JACKSON/TETON COUNTY AFFORDABLE HOUSING

REQUEST FOR PROPOSALS

DESIGN-BUILD SERVICES FOR

ADAPTIVE REUSE OF THE HISTORIC BENSON CABIN TO CREATE AFFORDABLE HOUSING

445 EAST KELLY AVE. JACKSON, WY

CONTENTS

1. INTRODUCTION

The Jackson/Teton County Housing Authority, through the Jackson/Teton County Housing Department ("Housing Department"), is seeking design-build services from a qualified team to adaptively reuse the historic Benson Cabin as permanently deed-restricted housing on a county-owned property located at 445 East Kelly Ave, in Jackson, WY.

The Benson Cabin property is zoned Neighborhood Low Density 5 (NL-5). The Benson Cabin is listed in the Jackson Historic Register and is subject to Type 1 Certificate of Appropriateness review for all exterior modifications. The cabin is subject to the International Residential Code.

A competitive response to the Request for Proposals (RFP) will propose a livable space for local workers and their families that respects the character of this important historic resource. The goal of this historic preservation rehabilitation project is to create a model for how historic, single-family homes can offer an opportunity to provide workforce housing while preserving the character of Jackson.

Selection of a Design-Build (DB) team will prioritize those that meet one or more of the Secretary of the Interior's (SOI) Professional Qualification Standards or have demonstrated experience working on historic buildings.

The Housing Department requests that interested parties respond to the solicitation by 5:00 P.M. MST on Friday, February 6th, 2026.

2. CLIENT

The Housing Department works to create healthy housing solutions so that our workforce can live, spend, and volunteer locally, maintaining the community character we all cherish. To learn more, visit jhaffordablehousing.org.

The Benson Cabin, once fully renovated, will serve as employee housing for Teton County. As such, it will be managed and maintained by Teton County.

3. PROJECT OVERVIEW

Background

The Benson Cabin was constructed as a residence for Ed Benson and his family in 1920 and housed the town's first commercial hydroelectric generator. Ed Benson is an important figure in Jackson history as the first person to sell electricity for public use in the emerging ranching town. The property has been in continuous residential use since Ed Benson sold the cabin in 1954 (see **Appendix A** for further historic background).

In 2020, Teton County acquired the 1.08-acre parcel on which the cabin is located to develop affordable housing in partnership with Habitat for Humanity. The 1.08-acre parcel was re-platted as the Benson-Brown Station Townhome Addition and divided into six common area and eighteen townhome lots. In 2022, to maximize usable square footage on the site for townhome construction, the one-story Benson Cabin was relocated within the site, set on a new foundation, and non-historic additions were removed. The roof structure and floor joists were reinforced to meet structural code in place at that time (see **Appendix B** for more information). The Housing Department plans to rehabilitate the historic Benson Cabin at 445 East Kelly Avenue for use as a single-family residence to be rented to county employees.

Description

The goal of this project is to preserve the historic character of the Benson Cabin while modernizing the residence to provide comfortable, livable, and affordable housing. The Housing Department aims to develop a model for the adaptive reuse of historic structures that is economically competitive with new construction, demonstrating that preserving community character and creating affordable housing are not mutually exclusive.

This project is being executed in partnership with a preservation consultant, Old School Heritage Solutions (OSHS). Both Housing Department staff and OSHS will be involved throughout the entire project. The Housing Department will serve as the primary point of contact, contract signatory, invoice recipient, and liaison between the hired project professionals and government agencies, including coordination of document submittals. OSHS will be involved in the pre-bid walkthrough, kick-off and status meetings, project documentation review, and site visits, and will make recommendations to the Housing Department as the final authority on decisions.

4. SERVICES AND SCOPE OF WORK

Design and construction services are expected for the completion of this project. As funding allows, the anticipated design and construction work may include, but is not limited to, interior wall relocation; exterior soffit repair; new bathroom and kitchen layout, finishes, appliances, fixtures, and/or relocation; upgraded mechanical, electrical, and plumbing; window and door replacement; insulation; exterior stairs; and any other code-compliance-related work. **Site planning and site work is not included in the scope of services**. The DB team is only responsible for water, electrical, and waste within the building envelope and its interior. The county will provide water, sewer, and electrical hookups to the building.

The Scope of Services includes:

- Review of the existing site documentation (See ***Attachment A: Historic Documentation and Existing Conditions****)*
- Redesign of interior one-bedroom layout to accommodate single-family occupancy that meets applicable residential building code, historic preservation standards as described in this RFP, and livability standards in **Attachment C**.
- Repair and refinishing of cabin exterior, including new roof, stripping, repairing, and finishing of logs, chinking repair with NHL 3.5 mortar, repair/replacement of deteriorating gable-end soffits, new rear door, and code-compliant entry and exit stairs.
- Building Permit application to be submitted for Housing Department, Town of Jackson Planning/Building Department Review, and Teton County Historic Preservation Board review at 30% (including Type 1 Certificate of Appropriateness) and 75% completion at minimum, and 100% completion.
- Construction administration and execution for Benson Cabin preservation and remodel while meeting applicable residential code, historic preservation standards, and livability standards.
- Regular progress meetings during all stages of the project: at least one at kick-off; one for the 30% and 75% design submittals; and regularly scheduled progress meetings during construction.
- Submission of brief status memos quarterly, due March 1; June 1; September 1; until the conclusion of the project.

All work performed shall adhere to the Secretary of the Interior's Standards for the Treatment of Historic Properties (Rehabilitation Standard) and all local, state, and federal laws and regulations. All work and final products are subject to Housing Department and Town of Jackson Planning/Building Department Review and shall incorporate any changes requested by either agency to their satisfaction.

5. PROJECT BUDGET

This project is supported by Teton County funding, which will align with the budget proposed by the selected DB team. Creative cost-cutting measures that do not compromise the livability of the home are encouraged. For example, reusing existing building components like fixtures and windows.

Services will be contracted based on a lump sum, negotiated with the selected DB team. This may result in necessary modification(s) to the scope of work, which the Housing Department will discuss with the selected DB team. In no event shall the selected DB team be entitled to receive more than the contracted amount unless authorized in advance and in writing by the Housing Department. Competitiveness of the budget will be considered as part of the proposal review process. Budgets that prioritize construction costs over administrative and design costs as a ratio of overall budget will be considered more competitive.

Note: Planning and Building Department permit review fees are waived for affordable workforce housing developments. DB teams should assume no other fees are waived.

6. SCHEDULE

Required Project Milestones

1. Within one month of contract (estimated by mid-April 2026): Schematic Design (30% design concept) and a Type 1 Certificate of Appropriateness (CoA) application due to Housing Department for review
2. Within two months of contract execution (estimated by mid-May 2026): The DB team must present the Type 1 CoA to the Teton County Historic Preservation Board at a public meeting
3. The Housing Department will review final designs at 75% completion and provide comments within two weeks
4. DB team must apply for and receive a Wildland Urban Interface (WUI) permit through the Jackson Hole Fire/EMS-Fire Division prior to application for Building Permit
5. Within three months of contract execution (estimated by mid-June 2026): DB team must provide a complete Building Permit application to the Housing Department for review prior to formal submittal to the Town of Jackson
6. Within one month of Building Permit approval: Construction must begin
7. Within three months of starting construction: The DB team must pass final electric, fire, plumbing, mechanical, and building inspections from the Town of Jackson.

Work is expected to begin immediately upon execution of the contract and conclude as expeditiously as possible, allowing for a completion date of no later than December 31, 2026.

7. DESIGN REQUIREMENTS

Land Development Regulations

The entire Benson-Brown Station Townhome Addition site is approximately 1.08 acres and is zoned Neighborhood Low Density 5 (NL-5). For planning and legal purposes, the Benson Cabin is treated as part of the larger Benson-Brown Station Townhome Addition. Because the property is part of a larger parcel, **the Housing Department will prepare all site development plans for the Benson Cabin assigned area that meets requirements for LSR, parking, on-site storage, utility hook-ups, landscaping, and circulation in the context of the larger site.**

While the details are currently under development, DB teams can assume that the site plan includes two tandem 9' x 20' parking spaces directly north of the cabin and a walkway from the street to the south (primary) elevation. The north yard may also include on-site storage. Please see **Attachment F** for a site plan concept.

Building Code

The Benson Cabin continues to function as a residential property and thus is subject to the International Residential Code. The Housing Department met with the code official on September 22, 2025, and discussed the following issues:

- Bedroom egress- the existing bedroom window (or any window) does not meet bedroom egress requirements because the bottom sill is too high above the floor. Furthermore, the existing window sash does not meet the minimum window opening size for egress. Because the windows are not historic and the opening is only 1" too high, a new, egress-compliant window that expands the window opening would not alter the character of the historic building and should be included in any design proposal.
- Seismic and snow load structural- when the cabin was moved in 2022 it was secured to the new foundation to meet Town of Jackson seismic requirements. Likewise, the roof members were reinforced with new structural members, and a central support post was added to the structure **(see Appendix B)**. **No known structural work is required to meet building code as part of this project per the Structural Engineering Report provided in Attachment E. However, any proposed moving or removal of existing walls or other structural support by the DB team is subject to further structural engineering by the DB team in the Building Permit application.**
- Energy Conservation - Because the Benson Cabin is on the Jackson Historic Register, R501.6 Historic Buildings of the International Energy Conservation Code (2021) applies to the project. Therefore, the building envelope does not need to meet the International Energy Conservation Code (2021) standards, as it would for any other major remodel. However, DB teams should include additional measures in their design to enhance energy conservation wherever possible without negatively impacting the historic character and materials. Note: The interior log walls have been identified as a character defining feature. Because they are larger than 8 inches in diameter, they provide adequate insulation value and should not be furred out and insulated solely for energy conservation purposes (but can be covered where desired for functionality, such as a kitchen or bathroom).
- Wildland Urban Interface (WUI)- Effective January 1, 2025, all private land parcels in the Town of Jackson and Teton County are now within the mapped Wildland Urban Interface and subject to IWUIC review by the Fire Department. Regardless of the location of the project or the scope of work to occur, prior to submitting for a building permit, all applicants must apply for a WUI permit through the Jackson Hole

Fire/EMS-Fire Division. As part of the building permit submittal, the applicant will be required to provide their WUI permit number.

This list is not exhaustive, and DB teams are encouraged to identify any other code issues as they develop their scope and estimates.

Historic Preservation Standards

The Benson Home was found to have enough historic significance and integrity to be listed on the Jackson Historic Register per Sec. 8.5.7 of the Town of Jackson Land Development Regulations on December 21, 2021 (Project P21-289). The property is now subject to and eligible for the provisions in the town's historic preservation program, including Division 5.9 (Preservation of Historic Properties); Sec. 5.8.13 (Historic Preservation Design Guidelines); Sec. 8.5.8 (Certificate of Appropriateness for Exterior Alterations); and Sec. 8.5.9 (Certificate of Appropriateness for Repositioning and Relocation) in the LDRs. The Benson cabin is not currently subject to a Historic Preservation Easement.

For the Certificate of Appropriateness for Exterior Alterations to be approved, the alterations must meet the Secretary of the Interior Standards for the Treatment of Historic Properties (Rehabilitation Standard). Simply put, the alterations must not impact the character defining features to a point where there is a significant loss in historic integrity. The Teton County Historic Preservation Board (TCHPB) will review the Type 1 CoA submission to determine that the exterior alterations meet this standard.

The interior alterations will not be included in the Type 1 CoA and, therefore, will not be reviewed by the TCHPB. However, the Housing Department will review drawings to ensure that the two interior character defining features (exposed interior log walls and wood flooring in the living/kitchen space) will not be altered to a point that historic character is lost on the inside of the structure. **All remaining interior finishes (other than the log walls and hardwood floors) are not considered historic and can be demolished or altered to achieve the aims of creating livable, comfortable housing.**

Livability Standards

Because this property will be a county-owned, deed-restricted housing unit, the property is subject to Jackson/Teton County Housing Department Rules and Regulations, Section 3.3 Livability Standards as a one-bedroom single-family home (see **Appendix C** for checklist). Where livability standards cannot be achieved without negatively impacting historic integrity and adhering to the SOI standards, the DB team can file for an exception following the process outlined in the livability standards.

