, Jackson, north of Town. What Gregory Griffith just said was a lot of the same concerns I have, and I’ll just touch on a few more specifics that he didn’t go into. Don’t need to repeat what he had to say exactly. I think a lot of the detail is totally missing from this draft, which a good job was done on themes one and two, but then you stayed at the 100,000-foot level. And, to be honest, most of this Plan that has not got detail in it, was not talked about. They were moving so slowly that they decided let’s just stay at that 100,000-foot level and then, you know, the details were never vetted. That’s why you see so many inconsistencies, and so I think there’s a lot more work than what we’re hearing from you all like, oh, we’re almost there. I just feel there’s a whole lot more work. And then if it does need detail, whenever an application comes in front of either the Planning Commission of either the Town or the County and then on to the electives, the Comprehensive Plan is looked at. Yes, it’s not Land Development Regulations, but it’s looked at and the Land Development Regulations mimic what’s in our Comprehensive Plan. So this is important. It’s not to be taken lightly. And I think that sometimes people do take it lightly. And if the detail isn’t there, there’s too much flexibility and it really doesn’t reflect what the community really wants. One more thing. I think that there should be room for more public comment. And I haven’t heard...I’ve heard that there’s these workshops but it doesn’t sound like the public gets any participation at those workshops. We just sit and listen to the electives discuss. But as this Plan develops and changes with detail and there’s no public comment between March 10th until June, that’s an awfully long time to go without any public comment, especially when there’s so much lack of detail to this whole Plan. You know, I just don’t think that that’s acceptable. The past public comment you have is not going to be comments that are specific to what you’re going to be doing now. So, anyway, those are my concerns. Thank you.

<td>2/15/2011</td>
<td>Bruner, Kristy</td>
<td>Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment today. As you know, the Conservation Alliance represents some 2000 members and we've been closely involved with this process from the beginning approximately four years ago. And, in fact, the Alliance was established in 1979 at the onset of the very first Comp Plan for our Valley. So in three decades of history and local planning, we really understand how important it is to have a good Comp Plan for the Valley. Because this process is very different than what would be generally expected at this stage, we would ask that you do add some time, which can be limited, for verbal public input at each hearing and workshop. Second, we do believe it would be a good idea to incorporate some type of forum for public input between the March 25th and April 20th hearings. There's a gap there that we feel like would be a good opportunity to incorporate more input but not lengthen the process overall. And touching on that, today I'd just like to go over a few of the broad goals that we're working on in the Comp Plan, and we mention those today because we want you to allow adequate time to address those in your process. First, we want the new Plan to represent an improvement of our existing Plan. This point is very basic but it's critical. The entire reason our community has supported the effort was the belief that we would make a Plan that's better than the one we have, one that is more predictable, accountable and measurable. You know, we've made some good strides in the right direction but we've also backpedaled in some areas, so we do need to do more to get back on track. And the future land-use plan is part of this. And just touching on what was mentioned at the beginning of the meeting, if in your discussion today you could provide an explanation to the public why it's beneficial to adopt part of it, you know, at the end of June and why not wait until the whole thing is reviewed and then adopt it formally in its entirety. Could you just speak a little bit to that? Second, we think that the new Plan must represent the documented will of the community in a consistent way throughout all its policies and maps. And we're sure that you will be working through some of those inconsistencies. And there are a number of places where we feel like the draft Plan didn't go far enough—affordable housing, transportation, natural resources are some examples. Third, the new Plan should work to protect the qualities of Jackson Hole that matter most to its residents and visitors. The new Plan really does need to make the values that fall under theme one the primary factors for consideration in all land-use decisions. And by that we mean you need to consider not only direct impacts to resources but indirect and cumulative impacts as well. So that's what we mean by that. Again, the policies and themes are a good start but more needs to be done overall, including updating some of the science information that we do have, which was already touched upon, so I won't go into that. You know, if you decide how to approach your review, it's important to remember this process has taken a long time, not simply because people here passionately care about where they live. They made their priority clear sometime ago and were ready to jump in and make, you know, the hard decisions, and we hope that you move forward in that direction. I'll try to wrap this up. Fourth, the new Plan shouldn't oversimplify planning principles and instead respect the unique context of Jackson Hole. If there's anything that acts like it's really important that we learned through this process is that there are a lot of negative consequences of oversimplifying the issues. You know...I'm running out of time. Anyway, so with that, related to your process, what we're concerned about how generalized your review could become, particularly given how accelerated the timeframe is. And, anyway, we really don't want you to oversimplify some of the issues. To conclude, this is a really important time to be visionary and to avoid oversimplification. In your effort, we hope that you really focus on what makes Jackson Hole rare, you clearly identify it, and then you do all you can to gain consensus on what you need to do to protect it. It's relatively easy to say that the values in theme one are going to be the community's priority. It's yet another thing to do the very hard work to gain consensus on what has to be done to uphold those values. You know, moving forward, the Alliance will continue to do all that we can do to help provide solutions, specific solutions to help uphold those values. Thank you.</td>
</tr>

</table>
I know you said it was unnecessary to prepare a formal response but as a small homeowner with concerns that official stakeholders might not have, I thought it was important to jot some things down. I think the questions on allowed growth keep popping up so I responded to them also. Could you send my comments on to Bruce and incorporate them into your records. I appreciated being invited to the introduction meeting with Bruce Meighen, but I forgot to submit my comments to him. I have a tough time organizing my thoughts on a normal day so I chose to organize them on paper:

1. What are the three objectives you would like to accomplish from the Comprehensive Plan update?
   A. “No Net Negative Environmental Impacts; Ideally, this means everyone working together to ensure that wildlife, plants, water, air, soil and the processes that connect them will be better off or at least no worse tomorrow than they are today.” (http://www.banff.ca/locals-residents/environment/No_Net_Negative_Environmental_Impact.htm)
   B. A healthy, energy sustainable, diverse economic mountain community and national park gateway that is not dependent on growth, non renewable energy, and boom and bust industries.
   C. An enforceable checks and balances system to support objectives A and B.

2. Given that new development will occur in the Town and County based on existing zoning, what are some key opportunities we can achieve with new growth?
   There are no opportunities we can achieve with new growth unless we resolve the contradictions in the new comp plan draft and create a verifiable predictability that does not deposit phantom densities in selected family neighborhoods that may not benefit from the open space these transfers claim to create. If these issues are left open to interpretation, the only people that will see opportunity and rewards are developers, while established family neighborhoods bear the negative impacts of unchecked dense growth.

3. What must happen for this development to occur in the right way?
   Verifiable predictability that includes a well researched (not inflated) build out number and permanent open space once created.

4. What is the desired character or vision you would like the Plan to achieve?
   A. Pride and responsibility that goes along with being the first gateway community to our national parks and live in caretakers of the Greater Yellowstone Ecosystem.
   B. A desired vision is one that doesn’t impart negative impacts on established family neighborhoods in order to satisfy development rights of large property owners. More development equals more traffic which leads to more roads and therefore degradation of established neighborhoods. The proposed Tribal Trails connector’s negative effects on the schools adjacent to and near High School Road and the Cottonwood Park neighborhood, in part, to mitigate dense growth in Northern South Park, is one example of satisfying the right of a large property owner to the detriment of a large group of small property owners.
   C. Provide several realistic tools and recommendations that would help preserve the character or vision you desire?
      A. Fully funded, enforceable, ongoing checks and balances system that would make themes one and two a success.
      B. Public and Private support for programs that encourage sustainable energy programs like JHESP, Slow Food, and Vertical Greenhouse... sharing and gathering helpful info from other mountain communities to further our goals.
      C. Switch from being dependent on boom and bust economies which include industries like non renewable energy and second homeowner construction (that increases the need for more servicing), to more innovative and sustainable industries like retrofitting existing housing with Net Zero Energy Community (“A net zero-energy community (ZEC) is one that has greatly reduced energy needs through efficiency gains such that the balance of energy for vehicles, thermal, and electrical energy within the community is met by renewable energy.” (National Renewable Energy Laboratory)) and Passive House (http://www.passivehouse.us/passiveHouse/PassiveHouseInfo.html) inspired techniques, green career training for our local youth in order to give them an option to stay and contribute to the community in a positive way, regional grown and transported food and goods (Wyoming, Idaho and Utah) and made in Jackson Hole products marketed throughout our intermountain region.

6. A successful Plan is one that:
   A. Realizes and supports new and healthier ways to sustain and preserve our fragile ecosystem.
   B. Does not sacrifice the needs of established family neighborhoods that want to foster a safe, healthy place to live and share with wildlife.
   C. That is simple to understand, and not contradictory.
1. What are the three objectives you would like to accomplish from the Comprehensive Plan update?
   • The Public Art Initiative would like to see the references to public art remain unchanged in Theme 3 of the comprehensive plan.
   • Recognize that arts and culture organizations have an economic impact on our community and should be cultivated as a revenue and cultural tourism generator in long-term economic development plans.
   • Declare the Town as Heart as a Cultural District
2. Given that new development will occur in the Town and County based on existing zoning, what are some key opportunities we can achieve with new growth?
   Public Art can be used as a design tool to make our public spaces, gateways, pedestrian areas and government projects exceptional by integrating art that speaks about the values of our community and educates visitors and residents.
3. What must happen for this development to occur in the right way?
   Strategy 3.4 must remain in the plan and elected officials should review the draft Public Art Plan that has been completed by the Taskforce. One elected from the Town and one from the County should be designated to work with the Public Art Initiative Director to revise the Draft Public Art Plan, including investigating potential funding sources, creating a Public Art Policy or Resolution.
4. What is the desired character or vision you would like the Plan to achieve?
   We live in a community with extremely limited developable area. Our elected leaders have the opportunity to use new development to engage in Creative Placemaking. New developments should be treated as opportunities to create exceptional public space. We attract inillions of visitors each year, we should be developing our community spaces to attract a certain type of visitor and include creative professionals in the design of public spaces to educate visitors about the values we hold as a community. Public spaces and buildings from bus shelters, parks, gateways, plazas, pathways and more should all have creative features integrated into the projects that serve as benisities to the public, but also delight, inspire and add to a sense of place. (Creative Placemaking)
5. Provide several realistic tools and recommendations that help would preserve the character or vision you desire?
   • Develop and implement a comprehensive public art plan for the community (Strategy 3.4).
   • Create incentives for private developers to include public art in their projects (Text amendment to the LOR's public art as option 4. Article 4, division 4100, page 8).
   • Create a regulatory structure effecting municipal development that supports public art (Policy, Joint Resolution or other).
6. A successful Plan is one that: has not removed the language in support of Public Art from the Plan, establishes guidelines for the inclusion of public art in public and private CIP's and results in the creation of separate (or joint) Town and County policies or resolutions on Public Art.
   Suggested change...
   Policy 3.2.b: Maintain downtown Jackson as the commerce and culture center of the region
   Please Note: these comments are submitted by Carrie Geraci and have not been reviewed by the Public Art Taskforce.
1. What are the three objectives you would like to accomplish from the Comprehensive Plan update?
a. Plan establishes a strong foundation for an economic development plan for JH, including a tourism development plan that focuses on sustainability standards and strengthening tourism that supports local businesses and community assets and values.
b. Plan establishes a positive, constructive vision for JH’s future – not just what we want to avoid, but also what we want to accomplish.
c. Plan has clear opportunities for citizen engagement in implementation as well as annual monitoring of progress -- and doesn’t just sit on a shelf, with all attention focused on the land use regulations. (I don’t believe land use regulations alone can achieve the goals of the comprehensive plan. Goals require proactive community participation.)

2. Given that new development will occur in the Town and County based on existing zoning, what are some key opportunities we can achieve with new growth?
In the commercial sector, interesting and unusual visitor services, with an emphasis on supporting locally owned businesses and strengthening community assets. For example, I’m thinking of Santa Fe’s Canyon Road and Museum Hill, which do not replicate the central Plaza, but add a different dimension to serve cultural tourists and take advantage of Santa Fe’s heritage. (Did you know that little, tiny Santa Fe’s art market is second only to NYC?) Now, in Santa Fe, the creative economy has grown larger than Canyon Road can accommodate and they’re building a whole new arts district that include farmer’s markets, etc.
In our case, we might see visitor services that take better advantage of our strong culture of conservation as well as more traditional cultural activities. Conservation internship opportunities, including live/work space. Open studios with shops in front, for artists & craftsmen. Also, other live/work spaces that support creative economies. Incubator buildings for new entrepreneurs. There are many possibilities. I’m also interested in more choices for visitor lodging, for example apartments such as offered in Tuscany. And agritourism ranches. There has also been a suggestion to study the feasibility of a Creative Corridor on S. Cache, extending from Snow King to Art Center, with bus service from the two Visitor Centers on N. Cache. In the public sector, educational facilities for locals and visitors.
In the housing sector, non-institutional eldercare facilities that are part of the fabric of the community. I also hope we can find room for co-housing options.

3. What must happen for this development to occur in the right way?
A shared vision for a positive future. I don’t think we have this. Our community dialogue is usually focused on what to avoid. But we do have a strong sense of shared values.
We must also have strong Town & County encouragement for citizen initiatives. 1 And MUCH more encouragement for preserving our heritage, particular ranching. Big problem right now… regulations make keeping horses, training horses very difficult on any new site, for just one example. I also think the Plan should acknowledge need for integration of our immigrant community.

4. What is the desired character or vision you would like the Plan to achieve?
I think consensus is clear that we want to preserve our small town character, protect our natural environment and wildlife to the highest possible standards of stewardship, preserve our heritage as a Western town and control the rate of growth in order to achieve balance.
We might not agree on how to achieve this vision, but I think the vision itself is very widely held. (Plan currently seems to allow too much growth to serve this vision. Easy fix seems to be to just hold development levels to those provided for in the current Plan.)
My hope is that the Plan can address this core vision, but also move beyond it. This vision is about what we want to preserve and protect. I’d like to also include what we want to become.
I personally would like Jackson Hole to become an international center for mountain cultures around the world and a gathering place for mountain people and the exchange of knowledge and ideas. I would also like Jackson Hole to become one of the world’s center for learning about the fine art of conservation. I would also like Jackson Hole to become a regional leader in adopting sustainability “best practices” of all kinds (including energy, clean air, tourism, etc.) I would also like Jackson to become a center for the arts, design and creative entrepreneurs. I would like us to become a model for integration of new immigrants. This is just my personal list. Everyone in town would have a list like this. I would like the Plan to adopt proactive goals of this kind, with specific strategies for what we’d like to accomplish in the next five years and a system for monitoring progress on an annual basis. Maybe, in the near term, we could begin by just gathering ideas of this kind and evaluating their relative potential for community benefit and inspiration.

5. Provide several realistic tools and recommendations that help would preserve the character or vision you desire?
Town & County governments need some new structures, common in other towns, such as Small Business Development Loan Fund, Small Business Ombudsman, Diversity Commission, Art Commission, Mayor’s Roundtable for New Ideas, Office for International Relations (including services for international visitors, cultural exchanges, sister cities, etc.). Public Art Program. Heritage Commission. Children and Youth Commission. World Heritage
Site Secretariat. Commission in Favor of Horses. A whole variety of ways for citizens to engage in achieving the goals of the Plan above & beyond land use regulations.

6. A successful Plan is one that:
Takes us beyond the core vision of what we want to protect and preserve into a positive and creative vision for the future, one which has multiple opportunities for engaging the energy and talents of our citizens to achieve these goals. Plan as springboard.

SPECIFIC GOAL: I am hoping to see significant changes to Theme #5: Provide for a Diverse and 2
3 Balanced Economy. I have detailed suggestions, but perhaps this is not the appropriate time to submit these. Please let me know when I should submit specific suggestions.
Generally, this theme is now framed in a negative way in order to restrain negative impacts from tourism. More important, it is lacking in positive direction. We want a Plan that is proactive and offers specific goals for making our tourism-based economy more creative, more sustainable, more serving of local values, more supportive of community assets, more encouraging for local small business development.
It should also include other goals for a diversified economy, above and beyond tourism, with specific strategies about how to achieve these goals.
I am attaching a copy of Santa Fe’s 2004 Economic Development Plan as an example of the kind of specific goals that we need for this section, as well as a tone of positive energy and ambition. We can honor our core vision of protection and preservation and have a direction for the future at the same time.
Thank you!

| 2/4/2011 | Bruner, Kristy   | Jackson Hole Comprehensive Plan RewriteWhy the Jackson Hole Conservation Alliance is at the table Mission: The Jackson Hole Conservation Alliance is dedicated to responsible land stewardship in Jackson Hole, Wyoming, to ensure that human activities are in harmony with the area’s inreplaceable wildlife, scenic and other natural resources. (Our organization, with some 2000 members, has worked on local planning issues since its inception in 1979.) Philosophy for working on the community’s Comprehensive Plan: All of us who are privileged to experience Jackson Hole have an obligation to take care of it. We, as a community, need to embrace how incredibly rare and precious this place is, and how much work will be required to make sure it stays that way. It’s the right thing to do - for our community, for those drawn to Jackson Hole, for the wildlife that roam through and beyond it, and for all the generations to come. Success - What it Looks Like If our community adopts a comprehensive plan that clearly embodies a conservation-based, fact-based and precautionary planning approach, the planning process will be a success. With this in mind, there is still a long way to go before this process could be considered a success. At the broadest level, a successful plan needs to do the following three things: • Improve our existing plan, by including a clear prioritization of community values, by incorporating essential data and the best available science, and by providing unambiguous policies and realistic implementation measures (all with the larger goal for increased predictability in mind), • Represent the documented will of the community in a consistent, integrated way throughout all policies and maps, and • Work to protect the qualities of Jackson Hole that matter most to its residents and visitors - our rural landscape, open spaces, scenery and diverse wildlife - by placing them (the values that currently fall under Theme One) as the primary factors for consideration in all future land use decisions. Re: Future Land Use Plan (excluded from the proposed scope of facilitation work) The Conservation Alliance does not agree that the Themes and Policies alone (without the Future Land Use Plan) would suffice as an acceptable replacement of our existing plan. If the Future Land Use Plan is not going to be a specific part of the new plan as was originally intended, major changes must be made to the Themes and Policies to make the overall plan clear enough to provide adequate guidance for the land development regulations and future land use decisions. We look forward to working with you over the next six months. If you have additional questions, please feel free to get in touch with us. [attached brochure on comp plan update available hard copy at the Teton County Planning Department]

<td>Bloom, Rich</td>
<td>Public Comment &amp; Participation</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Understand folks have already weighed in - we want that comment listened to - not just heard. Do not expect a weary public to offer up much more. The plan should reflect the will of the residents.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Staff versions have not done that to date.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• The joint PCs approved Theme 1 &amp; 2 mostly has. I am worried that the improvements in Theme 1 &amp; 2 - and to some degree elsewhere - will be unwound. That is very concerning to the public that has engaged to this point.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Trust is lacking.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Community Priorities</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Wildlife, natural resources and open space should be the top priority in all parts of the County.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Growth</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Growth is the elephant in the room. It is not just about where it goes - but how much occurs in total.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• The existing (1994) plan states our community's vision is to 'promote economic sustenance that does not depend on population growth.' (p 5)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Growth will occur. Current entitlements are huge - close to doubling of both residential units and job creating commercial space. The plan should work with rearranging that potential to achieve community goals - not pile on &quot;additive growth&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• The plan should clearly achieve community goals within, or less then, our reasonable assumed development potential - minus discretionary tools (PUO, PMUO, PR, and PUO-AH). We have termed this as a &quot;least growth&quot; approach to achieving community goals.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Pattern of Growth</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Impacts of growth are significant off-site through public land use, transportation and other impacts. Improving patterns of growth - only modestly reduces cumulative and off-site impacts. That is why the community is so concerned. The plan should recognize this.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• The rub is the community does not want both sprawl and new city centers. The community wants a potential build-out that matches, or is less than, currently where we are reasonably headed. The first plan drafts dramatically over estimated the rural PRO and other tools - then transferred a bunch of &quot;phantom density&quot; to multiple &quot;nodes&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• County planning chair Paul Dunker summarized it well in his final comments: &quot;What Staffwound up with, however, was a hypothetical buildout number that included every rural landowner using the PRD to its maximum potential, as well as every landowner with the right to construct an ARU doing so, and then transferring all of this hypothetical development potential into the various nodes designated in the April 2009 draft.&quot;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Cost of Growth</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• All development - commercial and residential - should pay for the full incremental impact it engenders - whether sewer, roads, water, parks or workforce housing.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Predictability</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Plan and zone for what we want - to avoid getting what we don't want.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• No more discretionary floating density tools. Encourage performance based, prescriptive approaches to zoning rather than less predictable tools.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Either Future Land Use Plan (FLUP) maps must be included - or the plan itself will need significant more clarifying language.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Achievement of Permanent Open Space</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Permanent achievement of open space should be a priority over temporary zoning.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• The rural open space clustering tool (PRO) is performance tool based but needs work. Right now - especially the non-contiguous PRO - is the only transfer of development tool we have.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>South Park - especially within South Park Loop Road (as greater South Park values have been mostly affirmed)</td>

<td>As requested I have attached a report containing abstracts of public art programs, their funding mechanisms and links to their websites [see actual public comment for referenced report]. This document has been reviewed and edited by Barbara Goldstein, Public Art Director for the City of San José Office of Cultural Affairs to highlight communities with similar demographics to ours and programs that follow best practices. The Public Art Initiative, under the direction of the Cultural Council of Jackson Hole, is working to raise the level of discourse and open discussion to potential approaches in the creation of a public art program that will address the needs of our community and compliment the Comprehensive Plan. A Public Art Program has the potential to successfully address three major themes included in the Comprehensive Plan. In Theme 5 a Public Art Program could increase cultural tourism through investment in our communities' successful arts and culture organizations and businesses. Public Art supports Theme 7 by making our public spaces, gateways and parks more livable, including artwork that is integrated as functional architectural features. There is also no doubt that Public Art will serve Theme 3 perfectly; identifying Jackson as a Cultural Destination. Barbara Goldstein is a great resource for best practices in Public Art around the country and she will be conducting a free community workshop on March 10th at the Center for the Arts. I hope you will take a moment to review the information contained in this report and I look forward to continuing our discussion.</td>
</tr>
<tr>
<td>1/28/2011</td>
<td>Schechter, Jonathan</td>
<td>Also, FYI, for reasons unrelated to the Comp Plan, I have reconvened a variant of the Sustaining JH environment group. We met for the first time earlier this week, and they felt the original group's Statement of Ideal should be tweaked in two ways: -- they don't like the term &quot;viable populations,&quot; and want something they feel is stronger; and -- they want the Statement to read include &quot;preservation of natural processes&quot; as in &quot;Teton County will have viable populations of all native species, and preserve all natural scenic vistas and natural processes.&quot; I mention this because it not only raises the issue of what the Statement of Ideal in chapter 1 might look like (assuming you want to keep using that tool), but also the larger issue of Statements of Ideal in the other chapters. I don't know what you are thinking regarding re-writing those, but my deep concern is that, if you continue to use the term &quot;Statement of Ideal,&quot; you need to re-write the many draft Statements which are, um, less than ideal. If that's not possible, I very much hope you drop the use of the &quot;Statement of Ideal&quot; term to describe what you have in there, for in most of the chapters, it's a case of mis-labeling/mis-use of the term.</td>

Subject: New Report Examines How Smart Growth Can Enhance Prosperity

A new report by the Center for Clean Air Policy finds that smart growth practices can enhance community prosperity and generate economic benefits for local businesses, households, and governments. The study, Growing Wealthier: Smart Growth, Climate Change and Prosperity, shows how reduced driving and efficient land use planning are strongly interconnected with economic growth and better quality of life. Growing Wealthier reports that cities investing in public transportation and downtown development are experiencing cost savings, growing tax revenues, increased property values and higher retail sales. For example, downtown retail sales in Dallas, Texas, grew by 33 percent annually after the city’s light rail system began operation. In Portland, Oregon, a $100 million investment in streetcars helped attract $3.5 billion in private investments. And in Denver, Colorado, home values within a half-mile of stations on a light rail line rose by 18 percent from 2006-2008, while home values in the rest of the city declined by 8 percent during the same period.

The report also documents how efficient land use planning can improve household resilience to rising oil prices by enhancing travel choices. Allowing more people to live closer to job centers can boost employment rates and income levels for low-wage workers while reducing exposure to congestion for all. Smart growth policies are also shown to cut government infrastructure costs, enhance public health, and conserve natural resources. The executive summary and full report are available at http://www.ccap.org and at http://www.growingwealthier.info.

Re: Dec. 20 & 21 Discussions regarding Subcommittee Recommendation for the draft Comprehensive Plan
Submitted via email

Dear Commissioners, Mayor and Council,

Given the Conservation Alliance’s work to ensure responsible land stewardship in Jackson Hole, we are writing in regard to your December 20 & 21 discussions on your review process for the draft Comprehensive Plan. As our community nears the beginning of the fifth year of this “update” process, the Alliance looks forward to continuing our active participation as you move into your discussions and review of the latest draft plan. While we understand that you do not intend to make a final decision on hiring a facilitator until January 3, we respectfully request that you keep the following comments in mind during your continuing discussions.

Initial Objectives of the Process
As we stated at the December JIM meeting, we believe that considerable attention should be given to creating consensus on whether the original objectives of this “update” process are still your objectives. If so, how will you work with the facilitator to ensure these objectives are addressed within a six-month timeline? (See the original RFP from January 2007, as well as earlier published materials from Clarion and Associates.)

Future Land Use Plan (FLUP)
Is there still a 65-page section (the FLUP) of the draft on the table that you envision being adopted as part of the plan within the six-month timeframe? If so, how will the public be involved in reviewing it? This section of the plan was initially designed to be an essential part of the final product - and not an addendum. In order to make meaningful comments on the draft, the public must understand whether you envision that only the “Themes and Policies” (without an associated FLUP) would be an acceptable replacement of our existing plan. This is a key point moving forward – and one that the public, as well as a potential facilitator, would need to understand, particularly when considering anticipated timelines for public participation, plan review and adoption.

Subcommittee Meetings
As a public participant in all aspects of the “update” process, the Conservation Alliance would like to make specific, constructive comments regarding the nature of your upcoming review – including establishing opportunities for effective public engagement. However, given the brevity of discussions on the Comprehensive Plan at JIM meetings, and given that meetings of the subcommittee have not been open to the public, it is difficult to provide comments in a manner that is specific enough to be helpful. In the future, because key discussions occur and recommendations are formulated via subcommittee, it would be helpful to clarify which meetings of certain subcommittees should be open to the public for observation. That way, it would be clearer for the public to understand how significant decisions and recommendations are made. (For one example, the public was able to observe the in-person interviews for the planning consultant finalists at the onset of this “update” process. Recent interviews were not open to the public.)

Thank you very much for your consideration, open communication, and all your efforts with this important planning process for our community.

Happy Holidays!
Kristy Bruner, Community Planning Director & Becky Tillson, Community Planning Associate
9/13/2010 Bloom, Rich
South Park Neighbors

On behalf of South Park Neighbors. I think most of you know, I’ve supported and previously proposed using a facilitator in this process, starting two years ago, and I’ve now watched this process and been intimately involved in it for a long time. I think what your planning staff is recommending about the value of a facilitator is very well founded in their reasoning. It’s not just for them, it’s also for you as the co-chairs of this process so you can be a resource and participate and not have to act as facilitators. You know my most recent experience was this last year or two, this Blue Ribbon panel, that was a facilitated process, and that did work very well. Not singling out that individual but we had a pretty diverse group and it was nice not to have to have Christine Walker in that position or anybody else. I think it would save considerable time in the process, to the joint electeds and to the public, who are all getting weary by keeping the process focused and moving along. I think indirectly it would actually save money in the end if you look at your staff time costs and your electeds time cost. If we can quicken this process that is a savings in money even though you have some front-end dollar expenses. I think it could help defuse the process somewhat, although there will be a lot of passion in the discussions, I’m not naive on that. But the public will react positively to the use of a neutral facilitator in the process. I don’t think you’ll feel a lot of resistance. I think it should be somebody local to save costs, yet not affiliated with the process, meaning not, you know, Clarion or somebody like that. Somebody trained in facilitation. It’s not a mediator that you’re looking for, so they need not be fluent on the process to date, because staff is still going to be developing all the meeting agendas. They are not out of the process. You’re just trying to facilitate the process forward. In the end, if money is an impediment, which it always is, you know where the budgets are, even though I think it will save money in the long run, then right now, South Park Neighbors, I’m willing to pledge $500 today towards dampening that cost. And I’d also pledge to assist Town and County in identifying other nongovernmental support like I did a few years ago through some of the local nonprofits. Thank you.

9/13/2010 Lockhart, Kelly
Interested Public

Thank you for the opportunity. I actually came to speak to you about the committee report but I couldn’t hear an opportunity for public comment on that, so I’ll roll that into this. I think kind of both applies. Seems like we’ve been talking about housing, you say for 38 years, I think we’ve been talking about the comprehensive plan, for seems like 38 years. I think it’s great that we’re here talking about it. I think it’s great that it’s on every agenda. I think it’s great to talk about the process, who we’re gonna hire next, which study we’re going to do. I personally would like to move on and start to do something. And I guess everyone feels maybe we have moved on and we are doing things. But when I look at the report, I think we ought to take an agenda item or a recommendation and we ought to stop talking about it and figure out what we’re going to do about it. If it’s identify a location, great, identify a location. If we’re gonna modify the mitigation rules, then modify the mitigation rules. And I think these meetings where we all sit around and talk are great, whether it’s the housing plan or the comp plan, I mean we’ve been sitting around and talking about it for three years. So, I personally don’t care whether you hire another facilitator or hire somebody else to do another study, but it seems like another year goes by, another election goes by, a decade goes by, and not much happens. So, I guess my thought is you ought to start having meetings where something happens on both the housing and the comp plan.

9/13/2010 Acri, Armond
Save Historic JH

Putting on my Save Historic Jackson Hole hat, I certainly would encourage discussion on the process, cause we do think that spending the time up front on setting up the process for this is important both for success and efficiency in the evaluation of the plan and developing the plan. I would like to suggest as you do that, do have some discussions about what the role of the facilitator would be. I think that would be really important to understand that. More than just saying we’re going to have a facilitator, I think we need to have some real discussions about what is that role going to be. And we would share Greg’s concern on the cost. Thank you.

9/13/2010 Griffith, Gregory
Interested Public

Read on his behalf by Armond Acri: First let me start off with some comments from Greg Griffith, who sends his regrets that he is unable to be here but he did have some comments that he wanted to get in. Greg was concerned, one of his major concerns, was taking on what he saw as an open-ended financial commitment. Because if we do have a facilitator, it would have to be an hourly rate, and he was concerned about whether that was the most efficient way, and probably the only way to bid a job like that, and he was concerned about that unknown amount of money to be spent. Also, I think he had questions related to paying outsiders to learn about our plan, to learn about our regulations, to learn about our community. He felt pretty strongly that the people in the community knew best. One suggestion that he offered was that if you did want to explore the concept of a moderator/facilitator was to ask perhaps members of the planning commission who’ve gone through the process and maybe saw the pitfalls, if one of them would be willing to serve in that role. So there’s that comment from him.

Phase: Joint PC Review
Speaking of Gregory [Griffith’s] comments last week, I’d like to see some type of documentation created in fact that for the first bunch of meetings, a couple of Themes, I felt like we were reinventing the wheel over and over again. And I’d like to see if we could maybe streamline it for the next poor souls that have to go through something like this, whether it’s in saying what worked, what didn’t, or coming up with at least a starting point for them to start their meetings and start to organize their thoughts and streamline it a little better.

My list of contradictions was more to the text than to the general theme. I think we battled the whole time to balance Theme One with the rest of the Themes. And, as Paul said earlier, we’ve learned a lot through the process and perhaps we were a little bit better in the later chapters. I personally think we erred in the TDR chapters, or in the concept of it. I was against the idea of taking property rights from certain owners, just obliterating them and then providing a windfall to others. That was a huge issue for me when we were reviewing this. However, I do think that conceptually the idea of down zoning—that was the wrong word to use—of keeping our open space open and putting our density where our density should be was the correct idea. I’m not saying nodes, but I do think that the Town was the place for it to be and in the Village; I put that in my comments and my contradictions. I think as the electeds are going through the chapters and trying to figure out how to work that out, I think if we had had a better idea of how to make TDRs work that seemed fair and that could be a success, I think perhaps we would have…or I would have felt differently about some of the chapters.

I have one more thing. Can we make a recommendation that the electeds review the transportation chapter prior to chapter two, or following chapter two, rather than at the end of the document? Or a suggestion? I think that had we all seen the transportation document, it would have been helpful in the review of…does anyone else?
Date | Name | Comment  
--- | --- | ---  
7/1/2010 | Duncker, Paul Interested Public | Anyone else care to make a comment? Okay, I will, and I apologize that this is a little bit long. I wrote it all down and I thought it was going to get included, not in the Staff Report but in some sort of Appendix. It didn’t, so I’m just going to go ahead and read my written comments. These are my final comments to the County Commission and the Town Council as they begin their process.

When this process of reviewing and updating our Comprehensive Plan began, I had high hopes that our Joint Planning Commission would embrace some of the progressive land-use policies we have discussed over the last year, such as transferrable development rights and a growth-rate cap. We have not. If we were not able to reach consensus on TDRs, I’d hoped we would at least be able to considerably strengthen the noncontiguous PRD tool included in our current land-use regulations in order to give our Valley’s large rural property owners more options for realizing significant financial gain from their extremely valuable properties other than by sale to developers of high-end suburban subdivisions. We have not. We have, however, taken what might be the first baby step toward this goal by allowing an increase in base density allowances in the Town’s targeted growth areas if it’s transferred from a rural PRD in conjunction with permanent conservation. In my opinion, this is the high point of our year’s worth of effort. The low points are the elimination of nodes and Accessory Residential Units in the County. I have already written at length about nodes. They need to be acknowledged as an appropriate extension of our current existing land-use pattern and allowed to receive additional density within targeted growth areas, which would be determined in the Future Land-Use Plan, just like Town is. If the policies contained within the draft Plan we are certifying to the elected officials are implemented as currently written, the Town will be able to grow over time and the rural County will be able to grow over time, but the nodes will remain unchanged. This makes no sense.

As far as County ARUs are concerned, my understanding of the reason they are eliminated by only two of the five sitting County Planning Commissioners was to subtract one hypothetical buildout number from an even larger but equally hypothetical buildout number. This action, however, would have some very significant impact on real homeowners, who currently have the right to construct these ARUs and have planned the development of their properties accordingly. One such example is a client family of mine who have master planned their property to include a main house and a guesthouse and have chosen to build the guesthouse first. They visit periodically and occupy the guesthouse while they approach retirement and plan the main house. What happens when their ability to construct a main house in the primary view corridor with the already-planned driveway access and pond is taken away? This policy represents nothing but a series of lawsuits waiting to happen to which written public comment has already alluded—just one reason to overturn this recommendation. Other equally valid reasons are the negative impacts it will have on current owners of overpriced Jackson Hole properties who are counting on rental income from those ARUs, as well as the loss of reasonably priced workforce housing opportunities.

In retrospect, I think I understand why both these policies were recommended and I share some of the blame. At the very beginning of the process, we had discussions with Staff regarding whether or not an end-state buildout number should be included in the Plan, and I was one advocate for calculating and including this number. What Staff wound up with, however, was a hypothetical buildout number that included every rural landowner using the PRD to its maximum potential, as well as every landowner with the right to construct an ARU doing so, and then transferring all of this hypothetical development potential into the various nodes designated in the April 2009 draft. The uproar over this number and the way it would affect the neighborhoods included in all these nodes came to drive the rest of the debate and made every Staff member and Planning Commissioner gun shy about changing very much that was included in our 1994 Plan. Some of my fellow County Commissioners advocated for stopping the debate at that point and remanding the draft Plan back to Staff for an immediate rewrite rather than to continue with the review process and try to fix the April draft. At the time, I advocated for continuing with the review process and again have come to realize that this was a mistake. If we had stopped the process at the very beginning and had Staff rework the Comp Plan based on historical development patterns instead of hypothetical maximum buildout numbers, we might well have been able to implement some of the progressive policy directives I mentioned earlier. I was perhaps too optimistic about what we could achieve and underestimated the power of the politics involved in Jackson Hole land-use planning, and for that I apologize. Having said all of this, I do have to acknowledge that while not perfect, the 1994 Comprehensive Plan is still a very good document and the 2010 draft improves on it, even if just incrementally. The primary shortcoming of this draft, as well as the 1994 Plan, is the fact that we as a community continue to rely on the stewardship of our large rural landowners to maintain the community character we so cherish without giving them every conceivable option related to permanent conservation of these valuable properties. As a community, we are extremely fortunate that these historic ranching families have chosen to preserve their properties in a way which directly benefits all of us. And I lament the fact that our Comprehensive Plan doesn’t give them every possible support mechanism to ensure that these properties can remain as close to their current state of (un)development as possible.

I ask our elected officials to remedy this shortcoming, though we on the Joint Planning Commission were unable to do it.

<tr>
<td>7/1/2010</td>
<td>Hello, Gail Jensen. Thanks, everyone, for all your efforts. I know, yes, it’s coming to an end for this part, but I really truly believe that you really need to reengage when and after the electives go over the themes, or I guess the vision and themes, after they’re finished with that, and go reconcile the FLUP maps and the directives that go along with that FLUP map. It’s really important. I think the process is also really important in that the community really needs a two-step process—the Planning Commission process and then the electives process like you do on every application for development or an LDR change. I think it’s really critical that the public has two chances to comment, two chances to look at it. You know, I know everybody’s exhausted and tired and doesn’t really want to start up again at that point, but, you know, I think that’s what’s called for in the state statutes and I think that’s what is really necessary to really move forward with a complete review. Thank you and thanks for all your work.</td>
<td></td>
</tr>
</tbody>
</table>
Gregory Griffith, West Bank. As far as Commissioner Mr. Wall’s calling out of a citizen being able to make amendments to the FLUPs, I fully agree with that. Any member of the public should be able to bring forth an amendment to the FLUPs or LDRs. No one wants to hear, and I certainly don’t take any pleasure in telling you, I told you so, but last August and in numerous instances along the way, I called out continuously the fact that if you did not review the FLUPs, that you possibly, or even probably, relinquish our right and our responsibility to help shape, craft and guide them to bring them in line with the Comp Plan. And here we sit. I don’t even know what to call Staff waiting until the last meeting to say that they had consultations with the County Attorney and the Town Attorney and that they stated exactly what was brought up by the public last August. We need to be a little more foresighted in our review going forward, if possible. The other issue apropos and looming is elections. I stated last August and numerous times along the way, whatever you do, don’t string this out to the point where we get significantly into or past the primaries or, heaven help, past the general election, which, according to the comments by Mr. Daugherty, Planning Director Daugherty, could possibly be the case. We don’t like to see October as the electives beginning to review. We have the right to vote into or out of office elected leaders based on what they do and how they vote, not how they say they’re going to vote. So, if we’re going to have a delay until October, let’s go ahead and start working on the FLUPs now. That would be my point on that. The public again has the right to have a redundancy—Gail, I think, spoke very eloquently towards this—a redundancy of review. That multiple-layered, I think she called it, multi-tiered approach where you had that extra opportunity to help shape and craft and guide our very future. So that’s very important. I’ve found that life in general, and this process specifically—I’ve attended every minute of every meeting—that the relative acceptance or rejection of a specific idea is inversely proportion to Wyoming ?. If you have a really idea, you can guarantee it won’t see the light of day. So I’m going to give you one right now that I guarantee you won’t see the light of day, that I doubt anyone can make a compelling or cogent case against. And that is recommend the strongest possible recommendation to the electives they ?? the process. Each and every one of you sitting there know that it’s the most efficient way forward. We don’t have any cross-jurisdictional enforceability on most issues. You know, I hate to call out someone, but this is positive. Commissioner Mr. Wall and Commissioner Mr. McCarthy are looking more like precious geniuses by the week, and I made that statement in August. So, at least consider it. I know you won’t, but at least I stated it. As far as the five-year review goes, a great concept. I really think we need a one-year review after...whenever this process comes to an end. Five years is too long to wait to pick up where we may or may not have missed. I would like to thank somebody also. I’d like, you know, our nation sleeps easier tonight because the military is out there and being ever vigilant and on patrol. This community sleeps better at night knowing the Jackson Hole Conservation Alliance is ever vigilant and on patrol. I would especially like to call out Kristy Bruner. I know everybody that’s been involved in this process and nobody has worked harder, nobody has been more overworked, no one paid and more under appreciated than Mrs. Bruner, so I just wanted to acknowledge her hard work in this process. As far as you go, your task was Herculean, but ours is Sisyphian because we get to do it again. We all had a really good laugh at Commissioner Mr Pruett’s expense at the last meeting when he was asked, do you really want to kid up and do this all over again if elected. Well, that’s funny, but what isn’t funny is the public has to kid up and do it all over again whether we want to or not. So, we’re the only demographic that’s involved at every stage in this process. So, the last message is really simple that I’m going to leave you with and I really wish you’d think about it. And it’s this—our community at large should not have to work this doggone hard to get our community plan implemented. I mean, you talk about Herculean, every meeting you attend, we attend and more. Everything you read, we read that and more. Everything you write, we write that and more. And, you know, some of the really good ideas I’ve heard from the public throughout this process, it just bounced off...you might as well throw mud on the wall. You need to realize that the only demographic in this community that matters is the citizens because it’s the only demographic to which we all belong. Thank you.

<td>Acri, Armond</td>
<td>Armond Acri, representing Save Historic Jackson Hole. I want to start off by recognizing the tremendous effort of...by my count, it has been 41 meetings, which is probably about 750 man and woman hours. That’s just in the meetings alone, untold hours. Outside of that, I think preparing for the meetings and it shows what you guys did. It took a tremendous amount of sacrifice to get where you are. There has been compromise. I know not everybody’s happy with everything. But I think overall you’ve done a good job. It’s certainly been shock full of analysis. Two points I would make in addition to what prett much what everyone with the comments made already. One, there is a thing about the justification which promotes morals. Certainly, we’re okay with promoting health and safety and general welfare but I’m not sure whether you really want those words in there promoting morals—it doesn’t seem to be appropriate. But the big issue for us is exactly what others have said about we support amending and certifying the document that you have, but we don’t support adopting it at this time. Pretty much has been said, we see it as very problematic to try and administer a Plan without the specificity for individual projects. We have some statements about where we’d like to see development, but we don’t have enough detail. We have to think about just a theoretical, hypothetical someone coming in with a property, specific property. We don’t believe you have enough definition yet to determine whether it fits within the guidelines of places where you’d like to have either increased density or decreased density. So you’re just going to create headaches for yourself. We certainly need the FLUPs for the detail to truly administer it and then we can go forward. Amending it we think would be problematic. And probably one FLUP in the ‘94 Plan was the transportation element was adopted separately and it ended up being six years later when...I think it was 2000 and that was a handicap we believe. So, get it all together, send it off, let the electives work on it, let them figure out what to do with what you’ve done, and then get together and work on the FLUPs and then we’ll have an entire document that we can go forward with. Thank you and again I want to recognize your tremendous efforts. Also, I need to apologize as I’m going to have to leave shortly and I don’t want you guys to think that it’s I don’t care. I need to go to the Tribal Trails connector meeting. So I actually would like to stay and hear your discussion, so I apologize.</td>

<tr>
<td>7/1/2010</td>
<td>Bloom, Rich</td>
<td>Good evening, Rich Bloom, and tonight I am speaking on behalf of some of the South Park neighbor groups that I ?? in the last few weeks. You’re going to hear a theme repeated...thank you for all your work by the way and thank you especially to Tony Wall and Barbara Allen for resonating some of my concerns that I have on theme four. I do appreciate that. Likewise, you know, I held back from engaging South Park neighbors until the FLUP maps came back, because that’s really where the rubber meets the road. Now I’m wondering whether that was the wrong move. Because I don’t think it was your intent. I was at the meeting when you decided to separate the FLUPs and the policies and themes, and then decided to wait and see if the electives would simply change the themes and policies before you put your time and effort, volunteers as you are, in the FLUPs. I do not believe that any of the Planning Commissioners that voted for that intended to have the themes and policies by themselves replace the current Comprehensive Plan. I certainly didn’t think that was the deal we made. I know well the current Comp Plan. I’ve read it through multiple times and I know pretty well this Plan before you and where it is right now cannot replace our current Comprehensive Plan. Until we add the FLUPs or use a substitute for those to have the detail, lesser, we won’t have the predictability. And again for those of you that are new to the Planning Commission when some of those decisions were made, it was very clear it was done so you wouldn’t have to repeat work by having the electives state a change of course. So, with that, and I guess for integrity of the process, I would hope that you would amend this Resolution to honor bullet number two the Staff put out there, requesting the Joint Planning Commissions be asked that the Future Land-Use Plan or their substitute following approval of the themes and policies by the electives, and that the elected officials wait to adopt the themes and policies as a formal portion of the Plan having it replaced. Or we will be in a quagmire. What will happen is they will be adopted in with no specificity. All of sudden applications will come forward and we’ll be in a worse situation than letting the current Comp Plan sit until we get this fully done. Thank you. I know you guys are tired and would like to get this done, but I think this is the proper way to do it, and it’s what the community and what I expected. Thank you.</td>

</table>
Good evening, Pegi Sobey, Co-Chair for the Jackson Hole Conservation Alliance. We have submitted written comments on behalf of our Alliance members regarding the administration chapter and hope you will take the time needed to get this section right. And also to promote the Resolution to adopt and certify the 2010 Jackson/Teton County Comprehensive Plan as the Comprehensive Master Plan for our community. I would just like to emphasize a few questions about the certification vote that we believe must be answered prior to your much-deserved break from these Comp Plan discussions. The draft Resolution before you clearly indicates that the themes and policies alone are intended to be our new Comprehensive Plan. This would mean that what was once nearly half of the proposed Plan, the Future Land-Use Plan, will not be considered a part of the Plan itself. The draft Resolution even goes as far as to state that the Future Land-Use Plan could be added later as an appendix. This change from the April 2009 draft Plan warrants discussion and clarification as to the legal implications and the unintended consequences of this significant shift. The themes and policies section alone will not suffice as an acceptable replacement for our existing Plan, because the current draft lacks the maximum level of clear guidance and direction that a Comprehensive Plan must provide. The Future Land-Use Plan was explicitly designed to be a critical piece in order to bring increased predictability to the overall Plan. If the Future Land-Use Plan is not going to be a specific part of the new Plan, major changes must be made to the themes and policies sections to include adequate guidance for the Land Development Regulations and future land-use decisions. We strongly recommend that you adopt the second bullet point identified in the Staff Report and request that your joint bodies be asked to complete the Future Land-Use Plan following approval of the themes and policies by our elected officials. And further, our elected officials must wait to adopt the 2010 Plan in its entirety until completion of the Joint Planning Commission’s certification of the Future Land-Use Plan. For example, if bullet four in the Staff Report is adopted and only the elected officials review the Future Land-Use Plan, does it mean that the Future Land-Use Plan cannot officially be considered part of the Plan? This and other questions need to be resolved prior to handing this off to our elected representatives. To be clear, throughout this review process the Conservation Alliance has raised a number of concerns about the Future Land-Use Plan and we continue to believe that this section needs significant modification. In conclusion, the Conservation Alliance insists that any new Comp Plan must have some component, whether it is the Future Land-Use Plan or simply more narrative in the themes and policies, that will bring increased predictability to the community and provide for enforceable policies. In any case, if it is to be included, the Future Land-Use Plan must be an essential part of—not an appendix or addendum to—our community’s Comp Plan. We therefore ask that the Planning Commissions recommend that the elected officials wait to adopt the 2010 Plan in its entirety until after the Joint Planning Commissions complete the review of the Future Land-Use Plan, and also that you make the necessary revisions to the Resolution to reflect this. Thank you for your hard work throughout this review process and for the time that you as volunteers have spent working to uphold our community’s priorities. And thank you for the opportunity to comment this evening.

At this point, as the comp plan advances to elected officials of town and county, I have two overriding hopes or concerns. One of these is that in rural areas that are of importance to the community in terms of open space, ranching and wildlife values, we move as far away from traditional Euclidian zoning practices as possible, by reverting to base line development potentials and mobilizing, on the other hand, incentives (like the non-contiguous PRD) to shift development into areas that can better absorb growth.

Under the heading of discussion points:

• Are we offering property owners in rural locations as much flexibility as possible in our efforts to minimize the impacts of new development on open space and wildlife?
• Do accessory residential units have a constructive role to play in terms of meeting the community’s diverse objectives?
• Separate from the decision to designate town as a focal point for nodal development, should relatively small and discreet amounts of additional development potential be allowed in areas like Wilson and the Aspens area that have local convenience services (when such development is density neutral)?

Other questions depend largely on how our concluding conversations develop.

| 6/25/2010 | Pruett, Michael       | My comments are specific to the Town of Jackson. I do not feel the growth caps achieve the goals we set for our community. I feel that the Town is the place the community agreed to meet many of our goals including housing, redevelopment, Town is Heart, vitality, character...etc. The community and we have agreed that we need to be “smart” about growth in town, that this is the right place for it because of:  
- Smart growth concepts  
- Existing infrastructure in the town  
- Walk and bike to work  
- Vitality in the town  
- Supports local businesses  
- Supports the tourism business which in turn benefits the community  
- Consistent in maintaining and preserving community character  
- And more                                                                                     |
| 6/25/2010 | Allen, Barbara        | 1) I believe there needs to be reconciliation between the caps placed in Town and our goals in 1, 8, 6 & 4.  
2) Still think that 3.2.b “sales tax collection within the Town must be maintained and expanded” is in conflict with Policy 2.6.c “Do not make land use decision for revenue purposes.” I do not think we should be discussing the expansion of taxes in a land use plan. |
| 6/25/2010 | Duncker, Paul         | Policy 3.2.c: Protect the image and function of Town Square: Last sentence: “Pedestrian only areas around the town square should be considered including the feasibility of closing certain streets to vehicular traffic.” Contradicts Rec# 222: “Identify pedestrian only areas around the town square including enhancement of pedestrian amenities and closing streets to vehicular traffic” Our recommendation was to identify pedestrian only areas, including closing streets to vehicular traffic not just consider their feasibility. |
The fundamental contradiction in the current draft is between Theme’s 1 and 2. Theme 1 states that for ideological, ecological and economic reasons wildlife will be protected and afforded as much opportunity to thrive as possible, cumulative impacts will be monitored and mitigated, and “large contiguous open spaces” will be conserved. There is little that is unclear about this Theme. It sets a high standard that poses challenges for the other seven themes in the plan. Never the less, it is clear this is desired by the community and should remain a preeminent theme going forward.

Insightful public comment has noted that the best way to successfully carry out the principles of Theme 1 while allowing for their common enjoyment by residents and visitors alike is to “rent” our community’s natural resources (here we can consider open space to be a proxy for natural resources), not occupy it. Logically this entails either not allowing any new development (unrealistic) or arranging new development near existing areas of density already impacted by humans, close to public transportation and services, and outside of scenic vistas.

Theme 2 primarily contradicts Theme 1 by precluding such land use planning other than by moving as much new development as possible from the county to the town. While conceptually ideal, reality may prove that Theme 2 as written motivates a dispersed type of ranchette development that contradicts core principles of Theme 1 as well as contradicting parts of Themes 4, 5, 6 and 7.

The reasons lie in how large property owners may interpret their development alternatives as stated in the current draft. “Why is this Theme Addressed?” in Theme 2 states that “increased density and intensity of development” threatens the character of existing neighborhoods in both the town and county and is undesirable. However 35-acre ranchettes are “inconsistent” with Theme 1 and also undesirable. But to avoid 35 acre ranchettes some form of density “bonus” must be allowed. Principle 2.1.a states that such density increases will not be permitted without “defined community benefit” (first and foremost in the way of open space/wildlife habitat if we are to abide by Theme 1, only secondarily for workforce housing). Fair enough. 2.1.c goes on to allow for PRD’s in areas outside of wildlife habitat and “adjacent to existing development”. However inserted between 2.1.a and 2.1.c is 2.1.b that states that no such development will occur in nodes, despite the fact that nodes are largely outside of vital wildlife habitat and are adjacent to existing development. Furthermore much of the open space that is outside of nodes but still “next to existing development” has seen development proposals in the past, proposals that ignited no small amount of debate.

Policies 2.1.d, 2.1.e and 2.1.g provide guidance in how to handle dense development where proposed as an alternative to 35 acre ranchettes: move it into town. However the mechanisms proposed, to my knowledge, have not been evaluated as to their efficacy or viability. I don’t think we know whether the logistical hurdles can be surmounted or whether there would even be any economic incentive to transfer development. Such transfers are at best uncertain.

Thus development under Theme 2 will occur only in town and/or in areas that have already seen contentious development proposals, or it will progress as 35 acre ranchettes. To force development into areas where contentious debate has already occurred is undesirable. And developing 35 acre ranchettes is undesirable as well as being counter to Theme 1. However without a clear mechanism and obvious economic incentive for transferring county development rights into town, such options seem hard to avoid. The fundamental flaw is that mechanisms for density increases are allowed but only in impractical ways, illogical places, or in a manner that defeats the goals of Theme 1.

How about removing the possibility for density increases altogether? That would resolve the issue of where density increases should go, but it would certainly result in 1 in 35 as being the primary development tool, which again contradicts the communities desire to not develop in 35 acre ranchettes as well as contradicting much of Theme 1. Furthermore it contradicts Theme’s 4 and 8 by leading to the potential construction of over 3500 dwellings of the most energy and employee intensive type. Per dwelling unit and per person energy consumption would rise. The need for subsidized employee housing would continue unabated.

Furthermore, if the subsidized housing required by ranchette style development were required to be placed on site, it would potentially lead to clusters of five, ten, possibly more units dispersed around the valley, again contradicting much of Theme 1 and some of Theme 2. Such development would also have a “bar bell” effect on the community by creating a class of service industry and maintenance workers living in subsidized housing along side a class of much wealthier large home owners. The middle class may be left with few housing options other than those that exist today, an amount that will comprise an ever smaller percentage of the overall housing mix, all of which is in contradiction to Theme 4.

To reiterate, the most important contradiction is that Theme 2 contradicts the core of Theme 1 by likely dispersing development throughout the remaining large open tracts of space and wildlife habitat.

Above all, the contradictions in Theme 2 may ultimately render this plan ineffective in meeting the preeminent goals of Theme 1 by actually encouraging ranchettes and dispersing development. Side effects would include a heavier reliance on subsidized housing, potentially dispersed clusters of workforce housing, and/or the increased likelihood of dense development in areas where battles over development have already been fought. Throughout history and throughout the world, when open space was considered valuable, buildings were clustered and building size was minimized. I believe this plan can do better towards both strategies without additive growth.
I see two overarching contradictions between the policies outlined throughout the Revised Comprehensive Plan and the directives the Joint Planning Commission have issued. The first is the elimination of ARU's in the unincorporated county. Apparently, much of the public agrees with me on this. I feel that the abundance of public comment opposed to this directive will insure that it gets brought up for discussion and resolution by revote. The second major contradiction is the elimination of the concept of Nodal development. As outlined in my previous written comment, a nodal development pattern is exactly what we have on the ground in Teton County today, and it is aligned with many of the other significant goals of this plan such as increased mass transit opportunities, compact development footprints and the preservation of open space. Failing to acknowledge this is hypocrisy. Failing to correct it would be unconscionable.

I have organized my reconciliation list to address the second inconsistency (Node elimination) rather than by Theme.

Nodal Development Elimination Contradictions:

• Policy 1.2.d: Improve air quality “Strategies to improve air quality will include reducing vehicle miles traveled.” A nodal development pattern would help reduce vehicle miles traveled.

• Policy 1.3.b: Maintain expansive hillside and foreground vistas: “Development in such areas will retain these vistas by being located at the periphery of the expanse and naturally screened.” The opposite of a nodal development pattern is a sprawling development pattern which would cover the valley floor in a uniformly spaced sea of houses.

• Rec # 172: “Maintenance of the existing residential and/or nonresidential pattern allowed today is the desired land use pattern in the areas formerly known as nodes.” The existing land use pattern in Teton County is nodal. A land use pattern which focuses development to a single area (town) is not “maintenance of the existing residential and/or nonresidential pattern allowed today.” Recommendations #147 and #172 conflict.

• Theme 2, 3rd paragraph text (p26): “35-acre ranchettes are valuable and easy to create but are inconsistent with the community’s goal to preserve large open spaces for their ecological and scenic value. To achieve the community’s ideal of preserving undeveloped lands as perpetual open space, land owners need to be able to achieve value from a development that also preserves large amounts of open space and clusters development out of ecologically sensitive and scenic areas, near existing development.” These sentences explain why nodal development should be preserved rather than eliminated.

• Policy 6.2.a: Develop a land use pattern based on transportation connectivity; That’s a nodal development pattern.

• Theme 8, 3rd paragraph text (p92): referencing the avoidance of sprawling development patterns directly contradicts the elimination of Nodal development pattern. Same is true for Principle 8.2, Policy 8.2b, 8.2c, 8.3b,

Remove language stating that the only Node will be Town, and language that Wilson, The Aspens, Teton Village and northern South Park will be eliminated from the Plan as nodes appropriate for increased development (172 and 147.) Allow PRD development transfers into specific Targeted Growth Areas within these Nodes, as designated by the FLUP, in association with permanent conservation. Once these Targeted Growth Areas have been filled to capacity with transfers related to permanent conservation, all PRD density bonuses will have to occur on site or in other rural areas of the county.

Policy 2.3.b: Fit the contextual scale and design of existing development in town: “development in Town must be consistent with existing contextual scale and design.” This contradicts “Theme 3 – Uphold Jackson as “Heart of the Region” – defines the characteristics of areas in Town appropriate for preservation and areas targeted for growth.” Targeted growth areas will not match the existing contextual scale and design. Omit the sentence.

Conflicts/Contradictions – We need to identify more areas in Town (and the Village) to accommodate the transfer of density from the county. I am not in favor of taking property rights from the county landowners and giving a windfall to owners in Wilson, Racquet Club, etc; however, I would be in favor a creating a multiplier for the PRD and specifying that a certain portion of that multiplier can only be realized in areas designated in Town or in Teton Village as receiving zones. The logistics of this would be left to the individual landowners to figure out.

a. We have unintentionally, but with good intentions, created a contradiction between Theme I, the Transportation Chapter and the Energy Chapter by not forcing remaining development into the denser areas. I am not in favor of density bonuses for specific end product; however, I would be in favor of upzoning some areas with the parameter that the upzone can ONLY be used if it a development right is extinguished somewhere else.

b.2.1.d. The last sentence of this paragraph “and encouraged to be designed provide workforce housing” is not an accurate representation of our discussion. Our discussion was to incentivize the conversion of commercial to residential. This would trigger an affordable housing requirement. We DO NOT need additional language hampering this effort by suggesting that it will “be encouraged to be workforce housing.”

c. Ref Recommendation 174 and 175, I think we need to discuss the conflict of the chapters I referenced in point a with the possibility of identifying some receiving areas in Teton Village rather than the outlying county again ONLY if said density is transferred from another location.

<tr>
<td>6/25/2010</td>
<td>Newcomb, Mark</td>
<td>As for Themes 3 and 4, the potential available housing supply in town will fall well short of the demand generated by this plan even if very little or no development is transferred from the county. Also the density asked for of town may be unpopular and resisted by a large enough segment of the community to render this goal unattainable. And the conversion of existing non-residential to residential mentioned in 3.4.a is untested (i.e. the relative levels of commercial rents to owners equivalent rents that would drive such a conversion have not been examined), and the amount of housing conversion will create remains uncertain. Given the above, Theme 3 may well contradict Themes 1 and 2 by placing an impossible burden on town and forcing dispersed pockets of workforce housing back into the county. If workforce housing is forced out of the county due to contradictions in Principle 2.1, an increasing number of employees will seek homes outside of the community, contradicting Principle 2.5.</td>
</tr>

</table>
| 6/25/2010 | Wall, Tony    | 1) Places where the desire for “predictability” is affirmed:  
   a. pg. 25 “Development that is not predictably managed to enhance community character will degrade it”  
   b. pg. 26 “The community now desires predictability”  
   c.2.3 (pg. 32) “Conservation and development will occur in a predictable pattern and with a predictable character”  
   d.2.3.e (pg. 34) “Limit discretion in land use decisions” and “discretionary regulations and incentives do not provide predictability”  
   Places where the concept of “predictability” is contradicted (ANY reference to UNQUANTIFIED “bonuses”, “incentives”, or “conditional” developments  
   a.2.1.c (pg. 28) “Allow residential density bonuses in order to conserve open space” without any quantification this statement directly contradicts “predictability”  
   b.2.3.e (pg. 34) “the intent and limits of the incentivized or conditional development will be clearly stated” which is saying that incentivized and conditional (both unpredictable) development is OK if it is “clearly stated” undermines our desire for predictability  
   c.4.3 contradicts the desire for predictability when it says that we will “provide incentives for the preservation and creation of workforce housing”.  
   This is repeated in 4.3.a. Both of these errors could be corrected by adding the language “without increasing the potential levels of density or intensity”  
   2) 2.1.e (pg. 29) Allow development of County residential potential in Town” is contradicted by vote #144 which FAILED to approve TDRs  
   3) 2.2.c and 2.2.d appear to contradict each other. One advocates for “clustering” non-residential development, then the next one encourages “dispersing” of that same development  
   4) Place where a residential development “cap” is noted  
   a.2.1.a (pg. 27) “Limit base development rights to those allowed today”  
   Place where the development “cap” is compromised  
   a.2.1.c (pg. 28) “Allow residential density bonuses in order to conserve open space” If the phrase “without increasing the potential levels of density or intensity permitted under the 1994 Plan” is added to this statement then it would not conflict with the concepts of “no additive growth” and “predictability: |
My comments are specific to density and caps on residential density in town Principle 2.1 and Policy 2.1.a. I think having a cap on residential development in town is inconsistent with any redevelopment in town and constitutes a “no growth” policy. A hard fast cap on residential development is not the solution we need – it is in direct conflict with providing housing for our workforce, local jobs, and supporting local businesses. It is in direct conflict with Theme 3 Town is Heart. For example under the current plan we would not be able to find any high density areas to meet the community’s goals of rental housing and workforce housing within the caps. This is inconsistent with the Theme 3, 4, and 5 and will stagnate our town. I propose that Principle 2.1 and Policy 2.1.a be revised to allow residential growth above the caps in specific areas (targeted growth areas) and for defined community benefit as follows:

- Workforce housing
- Market rate housing
- Apartments
- Etc.

My other concern or hope is that we embrace as directly as possible the idea that sustainability practices should be applied to land use planning and that we acknowledge (and manage) as a community the direct and excessive bearing that prosperity has on energy usage.

Reconciliation #2

My comments are specific to caps on nonresidential density in town Principle 2.2 and Policy 2.2.a. I think having a cap on nonresidential development in town is inconsistent with redevelopment in town and constitutes a “no growth” policy. A hard fast cap on nonresidential development is not the solution we need – it is in direct conflict with providing redevelopment (theme 3), providing local jobs (Theme 5), new lodging (theme 3) and supporting local businesses (theme 5). For example without the ability to discuss the appropriate nonresidential allowances in the Lodging Overlay we may not be able to implement the future vision for downtown in Principle 3.2 and Polices 3.2.b & d. This is inconsistent with the theme 3 and will stagnate our town. I propose that Principle 2.2 and Policy 2.2.a be revised to allow nonresidential growth above the caps in specific areas (defined in FLUP) and for defined community benefit as follows:

- Redevelopment to implement vision for downtown “lights on”
- Lodging
- Local jobs and businesses
- Etc.
Areas of Existing Dense Mixed Use Development (Nodes)

Principle 2.1.b Preserve existing county neighborhoods (development in existing nodes, except Town to remain at existing levels). This Policy is contradicted by the following policies and principles:

- Policy 1.1.a …encouraging clustered development to be located outside the NRO
- Policy 1.1.d …conserve large, contiguous, and connected open space
- Policy 2.1.c …Teton County will encourage that development resulting from bonuses be clustered outside of crucial wildlife habitat and scenic corridors, adjacent to existing development
- Policy 2.2.c&d …cluster county nonresidential development and encourage local convenience commercial in appropriate areas (If you add more commercial development to theses existing nodes but do not allow for additional residential units, who will work at and or patronize these businesses? People from Rural areas, from Town, or neighboring communities will commute to support these businesses, increasing traffic, adding to pollution, and intensifying wildlife conflicts.)
- Policy 4.1.a …achieve all four housing goals (Town can only fit so much density, once this level has been reached, and if additional density can not be added to the existing nodes, the only place for homes to be built are in the large undeveloped open lands within the County. Lots/homes developed in this location will most likely be large in scale and very likely owned as second homes. But by allowing density to be incorporated within existing areas of dense development more small lots/homes will be constructed that are more likely to be occupied, full time, by members of our workforce, therefore reducing traffic and pollution and adding to our sense of community by having homes occupied year round.)
- Principle 6.1 …increase the share of trips made by alternative transportation modes (Because of convenience, people living in areas of existing dense mixed use development are more likely to walk/bike to work, run errands, visit friends, etc… than those living in a more rural setting.)
- Policy 8.2.b …encourage mixed use, compact and connected land use patterns
- Policy 8.2.c …guide future development into already developed areas
- Policy 8.3.b …promote alternative modes of transportation (See Principle 6.1.)

Accessory Residential Units (ARUs):

Strategy 2.1 ...prohibit accessory residential units associated with residential development in the County (Does this eliminate Guest homes entirely, or just renting them, ie, ARUs? If this eliminates Guest Homes, I feel that his is contradictory to other sections of the plan that encourage the maintenance of community character. If guest homes are eliminated, people will build larger homes with attached guest wings, which will increase the bulk and scale of the dwellings. It is my opinion that clustered smaller homes (main houses and guest houses) are more line with our existing community character than single large scale homes.

Retain Base Zoning Allowances (Caps):

Policy 2.1.a ...limit base development rights to those allowed today. This Policy is contradicted by the following policies:

- Policy 2.1.c ...allow residential density bonuses in order to conserve open space
- Policy 4.3.b ...allow for density increases for restricted, workforce housing in targeted areas of Town

How can density bonuses be granted in the above two instances if development rights are to be limited at those allowed today? Instead of having an absolute “cap” I think it would be more beneficial to have the build out set at what is allowed today but allow the number to be flexible by +/- 5%-10%. This is important for two reasons. First, over the past 12 years I have seen more development units be given up for tax write offs than have been added using density bonuses. I have spoken to staff and this observation has been confirmed. Therefore by having a cap we actually have a number that will constantly be declining. By allowing bonuses we are more likely to stay closer to a constant build-out number. Secondly, allowing for appropriate and permissible density bonuses can be a very useful tool for the planning staff and the elected officials when dealing with either a difficult or desirable project.

Policy 8.2.b – This is in conflict with language in Theme III about stable neighborhoods as well as with zoning in certain areas. While I am in favor of the concept, it needs to be modified to make this policy appropriate.
Policy 8.2.c is inconsistent with Theme II and with the decision to cap growth. This needs to be reconciled

“Energy costs are also greatly impacted by the energy demand generated by development patterns. Sprawling development patterns increase infrastructure, service delivery and transportation costs for residents. Further, by reducing energy consumption the community reduces its reliance on foreign non-renewable energy sources. Thereby increasing our energy security position and creating benefit to our national security.” (This is precisely the justification for a Nodal Development pattern rather than a sprawling development pattern.)

</tbody>
</table>
| 6/25/2010  | Duncker, Paul      | 1) Theme [4] Workforce Housing definition: Seriously, you can’t call it “workforce housing regardless of employment.” Omit the words “or employment” and add a sentence including retirees as part of the historical workforce.  
2) I agree with the Conservation Alliance’s 5/28 comments regarding this Theme as they relate to Affordable Housing (which is one component of Workforce Housing.) More specific explanation of our Affordable Housing program needs to be included. Why it exists, what it’s goals are, how they’re being achieved, what needs to be reevaluated & update in this plan. Specifically, new ideas are included? |
| 6/25/2010  | Newcomb, Mark      | I find no glaring contradictions in Theme 6. However there is a critical lack of emphasis on human safety. The current development pattern has resulted in a large west bank population while our hospital is on the east bank. If a major incident (an explosion perhaps, or a fire at the urban/wildlands interface) were to occur simultaneously with an accident on the Snake River Bridge or at a similar constriction elsewhere in the county, we may lack adequate alternatives for rerouting emergency vehicles in a way that will effectively handle people needing emergency hospital care. Perhaps local fire and EMS have already planned for such contingencies and have viable plans in place. If not, the issue should be considered and taken into account when making decisions about transportation planning. |
| 6/25/2010  | Duncker, Paul      | Policy 6.1: The term “year around mode shift” should be “year round.”  
Strategy 6.7: Establish a Regional Transportation Authority: I support the concept, as well as joining the Linx Co-op, but they’re two separate entities. The Linx Co-op is a regional transportation network, a Regional Transportation Authority is a policy making body charged with identifying and funding projects and initiatives. |
<p>| 6/25/2010  | Newcomb, Mark      | Theme 5 is broadly contradicted by Theme 2 due to the potential stifling effects of Theme 2’s contradictions and associated uncertainty. As stated in Theme 1 the health of the county’s natural resources is critical in preserving the visitor service segment of the economy. If development in the county is comprised largely of ranchettes, it may impact the visitor experience. Furthermore if price incentives do happen to drive the conversion of non-residential in town to residential, it may suppress entrepreneurship (other than in the long term rental market) and impact economic vitality. It may also become more difficult to accomplish the goals of self reliance and diversity as stated in Theme 5.3. |
| 6/25/2010  | Allen, Barbara     | I cannot recall whether in our second review of this we agreed to the rewrites that are throughout. I thought this was one of the only chapters where we did actually vote on exact wording. I am concerned with the insertion of the word “sustainability” which is then tied to the concept in other communities. We voted to redefine the phrase, and I thought, remove much of it because we were concerned by the implications or the standard definition in other areas. |
| 6/25/2010  | Allen, Barbara     | I still think that this is a superfluous chapter, but will bow to being outvoted in every vote on this one.                                                                                                    |
| 6/25/2010  | Duncker, Paul      | I support the inclusion of the Jackson Hole Chamber of Commerce recommendations.                                                                                                                       |</p>

<tr>
<td>6/25/2010</td>
<td>Wall, Tony</td>
<td>1) pg. 54 The third housing issue “Catching Up to improve on existing situation” is in direct conflict with the goal of 65% and the acknowledgement that we are currently in excess of that number. There is no justification given for “catching up” - “Maintaining our current levels” should be the title of this bullet point. In the indicators section the goal should be changed accordingly from “Increase” to “maintain”. The language on pg. 55 “the community’s goal is to increase the percentage of the workforce living locally” is also in conflict with the fact that we are currently in excess of our goal 2)4.2 (pg. 58) “developers ….will be required to mitigate a portion of their impacts” is in direct contradiction to the achievement of our goal of housing 65% of our workforce 3)the goal in Theme 4 Indicator #1 to “increase” the % of the workforce housed locally from today’s number should change to “maintain” if we are currently above the established threshold 4)the goal in Theme 4 Indicator #7 should be changed to “maintain” for the same reason 5)The definition of Workforce Housing (Theme 4) is even more vague than in the original draft – there was considerable PC discussion and Public Comment about creating a NARROWER definition – not a BROADER one. By not defining WFH more narrowly we would be undermining the opportunity to achieve the 4 goals set forth on pg. 54</td>
</tr>
<tr>
<td>6/25/2010</td>
<td>Allen, Barbara</td>
<td>1)I do not think it generally reflects our discussion 2)I think definitions on page 55 need to be removed 3)Ref rec 263 – I do not see where this was incorporated into the chapter. The bullet point where this is footnoted does not pertain to the intent of this vote 4)Generational Continuity: Phrase “Community members that grew up here have a greater appreciation for the shared values of the community and its history.” I do not believe this was in the last version and would like it taken out of this one. I’m fine with “play an important role” or something of that ilk. 5)Problem 1: Statistical info at beginning of chapter discussing median income etc is no longer accurate 6)I do not think Rec 272 is accurately reflected in the text 7)Policy 4.1.e is very vague and I’m not sure it addresses the discussion 8)Ref Policy 4.2.c – This is a repeat of policy 2.1.d and does not accurately reflect our votes in rec. 34, 35 and 36. We did not incentivize the conversion of non-residential to residential with any stipulation as to the “encouragement of workforce housing.” 9)Principal 4.3 – this rewrite does not reference any recommendations nor does it accurately reflect what we reviewed in the previous version. It does not reference the rental housing issue that redevelopment impacts nor does specify what the word “incentive” means. 10)The concept of the “middle class” was a frequent conversation in this chapter, but not addressed in this chapter. Text needs to be added that recognizes that deed restricted housing raises the end price of the final product and prices out any “middle class” housing that may have existed without a deed restriction. Language should be added regarding potential size constraints to help create “urban” housing that is more efficient and that is more affordable based on the unit size, not based on a deed restriction Indicators – I do not recall or read a recommendation where we agreed upon 65%?</td>

Subject: Please add these comments to public comment for the Administration Chapter - Thanks!
From: Gail Jensen
Sent: Thursday, June 17, 2010 2:38 PM
June 17, 2010 Gail Jensen Comments
Administration Chapter
• This is one of the most important chapters of the Comp Plan. It deals with trust and commitment from our County Employees, Elected officials and Community to support this Comp Plan.
• I support all of the JH Alliance’s comments. I also hope that each of you has read and considered Roger Elletson’s comments made May 18th of 2009. I have similar concern’s and spent the better part of the last 3 years entrenched in the processes he describes.
• Page 140 The Community. 2. “Where government and other organizations are falling short in the implementation of this Plan, the community will hold them accountable and take additional action where needed. How can the community hold the elected officials, Planning Director, County Deputy Attorney, County Agencies, and Planning staff accountable? Let’s talk about the realities of our current government when a community member has a complaint with enforcement or an interpretation that is inconsistent with the Comprehensive Plan and/or Land Development Regulations. If it concerns one of many possible Planning Director decisions or interpretation’s, then the community member or community group must file a written appeal which includes an $800 fee, go through what is now a lengthy legal process, which will ultimately involve hiring an attorney and all this without our elected County Commissioners ever weighing in. Now the County Commissioners can not talk to the community member as there is a legal process that must be followed. The Deputy County Attorney always represents the Planning Staff which is at odds with the Community over the complaint. That same Deputy County Attorney also represents the Elected’s. Now an out of town hearing officer is appointed which generally is an attorney from an adjoining county which knows and is very familiar with our County Legal Staff. They expect to hold a “court like hearing” and really do not like the public speaking. Anyway, I hope you get the point and see where this is going. There is no reasonable system in place to hold accountable, the people that are employed by our county, paid by the citizen’s and that are tasked with representing our Comp Plan and LDR’s as written and approved short of litigation.
• Following and enforcing our Comp Plan and LDR’s is not optional.
• In this chapter there needs to be written commitments with a specific resultant action taken when this Plan is not followed.
• Teton County Governments policy of no enforcement is this: Let’s bury as many conditions of approval and restrictions in HOA Covenants so that the County is not responsible. The Commissioners feel good about the approval as they have throw in conditions etc. The result pits neighbor against neighbor. Please put enforcement language in this Chapter!
• The Community at large has lost confidence in our County Government and more specifically in the Comp Plan process. We need to feel that we have a role and voice and know that ultimately what we say does matter. An every 5 year review meeting with the community is not enough. The Planning Department needs to reach out to the Community and communicate with us.
• How many people are in this room tonight? Why isn’t this room filled? This Chapter must be written so that we have accountability, enforcement, predictability, and which embraces and encourages Community involvement.

2
Thank you for considering my comments,
Gail Jensen
My comments are directed towards theme 8. Policy 8.1.a: Shift Community energy consumption behavior. The community will probably need some very hard line rules and regulations to get the point across i.e. more modest dwelling size limits, no heated driveways, etc. Policy 8.1.b: Encourage Energy conservation through energy pricing. Energy pricing structures need to be steep and really hit the pocket book to be effective. Pricing could be tiered to penalize large energy users/wasters. Policy 8.4.a: Construct Energy Efficient Buildings. I would encourage the Town and County to not only adopt the most current energy and building codes, but also go beyond and require additional higher standards for our local climate/location in warranted situations. Along with requiring top notch energy and buildings codes, the contractor licensing program and building inspection process may need more monitoring. The basic building inspection process should be expanded upon even though it will increase the cost of permitting. Policy 8.4.d: Energy Efficient Building systems and appliances. Wording needs to be added to include "building envelopes". Policy 8.5.a: Encourage water conversation. Be sure to address smaller/older/private water systems that might not have the pumping capacities to handle even minimal revegetation/landscaping requirements and fire sprinkler demands required by the regulatory agencies. Trophy homes use more water! Not allowing pond construction helps keep aquifers intact. Strategy 8.2: Develop a comprehensive Sustainable Building Program - Add a requirement of a maximum residential square footage of 5000 feet. - Develop some performance standards for all housing that confirm codes are being met (not just in LEED construction). Strategy 8.3 Education. In the last bullet of this section change the word "encourage" to "Require" the use of energy efficient building systems and appliances. Thanks for all your time! Dave Coon

6/17/2010 Coon, Dave Interested Public

Strategy 8.4 and Policy 8.5.a: change to actively pursue incentives to reduce water consumption rather than a sliding scale for pricing

6/17/2010 Joint Planning Commis

8.4.e: incentivize smaller buildings in town and county

6/17/2010 Joint Planning Commis

"Why is this Theme Addressed": amend to indentify the policies of this Theme as an obligation not an opportunity

6/17/2010 Acri, Armond Save Historic JH

Madam Chair, members of the Commission, Armond Acri, representing Save Historic Jackson Hole. A couple of quick comments. One thing, I would urge you to use caution in the one statement about relaxing the Regulations to encourage sustainable energy. That is good, but we have to be careful, especially when we think about it in terms of relaxing things for wildlife. But two quick examples to think about. One is certainly we’d encourage people to use outdoor drying in good weather like this, but we do need to be cognizant that one of the things that the Game & Fish does get called out for is for moose especially getting caught in clothes lines and stuff. So, that’s not to say that we should not encourage people to dry their clothes outside, but again we need to be cognizant that we’re in a little different world than other people. If people use clotheslines, they should probably make them break away so there’s not a problem, you know, as an example. The other example that I would use is one that was in Town now. Members of the Town Commission at least are familiar with, which was the refuge project on North Cache where they were proposing to put wind turbines on the top of their building to boost their energy. And while that was a noble cause, I’m grateful or thankful that they at least withdrew that part of the project, because the concern there is that we spent a lot of money burying the power lines there to protect the trumpeter swans that use that corridor there along Flat Creek. And on a foggy day, that would potentially be a disaster. We only need to kill one or two swans a year to have a pretty catastrophic effect. So, we do need to be cognizant of that. And that’s another example of where, as Nancy Taylor mentioned earlier, the wind is not at efficient here. Certainly, if we have a good application and a good place to do it, we should encourage people to use it, but we shouldn’t just relax the standards and lose sight that we are trying to protect our wildlife. One other thing. We did have written comments but I would like to reiterate one point there because I have not heard anybody else say it is that one of the ways that we can use less is by avoidance. And that is something that we should always examine I think is whether we really do need...do we need a building or do we need a building to be as big. That should be the first policy in anything when you look at the...the mantra is always reduce, reuse, recycle. So, in this case, it would be reduce, do we need a building in the first place, is there a building existing that would work, or can we make the building smaller, to make the footprint small. That would be a good thing. One last thing then on the administration chapter, as Tony Wall pointed out in his comments, this is a community plan and we feel pretty strongly the community should be allowed to make proposed changes, not just to the administration chapter, but to the other parts. We don’t see any reason why the community shouldn’t be allowed to at least propose those and then go through the regular process. So, thank you and keep up the good work. It is appreciated, and you don’t always hear that.

<td>Bruner, Kristy Bruner, Jackson Hole Conservation Alliance</td>
<td>Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. Tonight I’d just like to emphasize one topic as it relates to the administration chapter, which is the future land-use plan. For our other points on this chapter, we would just refer you to our written comments. In reviewing the admin chapter, we believe it’s very clear how critical of a role the future land-use plan is expected to play in the Comprehensive Plan as a whole. As we voiced last week, we believe it’s very important, prior to completion of your review, to provide additional comments and guidance on the ultimate role of the future land-use plan. You know, based on the previous vote, a statement that the FLUP maps are off the table for now, we believe you need to move beyond that. It’s really necessary to get the public and the elected officials a clearer idea of what to expect moving forward. Essentially, the Alliance wants to see the themes and policies section and the future land-use plan combined as originally intended and outlined in April 2009 draft to create a new Comp Plan. We believe that the themes and policies portion that you’ve reviewed to date cannot stand on its own as this replacement of the ’94 Plan. So we just ask, you know, please include this in your discussion on the admin chapter this evening. This could entail just at a minimum just discussing a very basic question: Do you envision that the 1994 Plan will only be replaced upon adoption of both the themes and policies and the future land-use plan at a future date whenever you review that? Or are you to even envision that this part of the Plan that you’re moving forward could actually suffice as a substitute or a replacement of the ’94 Plan? Again, we would really appreciate this and it’s really to ensure that everyone involved has a clear understanding and is on the same page as we move forward. Thanks.</td>

Gregory Griffith, West Bank. I’d like to get real quickly on administration. It follows very closely to what Gail was saying. We have a major problem. It almost reaches crisis proportion in this County at times and also it involves the coefficient between enforcement, enforceability and the writing of our documents. We have written documents so poorly in the past, Master Plans, LDRs, you name it, that they’re virtually unenforceable. It’s a major problem. We’re going to have to send forth a very strong recommendation. Most of the acrimony …I don’t think I’m engaging in hyperbole if I say most of the acrimony contentiousness in this County is based on the nebulous language, selective interpretation, etc. We’ve got to do something about it. As far as the inconsistencies go, members of Staff have been quoted in the paper this past week or the week previous, whenever, they keep talking about the inconsistencies, etc. I’m not going to hammer on Staff or anything, but the idea—actually, I brought it forward way back in the day—that we should balance the statements of ideal with statements of intent. It would give us a way out of some of these contextual conundrums and these opportunities for selective enforcements, etc. Most of the major documents through our world history had a preamble, bill of rights, etc., that condenses the intent of the community at the time. With all due respect, the same Planning Commission, the same Staff, the same electives and the same members of the public won’t be involved in a lot of these decisions down the road. It won’t be any context of the way the document is written now. And again I explained last week for those of you who weren’t here that I don’t put any blame whatsoever on you for that. It takes a Village so to speak. Also another suggestion would be somewhere just subsequent to the administration chapter I imagine, there should be some acknowledgement that we would have benefited greatly if the crafters of the 1994 Plan would have had the foresight to say, look, we’re tired, we’re worn out, 15 years from now those individuals—us now—would have benefited from a list of what worked, what didn’t, this would have helped, this wouldn’t. We almost owe it to future generations to provide almost a primer forewarning to future generations on precisely how not to run a Comp Plan process. And I don’t say that with sarcasm or a feeble attempt at humor. We owe it to ourselves and to future generations, because a vision is possible to prevent some of this contentiousness, some of this acrimony, etc. So, that’s something to consider while it’s fresh on our mind. Fifteen/twenty years from now, the same—again, as I’ve just stated—the same people won’t be involved in the next process. So, we as a species don’t often think of the next generation, and it’s an opportunity to do so. Theme eight, I actually commend Staff for as little input that you got in the public, in open forum, and from the Planning Commissioners, this is really good, it’s really good, has really good writing. I have a…maybe it’s semantics, but sustainability, even the word, I really don’t think anything we do…our lifespans aren’t sustainable, our life style is not sustainable, our resource extraction rates aren’t sustainable, our population rate of growth isn’t sustainable. So, even though it may be semantics, I would suggest we go back to the document where it says sustainability, change it to more sustainable, so it’s aspirational instead of...we’re never going to attain sustainability. We can always strive for more sustainable. Again, maybe it’s semantics to some. Theme eight, the follow-through is going to be the most important. If we wanted to follow through with whatever we suggest and whatever we aspire to, we’re going to have to follow through with it. You know, I could give a million examples, but if we look very closely here right now, brown, in the hills above us, brown is the new green. It’s going to have enormous implications for fires, species loss, basic weeds, landslides, erosion, etc., etc. This is a good place to incorporate some of the skills and acumen of the Environmental Board, the Environmental Commission—they’re calling it a Board now. The last thing I’d like to say, it’s on the heels of what I said last week and I meant every word about how much respect I have for an unpaid body of volunteers to go through this much angst where no matter what you do, it’s wrong, you know. Whatever decision you make, somebody’s in your grille about it. But I really think there’s a small chance—and luckily it’s only a small chance—that some may try to devalue your effort by throwing this back to you. I think maybe it’s a 15 or 20 percent chance the electives in an election year may say go back and work on it. I would urge you to say, look, we’ve got individuals who are getting paid to make these decisions and the public has a right to vote into or out of office individuals based on what they do and how they vote, not what they say. So, don’t let anyone devalue your efforts; I’d greatly appreciate it. Thank you.

Thomas, Shirley
Interested Public

Hello. My name is Shirley Thomas and I live in Teton County, Melody Ranch. And I just had an idea as I read over the sustainability energy conservation theme. One of the things that came to mind is that maybe we can incentivize people in decreasing the amount of their trash by basing the rate on weight. And I don’t know if this is even feasible. You know, I have a bag of trash this big every night, a little tiny bag, because I compost and I do all kinds of things to reduce my weight. So, if everyone knew what I know and could do that, maybe an incentive, as far as what our waste removal would be, our garbage prices, even if it’s based on possibly containers, size of containers, or whatever, or a weight on a truck when they lift the bins. I don’t know whether that’s even feasible, but it’s just something to think about to reduce our waste in general. That’s it. Thank you.

Joint Planning Commiss

8.5.b: last sentence, amend to read: ...the County, and "designate appropriate locations for a potential landfill site within Teton County."
Good evening. My name is Nancy Taylor and I have two different hats I’m wearing tonight, so hopefully you’ll bear with me through two different testimonies. The first one is that I’m on the board of the Jackson Hole Conservation Alliance, so I’ll be making the comments for the Alliance tonight, and then I’ll tell you what hat I’m wearing for the second one. So, thank you, on behalf of the Alliance, for letting us comment on this energy conservation chapter. And please refer to the Alliance’s written comments for further explanation of these few bullet points that I’m going to make tonight. It’s really important to have this chapter on sustainability and energy conservation. But part of the original intent of the Plan was to leave sustainability throughout each theme, and that seems to have maybe fallen into the background somewhat. So we ask you to bring it up to the forefront to be sure that the whole content that’s outlined in theme eight is also woven through each of the chapters, so it becomes an overarching, oh, guidance, I would say, for the Plan. The Alliance has always focused on kind of the big picture of this Valley and researching sustainable energy practices. And we’ve consistently worked for reasonable amounts of locations of development to meet the community needs. But always the kind of overarching theme of the Alliance has been resource protection, which in the end is a very sustainable form of land-use planning. A couple of points to make. Conservation of energy is fiscally responsible, but as the economy kind of limps to a recovery, if that’s what we can call it—I’m not even sure it is limping at this point—sustainability often gets pushed to the back burner and is not given such a high priority, probably because sustainability is so hard to define, that kind of by default it takes the background. So I urge you to keep it in the forefront, even if the economy is limping through Jackson Hole. So education is key, education of the public, and related industries will be a critical component of the success of the goals of this theme. It needs more emphasis. So we’d like to emphasize education as a key part of this theme. There’s a couple of different definitions. The original one in the vision statement was from the ?? Commission and that was changed by...I’m not sure if even the ?? group that changed that is still here, but it was right at the beginning. So, and now there’s kind of a different definition. So if you could reconcile the definitions of sustainability, that would be really helpful I think for the public, and the Alliance urges you to do that. The theme gave mention of the commitment to keep up with technological advances, both as technology rapidly changes in the green-building industry, what is a best practice for green building today changes by next year, probably governed by the industry and the new materials that are coming out. And also the technological changes that take place in terms of renewable energy. So we just urge you to somehow incorporate in this theme to stay current with the technological advances in energy conservation as building practices. Originally, the original intent of the Energy Efficiency Advisory Board was to have subcommittees. Some of those committees I believe are still functioning. Many of them are defunct. But all of them had a tremendous amount of input to get us to where we are now. And so if it would be of help, I’d suggest reconvening the committees, or at least working with the energy sustainability project so that the work of the EEAB isn’t...you don’t have to reinvent the wheel and that work is incorporated. When discussing disposal of waste, please take into consideration more innovative reduction strategies, noise reduction strategies. I know that now the Recycling Center is a joint power board of the County and yet they’re somewhat inhibited by the market and what the market will bear in terms of recycling practices. So maybe theme eight can address that or help them move it further down the road. This theme should outline energy resources that we have here and explore whether it’s really viable to...well, it would be important to prioritize the resources that are available. It isn’t mentioned anywhere in theme eight that ?? solar is a really good resource. So, if you’re considering retrofitting, orienting even acute windows in a retrofit can make a difference in terms of a very low-cost way of generating heat in a home. So ?? solar isn’t really mentioned as a strategy, and in my personal comments mentioned that land was a valuable resource immediately at this time. So, to just kind of reiterate the first point. The Alliance feels it’s really important to weave sustainability throughout all of the chapters, all of the themes. And I hope it can become an integral part of the whole overarching part of the Plan. So those are the comments from the Jackson Hole Conservation Alliance.