Environmental Quality Standards

Although this project falls below the threshold for a four-bedroom residential project that requires mandatory hazardous materials abatement, the county is committed to worker and residential safety and will adhere to commercial property standards for this project. A hazardous materials inventory has been completed (see **Appendix D**).

8. CONSTRUCTION REQUIREMENTS

Site access

Construction efforts shall be coordinated with the Housing Department and not impact the other residential units built or in construction at 445 East Kelly Ave.

Construction zone

Though the Benson Property is legally part of the larger Benson-Brown Station Townhomes addition, for the purposes of this project, the Housing Department has identified a construction zone to contain all staging, construction, and waste removal. Please see Attachment F.

Rules and Regulations

DB team must follow all applicable laws, codes, rules, and regulations in Jackson and Teton County for construction and waste disposal.

9. INSTRUCTIONS TO DB TEAMS

Timeline (subject to change as needed):

- January 6, 2026: RFP Release
- January 13, 2026: Pre-bid walkthrough of cabin
- January 16, 2026: Deadline for respondents to submit questions
- February 6, 2026: Submission Deadline
- February 11, 2026: Review, Interviews (optional), and Scoring at Housing Supply Board Meeting
- February 17, 2026: Consideration of RFP Award and funding direction at Board of County Commissioners meeting
- March 3, 2026: Consideration of contract and funding allocation at Board of County Commissioners meeting

Procedures

By responding to this RFP, DB team agrees to meet all applicable local and state regulatory requirements.

Submissions are due **February 6, 2026, by 5 pm MST.** Submissions received after 5 pm will not be considered.

Incomplete submissions will not be considered. Responses must be submitted through the Teton County www.PublicPurchase.com portal and may not exceed 10 pages. Plan sheets do not count against the page limit.

All questions must be submitted on the Public Purchase site, no later than January 16, 2026. Answers will be provided on a rolling basis.

The Housing Department reserves the right to request additional materials from the DB team at any stage in the RFP process.

Requirements

DB teams must provide the following information in this order.

1. Introductory Letter

Please include a letter of interest that clearly demonstrates the DB team's understanding of the project and interest in being considered for the project. The letter shall include the DB team's name, contact information, and primary contact name.

2. Qualifications

a. Proposed Project Team. Please include an organizational chart and a description of each member of the DB team, including: a resume, how the member will participate in the project, their relevant

experience, and portfolios of any similar projects on which they have worked. At a minimum, teams must include an architect and general contractor licensed to work in Jackson, WY.

b. Examples of similar projects, including at least two projects involving historic buildings of similar scope of work as this project, completed within the last seven years.

c. References. Please provide two references for whom your team has provided similar services. List the name, address, email address and telephone number for each reference along with a brief

d. Description of the relevant work experience for each reference. Indicate which team members worked on each project.

3. Project Description

The project description must contain the following:

a. Proposed project approach and scope of services.

b. Itemized project budget indicating cost per service/deliverable, an allowance for reimbursable expenses, if applicable, and a remainder allowance for all construction costs. At a minimum, line items for project tasks must include:

   i. MEP upgrades/replacement

   ii. Interior demolition

   iii. Interior framing and wall finishing/trim

   iv. Door and window infill work and/or replacement door and window work

   v. Bathroom, laundry, and kitchen finishes, fixtures, and appliances

   vi. Flooring repair and replacement

   vii. Exterior maintenance (log paint removal and refinishing, soffit repair, roofing, etc.)

   viii. Exterior stair repair, replacement, or construction

c. Project schedule that identifies milestones and stipulates durations for key tasks and the overall project through completion of construction.

d. Scaled floor plan concept

Subcontracts

DB teams must identify all portions of the work intended to be performed through subcontractors.

10. EVALUATION AND SELECTION PROCEDURES

Evaluation Procedure

Each response will be evaluated in accordance with the indicated criteria. Special consideration will be given to DB teams who demonstrate familiarity with historic structures.

1	**Background and Qualifications (33%)** a) Special expertise of personnel, especially in historic log structures, including demonstration that one or more team members meets one or more of the Secretary of the Interior's Standards and Guidelines Professional Qualifications Standards, or has demonstrated recent experience working on historic structures. b) Past relevant experience following SOI Standards for Rehabilitation.
2	**Project Approach & Management (33%)** a) Names and functions of personnel assigned. b) Ability to meet project needs, including current workload. c) Commitment to project completion within the time and budget proposed in the response. Although no maximum budget is assigned in this RFP, respondents that minimize total project budget with efficient and realistic cost-saving measures will be scored higher. d) QA/QC methods.
3	**Technical Merit (33%)** a) Demonstrated comprehension of tasks to be completed. b) Completeness and clarity of submittal. c) Adequately addresses project goal(s) and objective(s).

Award

Acceptance of the successful DB team's proposal does not create a contractual relationship between the Housing Department and the successful DB team. The Housing Department reserves the right to award the contract to the next available DB team in the event the successful DB team fails to enter into the contract, or the contract with said DB team is terminated.

11. EXECUTION OF AGREEMENT

Submittal of a proposal binds the successful DB team to perform the work upon acceptance of the proposal.

Upon acceptance of the proposal, the successful DB team must provide:

- Contract for review
- Completed Form W9
- Satisfactory evidence of insurance coverage as required by the Housing Department, including but not limited to:
    - General Liability coverage with minimum limits of no less than $1,000,000.00 per claim.
    - Automobile Liability coverage to include Owned, Non-Owned, and Hired Autos, with minimum combined single limits of no less than $1,000,000.00 per claim.

- Workers' Compensation and Employer's Liability coverage with minimum limits of no less than that required by Wyoming law.
- Professional Liability coverage, if applicable, with minimum limits of no less than $1,000,000.00 per claim.
- Builders Risk Insurance, with minimum coverage for no less than the total value of the entire construction project on a replacement cost basis.

- If ACH payment preferred: Name and email address of the individual to whom a secured form can be sent to obtain necessary information

ATTACHMENT A: HISTORIC DOCUMENTATION AND EXISITING CONDITIONS

SITE DEVELOPMENT

Edward C. Benson was born in Colorado in 1883, but he spent his childhood and young adult years in the mid-Atlantic. Benson started his career as a bank clerk in Jersey City (following his father's footsteps), but by his thirties, he was working on and selling automobiles. Benson married Sylvia Miller from Philadelphia in the 1910s, and they lived there until moving West in 1917.

Although we don't know what prompted the Bensons to move west, Sylvia Benson was reported by the Jackson paper in 1917 to be spending time with Frances Mears, owner of the STS Dude Ranch. So, it's possible that before relocating to Jackson, the Bensons might have been summer guests at one of the local Philadelphia-connected dude ranches (White Grass, STS, or Bar BC).

E.C. Benson moved to Jackson before his bride, meeting her in Victor, Idaho, on Saturday, May 29, 1920, for her permanent move to the valley (although she returned back east for several months during the winter of 1921). The couple signed the paperwork to buy the property on Kelly Avenue from George Kelly on June 1, 1920. Interestingly, Benson was already supplying electric to limited customers prior to 1920, but it is unclear what facility he was using.

1 Benson Dredging the Pond to the East of His Newly Constructed Cabin

Benson not only constructed the cabin, which served as his power plant, but he also dredged a pond east of the cabin and diverted nearby Cache Creek to it, routing water under his home to power two water turbine generators he built in his basement. Although hydroelectric power was fairly common (the Chambers Ranch on Mormon Row, the Murie Ranch, and the Snake River Ranch all had similar generators), Benson was the only business selling the power he generated.

2 Benson in Front of his Cabin (1920s)

By December 1920, the Courier reported that "Freighters arrived the latter part of last week with the engine for the electric light plant which C.E. [sic] Benson is installing. Mr. Benson is engaged at present setting poles and stringing wires. He expects to be ready to turn on the juice soon." In January of 1921, the paper reported that after two months of installing poles and stringing wires that the system is nearly ready. And later that winter, they reported that "he now has the polls about all set and the wires practically all strung. Just as soon as he wires a few more buildings, the 'juice' will be turned on. Mr. Benson plans to have meters installed so each person can use all the juice he wants and pay accordingly."

In 1921, the all-female town council granted Benson the exclusive franchise to provide Jackson with electricity. By the end of that year Jackson considered itself "a modern 'burg' ...since E.C. Benson has erected seven street lights on some of the principal street corners. They burn until 11:00 o'clock every night." Starting in 1920, Benson began advertising in the *Jackson's Hole Courier* as "a seller of electrical supplies."

In 1923, Benson bought the corner property on Center and Deloney streets to serve as the company's headquarters. His home on Kelly Avenue was the only power source for Benson's operations until the late 1920s, when he built a dam and power plant on Flat Creek. Interestingly, he constructed a power station cabin on Flat Creek that was a smaller version of the Kelly Ave. cabin but less decorative.

At some point before 1930, Benson also built a generator station to house diesel generators on the property on Kelly Ave. In 1931, Benson incorporated the Jackson Hole Light and Power Company. Unfortunately, rural development loans favored power cooperatives over private companies, which led to Lower Valley Power and Light's acquisition of Jackson Hole Light and Power in 1952.

Sylvia Benson died of a cerebral hemorrhage in 1934, and Benson married Parthenia Hansen (Cliff Hansen's elder sister) in the early 1940s. Parthenia's daughter, Edith Stinnett, lived in the Benson Cabin on Kelly until 1968 when she sold the property to Norris and Grace Brown. The Browns added a porch and kitchen to the south side of the structure in 1977. The generators still remained in the basement. The land surrounding the Browns' one-acre property was sold to the town in 1988 and turned into Mike Yokel Park.

HISTORIC SIGNIFICANCE AND INTEGRITY

Historic significance is the importance of a property to the history, architecture, archeology, engineering, or culture of a community, state, or the nation. Integrity, also known as historic integrity, is the ability of a property to convey its

historic significance. A property must possess sufficient significance and integrity to be considered eligible for the Jackson Historic Register.

Significance

The Benson Home is significant for the role that it played in the development of a struggling ranching town into a thriving summer tourism destination. The property is significant not only as the place where the town's first electrical service was created but also as the home of the individual responsible for making that electrification possible. Although electrical power was not available on ranches until after World War II, the electrification of Jackson in 1921 symbolized the changes the rural ranching community was experiencing at the end of the second decade of the twentieth century.

The period of significance for the property is the year the cabin was built, 1920, and the year Benson sold the property and no longer lived there, 1947.

Integrity

Jackson/Teton County Housing Authority significantly improved the historic integrity of the property in 2022 by removing several additions that were outside the period of significance. The additions had been built on almost every side of the property, obscuring the historic Benson Cabin beneath them. At the same time, the housing authority was required to move the cabin to make way for much-needed housing. Moving a property, even within the same parcel, does affect overall integrity. However, because the setting and context are nearly identical to the original location, the impact was minimal.

Some other notable changes have taken place on the cabin since the period of significance. First, the three chimneys that once lined the roof (presumably to assist with exhaust in the basement as well) are no longer present. The storm cellar entrance and daylight basement windows are also gone. Small material changes, such as paint on the logs, a modern door and windows, a new roof, and painted shingles, also affect the overall integrity. However, many of these material changes are reversible, so the material integrity may be restored someday.

Despite the changes, the Benson Cabin still communicates its significance as the home of Jackson's electrical pioneer, who helped to modernize the growing ranching community.