<td>Taylor, Nancy</td>
<td>And the other hat that I’m wearing is that I’m an author and I wrote a book called Go Green – How to Build an Earth Friendly Community. It was published in 2008 but much of what’s in it is still relevant. So just in my role as an author and member of the community, I wanted to say, however we think about sustainability, we must consider what we are sustaining. This is a fragile...this ecosystem here, is a fragile part of our Plan. We have a short growing season, we have a migration route for a fragile population of animals, and a community filled with both human and financial resources. What we choose to sustain will be determined by this Comprehensive Plan, the Regulations that accompany it, and the elected officials and Planning Staff that implement it. The way we live now in Jackson and Teton County is unsustainable. I think all of you know that. I would suggest that we use our creative resources in this room and engage those who are not here to find a way to truly live in harmony with the wildlife and natural resources that are here. Instead of focusing on becoming an example to the rest of the world, which is a noble vision, why don’t we first help each other live in a way that truly has minimum impact on the planet and each other. We can do this through education, through example, through demonstration projects that teach our residents how to save energy and money at the same time. And through offering residents financial incentives to change their behavior. If our community values and embraces the idea of creating green jobs by retrofitting our homes and businesses, the benefit will go far beyond creating energy-efficient structures. We will be building a community of diverse individuals who not only feel the power of place, as the Chamber of Commerce motto states, but we will create an empowered community that understands how to live in harmony with this place. Thank you.</td>

<td>Shuptrine, Sandy</td>
<td>My name is Sandy Shuptrine and I am a member of the Energy Efficiency Advisory Board, which did submit some comments related to the energy conservation chapter to you. We are not seen in any of those comments are yet reflected in the drafts that are available. But I probably heard last week that comments that were submitted by the deadline were incorporated. So, partly I have a question I guess about what’s going to become of those comments that were submitted? I don’t know. Okay. And having said that, we would appreciate your consideration of comments that were made. My particular interest is, as it relates to principle 8.3, transportation, I would like to say that I think that this is very minimalistic in terms of your own study that certainly transportation is one of the major contributors to ?? in the Valley, 80 percent basically. And I would ask you to please fill this out utilizing some of the comments that we have submitted to you and with recognition of alternative fuels and vehicles as well as other strategies that help to minimize transportation. And the other thing that I would like to just point out to you is that I know that you were looking for inconsistencies and you probably found this one already. But this chapter is inconsistent I think with some of the other areas, in particular as it relates to development patterns. And it’s important from a transportation aspect to try to keep development as consolidated as possible, which is mentioned in here, but I’m not sure that it’s consistent throughout the Plan. So that’s just one of the things I’d like to point out. Thank you very much.</td>

<td>Hoffman, Nancy</td>
<td>I’m Nancy Hoffman. I’m a resident of Teton County since 1978. I’m speaking for myself. I look at this community, and having lived here as long as I have, I’ve seen many changes and I wonder now whether the Plan of ’94 was really...it had wonderful goals and I’m wondering how much they were met. In doing a revision of a Plan or even rewriting it, I feel that we needed to analyze what didn’t work in this old Plan and try to make it different. Make it better. And the most important thing I feel we should concentrate on is enhancing our quality of life. We have such a unique community. We go around the country and we look at the different environments and we look at how we have...we have such a special place. And our whole goal should be to keep that as special as it possibly can. We don’t want to turn around and become a town like anyplace else. We’ve talked about that before also. We get away with Wal-Mart. That’s one example of how we can make a difference. We can take the ball and run with it.. The policies of this particular Plan do not meet even the criteria that we had in ’94. And, as has been spoken to recently loud and clear by so many of you in the community, that I think that we cannot deny that this is still our goal, the preservation of not only our lifestyle but our national environment. To preserve it on. The Plan, presently, two examples of where it doesn’t meet the goals is the up zoning and new commercial where we have plenty that hasn’t been developed at this point. And then the incentives that are built in for growth. This is almost an anything-goes plan, and I would hope that you would all reconsider it. Thank you.</td>

My name is Becky Woods. I hope you bear with me if I ramble a little bit because I didn’t have time to really prepare any remarks. I was so surprised at Wednesday’s Daily saying nodes were going to be revisited, and come Thursday night, and I went, ohmygod, okay, I’ll be here. I hope you stick with your original vote. That original vote came after several years and much consideration. The Planning Staff, the PowerPoint slide shows, and newspaper articles, had neighborhood meetings and laid it all out to our community. Based on the accurate information they gave, the community carefully considered it and said this is not what we want. Why did they reach that conclusion? Well, there was a variety of reasons, but I think the main one was additive growth. To have a node, you have to concentrate growth in one area. That land is owned by X number of landowners and under the existing plan are only allowed so many units. To concentrate that growth, they get more units, or more growth. To not have additive growth, you have to transfer development rights from somewhere else. Yet, the Plan had no accurate or reliable means of transferring growth from other areas. So, what you opened yourself up to is sweetheart deals, where developers come in and talk to people who have land on a hillside that will probably never really be developed, a farmer in Town or ?? and say, look, we’ll buy your development rights if you let us put more units on our property. It propels growth. The community understood that and said, this is not what we want. We are already under existing base development rights that would double our population. Growth impacts every other aspect of the Comprehensive Plan. It impacts our open space. It impacts our scenic vistas, our wildlife and, yes, our transportation plan. Rather than going backwards, because you’re struggling with making the transportation plan work, I suggest you look at the current proposal of no nodes and figure out how to make a transportation plan work for what that is. Concentrate on the current areas where we have the greatest population, make the system efficient, and as the Valley progresses, then readdress that component. To do otherwise seems to be putting the cart before the horse. Please realize also that as Peg stated, if you’re trying to reconcile various areas of the Plan, and try to do that by revisiting nodes, you’re opening a Pandora’s box. What will nodes affect have on one of the top identifying primary needs, which is wildlife. How will it affect potential conservation easements? You may think you’re reconciling in one area only to reopen problems in others. Finally, I appreciate all your work. I appreciate all your time. It’s been amazing. But I think you will shoot yourselves in the foot and ?? if you change courses midstream and don’t honor what the public has explicitly expressed as their desires after many, many meetings and much, much comment. Thank you.
Yes, Kathy Hopkins, Cottonwood Park. First of all, my husband came home with the newspaper, threw it down on the floor and ran in the other room—a new life for nodes. He really liked that title and totally agreed with what the Conservation Alliance is saying, and I don’t want to revisit anything that has been already voted on. It just hurts the process. It humiliates everybody that’s been spending so many months coming here and really, really putting in some good work. And the other thing I would like to say is Ben Reid’s comments on chapter eight. I loved the one paragraph. There is a direct and conspicuous correlation between prosperity on the one hand and both carbon emissions and climate change on the other hand. And there are, of course, no differences at all between carbon emissions produced by a coal plant in China and those generated by the construction of large luxurious homes here that are far from services. It follows that we are challenged precisely because, as our community, we are so wealthy to recognize and manage our disproportionately very high contributions on ?? carbon emissions and of course global warming. And that leads me to the comments on the review about ARUs, Auxiliary Residential Units, and the opinion page last week about ?? consequences. You know, I read things like that, and I know they mean well, but I hate to be reminded of the hand that feeds you, you know. It’s getting very old and it’s very shortsighted. There are two editorials I really do like written by Kristen Rivers and Butch Kirschner about using local labor for local jobs. It’s so important to hire locally so we don’t get in, you know, when we do have a recession, we do have jobs for people here. And I’m embarrassed to say that, you know, with that Rocky Mountain Bank going up and how big it is and yet they have laborers from Utah building it, as Kristen states in her opinion, in her letter. I’m embarrassed that that’s my bank. I was happy to go to that little building there and get my mortgage. They were very helpful. I don’t see how they can be more helpful in a little building...or even more helpful in a big building. I was totally happy with that little square footage thing they had, almost a little bit bigger than my house. And I wasn’t going to submit another comment, except I wanted to...I did write an editorial that I did not submit, like Sue did with her response, so I’d like to submit it today, answering all the comments about the ARUs from a lot of real estate agents and architects and everything. And I know everybody needs jobs, architects need jobs, and real estate agents need places to sell to keep their companies going. But, again, it’s shortsighted solutions that have long-term problems attached to them. So, I’ll just read this letter that I wrote. It took me a long time to write this, so I didn’t rewrite it for the meeting. It says, I’m writing in response to the guest shop last week, as guesthouses have unintended consequences. They often make some valid points about the proposed elimination of Auxiliary Residential Units and making it right so it is fair to year-round Valley residents who want to provide for their families and live on their land when they get old and somebody can take care of them. You know, I think that should be a discussion, but I don’t think it should be a reason to go back to that vote. Unfortunately, the proposed elimination was probably needed to focus on a real and meaningful dialog to create and enforce real solutions for potential growth problems of ARUs. We need this conversation. We also need to create a sustainable economy to prevent boom/bust cycles that hurt our local service employers and employees. It is true that jobs are created by second homeowners. But what was not mentioned is what happens to the service people like carpenters, electricians, housekeepers and gardeners when the second homeowner industry goes into a bust cycle. And these same people see their jobs disappear that pay for mortgage, for rent and put food on the table for their families. I support the need like bumper stickers that the author resents. It is not an admonishment of second homeowners but more of a push for changing the way we all think about living in our natural environment. We need to choose human needs before human wants. And I know I say this a lot but I’m just going to keep repeating it—human needs before human wants. Let’s take care of human needs first with a healthy environment at the top of the list. I believe the environment is the hand that feeds us all, including second homeowners. Then we have to see if our wants are sustainable and leave them behind if they’re not. The United States leads all other nations when it comes to excesses in the building size of residential homes and what goes into them. The housing industry is the biggest user of oil. Unfortunately, we took a wrong turn and went down the road of everything bigger is better, and that journey led to our addiction to oil and ultimately to the tragedy in the Gulf of Mexico. Look at all the fishermen, oyster men, store owners, resort owners, restaurant owners, their employees and families who rely on the Gulf for their livelihood. Now they’re relying on BP. That could be here, you know, I mean, in different circumstances. People in need, the museums and the arts are already recipients of second homeowners’ charity and we benefit greatly from them. More importantly, however, we need to help Jackson Hole small business owners, their employees and their families in a permanent way. I agree with the author about needing a solid enforceable limited growth management plan, but that also includes a sustainable economy that is not constantly subjected to the high price of housing in a boom cycle and the harsh reality of a bust cycle. Therefore, we cannot rely on the second homeowner in these recurring recessions. They may have to cutback on services here to maintain their lifestyle and their primary home. The socioeconomic environmental damage, the downside of trickle-down economics, ?? is not good for Jackson Hole. Thank you very much.
Good evening, I'm Pegi Sobey. I'm Chair of the Jackson Hole Conservation Alliance. Thank you for the opportunity to comment. Again, thank you all for the work you have put into this process. Tonight I'd ask that you refer to our written comments that we submitted on May 28th where we provided detailed comments and concerns on clarifying the future land-use plan and the review process, the administration and energy conservation chapters, as well as on potential key inconsistencies in the latest draft. However, after reviewing the latest Staff Report, which included comments by the Planning Commissioners, we have additional comments and concerns regarding how you will go about the rest of your review on the themes and policies section. We fully support your goal to forward a draft document with as few inconsistencies as possible; however, we are also confident that you will stick to the rules you agreed upon at your last hearing. When you agreed upon this procedure, the public comment adhered to that procedure. We trust that you as Commissioners will continue to do the same. This is very important in terms of maintaining overall public confidence in this process. The public understands that the intent of the no-revote rule was to ensure that you would not rehash topics that have already been discussed which could lead to a circular endless discussion at the Planning Commission level. Once you go down the road of rehashing topic after topic, you could then end up with yet another fundamentally different fourth draft, which the public will be called on again to review, all before anything even goes to elected officials. This will discourage public involvement, particularly as we enter the fourth year of this process. We trust that the entire process to date, which includes years of participation on the part of the public, including those of previous Planning Commissioners, you will be respected...I'm sorry, yeah, you will be respected at the Planning Commission level. Looking ahead, elected officials must work to vet and to review, clarify key issues of the Plan, particularly those that have been difficult to reconcile across jurisdictions during your review. To make a point on the process, any member of the public, including the Conservation Alliance, could provide numerous examples of inconsistencies that could lead to revotes. But we believe revisiting all the concerns on the part of all citizens involved was not the intent of this next phase of the ??]. Here are a couple of examples. It’s inconsistent to place wildlife as the Valley’s top priority in any kind of meaningful way and still be planning to, at a minimum, approximately double what’s on the ground today without recognition of the likely irreversible impacts on that wildlife. It’s inconsistent to sign off on a growth management chapter as the second highest priority without any mention of the importance of the rate of growth. It’s inconsistent to claim that this new draft has established a strong monetary program that will offer increased accountability and predictability when the baseline figures for indicators haven’t even been identified yet. How will we know how we’re doing in the future if we never even had a starting point? This is across the board in all chapters. It’s inconsistent to have the housing goals in the Plan without more meaningful consideration of significantly reducing commercial development potential. Isn’t it better to take proactive steps to reduce the demand for more residential housing, rather than always resorting to building more and more houses? It’s inconsistent to say that we will have a more predictable Plan than the one we have now, our 1994 Plan, given that the draft today, particularly without the accompanying final land-use plan section, has far less detail and context to use in drafting the Land Development Regulations. Again, we expect, because you have already had hearings, discussions and taken votes on many of these topics, that elected officials should now address these topics. This leads me to the last point. Regarding the reference to a final vote in the Staff Report, we think it is absolutely critical to provide additional clarification. Are you assuming that just the themes and policies section of the Plan, the part you have reviewed so far, could stand alone as a replacement of our existing Comp Plan? And that you would take an official vote now? Where do the final land-use plan figures in? It’s clear when you read the draft that many of the major decisions are still ahead in the final land-use plan review. The Conservation Alliance strongly believes that part of the Plan you are currently reviewing cannot be a substitute for the existing Plan. Without the final land-use plan, this section should not stand alone. So, again, please provide directions to Staff on your expectations of how the final land-use plan will be reviewed with respect to final voting and adoption of the overall Plan. This is a very important ??]. Thanks for the opportunity to comment.
Thank you, and good afternoon. I think it’s appropriate...I haven’t been here for quite some time. I think it was March the last visit I remember, but I just wanted to share and acknowledge these boards for the amount of time and effort that’s gone into this effort. It’s been a brutal one and it’s certainly taken its toll. And I just want to say that from the public’s perspective, it’s appreciated. I know it’s not been easy and I just wanted to acknowledge that. The second thing is I want to applaud at least the willingness from what you read in the paper to address some of the tough issues that are still out there, and one of those is certainly nodes. In particular, I don’t think, at least I don’t believe anybody is arguing that Teton Village is in fact a node. When we last visited back in March, we discussed the cap on commercial and Teton Village. And I thought at one point we had an agreement that that would be addressed, and obviously it didn’t make it into the rewrite, and I’d just like to make a comment to support maybe taking a look at that again. If you recall, the discussion back then was such that, to give a little bit of history relative to the expansion of the SRA and the long period of time it took for the Village and the SRA to get together on that Plan. In fact, 60 or 70,000 square feet of commercial was taken out of that. In fact, that’s what is knitting or is going to knit the two port holes together. In fact, what we have now is an addition on the commercial core that’s not viable. And so what we end up with is a golf course along with affordable housing and nothing really hanging together. The other elements that are critical to that are some of the Village infrastructure, which I believe makes us...gives us the inability to really deal with some of the supportive and particularly competitive issues that we have in our business today. One of them is the transit center and without that commercial core, we don’t have a transit center. It’s not viable; it doesn’t work. And so just by simply instructing the County...the County Commissioners took that out of the Plan, it doesn’t work. It’s not going away and I would hope that you would see that perhaps if you’re going to address the tough issues, to take a look at that one again. I appreciate your efforts, again, and thank you for the opportunity to speak.

Final Review Process:
Review 8 and Admin
Compile composite list of individual commissioner identified inconsistencies and points for elected official discussion
Prepare individual opinions to explain final vote (optional)
Certify

??: Hi. My name is Sherri ?? and I don’t have anything prepared. I was really disappointed when I read the paper this morning. I thought, here we go again and kind of flashed SRA in my mind—we’re going to vote again until we get it the way somebody wants it. I think the people have given a really clear indication for three years at all these meetings and neighborhood meetings I’ve been to, all the times I’ve come here at night through the winter and spoken or listened to other people. And it was really clear what people wanted and what the priorities were. And by revisiting this, it’s almost insulting that we didn’t get it and we need to have it talked about again and again. Or you guys didn’t get it. I’m not sure. I actually heard someone, one of the members, mention during the winter sometime that, I didn’t know I voted for that four or five weeks ago, I didn’t know that. I’m like where were you, you know. I’m not sure where you’re coming from. I’m not sure about the preparation you gave people an opportunity to come here and talk. This was really short notice. There’s a lot of people out there that would like to speak again and tell you exactly what we thought you said, you know. I think nodes has been addressed. I think residential housing and guesthouses have been addressed. I’m not sure why we need to go again. We need to stick with our principle concept, you know, what’s really important, and the rest, we can work out. We don’t need to start from the bottom and go up. We need to stop with what’s really important and then people adjust, you know. Maybe there’s not a right and a wrong road. Maybe there’s two right roads, but we have to decide which one we’re going to take. And I thought we kind of started on that way. So I want you to kind of think about it and let’s not talk about this again. Let’s get it moving on. Thank you
Mr. Chairman, members of the Commission, Armond Acri, representing Save Historic Jackson Hole. We submitted written comments and won’t belabor those. Hopefully, you’ve all read them and have had a chance to think about them. I guess the decision has been made to reopen debate on nodes and ARUs under the guise of resolving conflicts, so I’ll play that game and argue the points on why they are not in conflict of some of the other policies. As far as axing nodes, the argument goes there’s a conflict because we...convenience locally will cut down on the number of trips. There’s a whole bunch of examples of that, but I boil it down to simple audio-visual aide here. And convenience, for those who can’t read this in the back, it says, convenience equals increased dollars. And that’s a fact of life. We’ve seen it in the Village where we put convenience commercial in, and you can put it in but you can’t make people go there. And we see it when people go to Idaho Falls. Why do people go to Idaho Falls? Why do they choose not to buy from their neighbors? They choose because it’s an economic decision. So, under this guise that we’re going to put nodes in in convenience local and it’s going to cut down on the trips, I think the reality is you don’t have any guarantee that that’s going to happen. So, I think that’s not in conflict with the transportation plan, not having nodes and not having that convenience local. As far as reducing trips, it’s not about putting the convenience local, the convenience shopping in, it’s about a change in attitude. My parents live 30 miles from the nearest store. They have a different lifestyle. They don’t run to the store, and they shop once a week and that’s the way they do it. And so that’s the way we’re going to truly reduce the number of trips is to convince people to change their lifestyle. It’s not going to be for convenience local in a node. Also, it’s an insult to the small businesses that we have here when we have this idea that convenience local is going to stop people from going, because what that’s...going someplace else. Because what that says is one place is the same as another. And I think most small business owners would be insulted to hear you say that my place that offers a beer is the same as the other place that offers a beer, my burger is as good as the other guy’s burger, or my pizza is as good as the other guy’s pizza. That flies in the face of what they’re trying to convince us anyway. So, that’s a problem with this idea that nodes are in conflict with our transportation plan and also with fostering small businesses. Also, we know we don’t have the jobs in nodes, so those people that are living in the nodes are going to have to still travel. We know that they don’t have the critical density in the nodes for START, unless you really seriously change the character like a tremendous increase in the density, much more than what you propose. We saw it with Rafter J, which is more...as density, we still can’t transfer service as mass transportation, because START says there’s just not enough people there. So, this idea that these other nodes are going to have mass transit and are going to reduce our transportation, it’s a wonderful idea, but the practical side is it’s not going to happen. And if any of you had the privilege of sitting in the JIM meeting the other day, you would have heard a lecture on the airport study where they looked at whether it made sense to run START out to the airport to get people there, or some type of mass transit. The conclusion that came there was, despite the density in Town, it’s still not economically feasible to deliver people to the airport. So, you know, I think that there’s not a conflict between the transportation plan and this idea of the nodes. I think the nodes are not going to address our idea for transportation. As far as the ARUs, I certainly would acknowledge they do provide jobs. They provide jobs for workers who have to drive because they have no option for mass transit. They all have to drive to work—the exact opposite of what the transportation plan asked for. Even if it does provide workforce housing, once again, it puts people in the wrong place. It puts them in a place where they’re going to have to drive to work, rather than live in someplace where they might have the option to use mass transit, or maybe even be able to walk to work. The biggest thing, and this was partly for those of you who weren’t here for the...and my apologies to those who were for this debate...over what should happen to these, or whether our area should continue this, you have no control once they’re built. Are they going to go short-term rental, even though it’s illegal? Are they going to go long-term rental, which in some cases is legal? Will they be sold off at some point in the future? Because that’s actually the debate that’s going on in Town right now is that, well, maybe we should be able to sell them off. And you have no control of that once you allow them to be built. So that is the question I guess, the real key issue on this, is how good is your vision for the future? What is going to happen to these units 20 years from now? Will there be a desire to sell them off? If it does, that represents, if you sell those units off, it represents a significant increase in dwelling units in an area that we all agree is inappropriate for that amount of density. I guess the last thing that I would ask you is, as you make this decision, I think I would remind you that you are asked to represent the community and not your individual employers, and hopefully you’ll use that filter as you make your decisions. Thank you.
Hello, Gail Jensen, representing myself. I really appreciate all the work, all the hours, and I painfully sat through a lot of that, as you did, through the last year. And, you know, we’re not all going to get what we want. We all need to make compromises. And everything was debated, votes were taken, comments were made based on those votes, or potential votes, and I don’t feel it’s appropriate to reopen the discussions again. I think there is a lot of reconciliation in a few places, but I also question that, because who’s going to reconcile the votes...or the inconsistencies really? If you look at all the...the small inconsistencies I think you might be able to deal with, but some of the larger ones, I think you need to go to the electives. Let them choose what to really reconcile with the big questions. You know, we could start all over again. I just don’t think that’s what anybody really wants to do. We need to move this forward. I’m extremely embarrassed to move myself a realtor with all the comments that have come out in the paper in the last week. I’m embarrassed because very few of those people attended any of these meetings. They don’t understand how that came to be. And I’m very embarrassed for my industry that that’s what’s come out in the last couple of weeks. I understand why that vote was taken, what the basis for it was, and I think we all need to understand that and send it forward and let the electives decide on what to do to limit ARUs, or put them back in. I don’t think we should reopen that, revisit that. I think it’s terribly inappropriate. A lot of my comments and a lot of the people that have spent a lot of time listening and commenting, I mean, my comments would totally change if you want to reopen that and a lot of the Plan, just not issue, but it affects other issues in the County, too. I just don’t find that appropriate. I’m not going to go into my other comments; everybody’s read those. But thanks for your hard work, all the thousands of hours put in, and I hope we can move this forward and move it forward in a timely fashion. Thank you.

---

Dave Coon, Teton County at large. First off, thanks, you guys, you all have done a great job. New faces after my hiatus, I just had other things to do, and it’s good to be back, and I’m glad it’s moving along. I hope we don’t revisit too many things. I’m sure there will be a couple of things that are revisited it sounds like it. We’ll see where that goes. If there is revisiting done, I just wanted to make a few comments on ARUs. ARUs are additive growth, period. I’m on the Water Board for 22 years. I’m on the Wilson School Board. I’m aware that these things have affects, and it’s not just those things, but it’s roads, hospitals, schools, ??, grocery stores, ?? ski area. I mean, it is growth. And if you do revisit ARUs, just make sure you have a handle on how much growth they really are. I know that right now, because of some of these boards I’m on, we have trouble ourselves monitoring their use, their impacts. And if they are going to be put back in, we need to know those things to add to the quote build-out, ???. But you just need to pay attention to these things. And I’m not saying do them, don’t do them. Just include them in the bigger picture because they really are an impact.

Quickly, one other thing. I think it’s theme eight, you know, energy and conservation. It’s a great way to go. I’d like to see things, you know, improve in that area a lot. And I initiated some thoughts with the County and the Town building departments to even just go basic and look at some of our building codes we use and improve on the basic codes. Besides going greener, you can up some codes up to a higher standard for our local climate stuff. And they’re looking at those, and that’s a good thing. So, I think we can even start more basic on some of those areas and move up from there and improve those things. So, that’s...I didn’t come prepared but ??.. Thanks.

Francesca Paolucci-Rice: I’m here to address the issue of ARUs. I sent a letter to all of you and I think that it expresses my opinion that I’m strongly opposed to removing that development option for any number of reasons, and I won’t rehash those. And I think there are a large number of folks in the community who really did not understand that that was being considered until very recently in this process. And I think whether you reconsider it at your level, or it becomes an issue of intense discussion at the board level, it is going to be an issue where it will be discussed—whether that type of development option remains to allow for rental, or returns to what its original condition was in the 1994 Plan as being guesthouses. That is something that I do think warrants a great deal of discussion, because it significantly impacts not just second homeowners but also a lot of middle-class homeowners who basically have relied on that ability to house their children, to house caregivers, as an option for private quarters for long-term guests, etc. And while right now we are not facing a significant issue with employee housing, as we did several years ago when the trans-modification for guesthouses to ARUs was made, I think sometime in the future we will find that a problem again, and it is a significant source for employee housing, which is important to the working community. I know many folks rely on that for use for nannies, for caregivers, for ailing members of the family, etc. So, I do think that that particular issue warrants a reconsideration. Again, whether it be at this level or at the board level. Thank you.

My name is Sara Stevens and I have nothing prepared, because I heard about this this morning when a friend and neighbor called and told me about it. We get slammed with this on June 10th when 80 percent of the Town is at middle-school graduation, the other 20 percent of Town maybe hasn’t had time to read the paper yet, or they’re working one of their two or three jobs? I mean, you’ve got to be kidding. That was my reaction. This is insane. I feel like it’s unethical. There was no notice in the weekly newspaper that came out yesterday. At least there was no notice that I was aware of. It comes out in the paper on the same day as the meeting on June 10th? You’ve got to be kidding me. Anyhow, I really appreciate the previous speakers and the fact that they can speak so eloquently. And I’m ashamed I don’t have anything prepared, but my coworker is covering for me right now while I came over here, and I’m amazed that this even happened. That’s what I have to say. Thank you very much.

<td>6/10/2010</td>
<td>Walkman, Nancy</td>
<td>Hi, I’m Nancy Walkman. My comments are related tonight to the process and the public expectation of the Planning Commissions. Trust, accountability, transparency and consistency have always been my ideals for what the Planning Commissions are responsible to do. They are the research people for the County and the Town and they are to come up with their best suggestions. And you have done that. The challenge has been, because of the difference in values from Town and County and they’ve been obvious for years, is to bring those together and make a plan that relates to each other. The Town and County are very much interrelated as are the public lands around us. And if we don’t have that, we really don’t have a solid Plan. We are ???. You have also been challenged in the process and much work was done to get to that point you are today. Your work has been very valuable and we cannot discount that. But there are points of disagreement. And instead of moving on to another discussion for another rewrite, you have defined the differences that you have, and my suggestion and others probably, too, is to take that list and what you have done to date and present that to the Town and County for their reconciliation. Thank you.</td>
</tr>
<tr>
<td>6/10/2010</td>
<td>Wallace, Herb</td>
<td>Herb Wallace, Wilson, representing myself. I read in the paper today that you are going to reconsider reconciling nodes with the rest of the Plan, or at least you’re going to potentially do so. There’s no reason to do this. The Planning Commissions’ vote to eliminate the nodes was in line with the wishes of the people of Teton County. Public comment was overwhelmingly against the nodes and a huge unnecessary density that they bring with them. Building thousands of homes in the outlying County will only make our terrible traffic problems worse. Any additional housing than what is currently allowed will generate far more pressure on our highways when people commute to their workplace in Town, to go to the grocery store, to go to school, to go to church, to go to soccer practice. It goes on and on and on. Nodes will stress and kill more of our precious wildlife. Nodes would bring noise and light pollution. Nodes would also lead to the loss of quality of life and character in the communities where we live. Additional housing should be placed in Town where the majority of our population works and there is already four-lane highways and the infrastructure to support additional growth. I also read that one of the Planning Commissioners thinks that nodes would prevent our Valley from becoming 35-acre ranchettes. Simple economics prevents this type of development. According to the Teton County ??, only 40 pieces of property for 35 acres sold in Teton County in the past ten years and that was through the boom. That is an average of only four properties in a year, and this number includes tracts that are substantially larger than 35 acres. Large landowners will continue to put their lands under conservation easement and do not have to sacrifice the communities that were designated as nodes to do it. Nodes belong in anywhere suburbia and not in Jackson Hole, at least under the years of work on this process, hundreds of Planning Commission votes, and the vision of the people of this County. Leave the nodes out of the Plan where they belong. Thank you.</td>
</tr>
</tbody>
</table>
Gregory Griffith, West Bank. I guess the purpose of this public comment is to help determine that you, as Planning Commissioners, capture the will of the community—its direction, its vision, etc. Having attended every minute of every one of these meetings, I actually believe that you did a superbly good job. Despite the differences, quite frankly, 18 of you stepped up to the plate when the community needed some service and a lot of us didn’t. So, that’s greater than thanks, that’s respect. As far as the question, did Staff capture your vision and your direction, I think after some initial resistance, they did a very good job capturing what you relayed on a weekly basis. Quite frankly, they had to make order out of chaos in some of the meetings. Those of us who were here can chuckle about some of the meetings and how they went. That would have happened regardless of who was sitting on the board. Slightly not as favorable to Staff was the fact that you were hampered, or hamstrung in effect, with the April ’09 draft. It bore so little resemblance to the well-documented will of the community that you had to spend 14 months and several hundred votes to try to bring it back up to snuff. And you did a superbly good job on that also. As far as the macro question, revision versus rewrite, I suppose it’s still valid. You don’t know what the electives are going to do. I was in the revision camp from the very beginning for the simple reason that we have a 16-year period of observation with the ‘94 Plan. We knew where the unintended consequences lay. We knew where the inconsistencies and gaps were. And it would have been slightly more efficient—and maybe greatly more efficient—to try to plug those holes instead of doing a complete and utter rewrite. But here we sit. So, I would just caution that in the future that we remain very vigilant that we don’t allow the inconsistencies between what the initial vision was to interfere with where we’re at now. As far as the ARU question, I said at the time there wasn’t a snowball’s chance in the Sahara that the electives would leave the ARUs thrown completely out. I understand the context of that vote. However, other communities have addressed this by having subcategories of ARUs—family-occupied dwelling units, employee-occupied dwelling units, caretaker dwelling units, etc. And if you put size, square footage restrictions, and deed restrictions on these units, and this would give us some greater input into how we shape our future. Quite frankly, by just having the taboo or wipeout vote for ARUs, we’ve neglected...we’ve actually abdicated our right or our responsibility to discuss these contentious issues in detail. The same with the PRD. Probably, in my opinion, the biggest mistake we made with the PRD...going back to the ARUs for a minute, if we took the outstanding potential of the ARU and multiplied it times the historical utilization rate, we come up with a relatively low number, in the high hundreds. If we take the historic utilization rate of the PRD and multiply it times its outstanding potential, we’re going with a very large number, somewhere around 4000 units. So, we probably should have taken...that was a five-zero-three-three vote where we suggested we hold a series of PRD forums. That one will come back to bite us in the butt. As far as the PRD goes, we need a greater discussion. I think Commissioner Mr. Reid suggested this qualitative aspect to the multiplier, at least a coefficient between the quantitative and the qualitative. If someone has a hundred acres, so to speak, hypothetically, in the Snake River migration corridor, and somebody has a hundred acres in a hayfield or a cow pasture, it’s ridiculous to have the same multiplier. We need to have a qualitative aspect to our PRD moving forward or we’re going to fall short on a lot of our theme-one goals especially. As far as the FLUPs go, the FLUP I should say, I said this before and I’ll say it again, we really need to caution that we don’t allow the FLUP to supersede the Comp Plan. The linear progression from utilizing the FLUP as a bridge between the Comp Plan and the LDRs, that in a linear train of thought means superior to the Comp Plan. It would create a dynamic with different electives, different appointees, etc., maybe even new Staff in the future, where the path of least resistance is to look at one district map with one map on one side and some writing on the other and have that supersede the intent of the community that we’ve put years and lots of time, effort, energy and money into, so we need to caution against that. Variances also weren’t addressed. I think we should send a strong recommendation to the electives that variances not be used to supersede the FLUP or the Comp Plan in the future because, you know, if we don’t remove the ability for the electives to use variances, we want to discourage judiciously and have them use in full view of the original intent of the community with the Comp Plan and the FLUP. Probably the second biggest failing we had in this process in my opinion, and I know Commissioner McCarthy was strong on this as well as some others, a viable transfer mechanism. We have a theme, theme three, Town as heart, where we don’t have Town as heart. We have 74 percent of the employment in 1200 acres of Town, yet only 48 percent of the population, so we don’t have Town as heart now. Moving into the future the disparity is going to increase, because the way the Plan is written right now, the potential dwelling units in the County dwarf that of Town and that’s not even considering the PRD potential of approximately 4000 units. So, without a viable transfer mechanism and a real tough hard discussion, a lot of what we’ve done previously is going to fall flat. Everyone has spoken to, you know, stick to the rules, stick to what was presented to us as far as not going back on votes, reconsideration votes, etc. I’ll ask the same question I asked previously—is your task to implement the well-documented will of the community, or is it to implement what you as an individual think you should implement? And if you believe the latter, as some of you obviously do, if you weren’t misquoted, then where does that leave the public if that’s the way things are going to go? I’ll leave it there. Thanks...One more thing, again, I’m not going to give you thanks because that wouldn’t cover what you’ve done—respect would cover it in my mind a lot better. You stepped up to the plate. We all had the same opportunity to do so, but we didn’t and you did. It’s a thankless task and regardless of any disagreements, kudos.

<td>Washut, Harry</td>
<td>Harry ??, Grand Teton Park ?? in Granite, Wyoming, 36 miles from Town. It’s somewhat of a commercial node because there isn’t nothing else out there. I don’t think, in this whole planning process, the BC &quot;&lt;inaudible&gt;&quot; category. And if you look at a chart of all properties—there’s 20 some properties in that thing—we’re still about where we were back then, because the plan was never set up. There was always talk of some kind of way to work us into auto urban or auto commercial or something that fit in our areas, but we all have been stuck with BC and it’s like they don’t want it to...and back then they said they didn’t want us to grow up and down the highway. Well, we couldn’t anyway, but there’s no other place to zone because we’re stuck where we’re at. There’s no expansion ability. And so between Camp Creek, and a lot of property has changed hands or went out of business, so to speak, and by not being in a lodging overlay, you know, we lost a lot of opportunity to grow with the economy locally. And it’s just ridiculous that and all these platitudes that everybody wanted to tell a neighbor how to live, private property rights has never seemed to be any part of this process. All I’m thinking is we should have a workshop, nodes or whatever you want to call it, and delve into the inequities of the BC landowners. You know, I know when Larry was Old West Cabins, he spent hundreds of thousands of dollars to get a plan through. Well, most of the property owners in this category don’t have that kind of money to run what has been...I was chastised because I called it a gauntlet, but it quite frankly is. We don’t have any clear-cut thing that we can do, there’s so much ambiguity to it, that, you know, we can’t hardly expand or do, you know, modernize our businesses with times, especially &lt;inaudible&gt; edge of Town. But it’s almost like we’re the forgotten ones and you’re going to brush over us again. So, I think there should be a workshop concerning that where it’s clear cut what we can do with our parcels that are very few, but they were more than mom and pop businesses in the Valley. Thank you.</td>

<td>Mahood, Virginia</td>
<td>I am opposed to eliminating guest houses under the current draft of the comprehensive plan. Specifically under policy 2.1.a, lines 6 and 7, where it states, &quot;accessory residential units associated with residential uses will not be allowed.&quot; Guest houses are a vital element of our community. They provide affordable housing for employees and a means for a homeowner to subsidize their mortgage through rentals. The construction of guest homes also provides much needed work for the construction industry. What guest houses provide greatly outweigh their impact on the environment. If a homeowner needs a guest home and they are banned under the current plan, they will be forced to buy adjacent land to develop that site for their needs. Please do not exclude &quot;accessory residential units&quot; from the comp plan.</td>

Town of Jackson and Teton County Planning Commissions

Re: Proposed Theme Six Comments
Submitted via email to Alex Norton and Tyler Sinclair
Dear Commissioners and Staff,
On behalf of the Yellowstone-Teton Clean Energy Coalition, I would like to thank you for the opportunity to provide comment the May 7 2010 version of the Jackson/Teton County Comprehensive plan.

Below are general suggestions followed by specific comments on proposed Theme Six – Develop a Multi-Modal Transportation Strategy.

Theme Six - “Develop a Multi-Modal Transportation Strategy”
Transportation choices drastically affect a variety of critical elements of a community including public health, the environment, and local economies. Considering the large portion of energy and emissions attributed to transportation activities in this community, local policy and planning related to transportation play a crucial role in a community’s sustainability. Sustainable transportation policies that address municipal fleets, commuter options, and alternative transportation systems cannot focus on simply displacing traffic congestion, but must also consider measurable strategies to seek a reduction in the role that petroleum based fuels play in local transportation. This will play a critical role on the long-term sustainability and security of the transportation models adopted in this community.

Statement of Ideal:
• Consider, ‘alternative fuels’ in lieu of, “clean and renewable fuels.” This matches better with language in the next section of the document.
• Add language to include the use of ‘advanced vehicle technologies’ in the description of the basis for the proposed transportation system.

P.O. Box 11756, Jackson, WY 83002
phil@ytcleanenergy.org 307.413.1971
www.ytcleanenergy.org

Why is this theme addressed?
• Consider changing, “Reduce economic impacts of a changing world, where the cost of oil will continue to rise.” to ‘Increase long-term economic security by decreasing the role of (foreign) petroleum on local transportation systems.”

Principles and Policies
Policy 6.2a
• Define, ‘active modes of transportation.’
Policy 6.2.d
• Is ‘Level of Service D’ a high enough level of service to receive WYDOT Funds? This seems to be at odds with the later mentioned Policy 6.3.d describing increased cooperation with WYDOT.
Policy 6.3.b
• Consider including language about communicating with, or engaging, existing, transportation focused organizations in developing transportation network decisions. Organizations such as ours have direct connections for funding sources that could support projects in this area.
Policy 6.3.d
• The use of alternative fuels, advanced vehicle technologies, and other strategies to reduce petroleum consumption play a role in diminishing the collective effects of transportation on natural resources through improved local air quality. Harmful exhaust emissions including sulfur dioxide, nitrogen dioxide, carbon monoxide, benzene and the secondary production of ground level ozone all result from vehicle emissions. Albeit less tangible,
these harmful substances all pose serious threats to local air quality and natural resources.

Strategies

Strategy 6.1
• Include ‘supporting alternative fuels and advanced vehicle technologies’ to the funded programs.

Strategy 6.2
• Consider including, ‘and to better facilitate the use of alternative fuels’ into the reasons for supporting a new START facility,
• Consider pursuing transit from Jackson to GRTE, beyond the airport, to accommodate visitors and employees travelling to the Park

Strategy 6.6
• Define ‘periodically’ for purposes of reviewing the entire transportation system.

Strategy 6.9
• Consider adding language to better define what the ‘Travel Study’ will constitute.

P.O. Box 11756, Jackson, WY 83002
phil@ytcleanenergy.org 307.413.1971
www.ytcleanenergy.org

• What will function as the baseline for this study? The first step should be establishing this prior to the 5-year interval as described and how it related to the indicators identified.

This highlights the necessity for further study to establish baseline for the indicators.
• 1996 Travel Study should not be considered baseline.

Strategy 6.10
• How exactly will Appendix K and the information it contains be ‘utilized’?
• When will TAC update/or complete a more detailed transportation plan?

Thank you for your ongoing, tireless efforts in the process of rewriting this important document. I have included several resources collected from communities throughout the country that could have bearing on the rewriting of the Jackson/Teton County Comprehensive Plan’s Theme Six.
Please consider our organization as a resource in any efforts to promote more efficient transportation systems and technologies in this community.

Best,
Phillip Cameron
Executive Director
We've come a long way since work began on our Jackson/Teton County Comprehensive Plan to update and prioritize the values in the 1994 Plan. In the early stages of this process, the Comp Plan Survey results clearly confirmed that stewardship of wildlife and scenic and natural resources remains our community's TOP priority. A simple comparison between drafts illustrates that our community's efforts over these last several years have begun to reap rewards and benefits to the future of our community in the form of a vastly improved draft Comp Plan. I am certainly appreciative of the Town and County Planning Commission's willingness to listen and carefully consider a majority of the recommendations made during what inevitably became a very complex planning exercise over the last year that has culminated in the current draft's release. Commissioners, therefore, have a plethora of information in the public record upon which to evaluate whether this draft is truly representative of the community's vision and, in fact, the promised improvement to our existing plan. An initial review of this draft indicates, ironically, that the Comp Plan has now come full circle and more closely resembles an update to the 1994 Plan that we anticipated from the start. I am heartened to see that this draft aims to identify wildlife protection as the community's overall top priority, protect scenic vistas and preserve rural character in the county, while also identifying wildlife and natural resources as the foundation of our economy. While this draft plan looks better at first glance, a closer evaluation proves that it lacks essential policies needed to ensure unequivocal protection for Jackson Hole's irreplaceable wildlife, scenery and community character.

Theme One: This draft is missing detailed language, data, action plans and specific timelines that could provide assurances that subsequent land development regulations will actually provide stronger protection for wildlife. This draft does not, for example, promote a true cap on development nor does it show whether the amount of development as proposed will or will not have negative, irreversible impacts on local wildlife and the community.

Theme Two: This draft plan proposes contradictory future patterns for both centralizing and dispersing commercial development. Theme Three: This draft's definition of our Town's character and charm is less definitive than our current plan.

Theme Four: This chapter needs work. By substituting workforce in place of affordable housing, its principles and policies become unnecessarily confusing and vague. The idea that smaller, free-market homes function as accessible, affordable homes for the workforce has not been demonstrated to hold true in this or any other resort community and is unrealistic at best.

Theme Five: None of the indicators include baseline data, and many sections contradict the goal of economic independence from growth and expansion. Theme Six: The level of analyses that typically accompany a comprehensive plan is missing. County-preferred and WYDOT Level of Service standards must be reconciled. Theme Seven: Policies must be refined for consistency between realistic goals that can be implemented versus a wish list. This is impossible to determine unless infrastructure and public facilities needed for buildout and future development patterns are projected.

Appendix I: The new table must be reconciled as to the cap plus light industrial plus local convenience commercial, as well as numbers associated with overall development potential. Of grave concern, is your deferral to date of review of the 65-page section -- the Future Land Use Plan. The Future Land Use Plan includes appropriate types of development and conservation efforts, wide ranges of expected development potential for newly proposed land-use types and a table of priorities that will take precedence in each district. Therefore, many of the most difficult questions remain unanswered. I think you will agree that the final state of the Future Land Use Plan will be the true test of the themes and policies that are being proposed. This fact unnecessarily complicates evaluation of the overall plan without a clearer understanding of this critical section. The desire for predictability to future land use decisions appears to remain as elusive as ever. Adequate analyses of fiscal impacts, transportation, natural resource inventories, etc., that typically accompany comprehensive planning processes have been conspicuously absent in this revision process to date. Each theme independently includes a number of unique strategies, but the draft plan does not correlate or prioritize them. A comprehensive priority list of strategies needs to be incorporated into the plan. Jackson Hole and Teton County deserve a comprehensive plan that will preserve and protect our wildlife, scenic vistas, natural resources, community character and quality of life in a sustainable and predictable manner. Let's continue to work together to create a Comprehensive Plan of which we can all be proud. Thank you for the opportunity to comment on this draft plan.

To Whom It May Concern: I believe that the comprehensive plan should not exclude people from being able to build guest homes. Best, Patricia Smith
Dear Teton County Commissioners,

We are saddened and appalled to learn that guest houses would now not be allowed on properties. Fifteen years ago my husband and I purchased a 4.5 acre parcel south of town. Ten years ago, we began building and moved into our home. In the past two years we just finished our basement. Now, we are trying to save to add a guest house. We live in a neighborhood where maybe 1/3 of our neighbors have guest homes and bought here because of the ability to have a guest home for future needs. We have parents who may have future health issues or needs that would require close or live in type care. Some of our neighbors have guest houses, we would like the same opportunity for our property. We greatly appreciate your efforts to look at maximizing wildlife conservation and minimizing impact. However creating a blanket moratorium on guest houses does not seem fair or just to the private property rights of individuals and landowners in Teton County. There does not appear to be any regard to the size of the lot or the homeowner’s immediate neighborhood.

Thank you,

Jennifer Reichert
PO Box 7149
Jackson, Wy  83002

We congratulate the Town and County planning staffs and planning commissions on an improved Comprehensive Plan. The following are our comments on Theme 5, "Provide for a Diverse and Balanced Economy":

GENERAL: (1) Change Policy 5.1.b to 5.1.c, change Policy 5.1.c to 5.1.d, and add the following policy as Policy 5.1.b: Title = "Strengthen community orientation of tourism economy." Explanation = "Jackson Hole and Teton County should appeal to a broad range economic demographic. A continued and new focus on middle class families should be integrated into our plan. Family visitation has been central to the success of our community’s tourism economy. Left unattended, current economics are driving new commercial development towards high-end business that is unaffordable for many families. In order to continue to attract families, commercial development policy will support affordability for visiting families. The policy and tourism goal of providing a high level of services and amenities is not limited to high-end development and high priced services." (2) Add the following as Policy 5.2.d: Title = "Orient economic development towards community self-reliance." Explanation = "As the community strives towards energy efficiency and other means of economic self-reliance, the community should promote the recruitment, formation, and growth of businesses that support our goals of self-reliance. Such green businesses would be consistent with our community’s orientation towards balancing economic, social, and environmental interests and concerns and create green collar jobs for our community. Our community’s tourism economy would be strengthened by the attraction of discriminating travelers who select Jackson Hole as their destination of choice because of our community’s economic development orientation and progress towards energy efficiency and self-reliance." (3) Revise the last sentence in Principle 5.3 to read, "Economic diversity in Teton County will focus on creating a network of small locally owned, operated, and supported businesses consistent with the community’s stewardship, social, cultural and arts, and heritage goals."

Re: Theme Eight: “Energy Conservation”  
Submitted via email  
Dear planning commissioners and planning staff,

On behalf of the Conservation Alliance, thank you for your attention to this memo regarding the May 7 draft of Theme Eight of the draft Comprehensive Plan. We understand that this theme, because it is new, will be reviewed differently than the other themes, and so have included the following broad, overarching comments.

What it did well:

1. It generally introduces many important topics into our planning process – from awareness of global climate change to concrete steps we can take on a local level and our responsibility to the larger ecosystem;
2. It focuses on ecosystem adaptation in the face of a changing climate;
3. It mentions possible changes to the ways we treat building materials and encourages “reuse, repurposing and renovation of existing buildings and building materials”;  
4. It encourages non-chemical methods for cleaning our drinking water;
5. It has started a list of indicators to measure our success.

Needs improvement/still to do:

1. The definitions of sustainability in the Vision chapter and Theme Eight should be reconciled;
2. The field of energy efficiency and sustainable living (from building standards to waste reduction and disposal) is constantly evolving and advancing. A mention of a commitment to keeping up with technological advances would strengthen the theme in the long run;
3. The timeline for implementation of some of the larger strategies can end up being quite protracted. In the interim, it would be appropriate to pursue some “low-hanging fruit” strategies, such as supporting existing groups and energy conservation efforts, adopting an idle-free ordinance and continuing the legacy of the 10X10 initiative;
4. When discussing disposal of waste, it is also important to discuss waste reduction strategies;
5. Looking forward, the plan could benefit from a policy committing to exploring economically feasible ways to expand the diversity of items that can be recycled locally;
6. As with most of the other indicators throughout the plan, there is no baseline data included in the plan yet. We cannot measure reductions or increases without knowing the starting points. We need to set concrete and measurable goals;
7. Lastly, clarification of the role of this theme in relation to the others would be helpful. One of the original intents of this planning process was to weave the concept of sustainability throughout the plan. But, seemingly in an effort to give “sustainability” a broader and more prevalent role in the plan, planning commissioners voted to give it its own chapter. Even so, sustainability and energy conservation should play a role in this plan that is slightly different than that of the other themes. It should continue to be woven throughout the rest of the themes, even if it is merely through additional references to other topics. Regardless of the exact form of this theme, it would be beneficial to discuss its role.

We would like to reiterate that we appreciate the inclusion of this theme into the overall plan. It encompasses some very valuable and forward-thinking concepts and is an excellent addition to the plan.

Sincerely,

Kristy Bruner Becky Tillson

Re: May 2010 Draft – “Themes and Policies” section of the Jackson/Teton County Comprehensive Plan
Submitted via email to Alex Norton

Dear Commissioners,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the May 2010 draft of the “Themes and Policies” section of the Jackson/Teton County Comprehensive Plan. We really appreciate your hours and hours of time over the last year to improve the plan; in numerous ways, the new draft represents a significant improvement over the April 2009 draft. However, to be clear, we believe there are a number of outstanding issues with this draft section of the plan, many of which relate to previous votes you took or ideas that have already been presented to you but were never discussed or voted upon. With this in mind, we will not reiterate all of these points at this time. Our comments are specifically framed within the recommended structure for public comment for this round of planning commission review, and will therefore be brief. We anticipate that many of our concerns will be addressed during the upcoming review by elected officials.

Also, over the last several years, members of the public, including the Conservation Alliance, have submitted extensive, detailed input to help shape our community’s next comprehensive plan, including suggestions for ways to improve the various drafts. You already have a lot of information in the public record that should help you determine to what extent the draft section you are forwarding on to elected officials is truly representative of the community’s vision and the original intent of this planning process – to improve our existing plan.

Below are comments related to the Future Land Use Plan, the overall review process, Theme Eight, the Administration Chapter, inconsistencies and key areas of contradiction organized by theme, and new ideas.

Future Land Use Plan (FLUP) & Review Process

While we understand your decision to defer review of the Future Land Use Plan at this point, it is critical that you clarify your intentions for the upcoming FLUP review process. Specifically, please clarify whether you think elected officials should “formally act upon” or adopt the “Themes and Policies” section of the plan prior to your review of the FLUP. Based on how the plan was structured, it appears that the FLUP is intended to be the predictable piece of the overall plan to guide future decisions and that it should be considered as a formal section of the plan, not something separate from it. Until the draft plan is considered and reviewed for consistency in its entirety, no single portion of it should replace our existing plan.

Because the document in its entirety has not been reviewed, many of the really hard questions remain unanswered. Specifically, the FLUP – a 65-page portion of the plan – includes considerable narrative on what types of development and conservation efforts are appropriate across the valley’s 25 districts. It provides wide ranges of expected development potential for newly proposed land-use types, and perhaps most significantly, includes a table that identifies the priorities (theme-wise) that will take precedence in each of the districts. It appears, based on the way the plan was structured, that the review of the FLUP will be the part of the planning process that will test everyone’s understanding of the themes and policies that are being brought forward. For example, are the policies in the May 2010 draft clear enough, predictable enough, etc., to direct clear, effective land development regulations? Also, while we appreciate that you, as planning commissioners, are not going to undertake a line-by-line review of the plan, we believe it is critical to acknowledge how important this step will be prior to adoption of the plan. Based on our organization’s decades of history in participating in reviews for individual applications in both the town and county, one thing is clear: the details and specific wording
within our community’s comprehensive plan matter a lot, because decision makers rely heavily on the Comp Plan for direction. At a minimum, a line-by-line analysis, including legal review, should occur well before plan adoption to ensure the proposed wording is clear enough to meet the community’s desired intent. Prior to concluding this phase of your review, please provide recommendations regarding this step of the process – who should do a line-by-line review and when – to assure the public this critical step will be undertaken at some point.

Theme 8
Please refer to both the written comments that we submitted on April 12, 2010 and the May 28, 2010 memo, included as an attachment.

Administration
Please refer to the written comments that we submitted on April 1, 2010.

Theme-By-Theme Analysis
While significant strides have been made, below are several key topics that would benefit from additional clarification to eliminate potential contradictions or inconsistencies. In general, and as we have expressed throughout this process, many of the policies in the draft are too broad and as a result leave the door open for diverse interpretations. In a number of cases, because the text is so abbreviated for certain policies, the context or rationale, which can help to more clearly provide guidance for land development regulations, is absent. We expect the elected officials to address this central issue of the draft plan – the shift to a far less detailed comprehensive plan than the existing plan.

In short, we have identified many of the topics below with the primary goal of this process in mind – to increase predictability for landowners, decision makers, and other members of the public in future land use decisions. As a result, the basic contradiction is, in some cases, the policies’ failure to be consistent with the overarching goal of the new plan – to improve upon and lessen the uncertainties and unpredictability of our current plan.

Theme One: Practice Stewardship of Wildlife, Natural Resources and Scenic Vistas
Inconsistencies and Potential Contradictions
- This theme lacks the detail typically necessary (such as recent data and the scenic policy-related illustrations that exist in our current plan) to guide strong land development regulations for wildlife and scenic resource protection.
- Even though wildlife is stated as the highest priority of the community, and the new plan is supposed to ensure greater predictability and accountability, no expected timelines are identified to carry out the actions or strategies that would increase our chances of actually protecting wildlife.

Theme Two: Manage Growth Responsibly
Inconsistencies and Potential Contradictions
- This theme includes vague, contradictory language regarding caps on development potential. (In some instances, it is unclear whether the implied goal for density neutrality supercedes policies related to density increases.)
- Several questions remain regarding references to potential transfers of development.
- Policies regarding the proposed future pattern of development for commercial development have the potential to be contradictory in some cases (the draft calls for both centralizing and dispersing commercial development).

Theme Three: Uphold Jackson as “Heart of the Region”
Inconsistencies and Potential Contradictions
- To ensure growth is not for growth’s sake, the intent of “growth neighborhoods” in town, specifically as it relates to unrestricted “workforce housing” should be clarified – See summary of theme four for discussion regarding “workforce housing.”
- If the “character and charm” of the Town are not more adequately defined, success in protecting
them will be difficult to achieve. (The draft’s approach to character is less defined than our existing plan.)

Theme Four: Meet Our Community’s Housing Needs

Inconsistencies and Potential Contradictions

• This chapter needs a lot of work. If significant changes are not made to this chapter, it alone could undermine all the improvements made to the new draft over the last year. Switching the focus to “workforce housing” without adequate inclusion of “affordable housing” criteria and specificity has made this chapter’s principles and policies unnecessarily confusing and vague. In general, there is awkward wording throughout the entire chapter.
  • Policy language is inadequate for setting and meeting a 65% quantitative goal.
  • Currently proposed policies, which have some good and reasonable intentions, need more detailed description to ensure no loopholes are being created. (Examples include requiring “mitigation on a sliding scale” and promoting that “small, local entrepreneurial businesses should be exempt from requirements.”)
  • The chapter appears to be largely based on the myth that smaller, free-market homes function as accessible, affordable homes for the workforce. (This idea rarely holds true in resort communities, and has not been demonstrated to hold in this community in the long term.)

Theme Five: Provide for a Diverse and Balanced Economy

Inconsistencies and Potential Contradictions

• The indicators, as in all chapters, need a lot of work. (None of them include baseline data, and some of the goals are questionable given the goals of the chapter.)
• Some sections of the draft plan contradict this theme’s goal of an economy not dependent on growth and expansion.

Theme Six: Develop a Multi-Modal Transportation Strategy

Inconsistencies and Potential Contradictions

• The role of Appendix K (existing transportation chapter) needs to be clarified to avoid confusion in the future.
• This theme currently lacks the level of analysis that accompanies a comprehensive plan. Prior to consideration and adoption of the FLUP section of the plan, considerably more analysis should be required.
• This theme needs to reconcile County-preferred and Wyoming Department of Transportation Level of Service (LOS) standards.

Theme Seven: Provide Quality Community Facilities, Services and Infrastructure

Inconsistencies and Potential Contradictions

• This theme needs to clarify concurrency review requirements, given that the following language was removed, “project the infrastructure and public facilities needed for the buildout and future development pattern.”
• Policies need to be refined to ensure that the chapter goals are realistic and able to be implemented (rather than just a wish list), particularly given the role of the FLUP section.

Appendix I: Buildout and Numbers

Inconsistencies and Potential Contradictions

• Anytime a new document is to be released during this process that refers to the findings of the Buildout and Employee Generation task forces, the members of the task forces should have the opportunity to review the document before it’s released. And, as we have stated before, we believe it is critical when presenting numbers to always attach information regarding the assumptions that were used to arrive at those numbers. Appendix I should include a list of assumptions. This would help to alleviate confusion for the public regarding the development potential associated with the new draft, and make things clearer for planners and community
members who will refer to these numbers in the future.

- The descriptions with the table, particularly the reference to a cap “+ light industrial and + local convenience commercial” should be consistent with the policy language regarding caps. (In both the town and county, when is additional local convenience commercial and light industrial permitted beyond the “caps”?)
- Also, ultimately, actual existing baseline allowances should be used to determine potential development, not figures that include many assumptions (including those for redevelopment).

New Ideas

It is unclear how you will specifically define and address “new ideas” in your review. Over the last year, the public (both in written form and in verbal testimony) introduced a number of new ideas and suggestions on which votes were never taken by planning commissioners. At this point, we assume any ideas that were previously brought forward in public comment will not be considered “new ideas” (regardless of whether a vote was taken related to these ideas), and will therefore not be considered during this phase of your review.

To provide one broad, comprehensive “new idea” for this plan, we recommend that you identify a comprehensive priority list of strategies to be incorporated into the text of the new plan (or you should make a recommendation that the elected officials develop this list as part of their review). Currently, the independent chapters include a number of strategies unique to each theme, but the draft plan, as a whole, doesn’t prioritize them in relation to one another. (For example, the 1994 Plan included a list at the end of the first chapter that identified the top issues that needed immediate attention upon adoption of the plan. A similar, but more specific approach with timelines, would be good to take with this new plan.)

Closing Thoughts

Based on our review of the new “Themes and Policies” section, we believe there have been some great steps in the right direction, but there are still a lot of remaining questions and issues that need to be clarified prior to adoption of a new comprehensive plan. The key factors of this uncertainty include:

1) There are many outstanding issues associated with the FLUP section. (It is structured to be a section of the plan, not something separate from our comprehensive plan.)

2) Some of the policies’ language is broad and vague, leaving potentially very diverse interpretations in the future when drafting land development regulations. (There are a number of issues that still need to be reconciled at some point, some of which can only be done at a more detailed level than the level at which the issues have been reviewed to date.)

3) Many of the tasks are still ahead of us that should play a role in the FLUP section discussion, such as an updated Natural Resources Overlay and Scenic Resources Overlay. And,

4) There are several key topics within the plan that should be more representative of the information gained in years of public input. However, again, to respect the structure of your review not to reconsider topics, we will emphasize these topics again as the draft gets forwarded to elected officials.

Thank you for your consideration of these comments. Again, we really appreciate your dedication of time and energy throughout this planning process and all the efforts you have made on behalf of our community.

Sincerely,

Kristy Bruner   Becky Tillson
Community Planning Director  Community Planning Associate
Dear Teton County and Town of Jackson Planning Commissioners, Planning Staff, First of all, I want to thank you for your thoughts, considerations and the unbelievable time commitment for the benefit of our community. I very much appreciate each of you and I hope those that have not been involved really show their appreciation as well. Generally the new draft is greatly more representative of what the community wanted verses the first draft. With the County and Town being so divergent in goals and policies, I do not know how you could have done a better job trying to reconcile between the 2 commissions. Until the BCC reviews this new draft, and the FLUP maps are prepared, it seems pointless to take this draft much further. I hope that you will take the time now to correct some obvious inconsistencies. VISION The new graphic and 2009 Vision on Page 10 represents that Theme 1 is above all and is the #1 consideration in planning. I do not see this as the first and most important thing to be considered in each one of the following themes as I read through the full draft plan. This priority needs to be repeated at the beginning of all themes. I am also concerned with the overuse of the word sustainability. Yes there is a definition, however, this word has so many different meanings to so many people. The definition provided in the draft indicates a balance where the Page 10 graphic is clear on the priority of Theme 1. Theme 1 Establishing the Environmental Commission is the key to this Theme and tasking them to develop baselines. Without baselines, and knowing where we are now, we have nothing to measure. Unless there are real numbers attached to this theme it lacks meaning and certainly planning staff, commissioners, and the BCC cannot make planning decisions based on numbers or facts as there are none. The LDR’s will not have these numbers or baselines. When will these be filled in? Is this Theme not the #1 priority and we have no recent data? Theme 2 There is inconsistent language in 2.1.a. The first sentence limits to existing base development rights allowed today, yet the next sentence indicates there can be additive growth. This is confusing and sends conflicting messages and offers no predictability yet offers vague flexibility. Public benefit? Who decides? The elected officials at the time? This is recurring throughout Theme 2. Policy 2.2.b possible increase in non-residential is inconsistent with other policies in theme 2. Does Policy 2.4.c mean platted but undeveloped lots can no longer apply for variances? Is this a taking? Policy 2.4.f. Shouldn’t wildfire mitigation be required for all properties including existing for the protection of all in the community? If your neighbor does not mitigate their existing home they put you at risk. Policy 2.2.d. Policy which indicates just Teton Village could have local convenience expanded is inconsistent with Straegy 2.1 which allows local convenience at all Resorts. Policy 2.6.a “Natural Resource conservation” also mean wildlife and wildlife habitat? Theme 4 I agree with Rich Blooms comments. I feel there is inconsistency in the density bonuses/incentives in this Theme and keeping with the existing base development rights as described in Theme 2. I still do not see the 65% number really documented anywhere unless you use the vague workforce housing description which is meaningless as it includes about every breathing human in Teton County. Theme 8 I feel there should be wording that confirms enforcement of building codes with real inspections in our Town and County. I had hoped to not be so rushed to get these comments out by your deadline. I did not see the draft of the Administration Chapter? Did I miss this? Is this not up for review too? Thank you again for considering my comments. Gail K. Jensen

5/28/2010 Tompkins, Kathy
Interested Public

I just wanted to say thanks so much to all of the planning commissioners for all the hard work and long hours put in to get the plan going in the right direction. I echo what SHJH and Rich Bloom submitted for comments. The contradictions about staying within our growth limits and bonus densities need to be addressed. Put more bite in the growth watchdog end of it. Implement an environmental commission, define better, workforce housing with emphasis on not going below 65% instead of increasing growth by increasing workforce percentage that can live and work in the valley (the dog chasing it’s tail syndrome). Remember that some people do choose to live somewhere else and come to work here. The flup is going to be the key to a successful comp plan. Get the planning commissioners review and recommendations to the county commissioners before the election to get their stance and then we can get going on the flip. Thanks again, Kathy Tompkins

5/27/2010 Faupel, Matt
Interested Public

If guest houses are considered AR units then this is a terrible idea. Guest houses do not have the issues that you are trying to mitigate with AR units being rented, etc. They are essentially guest bedrooms that are private. They can also provide housing for caregivers, nannys and caretakers who you are now saying either need to live off site or in the home of the owner. This is simply an unneeded restriction and a large right taken away from a landowner. If enforcement is the issue, fix the issue, do not avoid the issue, fix it and do not penalize those who are not the issue.
May 27, 2010  The following are comments which we tried unsuccessfully several times to send via the Commission web sight. We are adamantly opposed to the proposal within the comprehensive plan which would prohibit accessory residential units associated with residential uses. We strongly endorse Susan Shepherd’s thoughtful and articulate letter which details the consequences (intended and unintended) of such a myopic effort. We are not Johnny Come Latelys to Teton County having resided here and been in business here for nearly 30 years. We have seen the good, the bad and the ridiculous, including this effort, of county planning. This proposal demonstrates a lapse in common sense. The reality is that there are and will be a very small percentage of residences with guest houses. The message, however, is huge. It is negative, unwelcoming and woefully short sighted. We respectfully request the commissioners to consider the concerns of so many of us and eliminate this proposal from the comprehensive plan. Thank you. Regarding: Jackson / Teton County Comprehensive Plan Revision
Elimination of Guest Houses / ARUs
Dear Commission and Board Members,
We are writing to express our strong opposition to the proposal to eliminate guest houses/Accessory Residential Units (which, for simplicity I will refer to below as ARUs) from allowed development in Teton County. We believe ARUs, now each limited to a maximum floor area of 1000 square feet, are important for many permanent residents and second homeowners.

We own property in an area generally referred to as South Park Ranches, a development of 2.5 acre tracts, in which there are currently a significantumber of ARUs. (We do not have ARU on our property.) The majority of ARUs in South Park Ranches, as I believe is the case in most areas our community where permanent residents predominate, are utilized as: private living spaces for out-of-town family and friends who come for extended visits; quarters for aging parents; transition or permanent housing for children who could not otherwise afford to live in the valley; housing for caregivers in households with seriously ill family members; and/or living quarters for nannies for single parent households, or for families where both parents have demanding work schedules.

For second homeowners, a core segment of our tourist based economy, ARUs serve as an important source of caretaker employee housing, as well as a valued amenity allowing large families and groups of friends to visit the valley at the same time.

The current land development regulations (LDRs), adopted in 1994, did not originally allow the rental of guest houses. However, it is our understanding that one of the factors (along with a concern for creating more options for employee housing) resulting in the elimination of Guest Houses / ARUs
Letter Re: Jackson / Teton County Comprehensive Plan Revision
Elimination of Guest Houses / ARUs
LDR amendment that transformed guest houses into ARUs (permitted for rental) was the difficulty of enforcing the non-rental status of guest houses. Removing ARUs or guest houses
with non-rental status from allowed uses under the Land Development Regulations would not preclude the development of attached and detached recreation rooms or sleeping areas, which would easily and likely often be converted effectively into guest quarters again resulting in many enforcement and regulation compliance issues.

We understand the concern over the growth potential of Teton County, but the goal of providing for smart growth should not be achieved in a manner that creates unnecessary hardships on important segments of the community.

Thank you for your consideration.

Sincerely,
Francesca Paolucci Rice Richard A. Rice

<td>May 27, 2010 Via US Mail and Email to Jeff Daugherty Re: Comment on DRAFT COMPREHENSIVE PLAN. Dear Jeff: I represent Jackson Ranch Associates, LLC in their capacity as the developer of the 3 Creek Ranch and they have retained my services specifically to comment on Policy 2.1.a of the Draft Comprehensive Plan. As you are aware, the Ranch and Estate Lots at 3 Creek Ranch were approved by Teton County for development with a residential structure and an accessory residential unit. For the most part, the Ranch and Estate Lots at 3 Creek, while sold to end purchasers have not been developed. It is my client's expectation that Policy 2.1.a, if adopted, will NOT affect the Ranch and Estate Lots at 3 Creek Ranch since it is a previously approved development and that all future residential development on the Ranch and Estate Lots will allow a primary residence and accessory residential unit, subject of course to the terms of the development permit and other regulations. If it is the County's intention to eliminate accessory residential units for previously approved developments, we believe this would constitute an unconstitutional taking of land without fair compensation and would therefore strongly object to the same. If it is the County's intention to apply Policy 2.1.a to future developments only, my clients objection remains as they believe accessory residential units are a necessary component of sound community plan. If you have any questions, please do not hesitate to give me a call. Very truly yours, Christopher Hawks, PC, Hawks &amp; Associates, LC cc: Jackson Ranch Associates</td>

<td>As a professional in the field of historic preservation, I'd like to add my personal support to this draft of the Comprehensive Plan, specifically section 3.6 for its recognition of the importance of historic preservation in promoting heritage tourism and economic development. Our historic buildings may be humble, but they meet nationally-recognized criteria for historic significance. And while they may not be as old as historic structures in other communities, they are the oldest buildings we have, and if we don't allow them to survive to 100 years, they will never be 300 years old. I also support Theme 8 and its recognition of the sustainability of reusing existing buildings, a practice that further supports the local economy by putting more construction dollars in the pockets of local construction laborers than new construction, while reducing waste. Thank you for leading the county in recognizing that recycling buildings is as important as recycling cans and bottles, if not more so.</td>

<td>Dear County Commissioners: I am opposed to the ban on future guest homes in the county. Most guest houses are used for just guests or caretakers. Eliminating future accessory units will eliminate caretakers from being able to live close to their work and will eliminate guests from staying with friends and family. I do not believe that this is the intention of the ban. Thank you for your time, Kristin Vito</td>

<td>O'Connor, Jesse</td>
<td>On behalf of the Teton County Historic Preservation Board (â€œthe Boardâ€) I am writing in strong support of the Planning Commissionâ€™s Teton County/Jackson May 7, 2010 Draft Comprehensive Plan. Specifically, the board supports the careful consideration paid to the communityâ€™s cultural resources in the planâ€™s emphasis on the role that preserving heritage plays in maintaining community character, promoting economic development, and by promoting sustainable practices through the reuse of existing structures (found in Themes 3 and 8). The value of our historic resources is sometimes less obvious than in older communities, but Jackson Hole does have historic buildings that meet nationally-recognized criteria for historic significance. The town and county were designated a Preserve America Community by the Advisory Council for Historic Preservation, a Federal agency, in 2009, identifying Jackson Hole as a cultural asset important to the nation. The county is home to over 350 structures listed on or eligible to the National Register of Historic Places, and the area contains many more potentially eligible sites and structures that have yet to be evaluated. The Board supports the current draft of the Comprehensive Plan, which clearly articulates the importance of these nationally-recognized resources through policies 3.6a, b, and c and provides for their consideration during the planning process. We applaud the planâ€™s support for the mission of the Teton County Historic Preservation Board to identify and protect these resources. The plan, as drafted, is also consistent with the existing town Preservation Ordinance (15.38.020). This plan also acknowledges the core value of preserving the community character of Jackson Hole. Community members polled in the Lake Research Partnerâ€™s 2007 survey ranked preservation of community character as the second most important goal of the comprehensive plan (shown by the support of 90% of respondents). The character of any community is inextricably linked with an understanding of its roots, and with the built environment that represents those roots. When asked what defines community character, this Board has found many residents mention historic resources such as the town square, Mormon Row, the Wort Hotel, Jackson Drug, and the valleyâ€™s historic ranches. We support the planâ€™s goal of guiding development in a way that is respectful of that heritage. In terms of economic development, that heritage is critical to attracting heritage tourism, a valuable asset to the valleyâ€™s economy. Studies have shown tourists who travel to historic sites stay longer and spend more money each day of their trip than other types of tourists. Those are economic benefits this community reaps simply by preserving what we already have, and they are benefits we endanger if we do not protect our heritage. Historic preservation promotes economic development in another critical way. As opposed to new construction, in a project reusing an existing building, whether it is historic or just old, more of the construction dollars go to labor than to materials, keeping those dollars circulating in the community. Lastly, we applaud the plan for its recognition of the sustainability of the reuse of existing buildings (Theme 8). Green building professionals estimate it takes from thirty-five to fifty years for a new buildingâ€“even an energy efficient, LEED-certified buildingâ€“to recoup the embodied energy lost when an existing building of its size is demolished. The embodied energy in an existing building is equivalent to five to fifteen gallons of gasoline per square foot. New construction also creates significant wasteâ€“waste that constitutes 25% of the nationâ€™s municipal waste stream. The Jackson Hole community is passionate about reuse and recycling. The Board supports the current draft of the Comprehensive Plan for clearly articulating the connection between building reuse and sustainability. We appreciate your consideration of our comments and hope that we can continue to provide feedback for this important planning document.</td>

<td>5/27/2010</td>
<td>Parent, Karen</td>
<td>I strongly believe that eliminating the option to build separate, free-standing guest houses is a mistake. The opportunity to have a separate “outbuilding” helps to reduce and minimize the bulk and scale of larger homes. Furthermore, guest houses help provide housing for caretakers/employees on these properties. Why should the county remove this tool in the new comp plan? This tool has not created a problem - so why take the option away? It makes no sense.</td>
</tr>
<tr>
<td>5/27/2010</td>
<td>McGregor, Bob and Kim</td>
<td>Sirs, I just heard that one of the new provisions of the new comp plan draft is the elimination of guest houses. New I havenâ€™t thought this through completely since I just found out about this today and comments are due tomorrow. However, on the face of it this seems completely backwards and counter productive. Think about it. Who uses guest houses? 1- Guests (temporary visitors) 2- Relatives (children trying to make it in Jackson, or parents now living in the guest house) 3- Renters 4- Caretakers Now we obviously want to continue to allow people to have guests. And we all know how hard it is for children to continue to live in the valley once they are out of the house, this is one way to facilitate this transition and keep families together in Jackson. So what about renters and caretakers? Guest houses are small, by regulation. So renters (and caretakers) are consequently also small: young couples, singles, maybe a new small family. People who have a hard time making it in Jackson. The very people who we are building affordable housing for and worrying about providing rentals for (Witness the Townâ€™s moratorium on condominium conversions last year). This is not the type of population increase we are concerned about. This is the type of population increase we are trying to encourage--working people. One of the main concerns and goals of the plan is that Jackson go forward as a viable, balanced, and sustainable community. These are the people and this is the housing we need. Not new subdivisions where people with money can drive up the overall cost of living in Jackson. Concentrate on limiting that kind of growth, and leave this kind of affordable housing alone. Thank you, Kim &amp; Bob McGregor/Jackson Hole</td>

Comprehensive Plan Comments – 5.7.2010 Draft
Theme 4: Meet Our Community’s Housing Need

I have read the May 7, 2010 draft and have decided to submit comments only on Theme 4 as it has the most disconnects from the other chapters, your joint votes and also where we have been heading in workforce housing solutions as a community the last number of years as well as the current Town and County LDR’s.

I will focus only on those areas that I think do not represent your votes via other chapters - or fully represent the intent of the votes on this theme that you took. Recognize that the questions asked by staff to the joint planning commissions greatly influenced the votes and what they meant. I hope you will review the intent of some of your votes recognizing this limitation – without feeling it is in anyway “revisiting” any of the votes. This is an important point as you will see from my comments that follow.

Although my input is informed from my long history of creating workforce rental housing in the private sector (TSS), 30 plus years living in this county, well known community organizing – not only on planning issues but also advocating for workforce housing, and my current nine month involvement as a member of the Town/County Housing Blue Ribbon Panel – I am commenting solely as an individual.

Workforce Housing definition page 53:
• Your votes, all of our LDRs and the work of the last years by our community have defined this as housing for our workforce.
  o This new definition of “all housing occupied by people living in the community year-round regardless of deed restriction or employment.” - is very, very problematic! Workforce housing is tied to employment period – whether in deed restricted or free market housing units – whether owned or rented – whether seasonal or year-round. Please clarify that workforce housing – is for the workforce.
  o See my discussion later on how this focus on workforce housing then achieves secondarily the other goals of social diversity, sense of community and generational continuity that you have identified.
  o Also an emphasis for incentives can be more weighted for year-round and/or emergency service workers - without changing the definition of workforce housing in this manner by dropping all employment requirements as part of the definition and solely focusing the definition on year-round employees when seasonal employees remain a critical need for our economy – and community.

Why This Theme is Addressed and other areas throughout the theme:
• The key issue here is that supporting the goal of at least 65% of our workforce living locally will result in the other three bullets being achieved – socioeconomic and demographic diversity, generational continuity and a sense of community.
  o It needs to be clear that the reason we are focusing on the plan is to address workforce housing goals – and that will achieve these other three bulleted goals – not the other way around!
  o The way staff interpreted your votes (and how they constructed the votes themselves) – we are left with whether we should incent or mitigate for retirees, generational continuity – or for our workforce? It is for workforce housing that this theme is addressing – but to be consistent with your votes – the other goals of diversity, generational continuity and sense of community will be achieved by this statement of ideal and focus on what we are intervening on (workforce housing – your votes also on priority for year-round employees and emergency service workers) through regulation, mitigation, exactions and incentives.
  o It is currently the greatest flaw in this theme – and what I am suggesting is not inconsistent with your votes.
  o This is also found in Principle 4.1 – which should be rewritten to focus on workforce housing which then leads to achieving the other three bulleted reasons for this effort.

May 27, 2010 Rich Bloom
• “Catch-up” – is clearly not something we have talked about since identifying the goal of housing at least 65% of our workforce locally. This is old language and dated thinking from the 2005 Housing Needs Study that predated our establishment of a realistic and achievable goal of no less than 65% of our workforce being housed locally.
  o Since we are at 70% plus, and have never dipped below 67% - the discussion has focused on “keeping up”.
  o I want to point out that you never took a vote on these two terms.
  o It is a gigantic leap to now say we want to achieve 100% of our workforce living locally – the financial and regulatory implications of that are simply draconian and unachievable. I would strongly recommend removing all references to “catch-up”.
  o Again this is mentioned under “A Residential Workforce - page55 – “The community’s goal is to increase the percentage of the workforce living locally, improving the existing situation.”

This again is Theme four’s second greatest weakness and will do great harm to our affordable housing efforts if it is included as written. It must be made clear that we will not be incenting for a goal above 65% of our workforce living locally - or our collective work over the last number of years will...

<td>Ankeny, Jake</td>
<td>I stand in strong opposition to the elimination of the ARU from the Comprehensive Plan and future LDR’s. People have reduced their main residence sizes to allow for future, potential ARU’s. I can only imagine their disbelief, frustration and potential litigation that would come from such an action. You should also strongly consider who has benefited from ARU’s, namely caretakers, mothers-in-law, family members, etc. This is too severe of an action to take in these down economic times as well.</td>
</tr>
<tr>

<td>Bohl, Steven</td>
<td>Good Morning. We completed the construction of our guest home last May. We also had a building permit approved for our main home, however, do to economic changes we have postponed the main house construction for a year or two. Our property address is 5235 Fish Creek Rd, Wilson. As you can imagine, if we lose the ability to build a main house, with the exclusion of an accessory structure provision, this would dramatically impact our property. We complied with the maximum of 1,000 sq ft for a guest house in anticipation of building the main house. We have owned homes in the Jackson area for over 10 years and are planning on retiring in the area in two–three years with the completion of the main house. We bought this lot specifically for the building of the guest home and main home as proven by our approved building permits. Please consider this unique situation and not significantly impact our property value. Thank you, Steven Bohl 612-221-8741</td>

<td>Ward, Thomas</td>
<td>The transfer of density from county to town seems ill considered as well as a thinly veiled piece of political gerrymandering. It will remove housing stock that is often utilized by caretakers (tax paying working types) as well as eliminating the prospect of some construction opportunities for general contractors (also tax paying working types). The proposed amendment does not outline how these density credits will be transferred. An ARU in the county is 1000sf for a private residential development and 850sf for a commercial development. Neither of these floor areas would qualify as an affordable/employee unit as outlined by the housing authority, so if these are to be combined, how? This should be outlined in the proposed amendment. I did not see whether or not his would apply to new developments or be applied retroactively to all lots eligible for an ARU. These specifics should be worked out prior to being proposed for approval. I am certain that our elected county officials would required the points above, but I felt compelled to comment myself. 5/26/2010</td>

<tr>
<td>5/26/2010</td>
<td>Smith, Garnett</td>
<td>I hear the new plan has a provision stating that “accessory residential units associated with residential uses” will be prohibited. If this means there will be no guest houses allowed I am opposed to that. I am the owner of 2 lots in 3 Creek Ranch and if guest houses are not allowed then I think the value of these lots will decline. I purchased these lots with the idea that guest houses were allowed. If you grandfather existing owners that is one thing, but if you plan on applying this moratorium to existing owners I feel it will result in the taking of a right that was in the purchase price and would result in a diminution of value. <td>Linton, Carol</td>
<td>Commissioners and Planners, I have been a Jackson homeowner since 1987. I have lived in three different areas of the valley, bought and sold 5 times. My husband is a fourth generation Wyomingite; he owns a Wyoming business that has just celebrated its 50th year. I am telling you this because I am trying to impress that we are not “newcomers” to the valley. Eliminating guest houses in the Valley is not in your realm to impose. If the CCR’s of a subdivision allow it, and the property is of a size to allow it, then you are taking away an individual’s property rights. Why not put a restriction that it must be within a certain distance from the main home (clustering which you are fond of)? Clustering guest homes to main homes is the right solution. Eliminating guest homes from lots that allow them is just plain wrong. 5/26/2010</td>
</tr>
<tr>
<td>5/26/2010</td>
<td>Gaitan, Penny</td>
<td>To Whom It May Concern: With regards to the current draft of the Comprehensive Plan, I am very concerned and opposed to the Policy 2.1a, especially the proposition that future constructions of accessory residential units not being allowed. I have a 3 acre piece of property with home and plan to build a guest house for one of my children to be able to move back to the area and live in Jackson Hole. I haven't had the ability to do it yet, but that was the purpose of the purchase years ago. This ability to put a guest home on property has been allowed use for years and I would like to see that continued. I do not understand why it was even considered to change this regulation, but I definitely oppose this change. 5/26/2010</td>
</tr>
</tbody>
</table>
Theme 2 Manage Growth- One potential conflict is Policy 2.3.e which limits discretion in land use decisions, but then says â€œregulations and incentives will be performance based.â€ At least is does say the â€œintent and limits of the incentives will be clearly stated.â€ Unless incentives are clearly defined, they are discretionary. The statement that â€œif small town, rural character is to be preserved, human needs must be provided within existing development potentialâ€ seems pretty clear, but in the Housing Theme it mentions giving limited density bonuses. This conflict should be resolved. Policy 2.1.d talks about transferring density from the rural county and converting non-Residential potential into residential potential in town. No mechanism is proposed or an audit system to be sure this is not abused. Indicator 1 basically says we will follow the LDRs. Is that what the JP&amp;Z C, meant? It seems redundant, like promising to stop at red lights. Theme 4 Meet our Communityâ€™s Housing Needs-

Generally this Theme seems confusing and in need of some clarification. The definition of workforce housing as â€œall housing occupied by people living in the community year round regardless of deed restrictions or employmentâ€ is very confusing and vague. We would ask the JP&amp;Z C to confirm that this is what they recommended. Policy 4.3.b to â€œallow density increases for restricted workforce housing in target areas of townâ€ is in conflict with Theme 2 managing growth. Even if â€œBase density allowances will have to be set low enough to allow for density bonuses that do not increase residential development potentialâ€, it is difficult to understand how this will maintain the goal of no net increase in total Town and County development potential. We ask the JP&amp;Z C to confirm that the goal for indicator 1 is to increase the percentage of workforce housed locally. Our understanding was the goal was to stay above 65% but not necessarily to keep increasing the percentage. It is unrealistic to expect it to increase forever. Theme 5 Provide for a Diverse and Balanced Economy-Although the Theme talks about â€œDeveloping a better economy without building a bigger economyâ€ indicators for skier days, National Park visitation, monthly lodging occupancy rates, airport enplanement, and local domestic product are all targeted to increase. This seems to be in conflict with principle 5.2 which says â€œEconomic development will occur within the growth management policies of the communityâ€ with the primary goal of improving the local economy not necessarily physically expanding it.â€ Theme 6 Develop a Multi-Modal Transportation Strategy-Policy 6.3.c: to â€œReview land use proposals and decisions against their transportation network impactsâ€ is not necessary if total development potential in Town and County is limited. Instead the plan should review what transportation network is needed to service the development potential that is allowed. The goal to increase Level of Service for all modes in indicator 7 seems to conflict with other statements to discourage vehicle use. Theme 8 Energy Conservation-This is a new Theme which has not been reviewed so our comments are more general. Principle 8.4 misses an important way to reduce energy which is to build smaller public buildings and not build unnecessary public buildings. Consider requiring larger buildings to have higher energy efficiency. Policy 8.5.c suggests pursuing methane capture in the landfill. Is this possible since we do not operate the landfill in Sublette County? Is the goal of indicator 2 to reduce the number of carbon neutral buildings in 2030? How will indicator 4, per capita miles driven be measured? Indicator 7 seems to be a goal, and should be restated. The draft does not discuss efforts to reduce idling, which is a topic the Town has been working on.

5/25/2010 Mahood, Ken Interested Public I am opposed to removing the provision for accessory residential units associated with residential uses in the county. This is the wrong approach and should not be adopted.

5/25/2010 Evans, Tom Interested Public see comments above:

5/25/2010 Budge, Chad Interested Public If the elimination of guest houses is being considered, I am extremely opposed to that.

5/25/2010 Bennett, Brett Interested Public I oppose the elimination of guest houses as noted in Policy 2.1.a.Guest homes are an integral component to the employee housing base. The elimination of future guest homes would reduce the capacity for the valley to absorb future housing needs, would require more "affordable housing blocks" to be built and would increase commuter traffic from Star Valley and Teton Valley. Sincerely, Brett Bennett

<td>Jay, Chris</td>
<td>I strongly disagree with Section 2.1.a of the Comprehensive Plan. It border line attempts to diminish our freedoms as land owners more so than the current FAR regulations. The current regulations at least allow individuals to decide how they want to develop their own land (to a degree) but still controls the FAR. I think if someone wants to build a 3000sf Main house and then a 4000sf Guest House, they should be allowed to do so. The proposed method is just one step closer to the government completely dictating (and limiting) what we can build on our own land. The next step will inevitably be to cut down the allowable square footage of the one allowed building unit thus mandating that we all live in cabins. If the intention is to limit the amount of “building” per square acre, then just decrease the allowable square footage per unit, not the allowable number of units. Personally I think the current system is more than restrictive enough to accomplish the goal.</td>
</tr>
<tr>

<td>Bryan, Bomber</td>
<td>TC Planners and Commissioners, I am strongly against the proposed language in the Draft Comp Plan that defines the inability to construct future ARU’s. This is not the answer to managing growth in Teton County. What exists is history, and forward management has to do with future allowable deeds (residential development) and proper mitigation policies. Thank you for your time and consideration.</td>
</tr>
<tr>
<td>5/25/2010</td>
<td>Stevenson, Phil</td>
<td>I strongly object to the language contained in Policy 2.1.A which states, in part, “...accessory residential units associated with residential uses will not be allowed”. This would appear to be a direct prohibition on guest houses, which I believe would be a huge mistake. More than almost anywhere else in the country, when you live in Jackson, people want to come and visit, often for weeks at a time. For those who can afford them, a guest house is a gracious way to house visitors, and I don’t see how they in any way are harmful to the citizens of Teton County, especially when they are limited to 1,000 square feet.</td>
</tr>
<tr>
<td>5/25/2010</td>
<td>Evans, Tom</td>
<td>I am not in favor of taking away the accessory residential unit associated with residential uses in Teton County. I find it interesting that this is being considered. I have a guest house and I use for guest and friends and it is a wonderful addition to our household. It allows me the opportunity to also use if for staff and or employees without taking up any housing needs in the balance of the county. I don’t see what the purpose is to not allow guest houses other than wanting to take jobs away from architects, contractors and landscape companies or for that matter eliminate future housing of employees in the valley. By disallowing you are continuing to increase the demand for housing and in return will increase the amount of rent someone will have to pay. You need to be more proactive in this economic climate and not take away a potential job that does no harm in keeping the accessory units in place as it currently is in the master plan. Tom Evans</td>
</tr>
<tr>
<td>5/25/2010</td>
<td>Kleiman, Darren</td>
<td>I wish to voice my OPPOSITION to section 2.1.a of the most recent draft of the Comprehensive Plan, specifically as it pertains to ARUs. The proposed legislation stating “...accessory residential units associated with residential uses will not be allowed.” will have unintended consequences beyond anyone's imagination. While control of density in theory is a good idea, this is NOT the right way to achieve the goal. Commissioners, vote NO on the Comp Plan or you'll be out of a job next election.</td>

<tr>
<td>5/24/2010</td>
<td>Hanlon, John</td>
<td>Re: Theme on managing growth responsibly: I feel it is unwise to take away the guest house in the county. They should be added to the town and long term rental allowed too. When housing is tight and prices are high is one way the locals can pay their mortgage. It allows more quality to lives of people who live here. Some are turned away because they can’t pay a mortgage in this high priced community. Another advantage to guest houses is that they allow people to come and visit without having to actually move here so the impact on the community is lessened. A third benefit they provide is that if locals can rent guest houses then we will have less need for bigger apartment and condo complexes. If there are several hundred seasonal workers in the area and many of them are renting in various apartment complexes those place start looking like fraternity row. (Just go by Ponderosa village on Friday evening in the summer time - you’ll see). But if seasonal workers are renting a guest house behind a private home there will not be a &quot;keg party&quot; there because the owner would never allow it. This translates to less disturbance calls to the sheriff/police too. A fourth benefit is that it leaves other housing available, thus lessening the demand to build more publicly subsidized housing by Teton county. Please keep guest houses in the plan.</td>
</tr>
<tr>
<td>5/24/2010</td>
<td>Gillespie, Christy</td>
<td>In regards to: “Policy 2.1.a, lines 6 and 7, where it reads, â€œ accessory residential units associated with residential uses will not be allowed.â€ As a realtor in this valley and property owner I’m extremely disappointed that the planning commission for even considering this. Guest houses create jobs in the valley and provide housing. In a time when the economy is already in a downturn and builders are out of work - is this really the right time for you to take an anti-growth policy on guest houses? Not to mention, all the other services industries that will be affected by this - architects, landscapers, cleaners, etc.</td>
</tr>
<tr>
<td>5/21/2010</td>
<td>Shepard, Susan Margar</td>
<td>I am opposed to the elimination of the option to build guest houses that exists under current law. I would like to build one to house my adult children who are struggling with the economy right now. It could later be rented out to a couple who need reasonably priced housing. Also, it will impact second homeowners who bring a great deal of revenue (hence Jobs, charity and business support) to our valley. I am sending a more comprehensive letter outlining my concerns.</td>
</tr>
<tr>
<td>5/21/2010</td>
<td>Moore, Robert, E. J. Jr.</td>
<td>Dear Planning Commission, I expect that you use this forum to gauge popularity of particular issues as it is convenient, though be it misleading. One should be aware that not everyone has the time or ability to follow your latest endeavor. I fall into this foregoing mentioned group having to rely on our local news media which is obviously biased. I just thought to clear my conscious I needed to add my two cents by speaking out against eliminating ARU’s. Any more infringements than have already been inflicted by yourselves and your staff upon property owners in this valley is just plain wrong. Thank you for your service and your time.</td>
</tr>
</tbody>
</table>
Please do not deny homeowners the right to build a stand alone Guest House. Several people I know have recently bought their lots knowing that they would be able to build a guest house on the property eventually. I believe that if Guest Houses are no longer allowed, main houses will become that much larger, and that much more noticeable in the landscape. To be able to build a small Guest House and a moderately sized house breaks up the mass and creates smaller scale structures, which have a more quaint feel, like those of the olden days of Jackson Hole. I do not believe that eliminating Guest Houses will help eliminate wildlife in any way. Instead, it seems like eliminating them would take away coveted rights of the landowner to build on the land they own. I would rather not see Jackson turn into a place of 8000 sf houses. The fabric and beauty would benefit from grouped smaller scale structures. Thank you for your consideration! Shawn Ankeny

May 20, 2010 Addressed to: The Teton County, Wyoming Planning commission; The Town of Jackson, Wyoming Mayor and Town Council; The Joint Town and County Planning Commission. RE: Draft Joint Town and County Comprehensive Plan "Unintended Consequences". Dear Representatives: With personal fidelity to the overall goal of protecting wildlife and our incredible natural beauty through a reframing of our comprehensive plan, I also understand that every major decision made in such planning will have "unintended consequences." Wise planning should welcome serious discussion of the consequences of regulatory decisions. I refer in this letter to the proposed elimination of "residential ARUs," i.e., "Accessory Residential Units," or "Guest Houses." I understand that 53% of those attending a recent public meeting strongly supported such elimination. I wonder if they and others supporting such a change have considered the unintended consequences?

While even home owning residents of more modest means will be affected by this change, it does appear that this proposal seems directed toward second homeowners to discourage them from coming here. I urge you, our commissioners and councilors, and the citizens of Jackson Hole to consider the following: There are more than 150 "official" charities in our valley, an unbelievable number for an area of our size, that support underserved and needy people, the homeless, sick and hungry. Many are funded in large part by current and former second homeowners who have "fallen in love" with Jackson Hole. Jobs in our valley are increasingly scarce in this recession-battered time. It would be hard to overstate the positive effects on second homeowners on our local economy, even if the construction workers who build their residences are not included. Take for example just one family that spends a few weeks here winter and summer and employs two garden workers twice weekly in summer, snow removal workers in winter, a caretaker (who lives in their ARU with his family), a handyman, weekly cleaners, fishing guides, etc. This couple also donates heavily to several JH charities. Consider then, the many jobs created by them and other second homeowners. Along with the Tetons and National Parks, second homeowners are prime engines of job creation.

Virtually every job here is due to the trickle down effect of money spent by tourists and second homeowners. Could we have a national award-winning weekly newspaper laden with advertisements without the purchasing power of second homeowners, or world-class skiing and outdoor recreation, shops, businesses, a good hospital, restaurants? A short drive over the hill or to Idaho Falls or Star Valley will illustrate how difficult things are without a strong local engine of job creation. The Center for the Arts and National Wildlife Museum are remarkable achievements for a small valley. They were paid for and supported in part by generous donations from current and former second homeowners. The Grand Teton Music Festival receives strong support from second homeowners. These days nearly every mountain resort has one, but ours is world class and widely considered among the finest in the nation. Despite the perception of some locals that second homeowners are all jet-setting dilettantes, and while some certainly are, most JH second homeowners are more like those who worship in my church. "In love" with our valley, they donate substantially to the church and local charities. They love and value being here and many bring their children and grandchildren from quality family time.

Finally, and importantly, in addition to guest houses for second homeowners, those built by residents of more modest means can under current law be rented out or occupied by family members struggling with recession fallout. It is incomprehensible to consider taking away the option to build onto our own properties during a major recession. We can have limited growth, create affordable housing, protect our wildlife and the incredible character of our valley, and discourage futher large development without making it impossible for my middle class family and other like us to live here. Thoughtful planning can demonstrate the these concepts are not mutually exclusive and can be achieved without wreaking havoc on a fragile economy or biting the hands that feed us. Those who espouse extreme measures to "take back our valley" and who also claim to speak for "the people", will succeed only in destroying the ability of most of us to have gainful employment in Jackson Hole.

And yes, I have seen the crop of bumper stickers admonishing us to "Need Less". The unintended consequences of even well meaning decision may adversely affect life in Jackson Hole far into the future. We could end up with much less to need less of.

|----------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------
<p>| 5/18/2010| Taylor, Nancy | Comments on Theme 8. Thank you very much for adding Theme 8 to the draft Comprehensive Plan. It is crucial that it be included as part of our planning process. I would suggest that the word &quot;Renewable&quot; be used instead of &quot;alternative&quot; when you are speaking about energy, particularly where it is used as a theme heading. The word &quot;alternative&quot; implies that it is a practice that is on the fringe. The use of renewable energy needs to become mainstream for all of our citizens, even those who frown on &quot;alternative&quot; options for their lifestyle. The use of wind as a renewable resource for energy generation is really not a viable source for Teton County. We don't want to discourage the use of home wind turbines as they becomes more viable in the future, but at this time we do not have enough wind to make wind energy cost effective. It might be worth mentioning solar thermal or the heating of hot water from solar panels, as it is a very cost-effective way to heat water with a very short pay-back period. There was a Green Building Action Team which was a branch of the EEAB that drew up Green Building Guidelines for residential housing. We spent several years drawing up these guidelines and it would be good if they were incorporated into the LDRs connected to Theme 8. Please talk to Jesse Stover in the Building Department. There also needs to be some financial incentives to encourage green building for residential and commercial development. The Energy Mitigation Regulations need to be mentioned with more emphasis, as the size of 2nd and 3rd vacation homes does a great deal to increase the carbon footprint of Teton County. There was also a community 10X10 effort headed by Sarah Mitchell. We drew up several suggestions for education and retrofitting which could be mentioned in Theme 8. Thank you for your consideration. I would be happy to answer any further questions on this theme. |</p>

<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISSUE 1:</td>
<td>Definition of a “strong and diverse” economy</td>
</tr>
<tr>
<td>JHCC PROPOSED POSITION:</td>
<td>A strong and diverse economy (1) creates opportunities for business start up, sustainability, and growth that meets the essential needs and desired amenities of our community and visitors while having little to no negative impact on our local economy, community, or environment, (2) fills unused capacity in winter and shoulder seasons, (3) provides year-round jobs that attract a diversity of experience, skills, and capabilities that strengthen our workforce and community, (4) is flexible and resilient to changing economic conditions, and (5) establishes and sustains a stable tax base.</td>
</tr>
</tbody>
</table>

| ISSUE 2: | Are we a community first, resort second; a resort community; or a gateway community? |
| JHCC PROPOSED POSITION: | The Town of Jackson and Teton County are a gateway to our federal lands, recreation opportunities, incomparable wildlife and scenery that is characterized by the economic, social, and environmental benefits of both a community and a resort. Our gateway community works to sustain and enhance our distinctive economy, recreational opportunities, arts and culture, environment, heritage, aesthetics, and well-being of our residents and workforce through wisely managed tourism and destination stewardship. The strength of our community enhances the competitiveness of our resorts and the economic benefits of the resorts supports the creation and maintenance of the community’s amenities and essential services. |

| ISSUE 3: | Economic Development Council (EDC) |
| JHCC PROPOSED POSITION: | Create an Economic Development Council comprised of key business leaders for the purpose of developing and guiding the implementation of an economic development and sustainability strategy. |

| ISSUE 4: | Maintaining Current Levels of Approved Planned Resorts (Theme 5, Policy 5.1.a) |
| JHCC PROPOSED POSITION: | Modify Policy 5.1.a to read as follows (change highlighted in bold italics): “Previously approved resort developments are estimated to have an approximately 20-year build out. As a result the county and town will not approve new Planned Resorts or expansions to Planned Resorts that are not designated on the Future Land Use Plan (FLUP). Exceptions to this would include community amenities necessary to support these areas as sustainable community centers and community mix-use neighborhoods including workforce housing and local convenience commercial, if determined to be consistent with this Plan.” Restrictions to expansion or types of expansion decrease the flexibility to adapt to changing economic and competitive conditions (e.g., ability to expand lift operations rather than base square footage). |

| ISSUE 5: | Subsidizing Small Businesses (Theme 5, Policy 5.1.d) |
| JHCC PROPOSED POSITION: | There should be no subsidies for businesses. Incentives rather than regulations should be provided for the creation and success of businesses according to an economic development and sustainability strategy developed by an Economic Development Council. |

| ISSUE 6: | Taxation and Economic Development (e.g., Lodging Tax, etc.) |
| JHCC PROPOSED POSITION: | Any taxes, rules, regulations, and incentives developed should enhance and sustain our tourism economy. |

| ISSUE 7: | Integrate Arts and Cultural Offering as a Cornerstone of our Local Economy. (Theme 5, Policy 5.2.d) |
| JHCC PROPOSED POSITION: | A vibrant arts and culture industry provides direct and indirect stimulus for local business – attracting tourists, providing a professional workforce and increasing revenues. The town and county should support and encourage business partnerships with the Arts, helping to keep jobs local, strengthening the economy and enriching our quality of life. |

Re: Proposed Theme Eight: “Energy Conservation”
Submitted via email to Alex Norton

Dear planning commissioners and planning staff,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the proposed Theme Eight of the draft Comprehensive Plan, “Energy Conservation.” Conceptually, we fully support the writing, adoption and implementation of this proposed theme. As suggested by some of the planning commissioners in the April 8 hearing, we also support that the new theme have a broader intent to address climate change and adaptation issues.

Included below are our comments regarding this theme, the first of which pertain to the existing Principle 1.3 and related policies, strategies and indicators, followed by several comments regarding what we believe should be added to this theme.

Amendments to existing plan principles/policies: (please refer to our comments on Theme One for more contextualized explanations)

1. Energy conservation on a broad level is an essential goal. However, in terms of the statement in Principle 1.3 about “lower energy bills,” it is important to remember that it is safe to assume that energy costs will significantly increase once total energy demand in Teton County approaches a certain level. While reducing energy demand per capita is a necessary and essential policy, it is clear that the amount of development proposed within this plan will dramatically increase total energy demand, and therefore energy costs, despite how much is reduced per capita.

2. Policy 1.3c: Incentives should also be provided for reuse and/or recycling of materials in existing structures prior to razing.

Questions/Additions to a proposed Theme Eight:

1. The role of climate change with regard to our wildlife populations, water quality and conservation, and economy are not yet adequately addressed in Principle 1.3. There needs to be more language specific to the Greater Yellowstone Ecosystem within the dynamic context of a changing climate. In addition, the policies in this theme should speak to what it means to be a gateway community committed to the stewardship of two premier national parks and one of the last relatively intact ecosystems in North America, specifically in terms of the example that we set for visitors.

2. Conservation of energy is fiscally responsible; it is arguably the biggest cost savings measure that this community can take. Language to prioritize energy conservation beyond land use pattern and standards for new construction should be included. We need to set aggressive energy conservation goals and then carry them forward; this could include goals for the interim while larger changes are being implemented.

3. Air and water quality are essential to the health of the ecosystem, economy and community. Any and all growth and development will negatively impact these resources, so it will be important to continue to commit to mitigating those impacts.

4. Education of the public will be a critical component of the success of the goals of this theme. For example, developers and contractors could receive materials and information during the building permit review process regarding best building practices (green building). The more conversation about efficiency and conservation that takes place, the more likely people are to amend their behaviors.

5. In the energy audit conducted by the JHESP, it was determined that transportation is the number one CO2 (carbon dioxide) producer in Teton County. In most communities across the country, buildings are the number one CO2 producer, followed by transportation. But, here in Teton County, including
the airport, transportation is the largest contributor. This must be addressed in Theme Eight beyond what policy 1.3b and c mention, and be at least mentioned in Theme Six.

6. This theme should mention the concept of the responsibility of individuals and communities to act locally to reduce our impacts on the changing global climate.

7. In the creation of the indicators for this theme, it will be important to include both numerical and narrative descriptions of baseline conditions, or measurable starting points.

Thank you again for your continued work on this Plan and for your attention to these comments. We also encourage you to seriously consider the recommendations made to this body by other external groups and commissions whose exclusive, or at least primary, charge is energy efficiency and related policy considerations. In the writing of these comments, we also referred to several other community plans from across the country; we are by no means the first community to consider the incorporation of a broad definition of “energy conservation” into our community’s planning and vision document. We urge you to consider examples from other communities as well. Lastly, we applaud your efforts at including the important concepts of energy efficiency, climate responsible strategies and energy conservation into this Comp Plan. In addition to upholding the original intent to weave the concept of sustainability throughout the themes and policies, having a chapter directly related to sustainable community development will strengthen the overall Plan.