TOWN OF JACKSON HISTORIC REGISTER STATUS

The Benson Home was found to have enough historic significance and integrity to be listed on the Jackson Historic Register per Sec. 8.5.7 of the Town of Jackson Land Development Regulations on December 21, 2021 (Project P21-289). The property is now subject to and eligible for the provisions in the town's historic preservation program, including Division 5.9 (Preservation of Historic Properties); Sec. 5.8.13 (Historic Preservation Design Guidelines); Sec. 8.5.8 (Certificate of Appropriateness for Exterior Alterations); and Sec. 8.5.9 (Certificate of Appropriateness for Repositioning and Relocation) in the LDRs.

BUILDING DESCRIPTION AND CONDITION

The Benson Cabin, located at 445 East Kelly Ave., is a one-story log structure that exemplifies the log craftsman style of the early 20th century in Jackson. Materials were sourced locally, although the original windows were probably purchased from the Deloney Store and transported by train to Idaho. The building's footprint is generally rectangular (oriented east to west) with a 9' x 9' vestibule entrance attached to the south. Today, the building functions as a 1-

bedroom, 1-bathroom home with a kitchen. During its period of significance, the bathroom likely was not within the main log structure—initially as an outhouse and later as a lean-to shed added to the north.

Foundation

Following the cabin's move in 2022, the building sits on a reinforced poured concrete stem wall foundation that is 3 feet deep and 8 inches thick. The floor joists are supported by wood stud walls in the crawlspace. A pressure-treated Douglas fir sill was used to prevent decay of the sill log, although there is no record of vapor barrier tape. Because the historic basement housed the turbine (and Ed Benson's favorite fishing hole), the cabin traditionally had a raised foundation, which was an unusual design feature in Jackson at the time. The main visual difference between the new foundation and the historic one—aside from modern materials—was that the historic foundation was daylighted through small wood windows, likely making it easier for Benson to work in the basement during the day. The vestibule was supported at each corner by rock piers and filled in between with loose rock.

The crawlspace can be accessed from the cabin bedroom. Historically, the basement was accessed through a storm cellar entrance on the south side. The new foundation is in excellent condition, and there is no sign of moisture problems.

Log Walls

The square-notched log walls are likely crafted from lodgepole pine harvested from Cache Creek. The logs on the north wall, which were covered by a former non-historic addition, reveal their original finish. The logs on the north elevation were also notched to fit the now-removed north bedroom addition. However, the notches are superficial and serve as a record of the building's history, so they should remain untouched. The logs on the rest of the building are painted brown. The south kitchen wall includes new infill logs that reflect repairs made after the non-historic southern addition was removed in 2022. Overall, the logs are in good condition.

The unpainted north elevation logs show that the cabin was chinked with oakum, mortar chinking, and dimensional chinking stops. The original mortar was lime-based, a softer material than the wood, allowing moisture to escape through the sacrificial mortar rather than the logs, which helps slow wood deterioration. The harder chinking under the latex paint on the rest of the structure is probably Portland-based, and although mostly intact, it is less compatible than lime-based chinking. However, the structure was likely chinked with Portland mortar decades ago, and the logs are only experiencing normal deterioration for their age, suggesting that the hard mortar likely isn't truly problematic due to the quality and density of the logs. During the next regular maintenance cycle, the owner should consider using an NHL 3.5 mortar with the porosity of lime but greater durability. Similarly, in the next log maintenance, the owner should consider removing the paint to allow the logs to breathe. This will ultimately extend the logs' lifespan, as waterborne paints trap moisture behind their film, which seeps in through normal cracks and blisters that develop on any painted surface.

The unpainted log section on the north elevation has a few lower logs that will need repairs within the next 5-10 years, but they are not problematic right now. The damage likely occurred before the non-historic addition and may have led to the addition used to cover the problem area.

Roof and Roof Structure

The main cabin roof is covered with modern brown V-groove standing seam metal. The vestibule has a black membrane covering. While historic photos of the Benson Cabin are too illegible to clearly see the roof, it is likely that, given

Benson's success and status, the design details of the rest of the house, and other buildings from the same period in town, the roof was originally cedar shingles or shakes. Metal and rolled roofing were common options at the time of construction, so a metal roof isn't unusual. However, because of the prominently visible V-groove style, the roof does slightly detract from the overall historic character of the building. In the future, the current roof could be replaced with a corrugated metal roof, wood shingles, composite shingles, or three-ply rolled roofing, and still meet the Secretary of the Interior's Standards for the Treatment of Historic Properties.

In 2022, before the building move, the interior roof structure was reinforced by sistering modern lumber to strengthen the roof assembly.

The exterior roof structure on the gable ends features a closed eave with decorative knee brackets. The gable-end soffits are made of beaded board, which displays a level of craftsmanship not often seen in Jackson structures of that era. The non-gable-end eaves are simple open eaves, allowing the rafter tails and skip sheathing to be visible from below. All these elements are painted brown, and the paint is in fair condition, protecting the wood components. The gable-end soffits are deteriorating and pulling away from the structure.

Cladding and Trim

The gable ends and east- and west-facing upper walls of the vestibule are covered with brown shingles painted brown to match the logs. The building features simple square-profile trim painted tan. The cladding and trim are in fair condition.

Windows and Doors

The cabin has six window openings fitted with modern replacement windows that slide open, either double or triple pane (year unknown). The attic gable ends feature ventilated single-lite wood awning windows. These windows seem to be original or at least older than the first-floor replacement windows. On the north elevation, two additional window openings have been filled in with live edge boards, indicating that the infill is quite old. This was probably done when the north side addition was added to the building. There is also another window opening on the northern end of the eastern elevation that has been boarded up.

The vestibule has modern fixed windows on the south and west elevations (the window opening on the east side of the vestibule is boarded up). The eastern end of the south elevation (the kitchen location) lacks a window or door opening, or any evidence of it, due to the 2022 infill construction.

The historic windows were simple wood sliders (no muntins) on the cabin and fixed six-light sash in the vestibule on all three sides. All windows are in fair condition.

Currently, the building can only be accessed through the center door in the south vestibule. There is an opening on the north elevation that has been boarded up, where an exterior door once provided access to the property to the north. The south vestibule door is a modern fiberglass single-pane door.

Site

While major changes, such as the loss of the creek running through the basement or the neighboring pond, have affected the integrity of the setting, the site still retains several historic characteristics, such as the mature vegetation and views up Cache Creek Drainage. The site generally slopes downward toward Kelly Avenue; however, there is a high

point to the east of the cabin that should be addressed for water runoff. For the most part, however, the relocation and installation of the new foundation has created positive drainage away from the building.

Interior

The cabin interior has lost much of its historic character due to modifications over the years (before Teton County ownership). The kitchen and bathroom seem to have been remodeled in the 1980s or 1990s and lack any original design features. The quarter-sawn oak floor might not be original, but it likely belongs to the period of significance. The historic chinking has been replaced with synthetic chinking. New walls with popcorn-texture finish, doors, trim, and recessed lighting have been added. The floor plan and layout have been altered since the historic period, though it is unclear how many rooms the cabin initially included. When the house was built, Jackson did not have indoor plumbing, so the building likely did not include a bathroom. Similarly, the kitchen would have been limited to a wood stove/oven and a work surface for food prep. The interior is in good condition with no major signs of water damage or underlying problems.

BUILDING CHRONOLOGY TIMELINE:

Year	Event	Notes
1920	Benson constructed cabin and basement and used as house and power station to light 7 street lights	Begin Period of Significance
1920s	Vestibule added	
1947	Benson sold the property to his stepdaughter, Edith Stinnett	End of Period of Significance
1961	E.C. Benson died in Florida where he retired	
1968	Stinnett sold the property to Norris and Grace Brown	
1977	Brown added on to property	Probably occurred other times than 1977, but that is the only year with documentation of alterations. This also happened around the time when the Brown's constructed their taxidermy shop on site.
1988	The Browns sold the surrounding acre to the Town of Jackson for use as Mike Yokel Park.	

2020	Grace Brown died. Teton County purchased the cabin and property from Brown's heirs.	
2021	Teton County placed the Benson Cabin on the Jackson Historic Register	
2022	Teton County removed non-historic additions, repaired the south log wall, and placed the cabin on a new foundation to the south of the original location.	

CHARACTER DEFINING FEATURES

Character defining features (CDFs) are **features or elements** that give the building its **visual character** and that should be taken into account in order to preserve them to the maximum extent possible.

Benson Cabin

445 East Kelly Ave

South

East

North

West

Character Defining Features

(present)

Shingle and awning window

Log walls,chinking, box corners

Decoratie knee braces and closed eave (E/W gable end)

Exposed log walls (with marks) and oak flooring

Open eave (N/S eaves), exposed rafter tails, and horizontal fenestration pattern

Treed site, and proximity to street and sidewalk

Low-slung, rectilinear plan with vestibule entrance and stairs

Character Defining Features

(missing or obscured)

Six-lite vestibule windows on all three sides and wood single-lite door

Unfinished logs and unpainted chinking with chinking stops

Regular fenestration pattern on all elevations (e.g. windows where infill has occured)

Shingle roof. Note this photo is from the power station at Flat Creek built by Benson in the 1920s., not the Benson Cabin

White painted window trim and white wood slider windows (without muntins)

Regular window pattern on south elevation kitchen wall.

SURVEY NOTES

TOPO SURVEY BY:
JORGENSEN
1315 HWY 89 S SUITE #201
JACKSON, WY 83002
(307) 733-5150

JORGENSEN NOTES:

1. THIS SURVEY WAS CONDUCTED IN OCTOBER 2020 AND PREPARED UNDER THE DIRECTION OF MATTHEW GOTHAM, WYOMING PLS 13002, AND DOES NOT INCLUDE AN ENGINEERING REVIEW.
2. LOCATIONS OF UTILITIES DEPICTED HEREON ARE LIMITED TO VISIBLE STRUCTURES; UNDERGROUND LOCATIONS WERE NOT MARKED DURING THIS SURVEY AND MUST BE VERIFIED PRIOR TO ANY CONSTRUCTION ACTIVITY.
3. ONLY MONUMENTS PERTINENT TO SUBJECT PROPERTIES (PARCELS ONE AND TWO, DEED 0992548) ARE DEPICTED.
4. ELEVATIONS WERE DERIVED USING GPS OBSERVATION METHODS AND REFERENCE NAVD29. SITE BENCHMARK ELEVATION IS 6273.09' AT THE SOUTHWEST PROPERTY CORNER.
5. RECORD DIMENSIONS SHOWN ARE FROM SAID DEED 0992548.
6. BASIS OF BEARING FOR THIS SURVEY IS A LOCALIZED GRID SYSTEM BASED ON JORGENSEN ASSOCIATES GPS NETWORK.

NOTES:

1. FOUNDATIONS SHALL BE REMOVED AND BACKFILLED. GRADES SHALL BE FLUSH WITH EXISTING GRADE WITHOUT SLOPES STEEPER THAN 2:1.
2. BACKFILL MATERIAL SHOULD BE APPROVED BY GEOTECH ENGINEER; FUTURE BUILDINGS AND DRIVING SURFACES WILL BE BUILT WITHIN BACKFILL AREA.