Sincerely,
Kristy Bruner Becky Tillson
Community Planning Director Community Planning Associate

Wendy Koelfgen. I'm the Energy Affairs Coordinator for Teton County and the Town of Jackson and I'm here tonight representing Jackson Hole Energy Sustainability Project. I wanted to thank you for identifying the public mandate to start looking at drafting a theme eight on energy sustainability. I couldn't agree with you more. And pursuant to that, we were asked to prepare what we thought should be included in that chapter. And I believe that you all have in front of you the contribution of the Jackson Hole Energy Sustainability Project. In the gray box is our mission and goal statement. I want to make one clarification and make it very, very clear that any other mission and goal statements that come from other groups may contribute to this chapter, but these are the ones that are specific to the Jackson Hole Energy Sustainability Project. We are pursuing energy savings as a means of saving money for this entire community. There were some other documents floating around earlier this week that appeared to come from the Jackson Hole Energy Sustainability Project and they included some other goals surrounding climate and wildlife protection, and those are definitely admirable goals but they're not part of the Jackson Hole Energy Sustainability Project. We are careful about our messaging and I want to make sure that that is clear to everybody. So, again, thanks so much for the opportunity to participate in this. We look forward to participating in the drafting of the chapter going forward. And if you have any questions of us, please feel free to direct them to me and I can take them back to the steering committee.
: Gregory Griffith, West Bank. A couple of things I’d like to talk about; hope I’ll get through it. Paid parking has been brought up as a strategy. I just wanted to relay the information that we took extensive paid-parking surveys, research, petitions, etc., in about ’99 and ’08. In ’99 it was also a mirror of ’08. I’ll give you ’08. In the 2259 responses total, 2222 responses, no, negative—97.9 percent. Even more telling was the negative comments on the comment side of that I don’t have time to relay; 2.1 percent, yes. It mirrors to ’99 results also. The local participation and the demographic distribution was 65½ percent locally, 29½ percent tourist, 3.1 percent second homeowners. The effects of paid parking are generally oversold. The revenues generated are miniscule after maintenance, installation and enforcement. It’s not a viable option. And if we propose something like that, we need to talk to the experts and that’s the merchants downtown, Town Square, ??, etc., so it’s a major disagreement, one of the few I have with some of the board members over there. I’ll leave that there. Last week’s meeting lacked a lot of energy and a lot of focus, in my opinion, and I really think we need to pump up the volume and push through to the end of this process. There was a lot of discussion on some topics that don’t have a snowball’s chance in Sahara of ever getting implemented. And if we’re wasting time talking about that, we’re not talking about something else. The process transition is going to be very important here, and this is not a shot at Staff, but I categorically reject Commissioner Walter’s and other’s assertion that you can’t get this done without Staff leading you around by the ring in your nose on some of these questions, especially in the transition and the procedural end-game here. It’s worked very well in the past. I don’t know that that’s going to be the case. You’ve evolved into a group thing. I’m just responding to whatever the questions say and we’ve lost a little critical thinking skills here. As far as the FLUPs go, I’m not going to say anything retroactive because it won’t do any good, but we should have discussed them. We pragmatically probably won’t because it will take several months. However, the only comment I’ll make is I have a real strong inkling that they’ll be used in the future to supercede the Comp Plan. In other words, since they are supposed to be the bridge between the Comp Plan and the LDRs, they will be viewed as superior to the Comp Plan and the development application because they’re further along the linear progression. Someone will come in and say, well, wildlife is number four here because we didn’t rectify the inconsistencies between the community’s vision, the Comp Plan and transfer that to the FLUP, because we’re advocating our overriding responsibility to comment on it now possibly. So, someone could come in, wildlife is number four in this district, rampant growth and urbanization is rated number one, so therefore that plan is in Death Valley. We really need to watch out for that and that’s not an absurd…that’s not beyond the realm of possibility the way things have worked around here in the past. I’ve been here for every minute of every one of these meetings and my observation is that we need to be talking less about the Comp Plan at this stage and more about an action plan. We’ve got so many unfounded mandates. We’ve got so many authorial concepts, everything. We need to concentrate. We need to condense this down to an action plan moving forward, so we have something to look at, so we have something concrete to get our teeth into, and so it condenses it for the public’s assimilation. A really bad analogy is when you were a kid at Christmas, you made a 100-item gift list, you just increased your odds of getting any of those gifts that you aspired to. We’re doing the exact same thing here by not having the focus, the targeted aspiration, the prioritization, etc., on what we should do. Theme by theme, we should list it out. The last two things I’ll say is we have an aspirational goal around here correctly to become the first green resort, the first green community, the first green airport, or whatever, and we need to work real hard on closing the gap between what we say is what we do. If we continue to promote…maybe it’s like a snowmobile hill climb. It doesn’t mesh. Theme eight, I’ll refer mostly to, hopefully, Commissioner Mr. McCarthy’s comments, or the Alliance’s comments, and—I didn’t catch the nice lady’s name here—but we absolutely should be including climate considerations and wildlife considerations in anything we do relative to theme eight. Thanks.

<td>4/8/2010</td>
<td>Young, Tim Friends of Pathways</td>
<td>Good evening, Tim Young, Executive Director of Friends of Pathways. And I wanted to add an idea that's already actually in chapter eight and I think it would be a very good idea to dust off and incorporate into the new theme, and that's...it’s called transportation administrative strategies in the existing chapter eight. It’s only five pages long and I can e-mail it to the Staff. I’ll just them a...and it’s already in today’s Comp Plan, so it isn’t anything new here, but it...I’ll just go through a couple of quick pieces for you just to frame it and you can consider it as you have time to evaluate what you want to have in this theme. And then there will be, as I understand it, an administrative chapter and it might be appropriate to leave it within that. But potentially it could be an Appendix to the document. I guess you’ll have to determine its best fit. But the intent of it is the implementation of—in this case, it was chapter eight—will require technical advice and committed oversight. So those are two pieces—oversight is policy related, and technical advice is obviously transportation specialists that really know the nuts and bolts of how to make systems work. And this suggests that a policy committee would provide oversight to the implementation of the Plan and make that important link to the elected officials that ultimately...or appointed officials, if it’s an agency like WYDOT, to those officials who will make those decisions. The policy committee could make direction to the administrators of their agencies to allocate the necessary resources for implementing chapter components. So that’s actually a mechanism to get done what you say you ultimately will have goals about—multi-modal accommodation, improving transit, doing a TM program. Ultimately, whatever comes in here will be goals and objectives and aspirations. But without a mechanism to accomplish them, it’s a challenge. And I understand that after the planning consultants were in Town two weeks ago, there was a bit of a discussion among Planning Staff kind of looking at chapter eight and saying, whose job is it to implement this chapter? It’s not my job, is it your job? No, it’s not my job. And it’s a good question—whose job is it? And this I believe could be...it’s existing, but it’s not really being followed at this point in time. But it’s very well crafted. It’s I think fair between different entities that have autonomy or jurisdictional relation, like the Town has its own major and Council, the County Commission has the Board of County Commissioners, WYDOT has a mechanism in District 3 with the District Engineer and their oversight. And this is a mechanism for those to work collaboratively to assign resources as need be and to implement what you’ll ultimately move forward to the elected officials for the Comprehensive Plan. So I thought, as I read through it, it incorporates the information on how the transportation improvement program, for example, will be developed. A really important component of what is it that’s your capital improvements plan, or what are you going to actually do. And it has a monitoring program. How will that take place or who will do what. So, all really...traffic counters, transit ownership, the kind of data that would be good to gather over time. I thought it was...it remains a perfectly valid document with some very minor updates that could be considered. In fact, I’d even go one step farther in recommending you folks, as planning bodies, that are I think that our elected leaders look to you for advice. And I think it’s perfectly appropriate if you look at this and you say, that really does make some sense. There’s no reason to wait until we adopt this entire Plan when it’s already in chapter eight today. You could make a recommendation that we think this has merit in the future and one way to test it is to get going with it right now, to advise them, to kick start this. It’s in their policies. It’s in our community’s policies already as approved. They could simply have a meeting and decide let’s get going with this. And you’d have a test over the next six months and see if this exactly what we want, could we fine-tune this. And if it’s not, certainly you could make another decision at that point. But I think it has a lot of merit and I wanted to put that forward as additional to my previous comments. Thank you.</td>

Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. You have a lot on your agenda, so I'll make some brief comments. With regard to theme six, we raised a number of issues in written comment that we hope are addressed in addition to Staff's questions on the Staff Report. I just want to mention two of these. First, we would really like to see the incorporation of a policy regarding the importance of continued permanent conservation easements as a specific transportation strategy, as it is clearly outlined in our existing 1994 Plan. We believe the new chapter shouldn't remove the fundamental strategies that the 1994 Plan outlines to reduce traffic growth. Therefore, we request that you take a vote to incorporate the language that we cited in our written comments regarding conservation and conditions. Second, we believe it's important to vote on incorporating language from the '94 Plan about community character as it relates to transportation. Community character has been a central part of our community's transportation policies, and we believe the removal of focus on this element of our community vision could have negative consequences for transportation decisions in the future. With that, it's really critical to remember that early on in the process you voted to add community character to the overall vision statement, and it was supposed to have implications throughout the other chapters of the Plan. At this point, it's unclear how Staff is expecting to integrate community character criteria into other chapters. So, I just want to make sure it's an important part of transportation. More specifically, in terms of transportation character, preservation can have very direct and meaningful implications for design choices as our community moves forward with projects. By defining the character we are trying to protect as it specifically relates to transportation, it will help us when we are at the table with partner agencies asking for context-sensitive solutions that work within our local character objectives. So it's a really big concern to us that that concept of character is moved so significantly in the new draft. So again, we ask you to take a vote on whether to incorporate and build upon the '94 language <<inaudible>> transportation. Last week we provided a lot of comments on the review process, so I won't reiterate them all again tonight. But I did want to mention a few things after looking at the Staff's questions for this week. We believe serious consideration should be given to the nature of the final product from the proposed June hearings, particularly given that you will not be expected to review the rewritten version that may result from these hearings, as suggested in bullet point two on that question in your report. It's questionable to do yet another rewrite based on your June discussions. For the community to review an April 30 draft, and then another draft, which I assume will be available in July before it gets sent to elected officials, seems questionable. Again, from a procedural standpoint, it seems that you would need to review and vote on the actual version that will be sent to elected officials. So, if you're not going to review the second version, which is mentioned in bullet point two, then it seems that that shouldn't be the product that's the final version moving forward to the electives. Again, this is a procedural question that would be great if somebody could clarify. With all this in mind, we would lean towards sending the April 30th version based on your preliminary review, upon which you can also submit your suggestions for new ideas and recommendations for reconsideration, reconciliation in a list form to elected officials to consult as they will actually be amending the final Plan. With theme eight, the Alliance, along with other organizations, will be submitting written comments to Staff on what types of policy should be included in this chapter. As we stated, we think the incorporation of this chapter is extremely important and look forward to seeing it as part of the April 30th draft. With regard to administration, there are several critical items that you should discuss before completing your discussion on that chapter, and we would request that you review our written comments, particularly as they relate to the topics, those last three topics that are outlined by Staff at the end of page 8 on your Staff Report. I'll close there.

Thanks.

Barb and Paul,

I wanted to forward the attached transcript to you (Word and .pdf versions)...it's an email thread that has been going on for the last few days on the APBP listserve (Association of Pedestrian and Bicycle Professionals) that may provide some interesting ideas for the Planning Commission's discussion on congestion, LOS, and our transportation network and community goals.

The discussion started as a request for examples of bike/ped projects that have led to measurable decreases in congestion, but, like many threads on the APBP listserve, quickly diverted to a more philosophical discussion about community character and design, congestion pros and cons, why LOS may not be the best indicator of transportation network success, and the importance of asking the right questions and framing your discussion.

I have included the full discussion but have highlighted certain sections that are particularly relevant to our local conversation.

Bear in mind that the folks on the APBP listserve are generally more progressive minded than the average car-oriented transportation engineers, but they do have a great deal of transportation expertise and usually have broader scopes of training and experiences than many 'traditional' transportation engineers are willing to allow themselves. That is not to say that we're way behind the curve locally--many of the concepts discussed in the thread have also been discussed by your boards, the TAC, and the Comp Plan consultants.

If possible, would you mind forwarding this to your respective planning commissions?

Thanks,
Brian
Brian Schilling
Pathways Coordinator
Jackson Hole Community Pathways
Good evening, Rich Bloom, speaking tonight on behalf of South Park neighbors. Theme six, you already have my written comments and I don’t really have anything to add, but what I did want to do is just backtrack. You know, in August of 2007 defining the issues and concepts, the Plan’s role and this was from the Comp Plan. We’re three years into this process. Update and evaluate democratic changes. Evaluate consequences of overall growth—fiscal, environmental, social, infrastructure, transportation and public services. Key issues to be addressed. Model what the County might look like at build-out and consider the implications for infrastructure needs, quality of life and the environment. Transportation needs. Determine whether traffic and construction needs for the future in order to obtain our vision for the Valley. Determine under what conditions the traffic could affect the growth of the community. Fiscal and economic. Evaluate whether the Town can afford the public commitments in the Comprehensive Plan and that revenue is greater or at least equal to the cost of services. And I guess how did we do? You know, I wish I could say this was an April Fool’s joke, but we basically failed on all those, except for some modest modeling of a few connections in North Bridge and Spring Gulch. Why is that important? Because then I think we would have seen the economic and the traffic impacts of our decisions instead of that now coming at the end. So, I guess with theme six, the only thing to add to my comments are two. One is, I think Paul Duncker stated it best—we might as well stay at the 50,000-foot level because we don’t have any data. We don’t have any information to make those decisions about widening and connections and local connectors and bypasses. And second would be Friends of Pathways. Tim Young is here tonight. You have his written comments. You have his verbal comments. It’s been our whole argument about why this became a rewrite versus an update. We left behind all the good stuff in the existing transportation chapter. So, I hope you find a way to add that in. As far as the process, and that’s why I’m really here tonight, why I stepped back into this meeting. You know, in the last three years, this is a three-year plus process. In that time the economy has gone from growth to collapse to partial rebirth. We’ve elected a new President. We’ve debated health care. We actually passed it. You know, we’ve entered a new decade. As far as, you know, the public is drained and they’ve checked out. An elective has died in office in that time—God rest Bill. Another elective has become pregnant and given birth at this time. We’re in a new election cycle of half of our electives up for election. The Planning Commissioners finally review their new year tonight versus a year ago. Some have changed jobs. Others have gotten pregnant and had children, started new careers. No wonder the public is left behind and then left out. So general suggestions in the remaining process. Do not radically change course, e.g., the nodes and compact centers. The public will only be confirmed of things that are said to me on a weekly or monthly basis at this point, which is this is just like a large development process—it drags on and on and on until the public gives up, doesn’t attend, and at the very last moment a change in course. The public isn’t there to yell. And it’s done. Please don’t do that. I know that’s not your intent. And it’s not your intent to drag this out for a year since this review and three years since the start. Keep the new ideas out when you go back to visit the themes. Focus on whether Staff has gotten your joint votes correct in the new text. Then reconcile the inconsistencies between any themes. Those are two tasks that I think is big enough before you. That’s important. Specific suggestions as far as following the Staff Report. Again, public stay tuned on themes one and two and the introduction. And I think we heard them loud and clear. I think the other themes follow from that. So, please don’t go back and start changing the prioritization of wildlife and open space, capping development at no more than currently title, removing all nodes except for Town, because those tie into all those other things that were in some of my comments. Release of the remaining themes. With that release of the redline theme copies, the public is going to need four weeks to review that if you’re willing to make changes in course. And concurrent with that will be the vision and introduction chapters. Please release all those together so they will see three, four, five, six, seven and eight, plus the introduction and vision. And I understand that could be rewritten to the point it won’t be the final final, but let’s see those all as a whole if we want to have any hope of trying to get the public to see how we’ve done. Oral public comment because there’s some questions here to remain of no more than 45 minutes at the start of each meeting. Please don’t change that routine if you want to invite the public to speak. Vision and introduction again, release it. FLUP maps, these need to be addressed before you pass this on to the electives. The FLUP is about the only thing we ultimately care about at the first-step level as we tie it into the bigger picture, because that’s our backyards. As far as how you review those, I would go with the preliminary review by the Town and the County separately and then come back together with the joint finalization. That way you honor the joint process, but you have a little more efficiency of those three choices. Thank you for your time. Let’s get this done. Let’s get to the FLUP maps and get it to the electives so we can see what they do with it before we get the new member. Thank you.
Dear Planning Commissioners,

On behalf the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to the Administration chapter.

Overall, we really appreciate the efforts to add this chapter and incorporate a more clear commitment to enforcement of the community’s comprehensive plan in the future. Based on a thorough review of our existing plan, it is clear that a major obstacle was not necessarily the existing policies or recommendations, but rather a lack of enforcement. Ultimately, a comprehensive plan is only as effective for a community as the willingness and ability to enforce it. Unfortunately, the current draft will not provide increased accountability (particularly without clear timelines for specific strategies).

Attached are line-by-line comments and suggestions for discussion related to administration of the plan. Listed below are the key points that we hope are addressed and clarified during your review of the chapter:

- Clear purpose and need for the Future Land Use Plan (FLUP), particularly as it relates to the proposed criteria for amendments to the FLUP - (The FLUP is too detailed in many ways, and lacks analysis to support what it proposes);
- Clear process for prioritizing strategies by elected officials on an annual basis, particularly as it relates to the need to make sure the highest community priorities are upheld on a comprehensive, long-term basis;
- Clear process for upholding the overall priority of a predictable community vision within the context of potential incremental amendments to the comprehensive plan and the FLUP (versus amendments to the land development regulations which this chapter does not address);
- Potential additional criteria for policy changes and adjustments to the new plan, including the FLUP.

As a concluding chapter of the plan, this chapter raises a central issue that has been discussed throughout this planning process. How much detail should a comprehensive plan address versus the subsequent land development regulations? And more specific to this chapter, how often should broader policies and vision statements outlined in the comprehensive plan be amended versus sections of the plan or land development regulations that actually involve implementation? While we support that the land development regulations are the more appropriate place for many of the details (such as specific development standards), it has been unclear how the FLUP portion of the draft comp plan (some of which is highly detailed) is to be linked with the draft’s very broad-based themes and policies. This clarity is important in terms of deciding when and under what conditions (such as a completed analysis of transportation impacts) the community should adopt the FLUP, which currently includes parcel-level-looking maps for twenty-five districts in the town and county. If you choose to delay the FLUP discussion until a later date, it will be necessary to revisit, at some point, all of the statements regarding the FLUP, including those in the administration chapter.

Thank you for your consideration of these comments.

Sincerely,

Kristy Bruner
Community Planning Director

Bruner, Kristy
Conservation Alliance

Town of Jackson and Teton County Planning Commissions

April 1, 2010
Date | Name | Comment
--- | --- | ---
4/1/2010 | Bloom, Rich Interested Public | Comments - Theme 6 - Transportation

- The plan will “evaluate consequences of overall growth in the County (fiscal, environmental, social, infrastructure, transportation, public services, visual, etc.).”
- The plan will “model what the County might look like at “build-out”, and consider the implications for infrastructure needs, quality of life, and the environment.”
- The plan will “determine what our traffic infrastructure needs are for the future, in order to attain our vision for the valley.”
- The plan will “evaluate whether the Town and County can afford the public commitments in the Comprehensive Plan, and that revenue is greater or at least equal to the cost of services.”

So it is about time to be straight with the public and finally do this:
- To clarify my public comments of tonight: my argument was not that we need more data – but that the plan as presented did not inform the public of its consequences. The plan has mostly failed to accomplish any of the primary goals laid out in the initial defining issues and concepts above.
- Specifically commitments to multi-modal transit aside, we currently need – and over the next fifteen years will demand - dramatic expansion of - and additions to - our transportation systems. The expansion will be even greater unless we address commercial growth, second home development and preserve additional open space.
- Please be crystal clear with the public in Theme 6 and say both with our current land use plan, and especially with the incomplete and ill-conceived new draft use plan, the following will be needed:
  - A north bridge that will involve the use of eminent domain and the removal (via the courts) of what were to be permanent conservation easements. This will also further fragment and disturb wildlife movement and critical winter range.
  - The widening of HWY 390 (Teton Village road) to four lanes (plus center turn lane in places).
  - The widening of HWY 22 to four lanes and in places five – including through the town of Wilson.
  - The paving and widening of Spring Gulch road.
  - The construction of the Tribal Trails Connector with the resulting redirected traffic (other then local traffic) onto the already failing High School Road.
  - Despite these additions and improvements - a lower grade of service along several pinch points including the town center and the “Y”.
  - I would go on to estimate the fiscal impact of this transportation infrastructure. How will it be paid for – especially the portions that are a County (versus WYDOT) obligation?
  - I am not asking for more data. The issue is if we had been given the outline of these needed transportation improvements as promised - along with their environmental, quality of life and fiscal costs – we would certainly have had a very different dialog the last year on constraining build-out and its effective population.
  - It is not too late. Be straight up with the public on where we are headed – and let them and the electeds make an informed decision on whether this is the direction we want to head. Apart from base property rights, durable entitlements in existing resort zones, already approved town commercial and platted lots – we still have a lot to discuss. Meanwhile we will need to do serious improvements and some additions even with a concerted effort of reducing our end state of development. Don’t get me wrong – I also strongly support all the multi-modal efforts in addition.

So when we asked for metrics early and often during the plan process – transportation improvement needs, build-out, effective population, other infrastructure needs and all of their fiscal costs – that was not a demand for more data before moving forward – but rather the frustration that we continue, after several

<td>Gregory Griffith, West Bank. A lot to cover here fairly quick. I think it’s my page five, it’s the hearing format, the last sentence, Staff recommended new members should be able to propose a motion to vote how they choose. I wholeheartedly agree with that. However, the question that we never asked or answered... actually, I asked it early on; it never was answered. What is your role? Is your role as a citizen oversight committee who seeks to implement the well-documented growth of the community on some of these 60, 70, and 80 percent top issues, like nodes? Or is your role as an individual to implement whatever you as an individual think you should implement ala nodes? And if you answer in the affirmative to the latter, then where does that leave the public on an issue like nodes? We've got several instances in the Staff Report here, it leaves it open directly for reconsideration. So it’s something to think about as we move forward with that, the timing of how that’s presented, etc. Throughout this process, we’ve focused on a notion. We focused on micro supply-type solutions instead of macro demand solutions. This is a prime example in traffic. If we listen to the traffic consultants, etc., we realize that no matter what strategies we employ, if we added home mail delivery with local convenience commercial with START Bus expansion with pathways expansion, all of which I’m in favor for. In areas that have tried this and have implemented it for 30 years or more, we’ve had around a 10 to 15 percent reduction in the traffic growth. So we continue to talk about the small scale. If our goal is to reduce the growth of traffic in the future, then we would be much better off talking about commercial down zones and reducing PRD potential to two or three, etc., because that is a macro application for the desired goal of reduction of traffic in the future. I found it kind of odd that both traffic consultants last week didn’t mention that anything from the National Geographic Landmark Study on Sprawl to local data show that anywhere from 10.1 to 10.6 trips per household are generated daily. Locally, it’s about 11.1 to 11.4 trips per household per day. And we’re talking about a 10 percent reduction of those, some of which are already in place. I’m the biggest promoter of mass transit as there is, but there’s a tremendous subsidy involved—seventy cents per ride locally, $2.30 state and federal subsidy. We can’t infinitely expand a system that requires subsidy without a monstrous and dedicated funding source. With the funding sources...we have a funding source identified in every chapter, every theme so far. We’re going to have to triage and prioritize those funding sources and have direct applicability like the 40 percent remainder of the lodging tax direct to START Bus, etc. We’re going to have to start focusing in on it. We don’t really have any of the answers to any of the questions that we’ve asked ourselves. I think the answer in the future, I think I’ll be proven correct in 10 or 20 years that the real answer is going to be modifying our threshold of acceptability. We’re going to have to put up with longer cueing lines, and we’re going to have to put up with the great levels of servicing. Alternatives are just too onerous to consider. The last thing I’d like to touch on is the process itself. Some of the dates mentioned by Staff are getting into June, well into June. I think it’s the public’s right to vote into or out of office our elected leaders based on what they do and how they vote, and not what they say. If we extend this process long enough, that’s going to be violated. I really enjoyed Commissioner’s Wall’s… I’m singling anyone out but it’s positive… Mr. Wall’s comments about truncating this portion of the process. But if for no other reason than that reason, to allow the public to vote into/out of office the 60 percent of the electives who are up for reelection, based on what they do and how they vote on our very future, not on how they say they’re going to vote. Thanks.</td>

<td>4/1/2010</td>
<td>Jensen, Gail Interested Public</td>
<td>Hi, Gail Jensen, Teton County. First of all, the process that you're going to be discussing. I very much agree with what Tony Wall had to say about what he feels the process should be and that would be don't get into the overall detail, fine detail of this chapter or theme six. We really don't have the information we need to write a good Plan. And I, like Rich, have...I've lived here for over 30 years. And I have seen absolutely very little planning when it comes to roads around here for 30 years. And with what's in here right now, there's very little planning in this either. And that was one of the main topics of discussion when we had the transportation experts here last week. So, you know, you guys have these lofty goals but you're not doing anything. I would really like to see with theme six, ultimately, once you get everything else settled in build-out number, or where the density is really going to go, when you really settle on that, we need specifics. We need a prioritized list. We're going to do this; we're going to do that; we're going to start working with WYDOT. I mean, we have lost so many funds in this County over the last three years on our road construction. It is pathetic. It is really pathetic. I sat by living on Highway 22 for 28 years, and just every time I looked in my rearview mirror thinking I was going to get hit every time I turned into my subdivision. I mean, people shouldn't have to put up with that. I pay a lot of money in taxes, and I'm sorry, my tax money should be going to improve our road situation. And for some reason, the planning part just falls apart every time. We need a strong effort to really plan for our transportation this time around, not just FLUP but really plan this time. At the end of the chapters, I agree with Tony, we need to be looking globally. How do they all fit together? You go from theme to theme and not one of them fits with each other at this point. They're lofty goals, but it's a whole disconnected...I don't know what it is, really, to be quite honest. There's good stuff in every one of the themes. I'm not saying there isn't, but they don't fit together in any way. I think you need to be looking at the overall picture and how they fit together maybe that discussion. And then fine tune it from there. I think that's really, really important. And then yet again on theme six, I really think this theme is so important. It's one of the main things, the most important things, and I just don't see that there's any hope in getting much detail the way it's structured right now. So, please, if you give that a lot of thought and a lot of effort...and one more thing, I did really appreciate a lot of the, or at least your comments, about what you saw as a real Plan. And take those ideas and really come up with a Plan this time. I'd really appreciate it. Thank you.</td>
</tr>
</tbody>
</table>
Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thank you for the opportunity to comment tonight. I’ll try to be brief given that you’ve already received our extensive written comments on the transportation theme. I know you have a lot to discuss on your agenda tonight, so including clarifying the process moving forward. With respect to the review process, we appreciate Staff’s outline of procedural items you need to vote on. We would like to request one more key clarification. It’s really important to make the process as clear and understandable as possible. I’ll be describing that. Plus just going through steps outlined and a few quick points. We would request that you allow for a written comment period of a minimum for three weeks to give the public time to understand the changes, as it is fairly safe to assume that we’re going to see essentially a new document. We also believe it’s important for you, as Commissioners, to have at least two weeks to submit your discussion points after public comment ends. That’s at a minimum. In terms of public comment and hearing format, we would ask that the points brought up in verbal and written comments are always available, you know, as discussion items and as voting items in your process. We feel this is absolutely essential. Regarding the line-by-line review, while we recognize the Staff doesn’t recommend the theme that your boards do a line-by-line review, we feel like it’s really important to identify who is going to do this review and when will they be doing it. You know, this document has huge implications for our community and someone has to be doing a very detailed review of it. To answer the question, is that going to be placed on elected officials’? Who is it going to be placed on? Regarding Staff’s point about the vision and introduction, this question itself really raises some points and deserves some attention. The original design of this process was that the community vision, you know, at a very broad level should guide the individual themes and policies of the rest of the Plan. That’s how it was set up. Remember, in the very initial themes, you spent a lot of time on the vision and introduction chapter because you knew it was going to have huge implications for the rest of the Plan. And we should stick with this original design of a community vision driving the policies, the fundamental basis of the Comp Plan, and we hope you stick with that process. With regard to the FLUP, we believe that there are other options than those listed, one being that at a minimum you discuss the role of the future land-use plan or FLUP and how it is structured to function with the themes and policies of this Plan. You know, if you decide that you don’t want to review the individual district maps, the characterizations, all the details of that, you know, a recommendation on whether you agree with incorporating highly detailed parcel-level looking maps without analysis as a part of the Comp Plan, it’s an important broad planning discussion that you should answer before it goes to the electives. As we have stated, it’s important to not oversimplify the role of the future land-use plan. It’s simply a step between the themes and the Land Development Regulations. It’s intended to be an element of the Comp Plan that actually makes it predictable. So, with that in mind, we hope that you would vote to at least discuss the intended and purpose of that section of the Plan before sending your draft on to the electives. Before concluding with our comments on the review, we request that you vote on another item, which is the central question, this process looking forward. Is your intent for Staff to do another rewrite, so if you go through your new ideas, reconsiderations, reconciliation, which is scheduled to be discussed in hearings in June, are you expecting to see another rewrite? And if so, do you expect to do another review of that before it goes to the electives, or are you just planning on sending a list of your ideas, reconsiderations, that you hope, you know, the electives consider when they’re looking at the draft that’s released and expected on April 30th? Again, if the draft is to change considerably based on the June hearings, it’s important for the public to have an adequate understanding of what those changes will look like before the electives begin their review. I guess in short, what product do you expect to come out of the hearings in June and do you expect to review them again before sending it on to the electives? With regard to theme six, we raised a number of key issues and concerns in written comment that we hope are addressed. We also encourage you to incorporate much of the public’s suggestions, including many of the thorough comments that were provided by Friends of Pathways. We also urge these boards to consider what the consultants brought to the table last week. You know, as it’s been indicated, the draft theme six is a starting point, but it’s by no means as complete or as useful as chapter eight of the 1994 Plan that we have today. You know, all in all, there was some excellent debate and consensus when the consultants were in Town and we hope that you build on that tonight with your recommendations and votes. Lastly, just to give you an update. As you know, the Alliance and the Chamber of Commerce are working on the effective population study. Some of the data that we thought was compiled isn’t compiled, and compiling that and making summaries is taking a little bit longer than we expected. So if your meeting is actually due in next week, we don’t want to commit to April 8th as being when we would present. We wanted to let you know in the next few weeks we would, at a minimum, get the report to you in written form if you ??, and I’m asking if you have any questions about that. That’s all for now. Thanks.
Good evening, Tim Young, Executive Director of Friends of Pathways. Thanks a lot for letting me comment. I have submitted a letter, which I won’t go into again, but I did comment on it last week, and I appreciate your consideration of those comments. I just wanted to fill in a couple of thoughts as I continue to listen to your dialog here with the Commissions, particularly to address the question of how to address chapter eight in the Plan in theme six as it’s currently drafted here. And a suggestion I’d like to put forth to the Commissions to consider is given the existing level of detail in chapter eight, which is I think recognized as being more mature than some of the other chapters in the existing Comprehensive Plan, to take advantage of the level of detail as much as practical and include it in theme six. And by that I mean…I’m thinking of two categories. There are those items that I think a majority of you would agree with and, if that’s the case, I think it would be appropriate to include those now in the document because so much work is already in place. It’s a relatively non-controversial component when you start talking about transportation demand management that that could be in theme six a little more completely. And I might touch on a couple of others as well. There could be a second category that we might categorize as larger issues that are not resolved at this point in time and that probably do require some more analysis and study before reasonable bodies could make a decision. Without thinking of what the answer should be, just let me suggest that the North Bridge from the Village to the airport might rise to that level of an issue that’s…I don’t think you have the ability to make a decision on that as you move forward. Perhaps Tribal Trails Road, do you have enough information like to…I don’t know. But if you were to look at those problematic thornier issues that probably require more data and study and put those in one box and take the substantial number of issues, which are actually not that controversial, which would be very beneficial and have had a lot of discussion and are quite mature in the existing document, and integrate those into your Commissions’ revised theme six. I think that might bridge the gap between not being overly specific in this Comp Plan, which seems to be the tone of your other chapters, but recognizing good work where it exists and preventing having to redo much of the study that’s really ready to be incorporated with modest editorial efforts to include it in this theme. For example, some of the things that come to my mind that are probably not that controversial that would have broad support, the complete streets terminology and the idea that updating Town and County street standards, road standards, is appropriate. I think that’s almost universally supported. We could include it now. Adding traffic count information where we have it, at least for the last decade, would be appropriate. There’s good data that WYDOT keeps every year on traffic counts of your main corridors. And that would really give us a good idea of traffic going up or down. There’s data for the last couple of years as this process has gone on. It’d be interesting to see, for example, has the south highway actually gone down in the last couple of years as the economy has changed. I’d just like to know that and I don’t. But I do know the data exists. It’d be easy to include it in this chapter as you have it now and it would help all of us as you move forward. The transportation improvement program is really something fundamental that should be incorporated and you could reference that I think, and my comments did refer to that, the letter that’s on file. The transportation demand management, another I think well-supported theme. Regional transportation I think is a theme that is well supported. Just improve the terminology from being too specific with the Regional Transportation Authority, which is defined in Wyoming statutes, and allow yourself a little more room in that with regional transportation systems or terms that will allow you a couple of choices and not box you in too much. I also suggested administrative strategies are really well developed in chapter eight. It’s something that was vitally needed and it may be appropriate to include that as an Appendix. It may be more detailed than you decide the theme six, but it’s so well constructed as it stands now. It’s so vital to progress for transportation planning model for our community that it would be appropriate to put that in an Appendix type or if there’s another mechanism to do that. But to take the good work that’s in chapter eight and bring that forward as it stands with revisions that obviously make sense as time ???. And I think one thing that’s…that you might look at and make a recommendation on, this summer 2010 would be a great time to do an update of travel study. It was last done in 2001. It was done in 1996 before that. It’s a really important tool. It’s generally agreed in transportation planning. Professionals say it’s one of those tools that you use when you need to gather data. This would be I would suggest a very important year to gather that. It’s just something that goes in someone’s budget as a recommendation you might make. And before this whole thing is approved, you would actually have some really useful new information you could gather from that. So, thank you very much for your consideration.

<td>4/1/2010</td>
<td>Acri, Armond Acri, representing Save Historic Jackson Hole</td>
<td>To quickly address first off process, a couple of suggestions. We would suggest that you not limit comments to only one meeting. That’s one of the items for discussion. And we certainly would discourage only allowing discussion of items that are in the Staff Report. That we feel is only going to further insulate and alienate the public from the process. We really feel it is important to…if there is good oral comments that happen in the meeting, that at least you guys be allowed to discuss that. We would also question the need to limit to 45 minutes. If I am the last person tonight, we’re only going to go about 32, 33 minutes, and I think out of all the meetings, very rarely have we gone over the 45 minutes. So, I would ask you at least one question whether that is really necessary to limit it to 45 minutes. In most cases, I think people have been respectful. There’s been a lot of good dialog. And I’m not sure we need to have an arbitrary time limit. I think overall for the whole process we’ve averaged much less than 45 minutes. And I’m not going to blame, I just want it on the record here. On transportation then, we’d like to hope there’s one thing that we learned from last week that if it is to be effective, there really is a need for a comprehensive transportation analysis, the improvements that are needed to accommodate future growth. That has to be the basis of what we do. And those improvements that are needed have to be both possible, both from a technical and financial standpoint. We can’t ignore those things as we go forward. There’s no discussion in the Staff Report, but hopefully you guys will discuss updating functional classifications to reflect our current condition. We have changed and there is really a need to update that. We agree with Tim’s earlier comments about take the ?? now, the harder ones as a good warm up. Lastly, I’d like to leave you with one thought and that is the need for the decisions to be based on data. I think we all agree with that, but we tend to do a lot of things based on our own perceptions. An example I would give you of that is that what we all talk about we don’t want four-lane roads. Plenty of data from last year from WYDOT was that south of Town when the road widened to four lanes, wildlife mortality actually went down, rather than up. Now, does that mean that I would favor four-lane roads? Absolutely not. What I would say is that we need to study that more and understand why. There’s a couple of possibilities there. One is good and one is bad. One possibility is by widening the road, we allow more visibility and gave people more opportunity to avoid collisions. You know, that would be a good thing. The bad thing is maybe we did actually isolate the animals from one side to the other. But I think the point to be made there is the real need to base these decisions on real data and not just data that reinforces our own opinions, but it needs to be data that we understand the underlying causes and effects here, and that’s really important as we go forward. Again, not that I’m out espousing four-lane roads, but I think it really is important that we understand the impacts of the things that we do and make sure that what we’re proposing to do really does accomplish the goals that we want to. And go back...that’s interesting and if the road is there, but we need to go back and look at that data now and see what is the real effect, rather than just folding up our hands and say, well, we should have never done this or, well, this solved all our problems. We really need to understand these basic things. Thank you.</td>

</table>
Dear Planning Commissioners,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to Theme Six - “Develop a Multi-Modal Transportation Strategy.”

Attached are line-by-line comments and suggestions for discussion related to Theme Six. Listed below are key points that we hope are clarified in discussion and/or incorporated into a new draft of this chapter.

First, it is important to specifically identify how Chapter Eight of our existing plan is going to be used and integrated with the draft’s Theme Six. During a previous workshop, it was suggested that both Chapter Eight and Theme Six will be included as part of the new Comp Plan. Clarification on how this will work is essential. As we have consistently voiced throughout this process, in many cases the new draft is a step backwards from the existing plan. Perhaps nowhere is this more obvious than in the chapter on transportation. Please read and revisit Chapter Eight of our existing plan before you start your recommendations/voting on the new Theme Six chapter. In comparison to the new chapter on transportation, the existing chapter, which was adopted in 2000, would provide better guidance in terms of predictability, measurability and accountability than the new draft. As voiced in the March 23 workshops, much of the problem is not how the 2000 plan was written, but rather that it hasn’t been followed or enforced. The hard work that has gone into previous planning efforts should be built upon and enhanced, not weakened or eliminated.

Second, we fully agree with the points raised by transportation consultant Robert Bernstein that this process should include a comprehensive transportation analysis that is beyond what has been provided to date. The improvements necessary to support the expected growth outlined by a proposed Future Land Use Plan must be identified. Otherwise, decisions could be made without an adequate understanding of their implications. We also would like to see more discussion on the importance of setting infrastructure goals based on an understanding of fiscal impacts, which was a key discussion point at the morning workshop on March 23. One of the more compelling points made was that creating a fiscally constrained plan is what helps a community set realistic priorities. Without this component of knowing whether improvements and projects are financially feasible, the plan could result in simply a wish list with little guidance for prioritized implementation. You must ask – what does our community need to support anticipated growth, in terms of transportation infrastructure, and can we afford it, both financially and in terms of achieving other community priorities, like wildlife protection?

Third, and related to our concerns with not using our existing plan as a strong foundation for the new plan, there are critical elements missing from the new chapter. As an example, one of the three main land use strategies in our existing plan is “eliminating transportation demand by reducing the overall amount of residential development in the county.” However, there is no mention in the new chapter about how the overall amount of development is a factor in traffic growth rates. While the concept of shifting development into the town and mixed-use villages concept is included in the existing plan, there was clear recognition that in order for these land use strategies to bring benefits, the shift had to be combined with the continuation of conservation easements. Interestingly, the clear language about the need for continuation of permanent conservation easements, as a transportation strategy, (in terms of “incremental trip reduction”) has been removed in the new draft. The following is the strategy statement in our existing plan: “Facilitate conservation acquisitions including seeking funding in locations where removal of vehicular traffic from roadway corridors has the greatest benefit on the transportation system.” No such statement exists in the new chapter on transportation. It needs to be reinstated.

Fourth, as suggested in public comment, the new chapter needs to reinstate a much broader focus and clearer policies to implement a multi-modal system. Language should be incorporated that speaks to the ideal goal outlined in the March 23 workshop, that the policies must directly create the conditions and opportunities that allow...
people to choose not to drive. Within these policies, realistic identification of existing conditions and challenges, which are unique to Jackson Hole and not Anytown USA, is also really important. Understanding and recognizing traveling behaviors associated with lifestyles in Teton County is important in achieving overall goals. Friends of Pathways has provided excellent comments to help improve the language regarding implementation of a multi-modal system.

Fifth, our existing plan includes considerable language that links all community goals to community character preservation. For example, the first goal of our existing transportation chapter is to “systematically plan for future mobility that meets the needs of residents and tourists within the context of community character.” Many of the previous planning decisions regarding transportation infrastructure have been related to rural character preservation. However, the new draft does not speak to this concept, which is a concern.

Finally, when discussing the role of land-use patterns (i.e. compact centers and dispersed patterns) as it relates to transportation, it is essential to not oversimplify the issue. The Conservation Alliance supports the need for confined development footprints, but we have not supported the way the new draft implemented the nodal concept, specifically the manner in which “nodes” were defined. All nodes, centers, or confined development footprints are not created equal, which the new draft failed to address. The larger context, which includes location, scale and type of development within these areas, must be considered and analyzed in order to evaluate the benefits and costs. Also, in many of these identified areas, there is already considerable development potential still on the table. Ultimately, the capacity to uphold community priorities will weaken through time if our community’s vision of planning is to simply promote more growth (physical expansion) in places where growth has occurred in the past – in spite of whether those areas are important in terms of wildlife, scenic vistas and small mountain town character preservation.

We urge you to evaluate this chapter with the larger goal of the planning process in mind. We shouldn’t get so far beyond the basic point of this process – to improve and refine our existing plan – that we forget what we can build upon. We urge you to direct staff to not only carry out the additional modeling and analysis upon which your decisions can be better informed, but also to reincorporate the positive work that is in our existing chapter on transportation.

Thank you for your consideration of these comments.

Sincerely,

Kristy Bruner Becky Tillson
Community Planning Director Community Planning Associate
Support for the Friends of Pathways modification on the statement of ideal - especially the last sentence.

- “Town of Jackson and Teton County residents and visitors will be able to safely, efficiently, and economically move into, within, and out of the county by a variety of transportation choices that comprise an interconnected, multi-modal system based on conservation of energy, enhancement of public health, and fuels that are clean and renewable. The transportation system will allow for viable populations of all native species, the preservation of natural scenic vistas, and the safe, unimpeded movement of wildlife.”

Incompleteness in WYDOT Based Model:

- Citizens and electeds need the best available information to make sound policy decisions.
- As the consultant Carlos Hernandez stated in today’s presentation – the modeling done as part of the comp plan “is not the best available tool to determine roadway design.”
- In particular as consultant Rob Bernstein stated today “you need to determine the improvements to support your proposed growth. This was not done. You need a full traffic analysis based on the full comprehensive plan proposal; you need to indentify the list of improvements to meet the plan’s growth objective - including new roadway links, intersection and interchange improvements and additional capacity – e.g. widening of existing roadways.”
- Rob concluded with “This would have provided the information on your growth choices in how they will affect roadway costs, impacts and their desirability.”
- Simply we did not get the feedback on what the draft plan meant as far as build-out, effective population and the required transportation improvements to know what our decisions would actually engender. If we had - I think we would have had a much more meaningful discussion on possible growth reduction strategies as we worked through this plan review.

Circular Thinking:

- Identifying your total growth goal. I believe you will hear that again tonight from the consultants as a start point for what you then must model and plan for. The joint planning commissions have already decided on a slightly different approach.
- Absent that then - do the modeling as proposed by the transportation consultants once the draft is accepted but before it becomes law. Otherwise we still will not know the implications of our decisions. Then be willing to revisit our decisions once the public understands the implications of the revised plan.
- You will hear there is no silver bullet for transportation solutions – both total growth and pattern of growth are inseparable issues. As Michael Kinsley – growth expert from the Rocky Mountain Institute said when he visited: “Smart growth that is additive growth – can not be called smart!” Revisiting nodal development without discussing how you will achieve the shift in development patters (e.g. TDRs) will not move the plan forward – only backwards.
- You need to deal with the build-out and/or cap of growth if you want to reduce the ultimate impacts growth makes on transportation systems. Mitigating impacts only through pattern of development and multi-model approaches is incomplete. We have discussed this at length.
- Compact centers (nodes) will likely be revisited as you move into this theme.

D Listen to the consultants carefully and do not over estimate the achievable mitigation of compact centers.

D Patterns of behavior will still be important. Folks housed in Wilson working in Town or those housed near Cottonwood Park working at the village will only modestly reduce transportation demands. Likewise folks living near Cottonwood Park recreating at the
Village, skiing the pass or visiting Grand Teton Park will also not reduce transportation demands. The only sure way to reduce impacts – is to address and reduce the total build-out.

Rich Bloom – March 23, 2010

• As I said months ago on why citizens were so reluctant about the nodal concept – why does it seem there are no acceptable receiving areas (Wilson, Aspens, South Park, Teton Village)?

O The nodes were additive growth as proposed in the draft plan.
O The nodes were much too aggressive in footprint and in total housing numbers.
O The nodal approach did not appear to accomplish certain community priorities such as achieving the permanent protection of open space.
O The locations were selected in the FLUP maps without first updating the natural and scenic overlay maps (NRO and SRO).

• The community may be willing to support the concept of nodes if it is considered WITHIN the following constraints:
  o Absolutely can not be ‘gamed’ to achieve additive growth.
  O That nodes be used to address substitutive growth only – not adding, but rather shifting growth patterns.
• Do not revisit nodal development in Theme 6 unless you go back and also resolve the issues on growth caps, on how to incentivize permanent open space if the County PRD tool was removed, a workable Transfer of Development Rights (TDR) program, the converting of some commercial to residential zoning, or down zoning significant areas if you intend to upzone any compact centers (nodes).
• As I have said before - the Planned Residential Development (PRD) tool does NOT depend on the node concept to work. So nodes as proposed in the plan are not connected to the PRD tool.

• In closing relative to greater South Park:
  o We will already be achieving transportation and other goals without indentifying a new ‘expansion area’ to Town. It already exists.
  O Next week the PRD tool will come out of moratorium. On Robert Gill’s property as one example – there are 35 acres zoned as Suburban across from Cottonwood Park. At 4 DUA (four dwelling units per acre) this equates to 140 housing units, 25% of which must be Category 1-3 affordable.
  O In additional Mr. Gill has approximately 1,000 additional acres zoned rural. With the current unmodified PRD tool – 85% of this acreage can be permanently preserved as open space while locating some 257 additional housing units (maximizing the 9/35 clustering incentive) in the most logical location on his two parcels – in northern South Park. Again 25% of these units would be required by law to be category 1-3 affordable workforce housing.
  O The neighbors are also open to financially assisting Mr. Gill via a land trust to achieve any personal desires he may have to protect the ranch if this is simply too much development.
  O So why would the community want the proposed 1,500 unit node (more then the entirety of greater South Park to date including Cottonwood Park, Rafter J, Melody Ranch, 3 Creek Ranch, South Park Ranches, Shooting Iron, Indian Springs Ranch, Flat Creek Fishing Club etc.) identified in South Park where zoning could then be selectively changed?
  O A significant ‘node’ already de-facto exists via the LDR’s and zoning maps that also achieves other community values such protecting open space and wildlife habitat.

<td>Buckstaff, Sandy</td>
<td>Sandy ?? from Nelson Engineering. I worked with the Transportation Technical Committee on the Plan that you have that dates back ten years. In fact, I think I was the chairman of that committee by the same process that Sean is now the chairman of this committee. I heard in the question of the gentleman over here something that I think probably ought to be dispelled and that is that our peak traffic is three months, it’s in the summer, and gee we can blame it on the others who come to our community. In fact, our peak is longer than three months. It extends more like five or six months. And one of the things that we found ten years ago and we find today is to a certain extent the old colloquialism is true—we have met the enemy and the enemy is us. A lot of that traffic comes from us. It’s not easy to just blame it on the folks that come to our community.</td>

We’ve got a core of the professionals—Carlos and Robert, the Transportation Advisory Committee, and I think all of you that are on the planning staffs. I guess with our propensity to procrastinate as a community on making these tough decisions, are we looking far enough out on our modelings and traffic estimations? I see 2020/2025. Maybe should we be looking more at 2040/2055, just because, you know, it takes us so long to make these decisions, and with funding sources probably becoming tougher, not easier, in the future, do we need to take a bigger-picture look and not just on paved roads but multi-modal types. I think Tim was talking about ten, realistically talking, $15-a-gallon gas or is there going to be gas? You know, what really are our transportation future needs beyond this 15-year projection or whatever we’re looking at here. Kind of a second question to the professionals of these modeling systems you’re using...I wasn’t clear, are you using kind of a peak simulation or a daily-use, or is it a combination? I see a July date up there, which is kind of peakish, but I didn’t see the April stuff. We are a seasonal kind of, you know, community that has those three months of huge influx in the summer. Just some basic questions, so.</td>

Jackson, WY 83001

~ Submitted via email

Subject: Comprehensive Plan Comment on Theme 6
Dear Town of Jackson and Teton County Planning Commissioners,

On behalf of Friends of Pathways, I would like to submit the following comments on the Theme 6 – Develop; a Multi-Modal Transportation Strategy in the Draft Jackson/Teton Comprehensive Plan (Plan).

Friends of Pathways is a private non-profit with 1,200 members serving Teton County, the Town of Jackson and the greater Teton region. Friends of Pathways advocates the funding, construction, maintenance, and use of pathways, trails, and complete streets through advocacy, educational outreach, and public/private partnerships. Thank you for the opportunity to comment.

One over all comment is regarding statements made by Town and County Planning staff that the current Comprehensive Plan Chapter 8 Transportation is to be continued whole-cloth as “an appendix to the new Theme 6.” There are two problems with this. One, Theme 6 does not articulate this; one could argue, in fact, it does not say that. Second, the Theme 6 as proposed contains substantial reductions in goals and outcomes than the current Chapter 8, and would force the question, what are the real community transportation goals? These concerns are developed further in this comment letter, but the planning process must clarify just what our starting point is in the important discussion of transportation in the new Comprehensive Plan.

Friends of Pathways (FOP) comments start with the Community Vision on page 7, and then shift to the Transportation Theme 6 starting on page 59 (of the spring 2009 draft Plan). Quotes from the draft Plan are highlighted in italics with page numbers for reference.

Page 13. Community Vision, Strategy Theme 6, Transportation
“The most sustainable way to provide for the community mobility is through alternate modes of transportation such as transit, walking, carpooling, and bicycling. Part of enabling this change is by placing people in closer proximity to services and by providing travel choices—through a nodal development pattern and increased funding for transit and other travel modes. A larger part is changing way we think about transportation options.”

FOP Comprehensive Plan Comment – March 18, 2010; Page 2 of 2
FOP generally supports this general vision for Theme 6 Multi-modal transportation. We recommend this section should be improved with adding that TDM, or Mobility Management, is another one of the list of key solutions, along with walking, bicycling, transit, and Ride Share (perhaps better term than carpooling). The term nodal might be replaced more successfully with words like village or town, terms people have more association with than nodal. Also, the final sentence should simply state “...increased funding for the Active Transportation modes (we suggest use of “Active Transportation” term compared to “alternative transportation modes”), not just “...for transit and other travel modes”, which could be interpreted to mean wider roads.

Page 59. Current Theme 6 - Statement of Ideal
“Reduce resident and visitor reliance on single occupancy vehicles while still allowing safe, efficient, and economic travel”

This statement could be one of several plan goals, but it is nowhere near inclusive or measurable enough for a Statement of Ideal for the entire transportation system. Friends of
Pathways would like to suggest the following alternative statement. This is based on a significant effort by the Sustaining Jackson Hole project that worked on the transportation issue for 3 years. It incorporates the input and support of over a dozen transportation, planning, and energy professionals and experts familiar with our community and its challenges.

Statement of Ideal – Friends of Pathways - Suggested Alternative:
“Town of Jackson and Teton County residents and visitors will be able to safely, efficiently, and economically move into, within, and out of the county by a variety of transportation choices that comprise an interconnected, multi-modal system based on conservation of energy, enhancement of public health, and fuels that are clean and renewable. The transportation system will allow for viable populations of all native species, the preservation of natural scenic vistas, and the safe, unimpeded movement of wildlife.”

Comment Theme 6 – Why is this theme addressed: Include more key Issues
The opening section would be improved with a better statement of the problems, thus better providing the answer to the question, “Why is this theme addressed?”

The draft Theme 6 primarily mentions the problem of roadway widening. There are significant additional reasons why this theme is addressed that should be developed in the Plan, these are:

- Environmental impacts of transportation (climate change, air/water/noise pollution)
- Energy issues, including goals to reduce use of fossil fuel and promoting alternative fuels
- Public health impacts of auto-centric transportation (obesity, diabetes, cardio vascular disease)
- Economic impacts to JH of a changing world, where the cost of oil will continue to rise.

Comment – Mode Shift goals should be increased, not decreased
On page 59-60, the draft Plan states a substantially reduced goal for shifting trips – Why?
FOP Comprehensive Plan Comment – March 18, 2010; Page 3 of 3
Draft Plan Page 59-60

“This will require that an additional 10% of all trips along these major corridors be shifted out of single occupancy vehicles into another travel mode. Transit offers the most viable alternative to vehicular travel, however, roadway designs that use the “complete streets” principle will help ensure that roads safely accommodate all modes of travel.”

This is a significant reduction from the current Comprehensive Plan. Today’s Plan includes goals adopted by the Town of Jackson and Teton County in 2000 that are to increase “ride share 1%, walking 4%, bicycling 4%, and transit 5%”, which add up to a combined 14% mode shift goal by 2020 under current policy. [Page 8-22 of Chapter 8 – Transportation, Third Printing, October 2002] The draft Plan therefore represents nearly a one third reduction of the current community goal for mode shift.

Friends of Pathways does not support any reduction in the modal shift goals for the new Plan. It would be a step backwards from current policy, incompatible with the vision chapter of this draft Plan, and runs counter to the public opinion received in the Comprehensive Plan process. All Plan surveys clearly showed the public overwhelmingly supports multi-modal transportation, including pathways, bicycle, walking, and transit. Residents also support public investments to construct needed facilities and operate these active transportation systems safely and efficiently. In fact, public support for Pathways was typically higher than any other mode of travel in surveys as well as the recent SPET election.

This Plan should deliver on the public’s desire for a real multi-modal system that is among the best in the country. Such a system would go the farthest in minimizing environmental impacts of motor vehicle travel, and would overall be the best for wildlife and all natural resources. This means:
1. Completing the pathways system.
2. Greatly improving the pedestrian walkways in Jackson and all the mixed use villages
3. Making every street a complete street that serves all the users.
4. Expanding the START system, making it viable for more of the community and adding new routes to Wilson, the Airport, National Parks, and connecting to the region.
5. Working collaboratively on transportation projects with WYDOT, Bridger-Teton National Forest, and Grand Teton National Park.
6. Use the best of alternative fuel technology to minimize the carbon footprint of Jackson Hole’s transportation system.
7. Developing a high level of expertise in successful participation in federal funding for transportation projects - through the STIP and a wide range of federal grant opportunities in SAFETEA-LU the federal transportation bill, and other federal programs. It also means leadership-level participation in the new Linx regional transportation system now underway and being formed with support from the ARRA Stimulus funds, Idaho Transportation Department, and Yellowstone Business Partnership. START should be interconnected with the entire regional transportation system now being developed.

FOP Comprehensive Plan Comment – March 18, 2010; Page 4 of 4
Imagine full access to our region including the parks with one simple ticket connecting us to our neighboring communities and beyond. This regional transit system is underway, and the Plan should specifically include recognition and policy support. FOP believes it is important to broaden the Plan’s view of our region to include mention of future transit connections the next step beyond Teton Valley and Alpine to connect Jackson to the main greater Yellowstone gateway cities like Idaho Falls, Bozeman and others, and to Yellowstone, the hub of regional tourism. This is needed to support the future of travel in our region, including sustainable access for tourism, as gas prices will continue to climb over the next few decades and life of this Plan. Forward thinking goals should be a hallmark of this Plan, and taking steps backwards in mode shift would be the wrong way to go. Instead, the Plan should be revised to set higher goals and take much more advantage of the synergy of a comprehensive transportation strategy and action plan. This is possible - Many progressive local governments in America are achieving mode shift changes that exceed these levels, and most European nations are well above this - the Netherlands has bike mode share of 30% nationwide. Jackson Hole’s Plan must as well. Goals such as the following should be considered:

Mode Share of all transportation trips* - Proposed by Friends of Pathways:

• 10% Bicycle
• 10% Walking
• 10% Transit
• 10% TDM Reduction of motor vehicle trips
• 10% Ride Share reduction of motor vehicle trips
• 50% Total Alternative Mode share of all Jackson Hole trips by 2030.

*(Note “one trip” is travel of one block or more, for any purpose)

Comment: The Plan must rely on a combination of all active transportation solutions.

One important example of how the draft Plan language could be significantly improved is this statement on page 60, which is repeated in the draft Plan in multiple locations:

Page 60.

“Transit offers the most viable alternative to vehicular travel…”

This statement should be revised to more accurately reflect the reality that a combination of strategies will be required for Jackson’s transportation future. Each active transportation mode – Walk, Bike, Transit - has advantages, and works well in some, but typically not all,
Therefore the statement should be expanded to properly support the key additional alternative modes and key programs. Modern transportation research is clear – successful communities are using a combined, multi-modal approach, which is what the draft Plan claims to embrace. Thus, the language changes proposed are consistent with the intent of the Plan. For the new Plan to succeed it must proposed more specific, comprehensive, and integrated solutions. A proposed improved statement would be:

FOP Suggested change:
FOP Comprehensive Plan Comment – March 18, 2010; Page 5 of 5
Transit, bicycle and pedestrian modes (including the pathways system) offer alternatives to private motor vehicle travel for many trips. These “Active Transportation” modes have the lowest environmental impacts and help lower Jackson’s carbon footprint, and will be encouraged. In additional to embracing all the “Active Transportation” modes of Walk/Bike/Transit, the Plan needs to include a more robust Mobility Management strategy (or Transportation Demand Management). This must also play a key role in shifting private motor vehicle trips to lower impact modes and methods.

Each mode has its benefits and challenges, and the Plan needs to embrace all the active modes to fully develop a multi-modal system. Bicycle and walking are great for short to medium trip lengths, and since research shows 40% of all trips are 2 miles or less, there is substantial potential to increase these trips. Transit works well on fixed routes, including in-Town, Teton Village routes, and commuter routes from Teton Valley and Alpine. Today’s START system can be expanded in service frequency and with enhanced buses, which will increase use. The Plan should endorse potential transit extensions to the Airport and Grand Teton National Park, additional routes like Wilson and South Park, and better service to mixed use villages. Bike and walk modes can also be combined well with Transit, leveraging more use.

Page 61.

“Principles and Policies 6.1 - Increase the share of trips made by alternative modes, especially transit”
Same comment, this must be revised to be more inclusive. There is no magic bullet in transit, which in fact it is very expensive and the Plan even acknowledges on p. 60 it does not serve all the dispersed sections of our community. The other active modes frequently are more cost effective, serve most of Jackson Hole, are better for public health goals, and are the clear environmental winners. The best modes from an environmental sustainability standpoint are clearly the active modes of bicycling and walking – nothing else comes close. Transit is important and is more efficient that single passenger vehicles; FOP supports transit, but it is only one of the viable options that should be prioritized.

Page 61.

“Policies 6.1.a: Establish a permanent funding source for transit”
Friends of Pathways strongly recommends this Permanent Funding Source policy be expanded to include pathway, pedestrian and bicycle systems needs in any new funding source. For example, pedestrian facilities are one of the most important and challenging areas that need investment. The Town of Jackson and all Teton County villages have seriously deficient walkway systems, substantially fail in ADA compliance, have long capital needs lists, and limited funding sources. Pathways maintenance is equally very important to preserve the investments, encourage use, and provide high quality service. But funds for pathway maintenance are challenging to find, and would also benefit from a permanent funding source.

FOP Comprehensive Plan Comment – March 18, 2010; Page 6 of 6
Page 62.
“Policies 6.1.c: Research Regional Transportation Authority Viability”
This Policy section should be expanded to reflect the significant Regional Transportation Planning that is currently underway in our Teton/Yellowstone Region. The Plan should reference the Regional Transportation Concept Plan recently completed by the Idaho Transportation Department and the Yellowstone Business Partnership, which has recommended a Transportation Co-Op be formed. The Link Co-Op is now a reality and is in Pilot phase. It has received over $535,000 in ARRA Transit Stimulus funding from ITD, and has a full time staff working on a regional transit pilot program.

The Linx Regional Transportation Plan recognized START as the most successful Transit System in the region. This regional transit planning offers Jackson a tremendous opportunity to connect regionally. The opportunity to expand on the somewhat limited Regional Transportation language in the draft Plan is significant. The Plan should be revised to establish a local vision for how Jackson will fit into a future regional transportation network of not only transit, but also pathways and complete streets.

Leveraging the means and resources of our Greater Yellowstone region, including Idaho and Montana communities and the two National Parks is a significant opportunity. The Plan touches on the topic, but should be more specific, clear, measureable, and inclusive.

Please revise the Plan to include policy support and commitment to participate in the regional transportation planning underway. This is important not only for our local transportation, but also to support the future of travel and tourism in the Greater Yellowstone. Simply relying on motor vehicles for regional access will not be adequate to achieve our goals in the future. For more information please see: http://yellowstonebusiness.org/transportation/

Page 62.
“Policies 6.1.d: Interconnect all modes...”
This 6.1.d is mostly a Transit statement; it should be expanded for all the modes.

Page 62.
“Policies 6.2 Reduce reliance on single occupancy vehicle travel”
The Principle 6.2 needs to be specific, “single occupancy [add] MOTOR vehicle travel”. One reason, a bicycle is defined as a vehicle by Wyoming statute. So the Plan should call out motor vehicle where that is intended.

Also, perhaps in this section, there should be a basic policy statement on the primary “active transportation” modes. Add a bicycle section, pedestrian section, pathway section, and transit. In addition, this may be the place to add significant policy statement on adding a “Mobility Management (or TDM)” section with measureable goals.

FOP Comprehensive Plan Comment – March 18, 2010; Page 7 of 7
One of the world’s leading TDM experts Todd Litman has lectured in Jackson Hole on two recent occasions. Litman states that aggressive TDM programs can shift up to 20% of trips from high impact to lower impact via a mix of ride-share, employer, and neighborhood programs. See: http://www.vtpi.org/tdm/ Jackson could easily seek 10% TDM type motor vehicle reductions using off the shelf, proven programs.

Page 62.
“Policies 6.2.c Require Development to promote alternative modes...”
Should be expanded to require easements of developments to provide for sidewalk, pathways and transit needs. While a rational nexus must be met, that starts with good and specific policy support in comprehensive planning documents like this. Please add mention of this topic in the appropriate locations. This will help with future LDR revisions as well.

Page 62.
“Policies 6.2.d: Discourage single occupancy vehicles”
See comments above, this may be the place to add a “Mobility Management” or TDM policy.
Page 63.

“Principle 6.3—Maintain a safe, efficient, interconnected, multi-modal transportation system”

“Principle 6.3.b Coordinate network decisions...”
This should be substantially enhanced to spell out, in simple measureable ways, how all of
Jackson’s Transportation Improvement Programs are developed, coordinated, and updated.
Federal law requires states develop a STIP, and the current Comp Plan requires that an annual
default TIP for Jackson Hole be developed. This is crucial policy to continue.
The reality is, the Town and County have substantially failed to follow through with this
critical aspect of transportation planning. There is no on-going TIP as required by the current
Comp Plan, which states:
2002 Comp Plan Page 8-47: “The Town and County will develop a Transportation
Improvement Program that represents a master summary of the transportation
components of the improvement programs developed by each agency and department.
Principle 6.3.c Review land use proposals...
This should also mention the concept of requiring reasonable easements for pathways, sidewalks, and/or transit needs.
Page 64: Potential Transportation Network Projects:
This section of the draft Plan only contains highway projects, and thus is a highly limited list.
A list of highway projects is appropriate in the Plan and should be included. However, it is
equally critical a much broader list of improvements be included as well, and that the highway
projects are being considered as meeting Complete Streets and Context Sensitive principles. The
FOP Comprehensive Plan Comment – March 18, 2010; Page 8 of 8
list should include all known major Transit, Bicycle, and Pedestrian projects. As a starting point,
this would need to include:
• West Broadway 5-Way Main Street Project: roads, sidewalks, bike lanes, a complete
street project.
• WY-22 and West Broadway Pathway
• New START Transit Center
• Sidewalks in Town and mixed use villages
• Teton Village expansion follows Complete Streets concepts
• Hoback-Jackson South Project (Complete Street - highway, pathway, wildlife mitigation,
river recreation access, and transit needs)
Draft Plan Page 65 - Strategies:
In general, the Theme 6 Strategies section is less specific and potentially less helpful that the
current Transportation Chapter 8. It lacks measurable details and guidance on what is
recommended, what agency is responsible for what actions, and does not adequately discuss how
this plan is to be integrated with the WYDOT and Federal agencies STIP (State/National level).
Strategy 6.1: Establish a dedicated funding source for alternate modes of travel
Dedicate a seventh cent sales tax, additional mil property tax, or other funding source
to the provision of infrastructure for alternate transportation modes with transit as the
priority.
Comment: Strike Transit as priority. Transit should be one priority, but sidewalks and
pathways are equally important and must also be in the eligible list for funding.
Strategy 6.3: Create a behavioral shift program to increase travel by alternate
modes
Educate the community on alternative mode travel options and benefits.

Pursue home mail delivery.

Encourage or require students in all grades to take alternate modes of transportation to school rather than driving or being driven.

Pursue transit service between Jackson and the airport.

Establish a trip reduction coordinator to work with employers to reduce trips and facilitate carpooling.

Comment: As noted above in the policy section, this strategy needs to be better called out in the policies. This strategy is a good start, but would benefit by selecting a name – is it to be a TDM or Mobility Management Program? Those seem more descriptive than "behavioral shift".

Also, transit service to the Airport is a new transit route, not behavioral shift, this should be shifted to a revised Strategy 6.2 for a more comprehensive transit strategy section, which could also include Regional Transportation Co-OP and Regional Transportation Authority strategies.

Strategy 6.4: Update road design standards

Include “Complete Streets” and “Context Sensitive Solutions” policies in road design regulations.

FOP Comprehensive Plan Comment – March 18, 2010; Page 9 of 9

Include wildlife crossing and other wildlife mitigation standards in road design regulations.

Comment: The new Plan should go farther and formally adopt a strong Policy Statement on Complete Streets. This strategy can then be expanded then to show how the policy will be implemented. It should be more specific that it will apply to Town, County, and WYDOT. FOP would like to note it is very likely the U.S. Congress will include a new federally required Complete Streets policy in the big Transportation Reauthorization bill currently underway and expected to be completed next year. USDOT Secretary Ray LaHood has just announced strong new federal policies for planning for all modes.

Strategy 6.5: Update land use review standards

Concurrently review development projects for transportation impacts that can be mitigated.

Track incremental impacts and periodically evaluate their cumulative effect.

Institute a countywide transportation demand management program.

Adopt design standards to promote alternate modes of travel.

Reevaluate parking standards and other regulations that may promote the single occupancy vehicle.

Comment: Here, this should discuss how land use review could help TDM goals. The program itself should be covered above under behavioral shift, or TDM section. Additional mention of the need to secure easements for sidewalks, pathways, and transit should be noted.

Strategy 6.6: Cooperatively create, maintain, fund, implement, and monitor a joint town/county Transportation Capital Improvement Plan

Prioritize projects within the plan across all modes to implement this theme.

Establish permanent traffic counters for all modes of travel on specific corridors in order to monitor the effectiveness of crucial segments of the transportation system.

Comment: Cooperative planning for the TIP is an important topic, but at stated this is substantially incomplete and hard to track progress. It should spell out who is responsible to do it, and should be expanded to include WYDOT and the federal agencies, BTNF, GRTE, YELL, NER. It is worth reviewing the current Chapter 8, which has a much more specific process. The unfortunate reality is the Town and County have not followed the adopted policy in Chapter 8 in recent years. However, this is not a reason to take key details out of the plan; rather,
this should be an opportunity to redouble efforts on critical components like the development of the multi-modal local TIP. This is crucial for the success of any multi-modal system.

Strategy 6.7: Research a Regional Transportation Authority

Discuss with neighboring jurisdictions and state and federal officials the costs and benefits of a Regional Transportation Authority.

Discuss with neighboring jurisdictions improvements that can be made to the regional transportation system.

FOP Comprehensive Plan Comment – March 18, 2010; Page 10 of 10
See Earlier Comment: Teton County and Town should engage in the Linx Regional Transportation project underway, and should explore the potential benefits of expanding on the Pilot Transportation Co-Op now underway with ARRA Stimulus transit funding. RTAs are one possible option, and should be explored. However, there is substantial opportunity to fund much the START system’s needs through participation in the Regional System. This should be embraced fully in the Plan.

Page 66: Indicators:
The draft Plan Indicators are incomplete, far to general, and missing important items. The indicators should specifically set goals and track transit, bicycle and pedestrian mode share along with single and multi passenger motor vehicles. See FOP’s proposed Mode-Shift goals earlier in this comment letter. The current Plan has good, measureable and specific goals - those should be expanded on, not reduced.

The Plan should also require an update of the Teton/Jackson Travel Study. This key study should be updated every 5 years as is called for in the current plan. Travel Studies are considered essential tools by noted transportation experts such as Dr. John Pucher, and are frequently used in leading communities. The County and Town have missed the last two cycles of Travel Plan updates. Friends of Pathways strongly recommends that an updated Travel Plan be incorporated into the Town/County plans for FY-11, and that a summer plan be conducted this summer, 2010. (see: http://www.tetonwy.org/plan/docs/SpecialReports/TetonCountyTravelStudy2001.pdf)

On behalf of the Friends of Pathways Board of Trustees and our members we thank you again for your consideration of these comments. Please contact me if you have questions or wish more information on any of the points and issues raised.

Sincerely,

Tim Young, Executive Director

3/18/2010

Joint Planning Commiss

Theme 8 should be drafted by staff with help from relevant community organizations after a hopes and dreams exercise, using Principle 1.3 and previous PC recommendations as a base, prior to any workshop or presentation to the commissions.
Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. We are also going to listen to what I just heard expressed some similar concerns. You’ve already seen our written comments on theme seven. We really hope that some of the fundamental concerns we outlined are put on the table for discussion. However, our verbal comments tonight are just going to be targeted to the need to discuss and clarify the next steps of your review process, which you touched on last week. You know, the Conservation Alliance has not spoken to the process for some time, but last week was a turning point. The public are the portion that has remained engaged and been patient in working within the process that was laid out, including the shift to not actually review the 2009 draft of the Plan but instead to just review broad questions by Staff. While we have questioned whether this is really what joint hearings, rather than workshops, should entail, we understood the rationale for wanting to focus on the big picture at this point and not the details of the Plan, particularly given the shape that the draft was in when it was released in April. While the process today of course can’t be changed, we think there are a number of items related to the final review process that you can proactively act on to make the final review more effective and of greater benefit to the public. Overall, we speak to this process because of our direct concern with the end product. You know, we really feel that if this process suffers, the final product, which is the community Plan, will suffer as well. With that in mind, we will request that you set adequate time, if not tonight, on April 1st to outline the remaining tasks for your joint Commission. While we fully appreciate the difficulty of setting exact dates and timelines, we see no reason why your task or process description cannot be clearly identified. This is really important for making the process more understandable for the public. Basic questions should be on the table at this time, particularly given some of the recent suggestions and discussions that the review is almost over. We’re just going to provide a few examples. You know, people wonder this—will the joint Planning Commission review a list of inconsistencies before Staff finishes the chapter rewrites, or will the rewritten drafts, you know, chapters three, four, five, six and seven be released for public review prior to you going through inconsistencies? How long will the public have to review the full draft before your final hearings? Will you vote on...revote on items, or will your list of inconsistencies along with your rewritten drafts based on your original votes be forwarded to elected officials? These are just some basic questions that we really feel like are important to let the public know where you’re heading. A couple of specific concerns that we really feel is critical is you need to talk about the future land-use plan. It’s critical. Last week you discussed chapter eight but you didn’t discuss whether you’ll be discussing the role of the FLUP prior to being reviewed by elected officials. For months the Alliance has expressed concern about the need to clarify this. Perhaps particularly for those of you who are new, I’m not sure if you realize the potential consequences, the implications, and the intended role of the FLUP in the Comp Plan overall. As the FLUP maps are designed now, they are the key predictable element to guide future decisions, specifically directing which priorities and themes are going to take precedence and specific decisions in specific districts. At a minimum, prior to an initial review by electives, we think you, as a joint board, should discuss in a meaningful way whether you agree with the intended function and role of the future land-use plan. From the beginning, the Alliance has expressed concern about the disconnect between highly specific parcel level maps and the broader visionary function of the Comprehensive Plan. At the broad level, it’s really important to understand how this Plan is going to work and how integral the FLUP map is to the structure and design of the Comp Plan, so it’s got to be put on the table...very soon. Second, moving ahead, for the benefit of the public, we see room for improvement in your latter phase of the review. To be really frank, based on recent hearings, it has been really disappointing to see how little public or community preferences in common are being referred to in your discussions. Perhaps this is an unfortunate side effect from your review being so far removed from the years of energized public input. But too infrequently do we hear a mention of public vision or incorporation of many citizens’ and organizations’ ideas in the Plan. I’m just going to give an example. You know, somehow the initial review of the economy chapter was completed without sufficiently knowing or considering ideas from the Chamber of Commerce. I know that the Housing Habitat—I’m just going to throw out an example—Habitat for Humanity comments weren’t even mentioned. And I just bring this up because the public isn’t seeing the review, so it’s really hard for us to know whether the rewrites are going to include any of this, given that you didn’t take votes on the points raised. One more thing, perhaps some of you didn’t participate in the years when substantial public comment was compiled from workshops, open houses, phone and web-mail surveys. We really believe that it’s critical that you do not lose sight of the overall effort for this to be the community’s Plan. I’m just going to provide an example from last week’s meeting. We were disappointed to hear some of the comments about revisiting resort development language. The public has made it very clear that caps should be placed on resort developments and additional resort development is not a community priority. Polls showed a 77 to 82 percent agreement with caps, and only 11 to 13 percent of the public thought that additional resort development was appropriate. So we feel like it would be encouraging to see, you know, this mentioned when you’re discussing these types of things. It’s also interesting that the recent vote to repeal the resort zone in the County wasn’t even mentioned. I mean, to be honest, backpedaling on an issue that has such clear importance to the public, it’s concerning to hear and disappointing. I also want to point out the discussions continue to point to what seems like a common misunderstanding. There seems to be a perception that by capping resort development, no additional potential is possible, when in fact millions of square feet of commercial and residential development in resort zones are still going to be built beyond what we see on the ground. You know, it’s critical to understand the extent of how much potential exists that’s been approved but it simply hasn’t been built yet. We feel like it’s critical to have this information on the table when you’re

<td>3/18/2010</td>
<td>Griffith, Gregory</td>
<td>Gregory Griffith, West Bank. Relative to theme eight, since you brought it up last week, I made a specific request to you back in the fall that you direct Staff to immediately begin writing theme eight so that we wouldn’t be in this position. Quite frankly, the importance of energy efficiency, energy sustainability issues warranted its own theme; we determined that. We also have a right, from a public perspective, we have a right to review this Plan holistically. The whole is bigger than the sum of its parts. So, I would respectfully request that you direct Staff tonight to immediately begin writing theme eight, especially considering the time that we’ve spent on this process. There’s really no excuse for not having that done. You know, you can go back and listen to the tapes that you have my assertion, that I made that request of you in late fall. Relative to the theme seven, I don’t have any philosophical disagreement with anything that any of you said in hopes and dreams last week. However, I have some pragmatic problems with some of the stuff that you had said. Quite frankly, throughout the process, and last week was no exception, we have...quite frankly, our idealism has been writing checks that our reality can’t cash on a lot of these issues. The community asked specifically for theme seven. That’s acknowledged within the text of theme seven. The reason that we asked for it was not to discuss burying power lines and moving landfills from Sublette County. We just...our position in asking for theme seven was to do an exhaustive if necessary fiscal impact analysis so that we could look at the cost of growth in the development, not look at the micro-supply solution, but look at the macro generation of demand for infrastructure and services. Quite frankly, a secondary reason was to codify concurrency, ironclad concurrency requirements that would prevent development from getting ahead of infrastructure. So I think maybe we looked at some easy-to-discuss type topics in theme seven and we lost the big picture. I have a request that when you pass the baton on to the joint electives in this process, that you also pass on an instruction book, quite frankly, in the form of an open forum, a workshop, a retreat, if you deem necessary, so that we don’t repeat the mistakes that we’ve made in this process. We don’t replicate inefficiencies that have been inherent in this process. You owe that much to the public. We made so many mistakes and have taken so long that you need to get together with them so that we don’t again...if you don’t know history, you’re doomed to repeat it. Like Lincoln said, better than anyone else could say, if you have four hours to chop down a tree, you spend the first three hours sharpening your ax. So, let’s do that in the form of foresight and preparation. The last thing I want to cover is responsibilities that I see you as having to discuss in this process from now to the end of this process. Number one is the fact that we did a complete and utter rewrite instead of a revision. How are we going to address, since you have saw fit not to continue the line-by-line, etc., how are we going to address these inefficiencies, sorry, these inconsistencies, etc.? Who’s going to do it and when? As far as re-review goes, you also probably need to explain to the public how that process is going to play out, because I’ve heard varying accounts of how we’re going to do that. And there’s numerous examples I can bring up. I’ll only bring up one specific and that of course is Mr. Walter’s chopping at the bit to put the paddles to that flatline Frankenstein that we know as nodes. So that’s something that we need to...don’t spring that on the public at the last minute, please. Also, if we continue this process and continue to let it play out like it has been, we’re going to write this thing right back around to where we started, right back to the status quo. We saw some of that with the resort discussion last week. The last thing, and most importantly in my mind, is you need to have some type of discussion and explain to the public how you’re going to work the FLUP discussion. There was supposed to be the bridge between essentially the bark of the Comp Plan to the bite of the LDRs. It was supposed to codify consistency and predictability the public requested. And right now we don’t even know if you’re going to look at them or not. So, it’s something that’s very important. Thanks.</td>

Friday, May 04, 2012
Dear Planning Commissioners,

Thank you once again for your time in this process. Your support of public art in Theme 3 was paramount. Theme 7 garnered many comments as well due to our advocacy efforts. Below are some considerations. Thanks again for your time!

Background: Bland Hoke is currently coordinating a Public Art Taskforce to develop a Public Art Plan. This document will outline the framework of a Public Art Program, prospectively administered by the Cultural Council of Jackson Hole, for the Town of Jackson and Teton County. The Public Art Task Force meets the second and last Wednesday of the month at the Photo Lab at the Center for the Arts at 5 pm. Please contact Bland Hoke for additional information, or visit http://www.centerofwonder.org to review draft documents of the Public Art Plan.

Introduction: The vast majority of public art programs (>300) derive funding for projects by allocating 1%-2% of eligible Capital Improvement Projects for public art. The Public Art Plan currently in development is based on this widely supported and accepted model funding for public art. Given the broad scope of Theme 7, public art may not be appropriate to highlight in a specific Policy or Principle. However, it must be addressed in the resulting Level of Service plans and the Capital Improvement Plan.

Revisions to Theme 7 are listed below in RED

For reference, an image from Boise’s Comprehensive Plan is included, which details how public art fits into the City’s infrastructure.

Revised – Policy 7.1.a: Maintain Level of Service (LOS) plans for the provision of public services

Level of Service (LOS) is the quality and quantity of services supplied to the community by a provider of public services. To ensure that services are delivered to the public in a safe, efficient and timely manner, the Town of Jackson and Teton County will coordinate with governmental and nongovernmental service providers to accomplish the following:

A. Identify each provider’s acceptable Level of Service
B. Create a Level of Service plan for each service provider
C. Develop standards for measuring service delivery success

The first priority will be to identify acceptable Levels of Service, create LOS plans, and develop standards for measuring service delivery success for the following services:

- Fire/EMS and law enforcement,
- Library,
- Parks and recreation,
- Public health,
- Utilities/Infrastructure,
- Public transportation, and
- Weed and pest management.

The second priority will be to identify acceptable Levels of Service, create LOS plans, and develop standards for measuring service delivery success for the following services provided by non-profit, public and quasi-public entities:

- Arts/culture,
- Community events,
- Human services,
- Medical care,
- Schools, and
- Child care.

Rationale: If the intent of this policy is to actualize Level of Service Plans, Arts and culture necessitates its own category, separate from Community events. This will ensure the Arts/Culture organizations can effectively develop a LOS plan, which will incorporate a public art program.

Community events necessitate a separate category to ensure the topic is adequately addressed in the development of LOS plans. Jackson is home to a plethora of events such as the Hill Climb, Fall Arts Festival, Easter Egg Hunt, Old Bills Fun Run, and Old West Days. This breadth and depth of events necessitates a separate category so a LOS plan can be developed accordingly.
Madam Chair, members of the joint Planning Commissions, Jerry Bland, Jackson Hole Mountain Resort and a member of the STAG Committee. We’ve been reviewing a lot of the documentation from time to time and, having sat through a portion of your meeting last week, I had a couple of comments for here tonight. First of all, there was a number of comments about resorts, and I see you struggling with resort, which is a community, or resort/community, community/resort. I’d just like to point out a couple of things. You know, resort and tourism really describe our economy. I mean, it really is the economic generator, I believe, that really has put us in the position we are. I know some might not like to see the caps increased; however, if by nature of capping that, and we have through various regulations, really in the resort district in particular, there creates I think a potential to stagnate vision. And what happens when things stagnate is that you can’t develop, and capital investment will not come to this economy. The other thing that you touched on in pretty dramatic fashion last week was diversification. And I think we all support that. There is no doubt that a diversified economy here in Teton County is something we all desire. I would just point out that tourism and outdoor recreation is a ?? And it, by its nature, is what brings a lot of this diversified economy, such as we do have, and what brings people here in the first place. In the case of Teton Village, which, of course, I am formidably familiar with than any other component here. We continue to do economic analyses, fiscal impact analyses, to show that we more than carry our share. Now, what comes along with resort problems is other economic development and secondary development, those kinds of things. But I think, as certainly the County Planning Commission observed, services provided in Teton Village are minimal. And we actually, as a part of the 1998 Master Plan, formed a resort district out there in the Teton Village Association, which supports the bus system, START Bus, and I’m sure with the budgetary issues that are going on in the County, we’ll be hearing more about that <<inaudible>>. Every employer provides every employee a bus pass in Teton Village. We definitely support the transportation ??, and we are involved in and responsible and accountable for mitigation. In addition, I just might also add that any incremental activities that take place in the County, just to give you an example, we had a special event at Teton Village. We called the sheriff. We pay for the sheriff. If we want to get a dog catcher in Teton Village, we pay for the dog catcher. And so, you know, a lot of the services and the kinds of things that we’re talking about here, they really don’t maybe don’t necessarily apply directly. Now, again, the secondary impacts, the kinds of things we talked about ??, I, and I know you’ve dealt with this earlier, we are in a pretty significant recession now. We planned to discuss it before we started here. Last year our skier visits were down 9.2 percent. We’re down about 5 to 6 percent this year. That is on the throws of about a hundred-million-dollar investment in Teton Village. So, if you restrict growth in a community, what you inevitably do is limit the ability of, whether it’s airplanes or jets, or, you know, certainly we want to utilize the <<inaudible>>. I think we’re doing a better job community wise dealing with that. But the only thing you have to deal with then is price. And if you come...you can point to other resorts that have done this exclusively. And I think that’s not what our community is really all about. When SRA in the past several years ago, we worked prior to that and actually from the first day I arrived in Teton County in 1995, we tried to work with the SRA to try to come up with a plan that jointly really represented the visions that we all had for our community out there. We weren’t able to do that through the 1995 and 1998 Master Plan process. But subsequent to that, we sat down and worked with them over a three-year period to come up with a joint plan that really, we think, benefited everyone, and it included a transportation plan and it included a whole series of improvements to the Village that we feel restricted the whole donut in Teton Village. And SRA presented an opportunity to do that. Some of those components have been seen and executed at the Village, one which is certainly the ranch lot, transportation to and from, a lot of the improvements which are now being supported, I might add, by the Teton Village resort district, which is an incremental sales tax we have in Teton Village now, 2 percent, so anybody who goes to Teton Village pays an incremental 2 percent out there. What has been suggested through this process is that there should be no additional commercial other than what has been approved. Well, after three years of really extensive work by all of the Village and SRA, we came up with a plan to improve the process, but 60,000 square feet of commercial was stripped out of that plan. We thought that was the minimal amount, but that was really the glue that put it together. So what we ended up with is the golf course and, frankly, some nice open space that went along with that. We ended up with a parking lot. But what we don’t have are the other components that are really critical for development in Teton Village. And I would just like to point out that these kinds of things are extremely important for the sustainability of our Village. And you can put a cap on it. I’ve seen many resorts that I’ve been fortunate enough to work in, if you put a cap on these kinds of things, what you’ll end up doing is really restraining where we could have flexibility in the near future, because we don’t know what the market is going to handle. We hope this market will come back and skiers will start to <<inaudible>>. But I think it’s going to take a long time. Our budgetary process is starting right now and we’re going to, given what we’ve seen in the economy, you know, budget about where we were this year, which is going to be about flat and hopefully we can do that. So far, this recovery that we’re seeing has benefitted this obvious recovery. The fortunate thing about it is we’ll be able to hire locally and domestically. We haven’t had to go outside to foreign countries as we have in the past and hopeful that over a period of time the economy will be sustained as well. So, anyway, I just want to make a few comments. What you’re saying here is all fine and good. There’s a lot of discussion today around some of these components. I just want to point out that from a fiscal, from an economic generator standpoint, I didn’t hear a lot about that last week. Resorts are planned. If we deter, or we try to attract people, and they come and they see an economy that’s driven by an environment that isn’t sustainable, that doesn’t work. They will not come back. They’ve got a lot of choices. And let me just point out to you that in a
<table>

| 3/11/2010  | Tillson, Becky              | green resort community, and I don’t know how many of you know that Jackson Hole Mountain Resort is one of only two resorts in the United States that is ?? certified. And I will tell you that that’s a subject...we just went through our fifth audit and that’s a formal audit process. Aspen is the only other resort that has that. And every department in our organization is accountable specifically for environmental standards and improvement. I think we’re a long ways down that road, and we can work together I think to achieve a lot of these goals. We frankly are and besides it certainly helps when you have an environmental policy envisioned like that to attract the right kind of employees and the right kind of ?? this very unique place that we live in. Thank you. Becky Tillson, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. As you continue in your review of theme five, we wanted to say that we really appreciated your commitment at last week’s meeting to protecting the basis of our economy, our natural resources. We also applaud your vote to incorporate suggestions from the Rocky Mountain Institute into this theme. RMI is a well respected and valuable resource for a community such as ours and their work is backed up by comprehensive research. So thanks for taking the time to consider their suggestions and viewpoints, particularly when it comes to creative ways to build our economy without building our physical footprint, such as building upgrades, energy efficiency and local business ownership and patronage among many other creative solutions. We hope your discussions will continue to be informed by RMI’s work. In our written comments on this theme, we outlined seven specific topics that are missing from this current draft, that we feel are missing from this current draft. And we hope that once you’ve finished the Staff’s questions, you will not move on without at least discussing why this theme removed so much of the emphasis on community character and existing conditions that were central to the 1994 chapters that relate to the economy. Specifically, the current Plan attempts to describe the types of signage, appropriate building type and scale, and, excuse me, appropriate building size and scale, and the types of development that we want or do not want to see in relation to character preservation. It is not covered in the Comp Plan ?? LDRs, and we assume that signage and building type and scale will be regulated. Before moving on, it will also be important for this board to clarify the big shift from the ‘94 Plan that this draft makes with regard to community character as an economic goal. Last summer when you discussed the vision chapter, you took an 11 to 1 vote to incorporate the concept of community character back into the entire Plan. It’s important that this board ask whether or not the economy of the region should be clearly linked to community character as it is in the draft Plan. As always, please refer to our written comments for more details.
March 11, 2010
Town of Jackson and Teton County Planning Commissions
Re: Theme 7 Comments
Submitted via email to Alex Norton

Dear Planning Commissioners,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to Theme Seven - “Provide Quality Community Facilities, Services and Infrastructure.”

Attached are line-by-line comments and suggestions for discussion related to Theme Seven. Listed below are key points that we hope are clarified in discussion and/or incorporated into a new draft of this chapter.

First, we believe it is important to integrate additional language regarding fiscal responsibility in this chapter. In comparison to the 2008 draft of this chapter, the 2009 draft does not include a principle or policies that specifically highlight the importance of fiscal responsibility. For example, the first principle of the 2008 draft was “provide adequate public facilities and services for current and future residents in a fiscally responsible manner.” The 2008 draft also included statements such as “new development should not increase taxpayers’ costs to provide new schools” and “new development should not occur in locations or a manner that increases taxpayers’ cost to serve it or creates unsafe conditions.” In general, the lack of focus on fiscal responsibility is particularly concerning given that the concept of fiscal responsibility in future land use decisions was also not highlighted in the “managing growth responsibly” chapter of the new draft.

Second, the 2009 draft should include an estimated timeline for the development of a Capital Improvement Plan (CIP), particularly given the policies’ intent to require concurrent review of facilities’ capacity as it relates to new development. Related to this concern about a need for a timeline is the extent to which considerable detail has been removed from the “themes and policies” on community facilities, as compared to our existing 1994 Plan. The existing 1994 Plan included extensive detail to provide for clear guidance on the drafting of land development regulations, whereas the new chapter leaves considerable room for interpretation. The extent to which this new approach can lead to increased predictability and accountability, particularly in the near future, is questionable. Additional information on existing conditions and challenges should be incorporated.

Third, while we appreciate and support the inclusion of a specific chapter on community facilities, built infrastructure, and associated services, we also believe it is critical to at least reference how these issues complement other public priorities, such as open space conservation and wildlife habitat protection. We mention this for a primary reason; through its descriptions of public needs and preferences, this chapter will likely form the basis of public funding policies in the future. As part of these discussions, it is important to keep in mind a comprehensive picture of how the community prioritizes different amenities and services. Ultimately, we need to make sure public preferences and priorities like wildlife protection are factored into budgeting and decisionmaking in a meaningful way in the future.

Thank you for your consideration of these comments.

Sincerely,
Kristy Bruner
Becky Tillson
Community Planning Director
Community Planning Associate

A strategy should be added to the Theme to explore the creation of an Economic Development organization to establish an economic development plan for the community.

<td>3/11/2010</td>
<td>Griffith, Gregory</td>
<td>: Gregory Griffith, West Bank. I agree with about 20 percent of what Mr. Bland said. If there was a 100 percent mitigation rate, maybe that would be 50 percent. I would like to propose tonight, if you take a vote tonight, up or down, on sending a strong message via a recommendation to the electives to form an Economic Commission along the lines of the Environmental Commission where we have scientists informing science that informs policy. We have economists and business interest and business acumen informing policy decisions involving economics. It would eliminate a lot of the discussion that we had last week, etc., at the elected level, because they won’t have to go through these procedures because they’d already be whittled down by an Economic Commission. It would be very easy to get people to participate in this. We had quite a few members of the Chamber and the STAG Committee type representation, which could be approached. No budget; no staff. Make it a task force, if necessary. I think it would be very efficient. What we don’t want to see, as a member of the public watching a proceeding that occurred last week at the elected level, because quite frankly if you’ve watched the JIM meetings of late, it ain’t going to be a pretty sight. So, that’s one recommendation I would make. Another recommendation I would make, if we took a snapshot of the last four meetings we’ve had, we could have eliminated three of those meetings with just a little bit of foresight. Quite frankly, it’s a very low efficiency rate in the last four series of meetings. It’s effectively a month we could have eliminated the process. One way to do that is not have a situation occur that occurred last week where Staff is writing questions on a theme that you have not yet discussed. I understand the dynamic and Director Daughterty’s explanation was perfectly acceptable last week. But just looking forward and not complaining about the past, but looking forward, let’s not get in that situation again to the point where if you do finish theme five tonight, consider staying late and having the hopes and dreams discussion of six or seven, whatever the next sequence is, because there has been some discussion of taking those out of sequence because of the traffic consultant. Instead of staying late and doing hopes and dreams so Staff can have some insight that your direction to Staff on the questions that they ask you, did their interpretation of your directions capture what you were trying to do. Just always trying to get at better efficiency. Look at the room, you know, I’ve mentioned this in the past about the public participation. Quite frankly, relative to theme five, let’s not succumb to what I call the chamber of paradox. Chambers of Commerce nationwide are overly aggressive in pro-business, pro-growth, pro-development issues, with the paradox being that they essentially create more competition for their members and constituents. It’s, as I mentioned in the past, a slow, smart, sustainable economy and ?? probably our idealized future. And I’ll stop with that. Thanks very much.</td>

<td>O’Brien, Kristine</td>
<td>Christine O’Brien, Teton County. I also &lt;&lt;inaudible&gt;&gt;. I just wanted to talk a little bit about the economics chapter and how it can be more specific about the community’s vision of what drives the economy. And how the community wants to tradeoff its goal given the constraints it faces. I think we agree that the basis of economic strength for our community is its natural capital. Maintaining a strong and diverse economy means protecting that capital so it can continue to produce economic benefits. The community is fortunate that its natural capital, unlike an oilfield, for example, is a living entity and is renewable. If it is properly managed, it can support the community’s goals generation after generation and through hard times. We should encourage renting access to local experience, stays at camping, or stays at hotels, or well-planned resorts, rather than selling ownership through big second-home development. This not only keeps control of our natural capital in the community’s hands but produces steadier, less volatile income. For example, park visitation may have been flat but did not crash like the building industry and housing prices. And then all economic activity should be required to pay for its full cost and particularly those environmental and social costs that are now externalities, degrade the environment, traffic, increased infrastructure needs, workforce housing, wildlife impact, etc. This will ensure natural capital is preserved and level the playing field for green and sustainable industries. The Plan should commit to making all projects pay their full cost. This entails finding ways to measure these impacts and enforce compliance. And then finally there’s a lot of money at stake here and choices about development will have important financial consequences. The Plan should be clear that it’s economic vision means we can’t accept every development that comes along. In addition, transparency is essential. The Plan should recognize economic incentives to lobby the planning process and encourage appropriate sunshine laws wherever appropriate. Thank you.</td>

<td>Joint Planning Comm.</td>
<td>The economy should be diversified by incentivizing local entrepreneurial opportunities</td>
</tr>
</tbody>
</table>
The community should encourage eco-tourism that sustains our natural capital.

Outdoor recreational opportunities should continue to be a focus of the economy.

The community should encourage tourism that enables recognition as a “green resort community”

The economy should be diversified by encouraging “green collar” jobs and industry (such as alternative energy research and development).

With regard to promotion of self-reliance, the community will explore land use policies that promote local business (for example, but not limited to: live/work units, small lot development, etc.)

Dear Planners,

Thank you again for all the hard work and time you are devoting to the Comprehensive Plan on behalf of the Community.

Below are some thoughts on the economic section.

The economic chapter of the plan should lay out the community's vision of what drives its economy and how it wants to trade off different goals. Economics is about understanding the consequences of choices, and how to make the best choices given goals and constraints. The Plan should go beyond statements of aspiration and lay out real obligations and objectives.

1. Source of economic strength. Jackson Hole's economy is based on its natural capital, the scenic beauty that attracts people from across the world. Preserving that capital, and using its dividends to meet the needs of the community should be the goal of the Plan.

2. Diversity and balance. Economic diversity and balance can be achieved by using the natural capital of Jackson Hole in different ways: seasonal recreation, vacation homes, attracting entrepreneurs to build businesses. But the Plan must be realistic and make clear what sorts of businesses are viable. Moreover it should be stated whether words like “foster” and “encourage’ mean “subsidize”. If so the decision to subsidize any economic activity must be justified by strict cost/benefit analysis.

3. Renting versus owning. Natural capital is the ultimate renewable resource. Ownership of it gives control and responsibility. As much as possible, the community should keep control of the natural capital. “Renting” access rather than “selling” it keeps that control (i.e., selling resort stays, experiences and hotel visits rather than building irreversible residential development). Renting access promotes economic stability, because rental income is less volatile than real estate prices.

4. Making projects pay their way. The community must ensure that development projects do not degrade the environmental capital and quality of life that underpin the area’s economy. This should be paramount. The Plan should commit to making projects pay for all costs – workforce housing, infrastructure, traffic, pollution, wildlife impact – and provide for a mechanism to measure those costs.

5. Transparency. Limits to development deliver financial gains and losses. Provision of benefits such as subsidized housing will attract demand. These economic facts of life must be recognized and the Plan has to insist that implementation be open and fully transparent.

Kristine and Paul O’Brien
Subject: Comments from 4 March 2010 Joint P&Z Comm Meeting  
From: Armond Acri

Some thoughts on your discussion on Theme 5 this week: 
- Stability in the economy probably means controlling growth in some fashion to minimize the boom/bust cycle. That is what the Fed does. You have voted not to use growth caps, but you might want to consider some sort of indirect controls. Rapid growth is often followed by painful contractions like we are currently seeing.  
- Stability probably means raising taxes in good times to get through the bad times. It is tough to raise property taxes and sales taxes when property costs are high, but it is even tougher to raise taxes when people are losing their jobs and their homes.  
- It is difficult to legally exclude certain types of businesses like big box retail, but you can indirectly control the types of businesses you attract by controlling the size of buildings you allow. Large corporations are not interested in small buildings. Small local companies are.  
- Businesses that cater to locals will not earn as much money as a high end service business, but will probably have more business in the shoulder seasons. We cannot control the weather in spring and fall. It is very unpredictable and often unpleasant. That makes it difficult to attract tourists (including second home owners) during the shoulder seasons. True locals will be here during most of the shoulder seasons and will buy things they need. They do not need "local discount" high end services during the off season.  