REQUIREMENTS FOR DEMOLITION PERMIT

1. A DISCONNECT LETTER FROM LOWER VALLEY ENERGY AND/OR OTHER UTILITY SUPPLIERS STATING REMOVAL OF GAS METER(S), AND DISCONNECT OF ELECTRIC SERVICE, PHONE SERVICE AND CABLE SERVICE AS REQUIRED.
2. FOR COMMERCIAL PROJECTS OR RESIDENTIAL PROJECTS IN HIGH DENSITY DEVELOPMENTS, A PLAN FOR SECURING THE SITE AND PEDESTRIAN PROTECTION MAY BE REQUIRED. NOTIFICATION OF ADJACENT LANDOWNERS AND/OR RESIDENTS BY THE PARTY DEMOLISHING THE BUILDING MAY BE REQUIRED.
3. A LETTER FROM AN INDIVIDUAL QUALIFIED TO ASSESS THE PRESENCE OF POTENTIALLY TOXIC MATERIALS IN THE STRUCTURE BEING DEMOLISHED (I.E. LEAD BASED PAINTS, INSECTICIDES, OIL BASED PAINTS, ETC.), THEIR REMOVAL AND SITE OF DISPOSAL MAY BE REQUIRED.
4. TEMPORARY SANITARY FACILITIES SHALL BE PROVIDED FOR WORKMAN ON SITE.
5. AN APPROVED FIRE EXTINGUISHER SHALL BE AVAILABLE AT TIMES DURING DEMOLITION. PRIOR TO SHIPMENT TO A FINAL DISPOSAL AREA, ALL DEBRIS SHALL BE SORTED. FAILURE TO SORT DEBRIS WILL RESULT IN HIGHER DISPOSAL COST TO THE CONTRACTOR AND OWNER. NO ON-SITE BURNING OR BURYING OF DEBRIS IS PERMITTED.
6. RECYCLABLE ITEMS AND CERTAIN HAZARDOUS WASTE PRODUCTS MAY BE DISPOSED OF AT THE JACKSON COMMUNITY RECYCLING CENTER. CONTACT THE RECYCLING CENTER TO DETERMINE WHAT HAZARDOUS PRODUCTS ARE ACCEPTED AND WHEN.
7. FINISHED MATERIALS IN GOOD REPAIR, SUCH AS TOILETS, SHOWER AND TUB VALVES, KITCHEN SINKS, HARDWARE AND DOORS MAY BE DONATED TO THE HABITAT FOR HUMANITY RESALE OUTLET, RESTORE. CONTACT THE STORE ABOUT OTHER ITEMS THEY MAY NEED.
8. OTHER MATERIALS, SUCH AS DRYWALL, INSULATION, TREATED LUMBER, PLUMBING WASTE AND VENT MATERIALS, ETC., SHOULD GO TO THE COUNTY LANDFILL TO BE TRANSFERRED TO A DISPOSAL FACILITY.
9. PRIOR TO TRANSPORTING DEMOLITION WASTE TO THE TRASH TRANSFER STATION, CALL THE TETON COUNTY INTEGRATED SOLID WASTE AND RECYCLING (ISWR) 48 HOURS IN ADVANCE TO REQUEST A DROP-OFF. ISWR MAY REQUIRE A RECEIPT OF ASBESTOS ABATEMENT PAPERWORK FROM CONTRACTORS DELIVERING LARGE VOLUMES OF DEMOLITION WASTE. PLEASE CALL THE SCALE HOUSE, 733-7172, 48 HOURS IN ADVANCE TO SCHEDULE A DROP-OFF FOR ALL LOADS.

APPROVED FOR BUILDING CONSTRUCTION. ANY DEVIATIONS FROM APPROVED PLANS ARE SUBJECT TO PRIOR APPROVAL. APPROVAL OF THESE PLANS DOES NOT RELIEVE THE DESIGN PROFESSIONAL, GENERAL CONTRACTOR, OR SUBCONTRACTORS OF RESPONSIBILITY FOR COMPLIANCE WITH STATE AND LOCAL CONSTRUCTION LAWS. AN APPROVED SET OF THESE PLANS IS TO BE AVAILABLE ON THE JOB SITE FOR USE BY INSPECTORS.IF SUCH PLANS ARE NOT AVAILABLE ON SITE, ANY INSPECTION MAY BE CANCELLED AND A REINSPECTION CHARGE LEVIED PRIOR TO THE INSPECTION BEING PERFORMED.
PERMIT NO: B22-0081
DATE: 1/16/2022
BUILDING OFFICIAL: KS

PLAN NOTES

1. ALL MEASUREMENTS OFF OF LOG WALLS ARE TAKEN AS AN AVERAGE. LOGS VARY FROM 7" TO 9" IN DIAMETER. THE LOGS ARE HAND-HEWN THEREFORE THE SURFACE IS NOT CONSISTENT.
2. LOG BEAM VARY FROM 8" TO 9" IN DIAMETER AND HAVE A NATURAL TAPER FROM ONE END TO THE OTHER END.
3. THE ASSUMPTION OF 5/ 8" DRYWALL ON THE WALLS
4. NO DIMENSIONS SHOULD BE IMPLIED OR MEASURED FROM THIS PLAN UNLESS THE DIMENSION IS SPECIFICALLY CALLED OUT ON THE PLAN.
5. PLANS ARE ONLY REPRESENTATIVE OF THE EXISTING BUILDING NOT TO BE USED FOR MEASUREMENTS - ALL DIMENSIONS NEED TO BE FIELD VERIFIED

ALL DIMENSIONS MUST BE FIELD VERIFIED

STRUCTURAL DRAWING NOTES

BROWN FOUNDATION

I. GENERAL APPLICATION
A. These drawings must be used in conjunction with the architectural drawings to clearly define the requirements for construction.

B. Do not scale drawings.

C. In the opinion of the Contractor, any items that appear to be deficiencies, omissions, contradictions or ambiguities in the drawings, should be brought to the attention of the Architect and/or G&S Structural Engineers.

II. CODES AND SPECIFICATIONS **(see attached 1/17/22 letter from G&S Structural Engineers on adherence to 2021 IBC)**
A. International Building Code (IBC) - 2018 Edition

III. DESIGN CRITERIA
A. Wind — 3 Second Gust Wind Speed = 115 MPH (Ultimate) / 89 MPH (Nominal)
Exposure = B
Risk Category II
Enclosure Classification = Enclosed
Components and Cladding Pressure = 15 psf

B. Seismic
Ss = 1.21.1%g — Sds = 0.82g
S1 = 36.5%g — Sd1 = 0.47g
Risk Category = II — Ie = 1.00
Site Class = D — Seismic Design Category = D
R = 6.5 — V = Cs W = 0.126W
Light Frame Bearing Walls With Wood Shear Panel System Equivalent Lateral Force Analysis Method
Percentage of roof snow used for design = 20%

C. Live Loads per IBC Sec. 1607 — Uniform (psf)
1. Ground snow: Pg — 110
2. Roof
a. Snow Load: Pf — 75
1. Is = 1.0
II. Ce = 1.0
III. Ct = 1.0
b. Live Load — 20
3. Floors — 40
4. Interior wall lateral pressure — 5

D. Dead Loads — Uniform (psf)
1. Framing system — 15 (Roof) / 15 (All Floors)

E. Design Assumptions
1. Soil bearing pressure used is 5000 psf for columns and wall footings as per the 445 E Kelly soils report, by Nelson Engineering dated 12/17/21. Any variation encountered, different from this report, shall be brought to the attention of G&S Structural Engineers before proceeding.

F. Allowable Stresses (unless otherwise noted)
1. Concrete (Reference ACI 318-14, section 19.3-Concrete Durability Requirements)
a. Footings (and interior foundation walls)
I. Per ACI Table 19.3.1.1 - F0,S0,W0,C1
II. Minimum f'c @ 28 days — 3000 psi
III. W/C ratio — 0.55 max
IV. Slump limit — 4 - 8 inches with verified max slump of 3" before admixtures, (± 1")
V. Air entrainmentv. — 3% (± 1%) Total air content
b. Exterior/perimeter foundation walls
I. Per ACI Table 19.3.1.1 - F1,S0,W0,C1
II. Minimum f'c @ 28 days — 3500 psi
III. W/C ratio — 0.55 max
IV. Slump limit — 4 - 8 inches with verified max slump of 4" before admixtures, (± 1")
V. Air entrainment — 6% (± 1%) Total air content
2. Reinforcing steel
a. Typical — ASTM A615 Grade 60

IV. SPECIAL INSPECTION
A. The Owner or the Owner's Agent shall employ Independent Special Inspector(s) to perform the following duties. Each Special Inspector shall submit qualifications showing competency to the Building Official for approval prior to specified duties. All special inspection is to comply with IBC Chapter 17.
1. Duties and Responsibilities of the Special Inspector:
a. The Special Inspector shall observe the work assigned to be certain it conforms to the approved contract drawings.
b. The Special Inspector shall furnish inspection reports to the Building Official and to the Architect of Record. All discrepancies shall be brought to the immediate attention of the Contractor for correction.
2. Concrete:
a. No special inspection is required based upon the exceptions listed in IBC Section 1705.3.
3. Concrete and Masonry Anchors:
a. Drilled in adhesive (epoxy) and mechanical anchors:
I. Special inspection of drilled in anchors as per ICC Evaluation Services Report and/or as required by the building department.
4. Structural Backfill:
a. Periodic inspection of backfilled soil under concrete footings per the compaction requirements in the Geotechnical Engineering Report or note E in Section V.

V. GENERAL STRUCTURAL NOTES
A. All footings shall bear on undisturbed soil or rock. The foundation shall bear on the same soil type throughout the entire structure. A minimum distance of 3'-0" shall be maintained from finished grade to the bottom of all concrete footings.

B. Caution shall be taken not to undermine existing footings.

C. Contractor shall verify all dimensions in the field; any variation from the drawings shall be brought to the attention of the Architect. Any proposed field changes shall have prior approval from the Architect.

D. Adequate shoring and bracing of all structural members during construction shall be provided.

E. Backfill under slabs and footings shall be with approved material. Unless noted otherwise in a Geotechnical Engineering Report place fill in 8" maximum loose lifts and compact to 95% maximum dry density in accordance with ASTM D1557.

VI. CONCRETE
A. Unless otherwise noted, all concrete is to be made with Portland Cement - ASTM C150 with a maximum aggregate size less than or equal to one inch.

B. Concrete shall be of ready mix type conforming to ASTM C94.

C. When the average daily temperature is expected to drop below 40° F for 3 or more successive days, the concrete shall comply with the Cold Weather Concreting Standard (ACI 306). Place no concrete against frozen earth.

D. All vertical reinforcement in piers and walls shall be doweled from the footing or structure below with rebar of the same size and spacing as required above. All footing dowels shall have at least 40 diameters embedment into concrete above and shall have a 6" hook in footing below unless specified otherwise.

E. Provide corner bars at all intersecting corners. Use same bar size and spacing as horizontal wall reinforcement. Where horizontal reinforcing bars join concrete columns the reinforcing shall run continuous through columns. Where continuous horizontal reinforcement terminates, use a 90° return or separate corner bar.

F. Splices of reinforcement at points of maximum stress shall be avoided. All longitudinal reinforcement in beams and headers shall be continuous without splices between supports. Minimum overlap for lapped splices shall be as follows:
#4 - 24"

G. Reinforce all concrete walls as shown on the Concrete Wall Schedule.

H. All exterior vertical concrete surfaces below finished grade, where in contact with earth, shall be protected with an asphaltic coating.

I. No aluminum products shall be embedded in the concrete.

J. All construction joints shall be located so as not to impair the strength of the structure. Unless noted on the drawings, all reinforcement shall be continuous through the joints. Each construction joint shall be keyed.

VII. REINFORCING STEEL
A. Welding or tack welding of reinforcing bars to other bars, plates, angles, etc. is prohibited unless ASTM A706 (weldable) rebar is utilized.

B. All detailing, fabrication and placing of reinforcing bars shall conform to the ACI Manual of Standard Practice for Detailing Reinforcing Concrete Structures (ACI 315).

C. Reinforcement shall be accurately placed as indicated on the drawings and adequately supported to prevent displacement before concrete or masonry grout is placed.

D. The following minimum concrete cover for reinforcement shall be provided, unless otherwise noted.
Cast against and permanently exposed to earth.....3"
Exposed to earth or weather - #5 and smaller... 1-1/2"

VIII. TIMBER
A. All wood and timber construction that is part of this project shall comply with the Timber Construction Manual of the AITC. Other members with equivalent size and strength can be substituted only if documentation is provided to substantiate capacity of new product. All wood framing members shall have a moisture content less than 19% unless otherwise noted.

B. Notching of any structural member other than that shown on the drawings is prohibited. See Detail 2/S1.1 for Allowable Penetration in Light Framed 2x Lumber.

C. There shall be at least two nails at each contact point, with 8d thru 1" material, 16d thru 2" material and 40-60d thru 3" material.

D. Wherever possible nails should be driven perpendicular to the grain instead of toe nailed.

E. All wood materials in direct contact with concrete or masonry or within 6" of soil shall be pressure treated wood or wood of natural resistance to decay. When wood joists are located closer than 18" or wood beams are located closer than 12" to exposed soil, the wood framing shall be pressure treated wood or wood of natural resistance to decay.

F. Where wood tends to split, holes for nails shall be bored a diameter smaller than that of the nails.

G. All wood connection hardware shown on plans is based upon Simpson Strong Tie products. Equivalent hardware may be used upon approval of the Architect. All hangers are to match the width and depth of framing members with correct slope and skew where applicable. Fill all nail holes unless otherwise noted. All Simpson connectors in exterior applications or in contact with pressure treated wood shall have a corrosion resistant coating. The coating type shall be determined by referencing the "General Corrosion Information" website at "www.strongtie.com/info" and the "Corrosion Resistance Recommendations and Classifications" section.

H. See the Nailing Schedule for the typical wood to wood fastening requirements of the structural components.

NAILING SCHEDULE

All nails in this schedule are based upon IBC Table 2304.10.1 and Truss Joist specifier's guide. See the IBC table or engineered "I" Joist manufacture for additional options and requirements. All fasteners exposed to weather or moisture and/or fasteners less than 1/2"ø driven into pressure treated lumber shall be stainless steel or galvanized. Other nails with proper revised spacing may be used with written approval of the engineer.

CONNECTION	FASTENING
2x Floor Joists to bearing plate	3-10d box (0.128"x3") toenail
2x Rim Joist with 2x Floor Joists	4-10d box (0.128"x3") end nail from rim to each joist & 10d box (0.128"x3") toenail to plate below @ 6" o.c.
2x Roof Joists to top plate	4-10d box (0.128"x3") toenail or 3-16d box (0.135"x3.5") toenail
Blocking between 2x joists	3-10d box (0.128"x3") toenail to joist or truss & 10d box (0.128"x3") toenail to plate below @ 6" o.c.
Double Top Plates	
Lower plate to top of stud	2-16d common (0.162"x3.5") end nails or 3-10d box (0.128"x3") end nails

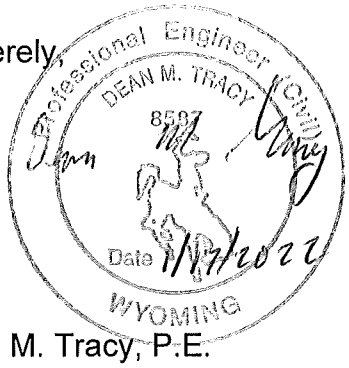
Re: Brown Residence and Foundation
445 E. Kelly Avenue
Jackson, Wyoming

Dear Cornelius,

It has been brought to my attention that the above referenced projects will be permitted under the 2021 IBC instead of the 2018 IBC. The new building code will have no negative affect on design submitted under the 2018 IBC. Attached is the lateral design for the building under the 2021 IBC which is the same as the 2018 IBC, pages 1.1-1.8.

Please call if you have any questions or if I can be of further assistance.

Sincerely,



Dean M. Tracy, P.E.

Enclosure Classification

Test for Enclosed Building: Ao < 0.01Ag or 4 sf, whichever is smaller

Test for Open Building: All walls are at least 80% open.
Ao ≥ 0.8Ag

Test for Partially Enclosed Building: Predominately open on one side only

	Input			Test	
Ao	500.0	sf	Ao ≥ 1.1Aoi	NO	
Ag	600.0	sf	Ao > 4' or 0.01Ag	YES	
Aoi	1000.0	sf	Aoi / Agi ≤ 0.20	YES	Building is NOT Partially Enclosed
Agi	10000.0	sf			

Conditions to qualify as Partially Enclosed Building. Must satisfy all of the following:
Ao ≥ 1.1Aoi
Ao > smaller of 4' or 0.01 Ag
Aoi / Agi ≤ 0.20
Where:
Ao = the total area of openings in a wall that receives positive external pressure.
Ag = the gross area of that wall in which Ao is identified.
Aoi = the sum of the areas of openings in the building envelope (walls and roof) not including Ao.
Agi = the sum of the gross surface areas of the building envelope (walls and roof) not including Ag.

Test for Partially Open Building: A building that does not qualify as open, enclosed or partially enclosed.
(This type building will have same wind pressures as an enclosed building.

Reduction Factor for large volume partially enclosed buildings (Ri) :

If the partially enclosed building contains a single room that is unpartitioned , the internal pressure coefficient may be multiplied by the reduction factor Ri.

Total area of all wall & roof openings (Aog): 0 sf
Unpartitioned internal volume (Vi) : 0 cf
Ri = 1.00

Ground Elevation Factor (Ke)

Grd level above sea level = 0.0 ft
Constant = 0.00256 Adj Constant = 0.00256
Ke = 1.0000

This section FAILS the design check

WARNING: This section violates the following design criteria: Bending and deflection

Analysis vs. Allowable Stress (psi) and Deflection (in) using NDS 2012 :

Criterion	Analysis Value	Design Value	Analysis/Design
Shear	fv = 93	Fv' = 207	fv/Fv' = 0.45
Bending(+)	fb = 2470	Fb' = 1547	fb/Fb' = 1.60
Live Defl'n	0.85 = L/158	0.56 = L/240	1.51
Total Defl'n	1.16 = L/116	0.75 = L/180	1.55

Additional Data:

FACTORS:	F/E(psi)	CD	CM	Ct	CL	CF	Cfu	Cr	Cfrt	Ci	Cn	LC#
Fv'	180	1.15	1.00	1.00	-	-	-	-	1.00	1.00	1.00	2
Fb'+	900	1.15	1.00	1.00	1.000	1.300	1.00	1.15	1.00	1.00	-	2
Fcp'	625	-	1.00	1.00	-	-	-	-	1.00	1.00	-	-
E'	1.6 million		1.00	1.00	-	-	-	-	1.00	1.00	-	2
Emin'	0.58 million		1.00	1.00	-	-	-	-	1.00	1.00	-	2

CRITICAL LOAD COMBINATIONS:
Shear : LC #2 = D+S, V = 557, V design = 509 lbs
Bending(+): LC #2 = D+S, M = 1557 lbs-ft
Deflection: LC #2 = D+S (live)
LC #2 = D+S (total)
D=dead L=live S=snow W=wind I=impact Lr=roof live Lc=concentrated E=earthquake
All LC's are listed in the Analysis output
Load combinations: ASCE 7-10 / IBC 2012

CALCULATIONS:
Deflection: EI = 33e06 lb-in2
"Live" deflection = Deflection from all non-dead loads (live, wind, snow…)
Total Deflection = 1.50(Dead Load Deflection) + Live Load Deflection.
Bearing: Allowable bearing at an angle F'theta calculated for each support as per NDS 3.10.3

Design Notes:
1. WoodWorks analysis and design are in accordance with the ICC International Building Code (IBC 2012), the National Design Specification (NDS 2012), and NDS Design Supplement.
2. Please verify that the default deflection limits are appropriate for your application.
3. Sawn lumber bending members shall be laterally supported according to the provisions of NDS Clause 4.4.1.
4. SLOPED BEAMS: level bearing is required for all sloped beams.
5. FIRE RATING: Joists, wall studs, and multi-ply members are not rated for fire endurance.

Deflection: LC #2 = D+S (live)
LC #2 = D+S (total)
D=dead L=live S=snow W=wind I=impact Lr=roof live Lc=concentrated E=earthquake
All LC's are listed in the Analysis output
Load combinations: ASCE 7-10 / IBC 2012
CALCULATIONS:
Deflection: EI = 4483e06 lb-in2
"Live" deflection = Deflection from all non-dead loads (live, wind, snow...)
Total Deflection = 1.50(Dead Load Deflection) + Live Load Deflection.

Design Notes:
1. WoodWorks analysis and design are in accordance with the ICC International Building Code (IBC 2012), the National Design Specification (NDS 2012), and NDS Design Supplement.
2. Please verify that the default deflection limits are appropriate for your application.
3. Glulam design values are for materials conforming to ANSI 117-2010 and manufactured in accordance with ANSI A190.1-2007
4. Grades with equal bending capacity in the top and bottom edges of the beam cross-section are recommended for continuous beams.
5. GLULAM: bxd = actual breadth x actual depth.
6. Glulam Beams shall be laterally supported according to the provisions of NDS Clause 3.3.3.
7. GLULAM: bearing length based on smaller of Fcp(tension), Fcp(comp'n).

Re: Brown Residence
445 E. Kelly Avenue
Jackson, Wyoming

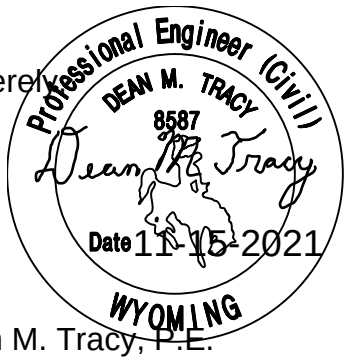
Dear Cornelius,

On the 11th of this month I had the opportunity to meet with you at the above referenced residence. The purpose of my visit was to determine the snow load capacity of the existing roof structure. The following is a brief overview of my observations and conclusions.

The roof is framed with 2x6 (1.75x5.75 actual) roof joists (top chord) at 16" on center with 2x6 ceiling joists (bottom chord) and a 2x6 ridge board. The framing members are attached to form site built wood trusses. Based upon the framing member sizes, the roof can support an allowable design snow load of 30 pounds per square foot (psf). The heel of the truss was not visible. The connections are often the point of failure. The capacity of the truss may be less than what is stated based upon the connections. The current building code in Jackson requires new construction to be designed for an allowable roof snow load of 75 psf.

G&S did not review or any other aspects of the house not stated above and does not claim responsibility for any other structural items, nor any mechanical, electrical, or architectural features. Due to the limited scope that G&S Structural Engineers had in this project, our limit of liability in this project is fees rendered. Please call if you have any questions or if I can be of further assistance.

Sincerely,



Dean M. Tracy, P.E.

Parapet

Windward parapet = 0.0 psf (GCpn = +1.5)
Leeward parapet = 0.0 psf (GCpn = -1.0)

Windward roof overhangs = 14.1 psf (upward) add to windward roof pressure

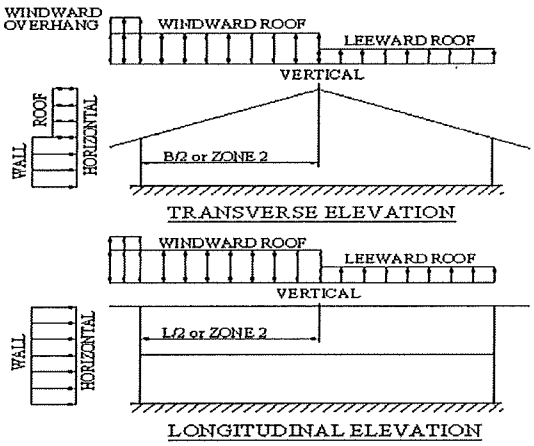
Horizontal MWFRS Simple Diaphragm Pressures (psf)

Transverse direction (normal to L)

Interior Zone: Wall 19.0 psf
Roof 7.0 psf
End Zone: Wall 25.5 psf
Roof 8.0 psf

Longitudinal direction (parallel to L)

Interior Zone: Wall 13.9 psf
End Zone: Wall 21.0 psf



The code requires the MWFRS be designed for a min ultimate force of 16 psf multiplied by the wall area plus an 8 psf force applied to the vertical projection of the roof.

Permits expire if work not commenced within 180 days or ceases more than 180 days.
The Town of Jackson is not responsible to review the applicability of plat covenants to this permit.
Compliance with plat covenants is the sole responsibility of the applicant/owner.
Separate permits are required for plumbing, mechanical and electrical work.
Separate Public Works permits are required for construction within right-of-way and/or easement.
Deviations from approved plans must be submitted for review and approval.
Final approval by the Building Official is required before occupancy.