Armond Acri  
Save Historic Jackson Hole

---

The economy should be strong, stable, diverse, and balanced

Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. I’m just going to make a few brief comments since you already have our written comments that we submitted on February 4th. In this week’s Staff Report, we were really happy to see Staff’s questions that we think will help refine what a sustainable economy should mean in Jackson. We do believe that Rocky Mountain’s extensive work on this topic can provide a good foundation for discussing these issues. I just wanted to reiterate if you think that a key goal for this chapter must be to distinguish between the words growth in terms of physical expansion and economic development. You know, when discussing and debating these terms, growth and development, and making recommendations on policy regarding a desired economy, it’s important to all be on the same page about what these broad terms represent, and particularly before you get into detailed discussions. As you do discuss future bases of the economy, another item that we feel is important to always keep in mind is the extent of commercial and residential development that has already been approved and that is in the pipeline. You know, we certainly are not facing a no-growth scenario with the decision that we should focus future efforts on economic development of our existing economy and businesses, as opposed to being further dependent on additional growth in land area or increase in development potential. With this chapter we really urge you to ask the tough questions about what’s in the best interest of a long-term sustainable economy here in Jackson. We hope that you’ll commit to policies that will protect our most important natural assets, our quality of life, family quality, the visitor experience, rather than promoting a continuation of policies that focus on the short term and that don’t provide the stability during economic highs and lows. Thanks for your work.

<td>3/4/2010</td>
<td>Griffith, Gregory</td>
<td>Gregory Griffith, West Bank. I just wanted to clarify the spring break request was for one week, not two, and it was to acknowledge the extra time commitment we had the week previous. It was also to acknowledge the fact that Staff informed us last week they weren’t going to perform a task that was assigned to them because of time constraints. Also to acknowledge that you aren’t the only people in the process, quite frankly. The public is usually left out of these discussions. I find it ironic that we can’t discuss a strategic break that could be used to increase efficiency, yet we left an hour and a half of quality discussion time at the table at the last meeting. The hopes and dreams, a very good addition, very informative, worked really well in theme three and theme four. I do have one additional thing that we weren’t allowed to comment on previously and that’s Commissioner Walter’s assertion that he’s going to dredge up the node concept yet again. And I fully respect and acknowledge that right. I just really think if we’re going to acknowledge that right, there’s a commensurate responsibility to do it earlier rather than later. If we can press all these tough revisits of contentious topics to the end of the process when six of our ten electives are engaged in the primary process in the summer and people are three sheets to the wind, etc., I don’t know how that contributes. And I fully respect the right of that. I just wanted to know that we weren’t allowed…that that was brought up at the last minute previously. As far as theme five itself goes, there’s very little we can do. Most of theme five is subject to the vagaries of market conditions beyond our control. I really think we can finish theme five tonight. There needs to be a stronger acknowledgement, as I said before, that ecology is economy in this Valley, that the best possible idea of what we should be striving for is an economy in relative spaces that utilizes our resources that we’ve been given and we’re in charge of maintaining stewardship of at a responsible rate. And that’s what I have to say. Thank you.</td>
</tr>

<td>3/4/2010</td>
<td>Acri, Armond</td>
<td>Armond Acri, representing Save Historic Jackson Hole. I’d like to thank both Chairs and the members for letting me speak tonight. I wanted to talk a little bit...I won’t repeat my comments, written comments, but I did want to make a couple of other points. I think one important thing to keep in mind is just as we cannot guarantee that everyone is going to get a house, I think it has to be the same way that we have to acknowledge that we cannot guarantee that everyone will succeed in business, or everyone will have a job. Our obligation is to set up opportunities for reasonable chance for success for people for starting jobs or for having opportunities for employment. One of the things I think that is a powerful lesson from the current economic problems is that the too-big-to-fail concept is a dangerous thing, and I think we need to keep that in mind as we go forward looking at what kind of business that we do want here. It’s probably good to ?? a little bit. But I think the fundamental question that we should always ask and should be the screen that we use is what is in the best interest for the community, not is what is in the best interest for ?? And then also I would lastly like to acknowledge Mark Newcomb’s comments, which I thought were very eloquent and actually a lot of verbiage could be taken out and put in for this chapter I thought, so very well written, Mark. Thank you.</td>

<td>Bruner, Kristy</td>
<td>Hi, Kristy Bruner, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment. I’ll be brief since you already have our written comments where we outlined what we see as the major improvements in the draft and in some topics where in some places were inconsistencies will be clarified. It’s good because it was our understanding that you are just revisiting votes, I mean, rather than revisiting votes, you’re simply confirming Staff’s interpretation of your previous votes. With that in mind, that’s why we framed our comments the way we did. One thing, after looking at the Staff Report, I just have a few comments. As a member of the Build-Out Task Force and the Employee Generation Task Force, I agree with the third point raised by Tony Wall that the Task Force numbers should not be referenced the way they currently are in the Plan. They’re merely assumptions tied to these final numbers and it’s critical that these assumptions are understood when you see the numbers in any way. The same goes for employee generation numbers. Referring to these numbers without sufficient noting of the assumptions to arrive at them is a concern. Therefore, we do think the findings with the assumptions should be in the Appendix. Also, based on some of the other comments from the Commissioners, it seems that some of the assumptions for the data, particularly regarding a PRD multiplier, were unclear. You know, without going into too much detail, line-by-line review, we feel that the draft should be very clear about the use of discretionary tools and how this affects other statements in this draft regarding the desire for predictability, and then additive growth is not appropriate right now. There’s a couple of instances the way the draft is written it’s sending mixed messages and we feel like that should be clarified before you move forward. Thanks.</td>

</table>
Hello, Stephan ??, Town resident. Some of your recommendations, if I read it right, number 1 50 talked about keeping new development should be what its base rights are in the County now. What I contrast that with the push by both the Town and County planning boards to eliminate ARUs. I’m somewhat at a loss and I’m hoping you might be able to discuss that tonight. There’s lots of talk about keeping the ’94 development plan potential, yet this seems to take a step backwards from it. So I encourage you to look at what ARUs are today in the County. Some of them are guesthouses for second homeowners. Some of them are workforce housing, as people who live in there part time are caretakers and part-time workers in the Town or the County. Others are full-time caretakers on those properties. And still others, they’re full-time workers in the County. That’s, I think, a way to meet some of the stated goals you talked about in the last theme about meeting workforce housing in the County. Instead of going on with exactions and conveying those exaction fees to other entities in Town that are already in the County that are making housing, it seems to me you’ve got a system of encouraging housing in the County that’s already linked to existing development, and I encourage you to take a look at keeping that. Those are my comments on that. Thank you for your continued time and effort.

Gregory Griffith, West Bank. This is not related to theme two, but if you haven’t already done so, I suggest that we identify, re-identify the spring break period. It’s highly likely there’d be a loss of quorum during that time anyway, why not go ahead and do that tonight. You’ve got a calendar here. That’s all we need, five minutes prior to Matters from Staff or something. Every process has a cost/benefit ratio and the cost/benefit, risk/reward, input/output ratio in the process is extremely low. I suggest with all this insight and intelligence we have, and I mean that sincerely, that we put our heads together and figure out a way to facilitate this process. We have spent an inordinate amount of time reaffirming the status quo—weeks and weeks and weeks on an individual theme—and I feel, and this is an actual suggestion which I know you won’t take but I’m going to make it anyway, that we seek to limit one theme per meeting, one meeting per theme, and then handle all the minutia and the micro-suggestions, etc., on the re-review. I really think we can cut this time in half. I mean, we have to get real. We’ve been at this seven months. And when we finish theme two, three, and four re-review, we’ll be halfway through it. So, this is the problem. You know, to the 50 percent of you who remain from the beginning of this process, in theme one and theme two, we, on a weekly basis, had a room full of eager, enthusiastic, energized citizenry, you know, looking forward to participating in the planning of the future. And we disenfranchised and de-energized them by this extremely long process. So, nobody else is going to say it, so I just did. So we really need to put our heads together and figure out a way to do this. Now, specific to theme two, the biggest thing missing in theme two, besides PRD potential, is a fiscal impact analysis and cumulative impact cost to the community. We haven’t even made any strong recommendations, you know, along those lines. Two specific sentences. One is 2.2.D, local convenience commercial. I really feel like through some of my research that the benefits of local convenience commercial are often greatly oversold and that some of the language remaining in 2.2.D and elsewhere can facilitate new growth via utilizing the supposed benefit of local convenience commercial. I won’t get into that specifically. Commissioner McCarthy and several others have covered that previously. The last thing I’ll say is 2.3.E, the middle sentence there is discretionary tools shall be limited. Anytime we have language that’s ambiguous like limited, it really should be prohibited in that stage. When you have limited, you have an infinite amount of non-predictability. So, let’s put the harshest language in, prohibited, and then ask the developer to come back for variances, which they always do anyway. Thank you.

Hi, Kathy Tompkins, Cottonwood Park. Accountability, predictability, and measurability are all important ingredients in a successful Comprehensive Plan. In particular, build-out numbers and a cost-of-growth statement incorporated for theme two will define what can and cannot be done when it comes to rewriting LDRs. You can stop unwanted growth and development that can’t pay for itself. Along with results and conflicting statements and better defining theme- two policies that were mentioned in the public comment, a lot of the public comment on theme two, we can also avoid long, drawn-out and costly confrontations with landowners and the public.<<inaudible>>.

Armond Acri, representing Save Historic Jackson Hole. I’m not going to repeat...I gave you guys some brief statements. I would like to point out that I’ve been reading the other comments that there were a number of comments that did point out there are some things that are inconsistencies. And that’s not a criticism because actually I think we’re a world ahead of where we were before, but I think as you go at it step by step, it is possible to not remember past steps. So, hopefully, you will address those. That’s all I have to say. Get on with it. Thank you.
Jackson/Teton County Comprehensive Plan

Theme 4, “Meet Our Community’s Housing Needs” Issues and Positions of the Jackson Hole Chamber of Commerce Board of Directors

The following positions of the Jackson Hole Chamber of Commerce Board of Directors were approved in its February 17, 2010 meeting.

ISSUE 1: Regulations versus incentives for developers

JHCC POSITION: Do not increase current regulations for mitigation rates and exaction fees in the current economy. Maintain current sharing of affordable housing mitigation by both residential and commercial development. Develop stronger and more diverse incentives for developers to provide workforce housing.

ISSUE 2: Rental housing for workforce

JHCC POSITION: Shift focus from ownership units to the creation and preservation of rental units, including but not limited affordable and attainable rental units, free market units, etc. These rental units should be for seasonal workers as well as year round workers. Regulations should be modified to promote and govern the amount and density of rental housing stock. Establish an affordable rental housing program with principles and criteria similar to that established for the affordable ownership program.

ISSUE 3: Sources of funding for affordable housing

JHCC POSITION: The pursuit of funding for affordable housing should continue tap Federal and State grant funding to the greatest extent possible in addition to the other current sources of funding, i.e., private donations and current exaction fees. Private and public cooperative partnerships should be explored and facilitated. No increase in taxes should be pursued during the current economy. Consideration of further SPET funding should be delayed until a strong economy is restored.

ISSUE 4: Location of workforce housing

JHCC POSITION: With an emphasis on redevelopment instead of new development, workforce housing should be concentrated in the Town of Jackson and Teton Village. The Jackson Hole Chamber of Commerce Board of Directors recommends that the Town of Jackson and Teton County conduct a study to explore the feasibility of moving the fairgrounds and jail from Town neighborhoods to the County to create additional space for workforce housing. Employee housing should be established near downtown Jackson and near any centralized mass transit locations rather than outlying areas to support the “Town as Heart” goal. Quality affordable housing should be mixed with free market homes rather than creating dedicated affordable housing subdivisions or developments.

ISSUE 5: Limiting or promoting new developments to provide more affordable housing units or funding for affordable housing.

JHCC POSITION: Emphasis should be placed on redevelopment of existing developed land versus the expansion of new development on undeveloped lands. Teton Village should be provided with enough square footage for workforce housing as well as commercial development to be a sustainable village center and lessen traffic impacts. Incentives should be created for landowners to work with developers on existing properties rather than build new developments.

ISSUE 6: Economic basis for housing at least 65% of the workforce in Teton County, Wyoming

JHCC POSITION: The Jackson Hole Chamber of Commerce strongly agrees with the goal of at least 65% of the workforce housed locally. The Jackson Hole Chamber of Commerce understands that approximately 65% of the current workforce lives in Teton County, Wyoming. Further decreases of workforce housed locally equate to further losses in revenue for local businesses as well as losses in sales tax revenue for Teton County and the Town of Jackson. The economic rationale for supporting this goal and maximizing the percentage of workforce housed locally is based on studies indicating that for every $100 spent at a locally owned business, approximately $63 remain in the community. In addition, money spent locally has a “multiplier effect” where the more people that spend money locally, the greater the percentage is of the money that stays locally because of the greater financial success achieved by local businesses. For example, increasing local spending from 50 to 80 percent more than doubles the local effect – from $200 to $500 (ref: Entrepreneur.com, Sustainable Seattle and Civic Economics). Money spent outside of the community by workforce housed elsewhere remains outside of the community.

GENERAL RECOMMENDATIONS:

- The data from the 2007 housing needs assessment and related studies needs to be updated in order to establish an accurate basis for making policies.
- Housing agencies and organizations should explore the purchase of existing “stressed” or affordable housing stock
Dear Planning Commissioners and Staff,

Thanks for all the hard work on the rewrite of Theme 2. Here are a few more general comments.

The costs of growth are still not adequately addressed. Public comment has consistently said development should pay its fair share of the costs of infrastructure, workforce housing, and social systems. The PRD tool still adds little predictability for future growth. Managing growth responsibly without a build out number may be an oversight. The valley (town and county) does have a carrying capacity for humans before degrading the abundant wildlife. Please consider my comments.

Sincerely,

Dave Coon

---

Dear Jeff,

Thanks once again for working so diligently on the rewrite of Theme 2.

Following are my comments for Theme 2. Apparently the Jackson Teton Plan website for Theme 2 is still down and I could not find the comment section within the redline version or the new version you sent me.

The original Statement of Ideal clearly identified and ranked the priorities of the community. Use that statement and modify as follows: “Preservation of the community values of wildlife protection, community character and quality of life will be the determining factors to manage” growth by limiting development rights to base rights allowed today.

2.1a Predictability is the goal for development. Predictability is achieved by limiting development rights to base rights allowed today. Town should not be the target for higher density beyond base rights allowed today.

2.2a Clearly state “No new resorts allowed.”

2.3e Eliminate discretionary planning tools. (Elimination of planning tools achieves predictability)

2.6b and 2.6c: Prohibit building on steep slopes and avalanche paths. (probably too late for that!)

Theme 2 does not address the cost of growth to the community. Growth should pay its own way, not the community.

This should be an overriding dictum for managing growth.

Thanks for including these comments on Theme 2.

Patty Ewing

| 2/16/2010 | Tompkins, Kathy  | Comments On Theme Two Rewrite  
I would like to comment on the theme 2 rewrite of the comp plan. Armond Acri said it best in SHJH's in all his comments on the theme redline version. I support his comments on tightening up the policies and defining better things like what kind of light industrial and convenience commercial will be allowed in neighborhoods. I worry about interpretations being wide and varied that could negatively affect neighborhoods in and around Cottonwood Park and interfere with the school zone on High School Road. We can't be all things to all people and still be a viable family neighborhood. With outside pressures coming from the Tribal Trails proposal and the development wishes from across High School Road you should be thinking a few steps ahead to prevent over doing it in West Jackson.  
Please continue to keep listening to what the public has been saying all along. We want accountability and predictability to make this plan work for the community. I would also like to include the below letter I wrote about including a cost of growth statement in the plan. Keep up the good work.  
Accountability and Predictability  
As the joint planning commissions review Theme 2 "Growth Management" of the Teton county, Town of Jackson Comprehensive plan over the next few weeks, the most important ingredient that seems to be missing from the plan to date is the cost of growth to our community. Adding this to the formula will help the plan succeed in making sure future growth won't be subsidized by the taxpayer. This in turn will help prevent unwanted growth and development that can not pay for itself. In my family budget we make sure that if we can't pay for it, well, we can't have it right now. It has helped us avoid getting in over our heads when something new looks too good to resist. We make do with taking good care of what we do have and putting our money where it counts, into our family's future. I think the nation is in the mess it's in right now because a lot of people's questionable needs wound up being wants they couldn't afford. If we treat the community of Jackson Hole as our family and the environment we live in, our home, then I think you'll easily agree that a cost of growth statement is needed in the rewrite of the Comprehensive Plan to create accountability and help predict what will be costly to the community or a great benefit to the community and future generations.  
Thank You, Kathy  
Tompkins  
Cottonwood Park Neighbors |
| 2/15/2010  | Jankowsky, Dorothy  | Hello,  
I would just like to say that I support the Jackson Hole Conservation Alliance’s comments (which are posted on the Alliance’s website at http://www.jhalliance.org/Library/Comments/2010/CompPlan10/Theme2RewriteComments.2-10.pdf) regarding the rewritten Theme Two of the draft Jackson/Teton County Comprehensive Plan.  
Thank you, sincerely,  
Dorothy Jankowsky |
Policy 2.1b Preserve Existing County Neighborhoods Regarding the second sentence, it is important to recognize that impacts of additional development potential in the county are not restricted to impacts on neighborhood character alone. These impacts also extend to wildlife, energy, and transportation-related issues, which should also be described.

Policy 2.1c Allow residential density bonuses in order to conserve open space Regarding the intention to encourage a shift of development relating to density bonuses “adjacent to existing development” versus not promoting a transferable development rights program should be further clarified.

Policy 2.1d Allow additional residential units in exchange for allowed commercial floor area in Town This policy, as it relates to capping residential development at base allowances, needs to be clarified. This policy should be clear about the conditions under which additional residential units are allowed as well as about the intentions of the allowances.

Policy 2.1e Allow development of County residential potential in Town The statement “allow residential units to be built in Town that could otherwise have been built in the County” should be further clarified. This relates to both the definition of a “commensurate decrease” as well as recent discussions regarding future conservation easements and how their associated “removed” development potential could be interpreted in this policy. In many cases, donors desire an extinguishment of rights, not a formal or informal transfer of these rights.

Policy 2.1f Promote infill and development in Town over development in the County The language of the end of the last sentence “in all situations where possible” makes the intent unnecessarily open-ended.

Principle 2.2 Local convenience commercial and light industry are the most appropriate types of future nonresidential development The language in this principle is unclear particularly given its strong assumptions (such as additional local convenience commercial is needed to preserve the small town community character). Interpretations of statements such as these could vary widely, which removes some of the predictability the community wants from the new plan. As for future nonresidential development, it is important to note that future types of development are already heavily targeted to resort-related projects.

Policy 2.2a Maintain nonresidential development potential allowed today; Policy 2.2b Promote light industry In these two policies it should be clarified whether the additional potential is additive commercial.

Policy 2.3e Limit discretion in land use decisions The language “discretionary tools will be limited” is weak and unclear. Given that the overall goal of this new process is to increase predictability, it is critical that this new plan clearly identify the role of regulations and incentives (and not include vague language). Highly unpredictable, discretionary tools should not be used in the future. Strategy 2.1 should be reconciled with this policy.

Strategies and Indicators

It would be ideal to work with designated technical committees or task forces on each of the chapter’s “Indicators” sections to ensure that these are the most beneficial and feasible factors to measure. We appreciate the effort to establish a baseline column, or measurable starting point. We still believe that some of the goals should be reworked in addition to incorporating more baseline data. For example, “consistent with historical trends” is not the best indicator for growth rates by jurisdiction.

At a broad level, below are key areas in which the rewrite improved the earlier draft:

Principle 2.1 The Town of Jackson is the only appropriate location for future residential density increases in the second sentence, the use of the word “overall rural character” would be more appropriate than “neighborhoods” and “density increases in some areas of Town” would be more appropriate than “density increases in Town.”...[also] Policy 2.1b Preserve Existing County Neighborhoods Regarding the second sentence, it is important to recognize that impacts of additional development potential in the county are not restricted to impacts on neighborhood character alone. These impacts also extend to wildlife, energy, and transportation-related issues, which should also be described...[also] Principle 2.3 Conservation and development will occur in a predictable pattern with a predictable character The addition of “with a predictable character” is a fundamental improvement over the April 2009 draft. An expansion of this should include what the public has consistently expressed regarding not only the importance of predictable development locations, but also the importance of a predictable amount.

Policy 2.1a Limit base development rights to those allowed today The specific language of this policy needs to be clarified. “Base residential development potential,” as outlined by the Buildout Task Force will need to be clarified in terms of the assumptions associated with the planned residential development tool. Also, statements such as “density increases” in relation to statements such as “additive growth will not be permitted” need to be clarified.
Comprehensive Plan Final Theme 2 Draft Comments

Theme 2: Manage Growth Responsibly

Statement of Ideal: Limit growth to established development allowances while encouraging preservation of existing neighborhoods and open spaces. Reflective of joint votes and overall community feedback:

- Theme 2 overall is well aligned with the joint planning commission’s votes and community input. Staff should be commended for the tremendous improvement in this draft. This version more accurately reflects community input and also captures the joint votes of the commissions properly.

Areas for improvement:

- Theme 2 still is silent on the issue of the cost of growth.
  - Growth, regardless of location or type (residential or commercial), should pay its full share of direct impacts on workforce housing, infrastructure and social systems.
  - If this is not discussed in this theme – then certainly the joint commissions need to address this in Theme Five – “Provide for a Diverse and Balanced Economy”.

- More precise language – each and every word will count and be debated for years to come in this plan. A few changes to consider that will clarify the specific intent of the language in this theme - yet are still aligned with your previous joint votes.

- Policy 2.1.a: “Limit base development rights to those allowed today” should be changed to read “Limit development rights to base rights allowed today.” This language better captures your votes on this topic.

- Policy 2.2.a: It should clearly state, “No new Resorts will be allowed.” Remember this is a ten year document and I believe you clearly reached this conclusion – that for the next ten years at least - given the very significant entitled but not yet built square footage in existing resort zones – there should not be any more resorts.

- Policy 2.2.b: I am concerned that promoting light industrial in some residential neighborhoods will change the character of these neighborhoods. This needs more clarity and detail. I believe your intent was to legalize some small-scale existing uses but not open the door for out-of-scale new uses.

- Policy 2.2.d: “Encourage local convenience commercial” should change to “allow limited convenience commercial.” The market will decide what succeeds and what fails. Although this is a good idea for transportation goals – not everyone’s plan to sell a four dollar gallon of milk will work. Let the market decide – “encourage” is an imprecise word as it infers free market interference.

- Policy 2.3.e: “Discretionary planning tools will be limited” should change to “strictly limited.” The community and also land owners have been quite clear on this. I think your votes were also clearer then the current language is written.

Housekeeping Item:

- Theme 2 and other chapter format:
  - Drop the “What the community said about this theme” pages – this section is not scientific but rather staff’s interpretation of what we said - this is better served through the appendix with all applicable questions and responses from the various surveys and forums.
  - I believe you may have already resolved this issue at your last meeting.

In closing - thank you for all the hours you continue to spend on this process – it is appreciated!

Rich Bloom
Dear Planning Commissioners and Staff, I find the rewrite of Theme 2 Manage Growth Responsibly is a marked improvement over the draft. The Staff should be commended! What I find is missing from this entire theme is the costs of growth and who pays for the impacts? Consistent public comments have been made about this from the initial meetings on the Comp Plan and most recently through the chapter by chapter review of the Plan. There should be a general statement at the beginning of the Theme that is clear that development will pay its full share of direct impacts on infrastructure, workforce housing, and social systems via exaction fees, connection fees to existing utilities, impact fees, and required rates of mitigation. With the local and national economy down, it is even more important that struggling residents not pay for new development that most often is done by out of town, county or state Corporations. The premise that this type of growth is good for our local economy is misleading. Most of the building materials are shipped in from out of state, as is much of the labor. The profits from development are not reinvested into Jackson Hole. Let’s not stimulate growth without charging the developers with the costs. I am still not happy that the PRD tool is left unchanged. I understand that the amount of density bonus allowed with the PRD will be determined with review of the Land Development Regulations, however, I feel, that some mention of limitations should be stated here. There is little predictability in any of the Rural zoned properties. This tool left unchecked represents the greatest potential in residential growth within the County. There are no guarantees that Conservation easements will be the result of the upzoning. The lack of a PRD workshop that the entire community wanted was unfortunate. The entire concept of how most of the conservation easements have been done was not truly presented. For instance: "The Poodle Ranch" (Hwy 22) shows as a Jackson Hole Land Trust Conservation Easement restricted property on the County GIS, yet, it does not show how many units/homes that can still be developed. Yes, the conservation easement agreement protects against the densities of an Indian Trails type of development. I would hope that when the FLUP maps are prepared that the number of homes to be built on all conservation easements are identified. I think these numbers will surprise many. The box on page 29 "What the community has said about this theme" should be eliminated. Any actual polling results and not someone’s opinion of conclusions should be in an Appendix exhibit. Page 31- Top of the page. The reference to Transferable Development Rights wording could be stated more clearly. Page 32 Policy 2.1.f I think a mention of existing private property rights in the County needs to be inserted here. Page 32 Policy 2.2.a The last sentence to me seems backwards. Isn’t the goal to trying keep nonresidential development from creating residential needs? There is a conflict here. Page 33 Policy 2.2.b A mention of a conditional use process for light industry home uses verses an open ended statement should be made. Page 35 Policy 2.3.c. "Areas identified as appropriate for increased development” Was it not determined that Town would be the only area indicated. Why not say this rather than saying there will be areas on the FLUP maps that may be inconsistent with Comp Plan Policies? Page 35 Policy 2.3.e Why say in the future? This would indicate a flexible undetermined timeframe. Just say: Discretionary tools will be eliminated. Page 40 The Indicators Box #3. amend to indicate: "Acres permanently conserved per PRD” The baseline should be tated as a ratio of acres/approved units. Page 40 The Indicators Box #4. This should indicate # of units above the 1/35 base Page 40 The Indicators Box #9. I do not think that this indicates anything about growth management. It indicates how efficient our planning dept. and approval system is functioning. Why not monitor building permit numbers if you are looking for an indicator of growth? Isn’t this conveder in the numbers in #1? Again, I feel the rewrite of this theme is very close to what was intended. Thank you for considerere my comments. Sincerely, Gail Jensen

Direct staff to amend the strategies and indicators sections to be consistent with the policy changes recommended by the commissions – with inclusion of the basis goals as indicators (Themes 2 &3 approach)
Save Historic Jackson Hole Comments on Theme 2 Rewrite (Redline Version)

General Comments: We are very happy that the document recognizes that flexibility and discretion have caused many problems in the past and should be eliminated. We agree that they caused more hard feelings than community benefit. Predictability does not just benefit the citizens. The landowner also benefits as they do not have to spend a great deal of time and money to develop their property. They will clearly understand what is allowed. We still believe that the box “What the Community Said” belongs in the Appendix with all the data, not snippets. We feel the rewrite is an improvement, but there are some conflicts in the policies that need to be resolved. They are called out specifically below.

What is Missing: A statement on the cost of growth and the need for development to pay for any costs associated with it is needed. The Community should not subsidize the cost of growth. Predictability means there must be an upper limit not just on base zoning but also on performance based tools such as density bonuses for clustering. That limit needs to be defined somewhere. If it is defined in the LDRs, the Plan should give clear direction on how to determine that limit.

Specific Comments:
Policy 2.1.a
“Limit base development rights to those allowed today” should be changed to read “Limit development rights to base rights allowed today.” This is consistent with 2.2.a and more closely reflects public sentiment. The statement that additive growth is not permitted and density increases will be performance based are in conflict. Density increases are additive growth. This should be resolved.

Policy 2.1.c
The policy states that transferable development rights that increase density in existing neighborhoods for conservation easements is not consistent with Community goals, but Policy 2.1.e allows residential development in Town that could have been built in the County. This is a conflict. How can the County development be built in Town without increasing the density in Town? The goal is to be predictable and limit development rights to the base amount allowed today. The Community has been consistent on this point.

Policy 2.1.f
Same comments as Policy 2.1.c

Policy 2.2.a
It should clearly state, “No new Resorts will be allowed.”

Policy 2.2.b
We are concerned that promoting light industrial in some residential neighborhoods may change the character of the neighborhoods. This needs more detail. There is a big difference between allowing a tradesman to store limited materials and tools at his house and allowing a fabrication shop in a residential area.

Policy 2.2.d
“Encourage local convenience commercial “should change to “allow limited convenience commercial.” Encouragement of a bad business plan is a bad idea. The market will decide what succeeds and what fails. Encouragement will not matter.

Policy 2.3.e
“Discretionary planning tools will be limited” should change to “eliminated” or “strictly limited.”

Policy 2.6.b
Prohibit building in avalanche zones. This is consistent with 2.6.c which prohibits building in steep slopes.

Policy 2.6.d
“Poor soils” should be defined. Strategy 2.2

Who will map hazard areas? This should be defined.

Indicator 1 This should compare development and redevelopment that occurs to what is already built and what can still be built.

Indicator 9 A decrease in the length of land use decisions can be accomplished by approving every application with no debate. That would be counter to the desires of the Community. A better metric is to monitor the time for decisions. If it starts to increase it is evidence we are growing too fast and our Planning Departments and Electeds are not able to keep up with the rate of growth. This should trigger a discussion on our rate of growth without requiring a growth rate cap.

Armond Acri
Executive Director
Save Historic Jackson Hole
2/11/2010, Joint Planning Commission

Gregory Griffith, West Bank. You know, a few things that were stated last week, if you get a chance to comment on the percentage afterwards. The 25 percent of zero argument is null and void in my mind because mitigation rate, there is a tether or a nexus or a linkage between the creation of demand and creation of supply. So, to use Commissioner Pruett’s—again, not to pick on anyone, just responding to the sentiment, not the individual—using the three-legged-stool analogy of mitigation, incentives and permanent funding source, if you remove mitigation, which would significantly reduce it to a two-legged stool, just as a house divided cannot stand, a two-legged stool cannot stand in this example. But we really don’t have a two-legged stool. We’ve got a one-legged stool because we don’t have a permanent funding source and we probably won’t get one in the foreseeable future. So, that leaves us with a one-legged stool, which is essentially a crutch and that crutch is incentives. We know that incentives is growth and development to be for density bonuses. So, there we go, last week. We’ve got to avoid being prisoners of the moment here with the economic situation, because we’ve got to plan for the boom and the bust, and hopefully this Plan will outlast the current economic cycle, as some people pointed out last week. We haven’t discussed what we need to discuss, and that’s commercial down zone. We have such an incredible imbalance in commercial latent potential and excessive employee generation that it’s not as we have, you know, indicated here on several of the other themes, it’s not balanced out by residential potential. So, the electives are going to have to address commercial down zones at some stage. If we’re not willing to go there, we need to at least consider a purchase of development rights from commercial entities. If we constantly talk about converting commercial to residential, really what we’re talking about is cash in the form of direct gain to the developer, or in the form of avoiding costs. So, at some point, it would be a win/win to remove that excessive employee generation willingly from the developer and convert that to residential. There’s actually some economic indicators that state that some may be more valuable ??, A concept we have to discuss, and I feel we need to discuss, is reverse regionalism. There’s an incredible imbalance between Teton County Wyoming and Teton County Idaho in that they have about 8200 platted yet vacant units potentially. And they also have a favorable property tax structure—3 percent per annum, capped. This coupled with our imbalance in commercial will create—not might—will create in the future a...almost a plethora of housing in a dearth of jobs on that side, and in our commercial potential will create a plethora of jobs and a relative dearth for housing here. I maintain that the negative impacts of Teton County Idaho in the near to middle future will be greater than our impacts on them that reverse ??, There was a mistake in the paper last week, at least contextual, in that the Housing Needs Assessment stated as one of their number-one actionable items that we increase the mitigation rate from 15 to 25 percent. It actually said on both commercial and residential we should increase mitigation rates to 40 percent. And we pay good money to these so-called experts and consultants not to consider that. Lastly, I’d like to say...and nobody’s going to cover this...there was no love lost between the methods that the Housing Authority has employed in the past from my perspective, especially in ?? Creek. So, to keep it simple, I just want to state that we need to be sophisticated and savvy enough in the future to avoid this misperception and this mythology, quite frankly, that anyone who is a proponent of affordable housing for any reason is an angelic altruist, pure motive, beyond reproach, and of them questions cannot be asked. And conversely anyone who has sense on any level of density placed anywhere with any amount of environmental degradation or degradation of adjoining and adjacent community character or any amount of externalized cost of community is somehow sub-human. We’ve got to get past that. Thanks.

2/11/2010, Joint Planning Commission

Ensure that multifamily (4 or more units in a building) housing is allowed by Plan

2/11/2010, Joint Planning Commission

Promotion of quality workforce housing should be added as a policy of the Plan

2/11/2010, Joint Planning Commission

The Plan should include shared appreciation mortgages as a strategy for retention of existing workforce housing stock?

2/11/2010, Joint Planning Commission

Place the Housing Authority under joint jurisdiction of the Town of Jackson and Teton County
2/11/2010, Joint Planning Commission

Limit the scope of the TCHA from any land banking

2/11/2010, Joint Planning Commission

The concept of affordable housing easements for the construction of additional deed restricted housing on an existing developed property should be included in the plan as a retention of existing workforce stock strategy

2/11/2010, Joint Planning Commission

Encourage deed restricted rental units

2/11/2010, Stone, Cindy Hill Interested Public

Planning commissioners,
After reviewing the redlined version of “Manage Growth Responsibly (Theme 2)” I would like to say that it is indeed easier to read and provides a better understanding of the work you have been pouring yourselves into.
On page 29 there is still the ghastly box that reads “What the Community has said about this theme”. In planning meetings past, it was agreed upon that this box is indeed a façade that only suffices the egos of the paid planning staff. It is upsetting that the planning staff is still able to control the body of this important document with misrepresentations.
On page 35, Policy 2.3e; Limit discretion in land use decisions; it states that discretionary planning tools will be limited. Regulations and incentives will be performance based.
Limited to what? What are you basing performance on?
Draw the line here team. Don’t talk out of the side of your mouth.
Cindy Hill Stone

2/11/2010, Frederick, Morgan Interested Public

Hi Paul-
I got your email address from my dad, Bud, and hope that you don’t mind me sending a town business letter to your personal account. Reading the paper today, I got the impression that frankly, the debate over mitigation rates has not been very well informed. In particular, the comment that mitigation rates increase rents is highly questionable, and although possible, it is dependent on a number of other factors. Maybe the reporter just declined to include the reasoning of some commissioners, but I wanted to write any way.
Last year, I devoted a chapter of my thesis paper at the Univ. of Montana to mitigation rate policies (known also as inclusionary zoning) in JH and thought that I would send it to you to see if it might be able to serve any purpose in this more focused discussion with the planning and zoning commission. It is largely theoretical in nature and written by guy who is probably a lot better carpenter and bartender than economist, but it is at least grounded in solid research and was reviewed and revised in conjunction with two professors - both PhD economists. As such, I wanted to send it directly to someone to whom I have a mutual contact rather than to the commission as a whole, since as I've said, it's value is of course, limited. Nonetheless, it is the only economic analysis of any kind that has been done on this issue in Jackson, and contains some figures I compiled about units built under this program, building permits, rent prices, etc.. I have included the chapter and attached at the end a little summary from the conclusion chapter.
Thanks.
Morgan Frederick
Dear Planning Commissioners, First of all I wanted to say thank you to each one of you for all of your time and effort put into our new Comp Plan. After reading what has been written and recommended by your Joint boards, I felt I needed to make the following comments: I do not believe in the percentage of 65% as the goal and the background of why this number. I did not see any real studies associated with the 65% White Paper that justify this number. The definition of workforce is loose and not really clear or meaningful. This is too broad and encourages the TCHA to delve into too many areas outside of the most needed housing. I do not support any dedicated funding source of any kind while the TCHA is in complete control of how and if funds are allocated. Their behavior history shows an unwillingness to comply with our LDR’s and decisions made by our Board of County Commissioners. The way the Authority is structured via the State Statute does not make me, as a taxpayer; feel comfortable with how funds are spent and how decisions are made to benefit the Jackson Hole community. I agree with and support all of Tony Walls comments regarding the exception of the 65% number. Michael Pruett’s motion for a vote #2 comment. I support his restructuring of the TCHA. I would add a provision that says: The Housing Department is required to comply with and support all Teton County/Town of Jackson Land Development Regulations. I do not agree with any of the Staff’s Summary 1-4. I especially am disturbed by the attempt to choose whom my neighbors might be based on who their parents are, their income, their age. The full time verses seasonal residences comment is inappropriate for this Theme. Workers generated to construct, maintain or staff new developments are primarily out of state workers, hired by out of state developers who purchase their materials from out of state and take their profits out of state. This does not support our local community. I do not want to support housing for this type of worker. Our Housing Authority should support local developers that hire local workers and invest in our community. I support attached, multi-family and rental housing types. Land is too expensive and the lower categories 1-3 are the ones most in need. Quality workforce housing is of utmost importance. This housing has to last more than a few years. Each new housing unit should meet the basic level of inspection as dictated by our Building Codes for our Area. Remove all what the community said. All polling or studies should be placed in the Appendix so the reader may reach their own conclusion. Thank you for considering my comments.

Armond Acri, representing Save Historic Jackson Hole. I’d like to thank, or wish Alex a happy birthday, I didn’t recognize that. I just wanted to recognize one of the issues you guys did cover last week with the Four Seasons and elaborate a little bit on that. I feel bad we keep them as a bad example, but I think it’s really important to recognize the issue there, and I think you guys you’re striking at the root cause there. The reason that everyone is so upset is the impact was calculated on our sliding scale, or a scale that tries to calculate impacts. When we get these high-end businesses like that, what happens is we under mitigate for them and over mitigate for lower, smaller mom-and-pop businesses. So, I think the sliding... We think the sliding scale is a good approach to try and attack that in battles that happen right now, that it makes more sense to... it’s a little more work, but it makes more sense and probably is fairer in the long run to try and address the individual impacts rather than do a broad-brush thing, especially as we go into this trend to go towards more high-end housing. What’s going to happen is we are concerned that we will under vacate because we’re taking the midpoint and if everybody’s going to be above that, then we are going to under mitigate for that. Also, one cautionary statement, just remember that your vision should be independent of the current economic conditions. I mean, we certainly need to acknowledge this. I think no one can deny that we’re in trying times right now, but I think we do need to remember that our vision, like the 30,000-foot-level view, should not be set by current economic conditions. We should determine what is our vision of what we want to do, and then if we set good policy, then it will adapt to those changing economic conditions. Otherwise, at some point, we’re going to have to go back and change things. So, and then I just want to echo Gail’s comment on the what-was-said boxes. Thank you.

Affirm Policy 4.1.d from the April 2009 Draft

<td>I was disappointed and very concerned when reading (JH Daily, Monday, 02/08/10) that some of you believe it is in our best interests to lower or put a moratorium on housing exactions.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>As reported, Commissioner Pruett stated, “If the goal is to promote local businesses, increasing those mitigation rates will increase rents and drive out local business,” he said. “I’m in favor of decreasing [rates]. I do believe ultimately that helps your local businesses.”</td>
</tr>
<tr>
<td></td>
<td></td>
<td>He may be correct but I strongly challenge the worth of the entire premise.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>First, Mr. Pruett’s indication that &quot;...if the goal is to promote local businesses...&quot; is disasterously single-minded. The goal of any government is to secure equal opportunity for all its citizens. I suggest that focusing so narrowly on promoting business 1) is an abrogation of the totality of his responsibilities, and 2) has led to placing the community at large in great financial jeopardy.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Second, Mr. Pruett fails to recognize that promoting business without a guarantee that adequate employee housing will be built concurrent with the project is what got us into this situation. Alternatives to exactions may appear useful in print but are always very slow to implement and seem particularly susceptible to variances.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Commissioner Di Costa’s concern that any exaction rate may be too high for developers, for perhaps as much as the next 10 years, again focuses only on business and completely misses the point: perhaps we don’t need more commercial development now. What we need is housing. The fact that we are almost totally dependent on development to provide new employee housing is the problem; we have no mechanism to meet existing housing needs other than through development exactions. That means we need new development, which only increases the need for housing (and services). A most vicious cycle. It seems obvious that if we increase commercial development without the attendant housing we are only exacerbating the problem, which doesn’t seem very smart to me. The first step in any solution is to find out what caused the problem. If, as I suspect, the problem of adequate employee housing was caused by inadequate exactions (and enforcement), then let’s fix that problem; and certainly, don’t make it worse.</td>
</tr>
<tr>

<td>Bruner, Kristy Bruner, Jackson Hole Conservation Alliance. I’ll be asking you primarily to refer to our written comments, but I just wanted to mention a couple of things based on the last Staff’s questions that you’ll be discussing this evening, particularly with regard to mitigation. We think it’s critical to step back and recognize the lessons we can learn from other communities and what’s been most effective there. You know, while human nature can make it difficult, we really feel like, you know, as you go through these questions, that it’s essential to look at them with the long term in mind, not just the economic conditions that we’re facing today. You know, it’s really critical to not lose sight that this is supposed to be a long-term strategic document. We recognize that it would be difficult to say, yes, we should increase mitigation today, but we also believe that as a general policy, new development should abide by the maximum level of affordable housing mitigation possible. That is the mitigation requirements should be at the levels supported by the required studies, and that could be the policy statement that can be in the Plan. I want to say this just isn’t the idea, you know, the Conservation Alliance mitigation has been proven a very effective tool in other communities. The 2007 Needs Assessment very clearly states that mitigation is the most effective affordable housing tool in Teton County, and approving the mitigation programs is the single most productive action to address the housing needs of the future. And also, in addition to that, the public has made it very clear that they support this. It’s a very large majority...I don’t have the statistic in front of me, but I believe it’s 78 percent agree that all new development should be required to increase or build a higher amount of deed-restricted housing. You know, at the most basic level, we encourage you, as Commissioners, to support the public as the public has supported that action. You know, with that in mind, we were disappointed with last week’s votes that failed in the Town regarding the mitigation rates should be set at levels that will assure success in achieving goals. You know, a second issue, I haven’t seen any votes yet that specifically call for narrower definitions of workforce housing, which was recommended by the County Planning Commission in June of ’09. We’re concerned that this is a central issue of this chapter and would like to see some votes direct additional clarification for the chapter. And along those lines also after looking at the Staff’s questions, I’m just curious if Commissioners are going to plan on voting on the 65 percent goal at the broad policy level. It’s in the statement of ideal, but we noticed that that question isn’t explicitly in this week’s list of questions. Other than that, I’ll close there, but I do agree with the concerns mentioned by Armond before me regarding the conservation easements. Thanks.</td>

Dear Planning Commissioners,

On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to Theme Five - “Provide for a Diverse and Balanced Economy.”

Attached are line-by-line comments and suggestions for discussion related to Theme Five. Listed below are key points that we hope are clarified in discussion and/or incorporated into a new draft of this chapter.

First, we believe that this chapter must incorporate more language on the importance of wildlife and scenic resource protection to the community’s long-term economic well being. More explicit language should be included that speaks to our unique economy and character as a gateway community. Because our location in the Greater Yellowstone Ecosystem, and the wildlife it sustains, draws millions of people to visit the valley, our economy is intricately tied to the protection of these irreplaceable resources.

Second, we believe that it is absolutely critical that this chapter distinguish between the terms growth and development. To ensure that everyone is on the same page in discussing growth and/or development and how it contributes to a long-term economy, further clarification on these terms is essential. Please see the attached report “Grappling with Growth” by Michael Kinsley of the Rocky Mountain Institute for explanation and specific details.

Third, it would be helpful to clarify the intent of removing a number of topics (that are in the 1994 Plan) that relate to community character and the local economy, such as signage or the appropriate size of structures. At the conclusion of our line-by-line comments, we highlighted a number of topics that are addressed in our current 1994 Plan, but that are no longer addressed in the new draft. Without guidance that certain topics should be addressed in the land development regulations, it’s unclear whether they will be.

Thank you for your consideration of these comments.

Sincerely,

Kristy Bruner
Becky Tillson
Community Planning Director
Community Planning Associate

Armond Acri, representing Save Historic Jackson Hole. I’ll be real quick. I want to comment on a...or a comment that was made last week but wasn’t actually voted on, which was the concept to transfer the density from conservation easements into Town. And you didn’t vote on that, but I want to at least comment on that. I think that’s something that you want to give careful consideration to. If we think about how our Grand Teton Park evolved, the concept there was to permanently retire all that density. And I think if you want to imagine what this community would look like if we had transferred all that data, or all that density, down into the rest of the County and in Town, I would propose, or submit to you that it would be quite a different place to live in. So, I think you want to think real hard before you do that. I’m not against...we’re not against the concept I think of transferrable development rights where the owner agrees to transfer them, but where the goal of the owner is perhaps to maintain the community as they see it and the desire is to extinguish those rights, I think you should respect that. The one point...I apologize to those of you who have already heard that, but I know there are some new members, we’d like to make the point again, which has been made, which is that density bonuses are not free. There is a cost to the community. It’s not an economic cost; it’s a cost in terms of traffic, change of character, and a change in the demand for services. So, thank you.