(2/3/2022 12:32 PM GOSS)
TO: Kelly Bowlin, Development Coordinator
FROM: Butch Gosselin, Chief Electrical Inspector
DATE: February 3, 2022
SUBJECT: Moving existing dwelling to new location/Brown Res
445 E Kelly
B22-0081

This office has reviewed and accepted with comments the electrical, plans for the SFD occupancy at above address in Jackson WY for. Please see the specific and general comments:
Specific comments:
1) NEC 2020 shall be followed. A permit is required for all new wiring.
2) Moving a SFD to a new location, even on same property requires that building to be brought up to the latest NEC which is the 2020 version, even if it is historic.
3) No plan review required unless it is under the IBC

See All General Comments:

1. Listed or labeled equipment shall be installed and used in accordance with any instructions included in the listing or labeling. Art. 110.3(B)

2. Ground fault protection for personnel for all temporary wiring installations shall be provided to comply with Article 590. This section shall apply only to temporary wiring installations used to supply temporary power to equipment used by personnel during construction, remodeling, maintenance, repair, or demolition of buildings, structures, equipment, or similar activities. If a receptacle(s) is installed or exists as part of the permanent wiring of the building or structure and used for temporary electric power, ground-fault circuit-interrupter (GFCI) protection for personnel shall be provided. NEC 590.6.

Wyoming Statue 35-9-120(a) Establishes the National Electrical Code as the minimum standard for the installation of electric equipment in or on buildings, Mobile homes, and premises. The 2017 National Electrical Code as adopted and published by the National Fire Protection Association. The Town of Jackson and Teton County has adopted the following amendments:

A. Article 230, Services, SECTION VI, Service Equipment – Disconnecting Means, SUBSECTION 230.7, (A), (1) Readily Accessible Location
The service disconnecting means of all services over 200 amperes in size shall be installed outside of the building or structure at a readily accessible location nearest the point of entrance of the service location. Feeders to other buildings or structures will require a disconnect on the exterior.

B. Article 250, Grounding, Section III, Grounding Electrode System and Grounding Electrode Conductor, SUBSECTION 250.52, (A), (3) Concrete Encased Electrode
All services over 200 amperes in size shall have at least 20 ft in length of bare copper conductor sized in accordance with Table 250-66 installed in the foundation footers and with enough length added to connect in the main disconnect.
C. Article 300, Wiring Methods, SECTION I, General Requirements, SUBSECTION 300.1, Scope, SUBSECTION (A) All Wiring Installations
All electrical wiring installed in buildings, structures or premises designed using the International Building Code located in the Town of
Jackson and Teton County shall be installed in accordance with the following wiring methods:
1. Article 320, Armored Cable: Type AC
2. Article 330, Metal-Clad Cable: Type MC
3. Article 332, Mineral-Insulated, Metal-Sheathed Cable: Type MI
4. Article 342, Intermediate Metal-Conduit: Type IMC
5. Article 344, Rigid Metal Conduit, Type RMC
6. Article 348, Flexible Metal Conduit, Type FMC
7. Article 350, Liquid-tight Flexible Metal Conduit; Type LFMC
8. Article358, Electrical Metallic Tubing: Type EMT
All electrical work, including low voltage wiring requires an electrical permit and shall be performed by Wyoming licensed contractors

Type / Contact	Status	Dates Sent	Due	Received	Elapsed	Remarks and Notes Below

using Wyoming licensed electricians and/or technicians.
Field inspections of the electrical system of this facility at a later date may lead to mandatory correction of any NEC violations, including the items listed above.

Please feel free to contact me if you have any further questions at bgosselin@tetoncountywy.gov.

PLANNING	APPROVED	1/27/22	2/17/22	2/1/22	5

Tyler Valentine
(2/1/2022 9:28 AM TV)
The historic Benson Home was designated as a historically signifigant structure in 2021. Later it received approval of a Administrative Adjustment to reduce the side setback from 10' to 5' and reduce the front setback from 20' to 15'.

BUILDING	APPROVED V	1/27/22	2/17/22	1/31/22	4

Kelly Sluder
(1/31/2022 9:10 AM KS)
1. There will not be any sewer or water to this structure.
2. Structure can only be used as a utility shed, or storage unit. Need to change plans to reflect the new occupancy of a U or S Occupancy.
3. If in the future, the building will require a change of use building permit from an architect and contection to water sewer.

COMMERCIAL BUILDING PERMIT APPLICATION

Building and Planning Department
P.O. Box 1687
Jackson, Wyoming 83001
307.733.0520 or 307.733.0440
www.townofjackson.com

This application form is for commercial and multi-family buildings only. If you wish to construct a one or two family residential dwelling, please use the residential application form. Separate permits are required for plumbing, mechanical, and electrical.

SITE LOCATION STREET ADDRESS 445 East Kelly Avenue

CLASS OF WORK: New ☐ **Addition** ☐ **Alteration** ☑ **Repair** ☐

PROPOSED USE/DESCRIPTION OF WORK: Describe the proposed use & work to be completed (i.e. retail, office, dwelling unit)

Move existing building to new location and foundation for immediate use as non-habitable Utility (storage shed). Building will not be occupied and any future change of use for human occupancy will be preceded by the required building permits and improvements.

Section 34 **Township** 41 **Range** 116 **Parcel** PT SE1/4NW1/4

ZONING DISTRICT NL-5 **ZONING OVERLAY DISTRICT** n/a

BUILDING DESIGN CRITERIA AND PLAN INFORMATION

All buildings are to be designed to the requirements of the 2018 International Building Code. The design criteria (Seismic Zone D, 75lbs psf Roof Snow Load, 90 mph/3 second gust Wind Load) information should be shown on the submitted plans. Plans must be drawn on 24 X 36 inch paper, to a ¼ inch scale (except for details) with dimensions. Each page shall bear a title block (with name of the owner and the building address), a scale, and a north arrow. On building elevations, the building height shall be shown and dimensioned.

IMPERVIOUS SURFACES: Impervious surfaces shall include buildings and roofed areas (eaves that overhang landscaped surfaces are excluded), paved and/or unpaved parking areas, solid terraces and other similar improvements.

Square footage of existing roofed areas	852	**square feet**	(852 sf of existing
Square footage of proposed roofed areas, including covered porches	0	**square feet**	structure will be
Paved, concrete, or unpaved driveways and parking areas	3,180	**square feet**	retained and moved;
Other impervious surfaces such as solid terraces and paved sidewalks	0	**square feet**	remainder to be demo'd
TOTAL	4,032	**square feet**	per B21-905; no new sf to be added)

GROSS SITE AREA 47,044.8 **square feet.**

NET SITE AREA: Net site area is the gross site area less all land within road rights of way or access easements.
47,044.8 **square feet or** 1.08 **acres**

Landscaping provided on site 43,012.8 **square feet** (= inverse of impervious surface total; landscape plan to be included in forthcoming BP for redevelopment of remainder of site)

PARKING: Provide the location and dimension of all parking spaces on the site plan.

GRADING: There is a separate application for this. Grading and Erosion Control Statement will be required for:

a. **Slopes of 0-5%, if area disturbed is at least 8000 square feet but less than one acre.**
b. **Slopes of greater than 5-15%, if area disturbed is at least 1000 square feet but less than one acre.**
c. **Slopes greater than 15%, if area disturbed is 3000 square feet or less.**

Grading and Erosion Control Plan prepared by a registered Wyoming professional engineer will be required for:

a. **Slopes of 0-5%, if area disturbed is one acre or larger.**
b. **Slopes greater than 5% to 15% if area disturbed is one acre or larger.**
c. **Slopes of greater than 15% if area disturbed is greater than 3000 square feet.**

PROPOSED ACCESS: If proposed construction site is accessed by a State or County road, not within the jurisdictional authority of the Town of Jackson, an approved road access permit must accompany this application. Please contact:

Wyoming Department of Transportation
1040 E. Evans Lane, Jackson 733-3665

Teton County Road Department
3190 S. Adams Canyon Dr., Jackson 733-7190

FLOOD PLAIN

Is the site or structure located in a flood plain or in close proximity to Cache Creek, Spring Creek, or Flat Creek?
Yes ☑ **No** ☐ It is located near the old location of Cache Creek but it is not located in a mapped FEMA floodway
Please be advised that development with the flood way is prohibited. If you are unsure if your site is located within the 100-year floodplain, please contact the Floodplain Administrator. Buildings located within the 100 year floodplain are required to provide an elevation certificate (FEMA Form No. 3067-0077) proving the first floor of the structure is elevated one foot above the base flood elevation. For additions or alterations to an existing structure, provide an elevation certificate for the first floor of the existing structure.

CERTIFICATE OF PLACEMENT: A Certificate of Placement will be required for all new construction and must be completed by a Wyoming licensed land surveyor.

SETBACKS

Setbacks of proposed structure from property and easement lines, streams, ponds, wetlands, and ditches. Clearly show any of these features on your site plan.

Street 15'* **Rear** 159' **Left Side** 55' **Right Side** 5'* **Alleys** n/a
Streams n/a **Ponds** n/a **Ditches** 50' **Wetlands** n/a

*Admin Adjustment for historical structure (P21-327)

HEIGHT OF STRUCTURE 16'-9-1/2" **The height of a building or structure is the vertical dimension measured from any point on the exterior of the building or structure to the nearest point of finished grade. For purposes of measuring height, finished grade shall mean the grade directly adjacent to the structure, which has been set through an approved grading and/or drainage plan. The term "finished grade" may also mean natural grade when no terrain alteration is proposed, or where otherwise applicable. Fill which is not necessary to achieve positive drainage or slope stabilization, or which is otherwise proposed clearly to raise the finished floor elevations(s) for any other purpose, shall not be considered finished grade. The vertical dimension from the highest point of the structure to the lowest point of finished grade, as viewed on any structure face or elevation, shall not exceed 110 percent of the maximum height allowed. No part of any structure may exceed the maximum structural height except for the following:**

1. **Chimneys, vents, and roof-top mechanical equipment such HVAC systems, provided that the maximum height is not exceeded by more than four (4) feet; and/or**
2. **Antenna used for the reception of television broadcast signals.**

GROSS SQUARE FOOTAGE TABULATION

	Existing	Proposed
1st Floor	849 sf	849 sf (no new sf proposed; relocation of existing)
2nd Floor	0	0
3rd Floor	0	0
Basement	0	0
Garage	0	0

FIRE SPRINKLER: The Town of Jackson requires all structures in excess of 5000 square feet to be fire sprinklered.

UTILITIES: Provide the location of all utilities on the site plan or utility plan to include any work in the public right of way or public easements.

WATER METER SIZE(S): ¾-inch ☐ **1-inch** ☐ **1 ½-inch** ☐ **2-inch** ☐ **3-inch** ☐ n/a, no water or sewer connection to this structure.

ESTIMATED COST OF CONSTRUCTION (required) $300,000

BUILDING PLANS:
Please submit building plans and corresponding documents electronically to townbuilding@jacksonwy.gov. If there is food service provide a set to the Teton County Health Department for review. Plans shall at a minimum include a site plan, landscape plan (Stamped by a landscape Architect licensed in Wyoming), foundation plan, floor plan, framing plan, building elevations, plumbing plan and/or mechanical plan. All structural plans of the building are required to be designed and stamped by an Engineer licensed in the State of Wyoming.
CERTFICATE OF OCCUPANCY IS REQUIRED. Before occupying the building, a Certificate of Occupancy must be issued by the Building Department. Persons occupying a structure prior to issuance of the Certificate of Occupancy are subject to fines under the Town of Jackson Municipal Code.

APPLICANTS' SIGNATURE, CERTIFICATION AND AUTHORIZATION: Under penalty of perjury, I hereby certify that I have read this application and state that the information herein is correct and swear that any information which may be given by me shall be truthful and correct. I agree to comply with all city regulations and state laws relating to the subject matter of this application and hereby authorize representatives of the Town of Jackson to enter upon the above-mentioned property for inspection purposes.