New small developments in Town should be exempt from mitigation requirements

<td>2/4/2010</td>
<td>Kaminski, Jim Interested Public</td>
<td>My name is Jim Kaminski. I've lived and worked here for about 35 years. And I just have a...I'm not an expert on the Housing Authority, but I want to comment about what I...sort of to me is a disconnect between an effort to try and make housing available to people who can't afford the median home price of around $2 million and up, and increasing amounts and ?? on public lands in the interest and in the expression of a meaning for more housing or a meaning to moderate-income people. And I'm speaking primarily about Park Service and Forest Service employees ???. Now, there's an issue that will probably take some time to unravel up on Nelson Drive and much of that interest has a lot to do with increasing the amount of available housing for people who work up in ?. Now, I don't argue that those people are poor. What I do assert is that there are very few people who, on an income of around fifty to seventy thousand dollars a year, can finance a home in the Valley on the order of 1.5 to 2 million dollars. Now, I've got a number of colleagues who work not just work for the Park Service, because it's not just Nelson Drive &lt;&lt;inaudible&gt;&gt; to try and use public land for more housing. But that very issue is present in the Park as well. So, on one hand, people argue consistently about the value of public land. It's a value of wildlife, recreation and a number of other issues and ??. On the hand, we seem all too willing to gobble it up, and it strikes me as something that's difficult to reconcile. And so with that comment, I talked to the mayor's office and to the city ?? about a better connection between the housing authorities and the need for moderately priced, or available public housing, or housing, if you will, that's moderately priced and could be accessed by people who lived in the community and worked for government. Now, there are a number of examples where people simply make too much money to make the affordable housing available to them, and I'm not talking about extraordinary amounts of money. I'm talking about seventy to ninety thousand dollars a year. Now, so, there was a broader issue that the context of that I want to underscore is that there are serious tradeoffs, or so it seems to me, for continuing to nickel and dime &lt;&lt;inaudible&gt;&gt; of making housing available to people who are seeking moderately priced homes in the Valley, and a continuing effort, or a lack of communication, so it seems to me, between the housing authorities and an effort to try and meet the needs of people who work here, not just to make a living, but to try and serve the public resources and public needs. Thank you.</td>
</tr>
<tr>
<td>2/4/2010</td>
<td>Griffith, Gregory Interested Public</td>
<td>Gregory Griffith, West Bank. Looking at inherent inefficiencies in processes, sometimes having presentations prior...after public comments &lt;&lt;inaudible&gt;&gt;, the question was asked of the Housing Authority Director last week about the proportion of distribution of Class 1, 2 and 3 houses. It was responded to correctly according to statute and LDR; however, the real world...and that's thirty-three and a third each...however, the real-world answer to that is during the ?? Creek hearing, the Housing Authority rolled over for that developer in favor of 50 percent Class 3, away from the demand, by the way. So, the reason I bring this up, it's not a gotcha moment for the Housing Authority, it's to illustrate that no matter how hard we worked on the Comprehensive Plan and transitioning that part into the light of the LDRs, we don't have the will to prevent selective enforcement and selective interpretation of some of our existing statutes that the whole exercise will be partial to or not. There was a lot of language in theme four about deed restricted or not, including in the workforce housing definition. To my way of thinking, if it's not deed restricted in perpetuity, or appreciation capped in perpetuity, that at some stage that unit becomes part of the problem, not part of the solution. The community will have to regenerate and re-subsidize that unit, a net loss, which brings me to the next topic. No net loss, there was a lot of discussion in theme three especially about redevelopment, etc., ???. There wasn't much discussion on how that affects no net loss, especially in Town, because as we do redevelop, obviously we will lose some of the lower-priced ownership and rental units. Funding source, no disrespect to Mr. Pruett, but my interpretation of the funding source was diametrically opposed to his. My idea is no better than his. I just figured I'd bring that up. Purchase of existing stock and to augment, not replace, mitigation was what I've been referring to since the first of this meeting actually. Also not to disrespect, by being cryptic, Commissioner Mr. Pruett and Commissioner Mr. Stewart, to my way of thinking, any suggestion that those who disproportionately create the demand for affordable and employee housing not be simultaneously and proportionately responsible to create the supply flies in the face of everything that the community has told us about development paying its own way and about instituting some hard-core codified concurrency requirements to prevent development from getting ahead of infrastructure. So, again, my idea is no better than yours. That's just my interpretation. Also, we've had a lot of effort in this and a lot of successes, but I'll give you one extreme example. The Four Seasons generated 450 employees. If at the time they were only required to mitigate 15 percent, or 25 percent with the current Regulations, that still leaves us housing the remaining 75 percent, or added into our commuter rate. If the suggestion comes up in the future that we somehow pay for this employee generation, you're essentially asking us as a community to subsidize the vacations and the recreation and the amenity migration of some more affluent people in the world. So, that's...if you're going to run for office sometime, try to run on that platform. Thank you.</td>

<td>Cresswell, Anne JH Community Housing</td>
<td>Anne Cresswell, speaking on behalf of the Jackson Hole Community Housing Trust. I don’t have much to say. I want to thank you for all the hard work and thought that you’ve given to this issue over the last four or five meetings. We have already submitted comments so I don’t want to add to that, but there’s been a lot of conversation over the past couple of meetings about what I would coin a seductive notion that we can buy up restricted housing, use taxpayer money to buy up restricted housing and then permanently deed restrict that. And I think there is some merit to that, but as you continue to consider this, I would urge you to very carefully consider the long-term financial liabilities that could accrue to the County and to the Town in the event of failure. All the due diligence in the world sometimes cannot uncover issues that are hidden in between walls. There are non-spectrums that can find very expensive problems and failures ?? that when you’re selling these homes to people that are earning less than 120 percent of median income, they can become upside down very quickly, and then the Town and the County can find themselves in a position of a bailout. And the Housing Trust has some experience with this, so that’s why I share this with you. We’ve acquired four to six different homes over the course of the last 20 years, bought down free-market opportunities as they’ve become available. And I would characterize half as having being very successful and half as having been pretty significant nightmares that we could not have anticipated. And we felt that it was our obligation to help out those homeowners and we did that, but we spent a lot of money trying to fix those problems. So, I think there’s a lot of merit to it and it certainly could have potential, but I don’t think it’s a silver bullet and we have to tread lightly when we go there. Thank you again for all the time you’ve put into this issue.</td>

</table>
Dear Planners,

It was surreal to read in our local papers this week that both our Planning Commissions were proposing expensive measures to support affordable housing at the same time that property tax revenues are expected to plunge and the Town Council and County Commissioners plan to present voters with a sales tax increase. One wonders if all these officials really live in the same county. Surely they are not looking at the same economy.

Affordable housing may be a laudable goal and maintaining the share of locally housed workers might benefit the community. But it does not come cheaply. Direct subsidies cost real dollars, and indirect subsidies (aka density bonuses) cost more when costs of congestion and additional infrastructure needs are counted. These costs are not at all hard to enumerate. (X workers times Y dollars per home.) And this is without counting the costs to the environment pushed off onto a community whose most valuable asset is its natural capital. While there might be more demand for ownership of more expensive homes, there is no doubt greater need for those in categories 1-3, especially for rentals, a sustainable option which should be considered. Developers (profit and nonprofit) might find it financially rewarding to provide more expensive homes and lobby for these. It is important to keep the policy goal in mind, being careful not to subsidize development in the name of affordable housing, but actually solve the problem and give priority to those most in need.

At a time when Town and County are struggling to meet their current obligations (as are many of their citizens) the planning process cannot ignore the costs of the promises it is making. Yes, the Plan is a long-term document, but it would be foolhardy to presume our current economic difficulties will end soon. Besides, hoping for another housing boom to solve our affordable housing challenges does not sound like a winning solution.

An effective comprehensive plan must align our goals and aspirations with our resources and competing needs. Over-promising and under-delivering is not a recipe for successful public policy.

Kristine and Paul O’Brien

<td>Becky Tillson, Jackson Hole Conservation Alliance</td>
<td>Becky Tillson, Jackson Hole Conservation Alliance. Thanks for the opportunity to comment tonight and for all the time and energy that you’ve put into this review process. In your Staff Report for next week, ?? comments on theme four, but we'd like to briefly raise a few key points tonight as well. Many of these are related to the County Planning Commission’s recommendations from last summer and echo some of the concerns raised by the housing agencies. First, this theme needs to more narrowly define and distinguish between workforce housing and affordable housing. We appreciate the intent of this theme to expand housing discussions to workforce housing as we set our community goals, but we believe that the current chapter’s language doesn’t provide enough policy guidance in the importance of clearly defining affordability measures. There needs to be stronger language that housing to be targeted to categories in proportion to local incomes and the community needs. The increase in higher category homes should come in addition to the development of lower category homes, not as a replacement for them. As we have raised in other chapters, we’re concerned about the amount of information on a diversity of topics, such as substandard housing, that were removed from this draft Plan but exist in our current Plan. Also, try to add new topics, such as the need for higher category homes, some who are ?? and should not be removed, but rather updated in this new draft. Second, this theme should securely indicate that workforce and affordable housing units are included in the overall development potential. Exceeding this number is not appropriate for our community. The goals of this theme, particularly quantitative goals, such as the 65 percent number, and eventually the mitigation rates, need to be based on ?? sizing houses and should be reasonable as a goal. Also, language in this theme should be strong enough to require that new development will not ??, and in the case of redevelopment, a no-net-loss policy should be explored. Third, as we’ve stated before, preservation of existing housing, the existing stock of workforce housing should be clearly prioritized over new construction. More and more detailed policies regarding production and preservation of rental housing, including opportunities for conversion of commercial square footage to rentals should be included. Essentially, there are two major pieces to the affordable housing puzzle—the supply and demand for the housing. Many of your earlier votes indicated a commitment to address the issue of &lt;&lt;inaudible&gt;&gt;. We hope that this will continue in future votes. We also hope that this group will continue to acknowledge that the lens through which we are building this Plan is and should continue to be the protection of wildlife, open spaces and natural resources and community character. Lastly, on a ?? question about theme two, we’re hoping to clarify when the hearing on theme two will be able to take place. It’s important to give the public adequate notice—a couple of weeks really—for both the hearing date and any deadline for written comment, especially since it wasn’t in this week’s Staff Report. I don’t know if people even knew that it was released. Thank you for your time.</td>

<td>Griffith, Gregory Interested Public</td>
<td>Gregory Griffith, West Bank. I'll hit on a few topics here, primarily related to the mission statement itself. We quite often use a lot of slogans in this County—Town as heart, workforce housing, community first, resort second, but we don’t always follow through with them. Community first, resort second, there’s been a tendency in the past to approve developments—??, Shooting Star, Jackson Hole Golf &amp; Tennis, I could keep going—that we always see the golf courses and the golf-course-view lots, i.e., the resort first, and we’re still waiting on the affordable and employee housing, i.e., ??, So, we need to do something to reverse this dynamic in the future as we go through this process. I have a direct challenge, and I have for quite some time, to the 65 percent rate itself and its statistical validity. It’s not based on peer review research or reproducible results. As I’ve stated in the past, it’s extracted from a singular comment in the Housing Needs Assessment that pretty much states that observation in the peer mountain resort areas seem to suggest that volunteers and rates go down and employee absenteeism rate go up some undefined percentage if you get much below that 60 percent number. We absolutely need an affordable housing program. I would just like to see more data-based approaches in the future. Also, there’s a problem in my mind with using the 65 percent, that number, which is almost wholly statistically correlated to the commuter rate as the sole arbiter of the success or failure of our entire affordable housing program. If you think about it, we’re basing everything on non-reproducible results that are statistically tied only to the commuter rate. There’s at least four major reasons for the commuter rate that have nothing to do with ?? or any of the other factors that often touted. Reason number one is the over approval of large golf, lodging, and resort entities within this community the last decade and a half that had an excessive employee generation, under mitigated. And that in itself necessitates a commuter rate. Technological advances, allowing remote work stationing, the discretionary income, market forces beyond our control, and lifestyle and quantity of life choices by our fellow citizens that choose not to be ball and chained to a deed restriction and maybe want a little space, in the great western tradition or great western mythology, whichever you choose of self-sufficiency, etc. Funding source is mentioned. Absolutely we should have a funding source for affordable housing, a dedicated revolving revenue stream. I think it should be tied to open space, as I’ve said in the past, but I personally as a citizen would rather have a direct known quantifiable subsidy than a series of unknown subsidies with the affordable housing program. I didn’t have time to review this chart, but just glancing at it, 45 percent of our stock, if I’m reading this correctly, is above the median income, above 100 percent of the median income. We have a tendency to pad our numbers by overproducing Class IV units in the very recent past, and we have seven units available unless we see 200 or 250 people show up, so we should correlate supply with demand a little more closely. Finally, on the 65 percent, two things: What will we do when the Planning Directors come in for the first time at an annual review meeting and say, last year we were at 64.97? We really need to discuss that. What are the ramifications of dipping below that number? The last thing was other communities have abandoned the numeric objective of workforce retention in favor of a targeted retention of essential services personnel. They’ve actually defined those persons and defined what is the threshold of retention they want in the community. So, that’s an example of communities that have tried a numeric objective in favor or adopted another one. The last thing I’ll say is that the...according to Mrs. Walker last week, I think the lottery system increase of one per application for emergency services workers is insufficient. We really need to address that, because you don’t want to place a greater value on one person or another, but you can over or under value specific skill sets for individuals, and emergency services are the most important there. Thanks.</td>
</tr>

</table>
On behalf of the Jackson Hole Conservation Alliance, thank you for the opportunity to comment on the April 2009 draft of the Jackson/Teton County Comprehensive Plan. Following are comments specific to Theme Four - “Meet Our Community’s Housing Needs.”

As we stated at the January 14 hearing, throughout its decades of work in the valley, the Conservation Alliance has addressed affordable housing policies within a larger context of responsible land use planning. We see affordable housing issues as a critical component of long-term strategic land-use. While we believe some of the recent approaches to secure affordable housing have been flawed, such as the unpredictable PUD-affordable housing, we support the broad intent to secure housing for our local workforce, close to the workplace.

With this in mind, attached are detailed comments associated with specific policies and language currently outlined in Theme Four. Thank you for your consideration of these comments.

Sincerely,
Kristy Bruner
Becky Tillson
Community Planning Director Community Planning Associate
Dear Planning Commissioners,

On behalf of the Jackson Hole Conservation Alliance, given your discussions at the Jan. 14 hearing, I would like to clarify our concerns regarding the “What the Community Has Said About this Theme” sections in each chapter. While we appreciate the intent to provide narrative summaries within the various chapters, we have consistently raised concerns regarding the degree to which the summaries are comprehensive and objective representations of public comment. We have requested that either the sections include a comprehensive list of findings (with actual results), or that the sections are eliminated and the plan simply include the polling findings as an appendix where a comprehensive data set can speak for itself. In short, caution should be taken in citing just several polling examples in these sections given the diversity of other community input that is highly relevant to a given chapter, but that is not reflected in the abbreviated lists.

To provide specific examples, below are some excerpts of the points we raised in earlier public comment as they relate to different themes.

Theme Four – “Meet Our Community’s Housing Needs”

The draft states the following: “2008 polling indicated that: a majority of the community agrees that the town and county should continue to use incentives, rather than requirements, to encourage more deed restricted workforce housing in new development.” However, based on analysis of three public surveys, two of the surveys actually demonstrated the opposite result – with more people disagreeing than agreeing with the statement. Only the University of Wyoming survey shows 50.3% in agreement with the statement, with a full 40.1% opposed, which does not represent a notable majority.

Theme Three – “Uphold Jackson as ‘Heart of the Region’”

The draft states the following: “Most of the community supports limiting building heights to three stories along major corridors outside of Town Square.” However, other polling indicates that this is not necessarily representative of the breadth of results across surveys questions. For example, the University of Wyoming “Key Findings” report states: “There was nearly equal agreement among residents that, “Current building heights in town today should be maintained. No change,” (40%), and, “Careful redevelopment outside of the town square should be allowed, with up to 3-storey buildings,” (37%).

Also, in discussions on theme three, the Conservation Alliance provided the following examples of polling results from The University of Wyoming, Teton County Community Survey (2008) that could be added to allow for a broader picture of community input:

- “A far higher percentage (78%) of residents considers it a higher priority to build more deed restricted affordable housing than to allow additional commercial or resort development.”
- “Both overall development in rural parts of Teton County and redevelopment in the Town of Jackson should be limited.” (61%)

Theme Two – “Manage Growth Responsibly”

The Conservation Alliance raised questions as to why this section “what the community has said about this theme” included no polling coverage on questions regarding the preferred overall amount of development. The public has expressed strong support for limiting or reducing development potential. (See attached memo for examples.) If this section remains, it should address community input on this important aspect of growth management.

Also, the narratives should not include incorrect statements, such as “the community strongly supported the value that growth in the community must be managed responsibly, and that a “no growth” strategy was not the preferred alternative.” See attached memo for clarification.

Theme One – “Promote Stewardship of Wildlife and Natural Resources”

In discussions on theme one, the Conservation Alliance primarily expressed concerns about the subjectivity of the narrative portion and the degree to which polling topics were not sufficiently addressed in the new draft overall (such as the lack of a strategy to establish a funding source for conservation easements).

In conclusion, thank you for your consideration in evaluating the “What the Community Has Said About this
Theme” section of the chapters. These sections should either be rewritten to more accurately reflect all the survey results, or eliminated and all the polling results included in the appendix. If the plan’s policies are written clearly enough, then they will capture and represent the community input, without having to have an additional section describing this input.

Thank you again for all your work.

Good evening, Stefan Fillmore. I live here in Town. I want to say first off that as a general concept, I support the concept of affordable housing; however, I think that the policy over the years has become somewhat skewed. And I think also...unfortunately, I haven’t had a chance to read the Housing Authority’s 65 percent report, but I think especially in this economy, and I think probably Alex made some comments in his Staff Report, that now is the time with prices so depressed to look around for some flexible alternatives. I also note that whether or not the 65 percent goal is adopted by these boards, we’re currently at 68 percent, so maybe we don’t need to do that much tweaking of our current policy and we need to focus on some market-based alternatives. Habitat for Humanity, there’s a group involved in the Point, which is affordable rentals. And that’s without any government subsidies or any taxation or any exaction fees on development here in Town. And I’d encourage the boards to look at those sorts of things as opposed to continuing to add exactions on existing or potential or future developments. There’s only so much that those entities can take, or those developments can take, before you make them unfeasible. Also, I think that in my brief experience in looking at a few and knowing a few people in affordable housing, I think there’s a fair amount of abuse out there. And I’d like to see or like to know—perhaps I need to get with the people in those entities—what’s being done to curb those abuses at the root, because that to me is unacceptable. If we’re going through a process to provide housing to needy people, to people who we deem should have some assistance, and at the same time that process is being abused, so I’d like to see some of that. Flexibility is the key. And especially with prices as depressed as they are, I’d like to see us look at some alternatives and perhaps if there’s money available, buy it up now. Lastly, I appreciate your time and all the effort you’ve put in over the course of this long process. Affordable rentals I think is a real thing we need to focus on as opposed to affordable housing permanently. If we’re saying we need some more workforce housing, we need to find housing for people because they’re providing a valuable service to the community, or because they provide valuable volunteer time, I think that should be more linked to a rental as opposed to a long-term housing. There’s some comments as to what happens when people retire, the stock gets taken up. Should we be providing affordable housing to retirees when really the goal...I think one of the goals is to provide for people that add some particular value to the community. I think that affordable rentals might be a better way to meet some of those as opposed to long-term. And I’m sorry, I did say last, but I have one more—shared appreciation mortgages. I believe, and I may be wrong, I believe Mr. Daugherty benefited from that when he was hired by the County, and I think that alternatives like that are really the way to go. The County has put in, I think, or my understanding of a shared appreciation mortgage, the County puts in a percentage of the purchase price and on the sale, gets a percentage of the sales price back. So, as long as the market goes up, the County is actually going to make some money investing in real estate, while at the same time allowing someone who may not have been able to come to Teton County to provide a service for us is allowing them to do so without, let’s say, capital outlay. So, that’s the way it...we’re not giving away those dollars; we’re actually investing them with the people that we feel need to be here. So, I thank you for your time.
Hello, Gale Jensen, Teton County. I have a few comments. I’ve read, in anticipation of making comments, the white paper that Teton County Housing Authority is going to present. I have one comment with regards to that and that is I think a definition of worker, like number of hours worked. There’s no mention of that and so everybody’s a worker in Teton County. And I think that there should be some sort of definition somewhere about what constitutes a worker, at least for consideration for the affordable housing and deed-restricted housing, whatever, some sort of definition needs to be established, number of hours. Also, my other comments relate to the Staff Report, and pretty much I mimic exactly what Tony Wall has stated in his comments, and since he’s not here, I’ll just highlight what he has said. They’re very simple and very to the point. Add language to establish special zoning districts for high-density, deed-restricted rental housing. And I would add a comment to that and also add them to the FLUP maps when those are produced. His second comment was strong language requiring that mitigation rates for both residential and commercial development be set at levels that will ensure the success of theme-four statement of idea of housing 65 percent of the workforce. And I would change what he has said to the percentage that is determined in the LDRs, or the Comprehensive Plan, because I don’t think you’ve established a number at this point, the 65 percent. The next thing would be to his third comment, page 49, principle 4.4, incentivize the creation of workforce housing should be removed entirely. I agree with that. We’ve already determined that we don’t want additive density and that that PUD-AH does not meet our desire for predictability. And then also his number four on density and floor-area bonuses and other incentives are what the public doesn’t want to see put in place. Onsite mitigation commercial and residential for employee generation is the only solution going forward that will eliminate subjectivity in the planning process and provide predictability. I had one more comment and that has to do with number eight, and I think this is in what the Staff I think is asking for questions that they would like you all to discuss. Yes, Staff followup and discussion points, in their number eight, I would add as other, pursue government, state and federal grants to build rent-restricted housing. Thank you very much.

Thank you. Armond Acri, representing Save Historic Jackson Hole. A quick comment. I heard repeatedly over the last four weeks the conversation I think that came out of the numbers, the discussion on nonresidential to residential conversion and the need to incentivize that. And I’d like to caution you about that. I’d really consider you being careful as you go forward with that. I’d liken that to try to start a fire with gasoline, and certainly, you know, if you’ve ever tried to start a fire when it’s cold and wet, you do need some accelerant, but too much and you lose your eyebrows and, in my case, you might lose your beard. So, that is I think something that needs to be considered in this is that incentives should be applied very carefully in that; otherwise, we’re going to end up with a phrase I used a lot during the STAG group, which is mischief. So, I think that’s something that you need to consider. To consider actually maybe not whether just let the marketplace handle that, whether you just allow the conversion to happen, because I think if you look at what’s going on right now anyway, there’s not that much drive for people to build commercial right now, nonresidential. So, if someone wants to build something, that would be perhaps something that would just come out of the market without having to incentivize. So, don’t give them something that they were already going to do in the first place, or consider not giving too much and slowly feed it in rather than throw a big slug on the fire. Lastly, one other comment on all the incentives, I think that incentives do have a value, certainly in the case of affordable housing, especially when you consider key occupations. I think if we did a secret poll of you guys, and even if we included the rest of the public, as to what we thought were key occupations that we need to support and make sure those people stay here, we’d probably come up with the same five. So, I think that’s something to consider that that is a place for incentives are to incentivize people to take those occupations. And then one last thought I’d like to leave you with, and I haven’t read the report on the 65 percent, that one of the things I think the goal of, really the goal of affordable housing should be to help people help themselves, not to give them a gift. That’s a big distinction because, coming back to the old proverb, anything easily obtained is not highly valued. So, I think that should be the goal is to help people but not to necessarily give them something. Thank you.
Kristy Bruner, Jackson Hole Conservation Alliance. On behalf of the Alliance, thanks for all your work on this. While there are a number of line-by-line adjustments we believe are critical in making this theme tonight, our comments are just going to focus on the broad level that you’re reviewing. And also I wanted to go ahead and warn and thank you in advance for some of your patience tonight since our comments are a little bit lengthier than usual. Throughout these decades of work in the Valley, the Alliance has addressed workforce housing within a larger context of responsible land-use planning. We see affordable housing as a critical component of strategic land use. While we believe some of the community’s recent approaches have been flawed, such as the unpredictable PUD for affordable housing, we support the broad intent to secure housing for our local workforce being close to a workplace. With this in mind, I’ll raise some issues along with four recommended actions to address our broad concerns on theme four. A couple of these I’m going to mention now and then I’m going to do a handout so I won’t have to read them all now. First, we believe that affordable housing policies in the new Plan must be consistent with the community’s primary goals to protect wildlife and to limit overall development potential. Policies must also clearly indicate that workforce and affordable housing units are included in an overall build-out number. So, to address this, we recommend voting to add a policy similar to one that was in the summer 2008 draft of the Comp Plan. The exact language stated workforce housing developments will be consistent with other aspects of this Plan, including overall build-out and protection of natural resource areas. The policy also included the language the appropriate levels of density established for workforce housing should not increase the overall build-out potential for Teton County. This type of language should be reinstated that speaks to a specific value and a goal, rather than just the consistency with the FLUP language that’s currently there. This is a similar concern that you already voted on regarding theme three. Second, policies in the new Plan must limit the demand for additional workforce housing just as your previous commitment to not expand commercial development beyond baseline entitlements did. Also, policies must include more specific definitions for affordable housing to help guide LDRs. Policies must clearly direct that affordable housing types in terms of category and pricing be required to enforce a community need. We think that policies must direct that new development, residential and commercial, abide by the maximum level of affordable housing mitigation possible. Mitigation requirements should be increased to levels supported by the required studies. So, to address these, we recommend voting to add stronger language in some of the policies. For example, workforce housing as it currently stands is far too vague. Some of the housing organizations already made really good recommendations regarding the importance of affordability, so I won’t reiterate that. I’ll just make two...bring up two other examples from again the 2008 draft of the Comp Plan. It stated that commercial development should fully mitigate its demand for employee housing. In this recent draft, that language has been weakened to housing to be granted for a portion of these new employees. Another example is the ‘08 draft had a policy that stated prevent net loss of housing units during redevelopment. The most recent draft simply says minimize loss through redevelopment. We believe stronger language will go further in shaping LDRs that actually product more housing that will benefit the community. Third, policies in the new Plan must be fiscally responsible in the long term. To address this, we recommend voting to add additional language that acknowledges that new development, unless strategically planned, proposes long-term financial cost to the community and, too, that clearly identifies that preservation of existing housing as the highest priority approach. More specifically, we caution the use of statements such as those currently in policy 4.4.A. It states density and floor-area bonuses provide workforce housing units at less financial cost to the community. While we understand the intent of this language, particularly if we’re talking short term, in certain aspects this statement wouldn’t hold. Time and time again, studies have shown that new development rarely pays its way in the long term and the financial costs to the community may actually increase through time. In terms of the economic times that we’re currently in, we do appreciate the hesitance to discuss higher mitigation rates and increasing requirements for developers. We fully appreciate that. However, we believe that the goals of this Plan must extend beyond current times and shouldn’t be based on...about concerns about developers today. As we said earlier, you don’t need to call out a specific number in the Comp Plan in terms of mitigation rate, but we believe that language should be included that affordable housing mitigation requirements will be at the maximum level supported by necessary studies. In terms of a lot of the discussion on cost of development, we believe it’s critical to understand in a policy that decreases costs for new development, for example, not requiring new development to pay its way in terms of housing, doesn’t actually result in a removal of costs. Costs, such as a lack of workforce housing, they don’t just disappear. They are simply displaced most often to existing taxpayers. If our community doesn’t commit to requiring mitigation of these costs up front, the burden on a single development in the short term may be removed, but it’s been placed on the larger community in perpetuity and that we don’t support this vision for planning in Jackson. Further comments about needing more growth to get housing, this argument is unclear. What about the thousands of residential units and millions of commercial square feet that are already in the pipeline and permitted under base zoning? In terms of redevelopment, as many communities have based unless strategically planned redevelopment actually results in a net loss of housing and successive workforce. I’m almost finished—last but not least, we request that you move or remove what the community said about this theme’s sections. We did raise this concern in various theme but no direction or votes have yet been taken in regard to this. And I’m just going to provide one example from this particularly theme four. There’s a sentence that states, 2008 indicated that a majority of the community agrees that the Town and County should continue to use incentives rather than requirements to encourage more deed-restricted housing. However, based on our analysis of the surveys, two of the surveys

| 1/12/2010  | Chong, Geneva, Interested Public | Hi All,  
I have been having an interesting conversation with an architect friend about accessory dwelling units (ADUs) as affordable and ADA accessible housing options. I am not pushing his business (kit and modular ADA accessible ADUs < 800 sf), but instead the idea that ADUs are not all bad and should be considered in town and county zoning where we want to encourage increased density of this specific type. Town's suburban residential comes to mind - where people already build “care-taker” and “mother-in-law” apartments, and the lots are big. These ADUs could also be used as home offices. Something to think about. The attachment provides links to zoning laws in specific towns and cities. Please share with the other planning commission members and electeds as you see fit.  
Thank you, and happy new year!

<td>Fulton, Greg</td>
<td>To the Honorable Mayor and Town Council, City of Jackson, Wy, Thank you for the opportunity to voice my views regarding the future of the Jackson Hole Town Square. As the owner of Astoria Fine Art Gallery located at 35 E. Deloney Ave. (on the Town Square) I am against any proposal to close Deloney Avenue or any Town Square streets to create a pedestrian only area. I am shocked and concerned that such an idea would even be considered without first contacting and interviewing the business owners that would be the most effected my such a measure. I believe this is a bad idea for the Town Square. I believe my business would be adversely effected by this proposal. It is important for my customers to have ample parking in the street; and especially during the winter months my business relies on people being able to park in front of the gallery and having easy access to my entrance. As you may know we are in the process of expansion. We are adding employees and attempting to grow even in a tough economic climate. Any experiment (and it would be an experiment) that could hurt traffic patterns at my establishment would be contrary to your mission statement: It is the mission of the Town of Jackson Municipal Organization to provide municipal services that enhance the quality of life for our residents and guests and to help support the local economy. Changing traffic patterns, perhaps adversely, would be a terrible blow to businesses who may be struggling. I believe the proposal would hurt, not support, the local economy and would be a decision that could lead to more closings and empty buildings. It is too risky. So far Jackson has survived the recession well. Other large art markets have seen 10-15% of their galleries close. Jackson has not. Please do not take any action that may change that scenario. Please do not close Deloney Avenue to the vehicles that our customers use to visit the town square and the adjacent businesses. To use the old adage: If its not broken do not fix. Please trust that if I thought my business or my neighbors' businesses would stand to benefit in the slightest way I would support any measure. I see no benefit and stand firmly against any future consideration towards changing a very good and historically high-performing economic center downtown. Sincerely, Greg Fulton A very concerned local business owner and resident</td>

<td>Griffith, Gregory</td>
<td>Gregory Griffith, West Bank. Welcome to the new guys. Be careful what you wish for; you got it. I’d like to reiterate a request for stronger language in a specific statement in regards to wildlife in Town, everything from, you know, Florence Meadow, Flat Creek Crossing, etc., etc. It’s not quite strong enough now. Also, this is related, Mrs. Chairperson, to theme three, PRD. PRD is the only mechanism whose tentacles permeate the rest of the eight themes. Relative to Town, we keep...we’re almost doing a disservice to ourselves by maintaining this Town as heart semantics, because, as I stated at the last meeting—this is for the benefit of the new guys—we have 1780 units entitled in Town. We have about 6200 units entitled in County. We have 47 percent of the population in this County lives in the Town of Jackson. We have 53 percent that lives out. It has not been for a couple of decades now Town as heart, and nothing we’ve done to date is going to change that. We really need a focused, coordinated discussion, and we tried to do this early on with the PRD forward request, which passed five/zero at the County level and it stalled at the Town level. Maybe that’s something we could bring back up, because more knowledge and more discussion and more discourse couldn’t be a bad thing. And if we don’t figure out a way to shift that dynamic to the entitled development in Town from the County, a mechanism other than the TDR that was proposed originally, we will never achieve the objectives of Town as heart as far as I see it. Thanks a lot.</td>

<td>Becky Tillson, Jackson Hole Conservation Alliance</td>
<td>Becky Tillson, Jackson Hole Conservation Alliance. Welcome back ?? Thank you for the opportunity to comment. Thank you also for taking this extra day to be sure that the review of theme three is complete. It’s important for this body to discuss all the things that are important to the public. Regarding theme three, we’ve submitted written comments with specific recommended actions followed by rationale and explanations. We also raised several significant questions that we hope will be addressed. There are a few key points for your consideration tonight. Commissioner Allen suggested in this week’s Staff Report the inclusion of a section regarding ecological and wildlife issues specific to Town as outlined in our comments. This important addition should be centered on the protection of areas that abut and interact with public lands, riparian areas and watershed health in quality in and near Town still to function as crucial winter ranges and corridors that ensure wildlife habitat connectivity. This addition would be particularly important to sensitive species, particularly the moose and mule deer, who are currently at the low target population levels and that rely on the Town as habitat. Second, the transportation issue specific to Town should be addressed in more detail in this theme. For example, West Broadway has the highest mortality rate for mule deer in all of Teton County and should be taken into consideration. Even if much of the discussion is postponed until the transportation theme, a reference to or mention of the interactions of transportation and wildlife in Town ?? Lastly, the indicator section could be improved by including, for example, percentage of net gain, preservation and loss of affordable housing units within the Town boundaries, transportation efficiency, watershed protection and wildlife habitat preservation in both the Town and the County, all of which are factors that measure the success of the Town as heart position and policies. The indicator section should also include baseline conditions as measurable certain points. As we have with the other themes, we will be submitting comments on theme four in weeks to come. Thanks again for all your hard work.</td>
</tr>

<td>O’Donoghue, Tim Chamber of Commerce</td>
<td>The Jackson Hole Chamber of Commerce respectfully submits the following recommendations for Theme 3, “Town as Heart” of the Jackson/Teton County Comprehensive Plan: 1. Place an emphasis on redevelopment versus expansion (new development) in Teton County with the exception of Teton Village. Provide Teton Village with enough commercial square footage to be a sustainable community center. 2. Develop architectural design and energy efficiency standards for redevelopment corridors. 3. Zoning in Town of Jackson promotes mixed commercial/residential redevelopment on North Cache, the five-way, the ìœYâ€œ, Jackson-King sections, Pearl-Hansen sections, S. Glenwood between W. Deloney and W. Gill, Scott Lane and other arteries off of Broadway, and Gregory Lane. 4. All development and redevelopment applications should address community transportation needs and concerns. 5. Any development of the ìœYâ€œ should consider the completion of the ìœBrown Cutoff. 6. All development and redevelopment should place consideration on affordable rental housing. 7. Develop density transfer regulations (TDRs) that will help land owners maintain their land values, provide incentives for redevelopment within the current town boundaries, and greatly reduces impacts to currently undeveloped lands in Teton County. Sincerely, Tim O’Donoghue Executive Director Jackson Hole Chamber of Commerce.</td>

Dear Mayor Barron and Town Council Members:

Thank you for considering the formation of the Environment Commission today. I hope that you will at least support the County moving ahead with its formation and that you do not prevent the Town from participating in the future even if you do not choose to go forward as a joint commission. Here is a brief list outlining why I believe the Town should participate on the Environment Commission:

1. Although the current NRO with the majority of development opportunity is in the County, the Town holds a special position in the County - we are like a clog in the artery that is Jackson Hole. In addition, with "Town as Heart" we should consider the regional transportation system as part of the Town as Heart system. This premise places us squarely in the environmental discussions that need to occur in relation to development in the County (remembering that, in my opinion, our transportation system and habits pose the greatest threats to our environment - directly via wildlife mortality and habitat fragmentation, and indirectly through carbon driven climate change).

2. The Town still has a need for environmental planning particularly related to understanding and influencing cumulative effects of development on the environment. As I mentioned above, our transportation system within Town is part of the County's and cannot be treated separately. Perhaps closer to Town residents' hearts, people want to see wildlife in and around town. Yet, if we do not pay attention and plan our development and transportation footprints we could solidify our "clog" position in the valley. Proposed activities/developments in and around Karn's Meadow provide a perfect example of how consultation with an Environment Commission should benefit town - use the Commission to look at potential impacts over a larger spatial and temporal scale and make informed decisions (don't just end up with something by accident/piecemeal that completely changes the ecological function of the property in the future).

3. Fundamentally, Town does not function in a vacuum. If in fact unified government (at least "unofficially") is a goal of our leadership, it seems we should take every opportunity to act as such. The Town could still position itself to be exempt from development review by the Environment Commission (e.g., lands outside the NRO), but we should not give up the opportunity to participate in critical discussions that will affect the ecological functioning of Jackson Hole - the entire area is or was critical wildlife habitat and contains critical ecological processes (e.g., hydrologic systems), and "Town as Heart" means we cannot ignore that fact.

Thank you for considering my thoughts, and please do not hesitate to call or email me if you want to discuss this further.

Thank you all for your hard work, and I hope 2010 is wonderful for you and yours,

Geneva Chong
Planning Commissioners and Staff:
I offer the following comments and suggestions regarding Theme 3 of the Draft Jackson/Teton County Comprehensive Plan - Jackson As "Heart of the Region."

Jackson Hole Gateways
Recommendation 229, item 3, suggests emphasizing Jackson gateways, which is addressed in principle 3.5.a and 3.5.c. I believe we should include a specific proposal in the Comprehensive Plan to utilize our bridges as gateways. There are waterways with existing bridges at many of the natural gateways within the valley - especially within the Town. The bridges in the Valley could be built up and enhanced to offer visual gateways into the Valley, into Town and into Wilson. WYDOT has a TranspOltation Enhancement Activities program which may be applied to for funding. We may have a better chance of receiving state and federal funding if there is a specific enhancement program regarding bridges laid out in our Comprehensive Plan. The bridge enhancements could be designed with a western theme or ambiance and/or displayed or combined with adjoining public alt projects. Creating more of a gateway effect would act as a powerful visual indication to drivers that they are entering a more dense area which would encourage them to slow down. This could be particularly useful at the bridge across Fish Creek into Wilson, the bridge crossing Flat Creek north of Town at the Dairy Queen, and at the 5 way intersection coming into downtown along west Broadway, and the intersection of Highway 89 and High School Road at Smith’s. These gateways would also serve to emphasize the impOltance of our waterways. There is already a recommendation to emphasize the relevance of Flat Creek in this theme as a community amenity. The bridges across the Gros Ventre, Snake, and Hoback rivers, and Lake Creek could be utilized as well. The gateway bridges could also potentially become Part of any future public alt programs. Art installations could be installed on the bridges or near by, perhaps incorporated in adjacent pathways. The bridges could also emphasize the Town As Heart theme. The bridges exist at those intersections and areas which are already commonly referred to as "gateways" - the bridge across Flat Creek into Town by Dairy Queen, the 5 way intersection as you come into downtown along Broadway, the bridge by Smiths - right at the south entry way into the Town. The bridge on Snow King by Karns Meadow could be enhanced as a local’s gateway. The enhancements could be done with the Karns Meadow park and development plans.

Specific recommendations:
Include language that a specific plan be developed to utilize the bridges and waterways as a part of the plan to improve and emphasize our gateways to Section 3.5.c.

Public Art
Recommendation 228 suggests enacting a public art program. The discussion about adding language to encourage public art is appropriate given Jackson Hole's growing reputation in this maja. Our reputation is not merely based on the visual arts with our collection of private galleries and the National Museum of Wildlife Art but also the Center for the Arts and, of course, the Grand Teton Music Festival.
Any public art program should, however, be limited to public projects and public landschools, hospitals, the Town Square and other community parks, and, of course, the Center for the Arts. Private developers should only be "encouraged" to work with a public art program. Development benefits could be offered though the regulatory scheme to encourage participation. Private land owners should not be required to fund public art through exactions and such (and it may be unconstitutional in Wyoming).

Funding for public art should come from a mechanism that taps all of the community equally and not just private property owners and developers. Developers already contribute to parks, schools, public utilities, affordable housing, and employee housing all of which bear some nexus to the impacts of their developments. Moreover, Jackson Hole is home to an extraordinary number of non-profits, including a variety of arts organizations, which are all a part of our community character. Another key component of our community character is our generosity in funding these groups. Land owners and developers should be free to make their own choices regarding the nonprofits they would like to support. They may choose community service organizations such as the Community Safety Network, the Jackson Food Cupboard, and the Community Children’s Project, or environmental organizations such as the Alliance for Responsible Planning, the Jackson Hole Land Trust and the Grand Teton National Park Foundation. They might choose the Library Foundation, the Grand Teton Music Festival,
Dancer's Workshop or the Jackson Hole Wildlife Film Festival. The Four Seasons selected the Library Foundation to support and they have contributed substantially to that organization over many years. The visual arts should not receive such preferential treatment over these other organizations by receiving direct funding as might be had from a development exaction. Specific Recommendation: Include language in Principle 3.5 that we have become a regional center for the arts in addition to a regional center for "tourism, government offices, and a gateway to the nation’s parks and forests." Emphasize the importance of the arts in Jackson Hole - both to our community character and our economy. State the growing reputation of Jackson Hole as a preeminent destination in the West for culture and the arts in addition to our natural beauty. Any language regarding the creation of a specific public art program should be included in section 3.5.a on maintaining and improving public spaces which states that public spaces are "the building blocks of a thriving community" and that "public spaces and civic facilities should be interesting, memorable, and reinforce our sense of community."

Town As Heart - Pedestrian Facilities Generally
This chapter on Town as Heart does not adequately address pedestrian facilities. An attractive pedestrian environment is critical to the success of downtown. Many pedestrian projects may also be eligible for federal transportation enhancement funds. There are several recommendations (220, 222, 223) that add language to the current draft which emphasizes the need for pedestrian facilities. However, mixed use development, particularly in the downtown core also encourages people to utilize those pedestrian facilities. It is not enough to say that if you build it (sidewalks) - they will come. See the example of West Jackson, where walking is encouraged not just from building more and better sidewalks but from the variety of businesses that have emerged in that neighborhood. Combining residential, office and retail use gives people places to walk to - from both work and home; places such as Picas, Hard Drive, Whole Grocer, Frost, the Post Office, Linen Alley, Atelier Ortega and the Bread Basket. Of note is the fact that these are all locally owned businesses. This dynamic needs to be encouraged downtown and in other areas.

Specific Recommendations
Add build "pedestrian facilities" throughout the chapter but in particular to policy 3.l which lists the necessary elements of successful neighborhoods.

Town As Heart - Jackson As Population Center
Jackson is going to continue to be promoted as the population center of our community. Development is going to be encouraged and directed in Town and in clusters to avoid suburban-like sprawl in order to preserve open space for both its scenic value and for wildlife habitat. Therefore, there will be larger buildings and denser developments in Town than what has existed historically, which may be labeled as "out of character." However, character is not just about bulk and scale - it about vitality.

Specific recommendations
As noted above add "pedestrian facilities" to paragraph 3.1.a, which lists the necessary elements of successful neighborhoods.
Add "encouraging mixed use" to 3.1.a and the list of elements to successful neighborhoods and/or 3.1.b as a component to "creating new vital neighborhoods". Note: "condos" is listed in Policy 3.1.c as a housing type when really it is a type of ownership and not a type of housing that is physically different.

Town As Heart and Jackson As Retail Center
If Town is Heart - then the Downtown Core (the area three or four blocks around the Square) is the "Heart of the Heart". Mixed use, density and redevelopment around the Square should be encouraged to prevent downtown sprawl development that keeps people in their cars. If too much regulation stifles development in the downtown core it will have an adverse effect on the health and vitality of the downtown area. Newer development will go in at the 5-way and the "Y" at the expense of the downtown core, which will attract businesses and tourists away from the Square. The Town Square itself warrants special consideration and careful controls on development to preserve its character. Redevelopment in the rest of the Downtown Core, especially mixed usedevelopment with appealing pedestrian oriented activity, should be encouraged to enhance the Square and preserve and increase the retail tax base in Town (pursuant to policy 3.2.d).

Specific recommendations:
Add language that downtown core is "Heart of the Heart" to 3.2.c
Add to Policy 3.2.c that the essential sales tax revenue generated in the Downtown Core around the Square will need to be maintained and increased
to fund town services but the geographic boundaries of this area should remain the
same to preserve this area's character and attraction.
In Policy 3.2.d regarding the lodging overlay state that the Lodging Overlay should be limited to avoid sprawl development within downtown and gaps in development in the Downtown Core. The Preservation of Historic Buildings and Sites - Principal 3.6 The Historic Preservation Board currently has approximately 117 buildings and sites identified as historically significant. This currently appears to be a completely subjective determination made by a relatively small group of people. A list of objective criteria should be prepared for how and why a site is designated as historically significant. The process and the parameters the Board uses to identify these building and sites should be transparent. The Historic Preservation Board should be required to present their research and findings for why a particular site is appropriate for being designated as historically significant in advance of such designation in a formal report and proposal. The public and in particular the property owner should be allowed a chance to comment on their findings and conclusion. A report should be prepared for each of the 117 properties already on the list. The current regulation, with a potentially 90 day stay before receiving a demolition permit, is too long. Especially given the current 90 day stay - property owners should receive advance notice that their property is being considered for the designation. It is profoundly unfair and unjust, and could potentially cause significant economic hardship, that a property owner proceeding with development plans, having expended considerable resources both financial and other wise, should suddenly have their construction and development timelines and schedules interrupted by a last minute inclusion of their property on this list with no notice. To the extent a property is not already included on the list; a process should be developed to flag the attention of the Historic Preservation Board long before a demolition permit is applied for. It is more typical for a property to go through a lengthy and substantial public review process for re-development before it is demolished. If a property is potentially historically significant - the issue should properly be raised by the Historic Preservation Board during the public review. The Historic Preservation Board should not have the authority to delay a project once it has been through the review process if the Board did not participate in the public hearings and give the property owner a fair and reasonable opportunity to address any concerns over preserving a potentially historically significant site. After all, private propely rights are a significant part of community character and our history here in the West. If the Town and County land development regulations allowed a "change of use" to historically significant and/or unique buildings without requiring them to be brought in full compliance with currently adopted building codes, without compromising the health or safety of the public, it would encourage and promote more viable economic uses of these structures, which would help preserve them.
Specific Recommendations
In Policy 3.6.b - add language that the Historic Preservation board will develop objective guidelines and transparent procedures and conduct appropriate research to aid their efforts to identify and preserve historic properties. Add a new Policy 3.6.d - Encourage the Town and County to adopt provisions which would allow change of use and re-location of historically significant buildings without requiring full compliance with current building codes if the history of the buildings and its use indicates that there would be no significant increased risk to the health and safety of the public. I would be happy to discuss any of my comments and can be reached at 413-7073.
1. Prepare a complete traffic analysis of the Comprehensive Plan preferred land use scenario in each of the various County growth areas in order to provide the information needed to (1) specify the road network/traffic control improvements and expansions needed to serve the level of development anticipated in the 20-year planning horizon, and (2) refine County LOS and traffic volume standards.

Task 1.1. Prepare daily and peak hour traffic forecasts for the proposed Comp Plan growth scenario. (This could be done either by running the WYDOT model for this scenario or by manually adjusting model outputs prepared previously for other scenarios.)

Task 1.2. Analyze and evaluate capacity adequacy of all roadway segments and intersections; identify deficiencies.

Task 1.3. Analyze and evaluate traffic safety for existing and future conditions.

2. Identify Road Network Improvements

Identify the new roadways, capacity improvements, and safety improvements needed to:

(1) meet the LOS and volume standards under the traffic loadings generated by the proposed Comp Plan growth scenario; and

(2) provide safe and convenient access to all developed and developing areas of the County.

Task 2.1. Identify and evaluate new regional/arterial road links; e.g., Tribal Trails Connector. (This analysis has been completed using the traffic forecasts prepared for an initial ‘example’ growth scenario; rather than redoing the entire analysis, the previously-completed analysis results and conclusions should simply be revised and reviewed based on the traffic forecasts for the proposed Comp Plan growth scenario. [Task 1.1])

Task 2.2. Identify and evaluate the arterial capacity and safety improvements needed to address the identified existing and future deficiencies (roadway widenings, intersection improvements, etc).

Task 2.3. Lay out a complete arterial/collector network to serve growth areas where the existing rural road network has neither the capacity nor the coverage to provide access to new development and accommodate the traffic generated by the urban/suburban development envisioned by the Comp Plan.

Task 2.4. In cooperation with WYDOT, identify the State Highway intersection/interchange improvements and new connections needed to accommodate the traffic to be generated by Comp Plan growth.

3. Revise and Refine County Road and Traffic Standards

Evaluate the County’s current Functional Classification Plan, street design standards, and Level of Service (LOS) standards, and propose revisions and refinements that will help provide (1) more effective guidance for the development of a complete road network in the suburbanizing areas of the County, and (2) a clear basis for fair and efficient review of individual development applications.

Task 3.1. Review and evaluate the Functional Classification Plans, street design standards, and LOS standards of other counties that have addressed growth and development issues.

Task 3.2. Refine/expand the County’s Functional Classification Plan and street design standards:

• Expand the number of classifications

• Refine/expand the definitions and standards for each classification for all roadway and network elements, including but not limited to type of traffic (local, through), roadway width, number of lanes, on-street parking bicycle and pedestrian facilities, access management, connectivity, and arterial/collector spacing.

Task 3.3. Revise/refine the County’s LOS standards as they apply to system-level analysis and development review:

• System-level analysis: Revise/refine the LOS standards used to evaluate the ability of the County road network to safely and conveniently serve anticipated traffic volumes, and to identify necessary road and traffic control improvements and expansions

• Development review: Revise/refine the LOS standards used to evaluate the impacts of individual development proposals and identify necessary mitigation measures

Task 3.4. Revise/refine the County’s development review traffic analysis requirements to ensure consistency between the methodologies used to estimate trip generation for development review and forecast traffic for the system planning element of the Comp Plan Transportation Element.

<td>Bergeron, Mary</td>
<td>I FULLY SUPPORT the recent commendations of the planning commissioners as reported in the JH News &amp; Guide, including [at least partially] closing the Town Square to vehicular traffic. I have been advocating this for the 12 years we have lived here, having seen it done in other places, and know it does (as you said) &quot;encourage cultural events and activities.&quot; As a person who has walked, rather than drive, from Town to Rafter J for no reason other than it is [if time permits] more enjoyable, I support any/everything possible that makes Town more pedestrian friendly. Just Tuesday I walked from Town to Indian Trails, and had great fun stopping in stores and new businesses. I did run into an obstacle where the tunnel under the highway was a river of ice (it was marked as a hazard which, fortunately, I managed to navigate safely). And I, too want a &quot;lights-on&quot; downtown, and I mean that literally. Many a late summer evening I have wished the holiday lights on the Town Square were on throughout the year, creating a vibrant focal point. I also like to walk at night to/from the Center from the Arts events, and it is a safety concern, as you mentioned when there are &quot;dead streets,&quot; where there is little lighting/activity. Keep the wilderness wild, but if we really want Town to be &quot;heart,&quot; we need to implement your suggestions. That includes access to groceries in East Jackson (how Helen's began, but morphed into &quot;Bud's Liquor&quot; -- something else entirely)! So, for what it's worth, I LIKED what you had to say.</td>