Kristi Malone — **Signature of Applicant**
Kristi Malone — **Print Name**
1/24/2022 — **Date**

Notice: The review and approval of a Building Permit by the Town of Jackson is not an endorsement or approval under other applicable review or regulations specific to the subject parcel or building. The Town of Jackson encourages the applicant to contact all other applicable reviewing agencies or associations at the same time or prior to submitting an application for a Building Permit.

APPLICANT'S GUIDE TO SUBMITTAL MATERIALS

Please submit building plans and corresponding documents electronically to townbuilding@jacksonwy.gov . Plans must be, ¼" = 1' scale *(except for details, which may be shown at a larger scale)*. All pages shall be on 24 X 36 inch paper. For other plan sizes please contact the Building Department. Each drawing shall bear a Title, a Scale, and North Arrow, as appropriate. On building elevations, the building height shall be shown and dimensioned. **Plans for alterations and repairs may deviate from these requirements with approval from the Building Official.**

445 E Kelly (Brown Property) Project Narrative

This overall project will propose redevelopment of the entire 1.08 acre site but will be permitted and constructed in phases taking place over the next year. At this time, physical development permits are sought for Phase 1 which constitutes site preparation.

PHASE 1: Site Preparation

- **Demo Permit** for extraneous structures and non-historic components of Brown cabin (B21-905 approved 12/29/21)
- **Administrative Adjustment** to front and east side building setbacks for Brown cabin relocation (P21-327 – submitted, waiting on approval)
- **THIS APPLICATION: Building Permit** for relocation of the Brown cabin to preserve the existing historic structure but make room for redevelopment of the rest of the site. Immediate use of this cabin will be as storage/shed so the use classification for this application is listed as Utility. No residential use or human occupancy of the building is proposed at this time. Grading for this permit is limited to preparation for a new foundation and infill of the portion of Cache Creek between the current building site and the proposed building site.
- **Grading Permit** for relocation of Cache Creek (to be submitted ASAP)

PHASE 2: Site Redevelopment

- **Building Permits** for construction of six multi-unit residential buildings, including grading for horizontal infrastructure. A phasing plan will be submitted with the first Building Permit to coordinate efficient construction.
- **Building Permit** for Brown cabin/shed. At this time, Parks & Rec has interest in future use of the relocated cabin. Prior to any change of use, human occupancy, or use other than a storage shed, a Building Permit will be obtained and finaled with issuance of a certificate of occupancy.

Town of Jackson Building Permit: Exterior Lighting Submittal Requirements

(For Commercial and Residential)

Address: 445 E Kelly

In addition to completing the tables below, you will need to submit **manufacturers' product specification sheets** for all proposed outdoor lighting and a **lighting plan showing the location and height of all proposed exterior lighting**. Commercial applications shall include description of adaptive controls and plan for lighting reduction. Complex uses may require additional information.

Proposed Lighting:					
Fixture Model or Description	**No. of Fixtures**	**Shielded (Y/N)**	**Light Color (Kelvin)**	**Max Lumen per Fixture**	**Lumens Total**
Ex: Cornice P5634 sconce	*3*	*Y*	*3000*	*623*	*1869*
n/a - no new proposed lighting					

Existing Exterior Lighting (complete to the best of your knowledge):					
Fixture Description	**No. of Fixtures**	**Shielded (Y/N)**	**Light Color (Kelvin)**	**Max Lumen per Fixture**	**Lumens Total**
n/a - no existing retained					
				Lumen Total (Existing & Proposed)	

**If you need additional space to detail your exterior lighting fixtures, please submit on a separate page*

Is your exterior lighting contained entirely on your property? **Yes** ☐ **No** ☐

Exterior Lighting Requirements (Sec. 5.3.1 of the Land Development Regulations)

✓ **Shielding**. All lights over 600 lumen must be shielded so that light is directed downward (see picture on reverse side). A lumen measures the brightness of a light and is indicated on lighting packaging. A standard 60 watt light bulb is roughly 800 lumens.

✓ **Illumination per sq ft limits.** Illumination is limited by how much existing or proposed impervious surface (pavement, building footprint, decks, gravel, etc) you have on your property.

Zone	Lumens/sq ft	Example
TS, UC, UC-2, UR, AC-ToJ, AR-ToJ, OP-ToJ, OP-2, BP-R, BP-ToJ, BC-ToJ, RB, MHP-ToJ, NC-2, P/SP-ToJ, P-ToJ	3	A commercial property with 32,395 sq ft of impervious surface is allowed 97,185 lumens (32,395 X 3)
R-ToJ, S-ToJ, NC-ToJ, RB	1.5	A property with 5,500 sq ft of impervious surface is allowed 8,250 lumens (1.5 X 5,500)

✓ **Light Color.** All lights must be equal to or below 3000 K. Correlated color temperature refers to the 'color' of the light emitted. It is indicated on lighting packaging.

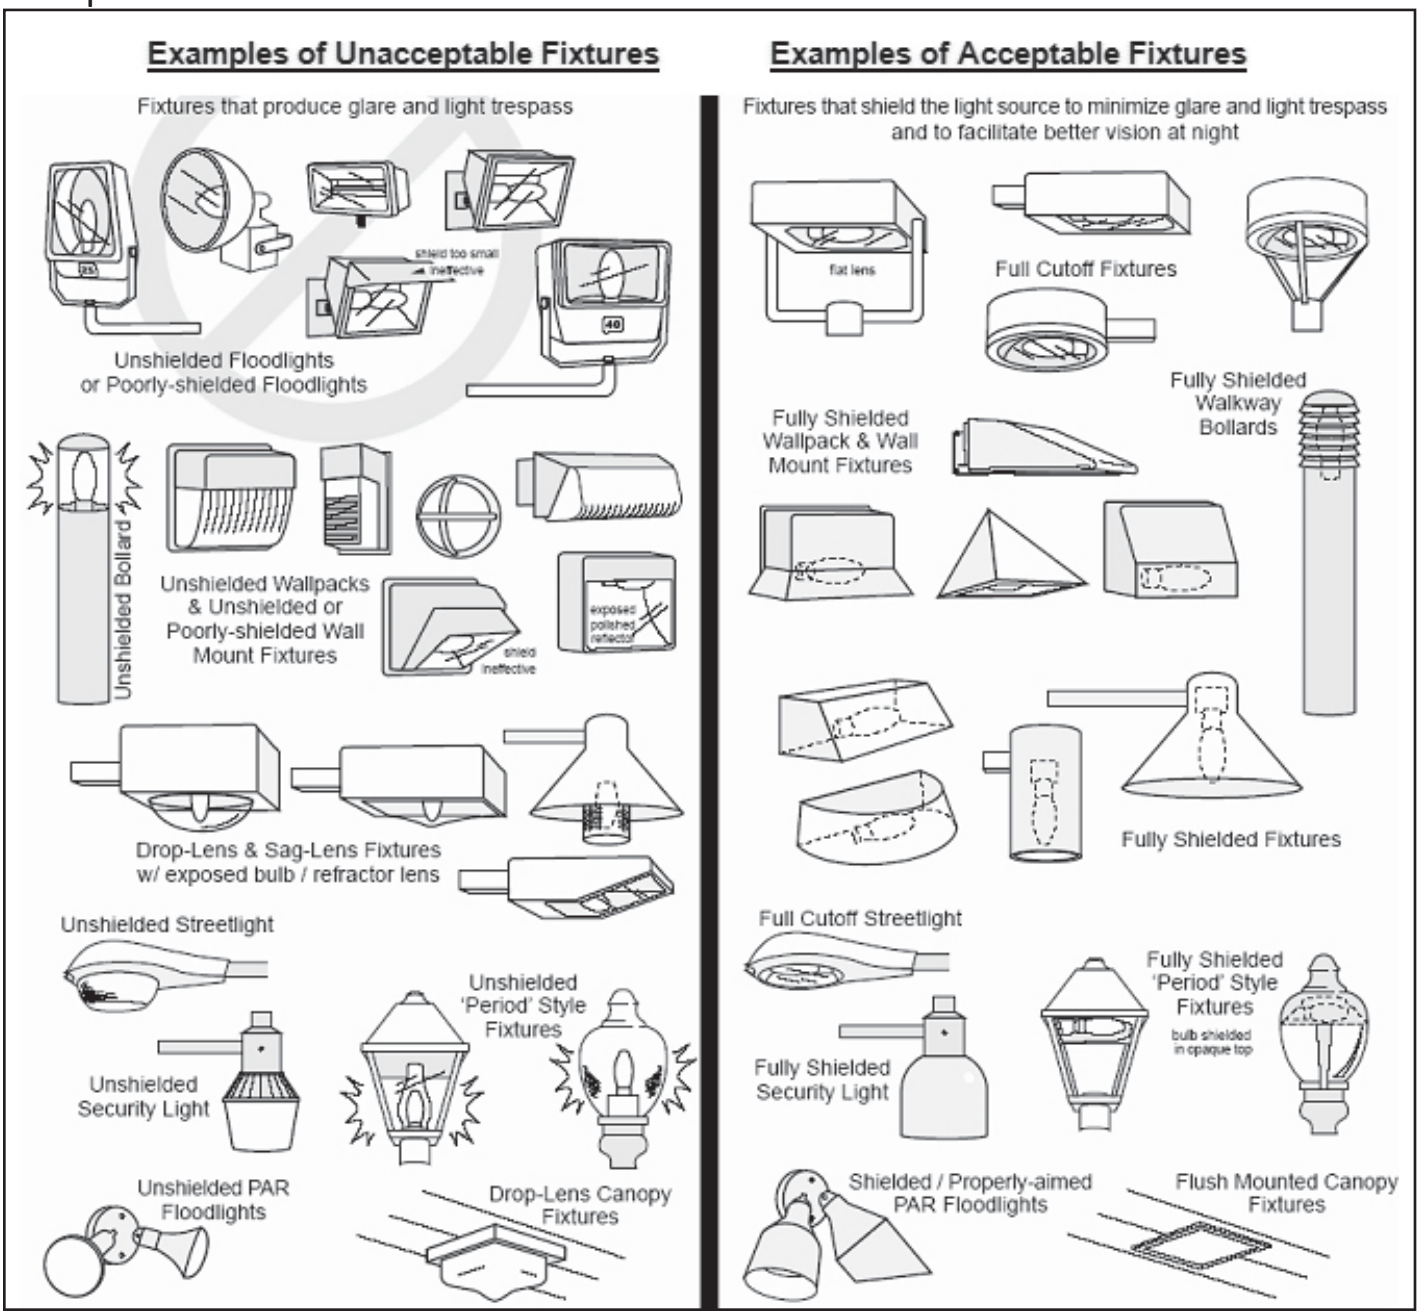
✓ **Light trespass.** Don't shine light into your neighbor's yard.

✓ **Pole Height:** Lights mounted on a standalone pole cannot be greater than 15 ft in height.

✓ **Prohibited Lights.** No flickering or flashing lights, no searchlights or laser lights, no strings of lights (unless between Nov 1 and April), or singular lights having 20,000 lumens or more.

✓ **Controls & Lighting Reduction.** All *nonresidential* properties shall use automatic lighting controls to extinguish lighting or reduce total exterior lighting by 30% by 12:00 am. Lights should be extinguished during the day when there is sufficient daylight.

Examples of Unshielded and Shielded Fixtures:



Why do we have Exterior Lighting Requirements?

Excessive or poorly designed exterior lighting contributes to Light Pollution, which has negative consequences for our community, including:

- **Hazards for public safety.** Poor lighting creates glare which makes it difficult to see hazards such as wildlife crossing the road at night.
- **Impacts to public health & Nuisance.** Excessive lighting disrupts sleep patterns.
- **Impacts on the natural environment.** Excessive lighting impacts wildlife feeding & breeding patterns.

RE: Asbestos & Lead Paint Building Inspection, Parkside at Benson-Brown Cabin

To Whom It May Concern:

In accordance with the U.S. Environmental Protection Agency (EPA), Wyoming Department of Environmental Quality (WDEQ) regulations, OSHA worker safety standards, and regional solid waste disposal requirements, The Jackson/Teton County Affordable Housing Department contracted Jorgensen Associates, Inc. **(Jorgensen)** to conduct an asbestos building inspection of a historic residential cabin located at 485 E. Kelly Avenue in Jackson, Wyoming known as The Benson-Brown Cabin.

Samples of suspect materials were collected from this cabin for the analysis of Asbestos-Containing Material (ACM) and lead-based paint in preparation for future renovations.

Inspection and Technical Approach
A Jorgensen-provided, EPA-certified asbestos building inspector conducted a visual inspection of the cabin's interior and exterior on November 7, 2025. During this inspection, suspect building materials were identified, and bulk samples were collected for ACM and lead-based paint analysis.

The inspector collected bulk material samples by taking a composite core that included all layers within the suspect materials, in accordance with applicable federal and state regulations.

Building History & Description

- **Year Built:** 1920 with subsequent remodels occurring since originally built.
- **Size:** Approximately 852 square feet, which consist of a main floor, basement and attic.
- **Construction:** Log construction with a concrete basement and metal roof.
- **Exterior Finishes:** Log construction including synthetic chinking and wood shingled gable ends. Metal roof.
- **Interior Finishes:** Log walls with synthetic chinking, wood paneling and trim, and a limited amount of drywall. Flooring consists of linoleum on a plywood subfloor in the entry, kitchen and bathroom, wood plank flooring in the living room, and carpet on a plywood subfloor in the laundry room. Doors are fiberglass and wood.
- **Insulation:** Insulation observed consists of fiberglass batten insulation.
- **Not Observed:** No fire doors, suspect carpet mastic, suspect window glazing, nor suspect heating duct putty was observed.

Asbestos Laboratory Analysis
The bulk suspect samples were submitted to EMSL Analytical, Inc. (EMSL) in Indianapolis, Indiana, for analysis using Polarized Light Microscopy (PLM) methodology. EMSL is a National Voluntary Laboratory Accreditation Program (NVLAP) accredited laboratory for Bulk Asbestos Fiber Analysis.

- *Note:* Per EPA NESHAP (40 CFR 61, Subpart M) regulatory guidance, samples containing less than 1% asbestos must be point-counted to be considered a trace-containing material.

Lead-Paint Laboratory Analysis
Paint samples were submitted to EMSL Analytical, Inc. (EMSL) in Indianapolis, Indiana, for analysis using Flame Atomic Absorption SW 846-7000B in paint chips methodology.

Materials Sampled for Asbestos Analysis
The following twelve (12) samples of suspect ACM were collected from the structure for analysis:

- Two (2) samples of linoleum flooring and mastic, entry
- Two (2) samples of linoleum flooring and mastic, kitchen
- Three (3) samples of drywall texture/finish
- Three (3) samples of drywall

Laboratory Results for Asbestos Analysis
Laboratory results, received on November 16, 2025, reported that all samples collected for the analysis of asbestos The full laboratory analysis is attached to this report.

***The kitchen sink does exhibit a black undercoating which should be assumed to contain asbestos.**

Paint Sampled for Lead Analysis
There is a limited number of painted surfaces in this cabin; the following three (3) samples were collected for analysis:

- Laundry Room, pink
- Bathroom and living room ceiling, white
- Living Room Back Door Jam, white

Laboratory Results for Lead Analysis
The paint sample from the living room back door jam tested as lead-based paint at 40,000 parts per million (ppm). The other two samples are considered lead-paint containing.

Lead-based paint is defined by lab analysis as paint with a concentration of 5,000 parts per million (ppm) or more. Paint is considered lead-based if it tests above 5,000 ppm; paint is considered lead-containing at levels below 5,000 ppm.

Conclusion and Recommendations
Based on the laboratory analysis, suspect materials present in this cabin have tested negative for asbestos and may be handled as such. The kitchen sink, which has a black undercoating, should be assumed asbestos. This sink undercoating is not friable and so does not pose an immediate heath concern; it should be disposed of accordingly when replaced.

The white paint present on the living room back door jamb strongly tested as lead-based paint and is in a deteriorating condition. Health precautions should be taken to abate or remove or this paint.

Although all reasonable efforts were made to discover potential ACM, some suspect materials may remain hidden in walls, voids, or other concealed areas. Please contact our office should any additional suspect materials be uncovered during demolition.

Thank you for allowing Jorgensen to provide this asbestos building inspection for your project. Please contact us if you have any questions or if we can provide additional services.

Sincerely,
JORGENSEN ASSOCIATES, INC.

Re: 445 E. Kelly
Jackson, Wyoming

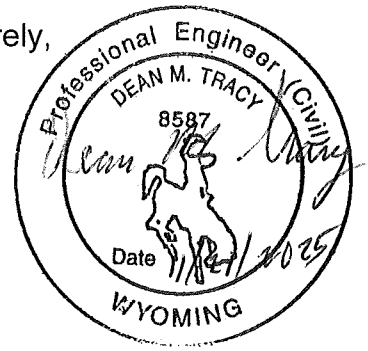
Dear Kristi,

Yesterday I met with you at the above referenced site. The purpose of the visit was to determine if the roof reinforcement per G&S' drawing dated 12-18-21 had been installed as shown in the drawing and if the reinforced roof complies with the 2024 IBC. The following is a brief overview of my observations and conclusions.

The roof reinforcement was installed as shown in G&S' drawing dated 12-18-21. The glulam beam and sistered joists were properly installed. Attached are the calculations that show the reinforced roof framing is adequately sized for the 2024 building code.

Please call if you have any questions or if I can be of further assistance.

Sincerely,



Dean M. Tracy, P.E.

Snow

Results:

Ground Snow Load, p_g:	158 lb/ft^2
20-year MRI Value:	87.95 lb/ft^2
Winter Wind Parameter:	0.35
Mapped Elevation:	6624.3 ft
Data Source:	ASCE/SEI 7-22, Figures 7.6-1 and 7.6-2 A-D
Date Accessed:	Fri Nov 21 2025

Values provided are ground snow loads. In areas designated "case study required," extreme local variations in ground snow loads preclude mapping at this scale. Site-specific case studies are required to establish ground snow loads at elevations not covered.

Snow load values are mapped to a 0.5 mile resolution. This resolution can create a mismatch between the mapped elevation and the site-specific elevation in topographically complex areas. Engineers should consult the local authority having jurisdiction in locations where the reported 'elevation' and 'mapped elevation' differ significantly from each other.

Ground Snow Loads for IRC only, $p_{g(asd)}$:	110.6 lb/ft^2

Snow Loads : ASCE 7- 22

Ultimate Snow Forces

Roof slope	=	26.6 deg
Horiz. eave to ridge dist (W)	=	14.0 ft
Roof length parallel to ridge (L)	=	36.0 ft

Type of Roof		Hip and gable w/ trussed systems
Ground Snow Load	Pg =	158.0 psf
Risk Category	=	II
Snow Factor	=	1.0
Roof R value	Rroof =	60
Thermal Factor	Ct =	1.200
Exposure Factor	Ce =	1.00
Pf = 0.7*Ce*Ct*I*Pg	=	132.7 psf
Unobstructed Slippery Surface		no
Sloped-roof Factor	Cs =	1.00
Balanced Snow Load	=	**132.7 psf**

Near ground level surface balanced snow load = **158.0 psf**

Rain on Snow Surcharge Angle		0.28 deg
Code Maximum Rain Surcharge		8.0 psf
Rain on Snow Surcharge	=	0.0 psf
Ps plus rain surcharge	=	132.7 psf
Minimum Snow Load	Pm =	0.0 psf
Uniform Roof Design Snow Load	=	**132.7 psf**

NOTE: Alternate spans of continuous beams shall be loaded with half the design roof snow load so as to produce the greatest possible effect - see code for loading diagrams and exceptions for gable roofs

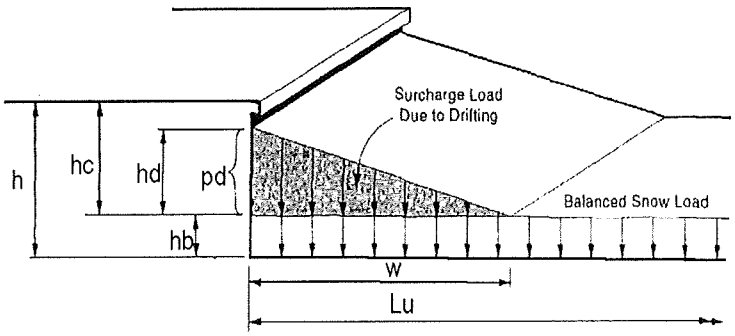
Unbalanced Snow Loads - for Hip & Gable roofs only

Winter Wind Parameter W2 = 0.55

Required if slope is between 7 on 12 =	30.26 deg	
and 2.38 deg =	2.38 deg	**Unbalanced snow loads must be applied**
Windward snow load =	39.8 psf	= 0.3Ps
Leeward snow load from ridge to 10.19' =	190.0 psf	= hdγ / √S + Ps
Leeward snow load from 10.19' to the eave =	132.7 psf	= Ps

Snow Drift 1 - Against roof projections, parapets, etc

Up or downwind fetch	lu =	0.0 ft
Projection height	h =	5.2 ft
Projection width/length	lp =	20.0 ft
Snow density	γ =	30.0 pcf
Balanced snow height	hb =	4.42 ft
	hd =	0.00 ft
	hc =	0.78 ft
hc/hb <0.2 = 0.2	**Therefore, no drift**	
Drift height (hd)	=	0.00 ft
Drift width	w =	0.00 ft
Surcharge load:	pd = γ*hd =	**0.0 psf**
Balanced Snow load:	=	132.7 psf
		132.7 psf



Snow Drift 2- Against roof projections, parapets, etc

Up or downwind fetch	lu =	0.0 ft
Projection height	h =	4.0 ft
Projection width/length	lp =	20.0 ft
Snow density	γ =	30.0 pcf
Balanced snow height	hb =	4.42 ft
	hd =	0.00 ft
	hc =	-0.42 ft
hc/hb <0.2 = -0.1	**Therefore, no drift**	
Drift height (hc)	=	0.00 ft
Drift width	w =	-3.39 ft
Surcharge load:	pd = γ*hd =	**0.0 psf**
Balanced Snow load:	=	132.7 psf
		132.7 psf

Note: If bottom of projection is at least 2 feet above hb then snow drift is not required.

CRITICAL LOAD COMBINATIONS:

```
Shear     : LC #2  = D + 0.7S
Bending(+): LC #2  = D + 0.7S
Deflection: LC #2  = D + 0.7S  (live)
            LC #2  = D + 0.7S  (total)
Bearing   : Support 1 - LC #2 = D + 0.7S
            Support 2 - LC #2 = D + 0.7S
Load Types: D=dead S=snow
Load combinations: ASD Basic from ASCE 7-22 2.4; all LC's listed in the Analysis report
```

CALCULATIONS:

```
V max = 337, V design = 308 (NDS 3.4.3.1(a)) lbs; M(+) = 943 lbs-ft
EI = 33.27e06 lb-in^2
"Live" deflection is due to all non-dead loads (live, wind, snow…)
Total deflection = 1.50 permanent + "live"
Bearing: Allowable bearing at an angle F'theta  calculated for each support
as per NDS 3.10.3
```

Design Notes:

1. Analysis and design are in accordance with the ICC International Building Code (IBC 2024) and the National Design Specification (NDS 2024), using Allowable Stress Design (ASD). Design values are from the NDS Supplement.
2. Please verify that the default deflection limits are appropriate for your application.
3. Sawn lumber bending members shall be laterally supported according to the provisions of NDS Clause 4.4.1.
4. SLOPED BEAMS: level bearing is required for all sloped beams.
